The eighteenth day, faire weather, the winde variable, we steering away Northward. This afternoone wee met with another ship of *Biscay*, being a ship of two or three hundred Tunnes. Our Generall, as he did to the rest, caused her Master and Pilot to come aboard vs, to whom he shewed his Commission, charging them to depart this Countrey. They, seeing no remedie, were content, so soone as they had filled fresh water. Wee met with them off the Southward part of the Iland. Our Generall being so neere *Greene Harbour*, where the *Gamaliel* and the *Desire* road, wee went into the Sound to see them, with this great ship of *Biscay*, and the ship of *Amsterdam*. We found that the entrance of *Greene Harbour* was quite stopped with Ice; and ran our ship into it, thinking to get through, but wee could not. Then wee got her out againe, and came to the Bay where wee rode on the other side of the Sound in *Poopy Bay*, or *Niches Coue*.

The nineteenth day, faire weather, the winde Northward. This day about twelue of the clock we came to an anchor in the foresaid Bay. This afternoone there came another ship of *Saint Sebastian* into the Bay where wee rode: and about seuen of the clocke, the Captaine came aboard of vs, who told vs that he had lost six of his men and a shallop vpon the coast of *Groineland*, vpon an Iland in the latitude of 72. degrees or thereabouts. This was the Master which had beene here the last yeere, and made a great voyage, Master *Woodcocke* being their Pilot. His making so great a voyage, was the cause that so many ships were here this yeere.

The twentieth in the morning, we had newes that the *John* and *Francis* was come about two dayes agoe, and that they had killed one and twentie Whales at the *Foreland*, and had also killed two at *Greene harbour*. This day it was very close weather with some snowe; the winde North-west. This afternoone the Captaines of the two *Biscay* ships were commanded to depart this Coast.

The one and twentieth, wee perceiued another ship standing toward vs. Wee lessened our sailes and stayed for her to see what shee was. At length, we perceiued her to bee another *Biscaine*. About a North sunne we came to an anchor in *Greene harbour*, by the *Gamaliel*, and the *Desire*, and the ship of *Burdeaux*: and the *Biscaine* followed vs. So soone as they were come to an anchor, their Captaine came aboard of vs, to whom our Generall shewed his Commission as he had done to the rest, charging him to depart those Coasts, and told him, that hee would take away some of their shallops. They earnestly intreated him not to take them away, and they would depart: the Captaine offering his bond to our Generall, that if he stayed either in *Greenland*, *Groineland*, or *Cberie Iland*, he would willingly forfait all he was worth. There was another Whale killed in *Greene harbour*, in the killing whereof there was a man slaine, and a Boate ouerwhelmed, by too much haste of following him, after the harping Iron was in him.

The three and twentieth day, faire weather, the winde Northward. This day, and the last night I obserued the latitude of the place where we rode, and found it by both, to bee in the latitude of 78. degrees 7. minutes; the skie at both obseruations being very cleere, where I finde that there is no sensible error betweene a South obseruation and a North, the skie being cleare. But if the skie be hacie, there will be some difference, as of eight or ten minutes, being obserued on shoare by some large Quadrant or other Instrument for the purpose, also a South

The ninth of Iuly, faire weather, the winde at North. This day wee stood to the Southward along the Iland: but, toward night it fell calme, and then the winde came to the West. The tenth day, faire weather, but thicke and close, the winde South South-west. All this day we stood for *Bell-Sound*. Our Generall went on shoare this afternoone, and killed foure Deere, and brought a young Morfe aline with him aboard.

The eleauenth day faire weather, but calme. This afternoone wee perceiued five shippes in a Bay in *Bel-sound*. The winde was so calme, that we were faine to towne in our shippes, and about a North North-west sunne, we came to an anchor by them, with our three ships, viz. the *Tigre* Admirall, the *Mathew* Vice-Admirall, and the *Richard* and *Barnard*, hauing made all things ready for to fight. These five shippes which rid here, the one was a great shippe of *Biscay* of seuen hundred

hundred Tunnes, and the two *Hollanders*, which we found the sixt of *June* in *Poopy-bay*, and one small Pinke of *Amsterdam*, and another small shippe of *Rechell*. This great shippe of *Biscay*, which we expected would haue fought with vs, sent their Capitaine aboard of vs before we came to an anchor, and submitted themselves vnto the Generall. The two ships of *Amsterdam*, whose Masters names were these, viz. *Cornelius Calias*, *William Vermogon*, Admirall, and *John Iacob* Vice-Admirall, these two would gladly haue stood out with vs, if the *Biscaine* would haue assisted them.

A Biscayn ship
of 700. tunns.

The twelfth day faire weather. This day the ship of *John Iacob* was vnladen of such goods as hee had in her; as *Oyle*, *Blubber*, and *Morses skinnies*. The thirteenth day I was sent in a shallop to *Greene Harborough*.

10 The foureteenth day, thicke close weather, the winde Northward; but toward noone it began to cleare vp, and then it blew more winde. About a West sunne, we came to a small Island, or rather a Rock, where *Morses* vse to come: where we found seauen which we killed, and knocked out their teeth, and let them lye. In this place are many of these rockes, where are great multitudes of fowle, and they are called *Lizets Islands*. The Land all along is so full of Rockes, that it is vnpossible for any shippe to come neere the Maine, but in the Sands which are very deepe, and good to come in. All this evening and night wee rowed betweene this Island and *Ice-sound*.

Many rockes
full of Fowle.
Lizets Islands.

30 The fifteenth day, about nine or tenne a clocke, we came to the shippes in *Greene-harborough*, where we found, that they had killed eightene Whales in all. Foure of these ships were *French-men*, which had killed eight Whales for the Companie according to the agreement: which the Generall had made with them: which was, that they should kill eight for vs, and after, what they could kill, should be for themselves. Our *English* men had killed three in this place, and the *Baskes* in the *Desire* also three. The *Desire* had taken in an hundred tunnes of *Oyle* when wee came there, and she was to be laden so soone as she could.

Eightene
Whales killed.

Three Whales
killed by the
English.

30 The seauenteenth day also faire weather, the winde Northward. This day, toward a West Sunne, the Master of the *French* shippe came from *Sea-horse Bay*, who went thither to speake with our Generall: because Master *Mason* and Master *Cooper* had stayed his Shallops from going to Sea, in regard they would not obserue the orders which the Generall had appointed them: which were, that those Whales which our *Englishmen* did chase, they should not follow, nor our men should not follow the Whales they chased. For the order of the *Biscaines* is, that who so doth strike the first Harping Iron into him, it is his Whale, if his Iron hold. This evening, I say, he returned from *Sea-horse Bay*, hauing lost his labour; for the Generall and Master *Edge* were in *Bell-sound*. We vnderstood by him, that they had killed some eight and thirtie Whales in all; and that there was one hundred and sixtie tunnes of *Oyle* ready made.

Eight & thirty
Whales killed.

40 The five and twentieth day in the morning, the *Desire* weighed Anchor to go to the Generall, and the Master of the *French* ship also this morning went from thence to speake with the Generall, because of a Whale which was in strife betweene his *Biscaines* and ours: when for pilfering and for some peremptorie speeches, two of the *Rockellers* were ducked at our Yard arme, the one on the one side, and the other on the other. This day I also obserued the latitude of this place, and found it to be 77. degrees 40. minutes. Also, the variation of the Compasse is 13. degrees 11. minutes West. This variation was obserued the third of *August* in the morning: the height of the sunne about the Horizon was 17. degrees 24. minutes, and the declination was 14. degrees 41. minutes. North in the latitude of 77. degrees 40. minutes, and his Magnetical azimuth was 63. from South to East. The ninth day wee had sight of Master *Bonnors* Ship, wherein was Master *Marmaduke*, who had beene to the Northward as faire as *Faire-bauen*: and now, as he said, he was bound to the southward to discouer beyond *Point Look-out*, hauing his direction from Master *Edge*, as he said. Our Generall told him, that hee had hindered the Voyage more by his absence, then his discouerie would profit; and that it were best that he went backe with him to the *Fore-land*, and that he would giue no licence to goe now for Discouerie, because the year was farre spent: but bad him, according to his Commission, so to proceede. The twelfth day I obserued, and found the latitude of this place by an exact obseruation to be in 79. degrees 14. minutes. They in the *Poopy-Bay* had seene a ship of *England* off *Black-point*, and had spoken with her, who told them that they were come from *Kildeene*.

This was Ma.
Cudners ship of
London.

50 The foureteenth day faire weather, the Winde at North North-east. This day about tenne a clocke in the forenoone, we waied anchor to goe homeward, being fixe ships in company, viz. the *Tigre* Admirall, the *Gamaliel* Vice-Admirall, the *John* and *Frances*, the *Annula*, the ship of *Burdeaux* which the Generall agreed with to fish in *Greene-harborough*, and the *Biscay* ship which fished in *Sir Thomas Smiths Bay*.

60 The fifteenth day very faire weather, all the forenoone almost calme: in the afternoone, an easie gale at North-east. This day about twelue a clocke at noone, wee were against *Faire Fore-land*, which is in the latitude of 79. degrees 8. minutes. This night was very cleere and faire weather, and also calme, by which meanes I had very good opportunitie to finde the sunnes refraction. For beholding it about a North North-east sunne, by the common Compasse, at which time the sunne was at the lowest, it was but one fift part of his body about the Horizon, hauing about

Latitude 79.
degrees 8. mi-
nutes.

Sunnes refra-
ction.

four

four fifth parts below, so neere as I could gesse. His declination for that instant was 10. degrees 35. minutes North, being at noone in the 2. degree 7. minutes of *Virgo*, his daily motion was 58. minutes: whose halfe beeing nineteene to bee added to the former, because it was at twelue houres afore noone. I say his place at that instant was 2. degrees 26. minutes of *Virgo*, whose declination was as before 10. degrees 35. minutes: the Latitude of the place was 78. degrees 47. minutes, whose complement was 11. degrees 13. minutes, the declination being subtracted from the complement of the Poles elevation, leaueth 38. minutes, foure fife part of which 12. minutes: which being subtracted from 38. leaueth 26. minutes for the Refraction. But, I suppose the Refraction is more or lesse, according as the ayre is thicke or cleare, which I leaue for better schollers to discusse: but this I thought good to note, for the better helpe of such as doe professe this studie.

Note.

M. Cudner of
London.
William Gourdon.
Variation 1.
degree 5. min.

The sixteenth day also very faire weather, and for the most part calme: the winde that was, was at North-west. This morning, we espied a ship out in the offen, ouer against *Cold-cape*, which we stood with, and she also stood with vs. And when we came to her, wee found her to be the *Desire*, a shippe of *Alborough*. Our Generall sent for the Master and Merchant aboard of vs, who certified him that they came from *Killedene*, and that they had made but a bad Voyage of fish: and they were come to see, if we could fraight them home. The Merchant was of *London*, whose name was Master *Cudner*: the Masters name was *Fletcher*, who also brought sixe men which *Thomas Bonner* had left at *Cherie* Island. These sixe men had killed but one Morfe all this yeere at the Island: who also told vs, that *William Gourdon* was gone to the Northwards. At noone, the three and twentieth day, I obserued the variation of the Compasse, and found it to be one degree 5. minutes East.

The three and twentieth day faire weather, with a fine gale at North and by East. We steering away South and by West halfe South: being at noone, by supposition, in the latitude of 69. degrees no minutes. Having sailed since yesterday noone, some thirtie leagues South, true.

Ross Islands or
Rossen.
68. deg. no min.
The variation
4. degrees 8.
minutes East.

The foure and twentieth day, very faire weather and cleere, the winde all the fore-noone Northwards, but about noone it came to the South-east. This morning I obserued the middle starre in the Great Beares tayle, and found it to bee in the latitude of 68. degrees 24. minutes about two a clocke, at which time that starre was on the Meridian vnder the Pole. Also I obserued the starre in the Beares Rump about one a clock, and found the like latitude. Also all this day we had sight of *Ross* Islands, being about ten or eleffen leagues off vs. Also at noone I obserued the latitude by the Sun, and found vs to be in the latitude of 68. degrees no minutes, which did agree with the former Obseruations by the starres. Also the variation of this place is 4. degrees 8. minutes East from the true Meridian, wee having runne since yesterday noone some two and twentie leagues South and by West. Almost all the afternoon it was almost calme.

Variation 5.
deg. 3. minutes
East.

The fife and twentieth day also very faire weather, the winde this morning came to the East South-east a fine easie gale. We steered away South and by West halfe West ten leagues, being at noone in the latitude of 67. degrees 5. minutes. The variation of this place is 5. degrees 3. minutes East, neere to the set of our Compasse. This Euening the winde came to the South South-west, which continued about two Watches.

The lying of
the land about
Scoutnesse.

The nine and twentieth day faire weather, with a good gale of winde at North North-east. From two this last night to sixe, we stood away South-west and by South, and at sixe we steered away South South-west, being at noone by obseruation, in 62. degrees no minutes. The land about *Scoutnesse* lyeth in this sort: from sixtie three toward sixtie two, it is nineteene leagues South South-west halfe Westward: from thence tenne leagues South and by West, which is two or three Islands, which are the Westwardest land in *Norway*, lying in the latitude of 62. degrees 44. minutes. But whether these Islands, or a Point of land, which lyeth about three or foure leagues more to the North, be called *Scoutnesse*, I know not. The sixt of September we entred the *Thames*.

CHAP. VI.

A Voyage of Discoverie to Greenland, &c. Anno 1614. Written
by RO. FOTHERBYE.

He ship *Thomasine* went downe from *Black-wall* to *Woolwich* the sixteenth of Aprill, and from thence to *Grauesend* the three and twentieth, where shee remained vntill the eight and twentieth of the same; and weighing from thence she anchored againe in *Tilberie Hope*, with ten ships more of good burchen, and two Pinnasses all of the *Greenland Fleet*, set forth also at the charge of the said Company, vnder the command of Master *Benjamin Ioseph*, Chiefe Caprayne and Generall of the said Fleet.

We

We set sayle out of *Tilberie Hope* the fourth of May, and came to an anchor the same day in *Lee Road*, where we stayed till the next morning, then wee set sayle againe and went forth to Sea before night.

We proceeded in company of the Fleet, and met with fragling Ice the five and twentieth of May in the latitude of 75. degrees 10. minutes, through which wee passed without danger, holding on our course all that day, till time of mid-night; then we found the Ice so close packt together, that we were forced to tacke about, and stand to the Westward, till wee found more open passage, wee plyed through it without any great danger, till the eight and twentieth day: but then being in sight of Land, we passed amongst very much Ice all the fore-noon, which lay in great abundance on both sides of vs: but a desire (as it seemes) to get through it, drew vs on to be the more intangled with it, for about noone we could neither find a passage to goe forward, nor way to retyre backe againe, but being nine ships and two Pinnasses (for the *Prosperous* and the *Desire* lost Company through foule weather, the one and twentieth of May, otherwise we had beene thirteene sayle) we began very suddenly to bee inclosed and shut vp with Ice. Now every one wrought the best meanes he could for the safetie of his ship, Our Master in the *Thomazine*, caused a Hauser and a Grapnell to be carried forth, and laid vpon a great Island of Ice, and so we rid as at an Anchor, and by that meanes wee stayed from forceable rushing against other peeces, afterward we laid forth an anchor for surer hold, and made fenders of an old Caille, which was hung ouer the ships sides to keepe the Ice from piercing of her planks. Wee rid thus from the eight and twentieth of May till the second of Iune, still floating as the wind droue vs with our anchor, holding Iland, which now we accounted as the shoare, and made vse thereof accordingly, for vpon it our Carpenter sealed and trimmed our lesser shallop.

On the second of Iune we had a great homening Sea, the wind being at North-west, where-by we iudged we were not farre from an open Sea to windward of vs; there wee resolved to make tryall what we might doe, to free our selues out of the Ice. In the afternoone about three a clock we got aboard our Anchor, letting fall our fore top-sayle, and putting forth our Mizzen; and so droue a sterne for a while, till the floating Iland gaue way; then wee filled our top-sayle, and attempted diuers places where to passe, but had repulse and fell sterne againe; notwithstanding at the length we preuayled, and with much adoe we attayned an open Sea at a North, and by West Sunne, parting very gladly from these ill neighbouring Ilands; which at our parting from them, gaue vs or rather receiued from vs some knockes, but whilst we remayned amongst them they seemed much more perillous then they proued hurtfull, so wee prayled God for our safe deliuerance, wishing that the rest of the ships which we left in the Ice, were as cleere out of it as was the *Thomazine*.

Having attayned the open Sea to the Westwards, we proceeded to the Northwards, keeping the Ice still on our starboord side, and met with the *Mary An-Sarah*, that got also free of the Ice the same day that we came forth of it; we kept company together till the next day, when being as high as *Prince Charles* Iland, we both stood in for the shoare, the *Mary An-Sarah* going for *Bel-sound*, her assigned Harbour; but we proceeded to the *Fore-land*, where when wee came the sixt of Iune, wee met with two shallops that belonged to the *Desire*, wherein was *Cuthbert Appleyard*, and *William Summes* Harponiers; by whom we vnderstood, that the *Prosperous* and the *Desire* had more desiredly prospered, then all the rest of the Fleet, they escaped the danger that all the rest fell into, and came to the *Fore-land* the third of Iune, finding the Harbour open.

Here was yet no worke begunne, for they had not seene one Whale since their comming into the Harbour; so that for vs there was no cause of stay to bee helpfull vnto them, and therefore we proceeded to the Northward, hoping to find the shoare still as free from Ice, as it was at this place; but it fel out contrary to our expectations, for being come as farre as *Maudlen Sound*, in the latitude of 79. degrees 34. minutes, we met with some fragling Ice, and from the mayne top we saw much Ice lye betwixt vs and *Hackluyts Head-land*, which seemed to bee close to the shoare, therefore we sent some men in a shallop to *Maudlen Sound*, to see if it were open, that wee might harbour our ship there, and search for a leake which wee found her subject vnto in foule weather.

The Sound was open and we anchored in a good Harbour, but the Ice was not gone cleere from the shoare, therefore we could not hale our ship aground, but we carined her and set vp our *Biscaine* shallop which we carried with vs out of *England* in peeces.

The next day after our comming hither I went forth in a little shallop (the other being then vnset together) to see how the Ice lay at *Hackluyts Head-land*, and whether we might passe with our ship that way or no. Being come forth of the Harbour, we perceiued, that it was very foule weather at Sea, notwithstanding I proceeded into *Faire Haven*, where the South Harbour was then open, but much Ice lay then in the Sound vnbroken from shoare to shoare; otherwise wee might haue passed that way to *Hackluyts Head-land*, betwixt the Iland and the mayne Land; we stayed here till the next morning, then the weather beganne to cleere vp, and wee put forth to Sea againe, intending to goe without the Ilands: but being out of the Harbour wee found the

We went forth to Sea.

in.

foule weather to be such, as our little weake shallop was not able to endure, therefore we retur-
ned againe to our ship, into *Maudlen Sound*, where we killed two Female Morfes, and took their
Teeth, Hides and Blubber.

On the tenth of Iune we set sayle out of *Maudlen Sound*, and coasted along to the North-
ward, till we were past *Hackluyts Head-land*, but then we saw the Ice lye before vs, extending
close to the shoare, so that for vs to passe further that way, it was not possible; therefore
wee turned to the Westward, to see if wee could finde passage further from the shoare. Wee
layled as the Ice trended West and West South-west till the thirteenth day, and keeping still a-
longst it, we found it to trend neereft South and South South-west, we proceeded well thus far,
till we came vnder the latitude of Prince Charles his Iland, in 78. degrees 40. minutes, being 10
eight and twentie leagues from shoare, but then we altered our course, and stood in for the *Fore-
land*, to goe and be helpfull to the other ships there for the furthering of their Voyage according
to our Instructions (as some did vnderstand them) but contrary I am sure to some of our desires.
When we came neere the *Fore-land*, we saw eleuen ships of *Hollanders* vnder sayle, plying to
the Southwards; one of them came roome towards vs, and strucke her top-sayles twice,
whereby we supposed they tooke vs for some of their Fleete, which they wanted, but wee
held on our course still into Sir Thomas Smiths Bay, where we came to an anchor the fifteenth of
Iune, by the *Iohn-Anne-Francis*, and the *Desire*, the *Mary Margaret* being then vnder sayle to go
to the *Fore-land*.

Here was yet no need of any helpe that we could make them, for they had hitherto neyther
killed nor seene one Whale since their first comming in hither; therefore we thought it best not
to stay here, but rather goe to *Faire Hauens*, where wee should bee more readie to proceed on our
Discouerie when the Ice would giue vs leaue, and in the meane-time wee might bee helpfull to
the two ships thither assigned for the making of their Voyage, and so much the rather wee ha-
sted, because we vnderstood that the *Hollanders* also set forth a ship on Discouerie.

We set sayle the seuenth of Iune, and met with the *Prosperous*, that came from *Crosse-road*, and
was going into Sir Thomas Smiths Bay, there to get some Bricke and Lime to mend their For-
nace, as *Nicholas Woodcocke* the Master told vs; then we went forth to Sea, and being about foure
leagues from the shoare, the winde began to blow so hard from the North-west, that wee were
forced back againe to seek Harbour, and came to an anchor the nineteenth of Iune, in *Crosse-road*.
Here we stayed two dayes, much wind blowing at the North North-east, till the one and twen-
tieth of Iune, and then in the after-noon the wind came to the East and by South, and the wea-
ther was faire, therefore at a North North-west Sunne, we weighed and set sayle againe, and so
did the *Thomas Bonaventure*, that came to an anchor by vs this morning, beeing also bound for
Faire Hauens.

This next day in the afternoone we were thwart of *Maudlen Sound*, and the weather being
faire and calme, we sent a shallop to the Northward, to see what alteration there was amongst
the Ice, and to seeke out some good Harbour for a ship, and also to set vp the Kings Armes at
Hackluyts Head-land, or some other conuenient place.

When Master Bassin was gone from the ship in the foresaid shallop, I went presently into the
other shallop into *Maudlen Sound*, there to set vp the Kings Armes; and also to see if there were
any Morfes come ashore; when I was within the Sound, I found no Beeches bare for Morfes to
come vpon: for Ice and snow lay yet vndissolued from the shoare side, but I went to the Har-
bour, and there caused a Crosse to be set vp, and the Kings Armes to bee nayled thereon; vnder
which also I nayled a piece of sheet Lead, whereon I set the *Moscomie* Companies Marke, with
the day of the moneth and yeere of our Lord. Then, cutting vp a piece of Earth, which after-
ward I carried aboard our ship, I tooke it into my hand and said, in the hearing of the men there
present to this effect.

I take this piece of Earth, as a signe of lawfull possession (of this Countrey of King Iames his
New-land, and of this particular place, which I name Trinitie Harbour) taken on the behalfe of the
Company of Merchants, called the Merchants of New Trades and Discoueries, for the vse of our
Sovereigne Lord Iames by the grace of God, King of great Brittain, France, and Ireland, whose
Royall Armes are here set vp, to the end that all people who shall here arrive may take notice of his Ma-
iesties Right and Title to this Countrey, and to euery part thereof. God save King Iames.

This is a good safe harbour, and is vnder the latitude of 79. degrees 34. minutes, as I haue found
by good obseruation, and haue of Westerly variation 25. degrees. When I had here set vp the
Kings armes, I returned toward our ship, which was come to an anchor at the entrance of *Faire
Hauens*, staying till the flood came, because that at the Tide of Ebbe, there runnes a great current
out of the Sound; so at the next flood, we came into *Faire hauens* and anchored by the *Gamaliel*,
and the *Thomas Bonaventure*, the three and twentieth day of Iune.

Then *Iohn Mason*, Master of the *Gamaliel*, came aboard of our ship, and I asked him if he had
any worke for our men, for I would cause them to come a shore: he told me, that hitherto he had
not seene a Whale come in, but his Furnaces and Coppers were already set vp, and therefore as
yet he had no neede of helpe, but when occasion serued he would imploy them. This day about
eleuen

eleauen a clocke Master *Bassin* returned in the Shallop from the Northwards: he said that he had beene at Cape *Barren*, which is the point of an Island three or foure leagues from *Hackluits head-land*, but further then that he could not passe for Ice which lay close to the shore, and he had not set vp the Kings armes in any place.

On Munday the seuen and twentieth day of Iune, I went forth againe in the Shallop to the Northward, partly to see what alteration there might be in the Ice, with the Easterly windes which had blowne hard since the Shallop last returned, but chiefly to set vp the Kings armes in some place conuenient, because there was none set vp to the Northwards of *Maudlen sound*.

We rowed to Cape *Barren*, where formerly Master *Bassin* had bin, and finding the Ice there gone from the shore, we proceeded further to an Island which now we call the *Saddle*, in respect of the forme thereof, more then a league distant from Cape *Barren*. In our way thither it began to snow, and grew to be a great and vehement storme from the West North-west, therefore we hasted and got to the lee side of the aforesaid Island, and there made fast our Shallop with a grapnell laid vpon the Ice shore, vsing the best meanes we could with our shallops saile to keepe vs from the extremitis of so cold an harbour: we staid here eight houres, and the storme continued driuing the Ice still Eastward in great abundance and with wonderfull swiftnesse: when the weather began to cleere, I caused the men to rowe to Leewards to another Island a league distant, which seemed then to be a Cape of the maine land, purposing there to set vp the Kings armes; but afterwards wee found it to be an Island, and to the maine wee could not come for broken Ice.

This stormie weather continued from Munday night till Friday morning, during which time we had beene but eleauen leagues at the furthest from our ship, yet went we so farre as we could haue gone, had the weather beene neuer so faire; for at foure leagues distance from Cape *Barren*, the Ice lay firme and vnbroken two or three miles from the shore, and close againe to it lay the shattered Ice thronged together with this present storme.

On Friday morning we came backe againe to *Hackluits headland*, and there I set the Kings armes in the like manner as at *Trinitie Harbour*: from thence we rowed towards our ship, and as we entred into *Faire-hauen*, there came a Whale that accompanied vs into the harbour leaping and aduancing himselfe almost quite out of the water, falling headlong downe againe with great noise; we hasted aboard our ship, and I sent forth both our Shallops to strike this Whale if they could, and told Master *Mason* of her comming in, who also went forth in his Shallop: but it seemed the Whale past vnder the Ice which lay yet vnbroken betwixt the North harbour and the South harbour, for they could not see her againe.

The next day there came more Whales in, and *Robert Hambleton*, our Masters mate stricke two, which vnluckily escaped; the first for want of helpe, the *Gamaliels* Shallop being in chase of another Whale, and our own little Shallop not able to row against a head-sea to assist the other: so that at length the Whale hauing towed the Shallop forth to Sea, the harpingiron came out: the second was also stricken within the sound, and ranne vnder the Ice, which lay yet vnbroken at the East end of the Sound, and drew the Shallop vpon it cleare out of the water; by which meanes the Harpingiron came forth. Here we remained till the sixt of Iulie, our men and Boates being helpfull at all times to further the Voyage.

The sixt of Iulie we set saile forth of *Faire-hauen*, intending to make triall if wee could to get to Westwards of the Ice, and so proceede to the Northwards, hauing sent away one of our Shallops the day before, provided with twentie dayes Bread, to coast alongst the shoare, search the Beach for Commodities, and set vp the Kings Armes at places conuenient, hoping thereby to preuent the *Hollanders*, who now rid in the North harbour of *Faire-hauen*, and were ready for the first opportunitie, to discover and take possession of other harbours, hauing two Ships to goe forth onely vpon Discouery.

We sailed Westwards from *Faire-hauen* seuen leagues, and then met with a maine banke of Ice which trended North & South, the Sea appeared to the Northwards to be open so far as we could see, therefore we plied that way: when we had run seuen or eight leagues more, the Ice lay so thick on euery side, that we were bard from proceeding any further; then we stood in toward the shore, and being a little to the Northwards of Cape *Barren*, our Shallop had sight of vs, & came rowing to vs through the broken Ice. Master *Bassin* told vs the shore to the Eastward was much pestered with Ice, and he had set vp the Kings armes at the entrance of a faire Sound, about foure leagues distant from Cape *Barren*.

Now the weather being faire and calme, Master *Sherwin*, Master *Bassin* and I, went in the Shallop to the place where the Kings Armes were set vp, purposing (because the ayre was very cleere) to goe vpon some high mountaine, from whence we might see how the Sea was pestered with Ice, and what likelihood there was of further proceeding. According to this our intent, we ascended a very high hill, and from thence we saw the Ice lye vpon the Sea so farre as we could discerne, so that the Sea seemed to be wholly coured with Ice, saue onely to the Eastwards: we thought that we saw the water beyond the Ice, which put vs in some hope that we should ere long get passage with our Shallops along the shore, if we could not passe with our shippe. Being thus

The shallop returned from the Northwards.

Cape Barren.

came to an an-
chor againe.

We killed a
Whale.

August.
We went to
the North-
wards with our
Shallops.

We got to the
shore of *Red-
Beach* with our
Shallops.

We walked o-
uer *Red-beach*.

thus satisfied, we returned aboard our ship and plyed towards *Faire hauen*, aduising amongst our selues of the best course we could to further the businesse committed vnto vs.

We resolved to make our discovery along the shore with both our Shallops, and to carry with vs our prouision for the Whale-killing, conceiuing good hopes besides, of profit which the beaches would afford vs; therefore we intended when our ship was brought safe into harbour againe, to goe from her with both our Shallops, and to put in practise this our late resolution. But the weather falling calme, and a fogge succeeding, which continued three dayes, so that our ship came not into harbour till the twelfth of Iuly; I went from her the eleuenth day, intending to search the Beaches, till Master *Baffin* came to me with the other Shallop, and then we to proceede both together: but before he came, I had gone so farre as that the Ice would not suffer mee to passe a Boates length further, and I had also searched a very faire Beach which was altogether fruitlesse.

Master *Baffin* came to me at a place appointed the foureteenth day of Iulie, in the other Shallop, and we proceeded both together to the Eastwards againe, and found passage amongst the Ice about a league further then I had lately beene, so that we came to the firme Ice, that lay almost two miles from the shore of *Red-beach*, vnbroken vp this yeare. Here wee hailed vp our Shallops out of the water, lest the broken Ice which is carried to and fro with the winde, might split them or bruse them: then Master *Baffin* and I with foure men more walked ouer the firme Ice and went ashore on *Red-beach*, where we trauelled about the space of three miles by the shore side, but found no commodities as we expected to haue done; for here had the *Hulmen* been in 1612. as we might know by fires that they had made, and gathered the fruites that many yeares before had brought forth. Thus as we could not finde that which wee desired to see, so did we behold that which we wished had not beene there to be seene, which was great abundance of Ice, that lay close to the shore and also off at Sea so farre as we could discerne; wherefore being thus satisfied, and more wearie to know that we could passe no further, then with traualing so farre, we returned to our Shallops, and went aboard of our Ship in *Faire hauen* on Sunday the seuenteenth of Iuly, passing the neere way betwixt the Ilands and the maine Land, for now the Ice was broken betwixt the South-harbour where we rid, and the North harbour, where the *Hollanders* rid.

The next day we sent our Shallop to the North-east side of *Faire hauen*, there to lye for the coming of the Whales ouer against the *Gamaliels* two Shallops that lye on the other side for the same purpose.

The twentieth of Iuly, wee were vnder saile to goe forth of *Faire hauen* with the *Gamaliel*, purposing to haue taken two Ships that rid at the entrance of *Maudlen-Sound*, with *Iohn Mason*, who first descried them, supposed to be the one a *Dutch*, and the other an *English* man; but the winde blew right into the Harbour, so that we could not get forth, and therefore we came to an anchor againe where we rid before.

On the one and twentieth of Iuly, our Harponiers killed a Whale, which split one of our Shallops and stricke the Harponier that was in her ouerboord: but both hee and the rest of the men were relieued and taken into an other Shallop: then we sent our Carpenter to mend the Shallop that was split: and on the five and twentieth day they helpt to kill another Whale.

On the sixe and twentieth of Iuly, I drew the plat of *Faire hauen*, as it is here projected (but here too costly to insert.)

When this Scoole of Whales were past, we went out of *Faire hauen* the first of August with both our Shallops, Master *Baffin* in the one, and I in the other, with five men more in each Shallop, thinking that now we should finde the Ice broken and cleere gone from the shore, conceiuing some good hope to proceede and make some new discovery, which was the chiefe occasion of our imployment. Wee passed ouer *Red-cliffe-Sound*, which we found cleare of Ice; and from thence we proceeded to *Red-beach*, where we also found great alteration since our last being there, notwithstanding the Ice was not cleere voided from the shore; for in some places it was firme and vnbroken off, for the space almost of halfe a mile: so we rowed alongst it, till wee came neere the North end of the Beach which lyeth furthest into the Sea, and there we found an open way to the shore with our Shallops, and went on land; but seeing in all places great abundance of broken Ice, we lay close to the shore, and doubting that although perhaps with much adoe, we might get about the point of the Beach, yet should we still be pestered with Ice from proceeding any further, we resolved to walke ouer land, to the other side of the Beach, where we saw a hill about foure miles distant; from which we thought we should be satisfied, how much further it was possible for vs to proceede: so thither we traualled, where when we came, wee saw a very faire Sound on the East side of the Beach which was open within, but there lay very much Ice at the entrance of it, which although it was extended more then halfe ouer Sound, yet we doubted not but if we could get our Shallops about the Beach, we should finde either one way or other to passe ouer the said Sound; & from the high land on the other side, we should receiue very good satisfaction, if the weather continued faire and cleare as now it was, therefore we intended to make triall what we might do; but before we returned we went down to the point of the Beach, at the

entrance

entrance of the Sound, and there set vp a Crosse, and nailed a fixe pence thereon with the Kings Armes. This being done, we returned to our Shallops, and according to our late determination, we rowed about the point of *Red-beach*, and with many crooked windings amongst the Ice, at length we got ouer *Wiches Sound* (for so it is now named.)

As soone as we were ouer on the other side, about two leagues from *Red-beach*, Master *Baffin* and I clambred vp a very high hill, from whence we saw a point of land bearing East North-east, by the ordinary Compasse eighteene or twentie leagues distant, as I supposed. Wee likewise saw another faire Sound to the Southwards of vs, which was much pestered with Ice, but we could not see the end of it. Here vpon the mountaine wee set vp a Warelocke, and then came downe againe with lesse labour, but more danger then we had in getting vp, by reason of the steepnesse thereof: then we walked to the shoare side, and there found many beach Finnes, whereby I conjectured that Master *Marmadukes* men in his first discovery, made in Anno 1612. had not bene vpon this land to search the Beaches, for in all other places where we had bene heretofore, we could finde nothing at all. Now therefore we resolved to make further search alongst this shoare, and to proceede with our Shallops so farre as we possibly could: whereupon wee returned to our men againe, whom we left with our Shallops, where we first landed.

Having stayed here a while and obserued the latitude which I found to be 79. degrees 54. minutes, we saw a Shallop come rowing towards the extreamest point of this shoare, therefore we hastened towards them to see who were therein, and found them to be Master *Marmadukes* men, lately come from their ship the *Hartsease*, which they said they left at Sea amongst the Ice, about a league from *Red Beach*: here they were setting vp a Crosse, which they said that they found there fallen downe, and had bene formerly set vp in the time of Master *Marmadukes* first discovery, by one *Laurence Prestwood*, whose name I saw thereon engrauen, with two or three names more, and it had the date of the seuenteenth of August 1612. Vpon this Crosse they nailed the Kings Armes.

Here we parted from them, and according to our former determination we proceeded, some in the Shallops amongst the Ice, and others on shoare, till wee went about foure leagues further: in which space we found many more Finnes, and one paire of Morfes teeth, but now we found the Ice so close packt together, that wee could not proceede any further with our Shallops: wherefore Master *Baffin* and I intended to walke ouer land vntill we should be better satisfied how faire this Sound went in, for wee could as yet see no end of it, and it seemed to make a separation of the land; so leauing our men here with the Shallops, wee trauielled almost a league further, till we came to the point of a landie beach, that shot into the Sound, which was wonderfully stored with drift Wood in great abundance. From this point we receiued such satisfaction as we looked for, because we saw the end of the Sound which lies South in about ten leagues. It hath in it a good harbour that is landlockt, and doubtlesse it is a good place for the Whale-killing if it be not euery yeare as now it is pestered with Ice. Here I saw a more naturall earch and clay then any that I haue seene in all the Countrey, but nothing growing thereupon more then in other places. This Sound is that which formerly had and still retaineth the name of *Sir Thomas Smiths Inlet*.

Being thus satisfied, we came backe againe to our Shallops, and seeing no way but one, we returned towards our Ship; but before we could get to *Red-beach*, there arose a very great storme from the East North-east, after we had entered amongst the Ice in *Wiches Sound*, so that we were separated the one Shallop from the other, whereby our danger was the greater: for whiles wee were both in company together, the one might haue bene helpfull to the other when neede required, and more easie it seemed to saue them both, then being separated to keepe either of them from wracke; but God (who in his wonted mercie is euer ready to relieue the faithfull distressed) did not onely so provide that we met together againe, and indeede were helpfull the one to the other (otherwise I doubt the one Shallop had miscarried, for she was in great danger) but also deliuered vs safely out from amongst these perillous rockes of Ice, which it was very hard to shun, and at the length brought vs into an open Sea, where with as scant a saile as we could make, we past swiftly before the winde, the Sea comming diuers times ouer the sternes of our Shallops, which wet our skinnes, that had scarce any dry cloathes on before to keepe them warme, by reason of a drizeling Snow which fell with the storme: then we went aboard our Ship into the South harbour of *Faire hauen*, the fift of August, with one hundred and fiftie Beach finnes, and one paire of Morfes teeth, giuing thanks to God for his blessing and mercifull deliuerance.

The ninth of August, two ships of the *Hollanders*, that were appointed for Northerne Discovery, were seene thwart of *Faire Haueu*, sayling to the Southwards.

The eleuenth of August, we set saile forth of *Faire Haueu*, the winde at South South-west, intending to make tryall, if yet the Ice would admit vs to haue passage to the Northwards or the North-eastwards. We held our course from Cape *Barren*, North-east and by East, till seuen a clocke at night, at which time hauing runne eight leagues from the shoare, wee met with the Ice which lay East and by South, and West and by North, and bore vp alongst it to the Eastwards, for the winde was now come to the North North-west; then wee tackt about to the Westwards,

The Kings Armes are set vp at *Wiches Sound*.

We passed ouer *Wiches Sound*.

We found Beach Finns.

We met with the *Hartsease* Shallop.

Note.

The end of *Sir Thomas Smiths Inlet* discovered.

We returned towards our Ship. A storme began when we were amongst Ice.

We got forth of the Ice.

We came aboard our ships.

The *Holland* Discoverers go homewards. Our Ship went forth to Sea. We met with Ice eight leagues from the shore.

We plyed off
and on the
Ice two dayes.

Wee anchored
again in the
North Harbor.

I went to the
Eastwards in a
shallop.
Ice was newly
frozen in Red-
cliffe Sound.
I intended to
goe once to
Point De fire.

A great snow
began.

I could not
passe for Ice.

The originall
cause of Ice at
Sea.

I went backe
again to Red-
beach.

I returned to-
wards our ship.

Point Welcome.

Westwards, and plyed off and on close by the Ice, till the thirteenth day at mid-night, still expecting a change of the weather, that we might have made some adventure amongst the shattered Ice, for both on the twelfth and thirteenth day, the winde blew hard at North, and the weather was cold, thicke, and very winter-like with fall of snow: this winde being so contrarie, droue both the Ice and our ship to leewards towards the shoare, so that wee were forced to put into Harbour againe, and came to an Anchor the fourteenth day in the North Harbour of *Faire Haven*, where the Fleet of *Hollanders* lately rid, at which time the *Hartsease* was there at an Anchor.

Now was the Land both Mountaynes and Plaines wholly couered with snow; so that almost all mens mindes were possessed with a desire of returning for *England*: But to preuent a sudden resolution for a homeward Voyage without further satisfaction, I made motion that once againe we might goe forth with our shallops, to see what alteration there might bee found amongst the shoare. It fell out that I was to goe in one shallop for this purpose, so I tooke with me eight men, and went from our ship the fifteenth day of August.

We rowed to *Red-cliffe Sound*, where we passed through much Ice that was newly congealed being thicker then an halfe Crowns piece of siluer, notwithstanding we broke way through it, and being ouer the *Sound*, we had a cleere Sea againe; then we proceeded to *Red-beach*, where finding the shoare cleere of Ice (which at my last being there was wonderfully pestered) I conceived good hope to finde passage to the furthest Land from thence in sight, bearing East halfe a point Southerly, nine, or ten leagues distant; to this end we put off from the shoare of *Red-beach*, and rowed a league and more in an open Sea, and then met with Ice which lay dispersed abroad, and was no hinderance to our proceeding, so that we continued rowing the space of sixe houres, in which time we had gotten more then halfe way ouer: but then we found the Ice to lye very thicke thronged together, so that it caused vs much to alter our course, sometimes Southward and sometimes Northwards, and euen in this time, when we thought wee stood in most need of cleere weather, it pleased God to send vs the contrary, for it beganne to snow very fast, which made the Ayre so thicke that we could not see to make choice of the most likely way for vs to passe, therefore I thought good to stay here awhile, hoping that ere long the weather would bee more agreeable to our purpose; so a Grapnell being laid forth vpon an Island off, to hold fast our shallop, a Tent was made of the shallops sayle to keepe the weather from vs, and we remayned here five houres, but finding no alteration in the constant weather, I willed the men to take downe the Tent, and with faire tearmes perswaded them, that notwithstanding the wet weather, it were good to be doing something, to get ouer to the desired shoare, where we might refresh our selues, and haue fire to dry our wet clothes; they seemed well content with this motion, and so we rowed the space of foure houres more, the Ice still causing vs to hold a South and South South-east course, which carried vs further into *Sir Thomas Smiths Inlet*, and put vs from the place where we willed to be.

The thicke snowie weather continued all this time, which was very vncomfortable to vs all, but especially to the men that rowed; and as the snow was noysome to their bodies, so did it also begin to astonish their mindes, as I well perceiued by their speeches, which proceeded vpon this occasion. The snow hauing continued thus long, and falling vpon the smooth water, lay in some places an inch thicke, being already in the nature of an Ice compact, though not congealed, and hindred sometimes our shallops way; this I say caused some of them, not altogether without reason to say, that if it should now freeze as it did that night when we came ouer *Red-cliffe Sound*, we should be in danger here to be frozen vp. Howsoeuer this search might bee a meanes to discourage the rest, that considered not of such a thing till they had heard it spoken of: yet true it is, that I saw no likelihood, by reason of the Ice, how to attayne my desire at this time, and therefore I bade them row toward the shoare of *Red-beach* againe, where I intended to stay till the weather might happily be more conuenient. So holding a West North-west course, so neere as the Ice would suffer vs, wee came to the East-side of *Red-beach*, hauing bene eighteen houres amongst the Ice, during all which time the snow fell, and as yet ceased not. When we had been here about an houre it began to cleere vp, and the wind to blow hard at East, which rather packt the Ice close together in this place then disperst it, so that I was now out of hope to get any further then I had bene already: wherefore I returned toward our ship, intending as I went to make a more particular Discouerie of *Broad-bay*, and *Red-cliffe Sound*, hoping that one place or other would afford some thing worthy of the time and labour. When we were come to the West side of *Red-beach*, it began to blow much wind, where withall the Sea growing to be great, all men aduised to passe ouer *Broad-bay*, whilst the winde and weather would serue vs to sayle, for they said it was like to be very foule weather: so seeing that it was no conuenient time for coasting, we came ouer the Bay to *Point Welcome* (which I so named because it is a place, where wee oftentimes rested, when wee went forth in our shallops) it is about foure leagues distant from the North end of *Red-beach*.

At this point the *Hollanders* had set vp Prince *Maurice* his Armes, neere vnto a Crosse which I had caused to bee set vp aboue a moneth before, and had nayled a sixe pence thereon with the

the Kings Armes, but the men that were with me, went (without any such direction from mee) and pulled downe the said Princes Armes, whilst I was gone vp a Mountayne to looke into the Sea, if I could see any Ice: and when I came downe againe they told me, that the six pence was taken from the Crosse that I had set vp, and there was another post set by it, with the *Hollanders* Armes made fast thereon, which they had pulled downe; so, because the six pence was taken away, I caused one to naye the Kings Armes cast in Lead vpon the Crosse: which being done we rowed to the bottome of *Red-cliffe Sound*, and as we coasted alongst the shoare, we searched two little Beaches, which had some wood on them, but nothing that we found of better value.

About two leagues within the *Sound*, on the East side there is an Harbour where shippes may ride in good ground Land-lockt, but if other yeeres be like this, I cannot say that it is an Harbour fitting for ships, because it is late ere the Sound breake vp; for euen now there lay much Ice at the bottome of it, insomuch, that I was forst to leaue the shallop, because I could not passe with her for Ice, and walke two miles ouer stonie Mountaynes, with another man in my company, to bee satisfied concerning a point of Land that shot into the Sound, whether it were an Island or no, as by all likelihood it seemed to bee: but when I came to the farthest part of it, I saw it joyne to the mayne Land, wherefore I called it *Point Decoit*, because it deceived mee so much. From hence wee proceeded toward our shippe, and came aboard of her in the North Harbour of *Faire Hauens*, on Friday night being the nineteenth of August, where she rid alone; for Master *Marmaduke* was gone forth to Sea that day.

The two and twentieth of August, *Iohn Mason* Master of the *Gamaliell*, came ouer from the South Harbour for helpe to hayle vp a Whale which had beene sunke fourteene dayes, in one hundred and twentie fathome depth, or else to pull the Warpe and Harping Iron out of her, for now it was time to take her or forsake her. Master *Sherwin* our Master caused our long Boate to bee manned and went with him; when they came where the Whale was sunke, they haled, and shee presently rose, bolting suddenly vp with a thundring cracke made with the bursting of her bodie; and notwithstanding shee had layen so long, yet had shee all her Finnes fast. Whilst this was in doing, the *Hartsease* was coming into the Harbour from the Northward, and anchored by our ship an houre after.

Here wee stayed till the seuen and twentieth of August, and since my last returne hither in the shallop from the Eastwards, the weather hath beene commonly warme, and the Mountaynes were now more cleere of Snow, then they had beene any time this yeere, notwithstanding there had much snowe fallen since the beginning of this moneth, but it was quite consumed, and a greater signe of warmth and thaw was now to bee obserued then any time of the yeere heretofore; namely, by the often falling of the Ice into the Sea from the huge snowie bankes, making a noyse like Thunder, so that the time was very hopefull, but thus wee made vse of occasion offered.

The seuen and twentieth of August, it was faire and warme weather, calme till noone, then had wee a gale of winde from the South South-west, wherewithall wee set sayle out of *Faire-hauens* in the company of the *Hartsease*, with whom wee had beene in termes of comfort-ship, but nothing was concluded. About fixe a clocke at night wee were fixe leagues from Cape

Barren, which bore from vs South-west and by South. We proceeded still to the North-eastward, and on the eight and twentieth day in the morning wee had runne about twentie leagues from Cape *Barren*, in an East North-east way by the ordinary Compasse, being open of *Sir Thomas Smiths Inlet*, nine or tenne leagues from the shoare; at which time wee were come to the Ice that trended East South-east, and West North-west, but the Sea being very rough, wee stood off againe from the Ice; in the afternoone it fell calme, and at night we had a gale of winde at East, and the ship was steered West, and then South-west homewards.

The nine and twentieth day, the winde Easterly an easie gale; at foure a clocke in the afternoone *Hackluyts Head-land* bore from vs South-east by East foure leagues distant: this Euening was very warme.

The thirtieth day, the winde at North-east an easie gale, at foure a clocke in the afternoone, *Maudlen Point* bore East North-east halfe a Point Easterly about three leagues distant: towards the Euening it fell calme, the weather not cold.

The thirtieth day, faire Sunne-shine weather and calme till noone, and then we had a good gale of winde from the North-east, being five leagues distant from the *Fore-land*, which bore South-east; now wee altered our course and stood to the West-ward: therefore to keepe vs still in the parallel that now wee were in which was 79. degrees 8. minutes, West North-west course was directed, in respect of the Variation, to make good a true West way.

This course wee held till we had runne about twentie leagues, and then wee ranne twentie leagues more in a West and by North course till one a clocke on Friday morning; at which time it fell calme; and wee heard the Sea make a great noyse, as if wee had beene neere Land, but wee rather iudged it to bee Ice, as indeed it proued to bee, for in the morning when it

The Kings Armes are set vp againe at Point Welcome. I went into Red cliffe Sound.

Point Decoit.

I came aboard our ship.

A Whale lay sunken fourteene dayes.

The *Hartsease* anchored by vs. Warne weather in the end of August.

We set sayle to the Eastward.

The *Thomasine* returns for England.

We stood to the westwards.

Wee met with
Ice.

was light and cleere, wee saw the Ice about a league from vs, which trended Southerly; hauing now a gale at East North-east, wee steered away South and South South-east, but in the afternoone we were embayed with a long banke of Ice, which wee could not weather, therefore wee were faine to tacke about, and the winde hauing come more Southerly then it was in the morning, wee stood off from the Ice North-east and North-east and by North, and then to the Southwards againe, making sundrie boardes to get forth to wind-wards of the Ice.

The third day before
noone.

The third day before noone, wee had sight againe of Ice to Westwards of vs, and at noone were vnder the parallel of 78. degrees 27. minutes, according to my Obseruation: then wee stood a way South to keepe cleere of the Ice, for wee had a great homing Sea, although but little winde; and therefore durst not be to bold to edge too neere it, especially the wind being Easterly as then it was.

We left the
Ice and came
for England.

On the fourth day our men saw the Ice againe from the mayne top-mast head, and therefore wee still maintayned a Southerly course: the next day it began to be foggie, and continued close weather and hazie for three dayes, so that wee had no more sight of the Ice; neyther could wee at this time receiue any further satisfaction concerning the same: theretoe wee kept a Southerly course so neere as wee could, although wee had but little winde, and the same very variable till the ninth day, but then wee had a good gale of winde at West North-west.

A storme be-
ganne.

On the tenth day beeing Saturday, wee were by my reckoning fiftie leagues distant from Low-foot, which bore from vs East South-east halfe a Point Southerly: this day the wind shifted to the South-west, and at night came to the South with much raine; then came backe againe to the West North-west and began a great storme.

A Corpo Santo.
It is often seen
at the end of
stormes.

This night the Master and others saw a light vpon the Fore-bonnet, which the Saylers call a *Corpo Santo*: it appeared like the flame of a Candle, and (as Sea-men obserue) it alwayes presageth an ensuing storme; which to verifie, this foule weather continued the next day, and grew to be so vehement on Sunday night, that the Sea oftentimes ouer-raked our ship, and wee were faine to lye atry with our fore course onely, and our Mayne top-mast also stricke, which last thing (as Sea-men say) is feldome done at Sea, then about one a clocke we were forced to take in our fore course, and to lye a-hull for five houres.

The fourth day of October, the shippe came to Wapping with the whole number of men that shee carryed forth (my selfe excepted that was come before) being sixe and twentie, all in perfect health.

CHAP. VII.

A true report of a Voyage Anno 1615. for Discouerie of Seas, Lands, and Islands, to the Northwards; as it was performed by ROBERT FOTHERBIE, in a Pinnasse of twentie tunnes called the Richard of London: set forth at the charge of the Right Worshipfull Sir THOMAS SMITH, Knight, my very good Master, and Master RICHARD WICHE, Gouvernours: and the rest of the Worshipfull Company of Merchants, called the Merchants of New Trades and Discoueries, trading into Moscouia, and King IAMES his New Land.

Y the prouidence of Almighty God I went forth of Harwich Harbour in the foresaid Pinnasse, the twelfth of May, in the company of eight shippes of the Fleet, for King IAMES his New Land, who in foule weather out-fayled me in the latitude 71. degrees, or thereabouts: So I proceeded alone towards King IAMES his New Land: and met with Ice in latitude 73. degrees 30. minutes, I stood North-eastwards for the wast of King IAMES his New Land, and had sundry conflicts with the Ice in rainie and wet foggie weather, and had sight of Land the eleuenth of Iune, and on the nineteenth of the same I anchored in Faire Hauen. Here I stayed till the thirde of Iuly, for the Pinnasse had receiued some hurt amongst the Ice, which to amend, I was faine to hale her a-ground, besides diuers other things necessary to be done, which detayned mee longer then willingly I would haue stayed there.

Hackluyts
Headland.

From hence I sayled Northward, but met with Ice in latitude 79. degrees 50. minutes, being six leagues from Hackluyts Head-land, then I coasted the Ice as it lay in Points and Bayes to the Westwards and South-westward, and being thirtie leagues from the Land in latitude 79. degrees 10. minutes, I found it to trend Northward and North-westwards, and coasted it to the latitude

of 79. degrees 50. minutes, but then I was embayed with Ice, and was faine to stand out againe and sailed about ten leagues before I got cleere: when I was out of this Bay, I proceeded South Westerly with the Ice on the starboord to the latitude 78. degrees 30. minutes, where being fortie leagues from the shoare, I was againe embayed with the Ice, and hauing had faire Sun-shine weather all the day, which made mee the bolder to stand so neere it, the weather on a sudden fell foggie, and the wind beganne to blow hard at South, which put vs to great trouble and no small perill: but the Almighty power who hath mercifully deliuered vs heretofore out of as great dangers, preferred vs also from this: when wee were gotten cleere off the Ice, we had the Sea much growne, and the storme increasing, but being desirous still to keepe the Sea, I stood close by the wind vnder a payre of coarces, till the Pinnasse waxt leake with bearing too much sayle, and there was forced to lye atry vnder a mayne coarce only: and although shee stemmed South-east and South-east by South, yet was she hurried violently to the North-eastwards, and by the mercifull prouidence of God we fell right with the *Fore-land*, in latitude 79. degrees, then I stood ouer *Sir Thomas Smiths Bay* for harbour in *Crosse-road*, where I anchored the thirteenth of Iuly being Thursday. I stayed here foure dayes, in which time my men mended the Sayles and ships tackling that had receiued hurt by the late storme, and made a new mayne Sayle to serue in time of need, and on the seuenteenth of Iuly I weighed out of *Crosse-road*, and sayling Westwards from thence came to Ice againe in latitude 78. degrees 40. minutes, which I coasted as it lay neereft South-west, or more Westerly, but with many Points & Bayes, wherewith I was sometimes intangled, yet, God be thanked, got cleere againe, either by helpe of Oares or Sayles without any hurt. In this sort I proceeded with good satisfaction, although not with so good content, till I came to the latitude of 76. degrees, being about one hundred leagues from Point *Looke-out*, but then was crossed with a contrarie storme from the South-west and South South-west, which droue me to the South-eastward, till I came in the latitude of 74. degrees, and then I made my way Westward againe, so neere as I could lye, close by the winde, and ouer-ranne the formerly supposed Land of *Gronland*, which some haue layd downe in plats and extended to 75. degrees. When I came into the latitude of 73. degrees, I stood West and North-west, and fell with Ice againe in latitude 73. degrees 50. minutes, and thought indeed at that time that I was neere Land by abundance of Fowle, which we saw in great flockes: but such thicke fogges haue continued for three or foure dayes together, that we might sooner heare the Land if any were, then see it, and so did we first find this Ice by hearing the rut, thinking till we saw it, that it had beene Land, so that we were embayed with it, before we thought that we had beene neere it; then I stood out againe and coasted the Ice still to the Westwards Southerly, but could see no Land, as I expected to haue done, vntill wee came vnder the latitude of 71. degrees thirtie minutes, and then we espyed a snowie Hill very high in the cloudes, for this day was very cleere at Sea, but the fogge was not yet cleered from the Land, so that we could see no part of it, but only the top of a snowie Mountayne, which appeared very high although wee were foureene or fifteene leagues distant from it, bearing off vs South-east and by South.

Perill and escape.

Note: Error of Gronland.

Fogges.

High Hill.

Then I stood in for the shoare, supposing it had beene part of the Mayne of *Gronland*: for the fogge lay on each side of this Mount, as if there had beene a great Continent vnder it, but it proved otherwise, for as we came neerer to it, the fogge dispersed more and more, and when wee were five leagues distant, the Land appeared in forme like an Island.

When I came neerer the shore, I could find no Harbor to anchor in. Notwithstanding, the weather being faire & calme, I hoist out my Boat & went ashore with three men more, and set vp the Kings Armes: then we searched a Sandie Beach, which was abundantly stored with drift wood, but yeelded no other fruits, that we could find worth the taking vp, so I returned aboard againe, and sent alhoare my Boat to fetch some wood. But before the men had laid into her the little quantitie that she was able to carrie, they came aboard againe, for the wind began to blow hard, and the Sea to goe loftie, so that here was no place for vs to abide any longer, otherwise I was purposed to haue searched further alongst the shoare, but this gale of winde comming Northerly I stood from hence to the Westwards, being desirous to see more Land or finde a more open Sea. And hauing sayled about fifteene or sixteene leagues I met with Ice againe, in latitude 71. degrees, and coasted it eight or nine leagues further Westward, and South-westward as it lay, but then the wind came to the South-west, and we stood close by it a while to the Southwards, but finding the gale to increase, and considering that it was the most contrary winde which could blow against my further proceeding (for the Ice as we found did trend neereft South-west, and besides if there had beene any high Land within twentie leagues of vs, wee might perfectly haue made it, the weather was so faire and cleere.) In these respects, and for the Reasons following, I tooke the benefit of this wind to returne to the North-eastwards againe, being now about two hundred leagues from King *James his New Land* in latitude 71. degrees.

Drift wood.

Note.

First, I purposed to sayle alongst the South-east side of the Land that I had discovered, to bee better satisfied what Harbours there were, and what likelihood of profit to ensue; and from thence to proceed to the place where I first fell with Ice in latitude 73. degrees when I was driuen to the South-eastwards with a Westerly storme, for I am yet verily perswaded, that being there

there we were not farre from Land, although wee could not see it by reason of thicke foggie weather. Then my further intent was, if I found no good occasion to spend my time there, for to coast the Ice, or try the open Sea to the Northwards, betwixt 73. and 76. degrees, where formerly I had not receiued desired satisfaction by reason of a storme that draue me off, and then I purposed, if time might seeme conuenient, to proceed to the North Coast of King James his New Land, to haue seene what hope was there to be had for passage Northward, or for compassing of the Land, which is most like to be an Island.

I stood away East and by South, and being neere the foresaid Island, the winde came to the West and blew a very hard gale, wherewith I passed alongst the South-east side of the Island vnder a paire of coarces, but without that satisfaction which I expected: for the winde blowing so stormie, and the Sea growne very great, I was forced to stand further from the shoare then willingly I would haue done, and besides there was a thicke fogge vpon the Land, whereby I could not be satisfied what Harbours or Roads were about it, yet might we see three or foure Capes, or Head-lands, as if there went in Bayes betwixt them. I sayled about it, and then stood to the Northward againe, and being now assured that it was an Island, I named it Sir Thomas Smiths Island.

Sir T. Smiths
Island.

Mount Hack-
luyt.

This Island is about ten leagues in length, and stretcheth North-east and South-west: it is high Land, and at the North end of it there is a Mountayne of a wonderfull height and bignesse, all couered with Snow, which I called *Mount Hackluyt*; the base or foot of it on the East side is almost foure leagues long, it hath three such sides at the base lying out to the Sea, and from the fourth side doth the rest of the Island extend it selfe towards the South-west, which is also, as it were, a place fortified with Castles and Bulwarkes, for on each side there bee three or foure high Rockes which stand out from the Land, appearing like Towres and Forts. It lyes in the parallel of 71. degrees, where the Needle varieth from the true Meridian Westwards eight degrees. The Land is generally so farre as I haue seene, Rockie and very barren, and worse then the Land that I haue seene in King James his New Land, vnder eightie degrees, for there is no grasse but mosse, and where I first landed vpon low ground, all the stones were like vnto a Smiths sin-
ders both in colour and forme, the sand is generally mixed with a corne like Amber; the Beaches are abundantly stored with drift wood and many stones, light like Pumis, which will swimme on the water. I saw many traces of Foxes and the footing of Beares, but not any signe of Deere or other liuing creatures, and very small store of Fowle.

From hence I stood to the Northward according to my former purpose, but was crossed with a contrarie storme from the North-west which put me off to the Eastward: but as the wind shifted I made my way to the North-westwards all I could, and came againe to the Ice in latitude 75. degrees, from whence I proceeded towards King James his New Land, and had sight of the Land the eighteenth of August, being in latitude 77. degrees 30. minutes, and hauing a hard gale of wind then at North-west, I stood close by it vnder a paire of coarces, but could not weather Prince Charles Island, and therefore I bore vp, intending to goe into Nicks Cone, which is on the North side of Ice-sound, there to attend a faire winde, and in the meane time to get ballast aboard the Pinnasse, and all other things necessary. But comming to enter into the Harbour, I thought it not a place conuenient, because I could hardly haue gotten out againe with a Southerly wind, which would carrie me to the Northwards, and therefore I stood ouer for Green-harbor, where I anchored at one a clocke in the morning, the nineteenth of August.

Here I caused my men to launch a shallop, and to get ballast and water aboard the Pinnasse, and before nine a clocke at night I was readie to proceed Northward with the first faire winde. I stayed here fife dayes, during which time it blew hard for the most part at North and North-west, and on the foure and twentieth of August, the winde came to the East North-east as wee supposed, till we were out of the Harbour, so I set sayle to proceed Northward, and had the wind Easterly out of Ice-sound, wherewith I stood North-west towards Cape Cold, but being cleere of the high Land, we found the wind to bee at North North-east; therefore I resolued of another course, which was this.

Hudsons Hold-
with-hope que-
stioned, as be-
fore also.

Hauing perused Hudsons Iournall written by his owne hand in that Voyage wherein hee had sight of certayne Land, which he named *Hold-with-hope*; I found that by his owne reckoning it should not be more then one hundred leagues distant from King James his New Land, and in the latitude of 72. degrees 30. minutes or thereabouts: therefore seeing I could not proceed Northward, I purposed to goe to the South-westwards to haue sight of this Land, and discover it, if wind and weather would permit. So I stood away South-west, and sometimes West South-west, till I had runne one hundred and thirtie leagues, and was by account in latitude 72. degrees 30. minutes, where hauing the wind contrarie to proceed further Westward, I stood Eastward till I had runne thirtie leagues, in which course I should haue seene this Land, if credit might be giuen to Hudsons Iournall, but I saw not any. And hauing a hard gale of winde still Northerly, I conceiued no course so good to be taken at this time, as to speed homewards; and so stood to the Southwards, directing my course for England, this beeing the eight and twentieth of August. After which time the wind continued Northerly till the sixt day of September, and then wee were

were on the coast of *Scotland* in latitude 57. degrees, and on the eight day of September had sight of the land of *England* on the coast of *Yorkshire*. Thus by the great mercy of God haue we escaped many dangers, and after a cold Summer haue some taste of a warme Autumne. All glorie therefore be to God the Father, the Sonne, and the Holy Ghost. Amen.

By this briefe Relation, and by the plat wherein I haue traced the ships way vpon each seuerall trauesse it may plainly appeare, how farre the state of this Sea is discovered betwixt 80. and 71. degrees of latitude, making difference of longitude 26. degrees from the Meridian of *Hackluyts Headland*.

Now if any demand my opinion concerning hope of a passage to bee found in those Seas; I answer, that it is true, that I both hoped and much desired, to haue passed further then I did, but was hindred with Ice: wherein although I haue not attained my desire, yet forasmuch as it appeares not yet to the contrarie, but that there is a spacious Sea betwixt *Groinland* and King *James* his *New-land*, although much pestered with Ice; I will not seeme to dissuade this worshipfull Companie from the yearly aduenturing of 150. or 200. pounds at the most, till some further discouerie be made of the said Seas and Lands adjacent, for which purpose no other Vessel would I aduise vnto, then this Pinnasse with ten men, which I hold to bee most conuenient for that action, although heretofore I conceiued otherwise, but now I speake after good experience, hauing sayled in her out and in about two thousand leagues.

RO. FOTHERBY.

A Letter of ROBERT FOTHERBY to Captaine EDGE,
written in *Crosse-ode*, July 15. 1615.

After Edge, By the mercy of God I came into *Crosse-road* on Thursday last, being driven from Sea neere shore by extreme tempest. At the beginning of the storme I was unwittingly embayed with Ice about fortie leagues from land, in latitude 78. degrees and 30. minutes, but, thanks be to God, I got cleare of it, yet not without much trouble and great danger. Having plyed under two courses to and againe so long till my Pinnasse was made leake with bearing, I tryed it under a mayne course and stend South-east and South-east and by South, notwithstanding I was hurried to the Northward, and fell right with the Foreland, which by reason of the misty storme we could not see till we were within a league of it; then I stood over the Bay and came to an anchor here, where I must be forced to stay till our sailes be mended, and a new mayne course be made, if not a fore course also. Then I purpose to goe to Sea againe, and to proceed in coasting the Ice to the Westward, if it hinder me to proceed Northward. I haue already coasted it from *Hackluyts Headland* to the latitude aforesaid, and intend to beginne againe so neare as I can at the place where I was put off with the storme. I came from *Faire Hauen* the fourth of July, and then had there beene killed twelue Whales, besides one found dead, and another brought in by Fra. Birkes, which he found at Sea before he came into *Faire Hauen*.

When I came in hither, here were three Ships and a Pinnasse of the King of Denmarks; they rid in deepe water about a league and a halfe from the Road, but weighed from thence, and the Admirall came to an anchor close by me, and sent to intreat me to come aboard of him; I went aboard and was courteously entertained by the Generall, who questioned me of the Country, and asked me by what right the English Merchants did resort and fish in this place: I told him, by the King of Englands right, who had granted a Patent to the Muscouie Company of Merchants, whereby he authorizeth them, and forbiddeth all others to frequent these places. Then he entreated me to goe with him to Sir Tho. Smiths Bay, to the two English ships there. I told him, it would be losse of time to me, because I had some businesse here to doe, and then to goe forth presently to Sea againe to prosecute my Discouery. He said, that he would haue me goe with him to be witnesse what passed betwixt him and you, for he had matters of importance to acquaint you withall, which concerned our King and theirs, and therefore intreated me to giue direction presently to weigh and set saile, for I must needs goe with him: I replied againe, that it would be a great losse vnto me of time, and I knew not how to answer it; but he told me peremptorily that I must goe with him. So seeing no remedie, I bad the Master be readie: then he presently weighed and kept me aboard him, but afterwards meeting with the two Capitaines that came from you, he returned and anchored againe in *Crosse-road*. I receiued very courteous entertainment of the Admirall, Vice-admirall, and of Captaine Killingham: but Captaine Killingham being aboard of me, went away as he seemed, discontented, because I would not giue him a young Morse I haue aboard, which I denyed to doe, because I writ to my Master from *Faire Hauen*, that such a thing I haue, and will bring alike into England, if I may. When he went off aboard of me, he said, he would shoot downe my flag: And soone after there came a shot which fiew ouer vs, out of the Admirall, and I expected another; but soone after there came a man aboard of me out of the Admirall, to see if any of your men that came in the Shallop, would goe with them into the Bay, and he swore vnto me that the shot was made to call their Boat aboard, because they were ready to weigh. As farre as I can perceiue, their purpose is to see what Grant the King of England hath made

Ships of the King of Denmarke.

made unto the Companie, for they seeme to pretend that the right of this Land belongs to the King of Denmarke, and neither to English nor Hollanders. Thus with my heartie commendations to your selfe, and Master Bredcake, together with my prayers for your prosperous voyage, I commit you to God.

CHAP. VIII.

Diuers other Voyages to Greenland, with Letters of those which were there employed, communicated to mee by Master
WILLIAM HELEY.

An. 1616. Edges Iland was discovered, and a prosperous voyage was made, all the ships being laden, vnder the command of Captaine Thomas Edge. An. 1617. Witches Iland was discovered; and what voyage was made appeareth in the Letter following, written to Master Decrow by William Heley.

Laus Deo, in Portnick the 12. of August, 1617.

Worshipfull Sir,

My dutie remembred, May it please you to understand, that through Gods blessing our Voyage is performed in all the Harbours in the Countrie this yeere, with a greater ouerplus then our ships will carry: so that in some places we must of force leane good store of Oyle and Blubber behinde for the next yeere. Wee are all for the most part readie to set sayle, being full laden: onely I desire to see the Coast cleere of Interlopers, whereby our provisions may be left in securitie. We tooke a ship of Flushing, called the Noahs Arke (Master, Iohn Verhile) in Horne-sound, hauing out of him two hundred hogheads of Blubber, and two Whales and a halfe to cut vp, a great Copper, and diuers other provisions, and sent him away ballasted with stones. There were two more of them who were gone laden with Blubber, before we could get thither, hauing intelligence of our coming. There were also two Danes, who made one hundred and odde tunnes of Oyle, and laded one ship for Copen-hauen, the other with halfe the Oyle and Finnes for Amsterdam, and left the Countrey about the sixth or seuenth of August. And for Master Cudner, he rid in Portnick, where he killed eleuen Whales, and made some seuentie and odde tunnes of Oyle, which is laden aboard him and his Finnes. In whom, if our ships had come together thither as I desired, I would haue laden fortie or fiftie tunnes of Oyle in him, and displaced his men and sent him for England: but bad weather hindring our ships getting thither, and his sudden departure after our coming in with the Pleasure, shee being laden and not sufficiently fitted to surprise him, he escaped, but I sent her away in company with him, whereby he may not doe any hurt in other places in the Countrey. I would haue had him to haue taken in some Oyle, for which I offered him freight, so I might put some men into him to see to it, and that it might be brought safe to London: but he refused, yet protesteth, he purposeth to bring his ship and goods to London: his voyage is by the thirds, so that his men will rather dye then forgoe that they haue got. The small ship Iohn Ellis is returned from the South Eastward, hauing made some further discovery, and killed some eight hundred Seamorse, and laden the teeth, and thirtie tunnes of hides, and the rest of his lading in Oyle: he brought some Sea-horse blubber with him. He met with Thomas Marmaduke of Hull in those parts, who had not done any thing when he saw him towards making a voyage, but went for Hope Iland, and no doubt but hee will doe much spoile there. As for the Beare, shee departed for Hamborough the third of August out of Crosse-road; and the Gray-hound in company with her for England, who, I hope, is safely arrived, and by whom I hope you understand of her proceedings at full.

The Whales killed this yeere in the Countrey are about one hundred and fiftie in number, and the Oyle made will be about one thousand eight hundred and odde tunnes, besides the blubber left for want of cask. The lading of this ship is one hundred and eightie tunnes, as by the Bill of lading here inclosed. Thus hauing not further wherewith to acquaint your Worship, withall praying God to send all home in safety with a good passage; I humbly take my leaue, and doe rest

Readie at your Worships command in all dutifull seruice.

WILLIAM HELEY.

A Letter of Master ROBERT SALMON to Master SHERWIN.

In Sir THOMAS SMITHES Bay, the
24. of Iune, 1618.

Loving friend Master Sherwine, I kindly salute you, wishing you as much prosperitie as unto my selfe, &c. Since our comming into the Bay, we have beene much troubled with Ice and Northerly windes, so as we have not beene two dayes free of Ice. We had a storme Northerly which brought in much Ice, so as we were inclosed withall eight dayes: there went such a Sea in the Ice that did beate our ships very much for foure and twentie houres, that I did thinke we should have spoyled our ships: but I thanke God we cannot perceine any hurt at all it hath done to vs; also we have broken two anchors with the Ice; we have killed thirteene Whales, but they yeeld but little, in regard of the Ice which hath much hindered vs in our worke, for in ten dayes we could not doe any worke the Bay was so full of Ice: the Bay was full as low as Fox-nose, and now at this present the Bay is full of shattered Ice, the windes hanging Northerly keepes it in. Here is fine faze of Flemmings which have foureene and sixteene pieces of Ordnance in a ship; and they doe man but eighteene Shallops, so that with theirs and ours here is thirtie Shallops in the Bay, too many for vs to make a voyage: there is at the least fiftene hundred tunnes of shipping of the Flemmings; we have reasonable good quarter with them, for we are merry aboard of them, and they of vs; they have good store of Sacks, and are very kinde to vs, proffering vs any thing that we want. I am very doubtfull of making a voyage this yeere, yet I hope Crosse-road will helpe vs for one ship, the Company must take another course the next yeere: if they meane to make any benefit of this Country, they must send better ships that must beat these knaves out of this Country, but as farre as I can understand by them, they meane to make a trade of continuance of it: they have every one of them Graue Maurices Commission under his Hand and Seale: we will let them rest this yeere, and let who will take care the next yeere, for I hope not to trouble them. I pray remember my dutie to the Captaine, and also to honest Master Thornbulh, and to Iohn Martin; Master Smith doth remember his love to you, and to all the rest of his friends: we are well at this present, I thanke God: I pray let vs heare from you when you have any conuayance; I hope wee shall goe home in companie together as wee came out. Thus with my love once againe remembred to you, beseeching God to send vs all a prosperous voyage, and ioyfully to meet, I rest.

A Letter of Master TH. SHERWIN: Bell-sound this
29. of Iune, 1618.

Master William Heley, your Letter I receiued, wherein I understand you haue tooke very great griefe, which I am very sorry for: but I am in good hope to come to you my selfe one of these dayes, that I may comfort you with a good comple of Hennes and a bottle of Canary wine, but I pray bee carefull of your selfe and keepe you warme, and take heed the Nodis doe not pick out your eyes: but as for the Flemmings let them all go hang themselves, and although you be not strong enough to meddle with them, yet the worst wordes are too good for them, the time may come you may be reuenged on them againe. The Captaine wishes they would come all into Bell-sound and beat vs out, and carry vs for Holland; here is a great fleet of them in this Country. Here came in two Flemmings, but wee handled them very honestly, but for feare of after-claps, or had it beene the latter part of the yeere, we would haue handled them better; now they be gone for Horne-sound, I would that they had all of them as good a paire of hornes growing on their heads, as is in this Country. As concerning our voyage, Master Salmon can certifie you both in Horne-sound, and in our harbour. My brother Bulle, Iohn Martin, and I, dranke to you, and wish you many a Venison pasty. We haue so little to doe wee feare we shall all haue the Scurvy, but we haue pulled downe the Flemmish house, and brought it neere more fit for our turne. Thus praying you to remember my love to all at Faire-hauen, I cease, with my prayers to God, to send you and vs all a prosperous voyage, with all your good health, that we may goe merrily home together.

A Letter of IAMES BEVERSHAM to Master HELEY. From
Faire-hauen, the 12. of Iuly, 1618.

Master Heley, My commendations remembred to your selfe, Master Salmon, Master Smith, and Master Beymond, as also to Master Wilkenison, Mate Headland, Master Greene, and the rest of our good friends with you, wishing all your healths as my owne; I am very sorry to understand of the annoyances by the Flemmings, both with you and other places; as also of the small hope there is, in making a voyage this yeere. For our parts we are and haue beene so pestered with Ice these twentie dayes, that we haue not beene able to goe out to Sea with our Shallops aboue twice in the time, neither haue we beene able to doe any good by reason of foule weather and fogs, nor haue seen any more then

one Whale in all that time, which after shee was killed turned vs to much trouble, by reason of foule weather, and forced vs at last to leaue her in the Ice, where the Beares made a prey of her, who I feare will spoyle her before shee be recovered. We haue killed sixteene Whales besides, whereof the Flemmish Biscainers stole one, for which they haue promised satisfaction: but they are so shut vp with Ice that they are not able to stirre either Ships or Shallops. All the Sea to the Northward of Hakluyts headland, and both Eastward and Westward thereof, is packt so full of Ice, that I feare it will ouerthrow our voyage, and put our ships in much bazard, the Lord release vs of that miserie in due time. I neither haue nor will be slack to doe my best endeuours for the good of the voyage, the prosperitie whereof I doe much wish and desire both here and in all other places. I pray remember my loue to the Captaine, by your next conuoy to the Southward, with my commendations to all the rest of our friends; thus for present wishing your health, I kindly take my leaue, and rest your louing friend.

I had thought to haue added a large Discourse of occurrents betwixt the Dutch and English in Greenland this 1618. and had prepared it to the Presse. But hauing alreadye giuen some Relation thereof from Captaine Edge &c. and seeing the insolencies of some of the Dutch were intolerable to English spirits, which then suffered, or hereafter should reade them; I chose rather to passe them by; aduising my Countreymen not to impute to that Nation what some frothy spirit vomits from amidst his drinke, but to honor the Hollanders worth, and to acknowledge the glorie of the Confederate Provinces, howsoeuer they also haue their sinke and stinking sewers (too officious mouthes, such as some in this businesse of Greenland, beyond all names of impudence against his Maiestie, and his Leage people, as others elsewhere haue demeaned themselves) whose lothsome-
ness is not to be cast as an aspersion to that industrious and illustrious Nation. Euery Body hath its excrements, euery great House its Vault or Iakes, euery Citie some Port exquiline and dung-hills, euery Campe the baggage; the World it selfe a Hell: and so hath euery Nation the retriments, scumme, dregs, rascalitie, intempered, distempered spirits, which not fearing God nor reuerencing Man, spare not to spue out that to the dishonor of both, which sauing the honor of both can scarcely be related after them. A difference is to be made of relation and personall fautes, of which we haue said enough in the East India quarrels, twixt ours and the Dutch.

A Letter of IOHN CHAMBERS to W. HELEY,
Bel-sound Iune 16. 1619.

Terrible Disaster.

Louing and approved good friend, Master William Heley, &c. I am furd to write in teares unto you for the losse of our Men, by the most uncouth accident that euer befell unto poore men. The thirteenth of Iune last we were put ashore in the Ice Bay, our Shallops being not aboard: but as soone as we heard of it, we made what haste we could, and haled our Shallops upon the Ice, and went aboard our ship. By that time we had bene there an houre, making what meanes we could to get her out, a maine peece of the Cliffe falling, the fearefullest sight that euer I beheld being then aboard, expecting nothing else but death, with all the rest that were in her: But God of his great mercie and providence delivered us, that were not then appointed to dye, that were past all hope of life; for the Ice fell so high and so much, that it carried away our fore-Mast, broke our maine-Mast, sprung our Bouldstrut, and fetcht such a careere that he heaued a peece of Ordnance ouer-boord from under our halfe Decke, houe me ouer boord amongst the Ice in all the sea, and yet I thanke the Lord I was neuer hurt with a peece of Ice, although it pleased God they were spoyled and killed close by me. Thus hauing related unto you the miserie of this our Voyage, hoping of your aide and assistance in what you may, I shall be euer bound to pray for you. The Captaine bid me write unto you for a fine inch Hafer, which I pray you spare me and it be possible: I haue writ the particular of our wants in my Brother Sherwins Letter, which I pray you be a meane to further me in. Thus ceasing any further to trouble you, I commit you unto the Lord, unto whom I pray to blesse and prosper you in this your present Voyage, with all the rest of your dayes.

The men that are killed are these: My Mate Money, Nicholas Greene and Allin the Butcher. There be many more hurt which I hope will recouer it by the helpe of God and the meanes of a good Surgeon.

Louing friend Master Heley, I kindly salute you, &c. Your Letter I receiued the fift of this present: wherein I vnderstand of the backwardnesse of your Voyage, the which I am hartly sorrie for: but you must be content, seeing it is the will of God it shall be so, and that other harbours sake neighbours fare with you: our best hopes of our Voyage was upon you, for of our selues we doe little, in regard we are much troubled with Ice, and haue bin so this ten dayes, which hath made vs hale a shoare sixe or seauen times for it: we haue had the windes at North-east, and East North-east, and at North west, which now keepe in the Ice: we haue killed ten Whales, whereof eight are made into Oyle, which hath made one hundred and cleauan Tuns & a halfe, the other two were killed the fourth of this present, being very large fish,

not doubting but they will make fixe and thirtie or fortie tunnes: we haue the hundred tunnes aboard, the rest Master Barker taketh in, in regard Master Bushes shippe is not fitted up, we shall make her fore-Mast to serue againe and all things else for this Voyage. The fourth of this present, George Wiuelden came from Horne-found, where they haue killed foure Whales, they haue bin much troubled with windes Easterly, also much Ice, there is so much Ice off of Point Looke out, that George could not get about. This Ice hath put in young Duke of Hull into Horne-found, his ship being much torne with the Ice, his Merchant is now aboard of us, his name is Medcalf, whom the Captaine doth detaine, his Voyage is vnterly overthrowne, for he hath lost one shallop with sixe men, and another shallop broken with the Ice, his Ruther Irons being all broken, his Steeme broke a way close to the Woodings, also George did meete with a Fleming of Flushing, burthen two hundred tuns, the which he thinkes is cast away with Ice, for the Ice did beate her very sore. I vnderstand by M. Catchers Letter, that there is cleauen saile of Flemmings and Danes about them, I doubt not but we shall call them to account of how many tunnes of Oyle they haue made, as they did call vs the last Voyage to account: my loue is such vnto them, that I protest I could wish with all my heart that we might goe and see them, and to spend my best blood in the righting of our former wrongs. Also I vnderstood by Robert Foxe, that Adrian of Flushing is one of them, I should be verie glad to see him, that I might balance the account with him. The Captaine willed mee to write vnto you concerning the Ruffe house, that if you cannot set it vp, that then you should make an English house of it, and to place the post of a Deales length, and to be three Deales in length, and so much in breadth, and so to couer it with Deales the next yeare, and so he thinketh that it will make two frames: also hee could wish that you would remoue the Coppers more vp into the Bay. I pray you commend me to my louing friend Master Sherwine, Master Wilkinson, Master Henderson and Michael Greene; also my loue remembred vnto your selfe, I take my leaue, hoping we shall see you at the Fore-land ere it be long: till when, I pray God to blesse you and prosper you in all your proceedings. Resting still

Bell-found the fifth of
Iuly. 1619.

Your assured friend to command
ROBERT SALMON Iunior.

A Letter of I. CATCHER to Master HELEY from Faire-hauen. Laus
Deco, this seuenteenth of Iune 1620.

Louing Brother, with my best loue I salute you, wishing you better then we at this time, to haue good store of Whales to make for you and vs a Voyage, for we haue seene small store of Whales, but haue killed none as yet. In the Flemish barkur there is three Flemings great shippes, whereof is one Statesman of Warre, who haue set to Sea eightene shallops with three Biscainers in euerie shallop; and in our harbour two of the Kings of Denmarke shippes, who haue set to Sea seauen shallops with three Biscainers in euerie shallop: the Hollanders haue killed one Whale, and found one Whale of the last yeares killing. I thought good to send to you the sooner, because we hope you haue good store of Whales, that you may send for vs to you, which I pray God you may, for we are in great doubt, but our hope is, if that you are not yet provided to send for vs, we haue a great time to stay in this Countrie, in which time, it may so please God, that we may here make a Voyage. For our selues, one of our men is dead, and one other sicke, so that wee haue but one and fiftie men, which is too little as you know, therefore if you can spare vs three men, they will stand vs in good stead: if our Voyage commeth in, there is to the Northward good store of Ice, which putteth vs in good comfort that we shall haue Whales: the Danes doe report that there is two shippes to come from Denmarke to our harbour, but as yet are not come. I pray you commend vs to Master Wilkinson, Master Greene, Master Hedlam, Master Cleyborne, Master Alpo, and all the rest of our good friends. Humfrey Moore is very sicke, so that we shall want a Harponiere. I know not what to write more to you, for with grieve I write this. Thus kindly taking my leaue, beseeching God to blesse vs, and send vs a good Voyage, with a merry meeting, I rest

Your louing brother to vse
IOHN CATCHER.

A Letter of ROBERT SALMON from Sir THOMAS
SMITHS Bay, Iuly 6. 1621.

Louing friend Master Heley, with my loue I salute you, &c. These are to certifie you, that vpon the fifteenth of the last, we arrived at Sir Thomas Smiths unfortunate Bay: since which time we haue killed sixe Whales, which are almost reduced into Oyle, being some seuentie tunnes or somewhat more; so within a day or two we may goe sleepe, for I feare we haue our portion of Whales in this place: wee haue not seene a Whale this foureteene dayes, and faire weather is as scarce as the Whales, for ten daies together nothing but blow, sometime Southerly and sometime Northerly: I doe verily perswade my selfe that God

God is much displeased for the blood which was lost in this place, and I feare a perpetuall curse still to remaine yet; God I know is all-sufficient, and may, if it please him, send a Voyage in this place. Newes from Faire-hauen I can write you none, for as yet we haue not heard from him: the reason thereof I cannot conceiue; I feare his Shallop is miscarried, for certainly else we should haue heard from him ere this, or some other cause there is: I pray God it be not so. I pray commend me to Master Iohn Hedlam, and tell him that the Master and Pilot doe set both their horse together, being very great friends: also I pray commend me to my Cosen William Driuer and Master Wilkinson, wishing them all happinesse. I am in good hope that you haue done some good vpon the Whale, not doubting but you will haue sufficient for your selues and to helpe your neighbours, the which I desire may be. Other newes I haue none to write you. So desiring God to blesse you in your proceedings in this your Voyage, I take my leaue: 10
Resting

Your louing friend to command

ROBERT SALMON Jun.

Nine Ships were imployed Anno 1622. of which one for Discouerie. Their disastrous successe you may reade before, page 469. The last Fleete Anno 1623. was set forth by the former Aduenturers, vnder the command of Captaine William Goodlard, William Heley being Vice-admirall. Of the successe thereof you may read the Letters following.

Laus Deo in Faire-Hauen, the foure and twentieth
of Iune, 1623.

Master Heley, your health wished, as also a happy accomplishment of your pretended Voyage desired. I had written you according to order, of all matters happening since our arrinall, had not contrarie windes and weather preuented, and therefore haue taken the first opportunitie offering at present.

Wee arrived at our harbour with both our Ships in safetie vpon the third of this present, blessed be God, finding the yeare past to haue beene a verie hard season, in regard of the great quantitie of Snow and Ice, but yet not very offensive to vs in respect of our good harbour. Touching our proceeding vpon our Voyage, by the eight of this present we had killed thirteene Whales, and then were all our Shallops constrained in, by reason of foule weather, till the fifteenth, dicto, and vpon the fifteenth we killed two more, which being all boyled but the heads, and then estimated will hardly make past eightie Tunnes, which is a very small quantitie. The weather continued bad till the twentieth two, dicto, and vpon the three and twentieth we killed three more, which by probabilitie will make neere fortie Tunnes. And thus wee doubt not but by degrees we shall accomplish our Voyage, by the grace of God.

As touching our order for the Flemmings, wee went as yesterday aboard them, supposing that wee should haue found the Danes there, but they are not as yet arrived, but wee found there five sailes of Flemmings, the Admirall five hundred Tunnes, the Vice-admirall of the same burthen, the other three neere two hundred each Ship, hauing also fiftie or sixtie persons amongst them, hauing foure and twentieth Shallops belonging to their five Ships, and are building Houses and Tabernacles to inhabit, for they make new and substantiall: also they told vs, they expected one or two Ships more euery day: after some time we had conference concerning the order giuen vs with the Generall Cornelius Ice, and declared vnto him that the time granted them to fish vpon King Iames his New Land was expired, and thereupon his Maiestie hath granted to our Principals a Commission vnder the broad Seale of England for the depressing of any Interloper or Flemming whatsoeuer that we shall meete withall vpon this Coast; yet notwithstanding it pleased our Principals to appoint vs to goe aboard them, and in a louing manner to informe them hereof, which if you will condescend vnto and desist fishing, you shall manifest your selues friends to our Principals; if otherwise, you shall cause them to compell by force, who had rather perswade by lone. Vnto which he answered, that he heard of no such matter in Holland, for if there were, it should be certified by writing: to which we answered, that Sir Nowel Carroon their Agent was not ignorant of it, who should giue information: and saith he, I haue a Commission from the Prince of Orange, for the making of my Voyage vpon this Coast, which was procured by my Merchants for my defence: and this is that could be gotten by words from him.

Also at our first arrinall, there rode two Biskie shippes with the Flemmings, but within a day or two they waited and stood for the Southward: but inquired of the Flemmings what port they were bound for, they answered, for the North Cape; but Master Mason is perswaded they are at Greene-harbour: to which purpose I wrote to Master Catcher, that he giues order to his Shallop that goes to Bel-sound, to stand in for the harbour, to giue the Captaine true information. And so for present I rest, intreating you to remember me to Master Salmon and Master Iohn Hadland: and thus contracting my sailes, lest the boorde of my words carrie me into the Ocean of discourse, here I anchor: resting.

Your friend

NATHANIEL FANNE.

Master

Master CATHERS Letter the nine and twentieth
of June, 1623.

Brother Heley, with my best loue I salute you, wishing your health with a prosperous Voyage, &c. Since our departure, we haue had much foule weather and troubled with Ice before we could get into harbour, and after we came into harbour, we neuer let fall anchor, by reason of the Ice, till the sixteenth of this month, in which time we killed sixe Whales at the Fore-land, which made but eightene Tuns and a halfe, and since we haue killed sixe Whales more, which I hope will make in all upwards of eightie Tunnes. We haue fit nine Shallops verie well, and I thank God not one of our Men faileth, saue one that was shot accidentally with a Musket. I hope some of the Southerne harbours will supply our wants, if there be any, which I feare there will: our harbour, manie say still, is vnpossible to make a Voyage, by reason that the Flemmings shed blood there, which I pray God to take that plague from vs. For Faire-hauen, I doubt not but that you shall heare by the Letters sent you of the proceedings; but Master Sherwin writ, that there is fine Flemmings of fine hundred Tunnes a peece: there was also two Biscainers which the English nor Flemmings would suffer to fish: therefore they departed, and said they would goe for the North Cape; but I thinke they are in Greene-harbour, or gone to the Eastward; which if they be in Greene-harbour, our Shallop going to Bel-found shall touch there to see, and so certifie the Captains, and know his will what he would haue done in it: I hold it not fit that they should harbour there. There are no Danes in the Countrie as yet, &c.

Captaine WILLIAM GOODLARD'S Letter: Bell-found
this eight of Iuly, 1623.

Loving friend Master Heley, I kindly salute you, wishing health to you with the rest of your compaignie, praising the Lord for your good successe in your fishing. To certifie you of our proceedings; we haue killed here in Bel-found three and thirtie Whales, and lost manie more by Irons broken, yet I hope sufficient to fill our ships: we haue boiled a hundred and eightie Tunnes, of which a hundred and sixtie aboard our Ship, and make account sixtie tunnes more will fill our hould. Our Whales here proue verie watrish and leane, which maketh bad Oyle, and hindereth vs much in boyling. This present day our Shallop came from the Fore-land, at which time they had killed fifteene Whales verie small, and are verie doubtfull of a Voyage there: if God sendeth fish into this harbour, I will not spare till I haue killed sufficient to fill all our Casks, to leaue for them if there be occasion. The foure and twentieth of Iune, there was killed at Faire-hauen eightene Whales, which proue verie small to yeelde, by their estimation one hundred and twentie tunnes: hauing there fine Flemmings well fortified, and ships of fine hundred Tuns some of them, and two more expected thither euery day, which I feare will hinder much our shippes in their fishing this yeare, and in my iudgement not to be remoued from thence, for they hauing a Commission from the States to fish upon this Coast; were our whole Fleete there, and could put them away, yet would they stie to one of our Southerne harbours, and so should we spend our time in following of them, and lose our Voyage, &c. There were two French Ships of Saint Iohn de Luz at Faire-Hauen, which were put away by the Flemmings and our Ships, which they iudge are gone for the Cape.

With a heauie heart I write you the lamentable accident which happened here the eight and twentieth of Iune, our shallops all out in chase, and my selfe asleepe; my brother hauing a shallop lying by the ships side, spide a Whale going into the Ice Bay followed him and strucke him, and his rope being new ranne out with kinckes, which overthrew his shallop, where he lost his life with my Boy Bredrake, being as we thinke carried away with the rope (the dearest Whale to me that euer was strucke in this harbour) there was neuer anie losse, I thinke, went so neere my heart, &c.

Many other Letters I could haue added, but doubt I haue already wearied you with this vn-couth Coast, whereto our English Neptunes are now so wonted, that there they haue found not onely Venison, but Pernassus and Helicon; and haue melted a Mussean Fountain out of the Greenland Snowes and Ice Rockes. Whole Elaborate Poems haue I seene of Master Heley, as also of Iames Presson, there composed: but we haue harther Discoueries in hand; to which wee are now shipping you. This I thought good at our parting to aduertise thee, that Master Heley hath affirmed to me touching the diueritie of weather in Greenland; that one day, it hath bene so cold (the winde blowing out of some quarter) that they could scarce handle the frozen sailes: another day so hot, that the pitch melted off the ship, so that hardy they could keepe their cloathes from pollution: yea, he hath seene at midnight Tobacco lighted or fired by the Sunne-beames with a Glasse. Likewise for a farewell to our Whale-storie, I thought good to deliuer Stowes relation touching a Whale somewhat differing in forme from those here usually found in Greenland: my selfe also hauing spoken with some diligent viewers thereof in Thanet where it was taken Iulie 9. 1574. shooting himselfe on shore besides Rammesgate in the Parish of Saint Peter, and there dying forsaken of his Ocean parent. Hee came on shoare about sixe of the clocke at night, and died about sixe the next morning, before which time he roared and

ed by the Sun
at midnight.

and was heard more then a mile on the land. The length was two and twentie yards, the nether iaw twelue foote in the opening : one of his eyes (which in the Greene-land Whale is verie small, not much greater then the eye of an Oxe) being taken out of his head, was more then sixe Horses in a Cart could draw; a man stood upright in the place whence the eye was taken. The thicknesse from the backe whereon he lay, to his bellie, which was upwards, was fourteene foote; his taile of the same breadth : three men stood upright in his mouth : betwixt his eyes twelue foote : some of the ribs sixteene foote long : the tongue fifteene foote long : his liner two Cart load : into his nostrils anie man might haue crept : the Oyle of his head Spermaceti, &c.

CHAP. IX.

The late changes and manifold alterations in Russia since IVAN VASILOWICH to this present, gathered out of many Letters and Observations of English Embassadors and other Trauellers in those parts.

§. I.

Of the reigne of IVAN, PHEODORE his sonne; and of BORIS.

Gods mercy
to England
whiles warres
haue infested
the rest of the
World.

Eader, I here present thee not what I would of Russian affaires, but what I could. We Englishmen vnder the gouernment of his Maiestie, haue enioyed such a Sunshine of peace, that our Summers day to many hath beene tedious; they haue loathed their Manna, and longed for I know not what Egyptian flesh pots. For what else are Warres but pots set ouer the fire of Anger (how often of Furie, yea of Hell, the Furies or Deuils blowing the coales) and boyling mans flesh? whole Families, Villages, Townes, Cities, Shires, Prouinces, not onely hurried thereby in confusions of State, harried and enflamed with combustions of goods and goodnesse, but the flesh of Men, Women, and Children, but chered and as it were boyled beyond the manifold shapes of Death, vnto the bones, into the Vapors, Froth, Scumme, Chaos, nothing and lesse then nothing of Humanitie! Such is the inhumanitie, the immanitie, the inanitie of Warres! And such Warres haue made impressions into all our Neighbour Countries (whiles wee sit vnder the shadow of Beati Pacifici) haue lightened on Turkeie and blasted the Seraglio; haue thunder-stricken Barbarie, haue torne the Atlas there, and rent the Grison Alpes in Europe; haue shaken France with earthquakes; haue rayed Belgian stormes, Bohemian broyles, Hungarian gusts, Germanian whirlwinds (these selfe-diuided in Ciuill, that is, the vilest, vnciuillest massacres and worst of Warres) that I mention not the inundations and exundations of Poland; the Snowes and Mists of Sweden, the Danish Hailes and Frosts. But all these and more then all these Tempests, Turnado's, Tuffons haue combined in Russia, and there made their Hell-mouth centre, there pitching the Tents of Destruction, there erecting the Thrones of Desolation.

A. Thuan. histor.
l. 135.

Pestilence and Famine had gone two yeeres before as direful Heralds, to denounce these dreadful warres and mutations of State: the Pestilence possessing the Northerne parts of the World, and dispossessing it of many many thousands: the Famine in Russia wanting necessaries to eate, necessarily deuoured all things, not onely Cats, Mice, and impure Creatures, but mens flesh also, and that in neereft necessitude, Parents reuoking to their wombes by vnnaturall passage the dearest pledges of Nature, which hauing euen now dyed with hunger, were made preseruatiues from like death to those which first had giuen them life. The Mightier made sale of the Poorer, yea, Fathers and Mothers of their Sonnes and Daughters, and Husbands of their Wiues, that price might bee had to buy Corne, which was now beyond all names of whatsoeuer price credible. But these things must be further searched.

Exod. 1.
Iam. 3.

Bloudinesse is a slipperie foundation of Greatnesse, and the Mercifull haue the promise to finde mercy: other wisdom (how euer seeming politike) is earthly, sensuall, deuillish; yea, ruine to the foole-wise Consultors, as appeareth in Pharaohs working wisely, that is, cruelly, to preuent the multiplying Israelites. The greatest of Creatures on Sea and Land, the Elephant and Whale, liue on grasse, weeds, and simpler diet, not on rapine and flesh or fish-deuouring prey: Thunders and all tempestuous stormes trouble not the higher airy Regions, but the lower and those next the baser earthy dregs, the sediment and sinke of the World: nor doth ancient Philosophie reckon Comets other then Meteors, or falling Starres to be Starres indeed, but excludes both from the heavenly Sphaeres. Had Alexander followed this rule, and sought Greatnesse in Goodnesse (like him which is Optimus Maximus, the Great God, the great Good of the World) and in him-

selfe

selfe rather then others, in being Master of himselfe then Lord of large Territories; he neither had sighd after the conquests of other Worlds which *Philosophie* had created, before he had seene the tenth part of this; nor had dyed by poyson in a forraine Countrie, forced to content himselfe with possessing, nay, being possessed of a few feet of earth: then had he bene in very deed (now but in Title) GREAT Alexander. Great Goodnesse is the true and good Greatnesse.

I know not how fit a Preface this may seeme to the ensuing *Russian Relation*; this I am sure, that they which write of *Iuan Vasilowich*, the Great Great *Muscovite*, doe lay heauie aspersions on his Father and Grand-father, but on himselfe superlatives of cruelty (that I mention not other vices) both for Matter and Forme. These things are deliuered particularly in the Histories of *Alexander Gwagninus*, *Tilmanus Bredenbachius*, *Paulus Oderbornius*, *Reinoldus Heidensten* and others, in large Treatises written thereof purposely. His merits of the *English* might procure a silence of his evils (wee of all men being in regard of respect to our Nation unworthy to speake, that which hee, if those Authours haue not bene malicious, was worthy to heare) if so dreadfull effects did not force an Historian (that is, the Register of the execution of Acts of Gods bountie and iustice decreed in the Court of Diuine Prouidence) to looke to the direfull Cause in foregoing sinnes, that after Ages may heare and feare.

I will touch a few of those which *Gwagninus* alone relates. His owne brother being accused An. 1570. by *Wiskonati*, is said without leaue granted to cleare himselfe, to bee put to exquisite tortures first, and after to death; his wife stripped and set naked to the eyes of all, and then by one on horse-backe drawne with a rope into the Riuer and drowned. *Iohn Piotrowich*, a man of principall command, accused of treason, presenting himselfe to him, not admitted to make any purgation, was set in Princely accoutrements on a Throne, the Emperour standing bare-headed before him and bowing to him, but soone after with a knife thrusting him to the heart, the Attendants adding other Furies till his bowels fell out; his body dragged forth, his seruants slaine, three hundred others in his Cattle executed, his *Boiars* all gathered into one house and blowne vp with poulder; their Wiues and Daughters rauished before his face by his followers, and then cut in pieces, and no living thing left in their houses or grounds; the husbandmens wiues stripped naked as they were borne and driuen into a Wood, where were Executioners purposely set to giue them their fatal entertainment. His Chancellor *Dubrowski* sitting at table with his two Sonnes, were also vpon accusation without answer cut in pieces, and the third sonne quartered aliuie with foure wheelles, each drawne a diuers way by fiftene men. *Mieszkowischky*, supreme Notarie, displeasing him, his wife was taken from him, and after some weeks detayning was with her hand-maid hanged ouer her husbands doore, and so continued a fortnight, he being driuen to goe in and out by her all that time. Another Notaries wife was rauished and then sent home and hanged ouer her husbands table, whereat he was forced daily to eate. In traouelling if he met any woman whose husband he liked not, he caused her to stand with her nakednesse disclosed till all his retinue were passed. Cutting out tongues, cutting off hands and feet of his complaining Subiects, and other diuersified tortures I omit; as also the guarding his father in lawes doores with Beares tyed there, that none might goe in or out, hanging his seruants at his doores, torturing him for treasure; casting hundreds of men * at once into the water vnder the Ice; two thousand seuen hundred and seuentie thus and by other tortures executed at *Nonogrod* An. 1569. besides women, and the poorer persons which Famine forced, did eate the bodies of the slaine, and were after slaine themselves; the Archbishop also set on a Mare with his feet ryed vnder the belly, and made to play on Bag-pipes thorow the Citie; the Monks spoyled and slaine; *Theodore Sirconi*, the Founder of twelue Monasteries, tortured to shew his treasure and then slaine: *Wiazinsky* his Secretarie, by many dayes renewed tortures dying; hee recreating himselfe with letting Beares loose in throngs of people; *Iohn Michalowich Wiskewati* the Chancellor, his eares, lips, and other members one after another cut off * by piece-meale, notwithstanding all protestations of his innocency; aboue two hundred other Nobles at the same time variously executed, one his Treasurer, two other Secretaries; the Treasurers wife set on a rope and forcibly dragged to and fro thereon (by that torturing her naked flesh, to learne her husbands treasures) whereof soone after shee dyed in a Monasterie, into which shee was thrust. All these are but a little of that which *Gwagninus* alone hath written. A taste and touch is too much of blood, and in such immanities. He is also said in a famine to haue gathered many people, in expectation of almes, on a bridge, and there guarded the bridge being cut to drowne them, as the readiest way for cheapnesse of corne. But I lothe such crudities. His last cruelty was on himselfe, dying with griefe, as was thought, for the death of his eldest sonne *Iuan*, whom falsely accused he struck with a staffe wrought with Iron, whereof he dyed in few dayes after. Hee was a man accused for communicating in disposition with his father, and as a ioyfull Spectator of his tragicall executions.

But if any delight to reade the terrible and bloudie Acts of *Iuan Basilowich*, he may glut, if not drowne himselfe in blood, in that Historie which *Paul Oderborne* hath written of his life, and both there and in others take view of other his vniust Acts. I will not depose for their truth, though I cannot disprove it: aduersaries perhaps make the worst. For my selfe I list not to rake

sinkes against him, and would speake in his defence, if I found not an vniuersall conspiracy of all Hittorie and Reports against him. I honour his other good parts, his wit, his learning (perhaps better then almost any other *Russe* in his time) his exemplarie seuerity on vniust Magistrates, his Martiall skill, industrie, fortune, wherby he subdued the Kingdoms of *Casan* and *Astracan* (which also the *Turke* sending from *Constantinople* an Armie of three hundred thousand to dispossesse him of, *A. 1569.* besides his hopes and helps from the *Tartars*, few returned to tell their disasters, and the destructions of their fellowes) besides what hee got in *Siberia* and from the *Pole*, *Sweden*, *Prussian*, extending his Conquests East, West, North, and South: yea, his memorie is sauourie still to the *Russians*, which (either of their seruile disposition needing such a bridle and whip, or for his long and prosperous reigne, or out of distaste of later tragedies) hold him in little lesse reputation (as some haue out of their experience instructed me) then a Saint.

His loue to our Nation is magnified by our Countymen with all thankfulness, whose gaines there begun by him, haue made them also in some sort seeme to turne *Russe* (in I know what loues or feares, as if they were still shut vp in *Russia*, & to conceale whatsoever they know of *Russian* occurrents) that I haue sustayned no small torture with great paines of body, vexation of minde, and triall of potent interceding friends to get but neglect and silence from some, yea almost contempt and scorne. They alledge their thankfulness for benefits receiued from that Nation, and their feare of the *Dutch*, readie to take aduantage thereof, and by calumniation from hence to interuert their Trade. This for loue to my Nation I haue inserted against any Cauillers of our *Russe* Merchants: though I must needs professe that I distaste, and almost detest that (call it what you will) of Merchants to neglect Gods glorie in his providence, and the Worlds instruction from their knowledge; who while they will conceale the *Russians* Faults, will tell nothing of their Facts; and whiles they will be silent in mysteries of State, will reueale nothing of the histories of Fact, and that in so perplexed, diuersified chances and changes as seldome the World hath in so short a space seene on one Scene. Whiles therefore they which seeme to know most, will in these *Russian* Relations helpe me little or nothing (except to labour and frustrated hopes) I haue (besides much conference with eye witnesses) made bold with others in such books as in diuers languages I haue read, and in such Letters and written Treatises as I could procure of my friends, or found with Master *Hakluyt* (as in other parts of our storie) not seeking any whit to disgrace that Nation or their Princes, but onely desiring that truth of things done may bee knowne, and such memorable alterations may not passe as a dreame, or bee buried with the Doers. Sir *Ierome Horsey* shall leade you from *Iuans* Graue to *Pheodores* Coronation.

* Or Theodor

Sir Ierom Horsey.

The most solemnne and magnificent coronation of PHEODOR IVANOVICH, Emperour of Russia, &c. the tenth of Iune, in the yeare 1584. scene and obserued by Master IEROM HORSEY Gentleman, and seruant to her Maiesstie.

The death of Iuan Vasilowich 1584. April 18.

Lord Boris adopted as the Emperors third sonne.

When the old Emperour *Iuan Vasilowich* died (being about the eighteenth of April, 1584. after our computation) in the Citie of *Mosco*, hauing raigned fiftie foure yeares, there was some tumult & vprore among some of the Nobilitie and Comminaltie, which notwithstanding was quickly pacified. Immediately the same night, the Prince *Boris Pheodorowich Godonowa*, *Knez*, *Iuan Pheodorowich*, *Mesthis Slafsky*, *Knez*, *Iuan Petrowich Snsky*, *Mekita Romanowich* and *Bodan Iacoulewich Belikoy*, being all noble men, and chiefeest in the Emperours Will, especially the Lord *Boris*, whom he adopted as his third son, and was brother to the Empreffe, who was a man very well liked of all estates, as no lesse worthy for his valour and wisedome: all these were appointed to dispose, and settle his Sonne *Pheodor Iuanowich*, hauing one sworne another, and all the Nobilitie and Officers whosoeuer. In the morning the dead Emperour was laid into the Church of *Michael the Archangell*, into a hewen Sepulchre, very richly decked with Vestures fit for such a purpose: and present Proclamation was made (Emperour *Pheodor Iuanowich* of all *Russia*, &c.) Throughout all the Citie of *Mosco* was great watch and ward, with Souldiours, and Gunners, good orders established, and Officers placed to subdue the tumulters, and maintaine quietnesse: to see what speede and policie was in this case vsed, was a thing worth the beholding. This being done in *Mosco*, great men of birth and accompt were also presently sent to the bordering Townes, as *Smolensko*, *Uolsko*, *Kasan*, *Novogorod*, &c. with fresh garrison, and the old sent vp. As vpon the fourth of May a Parliament was held, wherein were assembled the Metropolitan, Archbishops, Bishops, Priors, and chiefe Clergie men, and all the Nobility whatsoever: where many matters were determined not pertinent to my purpose, yet all tended to a new reformation in the gouernement: but especially the terme, and time was agreed vpon for the solemnizing of the new Emperours coronation. In the meane time the Empreffe, wife to the old Emperour, was with her childe the Emperours son, *Charlewich Demetrie Iuanowich*, of one yeares age or thereabouts, sent with her Father *Pheodor Pheodorowich Nagay*, and that kindred, being

40

50

60

five

five brothers, to a towne called *Ouglets*, which was giuen vnto her, and the yong Prince her sonne, with all the Lands belonging to it in the shire, with officers of all sorts appointed, hauing allowance of apparell, iewels, diet, horse, &c. in ample manner belonging to the estate of a Prince. The time of mourning after their vse being expired, called *Sorachyn*, or fortie orderly dayes, the day of the solemnizing of this coronation, with great preparations, was come, being vpon the tenth day of Iune, 1584. and that day then Sunday, he being of the age of twenty five years: at which time, Master *Ierom Horsey* was orderly sent for, and placed in a fit roome to see all the solemnity. The Emperour comming out of his Pallace, there went before him, the Metropolitan, Archbishops, Bishops, and chiefe Monkes, and Clergie men, with very rich Coapes and Priests garments vpon them, carrying pictures of our Lady, &c. with the Emperours Angell, banners, censers, and many other such ceremonious things, singing all the way. The Emperour with his nobility in order entred the Church, named *Blueshina* or *Blessednes*, where prayers and seruice were vsed, according to the manner of their Church: that done, they went thence to the Church called *Michael* the Archangell, and there also vsed the like prayers, and seruice: and from thence to our Lady Church, *Prechista*, being their Cathedrall Church. In the middest thereof was a chaire of maiestie placed, wherein his Ancestors vsed to sit at such extraordinary times: his robes were then changed, and most rich and vnualueable garments put on him: being placed in this Princely seate, his nobilitie standing round about them in their degrees, his imperiall Crowne was set vpon his head by the Metropolitan, his Scepter globe in his right hand, his sword of Iustice in his left of great riches: his six crowns also, by which he holdeth his Kingdomes were set before him, and the Lord *Boris Pheodorovich* was placed at his right hand: then the Metropolitan read openly a booke of a small volume, with exhortations to the Emperour to minister true Iustice, to ioy with tranquility the Crowne of his ancestours, which God had giuen him, and vsed these words following:

Through the will of the almightie and without beginning God, which was before this world, whom we glorifie in the Trinitie, one onely God, the Father, the Sonne, and the holy Ghost, maker of all things, worker of all in all euery where, fulfiller of all things, by which will, and working, he both lueth and giueth life to man: that our onely God which enspireth euery one of vs his onely children with his word to discerne God through our Lord Iesus Christ, and the holy quickning spirit of life, now in these perillous times established vs to keepe the right Scepter, and suffer vs to raigne of our selues to the good profit of the land, to the subduing of the people, together with the enemies, and the maintenance of vertue. And so the Metropolitan blessed and laid his crosse vpon him. After this, he was taken out of his chaire of Maiesty, hauing vpon him an vpper robe adorned with precious stones of all sorts, orient pearles of great quantity, but alwayes augmented in riches: it was in weight two hundred pounds, the traine and parts thereof borne vp by six Dukes, his chiefe imperiall Crowne vpon his head very precious: his staffe imperiall in his right hand of an Vnicornes horne of three foote and a halfe in length beset with rich stones, bought of Merchants of *Ausburge* by the old Emperour, in Anno 1581. and cost him 7000. Markes sterling. This Iewel Master *Horsey* kept sometimes, before the Emperour had it. His Scepter globe was carried before him by the Prince *Boris Pheodorovich*: his rich cap beset with rich stones and pearles, was carried before him by a Duke: his sixe Crownes also were carried by *Demetrius Iuanowich Godonoua*, the Emperours vnckle, *Mekita Romanowich* the Emperours vnckle, *Stephen Vasilowich*, *Gregorie Vasilowich*, *Iuan Vasilowich* brothers of the blood royall. Thus at last the Emperour came to the great Churchdoore, and the people cried, God saue our Emperour *Pheodor Iuanowich* of all *Russia*. His Horse was there ready most richly adorned, with a couering of imbroidered pearle and precious stones, saddle, and all furniture agreeable to it, reported to be worth 300000. markes sterling.

There was a bridge made of a hundred & fiftie fadomes in length, three manner of waies, three foot aboue ground, and two fadome broad, for him to goe from one Church to the other with his Princes and nobles from the presse of the people, which were in number infinite, and some at that time pressed to death with the throng. As the Emperour returned out of the Churches, they were spread vnder foot with cloth of Gold, the porches of the Churches with red Veluet, the Bridges with Scarlet, & stammelled cloth from one Church to another: and as soone as the Emperour was passed by, the cloth of gold, veluet and scarlet was cut, & taken of those that could come by it, euery man desirous to haue a piece, to reserue it for a monument: siluer and gold coine, then minted of purpose was cast among the people in great quantitie. The Lord *Boris Pheodorovich* was sumptuously and richly attired, with his garments decked with great orient pearle, beset with all sorts of precious stones. In like rich manner were apparelled all the family of the *Godonouas* in their degrees, with the rest of the Princes and nobilitie, whereof one named *Knez Iuan Michailowich Glynsky*, whose robe, horse and furniture, was in regilter found worth one hundred thousand markes sterling, being of great antiquitie. The Embresse being in her Pallace, was placed in her chaire of Maiesty also before a great open window: most precious, and rich were her robes, and shining to behold, with rich stones, and orient Pearles beset, her crowne was placed vpon her head, accompanied with her Princesses, and Ladies of estate: then cried out the people, God preserve our noble Empresse *Irena*. After all this, the Emperour came into the Parliament

The day of
Pheodor his co-
ronation.

house, which was richly decked: there he was placed in his royall seat adorned as before: his sixe crownes were set before him vpon a Table: the Bason and Ewre royall of gold held by his knight of gard, with his men standing two on each side in white apparell of cloth of siluer, called Kindry with scepters and battle-axes of gold in their hands, the Princes and nobility were all placed according to their degrees all in their rich robes.

The Emperour after a short Oration, permitted euery man in order to kisse his hand: which being done, he remoued to a princely seate prepared for him at the table: where he was serued by his Nobles in very princely order. The three out roomes being very great and large were beset with plate of gold and siluer round, from the ground vp to the vaults one vpon the other: among which plate were many barrells of siluer and gold: this solemnitie and triumph lasted a whole weeke, wherein many royall pastimes were shewed and vsed: after which, the chiefe men of the Nobilitie were elected to their places of office and dignitie, as the Prince *Boris Phedorowich* was made chiefe Counsellour to the Emperour, Master of the Horse, had the charge of his person, Lieutenant of the Empire, and warlike engins, Governour or Lieutenant of the Empire of *Cazan*, and *Astracan*, and others: to this dignitie were by Parliament, and gift of the Emperour giuen him many reuenues and rich lands, as there was giuen him, and his for euer to inherite a Prouince called *Vaga*, of three hundred *English* miles in length, and two hundred and fiftie in bredth, with many Townes and great Villages populous and wealthy: his yearly Reuenue out of that Prouince, is fife and thirtie thousand Markes sterling, being not the fifth part of his yeare Reuenue. Further, he and his house be of such authoritie and power, that in forty dayes warning, they are able to bring into the field a hundred thousand Souldiours well furnished.

The conclusion of the Emperours Coronation was a peale of Ordnance, called a Peale royall, two miles without the Citie, being a hundred and seuentie great pieces of brasie of all sorts, as faire as any can be made; these pieces were all discharged with shot against bulwarkes made of purpose: twentie thousand hargubusers standing in eight ranks two miles in length, apparelled all in velvet, coloured silke and stammels, discharged their shot also twise ouer in good order: and so the Emperour accompanied with all his Princes and Nobles, at the least fiftie thousand horse, departed through the Citie to his palace. This royall coronation would aske much time, and many leaues of paper to be described particularly as it was performed: it shall suffice, to vnderstand that the like magnificence was neuer seene in *Russia*.

The Coronation, and other triumphs ended, all the Nobilitie, officers, and Merchants, according to an accustomed order euery one in his place and degree, brought rich presents vnto the Emperour, wishing him long life, and ioy in his kingdome.

John de Wale

The same time also Master *Ierom Horsey* aforesaid, remaining as seruant in *Russia* for the Queens most excellent Maiestie, was called for to the Emperour, as he sate in his Imperiall seat, and the also a famous Merchant of *Netherland* being newly come to *Mosco* (who gaue him selfe out to be the King of *Spaines* subiect) called *John de Wale*, was in like sort called for. Some of the Nobilitie would haue preferred this subiect of the *Spaniard* before Master *Horsey* seruant to the Queen of *England*, whereunto Master *Horsey* would in no case agree, saying, hee would haue his legges cut off by the knees, before hee would yeelde to such an indignitie offered to his Soueraigne the *Queenes* Maiestie of *England*, to bring the Emperour a present, in course after the King of *Spaines* subiect, or any other whatsoever. The Emperour, and the Prince *Boris Phedorowich* perceuing the controuersie, sent the Lord Treasurer *Peter Iuanowich Galayn*, and *Vasili Shalkan*, both of the Counsell, to them, who deliuered the Emperour backe Master *Horseys* speech: whereupon he was first in order (as good reason) admitted and presented the Emperour in the behalfe of the *English* Merchants trading thither, a present, wishing him ioy, and long to raigne in tranquillitie, and so kissed the Emperours hand, he accepting the present with good liking, and auouching, that for his Sisters sake, *Queene Elizabeth* of *England*, he would be a gracious Lord to her Merchants, in as ample manner as euer his Father had beene: and being dismissed, he had the same day sent him, seauentie dishes of sundry kinds of meats, with three carts laden with all sorts of drinks very bountifully. After him was the foresaid subiect of the *Spanish* King admitted with his present, whom the Emperour willed to be no lesse faithfull & seruiceable vnto him, then the Queen of *England* subiects were & had been, & then the King of *Spaines* subiects shold receiue fauor accordingly.

All these things thus in order performed, prayses were sung in all the Churches. The Emperour and Empreffe very deuoutly resorted on foote to many principal Churches in the Citie, and vpon Trinitie Sunday betooke themselues to a progresse in order of procession, to a famous Monasterie called *Sergius* and the *Trinitie*, sixtie miles distant from the Citie of *Mosco*, accompanied with a huge armie of Noblemen, Gentlemen, and others, mounted vpon goodly Horses with furniture accordingly,

The Empreffe of deuotion tooke this iourney on foote all the way, accompanied with her Princesses and Ladies, no small number: her Guard and Gunners were in number twentie thousand: her chiefe Counsellor or Attendant, was a noble man of the blood Royall her Vncle of great authoritie, called *Demetri Iuanowich Godonoua*. All this progresse ended, both the Emperour and Empreffe returned to *Mosco*: shortly after, the Emperour by the direction of the Prince

Boris

Boris Pheodorowich, sent a power into the Land of *Siberia*, where all the rich Sables and Fures are gotten. This power conquered in one yeere and a halfe one thousand miles. In the performance of this warre, there was taken prisoner the Emperour of the Country, called *Chare Sibersky*, and with him many other Dukes and Noble men, which were brought to *Mosco*, with a guard of Souldiers and Gunners, who were receiued into the Citie in very honourable manner, and doe there remaine to this day.

Chare Sibersky
Prince of *Siberia*
taken prisoner
& brought
to *Mosco*.

Hereupon the corrupt Officers, Iudges, Iustices, Captaines and Lieutenants through the whole Kingdome were remooued, and more honest men substituted in their places, with expresse commandement, vnder seuer punishment to surcease their old bribing and extortion which they had vsed in the old Emperours time, and now to execute true iustice without respect of persons: and to the end that this might be the better done, their lands and yeerly stipends were augmented: the great taskes, customes, and duties, which were before laid vpon the people in the old Emperours time, were now abated, and some wholly remitted, and no punishments commanded to be vsed, without sufficient and due prooffe, although the crime were capitall, deseruing death: many Dukes and Noble men of great Houses, that were vnder displeasure, and imprisoned twentie yeeres by the old Emperour, were now set at libertie and restored to their lands: all prisoners were set at libertie, and their trespasses forgiven. In summe, a great alteration vniuersally in the gouernment followed, and yet all was done quietly, ciuilly, peaceably, without trouble to the Prince, or offence to the Subject: and this bred great assurance and honour to the Kingdome, and all was accomplished by the wisdome especially of *Irenia* the Empresse.

These things being reported and carried to the eares of the Kings and Princes that were borderers vpon *Russia*, they grew so fearfull and terrible to them, that the Monarch of all the *Seythians* called the *Crim Tartar* or great *Can* himselfe, named *Sophet Keri Alli*, came out of his owne Countie to the Emperour of *Russia*, accompanied with a great number of his Nobilitie well horfed, although to them that were Christians they seemed rude, yet they were personable men, and valiant: their comming was gratefull to the Emperour, and their entertainment was honourable: the *Tartar* Prince hauing brought with him his wiues also, receiued of the *Russe* Emperour entertainment, and Princely welcome according to their estates.

Sophet Keri Alli
King of the
Crim arrivall
at *Mosco*.

Not long after, one thousand and two hundred *Polish* Gentlemen, valiant Souldiers, and proper men came to *Mosco*, offering their seruice to the Emperour, who were all entertayned: and in like sort many *Chirkasses*, and people of other Nations came and offered seruice. And as soone as the report of this new created Emperour was spred ouer other Kingdomes of *Europe*, there were sent to him sundrie Ambassadors, to wish him ioy and prosperitie in his Kingdome: thither came Ambassadors from the *Turke*, from the *Persian*, the *Bogharian*, the *Crim*, the *Georgian*, and many other *Tartar* Princes. There came also Ambassadors from the Emperour of *Almaine*, the *Pole*, the *Swethen*, the *Dane*, &c. And since his Coronation noemie of his hath preuailed in his attempts.

It fell out not long after, that the Emperour was desirous to send a message to the most excellent Queene of *England*, for which seruice he thought no man fitter then Master *Ierome Horsey*, supposing that one of the Queenes owne men and subiects would bee the more acceptable to her. The summe of which message was, That the Emperour desired a continuance of that league, friendship, amitie and intercourse of traffique which was betweene his Father and the Queenes Maiestie and her Subiects, with other priuate affaires besides, which are not to bee made common.

The new Emperour
Pheodore
Iuanowich his
Letters and
Requests to
the Queene.

Master *Horsey* hauing receiued the Letters and Requests of the Emperour, provided for his journey ouer Land, and departed from *Mosco* the fift day of September, thence vnto *Orner*, to *Torshook*, to great *Nonogrod*, to *Volskie*, and thence to *Nyhouse* in *Linonia*, to *Wenden*, and so to *Riga*: (where he was beset, and brought forthwith before a Cardinall, called *Ragenil*, but yet suffered to passe in the end :) From thence to *Mito*, to *Golden*, and *Libon* in *Curland*, to *Memel*, to *Koningsburgh* in *Prussia*, to *Elbing*, to *Dantzike*, to *Stetme* in *Pomerland*, to *Rostock*, to *Lubeck*, to *Hamborough*, to *Breme*, to *Emden*, and by Sea to *London*. Being arrived at her Maiesties Royal Court, and hauing deliuered the Emperours Letters with good fauour, and gracious acceptance, he was forthwith againe commanded to repasse into *Russia*, with other Letters from her Maiestie to the Emperour, and Prince *Boris Pheodorowich*, answering the Emperours Letters, and withall requesting the fauour and friendship, which his Father had yeilded to the *English* Merchants: and hereunto was he earnestly also solicited by the Merchants of *London* themselves of that Companie, to deale in their behalfe. Being thus dispatched from *London* by Sea, he arrived in *Mosco*, the twentieth of Aprill, 1586. and was very honourably welcommed, and for the Merchants behoofe, obtayned all his Requests, being therein specially fauoured by the Noble Prince *Boris Pheodorowich*, who alwayes affected Master *Horsey* with speciall liking. And hauing obtayned priuiledges for the Merchants, he was recommended from the Emperour againe, to the Queene of *England* his Mistresse, by whom the Prince *Boris*, in token of his honourable and good opinion of the Queenes Maiestie, sent her Highnesse a Royall present of Sables, *Luzarns*.

Master *Horsey*
voyage from
Mosco to *Eng-*
land ouer land.

Luzarns, cloth of Gold and other rich things. So that the Companie of *English* Merchants, next to their thankfulness to her Maiestie, are to account Master *Horsey* paines their speciall benefit, who obtayned for them those priuiledges, which in twentie yeeres before would not be granted.

The manner of Master *Horsey*'s last dispatch from the Emperour, because it was very honorable, I thought good to record. Hee was freely allowed post-horses for him and his seruants, victuals and all other necessities for his long journey: at euery Towne that he came vnto from *Mosco* to *Vologda*, which is by Land five hundred miles, he receiued the like free and bountifull allowances, at the Emperours charge. New victuall and prouision were given him vpon the River *Dvina* at euery Towne by the Kings Officers, being one thousand miles in length. When he came to the new Castle, called *Archangel*, he was receiued of the Duke *Knez Vasil Andre-wich Isuanogorodsky* by the Emperours Commission into the Castle, Gunners being set in rankes after their vse, where he was sumptuously feasted: from thence he was dispatched with bountifull prouision and allowance in the Dukes Boat, with one hundred men to rowe him, and one hundred Gunners in other Boats to conduct him, with a Gentleman Captaine of the Gunners. Comming to the Road where the *English*, *Dutch*, and *French* ships rode, the Gunners discharged, and the shippes shot in like manner fortie fixe pieces of their Ordnance, and so hee was brought to his lodging at the *English* house vpon *Rose* Island.

And, that which was the full and complete conclusion of the fauour of the Emperour and *Boris Pheodorowich* toward Master *Horsey*, there were the next day sent him for his further prouision vpon the Sea by a Gentleman and a Captaine, the things following. Sixteene liue Oxen, seuentie Sheepe, six hundred Hens, five and twentie fitches of Bacon, eightie bushels of Meale, six hundred loaves of bread, two thousand Egges, ten Geese, two Cranes, two Swannes, sixtie five gallons of Meade, fortie gallons of Aquavita, sixtie gallons of Beere, three young Beares, foure Hawkes, store of Onions and Garlecke, ten fresh Salmones, a wilde Boare.

All these things were brought him downe by a Gentleman of the Emperours, and another of Prince *Boris Pheodorowich*, and were receiued in order by *Iohn Frese* seruant to Master *Horsey*, together with an honourable present and reward from the Prince *Boris*, sent him by Master *Francis Cherry* an *English* man: which present was a whole very rich piece of cloth of Gold, and a faire paire of Sables.

Ivan Vasilowich is reported to haue had seauen Wiues, and of them to haue left three children suruiuing, *Theodore* or *Pheodore* and *Demetrius* a yongling by his last wife, and a Daughter, which was the wife of *L. Boris* aforesaid, whose sister *Pheodore* had married in his Fathers life time, who would haue caused her diuorfe for her barrennesse (as he had caused *Iuan* his eldest sonne diuers times to doe and his refusing it at last, was the occasion of that angry, last, and fatall blow, before mentioned) but being protracted by faire excuses for a time, the diuorfe of soule and body in the Father preuented that in the marriage bed of the Sonne. Yet by his Testament he ordained, that if within two yeares she proued not fruitfull, hee should marrie another. The executors vrged this after that terme expired, but *Gernia* or *Irenia*, so wrought with her husband, that their counsels were frustrate: wherein she was assisted by the politicke wisdom of her brother *Boris*, who was now become chiefe Pilot, though not the Master in that *Russian* ship: and is said formerly to haue been no small doer in those cruel designes of *Iuan* his deceased Master; yet had he cunningly cast the blame on him now dead, and wisely insinuated into the peoples fauour, by mitigating the seueritie of his Decrees. You haue read before of his great Reuenues and wealth, recorded by eye witnesses. *Thuanus* saith, that three hundred of the *Knazs* and *Boiarens*, whereof the Senate of the Empire consisted, by aduise of the Executors, had subscribed. *Boris* made the simpler Emperour beleue, that it was a conspiracie against him: whereupon they were all committed, ten of which (whom he thought his most dangerous aduersaries) were suddenly and priuily executed: to the rest, he procured the Emperours pardon and fauour, seeming very sorrowfull that this clemency had bene so much foreflowed: and that the hastie execution had preuented his officious inuents for their deliuerance. And that he might seem serious, he got their goods to be restored to their heires: so working himselfe into the good liking of all degrees.

But soone after, yong *Demetrius* the Emperours brother was slaine, as hee was going to Church betwixt two *Boiarens*, by a mad man (as he seemed) who was thereupon suddenly slaine, but the author which set him on worke, could not be found: whereupon *Boris* was suspected to affect the soueraigntie. *Thuanus* elsewhere telleth, that hee corrupted those which were about *Demetrius*: and the great Bell being rung as is vsuall in cases of fire to bring the people together, *Demetrius* at that noise running forth, some were set in that tumult to kill him, which accordingly was effected, as he was comming downe a Ladder: the rumour whereof, caused the tumultuous people (making no curious search for the doers) to kill those of the Family which they met in their furie, to put the suspicion thereof from themselves: which notwithstanding, *Boris* exercised neuer tortures and terrible executions vpon them, and as one which hartily execrated the fact, burned the fort to expiate the parricide. This place being farre remote from the Court, whither

this burthen to my shoulders, but have determined to undertake your protection with greatest fidelitie, being readie to sway the Russian Scepter and Government, as farre as Gods grace shall enable mee. On the other side bee you faithfull to mee and to my command, as God may you helpe. I am your most gentle King.

Joyfull acclamations followed, with all protestation of their fidelitie and future obedience. He entring into the Monasterie, after Prayers, received the first Benediction. The people returned full of joy, and the Bels (of which are numbred in *Mosco*, three thousand) resounded the publike Festiuitie. All the Magistrates and Officers, & such as received Salarie of the King, go presently to the Monasterie and carrie Gold, Silver, Precious Stones, Pearles, Bread, and Salt, (after the solemne custome) with wishes of long life & al happines, and desiring to accept in good worth their Presents. He with thanks rendred, accepts only the Bread and Salt, laying, these were his; the rest they should take to themselves. Then doth hee bid them to a Feast, and presently with *Mary* his Wife, *Theodore* his Sonne of ten yeeres old, and *Arsenica* his Daughter being sixteene, he goeth out of the Monasterie with pompeous Procession to the Castle. Like Presents were offered to his Wife and Children, which accepted only the Bread and Salt, remitting the rest to the Presenters. When he was comne to the Castle, he chose his Sisters Lodging; for that of the Prince deceased, as offensue by his death was destroyed, and after new built.

After Festiuall entertaynment of innumerable people, solemne Oath was taken of all the Gouvernours; those things being in action till May. Then came newes that the *Crim Tartars* had entred the borders thinking to find all things troubled with an interregne; whereupon he assembled an Armie of three hundred thousand, and went in person against them. But the *Tartars* hearing how things went, returned home and sent Embassadors to the Emperours Tents. Hee returned with them to *Mosco*, where the next September (which is the beginning of the *Russian* New yeere, which enters in other places with January following) hee was publicly blessed by the Patriarke, carrying a golden Crosse in his hand, and on the fourteenth of September, before the *Knazeys*, *Boiarsens*, Bishops and other Orders, had the Crowne set on his head by the Patriarke, and the Scepter put in his hand, with the Solemnitie in such cases accustomed.

Twelue dayes together all Orders were feasted in the Castle, and the Magistrates and Officers had a yeeres pay giuen them. Merchants also of other Countries had Immunities and Priuiledges granted. The Rusticks had their payments to their *Boiarsens* reasonably rated, and their persons made more free. *Germane* Merchants had moneyes lent them to repay seuen yeeres after without Vsurie. Widdowes, and Orphans, and poorer persons received much Almes. *Pheodores* Obsequies were solemnely performed, and the Priests richly rewarded; and that Empire which seemed dead with the death of the house of *Beala*, now was as it were reuiued, and received a glorious Resurrection.

Thus haue we deliuered you *Thuanas* his report touching *Boris* manner of acquiring the Empire without publike enuie, and cunning wiping off the aspersions of *Pheodore* and *Demetrius* their deaths. And as euery bodie is nourished by Aliments correspondent to the Principles of the Generation, so did hee seeke by politike wisdom to establish that which by wise Policies he had gotten. Wherein his care was not little to multiply Treasure, and as at first hee had seemed popularly prodigall, so after a small time of his Reigne, hee became providently penurious, the wonted allowances of the Court being much shortened from that which had bene in former times, as I haue received from eye-witnesses. Likewise he was carefull to hold good tearmes with his Neighbouring Princes, and aswell by plots at home, as by forreigne Aliance indeuoured to settle on his Race this new gotten Empire. He is said for this end to haue sought a Wife for his sonne out of *England*, and a Husband for his Daughter out of *Denmarke*. His Wife was a woman of haughtie spirit, who thought her too good for any *Hollop* (so they call a slaue, and such she esteemed all the subjects) and on such tearmes she is said to haue bene denied to a great man his best Souldier and Commander of his Armie.

But while his Sunne shined now in the height of his course, and with brightest and warmest beames of prosperitie, there arose grosse vapours out of *Demetrius* his graue, which grew quickly into a blacke darke cloud, and not only eclipsed that Imperiall glorie, but soone engendered a bloudie storme, which with a floud swept away that whole Family, and ouerwhelmed also the whole Empire. Contraries set together cause the greater lustre; for which cause I will bring on the stage a Gentleman, which attended Sir *Thomas Smith* employed in Honourable Embassage from his Maiestie of Great *Brittaine* to the then flourishing Emperor *Boris*, and out of his large Relations deliuer you this which followeth in his owne words (omitting the most part * to our purpose not so pertinent) in the Booke printed, *Anno 1605*.

* Where the cenforious bitterness also seemeth too much to insult on *Boris* his disasters.

§. II.

Occurrents of principall Note which happened in Russia, in the time while the Honourable Sir THOMAS SMITH remayned there Ambassador from his Maiestie.

Sir Thomas Smith Knight, accompanied with Sir T. Challenor and Sir W. Wray Knights, diuers Gentlemen and his owne Attendants, repayed to the Court on the tenth of June 1604. then lying at *Greenwich*, where by the Right Honourable the Earle of *Salisbury* he was brought to His Maiesties presence, kissed his Hand, &c. The next day he tooke leave of the Prince, and on the twelfth being furnished with his Commission, he came to *Gravesend*, and next morning went aboard the *John* and *Francis* Admirall: and the two and twentieth of July anchored within a mile of the *Archangell*. The sixteenth of September, hee came to *Kologda*: the five and twentieth to *Perislawe*, and there staid three dayes, and then departed to *Troies*, (that faire and rich Monasterie) so to *Brattesheen* and *Rostouekin*, five versts from the great Citie of *Mosco*. The fourth of October, the *Prestau* came and declared the Emperours pleasure that hee should come into the *Mosco* that forenoone: presently after came Master *J. Mericke* Agent, with some twentie Horses to attend his Lordship, which forth-with was performed. Then we did ride, til we came within a little mile of the many thousands of Noblemen and Gentlemen on both sides the way, attended on horsebacke to receiue his Lordship. Where the Embassadour alighted from his Coach, and mounted on his foot-cloth Horse, and so rode on with his Trumpets sounding. A quarter of a mile farther, met him a proper and gallant Gentleman a-foot of the Emperours stable, who with Cap in hand, declared to the Embassadour, that the Emperour, the young Prince, and the Master of the Horse, had so farre fauoured him, as to send him a Iennet, very gorgeously trapped with Gold, Pearle, and Precious Stone: and particularly, a great Chaîne of plated Gold about his necke, to ride vpon. Whereupon the Embassadour alighted, imbraced the Gentleman, returned humble thanks to them all, and presently mounted. Then he declared that they likewise had sent horses for the Kings Gentlemen, which likewise were very richly adorned, then for all his followers: which Ceremonie or State performed, and all being horsed, he departed, we riding orderly forward, till wee were met by three great Noblemen, seuered from the rest of the multitude, and the Emperours *Tolmache* or Interpreter with them.

They being within speech, thus began that Oration they could neuer well conclude: Which was, That from their Lord and Master the mightie Emperour of *Russia*, &c. they had a message to deliuer his Lordship. The Embassadour then thinking they would be tedious and troublesome with their vsuall Ceremonies, preuented their farther speech with this (to them a *Spell*) That it was unfitting for Subiects to hold discourse in that kind of complement, of two such mightie and renowned Potentates on horsebacke. They (hereby not only put by their Ceremonious Saddle-sitting, but out of their Paper instructions) allighted suddenly, as men fearing they were halfe vnhorsed, and the Embassadour presently after them, coming very courteously all three, saluting the Embassadour and the Kings Gentlemen, taking them by the hands. Thus like a Scholer, too old to learne by rote (the Duke named King *Volladamur Euanywich Mawfolsky*) with his Lesson before him, declared his message; which was, that he with the other two Noblemen, were sent from the Great Lord, Emperour and great Duke *Boris Phedorowich, selfe-upholder, great Lord Emperour, and great Duke of all Russia, Volademer, Moskoe and Nouogrode, King of Calan and Astracan, Lord of Vobskoe, great Duke of Smolenskoe, Tuer, Huder, Vghory, Perme, Viatsky, Bolgory, &c. Lord and great Duke of Nouogrod in the Low Countreies, of Chernigo, Rezan, Polotskey, Rostoue, Geraslaue, Bealozera, Leifland, Oudorskey, Obdorskey, Condingskey. King of all Syberia and the North Coasts, Commander of the Countreies of Iuersky, Gryfinsky, and Emperour of Kabardiuskey, of Chirkasky, and of the whole Countrey of Garskey, and of many other Countreies and Kingdomes Lord and Emperour*, to know of his Maiesties health of England, the Queene and Princes. The second, being a Captayne of Gunners (the Emperours Guard) named *Kazrinus Danydowich Beabeetchone*, pronouncing the Emperour and Princes Title, said hee was sent from them to know his Lordships health and vface, with the Kings Gentlemen. The third, was one of the Secretaries, named *Phedor Boulteene*, obseruing the former order did deliuer what he had in comand from the Emperour, Prince and Empreffe, to informe the Embassadour of their much fauour towards him, and the Kings Gentlemen, in prouiding for his Honourable entertayne and ease, a faire large house to lodge in: Also that they three were sent from the Emperour, Prince, and Empreffe, to be his *Prestaues*, to supply the Emperours goodnesse toward him, to prouide his necessaries, and deliuer any lute it pleased the Ambassadour to make to the Emperour. To all which the Embassadour very wisely gaue answer (as they made report vnto the Emperour.)

So we all presently mounted againe, the *Prestaues* on either hand of the Ambassadour his Horse and Foot-cloth being led by his Page, some small distance, his Coach behind that, and some

some fixe thousand Gallants after behind all: who at the Embassadors riding through the guard, that was made for him, very courteously bowed himselfe. Thus was he followed by thousands, and within the three wals of the Citie, many hundreds of young Noblemen, Gentlemen, and rich Merchants well mounted, begirt the wayes on euery side: diuers on foot also, euen to the gate of the house where the Embassador was to be lodged, which was some two miles. Whether being come, he was brought into his Bed-chamber by the Noblemen his *Prestanes*, where with many thanks for their honourable paines; they were dismist, betaking themselves to their further affaires. The next morning came three other *Prestanes* with the former, to know of his Lordships health, and how he had rested the night past withall, that if his Lordship wanted any thing, they all, or any one of them, were as commanded, so ready to obey therein. These, with the Interpreter and fixe Gentlemen were most within the walls, lodged in a house ouer the gate, besides we had fiftie Gunners to attend, and guard vs in our going abroad.

Strange request. The eight of October being the fourth day after our comming to *Musco*, the *Prestanes* came to his Lordship to let him vnderstand, they heard he should goe vp the next day: wherefore they desired his speech and Embassage to the Emperour: and the rather, that the Interpreter might (as they pretended) translate it. To this purpose, very earnestly at seuerall times they made demand. The Embassador answered, that he was sent from a mightie Prince, to bee his Embassador to their Emperour, and being sent to their Master, he deemed it, not only a dishonour to him, but a weaknesse in them, to require that at his hands.

His audience. The cleuenth of October, his Lordship being sent for by his *Prestanes* there wayting, hauing excellent Iennets for himselfe, the Kings Gentlemen, and good horses for the rest: as likewise two gallant white Palfreis to carrie or draw a rich Chariot, one parcell of the great Present, with his followers and the Emperours guard, carrying the rest: on each side the streets standing the Emperours guard with Peeces in their hands well apparelled, to the number of two thousand by esteeme, many Messengers posting betwixt the Court and our *Prestanes*. Thus with much state, softly riding, till we came vnto the vtmmost gate of the Court (hauing passed through the great Castle before) there his Lordship dismounted. Then met him a great Duke (named *Knase Andriay Metowich Soomederoue*) with certayne Gentlemen, to bring him vp. So in order as we rode, we ascended the staires and a stone Gallerie, whereon each side stood many Nobles and Courtiers, in faire Coates of *Persian* Stoffe, Veluet, Damaske, &c. At the entry to the great Chamber, two Counsellors encountred the Embassador, to conduct him through that Roome, round about which sat many graue and richly apparelled Personages. Then we entered the Presence, whether being come, and making obeysance, we staid to heare, but not vnderstand, a very gallant Nobleman, named *Peter Basman*, deliuer the Emperours Title: Then the particular of the Presents, and some other Ceremonies: which performed the Embassador hauing libertie, deliuered so much of his Embassage, as the time and occasion then afforded: After which the Emperour arising from his Throne, demanded of the King of *Englands* health, the Princes, and Queenes: then of the Embassadors and the Kings Gentlemen, and how they had bene vsed since they entred within his Dominions: to all which with obeysance wee answered as was meete. Then the young Prince demanded the very same.

P. Basman. The Embassador hauing taken the Kings Letter of his Gentleman Vsher, went vp after his obeysance to deliuer it, which the Lord Chancellor would haue intercepted. But the Embassador gaue it to the Emperours owne hands, and his Majestie afterwards deliuered it to the Lord Chancellor: who tooke it, and shewing the superscription to the Emperour and Prince, held it in his hand openly with the Seale towards them. Then the Emperour called the Embassador to kisse his hand, which he did, as likewise the Princes, and with his face towards them returned. Then did hee call for the Kings Gentlemen to kisse his hand, and the Princes, which they after obeysance made, did accordingly. Afterwards, his Majestie inuited his Lordship, the Kings Gentlemen and the rest to dine with him, as likewise Master *I. Mericke* Agent by name, who gaue his attendance there on the Embassador, and was now (as diuers times) very graciously vsed of the Emperour and Prince: no stranger (that I euer heard off) like him in all respects.

Emperours glorie. Being entred the Presence, we might behold the excellent Majestie of a mightie Emperour, seated in a Chaire of Gold, richly embroydered with *Persian* Stoffe: in his right hand hee held a golden Scepter, a Crowne of pure Gold vpon his head, a Coller of rich stones and Pearles about his necke, his outward Garments of Crimson Veluet, embroydered very faire, with Pearles, Precious stones and Gold: On his right side, (on equall height to his Throne) standing a very faire Globe of beaten Gold, on a Pyramis, with a faire Crosse vpon it, vnto which before hee spake, he turned a little and crost himselfe. Nigh that, stood a faire Bason and Ewer, which the Emperour often vseth daily.

Princes splendour. Close by him in another Throne sat the Prince, in an outward Garment like his Fathers, but not so rich, a high blacke Foxe Cap on his head, worth in those Countreyes five hundred pound, a Golden Staffe like a Friers, with the likenesse of a Crosse at the top. On the right hand of the Emperour, stood two gallant Noblemen in cloth of Siluer Garments, high blacke Foxe Cappes, great and long chaines of Gold hanging to their feet, with Pollaxes on their shoulders of Gold.

Pollaxes.

And

And on the left hand of the Prince two other such, but with Silver Pollaxes. Round about the benches sat the Councell and Nobilitie, in Golden and *Persian* Coats, and high blacke Foxe Caps, to the number of two hundred, the ground being couered with Cloth of Arrasse, or Tapistrie: The Presents standing all the while in the Roome, within little distance of his Majestie, where he and the Prince often viewed them. Being now by our *Prestanes* and others come for to Dinner, who led vs through much presse and many Chambers to one very faire and rich Roome, where was infinite store of masse Plate of all sorts; Towards the other end stood the Emperours Vncle, named *Stephan Vaselewich Godonow*, Lord High Steward, being attended with many Noblemen and Gentlemen, whom my Lord in his passage saluted, which with an extraordinary countenance of aged Ioy, he received, making one of their honourable Nods. The Embassador entered the dining Roome, where we againe viewed the Emperour and Prince, seated vnder two Chaires of State, readie to dine, each hauing a Scull of Pearle on their bare heads, but the Princes was but a Coronet. Also their Vestments were changed.

Councell and Nobilitie.

Gifts.

Newes of Demetrius.

The former Duke, that for that day was the Embassadours *Prestane*, came, as commanded from the Emperour, and placed the Embassador at a Table, on the bench side, some twentie foot from the Emperour. Then the Kings Gentlemen, Master *Merike*, Master *Edward Churrie*, and all the rest were placed, so that our eyes were halfe opposite to the Emperour.ouer against the Embassadour sat his *Prestanes* vppermost. Also in this large place sat the Priue Councill, to the number of two hundred Nobles at severall Tables. In the midst of this Hall might seeme to stand a great Pillar, round about which, a great heighth stood wonderfull great pieces of Plate, very curiously wrought with all manner of Beasts, Fishes and Fowles, besides some other ordinarie pieces of seruiceable Plate.

Being thus set (some quarter of an houre as it were, feeding our eyes with that faire Pillar of Plate) we beheld the Emperours Table serued by two hundred Noblemen, all in Coats of cloth of Gold. The Princes Table serued with one hundred young Dukes and Princes of *Cassan*, *African*, *Syberia*, *Tartaria*, *Chercafes* and *Russes*, none aboue twentie yeeres old.

Then the Emperour sent from his Table by his Noble Seruitors, to my Lord and the Kings Gentlemen, thirtie Dishes of meate, and to each a loafe of extraordinary fine bread. Then followed a great number of strange and rare Dishes, some in Silver, but most of masse Gold; with boyled, baked, and roasted, being piled vp on one another by halfe dozens. To make you a particular Relation, I should doe the entertaynment wrong, consisting almost of innumerable Dishes: Also, I should ouer-charge my memory, as then I did mine eyes and stomacke, little delighting the Reader, because Garlike and Onions, must besawce many of my words, as then it did the most part of their Dishes.

For our Drinckes, they consisted of many excellent kinds of Meades, besides all sorts of Wine and Beere. Diuers times by name, the Emperour sent vs Dishes: but in the midst of Dinner hee called the Embassadour vp to him, and dranke our Kings health, where the Emperour held some discourte of our King and State. But at one time (striking his hand aduisedly on his brest) *Oh, said hee, my deere Sister Queene Elizabeth*, whom I loued as mine owne heart, expressing this his great affection almost in a weeping passion. The Embassador receiuing the Cup from his Princely hand, returned againe to his owne place, where all of vs standing, dranke the same health out of the same Cup, being of faire Christall, as the Emperour had commanded, the Wine (as farre as my judgement gaue leaue) being Alligant.

Thus passing some foure houres in banquetting, and refreshing our selues too plentifully, all being taken away, we did arise. The Embassadour and the Kings Gentlemen beeing called by name to receiue from his Emperiall hands, a Cup (or rather as they call it a *Tendouer*) of excellent red Mead, a fauour among them neuer obserued before, which Cups for they were great and the Mead very strong, we often sipped at, but without hurting our memories, we could not say *Amen* vnto: which the Emperour perceiuing, commanded them to be taken away, saying, Hee was best pleased with what was most for our healths.

Thus after our low courtesies performed, wee departed from his presence, riding home with the same former guard and attendance to our Lodings; where our *Prestanes* for that instant left vs, but shortly after they came againe, to accompany a great and gallant Duke, one of them that held the Emperours golden Pollaxes, named *Knes Romana Phedorowich Troja Narow*, who was sent from his Majestie to make the Embassadour and the Kings Gentlemen merrier: likewise hauing instructions to drinke their Emperours, our Kings, and both the Princes healths, and diuers Princes else, which hee did himselfe very freely and some of vs, as many of them as wee could with our owne healths, there being such plentie of Meades and other Drinckes, as might well haue made fortie *Russes* haue stumbled to sleepe. Thus light-headed, and well laded especially if you take knowledge of the thirtie yards of cloth of Gold, and the two standing Cups with couers, which the Embassadour rewarded him withall, before he departed.

But vnwelcome newes within foure dayes after our audience so vnhappy came, as not only our Affaires, but any else, except counsell against present danger, was not regarded. For this was held for currant, that one who named himselfe *Demetrie Euanowich Beala*, as the Sonne of their late

late Emperor *Iuan Vasilowich*; hee that in the reigne of *Pheodor Euanowich* his brother was in his infancie, as was thought, murdered at *Ongleets* is now reuiued againe, and vp in armes for his right and inheritance: whereupon presently was sent an Armie of two hundred thousand Souldiers, either to take or slay him. But he was so strengthened with *Poles, Cossacks, &c.* that a number of *Russes* yeelded to his obedience.

Vpon the one and twentieth of Nouember, the young Prince of an ancient custome going to a Church within *Mosco*, the Kings Gentlemen vpon knowledge thereof (the Ambassador being vnwilling to be seene publike, as also for that the Emperor himselfe did not goe as hee was accustomed) went and attended where his Excellency might see them, and they safely beheld him, who rode in a very faire and rich sled, hauing a gallant Palfrey lead by two Groomes to draw it, many hundreds running before to sweepe the snowe away where he should passe, and were said to bee slaues, which I verily beleue, because certainly they were his Subiects. Then came the Prince richly apparelled with two *Tartar* Princes standing before on his sled, and two young Dukes behind, with two hundred sleds following him.

The eight of Februarie, the Emperor sent vs sleds to ride abroad, and this day the rather, that we might behold a reported victorie, against the reputed Rebell *Demetrie, &c.* So we the Kings Gentlemen did behold three hundred poore Prisoners, seuentene Ensignes, and eleuen Drums brought in, with more glorie then victorie. About this time returned *Peter Basman*, one of the Generals, who had performed very honourable seruice, and certainly, he was the man of greatest hope and expectation in the whole Empire, who was brought into the *Mosco*, with all the Counsell, Nobles, Gentlemen, and Merchants, a grace neuer performed before to any Subiect. But not without suspicion of some extraordinarie secret herein, and besides particular fauours, bountifull rewards, and a promise he should neuer goe againe vntill the Emperor himselfe went; he was, being but a young man, made a Priue Counsellor. Forthwith one thing I will you shall obserue the Emperors fauour, and his then noble Spirit, he making diuers times sure (as was thought) because they were in great danger, to goe againe to the warres, once prostrated himselfe to obayne his desire, but falling downe too humbly, hee could not easily rise againe, whereby the Emperor vnderstanding of his many and great wounds, was said to weepe, rising himselfe vp to raise and helpe him vp, but extraordinarie Causes haue the like Effects, as hereafter you shall vnderstand.

We were lodged in the same house where the young Prince *Iohn of Denmarke*, brother to that King and our now Queene of England, did lodge, (who would haue married the young Princeesse *Oucfinia*, the Emperors only daughter, but that he unhappily there died) but not in any of those lodgings: for it is a custome there, that where a Prince dyes (especially a stranger) not of long time after to let any other lodge there.

Now the Ambassador vnderstanding of the conuenience of his passage downe by sled-way, also fearing (as wise men had cause) what the issue of these warres would be, knowing the state here vsed in any sutes, bethought himselfe aduisedly that it was high time, being the middest of Februarie, to desire a second audience for his sooner dispatch, which he forthwith requested, and wrote a letter to that purpose vnto the Lord Chancellor.

Vpon the tenth of March, the Ambassador with the Kings Gentlemen all richly apparelled, and all his followers decently attending, very honourably (as before) and with the like recourse of beholders, and guard of Gunners (but that they were said to bee Citizens by reason of their warres, but in like apparell) was attended to the Court, being receiued with the former grace, or more, he ascended the Presence: the Emperour and Prince holding their wonted state, onely changing their Vestments with the season, but for the riches nothing inferior.

So soone as the Ambassador and the Kings Gentlemen were come opposite to his Throne, hee commanded seates that they might sit downe: then with a Maiestick countenance, representing rather constraint then former cheerfulness, he declared, that He, his Sonne and Councell, had considered his Maiesties Letter, the Maiestie of King *Iames of England*, as also on whatsoever else was desired, and in token of his ioyfull receiued amitie with the renowned King of England, as with his Predecessor, he had wrote his Princely Letters to that purpose. Herewith the Chancellor from the Emperour deliuered the Ambassadors his Highnesse Letters to his excellent Maiestie. Withall vnderstanding by the Chancellor hee had some farther matter to intreat of, then in his Briefe to his Maiestie was remembred: therefore hee had appointed foure principall Councillors to consult with him of his Requests, which was done. After, the Ambassador yeelding courteous thanks for his Maiesties fauour, his Lordship attended by many Nobles, proceeded to the Councell Chamber, whither presently after came foure Councillors, and the Emperours *Tolmach*: who after salutations, we withdrew to the next chamber, where wee passed away an houre in discourse, among many young Nobles, hauing the Ambassadors Interpreter. In the end, after three or foure goings and returnes of the Chancellor from the Emperour, wee went againe before him (where after hee had commanded vs to sit downe as before) by the mouth of the Chancellor was openly deliuered a Briefe of the whole Embassie (and that dayes particular desire, according to the Ambassadors request, confirmed.) Also in good and pleasing language,

language, was declared the great desire that the Emperour had, for the continuance of peace and amitie with the renowned *James King of England*, as with the late *Queene Elizabeth*; withall that in due time (all accidents well ended) he would send an honourable Ambassador for further affaires, as likewise to congratulate with our King of his happinesse in so plausible comming to his Right and Inheritance. Likewise, a Grant of a new Priuledge for the Companie, which he said should be vnder the golden Seale, &c.

Which ceremonious speech ended, the Emperour called for the Ambassador and the Kings Gentlemen to kisse his hand, and the Princes: which done, with the Emperours nod or bowing to vs, as likewise the Princes, desiring the remembrance of his and the Princes commendations to his Maiestie, the Prince, and *Queene of England*, we were dismissed, but not before the Emperour said he would send home to vs. Thus we tooke our last leaue of the Emperours Court, being more graciously and especially entertayned then before, or then euer any would take knowledge Ambassadors were vied withall: we are honorably attended home, and a Duke of great account, named *Knas Euan Euannowich Courleten*, was attended with many of the Emperours seruants within our Gates: following him a dinner, sent from the Emperour by some two hundred persons, consisting of three hundred seuerall dishes of Fitt (for it was now Lent) of such strangenesse, greatnesse, and goodnesse (for their number) as it were not to bee beleued by any report, but by a mans owne eye-sight, with infinite store of Meades, and Beere, in massie plate, &c.

The eighteenth of March, the Emperour sent by *Vassilly Gregorenich Telephone*, the Roll wherein was the Demands of the Ambassador, and the particulars of the whole negotiation, as there at large appeares. The nineteenth, his Maiestie sent by *Monsboy Buldecoue*, vnder Treasurer, a royall Present to the Ambassador of many particulars, also to each of the Kings Gentlemen, being rewarded, he departed.

The twentieth of March, being honourably accompanied with thousands of Gallants of each side the streets all along as we passed, the Ambassador departed from the Citie of *Mosco*, with the whole numbers of horse-men still becking vs, till we came a short mile on this side the Citie where we made a stand, and after some complement betweene the Ambassador and his kinde and honourable *Prestane*, the Duke *Vollagdemor*, with almost weeping on his part, the Ambassador went from the Emperours sled to his coach set vpon a sled, and wee alighted from the Emperours horses, and betooke our selues to our easie and pleasant passage in sleds, such a passage as this part of the World would wonder at, in which a man though hee goe a Hackney pace, may as easily reade as sleepe.

Thus accompanied with Master *John Mericke*, Master *William Russel*, sometimes Agent for the *Dutch*, and many other Merchants, we easily rode that night to *Brattefshin*, thirtie miles from the *Mosco*. The next morrow taking leaue of them all, we continued our iourney fiftie and sixtie versts a day easily.

Within few dayes after wee heard newes certainly of the Emperours sudden and vntimely death: which, considering neither the *Prestane*, the Gouvernour, or Bishop, had not or would not of ten dayes after take knowledge of, we might in the meane time haue doubted of, but that his Lordship had it from Master *John Mericke* by Letter particularly. His death was very sudden, and as it was in it selfe, very strange: for within some two houres after dinner, hauing (as hee vsually had) his Doctors with him, who left him in their iudgements in health, as the good meale he made could witnesse, for hee dined well, and fed plentifully, though presently after as may be thought, feeding ouer-much, hee felt himselfe not onely heauie, but also payned in his stomacke: presently went into his chamber, laid himselfe vpon his bed, sent for his Doctors (which alwayes speeded) yet before they came, hee was past, being speechlesse and soone after dying. Before his death (as speedie as it was) hee would bee shorne, and new christned: what the cause was otherwise then the grieffe, inward sorrow, with diuers distractions about the warres, and their bad successe, fearing the worst on his part, onely God knowes: yet who so remembers Gods iudgements, or Princes policies for Kingdomes, with mans sinfulness, and considereth the one with the other, may bee satisfied, if not contented.

For the Emperours person, he was tall and well bodied, teaching out of his authoritie obedience, of an excellent presence, black and thin haired, well faced, round and close shaued, strong limmed. A Prince framed betweene Thought and Resolution, as being euer in labour, but neuer till death deliuered: neuer acting (though euer plotting) but in his Closet or Council Chamber. One rather obeyed then loued, being feared where hee was not serued: doubtlesse, vpholding a true Maiestie and gouernment in euery part, but in his owne minde, that it is a question, whether he were more kinde to Strangers, or seuerer and iust to his Subiects, or hateful and terrible to his Enemies. A father and a Prince, whose wordes, counsels, obseruations, policies, resolutions, and experiments, were but the life of his deare Sonne, neuer aduising, entertayning, no not praying without him. In all Ambassies and Negotiations, remembering his sonnes name with his owne, louing him (being louely) for that himselfe would bee loued, unwilling to spare his presence, desirous to haue him at all occasions before his eyes. I shall not doe

amisse, to giue a taste of the fruit sprung from so stately a Tree. Being by a learned and well tra-
tailed Gentleman diuers times particularly aduised, to let the Prince take some more (then no
recreation) by which meanes he might as well prolong his life, as instruct his iudgement and de-
light his minde: Oh, would the Emperour answere, one sonne is no sonne: nay, I am perswa-
ded, three sonnes to me is but halfe a sonne. But had I fixe sonnes, then I might safely say I
had one, how then should I part with that at any time, I know not to bee mine for any time?
This may giue satisfaction to any vnderstanding both of his feares and ielousies: his great loue,
and much care. It was an vsuall speech with the Emperour vpon good reason to say, *hee was the*
Lord and father of his sonne, yet withall, That he was not onely his seruant, but his very slave.

* Because he
had done more
for him, then
might lawfully
be comman-
ded.

Two policies of the said Emperour I shall willingly acquaint you with, for diuers reasons. 10
One was, when hee caused fire to bee kindled in foure parts of *Mosco*; whereat himselfe was
noted to be very diligent, with all his Nobles and Courtiers: and after it was quenched, he sent
his bountie to them all, that builded anew their houses, and repaid all their losses. And this was
but to stop the rumour, then so common, of his strange gayning the Empire: by which stra-
tagem of his, when his people were readie to mutinie, they were created anew good Subiects;
yet did admire his not onely care, but goodnesse towards them all.

A second, was at that time the Land was visited with a mightie famine, and as great a plague
(some foure yeeres since) whereof a third of the whole Nation is rated to haue died: and the
murmuring multitude said the cause was, *their electing of a murderer to the Empire; wherefore*
God did thus visit them: Whereupon, hee caused Galleries to bee builded round about the vt-
most wall of the great Citie of *Mosco*, and there appointed daily to bee giuen to the poore,
twentie thousand pounds sterling: which was accordingly performed for one moneth, where-
upon the common peoples mouthes and bellies were well stopped.

Here wee lodged till the sixt of May, being wearied with the inconstancie and ill-come
newes of flying reports, whereupon the time of the yeere requiring, the Ambassador resol-
ued to passe downe the Riuer to *Colmogro*, as well that hee might the sooner haue newes from
England, as happily to bee out of feare of any disaster, the rumours being innumerable and
vncertaine.

Peter Basman
sent against
Demetrius, re-
uolteth.

After the suspicious death of the old Emperour *Boris Pheodorowich*, &c. by the appointment
of the Prince (then their expected Emperour) and the Counsell, *Peter Basman* (that noble 30
Sparke) was speedily dispatched and sent as Generall vnto their ill succeeding warres, as their
last hope (indeed hee prooued so in a contrarie sense) and the onely refuge to the Commons:
whither being come, hee with himselfe presented most of his command, as many as freely
would offer themselues: Vnder which were all the *English*, *Scots*, *French*, *Dutch* and *Flem-
mings*, whatsoeuer: and with him, or rather before him (as least suspected) *Ries Vasil E-
uanowich Goleeche*, the other Generall, a man of great birth, and in the prioritie of place, to bee
received before *Peter Basman*. All which, the now well knowne newly opinionated Empe-
rour very graciously receiued, happily not without some ielousie of many particulars.

Demetrius now sent Messengers with Letters which entred the Suburbs, where the Com-
mons in infinite numbers brought them safe into the spacious Plaine before the Castle gate:
within which, as daily they did vse, so now were all the Counsellors in consultation; but 40
happily not in a secret Counsaile; also wherein was the Emperiall Court.

Tumult of the
Commons.

There these *Boyerens* made demand for many of the Counsellors, especially for the *Godono-
ues*, to come to heare their right King *Demetrius Euanowich* speaking vnto them by Letters:
Who yet after refusall (and I cannot condemne all) many came; the Commons being resol-
ued, else to fetch them out. Then, by the *Boyerens* aloud was read the Emperours Letters, to
this effect.

Demetrius his
Letter.

That hee much wondred at that time, wherein expedition was to bee accounted safest policie, hauing
sent many Letters and Messengers to them, concerning their approuing him to bee their lawfull
Prince, as being the sonne of *Euan Vasilowich* their late Emperour, and the onely brother of *Pheo-
dor Euanowich* selfe-upholder, of happy memorie, both with inuincible Arguments and direct 50
Reasons to the manifesting thereof, they (notwithstanding his long patience and gracious remissnesse)
were not onely so proud as not to answere his Princely Letters, but so presumptuous as to retayne his
Messengers, whereby they made themselues apparantly to bee no lesse Vipers to the State in obscuring
him, then Traytors to himselfe the true and right Emperour, by defrauding them: yet giuing him a
strong Argument by their Silence, of their guiltinesse; also allowing thereby, time and opportunitie
(if hee had not bene their true-borne Emperour, and with the naturall Moither, tendered the life
of her deare Children) to haue conquered and destroyed the whole Nation.

All which notwithstanding, hee (being confident in his owne conscience, of his iust Title, made
the Prince of patience and humilitie from his former many great miseries and dangers) had in his
Princely wisdom and clemency againe wrote these (but certainly his last Peace-requiring, and Grace- 60
offering Letters: yea, was content to desire them he might) and doubted not shortly but he should com-
mand, onely aiming at the good of the Commonwealth and State in generall; as be that without much
shedding of his Subiects blood, desired the Kingdomo.

Also

Also to this end hee had sent men of great birth, viz. Rues Pheodor, Euanowich Methith-sosky, and Rues Demetre, Euanowich Suskey; and giuen them Commission to displace his E-nemies, and Prestaue the Godonoues, and others, till his further pleasure were knowne, consu-ming those monstrous bloud suckers and Traytors, with returne of the Commons answer thereunto: Likewise to demand his Messengers, and they to bee brought before the Commons, whom hee had rea-son to beleene were ill-intreated, if not murdered; withall, that if they did submit themselues now to him, as to their lawfull Prince and Soueraigne, (which hee was truly resolved their consciences were guiltie of) that yet they should finde him a gracious and mercifull Lord; if otherwise, a se-vere and iust Reneger of them, and their many misdeedes towards him, as hee that had his Sword
10 ever unsheathed to execute his vengeance on them all: and was easily perswaded they were not ignorant of the many Victories hee had obtained formerly against them, when they would seeme able and wil-ling to fight with his Souldiers: and how afflicted and troubled herewith they all were: But that now, he had their chiefe and strongest Heads and Armes in his owne hand, the whole World might not be- troth him they durst once speake openly against him, as assured that all (excepting a very few, and they of the worst) in heart were his loyall Subjects, &c.

But before this Letter was halfe read, the Hearts and Hands of the multitude were strange-ly combined together, not one speaking, but all confusedly like fettered and chayned Horses stamping; being indeed without any feare, but of not doing mischief enough, all (as one) running violently into the Castle, where (meeting two of the pitifully tormented Messengers)
20 they pawed to heare them as sufficiently as their insufficiencie would permit them, deliuer the vilde manner of their torturing, whipping, and roasting, which was in deede a Whip and Spurre to drue them, without wit or humanitie, as if they had bene fired like Gun-powder with the very sparkes of heate: Such barbarous crueltie, beastly actions, and inhumane spe-ctacles, as without the great Deuill had bene their Generall, no particular could haue a-cted; laying violent hands on all they met: but not killing (the great mercy of God) any man of account.

Thus the whole Citie was in an vproare, all the Counsellors houses, sellers, and studies ransacked, beginning with the Godonoues; spoyling, renting, and stealing all they mee- vwith; but carrying little away but drinke, which they could not carry away.

30 The Commons (no doubt) would haue made this day little inferiour to the massacre of Pa- ris, so violent and deuillish were their sudden resolutions; but that the Nobles (best beloued and obeyed) intreated, where none could command: others perswading, all wishing an end to this most miserable and neuer exempld mischief. But the multitude did what they would and could; especially on the greatest, which certainly were the worst: So as the Empreffe fly- ing to a safer lodging, had her collar of Pearle pluckt from her necke.

Then the Prince, Empreffe, and Princesse, were prestaue (a second command being come from the Campe) with the Godonoues, and many others that were suspected most: The Nobles ioyning in one counsell for the present ordering of these sudden accidents, and for an- swere to the Prince Demetrius Euanowich, who suddenly was by generall consent concluded
40 (by the particular knowledge of Bodan Belskey a great Counsellor, that was priue to his de- parture, and some others) to bee their right and lawfull Emperour, onely a few excepted. So as the young Prince was by many (but particularly by his mother) counselled to leaue the Kingdome vtterly, before it forsooke him; to follow his Fathers example in murdering him- selfe, and herein his mother (that Map of miseries, that Cradle of crueltie) and his onely deare sister would associate him.

Letters were deuised, and Messengers framed to effect this desperate treacherie on his in- nocent life; so as in very few dayes (for Mischiefe hath the wings of Thought and Resolution) they three did consent (an unhappy coniunction) to destroy themselues; and rather to lay violent hands vpon their hatefull liues, then make an Enemie seeme cruell in executing Ius- tice on them: which * yet certainly this Emperour neuer dreamt of, but determined the
50 Prince should be within himselfe, not lesse then Absolute, and in a very great Dukedome. The Princely Mother began the health of Death to her noble Sonne, who pledged her with a heartie draught, therein so much strength did hee adde to his vile wicked obedience, that hee prooued a banquerout presently, and hand in hand embracing each other, they fell, and died as one; the Mother counselling and acting, whilst the child be thought and suffered: yet see Pro- uidence and Commiseration, Constancy and Obedience: the Princesse dranke, but like a Vir- gin temperately: so as modestie (the want of which was the death of the Mother) now prooued the life of the Daughter.

60 Howener it was with Boris for other things, I thought it not amisse to adde this testimonie of his respect to the English Nation and Merchants in Priuiledges granted them, as followeth,

One

* Thus hee bus others ascribe his murder to Demetrius his command, and this selfe-murder was pretended to auoid enuy of the fact. Death of Mo- ther & Sonne.

Emperor Boris
his Mosco Pa-
tent translated
whiles Sir Th.
Smith was
there.

ONe Almighty God without and before the Beginning, the Father, the Sonne, and the Holy Ghost, whom we glorifie in the Trinitie, our onely God, Creator and Preseruer of all things every-where, by which Will and Working, he liueth and giueth life vnto Man; Our onely God which inspi- reth euery one of vs his Children with his holy Word, through our Lord Iesus Christ, the Spirit of Life, now in this latter times, establish vs to hold the right Scepter, and suffer vs of our selues to reigne, for the good of the Land, and the happinesse of the People, together with our Enemies, and to the doing of good.

We the great Lord Emperour and great Duke Boris Pheodorowich of all Russia, sole Comman- der of Volodemer, Mosco, Nouogrod, Emperour of Cazan, King of Astracan, Lord of Vobsko, and 10
great Duke of Smolensko, of Twersko, Vhorskoy, Permskoy, Vatskoy, Bolharskay, and of o- thers, Lord and great Duke of Nouagrod in the low Country of Chernego, Rezan, Polotskay, Ro- stouskoy, Yeraslauskoy, Belozerskoy, Leefhanskoy, Owdorskoy, Obdorskoy, Condinskoy, and all Siberia, and the North parts; Lord and Commander of Euerskoy Land, and Cabardinskoy Country, and of Cherces, and Igarskoy Land, as also of many others Lord and Commander, with our Sonne Prince Phedar Borilowich of all Russia. We haue bestowed on the Merchants of England, viz. Sir Iohn Hart, Knight; Sir William Webb, Knight; Richard Saltanfall, Alderman; Nicolas Moshley, Alderman; Robert Doue, William Garaway, Iohn Harbey, Robert Chamberlin, Henrie Anderson, Iohn Andwart, Francis Cherie, Iohn Merick, Anthony Marlär; Wee haue granted and licenced them to come with their ships into our Dominion the Country of Dwina, with all 20
manner of Commodities, to trade freely from the Sea side and within our Dominions, to the Citie of our Empire of Mosco. Also there made sute vnto vs Sir Iohn Hart, Knight, and his Companie, to grati- fie them to trade to our Citie of Mosco, and to our Heritage of great Nouogrod and Vobsko, and to all parts of our Empire, with their Commodities, and to Trade freely without custome: upon which Wee the great Lord Emperour and great Duke Boris Pheodorowich of all Russia, with our Sonne Prince Pheodor Borilowich of all Russia, haue granted vnto the English Merchants, Sir Iohn Hart, Knight, and his fellowes, for our Sisters sake Queene Elizabeth, free passage to come into our Kingdome of Mosco, and into all the rest of our Dominions, with all manner of Commodities to trade and traffick free- ly at their pleasure. Also we haue commanded, not to take any kinde of Custome for their goods, nor any 30
other Customes whatsoeuer, viz. for passing by any place by Land, nor for passing by any place by Water; nor for Custome of their Boats or Head money, nor for passing ouer Bridges and Ferries, nor for any en- trie of Wares: as also all manner of other Customes or Duties whatsoeuer wee command shall not bee taken of them: But they shall not bring other mens goods into our Dominions, nor likewise recarry out of our Kingdome any other mens goods as their owne: nor to sell or barter for other men. Neither shall our Subiects buy and sell for them or from them: neither shall they keepe any of our peoples goods or pawnes by them to owne or colour them. Likewise they shall not send any of our Subiects to any Towne or Citie to buy Commodities. But what Citie they come into themselves they shall sell their owne Com- modities, and buy our Commodities. And when they shall come to our Heritage to great Vobsko and Nouagrod, or to any other Citie within our Dominions with their Commodities, that then our Gentle- men and Gouvernours, and all other officers shall suffer and let them passe according to this our Letter, and to take no manner of Custome of them whatsoeuer for any of their Commodities for passing by, nor 40
for passage ouer any Bridges: neither shall they take any other Custome whatsoeuer in all our Dominions. And wheresoever they happen to come, and doe proceed to buy and sell; as also wheresoever they shall passe through with goods not buying of any Commoditie nor selling their owne, then in those Citie they shall take of them no manner of Custome whatsoeuer as aforesaid: and wee haue gratified and given them leaue to trade in all parts of our Dominions with their goods freely without Custome. And like- wise whensoever the English Merchants shall bee desirous to buy or sell or barter their wares with our Merchants wares for wares, then shall they sell their wares whole sale and not by retails. Cloth by the pack and by Clothes and by remnants; and Damasks and Veluets by the Piece and not by the Yard, or askeene, and such Commodities as is to be sold by waight, not to sell them by the small wights, that is 50
to say, by the Zolotnick. Also they shall sell Wines by the Pipe and the Hoghead, but by the Gallon, Quart or Pot or Charke they shall not sell: moreover, they shall buy, sell and exchange their owne Commodities themselves, and the Russe Merchants shall not sell or exchange for them or from them their Commodities, neither shall they carry any mans goods to no manner of place vnder colour of their owne, and which of the English Merchants would at any time sell his Commodities at Colmogro or the Dwina, or at Vologda and at Yeraslauly they may, and of all their Commodities throughout all our Cities and Dominion, our Gentlemen, Gouvernours, and all other Officers shall take no manner of Cu- stome according to this our Imperiall Letter of fauour. Also through all our Dominions, Cities, and Townes they shall hire Carriers, Boats, and men to labour or rowe in the said Boats at their owne cost. Likewise when as the English Merchants shall desire to goe out of our Dominion into any other King- dome, or into their owne Land, and that we thinke it good for them to take with them from our Treasure 60
any Commodities to sell or exchange them for vs, for such Commodities as shall be fitting to our King- dome, and to deliuer them to our Treasurer: and with those their and our goods, our Gentlemen and Go- uernours shall suffer them to passe through all Cities and Townes within our Dominions without Cu- stome

stome as before. And when they haue ended their Market, and doe desire to goe from the Mosko, then they shall appeare in the Chancerie to the Keeper of our Seale, the Secretarie Vassily Yacowich Schellcalou. Likewise, if there happen to the English Merchants any extremitie by Sea, or that a ship be broken, and that it be neere any place of our Kingdome, then we command that all those goods shall bee brought out iustly, and bee giuen to the English people that shall at that time bee in our Land, or if they be not here, then to lay them up all together in one place, and when the Englishmen come into our Land, then to deliuer those goods to them. Also wee haue bestowed on the English Merchants the House of Yourya, in the Mosko by a Church of Saint Maxims neere the Marget, to dwell in it as in former time, keeping one House-keeper a Russe, or one of their owne strangers: but other Russe folkes they shall not keepe any. Likewise these Merchants haue Houses in diuers our Cities as followeth: A House at Yetes, a House at Vologda, a House at Colmogro, and a House at Michael the Archangell, being the skipping place: these said Houses they shall keepe as in former time according to this our Imperiall Letter of fauour, or gratified without paying any manner of Rent or any other duties whatsoeuer, either at Mosko, Yereλλαue, Vologda, Colmogro, or at the Castle of the Archangell, neither shall they pay any tax. Also at these Houses at Yereλλαue, Vologda, Colmogro, and at Archangell they shall haue House-keepers of their owne Countrey-men, or Russes of a meane sort that are not Merchants, a man or two in a House: to lay up their goods in those Houses, and to make sale of their goods out of those Houses, to whom they will according to this our Imperiall Letter of fauour, but their Russe House-keepers in their absence shall not sell any of their Commodities. And the English Merchants shall come with their ship to their Port, as in former times they haue done to unlade their goods out of their ships, and likewise to lade them againe with our Russia Commodities, at their owne charges of Boates and hire of men, and ferrying ouer the said goods from their ships to their House at the Castle of Archangell. Likewise our Officers, Customers, and Swornemen shall take a iust note of all such goods as they haue both of Russia and English Commodities, and the note to passe vnder the Merchants Firma, because it may be knowne what goods passeth of the strangers and of the Russes. But they shall not looke ouer their goods, neither vnbind any packs in any place, and when they doe send their owne Englishmen from Archangell to our Citie of Mosko, or doe send Russia Commodities into their owne Land, Then all our Officers and Customers shall let them passe without delay, according to this our Letter of fauour. And whensoeuer the Merchants shall be desirous to send any of their owne Countrey-men into their owne Land, or into any other Kingdome ouer Land: they shall doe it freely with our Imperiall Maiesties order, without carrying any Commodity ouer with them, and they shall haue their Letters of Passe giuen them in the Embassadors Office. And concerning any matters of debate or controuersie in Merchandize, or iniurie, then they shall be iudged by the Keeper of the Seale, and Secretarie Vassily Yacowich Shelcolou, doing right and Iustice to both parties with equitie and truth. and what cannot be found out by Law, or Inquisition, there shall be used Lots. His Lot that is taken forth, shall haue right done vnto him. Likewise, in what place else in all our Kingdome there doe happen any matter of discord in Merchandize or by iniurie, then our men of authoritie, or Governours, and all manner of our Officers shall doe true Iustice betweene them: and what cannot be sought out by Law shall be sought out by Lot: his Lot that is taken out shall haue right done vnto him as before mentioned, as also they shall not take any custome or dutie of them for any Law matter, not in any place in our Kingdome. Moreover, this our Imperiall Letter in all our Realme and Dominion, our Officers, and all manner of our subiects shall not disobey or breake it in any point whatsoeuer, but if there bee any that doth disobey this our Imperiall Letter of fauour, that then those people shall bee in our high displeasure, and executed to death. This our Imperiall Letter of gratitude, is giuen at our Imperiall Palace and House in our Citie of Mosko, from the yeere of the beginning of the world 7107. in the month of Nouember: being vnderwritten as followeth.

By the great Lord Emperour and great Duke Boris Pheodorowich of all Russia, selfe-upholder: his Keeper of the Seale, and Secretarie by name Vassily Yacowich Shealcaloue!

§. III.

One pretending himselfe to be DEMETRIUS, with the Popes and Poles helps attayneth the Russian Empire: his Arts, Acts, Mariage, fauour to the English, and miserable end.

Auing thus presented you Boris his Tragedie out of that printed Author, and his Grant to the English from a written Copie; it shall not bee amisse to take more leisurely and mature view of this Pretender, against whom Boris his desire of secrecie (permitting none guiltie of the murder to suruiue) had vnfurnished him of Arguments. He produced a Purse giuen him by his Mother; with the Historie of his life after that sending him away and acknowledging another whom she was more willing to act that bloudy

Scene then her own Son: with other particulars which bred strong confidence in such as (weary of *Boris*) were desirous it should be so. But for the death of the young Emperor, & his mother, it is by most ascribed to *Demetrius*, who seeing the people of *Musco* his friends, and the Emperour and his Mother in hold, pretended he could not come thither whiles his enemies liued, whereupon they in a mutinie slue them; to auert the enuie whereof, it is probable that it was made to be their owne act, and their Keepers therefore by him imprisoned. *Boris* his daughter was thrust into a Nunnerie, and so made dead also to the succession. But as I haue before deliuered out of that diligent, learned and sincere Historian *Thuanus*, *Boris* his attayning the Scepter, I shall likewise intreat your patience out of him to receiue these Relations of *Demetrius*.

Seueria yeelds.

Thuanus writeth that after the murder of that (true or false) *Demetrius*, some yeeres after in the borders of *Polonia* and *Musconia*, appeared one which called himselfe *Demetrius*, and in testimonie thereof, shewed a Wart in his face, and one arme shorter then the other (noted before in the true *Demetrius*) a man of sharpe wit, bold courage, liberall mind, gentle behauiour, and of parts composed to a Scepter-worthinesse. First, was he made knowne to the Iesuites of principall note in *Poland*, to whom he promised if he might receiue helpe for the recouery of his just Inheritance, his first care should be to reduce the *Russians* to the Vnion of the *Romish* Church. This thing was commended to the Pope as conducing to the enlarging of the holy See, by his ayde, and furtherance with the *Polish* King and Nobilitie, to be promoted; which also was done by the Iesuites themselues, who brought him to *George Miecinsky* *Palatine* of *Sandomir* a man potent in that Kingdome, with whom he couenanted also to marrie his Daughter if hee succeeded in his *Russian* Enterprize. He had lurked awhile in *Liesland*, casting off his Cowle, and had there learned to speake and write the *Latine* Tongue: and had written to Pope *Clement* the Eighth, with his owne hand not inelegantly. And being by the said *Palatine*, and *Visnouitz* his Sonne in Law, brought before King *Sigismund*, he made a pithy and Masculine speech, that he should remember that himselfe had bene borne in Prison and Captiuitie, whence Gods mercie had deliuered him, to learne him to succour others afflicted with like disastre.

Thus by the Kings fauour, the *Palatines* money, the Iesuites industrie (not to mention the Popes Sanctitie) he procured an Armie of ten thousand Souldiers in *Poland* well furnished, and in his *Russian* March, winneth to his partie the *Cossaks* a kind of men which follow forreigne Warres and prey, and leades with him tenne thousands of them. Passing *Boristhenes* hee first charged vpon *Zerniga*, & summoned them to yeeld to the true heire *Demetrius*, which was done by *Iuan Takmeny*, who had before conceived dislike against *Boris*. *Corelus* commanded the *Cossaks*, a notorious Sorcerer. He was the Author of the liege of *Putinna* a populous Citie, which *Michelomich Soltekoni* held with eight thousand *Cossaks*, whom also he wrought with, that hee admitted and followed *Demetrius*. Hereupon *Boris* sends an Army of an hundred thousand men against him. He also sends Ambassadors into *Poland*, to put them in minde of the league betwixt both Nations, and earnestly desired this counterfeit *Demetrius*, a Priests Bastard and notable Sorcerer, to bee deliuered vnto him alieue or dead, adding threats if they persisted, and withall working vnder-hand with the Nobles to deterre the King from his ayde. But by the Popes and Iesuites preuayling power nothing was effected, the King and the *Poles* resolving to assist him, as thinking it the best course to accord both Nations.

Both Armies met at *Novograd*, where *Palatine Sandomir* the Generall, in the end of Ianuarie 1605, thinking to find a reuolt in the *Russian* Armie, gaue a rash on-set, & was put to flight, and after returned to *Poland*. *Demetrius* retyred himselfe to *Rilsky* Castle (in the borders) with a few, and forsaken of others, he forsooke not himselfe. Hee had brought with him two Diuines of the *Cistercian* Order which returned home: two Iesuites also, *Nicolas Cherraconi* and *Andrew Lonitzi*, which had bene Authors of the Expedition, and now encouraged him by their exhortations and examples of patience. He confident (as hee made shew) in the iustice of his cause, when he was to begin battell or skirmish, vsed to call vpon God, so as he might bee heard of all, with his hands stretched forth, and his eyes lifted vp to heauen, in such like words. O most iust Iudge, kill me first with a Thunderbolt, destroy me first, and spare this Christian blond, if vniustly, if couetously, if wickedly I goe about this Enterprize which thou seest. Thou seest mine innocencie, helpe the iust cause. To thee O Queene of Heauen I commend my selfe and these my Souldiers. Which if they be truly related, and he not the true *Demetrius*, he was either an impudent Iugler, or exceedingly gulled with fortunes daliance and prosperous successe, which concluded in a Tragicall period.

Part of *Boris* his Armie was now come to *Rilsky*, where in a battle betwixt the horsemen of both parts, *Demetrius* got the better, and the lately conquered, and presently fewer, became *Victors*; at the first encounter a thousand being slaine, two hundred taken, and the rest put to flight, leauing their footmen to the slaughter, and the baggage to the spoyle. Hereupon five neighbouring Castles with their seuerall Territories, yeelded to *Demetrius*, one of which, *Bialogrod* yeelded him a hundred and fiftie Peeces of Ordnance. The Captaynes were deliuered into his hands. Soone after *Ialeka* and *Leptina* yeelded, in which *Hinsko Otiopelus* that famous Sorcerer was taken: after which all *Seueria*, a large Principalltie, came in, and eight Castles; *Demetrius* ysing great modestie in this v unexpected victorie. *Boris* meanwhile sent some with large

pro-

promises to murder him, and the Patriarke excommunicated all which favoured him. *Demetrius* writ hereof modestly to the Patriarke, and to *Boris* also, offering faire conditions to his Family, if he would resigne his vsurped Empire, which he with indignation rejected. That happened when the Embassadors of *Denmarke* and *Sweden* were in his Court to joyne league with him against the *Pole*. In that consultation *Boris* is said to have bene in such a chafe, that hee fell downe suddenly, much bloud passing from his mouth, nostrils and eares; and in the end of *April* hee dyed; some say of an Apoplexie, others, of poyson which hee drunke: after hee had reigned seven yeeres. His Wife with her Sonne were advanced to the Throne after him, and the Nobilitie sworn to them. The dead bodie was buried without any pompe. *Constantine Fidler* a

Boris dyeth.
Some say, that hee had vsed with *Aqua vite* to poyson others.

Neque enim lex inferior ulla est, quam necis atque parricidis.
* Some say of 60000. men.

10 *Lieslander* of *Rie* made an elegant Oration in his prayse, whose brother *Gaspar* served *Boris*.

Presently *Peter Basman* was sent away with an Armie. * *Hodunius* (a neere Kinsman of *Boris*) besieged *Crom*, to rayse whom, *Demetrius* vsed this policie. Hee sent a simple man thither, which being deceiued himselfe might deceiue others, with Letters that fortie thousand were coming to ayde the besieged. He being taken (sent by a way which he could not escape) and examined with tortures confesseth the same with his Letters: which caused a tumult in the Campe; and in the end, the besieged taking aduantage of the rumour still increased by some sent purposely with reports that they had seen the new auxiliaries issued with a counterfeit shew of great numbers, and caused the *Russians* to consult of yeelding. *Basman* also the new Generall yeelded and cried out with a loud voyce, that *Demetrius* was the true heire, and therefore all true hearted *Muscovites* should follow his example; which the most followed. *Hodunius* was taken, and refusing to acknowledge *Demetrius* was cast in Prison. In the Tents were huge Ordnance found. After this Campe-alteration, followed the like in *Mosco*, the people resounding the name of *Demetrius*. The Empreffe and her sonne were committed to ward, where some write that they poysoned themselves, some that *Demetrius* commanded it. The *Germanes* flying out of the *Borissian* Campe to *Demetrius* drew many with them.

Basman yeeldeth.

From *Crom* doth *Demetrius* now march towards *Mosco*, the people all the way flocking to see their new Prince, who in twentie remoues came thither on the 19. of Iune, and entred with pompous procession of Souldiers & Priests, the *Russian* Priests hauing Banners with the Pictures of the blessed Virgin and their Tutelare Saint *Nicolas*, in the end of al the Patriarch, and after him

Demetrius cometh to Mosco, his pompous entrance.

30 *Demetrius* by himselfe on a white Palfray with a gallant trayne of attendants. Thus hee goeth to the Temple of our *Ladie*, and after Prayers, from thence to Saint *Michaels* Church in which his Father lay buried, and hearing that *Boris* lay there interred, he presently commanded his body to be taken vp and to be remoued to a meaner Chappell without the Citie. Passing by *Boris* his peculiar House, he could not endure the sight, but sent workemen presently to raze the same; saying, they were infamous with Sorceries, and that an image was said to be placed vnder the ground, holding in the hand a burning Lampe, hauing vnderneath store of Gunpowder buried; things so disposed, that the Oyle failing, and the Lampe breaking, the fire should (had it not bene before spied and remoued) blow vp that, and the houses adioyning. Thus had *Boris* impeached him, and he now *Boris* of Magicall arts, which are vsuall accusations in those parts.

40 Thence he went to the Imperiall Pallace, and beganne to gouerne the Empire, more inclining to the *Poles* and forreiners, then to the *Russes*; which vntimely expressing himselfe, hastned his ruine. Seuentie noble Families of *Boris* his kindred or faction were exiled, that their Goods might be shared amongst strangers, and new Colonies of men planted, brought into *Russia*. His clemency was remarkable to *Snisky*, who being condemned for not onely refusing to acknowledge this Emperour, but vttering also reproachfull speeches of him (as being of base Parentage, and one which had conspired with the *Poles* to ouerthrow the *Russian* Temples, & Nobility) and now his prayers ended, and the fatall stroake on his knees expected, on the seauenth of Iuly, by vnexpected mercy, euen then receiued his pardon. The last which yeelded to him were the *Plesconites*. Some tell of exceeding Treasures also which hee found laid vp for other purposes, which through his profusenesse soone vanished. The first of September, was designed to his inauguration (being New yeeres day to the *Russes*, as sometimes to the *Iewes*) but for other causes it was hastned, and his Mother was sent for out of a Monasterie (into which *Boris* had thrust her) farre from the Court. An honorable Conuoy was herein employed, and himselfe with great shew of Pietie went to meet her, embraced her with teares, and bare-headed, on foot, attended her Chariot to the Castle; whence afterwards she remoued with her women into a Monasterie where the Noblest Virgins and Widdowes of *Russia* vse to sequester themselves from the World. His Mother was noted to answere with like affection to him, whether true or dissembled on both parts. At his entrance to the Kingdome, after Ceremonies ended, *Nicolas Cnemaconius* a Iesuite made him a goodly Oration: the like was done by the Senate. To the Iesuits was allotted a faire place of entertaynment not far from the Castle, wherein to obserue the

Poles aduanced.

Clemencie to Snisky.

Respect to his Mother.

Iesuits.

50 *Romish* Rites and Holies: and euen then by their meanes he had declared himselfe in that point, but for feare of *Snisky* hee stayed till fitter oportunitie.

Hauing thus settled things, his care was to recompence the *Poles*, to enter league with that Nation, and to consummate the Marriage. For which purpose hee sent three hundred Horsemen with

Embassage to Poland.

with *Athanasius* the Treasurer, who in Nouember came to *Crasonia*, had audience of King *Sigismund*, where he with all thankfulness acknowledged the Kings forwardnesse with his Nobles to recouer his right, whereto God had giuen answerable successe beyond expectation; that he deplored the *Turkish* insolencies in *Hungary* and other parts: to vindicate which, he would willingly joyne with the *Pole*, and other *Christian* Princes: meane whiles hee was willing to make an euerlasting league with him, and to that end entreated his good leaue to take vnto himselfe a Wife out of *Poland*, namely, *Anna Maria*, the Daughter of *George Miecinsie* the *Palatine* of *Sandomir*, to whom for money, men, and endangering of his owne life, hee was so much engaged. The eight day after, the Contract was solemnly made by the Cardinall, Bishop of *Crasonia*, and the Embassadour with her Parents feasted by the King. *Demetrius* had sent her and her Father, Jewels worth 200000. Crownes.

Thus farre haue wee followed *Thuanus*, and hee *Iacobus Margaretus* a French Captayne of *Demetrius* guard of *Partisans*, which published a Booke hereof. Now let vs present you a little *English* Intelligence touching this *Demetrius* and his respect to men of our Nation in those parts, and first his Letter to Sir *Iohn Mericke*.

The Copie of a Letter sent from the Emperor *DEMETRY EVANOWICH*, otherwise called *GRISHCO OTREAPYOV*: the which Letter was sent to Master *JOHN MERRICK* Agent, out of the Campe, as Master *MERRICK* was taking his Iournie to the Sea-side, the eighth of Iune, Anno 1605.

From the great Lord Emperour and great Duke *Demetry Euanowich* of all *Russia*. To the *English* Marchant *Iohn Merrick*, wee giue to vnderstand, that by the iust iudgement of God and his strong power, we are raised to our Fathers throne of *Vladedmer*, *Mosko*, and of all the Empire of *Russia*; as great Duke and sole commander: likewise we calling to memorie the loue and amitie of our Father, the great Lord Emperour and great Duke *Euan Vassily wick* of all *Russia*, and our Brother *Theodor Euanowich* of all *Russia*, which was held, and kept by them and other great *Christian* Princes, in the same forme and manner doe we likewise intend, and purpose to hold and keepe Loue and amitie: but especially, and aboue all others, doe we intend to send and to haue loue and friendship with your King *Iames*, and all you his *English* Merchants, we will fauour more then before. Further, as soone as this our Letter doth come to your hand, and as soone as you haue ended your Markets at the shipping place of *Michael the Archangell*, then to come up to *Mosco* to behold our Maiesties presence. And for your poste Horse I haue commanded shall be giuen you, and at your comming to *Mosco*, then to make your appearance in our Chancery, to our Secretarie *Ofanasy Vlaffou*. Written in our Maiesties Campe at *Tooly*, in the yeare of the world Anno seauen thousand one hundred and thirteene.

The Copie of the translation of a Passe giuen to Master *JOHN MERRICK*, which was giuen him in the time of his being in the Campe at *Molodoue* with the Emperour *DEMETRY EVANOWICH*, otherwise called *GRISHCO OTREAPYOV*.

From the great Lord Emperour and great Duke *Demetry Euanowich* of all *Russia*, from *Mosco* to our Cities and Castles, as also to the Castle of *Archangell* at the Shipping place and haven to our Generals, Secretaries, and all other our Officers, &c.

There did make suite vnto vs the *English* Marchant *Iohn Merricke* and his Company, that we would gratifie them to be suffered to passe to the new Castle of *Archangell*, or to the shipping place or haven, in regard of trafficke of Merchandise.

Also, that if he doe send home any of his fellowes and seruants from the shipping place, being of the *English*, that then they might be suffered to passe into *England*. Also that to whatsoever Cite of ours the *English* Marchant *Iohn Merricke*, and his fellowes, doth or shall come vnto; then all ye our Generals, Secretaries, and all other our Officers, shall suffer them to passe euery where, without all delay. And as for our Customes, as for passing by or for head money, our custome of goods, you shall not take any of them nor of their seruants. Likewise, when the *English* Merchants *Iohn Merricke* with his fellowes and seruants, shall come to the Castle of *Archangell*, then *Timophey Matphewich Lazaroue*, and our Secretary *Rohmanem Mocaryoued*, *Voronoue*, at the foresaid Castle of *Archangell*, shall suffer and permit the *English* Merchant, *Iohn* and his companie to trade freely. Moreover, when at the shipping place they haue ended and finished their Markets, and that then the said *Iohn Merricke* shall desire to send into *England* any of his fellowes or seruants with goods, then likewise they shall be suffered to passe. But *Russe* people, and other strangers of *Mosco* shall not be suffered to passe further: that if *Iohn Merricke* with his fellowes and seruants doe not goe for *England*: but after their Market is ended doe purpose to come backe againe to *Mosco*; that then at the Castle of *Archangell* *Timophey Matphewich Lazaroue*,

Lazaroue, and our Secretarie Rohmaneeu Voronaue; as also at all other our Castels and Cities, our Generals, Secretaries, and all other our Officers shall let passe the English Merchant Iohn Merricke with his fellowes and servants, without all stay or hinderance, and as for custome of them, their goods, or their servants, there shall not be any taken.

And after the Reading of this our Letter and Passe, you shall keepe the Copie of it by you: but this you shall deliuer backe againe to the said Iohn, and his companie. Written at our Campe at Molodone, the yeare from the beginning of the World 7113. the eighteenth of Iune.

The last of Iuly 1605. at Archangell.

The Copie of the translation of a Commission that was sent from the Mosko, from the Emperour DEMETRY EVANOWICH, alias GRYSKA OTREAPYOVE by a Courtier named GAVARYLA SAMOYLOWICH SALMANOVE, who was sent downe to the Castle of Archangell, to Sir THOMAS SMITH, then Lord Embassadour: as followeth.

THE great Lord Emperour, and great Duke Demetry Euanowich of all Russia, hath commanded Gauareela Samoylowich Salmanoue, to goe to Vologda, and from Vologda to the new Castle of Archangell, or where soener he shall overtake the English Ambassadour Sir Thomas Smith. Also when he hath overtooke the Ambassadour, then Gauareela shall send the Ambassadour his Interpreter Richard Finch, willing him to certifie unto the Ambassadour, that the great Lord Emperour and great Duke Demetry Euanowich, sole commander of Russia, hath sent unto him one of his Courtiers, in regard of his Maiesties affaires: and after some two houres respite, Gauareela himselfe shall ride to the Ambassadour, and deliuer unto him his Maiesties speeches, as followeth.

THE great Lord Emperour and great Duke Demetry Euanowich of all Russia, and of many Kingdomes Lord and commander, Hath commanded thee, Thomas the English Ambassadour, to certifie unto Iames, King of England, Scotland, France and Ireland, that by the iust iudgement of God, and his strange power, we are come and succeeded into the place of our Father and predecessours: as also we are come to the throne of the great and famous Kingdome of Vlodermer Molco, and to the Empire of Cazan, Astracan and Siberia; and of all the Kingdomes of the Empire of Russia; being an Empire belonging to the great Lords, Emperours, and great Dukes of all Russia. Moreover, we calling to memorie the sending, loue and amitie betwixt our Father, the great Lord and Emperour, and great Duke Euan Vasilywich of all Russia, of famous memorie: as also our Brother, the great Lord and Emperour and great Duke Feoder Euanowich of all Russia, sole commander, with their sister Elizabeth, Queene of England: in the like manner doe we purpose to haue sendings, and to be in loue with your Lord King Iames, and more then hath bin in former time. And in token of our said loue and amitie, we doe intend to fauour all his subjects in our Land, and to giue unto them freer libertie then they haue had heretofore; and you his Ambassadour, we haue commanded to dispatch without all delay or hinderance. Therefore we would haue you to make knowne unto your Lord King Iames, our Maiesties loue. And as soone as God shall grant the time of our Coronation to be finished, and that we are crowned with the Emperiall crowne of our predecessours, according to our manner and worthinesse, then we the great Lord Emperour, and great Duke Demetry Euanowich of all Russia sole Commander, will send our messenger to salute each other, according to the former manner. And concerning those Letters which were sent by you from Borris Godenoue, we would haue you deliuer them backe againe to our Courtier Gauareela, and after the deliuerie of our speeches to retorne him to the Emperour, under written by the Chancellour Ofanasy Euanowich Vlateou.

The Copie of the Translation of a new Priuiledge that was giuen to the Company, by the Emperour DEMETRY EVANOWICH, otherwise called GRYSKA OTREAPYOVE, the which Priuiledge was sent into England ouer-land by OLIVER LYSSET Marchant, and seruant to the foresaid Company.

GOD, the Trenitie, before, and without the beginning, the Father, the Sonne, and the holy Ghost, GEstablish vs to hold and keepe our Scepter and Realme for the good of our Land, and the happinesse of our people. Wee the resplendant and manifest, and not the miserable upholder, but sole commander, the great Duke Demetry Euanowich, by the mercy of God, Casar and great Duke of Russia, and of all the Empire of Tartaria, and many other Kingdomes: as also of the great Monarchie of Molco, Lord Emperour and Commander, Haue bestowed, and gratified unto the English Merchants, viz. Sir Thomas

Thomas Smith, Knight, Sir Iohn Spencer, Knight, Sir Humfrey Wild, Knight, Robert Doue, Robert Chamberline, William Garaway, Iohn Haruey, Richard Stapers, Iohn Merricke, Richard Wryght, Richard Cocks, Thomas Farrington, Richard Wych, George Bowles. Bartholomew Barnes, Richard Bowldra, Iohn Casten, Edward Chery, Thomas, the sonne of Alexander alias Hicks: we haue giuen them free liberty to come with their ships into our Realme and Dominion, and to the Country of Dwina, & to the Castle of Archangel, and to Colmogro, with all maner of commodities, and to trade freely, as also to come from the sea side by land or by water, to our great dominion and Cæsars City of Mosco, & great Nouogrod and Vobsko, and all other cities within our dominions, to trade with all manner of commodities, in the same forme and manner, as heretofore was bestowed on the English Merchants, in the time of our father of famous memory, the great Lord and Cesar, and great Duke Euan Vassilywiche of all Russia, sole Commander, and as was granted vnto them in the time of our Brother the great Duke Theodor Euanowich of all Russia sole Commander. And as for custome of their goods, or for passing by, as also for the custome of their boates, or for Head-money, or for going ouer bridges or Ferryes, or for entrie of goods, As also all manner of Custome whatsoeuer, we command shall not bee taken of them: Also the English Merchants shall not bring nor sell other mens goods in our Dominion, as their owne: neither shall our Subjects buy, or sell, or traffique for. Also our Subjects pawnes they shall not keep by them, nor send others about the Cities to buy goods: but what Cities they come into themselves they shall trafficke and sell their owne commodities, and buy Russe commodities freely: And when they come into our Dominion of great Nouogrod and Vobsko, or to any other Cities within our Realme to trafficke with their goods, and that after the market is past, they shall bee desirous to passe for Mosco, or for England, then our Gentlemen and Gouernours, and all people shall according to this our Cæsars Letter, let them passe without delay, and as for Customes for them and their goods they shall not take any. And whithersoever they passe with their goods, without buying any commodities, or selling their owne; Then likewise in those Cities they shall passe, and not take of them any manner of Custome whatsoeuer as before: also the English Merchants shall trafficke as followeth; They shall barter their owne goods, by the whole Salecloth: by the Packe, and by the Clothes: Damaske and Veluet not by the piece, but by the areshine and by retaile and retaile weights they shall not barter or sell. Also goods, which is sold by weight, by retaile, or by the zolotnicke they shall likewise not sell. And Claret wine they shall sell by the piece, but by retaile, as by the Reader stop, or Pot and Charck they shall not sell. Likewise they shall buy and sell, and barter their goods themselves: but the Russe Merchant shall not sell nor barter their goods for them; neither shall they carry other mens goods in colour of their owne, not to any place whatsoeuer. Also if the English Merchants bee minded to make sale of their commodities at Colmogro, or on the Dwina, or at Vologda, or at Yeraslaue, then they shall doe it freely. And for their said goods in all our Cities within our Realme, our Gentlemen and Gouernours, and all manner of our Officers shall not of them take any Tole or custome, according to this our Cæsars Letter of Favour. And in all our Cities within our dominion, they shall hyre Carriers Boats, and men to row them freely as before. And as the order is of the Merchants within our Realme: so likewise if the English Merchants be desirous to goe out of our Realme, into any other Kingdome, or into their owne Countrey: as also if they bee desirous in our Realme to buy any Staple commoditie, and to carry it into their owne Land, then shall they likewise buy and trafficke freely at pleasure, and those Staple commodities which are sitting for our Cæsars Treasure, they shall likewise bring it to our Treasure freely at pleasure, and for the said Staple commodities in all our Cities, our Officers shall not take any manner of Custome: but they shall suffer them to passe without any staying of them. Also when the English Merchants haue ended their market, and shall desire to goe from the Mosco, then they shall appeare in the Embassadors Office, to our Chancellour and Secretarie Euan Cowrbatou Hramioteenop. Moreover, if that by the prouidence of God, the English Merchants haue any shipwracke, and that the said ship bee brought or driuen to any place within our Realme, then our Cæsars commandement to those places where the ship is brought in, that our men in office doe seeke out the English Merchants goods iustly, and to giue them to the English people that shall bee at that time in our Land. But if at that time there bee none of them in our Realme, then to gather them together, and to lay them up in one place: and so when the English Merchants doe come there, by our Cæsars Order, to deliuer those goods to the said Merchants. And whereas the English Merchants according to their former Letters of Favour had a house in the Mosco by the Church of the holy Maxim by the market, which was granted vnto them by our predecessour the great Lord and Cesar of Russia, the said English Merchants shall dwell in the said house as heretofore they haue done: Keeping one house-keeper a Russe, or one of their owne stranger; but any other Russes they shall not keepe. Moreover the said English Merchants haue houses in other Cities, a house at Yeraslaue, a house at Vologda, a house at Colmogro, and a house at the shipping place at the Castle of the Archangell: and those houses they shall keepe and hold by them, according to our Cæsars Favour or Gratitude, as in former time they haue done, and for any subsidie, rent, dutie, or any custome whatsoeuer for the said houses there shall not be any taken of them: and their other houses, as at Yeraslaue, Vologda, Colmogro and Archangell, they shall haue house-keepers of their owne countrie-men or Russes, but the Russes shall bee meane men, a man or two at a house: And they shall lay their goods in those houses, and likewise shall make sale of their goods out of their houses, to whom they will, according to this our Cæsars Letter of Favour, and their house-keepers being Russes shall not buy or sell any manner of commodities in their absence. Also they shall come with their ships to the

the shipping place, as before with their Commodities, and to vnde out of the shippe their goods, and to lade their shippe with Russe goods, with their owne hired labourers, as also to carry their owne goods ouer in their owne Boats and Vessels, to their owne house at the Castle of Archangell. And whatsoeuer goods they haue, our chiefe Customer, and Officers, and sworne men, shall take a note of the goods vnder their owne firme, both of goods they bring in, and also of goods they carry out. But they shall not looke ouer, neither vnpacke their packes in any place; as also they shall suffer them to passe in all places, without all stay or delay, according to this our Cæsars priuiledge and Letter of fauour. Also whensoever the English Merchants shall be desirous to send out of our Realme into their owne Land any of their seruants ouerland, or into other Kingdomes, then they shall likewise send their people ouerland with our Cæsars order freely, but without carying any Commodities, and their passe shall be giuen them in the Embassadours office. Further, concerning any matter of controuersie that any man shall haue to doe with them either in bargaining, or in iniury, according to this our Cæsars order, they shall be iudged by our Counsellor and Secretary Euan Cowrbatou Hramoteeu: Therefore, as before, wheresoever they, or any of their seruants, in all our Realme, in what Citie soener, haue any matter of controuersie in Bargaining, or in Iniurie against any man, or that any man haue any matter against any of them, then in all our Cities, our Gentlemen, and Gouernours, and all other our Officers, shall iudge them, doing iustice betwixt either of them with equitie and truth. This priuiledge or letter of fauour was giuen at our Cæsars Pallace of Mosco.

20 From the world Anno 7113. in the moneth of December.

The Copie of the Translation of a Contract, made by the Emperour DEMETRY EVANOWICH, otherwise called GRYSCHCA OTREAPYOVE, and the daughter of the Palatine SENDAMERSKO, chiefe Generall of Poland, in the time of DEMETRY his being in Poland, the which was sent ouer by Master IOHN MERRICK, and translated out of Russe into English for the Kings Maiestie, as followeth.

30 A True Translation of a writing out of Polish into Russe, given by a Monke who left his habit, called by the name of Gryshca Otreapyoue, supposed to be the Son of the Emperour Euan Valsiliwich, named Demeetry Euanowich, who gaue this assurance vnder his firme, to the Palatine Sendamersko, as also hath bene auouched by one Bewcheesko, principall Secretary vnto the said Demeetry, before all the Nobilitie of Russe, that this said writing was written by the Generall his owne hand, as followeth.

Wee Demetry Euanowich, by the mercy of God, Prince of all Russia, of Owgleets Demetryuskoy, and Lord of all the Empire of Mosco, and being of the stocke of Preatroue; Calling to memorie our former life, being not in that forme and manner, as is in other great Monarchies, as was in the time of our Predecessours, and other Christian people. Neuerthelesse, by the providence of God almightie, from whom proceedeth a beginning and an end, and from whom cometh life and death: We haue by him espied and made choise vnto our selfe, with good liking, in the time of our being in the Kingdome of Poland, of a Companion, of great and honorable birth, and of godly education, and is such a companion, with whom we shall by the mercie of God, liue peaceably: which is the resplendent and Noble Lady Marina, daughter to the great Palatine Sendamersko. And vpon this occasion haue taken him for our Father, and hauing requested of him to giue vnto vs his Daughter Maryna in marriage, and in regard that wee are not yet in our owne Kingdome, therefore doe we purpose hereafter to take order for her comming vnto vs with the Generall Sendamersko. Likewise, when I doe come to liue in my owne Kingdome, then shall the Palatine Sendamersko remember his faithfull and true promise with his Daughter, the Lady Maryna her vow, my selfe remembring my owne vow, and so both of vs to hold it faithfullly with lone and affecti-

50 on, and to that end doe we binde our selues by our writings. Likewise, first and principally, in the name of the holy Trinitie, I doe giue my faithfull and true princely promise, that I will take in marriage the Lady Maryna. If on the contrary, I doe not, then, I wish that I might giue this as a curse vpon my selfe: also, so soone as I shall make entrance into our Kingdome, and heritage of Mosco, then will I giue the Palatine, the Lord her Father, a reward of tenne thousand peeces of Polish gold. And to the Lady Maryna our wife, in consideration of her great and long Iourney, as also for the providing and furnishing of her selfe, I will giue out of my Treasure Veluets wrought with Siluer and Gold. And the Messengers that shall be sent to me from the Lord her Father, or from the Lady her selfe, I shall not hold or keepe, but shall let them passe, and will reward them with gifts, which shall be a token of our Princely fauour: and thereunto doe we giue this our Princely promise. Secondly, as soone as we shall come to the Imperiall throne of our Father, then presently will we send our Embassadour to the resplendant King of Poland to certifie vnto him, as also to intreate him to take knowledge of this businesse now passed betwixt vs, and withall, that he would be pleased to suffer vs to conclude and effect this our said businesse, without losse or hindrance. Also vnto the forenamed Lady Maryna our wife, we giue two Lordships, viz. Nouogrod the

Promise of Ro-
mish Religion.

the great, and Vobsko, with all the Prouinces belonging to the same, with Counsellors, Gentlemen, and Yeoman, and Priests, sitting for a Congregation, to rule and gouerne freely with full authority in the same forme and manner, as if we ruled. And my selfe to haue no more right or title nor authoritie in the said two Cities of Nouogrod and Vobsko: and thereunto doe I binde my selfe with this writing, and doe wholly giue and bestow all on the said Lady Maryna that is contained in this writing, as soone as by Gods helpe we shall be married together, and thereunto haue giuen this our writing, sealed with our princely Seale. But if by chance our wife hath not by us any children, then in those two Lordships before specified, shee shall place men in authoritie of her owne, to gouerne and to doe Iustice: and also it shall be free for the said men in authoritie, to giue Lands and Inheritance to their owne Souldiers, and to trade freely at pleasure, as shall be best liking to them, and as though it were in their owne true and lawfull dominion, and to build Monasteries, and to set up the Romish Religion, and to haue Latine or Romish Priests, and Schooles. But she her selfe to abide and remaine with us. And concerning her Priest, to haue as many as shall be needefull to be kept for her owne godly Romish Religion, without all let or hindrance: and as wee our selfe by the mercy of God are already inclined to the same, so will wee likewise with earnest care, seeke by all meanes to bring all the Kingdome of Mosco to the knowledge of the Romish Religion, and to set up the Church of Rome. Also, if God should not grant vnto vs good successe, whereby this be performed within a yeare; then it shall be at the pleasure of our Father to separate mee and his daughter Maryna. But if it please him to forbear till another yeare, then doe I passe this my Bill, with my owne hand writing, and thereunto I haue sworne my selfe, and giuen a vow according to the holy order; and all in this Bill to hold and keepe carefully: as also that I shall bring all the Russe people to the Latine Religion. Written at Sambore the five and twentieth of May, in Anno 1604. Vnderneath was his firme, to all this foresaid as appeareth: Prince Demetry of Owglets.

Demetrius his
Marriage.

Both crowned.

Conspiracie.

bert I haue of-
ten heard of in
that place of
seruice, which
writ also
commentaries
of these af-
fares which
I haue much
fought to little
purpose in our
Merchants
hands.

Bloudie day.

Now let vs returne with Thuanus into Poland, where with his Histori- cal eies we see this glo- rious Spouse, her Father, Vncle, & trayne of women accompanying the Russian Embassador in his returne; whom many Merchants out of Italie and Germanie followed in hope of gaine. In this lingring journey, they continued from the end of Ianuary to the sixe and twentieth of A- prill, before they entred Mosco. And the seuenth day after, Peter Basman with a great troupe of Courtiers and Nobles, attended the Spouse to the Court, where shee was solemnely enter- tained by her Husband, and thence conueighed to the Monasterie where his Mother abode. The fourth day after, all things being prepared, shee was brought into the Palace, and the next day married to him by the Patriarch after Euening Prayer. Both of them also, solemnely crowned, re- turned with sound of Musick and Ordnance into the Castle, and the night passed with great Iu- bilee, Demetrius his mind being filled notwithstanding with cares. For a conspiracie which had beene hatching sixe moneths, now growing to ripenesse, terrified him: against which hee had armed himselfe with forreigne aides. At first hee had brought a guard of Germanes out of Po- land, which being without example of his Predecessors, and seeing it disliked of his subjects, hee dismissed, together with all forren Souldiers. They being thus sent away without pay, retur- ned with the casheered Polanders to the borders, where they committed many outrages to the greater discontent of the Russes. Many of them found grieuances notwithstanding, in his too much respect to the Poles: and many made question of his birth. Many were suspected of con- spiracie, and diuers tortured; which was but quenching fire with Oyle, the flame growing greater. And now beganne Demetrius to repent of his hastie dismissing his guards, and began a new Check-roll of Lieslanders and Germanes, to which hee added an hundred English Halber- diers and as many Scots (their Captaynes hee calleth Matthias Cnotsenius and * Albert Lant) and an hundred French vnder Iaques Margeret armed with Partisans. Then also he enlarged his pay, but too late.

Alexander Gofenskie Cornutus was sent Embassadour from Poland with rich Presents and Let- ters from King Sigismund to Demetrius, which because they expressed not the Title of Emperour were not receiued nor opened. In excuse whereof the Embassadour vsed words vsufferable to Russian patience, that he should goe and deprive the great Turke of those Titles. Demetrius dis- sembled notwithstanding, in regard of his past experience, and hoped helpe from the Pole. The dayes following were spent in pastimes and sloth. Saturday was solemne to the Russians, a Feast then happening which they preferre before Easter. The Emperour and Emperesse late crowned in the Hall, and made a great Feast to their owne and to strangers; in which the Pole Embassa- dour refused to be present, except he might sit at the Princes Table, as the Russian Embassadour had beene honoured at Craconia. The Russes denied stiffely, but Demetrius at length yeelded. Many peremptorie and licentious passages happened, the Poles carrying themselves domineering- ly to the Russes, as Victors to the conquered. Demetrius at first ouer-bold, now beganne to feare, and warned the Poles to bee warie, and sent for all his guards. On Friday, the Russes preparing for offence, and the Poles for their defence (for they and not the Prince, seemed to bee then in danger) in the Euening the Nobles command the people to arme against the next day. The Em- peresse was this while secure, and made ready a magnificent Feast against Sunday. But on Satur- day (the sixteenth of the Kalends of Iune) the Conspirators assemblie early, and a great cry is ray-

rayled to kill the *Poles* and *Demetrius*. Some greedie of spoyle runne presently to the *Poles* Lodgings, assault them and embroyle all with slaughters. Others runne to the Castle. Few of the guard were there, delay hauing bred securitie in *Demetrius*, nor were any of their Captaynes seene. *Margaret* then lay sicke as he after told me (*Thuanus*) which disease saued his life. Things were done with such furie and celeritie, that many *Russes* in *Polish* attire were slaine before they were knowne.

Peter Basman came running forth halfe naked, & was killed by one of his own seruants. *Suiskey* their Leader, carrying a Sword in one hand, a Crosse in the other, caused the great Bel to be rung in token of fire that *Demetrius* might be raised & come forth of his Parlor. He awaked with the noyse, now seeing a greater danger then fire, taketh a *Turkish* Sword, and suddenly slips downe out of a window, breaking his legge with the fall, whereby he was easily taken by the people, and by *Suiskeys* command carried into the greater Hall, where Embassadours haue audience. There some vpbaying his impostures, he with his sword layd one on the ground: and then desired the Nobilitie to permit him to speake to the people, which was denyed. Some say that he obtayned of *Suiskey*, that he might be tryed by the testimonie of *Vasilowich* his Wife; which being brought out of the Nunnery, affirmed before the Nobles on her oath, that her Sonne *Demetrius* was many yeeres before murdered by *Boris* his perfidies, which she at first seeing the peoples fauour, and iust reuenge on *Boris*, willingly dissembled, whereupon they ranne vpon him, and with many wounds slue him. Thus writeth *Peter Paterson* of *Pspsal* which then was in *Russia*. When they had slaine him, they thrust a rope thorow his secret parts, and drew him thorow the myre into the Market place, where he remayned foure dayes lying all gorie and myrie on a boord, with *Peter Basman* vnder it, and an vgly Vizar ouer it, a Bag-pipe in his mouth, with other lasciuious cruelties exercised on his dead body.

The *Palatine Sandomir* (or *Sandamersko*) was blocked vp in his House, and other *Poles* Houses rifled, many of which died not vreuenged, howsoeuer by numbers ouercome. *Vitenskie* after much slaughter of the assailing *Russes*, when he saw Ordnance brought, set forth a white flagge in token of yeelding, bidding his Seruants cast abroad his money; which whiles the people were gathering, he and his made way with their Swords with great slaughter, & yeelded to the *Boiars* which came from the Castle. The miserable Bride was not only spoiled of inestimable Treasure, but of all her Apparell, and Iewels, carefull only of her Father and Vncle, and thinking it a happy purchase, if she might saue her life and recouer her Countrey. Meane-while, without her Garment to couer her, without Bed to lye on, without securitie of life, shee expected in poore Weeds the issue of the peoples furie.

Many Merchants endured like fates. *Ambrose Cellar*, besides the losse of thirtie thousand Crownes, lost his life. *James Win* was with his own Sword beheaded: *Nathan* lost one hundred and fiftie thousand Florens: *Nicolas Limborough* fiftie thousand. Two of *Ausburg* had lent two hundred thousand Crownes to *Demetrius*, which now was not to pay them. *Marcellius* lost an hundred thousand Florens. Twelue hundred *Poles* lost their liues; many were saued by the *Boiars*. Foure hundred *Russes* were slayne. At night the tumult ceased. Scarsly would the people giue leaue to bury the bodies after three dayes wallowing in the durt, in the *Germane* Church-yard.

After this tempest was calmed, the *Boiars* assembled in counsell about a new Election, where *Suiskey* made speech to them, professing himselfe sorrowfull for that had passed, in the execution of a iust zeale to the Imperiall Family and his Countrey, and in hatred of a cruell Tyrant: that *Iuan Vasilowich*, how euer injuriously taxed by some, had left Kingdomes annexed to his Inheritance as Monuments of his great spirit; by whom he had bene sent to *Stephen King* of *Poland* to treat of peace, and euer since had so carried himselfe in the State, that none could iustly blame him: that *Iohn* being dead, *Theodore* succeeded, but another ruled, who murdered the yonger brother, and as was thought, after that poysoned the other; so attayning the Empire, which how miserable was it all his time? that *Demetrius* therefore (whosoever he was) found friends, himselfe amongst others, but when their Religion was endangered, Forreiners aduanced, Lawes violated, Exotike fashions brought in, liberties suppressed, he withstood with the peril of his life; which it grieved him to haue enjoyed, as a Theeues benefite, by his grant which had no right to take it: yet seeing their forwardnesse in a cause so iust (would God it had not bene so bloody) more regarding his Countreys safety then rumours and reports, hee had bene their Captayne to doe that which God the disposer of Kingdomes by the successe had approoued, so that now they were freed from a cruel Tyrant, nor had they any Sorcerer or Impostor to mock them: that it remayned now, seeing the Imperiall Family was extinct, they should now seeke one of noblest blood, of wisest experience, of most religious zeale, who might esteeme his peoples hearts his strongest Forts, such an one as either is, or is thought to bee the best man to become their Prince. Thus was himselfe chosen Emperour the thirteenth of the Kalends of Iune. A writing was published to iustifie the killing of *Demetrius*, a runnagate Fryer called *Grishka*, or *Gregorie Strepy*, professed in the Monasterie in the Castle (which therefore hee would neuer enter lest hee should bee knowne) with other aspersions of Heresie, Sorcerie, affectation of indu-

The Deuill is often slandered: and by ill willers, bad is made worse. And so perhaps by Suiskeys faction was this Demetrius.

The former part of this intelligence I found in Master Hackluyts Papers; the latter by conference, &c. Son of Gregory Penpoloy. See Suiskeys Letter following. Occasion of ambition. Boris ill government.

Demetrius Emperour.

He is slaine.

Suiskey Emperour.

* This might be rumoured: Others say hee was not of that but of very noble blood. See sup. in Fletcher and Thuanus. Demetrius his person described. Some say that he was not like Demetrius and that he seemed a dozen yeeres elder: but perhaps they mistake this for

cing Popery (the Popes Letters also challenging his promise produced) to giue the Iesuites Temples, Colledges, and other necessities; with other overtures to the *Palatine Sandomersko*, for *Smolensko*, and *Novogrod*; his bringing in *Poles* in *Russian* Roomes, his luxurie, riot, pompe, reseruing *Boris* his Daughter in a Nunnerie with intent of incestuous lust, hauing murdered her Mother and Brother; making a siluer Throne with sixe Lions on each side, and other pride; abusing Nunneries to lust and lasciuiousnesse, &c. But wee shall giue you hereof more authenticke testimonie then this of *Thuanus* in *Suiskeys* Imperiall Letter to His Majestie. Meane-while touching this *Demetrius* we will produce a few *English* Testimonies extracted out of their Letters and Relations: wherein if some circumstantiall discrepance appeare (in things done both so farre and so foule in tumultuous furie, where men had rather hide themselves then become witnesses, lest whiles they would bee Spectators, they should bee forced to bee Actors, and haue their parts acted in that bloudie Tragedy) it is no maruell. I produce all Witnesses I can, in a cause of so remarkable consequence, and choose rather to bee prolix then negligent, that the Reader out of so much euidence may better weigh and examine the truth.

The late Emperour of *Russia* called by the name of *Demetry Euanowich*, is now credibly said (as some of them say) to haue bene the Sonne of a *Russe* Gentleman, named *Gregorie Penpoloy*, and that in his younger yeeres he was shorne a Frier into a Monasterie: from whence hee afterwards priuily got away, trauelled into *Germanie* and other Countreyes, but had his most abiding in *Poland*, in which time he attayned to good perfection in Armes and Military knowledge; with other abilities of sufficiencie; Afterwards finding a conceit taken by the *Russes* of a secret conueying away of *Demetry Euanowich*, brother and heire to *Pheodore Euanowich* Emperour; and that some other should be made away in his steed: And finding also the generall distaste of the government of *Boris* then Emperour, who after a faire beginning, did in his latter yeeres vphold himselfe, and his house with oppression and crueltie: And hauing also many circumstances and opportunities of time and age, and such other likelihoods, to aduantage and second his pretence, began first to broach his Title (as before) and by degrees found such a generall acceptation of all sorts of people, that it so daunted *Boris*, that (as it was then rumoured about) hee, first, and afterwards his Wife, and his Sonne succeeding him, made themselves away by Poyson. Though now it goeth for certayne, that the poysoning of them was procured by the Pretender, to make the easier way to the Empire, which thereby he obtayned, entring and continuing the same with all the State, and greatnesse that such a place required: Vntill at length the *Russes* moued rather by other certainties, then by any thing discovered by himselfe, the sixt day after his marriage (which was kept with very great pompe and solemnitie) being the seuenteenth of May last past, taking a time when the *Poles* stood least on Guard; came to the Court with one consent of Nobilitie and Commons about three of the clocke in the morning, and mastring the Guards, drew the Emperour out of his bed from the Emperesse, and charging him that hee was not the true *Demetry Euanowich*, but a false Pretender, he confessed the Deceit, and was forthwith hewed in pieces by the multitude: *Peter Basman* resisting was likewise slaine; and both brought into the Market place, where their bodies lay for a time to bee viewed of every man. The old Queene denied him to bee her Sonne, excusing her former acknowledgement to haue proceeded from feare and the generall acceptance which hee found amongst the people. As many *Poles* as made resistance, were slaine to the number of seuentene hundred. The new Emperesse, her Father, his brother with the other *Poles* were committed to safe keeping, to the number of eight or nine thousand.

And then proceeding to a new Election they chose Emperour *Vassiloe Euanowich Shoskey*, who not long before was at the Blocke to haue bene beheaded, for reporting that hee had seene the true *Demetry Euanowich* after he was dead, and did helpe to burie him. But the Emperour did recall him, and afterwards aduanced him to the chiefe place of dignitie about his person. He is the next of blood * liuing, descended of the Race of the old Emperour *Iuan Vasilowich*, of the age of fiftie yeeres or thereabouts, neuer married, but kept vnder during *Boris* time, a Prince of great wisdom, and a great fauourer of our Nation, as did specially appeare by the care hee had to guard the *English* House from rising, when the late *Demetry* was brought in by the *Poles*.

The late Pretender was of stature low, but well set, hard fauoured and of no presence; howsoever otherwise of a Princely disposition, executing Iustice without partialitie; And not remitting the insolencie euen of the *Poles*; well seene in martiall practises, and trayning his Nobilitie to the Discipline of warre, to make them the readier against the *Tartar*, not giuen either to women or drinke, but very liberall and bountifull, which occasioned some grievous Exactions to maintayne the same. And to conclude, a man in the opinion of such as knew him, not unworthy of a better gotten, and longer continued Empire, which hee lost chiefly through the greatnesse of his minde, supposing that none of his Subjects durst attempt any such matter against his person, when as in the meane time the practice went on with such a generall Conjurati-
on, that the *Russes* were summoned by the ringing of a Bell to bee readie to enter the Court. And an other after Pretender, calling himselfe the same *Demetrius*, &c. as after shall appeare, a deformed man.

to shake off that Gouvernement which would haue made them a more noble Nation then formerly they haue beene.

IT is reported by some of Ours, that hee the rather was inclinable to our Nation in the respect he bare to his Majestie, hauing read that his worthy Worke dedicated to Prince *Henrie*. Hee is said also to haue beene a resolute man of his hands, to haue delighted in fighting with the Beare; active and strong. I haue likewise heard that hee gaue the command of his Guard consisting of strangers to Captayne *Gilbert a Scot*; to haue made one *Buchenskey* (a Learned and Religious Protestant) his Secretarie; and otherwise to haue beene so alienated from *Russian* manners, and so well affected to Strangers, that they conspired as aforesaid. The people are said to haue entred the Castle (which was a quadrant, hauing a high bricke wall of seuen stories, and another of stone, and a Market place) with stones in their pockets (which are rare thereabouts) and some with weapons.

Captayne Gilbert.
Buchenskey.

Stones rare about Mosco.

Captaine Gilberts report of a Vision.

Some report from Captayne *Gilberts* Relation, that lying on his bed not long before his death (as hee thought, awake) an aged man came to him, which sight caused him to arise and come to Captayne *Gilbert*, and his guard that watched, but none of them had seene any thing. Hereupon he returned to his Bed, but within an houre after he againe troubled with like apparition called, and sent for *Buchinskie*: telling him that he had now twice seene an aged man, who at the second comming told him, that though for his owne person he was a good Prince, yet the injustice and oppressions of his inferiour Ministers must bee punished, and his Empire should bee taken from him. In this perplexitie his Secretarie gaue him good and holy counsell, saying till true Religion were there planted, his Officers would bee lewd, the people oppressed, and God Almighty offended, who perhaps by that Dreame or Vision had admonished him of his dutie. The Emperour seemed much moued, and to intend that good which that Countrey was not so happy to receiue. For a few dayes after (as that Relation auereth) his *Russe* Secretarie came to him with a Sword, at which the Emperour iested, and hee suddenly after fawcie speeches assaulted him, with many other *Grandes* of that Conspiracie, and (like another *Cesar*) slae him, crying *Libertie*, before his guards could apprehend the danger; of which some were slaine, but the most with *Gilbert* their Captayne, got to a place called *Coluga*, which with the helpe of some *Russes* they fortified and held for their defence. *Buchinskie* the Secretarie was taken and imprisoned, the strangers murdered, the *English* except, who haue in all changes been well beloued of the *Russians*; as indeed they deserue, hauing alway done good seruice to the Emperours. And their interest saued the life of that worthy man *Buchinskey*, which they requited with much obseruance to the succeeding Emperour *Suiskey*, who comes next to be spoken of; and first you shall haue his Letter to our Gracious Souereigne.

Another manner of his death reported.
Coluga.

§. II. III.

SVISKY the Successour his Letter to our King, describing the former DEMETRIUS his Acts and Tragedie.

The Copie of the Translation of a Letter sent from the new Emperour Vassily Euanowich Shoskey to the Kings Maiestie by Master Iohn Mericke.

The loue and mercie of God that guideth vs in the wayes of peace, we glorifie with the Trinitie.

I find him called Shoskey, Suiskey, Ziska, &c. the iust translation and pronounciation being W. d.

50 **F**rom the great Lord Emperour and great Duke Vassily Euanowich of all *Russia*, sole Commander of *Voladomer*, *Mosko*, *Nouogrod*, *King of Cazan* and *Astracan*, of *Syberia*, *Lord of Vobsko*, and great Duke of *Smolensko*, *Twerskoy*, *Yauharskoy*, *Pearmskoy*, *Vatskoy*, *Bollharskoy*, and of other: *Lord and great Duke of Nouogrod* of the *Low Countrey* of *Cherneego*, *Rezanskoy*, *Polotskoy*, *Rostouskoy*, *Yerelaueskoy*, *Bealozerskoy*, *Leeflanskoy*, *Owdorskoy*, *Obdorskoy*, *Condinskoy*, and Commander of all the *North parts*: also *Lord of the Land of Eeuerskoy*, *Cartalinskoy*, and ouer the Empire of the *Gorgians* of the Land of *Cabardinskoy*, and *Eeharskoy Land*, likewise of many other Lordships Lord and Commander.

50 To our beloued Brother James King of England, Scotland, France, and Ireland, Wee giue to vnderstand that *Sigismund King of Poland*, and great Duke of *Letto*, in Anno 7109. did send vnto the late Emperour *Boris*, his Embassadour named *Lewis Sapeago*, being Chancelor of the great Dukedome of *Poland*, requesting the said Emperour *Boris*, that the former league and peace made and concluded upon by the great Lord Emperour and great Duke *Theodore Euanowich* of all *Russia*, and

land.

him, Sigismund, King of Poland, might be steadfastly holden and continued till the time of that league were expired. As also that the Emperour Boris would enlarge the said league for thirtie yeeres more, whereupon the Emperour Boris yeelded thus farre unto the request of the King of Poland, that hee would continue the old league till the full time were expired, and assent to a new league for iwentie yeeres more; and to that effect he tooke an Oath, to hold and keepe all the contents faithfully, mentioned in the said Writing, touching the same league: and instead of the King of Poland, his Embassador Lewis Sapeagoe was sworne in the presence of the Emperour Boris. And after the Polish Embassador was departed from the Mosko, the Emperour Boris sent unto Sigismund King of Poland his Embassa-
dour, being one of the Prinie Councell, called Michailo Zleabowich Sallteecoue, with some others to
end and finish the aforesaid league, to the which league the King of Poland himselfe was sworne in the
presence of the Emperours Embassador to hold and keepe the said league faithfully, according to the te-
nour of their Writing.

But not long after Sigismund King of Poland, with one Pauarade, entred into such a practise, as
he therein falsified his Oath, and made way to the shedding of much Christian blood. First, by retaining
and upholding one Gryshca Otreapyoue, a Runnagate, a Coniurer, and one that left his profession
being a Monke, and ran away out of Russia into Poland; and being come thither, tooke upon him to be the
Son of the great Emperour Euan Vassilawich of famous memorie, and by name Demetry Euanowich:
when as it was well knowne in our Kingdome, that before he was shorne a Monke, he was commonly called
Yowhco, Son to one Bowghdan Otreapyoue, dwelling at a place called Galits; and when hee had
committed much villanie, to saue his life he shorne himselfe a Frier, and so runne from one Monasterie
to another, and lastly, came into a Monasterie called Chowdo, where hee was made one of the Clarkes;
being so placed there by the Patriarke of Mosko himselfe: But he did not leaue off his former life; for
he continued still in his most Devilish actions, as he did before he was shorne, committing villany, forsaking
God and falling to the studie of the Blacke Arie, and to many such like evils he was inclined. Also there
was found by him a Writing which shewed how he was false from God, and the same was made well knowne
to the holy Patriarch of Mosko, and of all Russia, and to the Metropolitans, Archbishops, and Bishops,
and to all the holy Cleargie: whereupon the said Rulers of our true Christian Faith, which is from the
Grecian Law, for these his most ungodly works, consulted to send him to perpetuall Prison, there to end his
life. Whereupon this notorious Instrument of Satan, perceiving this his overthrow, and that his vile pra-
ctises were discovered, ran away out of the Kingdome of Mosko, beyond the borders, and into Letto, to a
place called Keeyue: thus according to the Devils instructing of him, as one forsaken of God, he made
this his doing manifestly known to all people, leauing off his Monks Habit, and withall by the counsell and
advice of our Enemie the Polish King, and one of his Palatines named Sandamersko Yourya, m. with
Duke Constantine, and Duke Veshneuetzkoy and his Brethren with other Polish Lords that were of
his Councell, began to call him the Son of the great Lord, Emperour and great Duke Euan Vassily wick,
by name Prince Demetry of Owglits.

As also by his villanous treacherie and the Devils perswading of him, he made much trouble in our
Land, by sending abroad many of his intising and prouoking Letters, to diuers places vpon the borders of
our Countrey: that is, to a place called Done, and to the Volgoe, to our Cossacks and Souldiers, na-
ming himselfe to be the Prince Demetry of Owglits. Moreover, there came, to our Kingdome of
Mosko many Polish Spies, which brought and dispersed Libels both in Cities and Townes, and in the
high-ways, practising to raise dissention in the Kingdome of Mosko. Also it is well knowne, not only
to them in the Empire of Mosko, but likewise in other Kingdomes, that the great Lord Emperour, and
great Duke Euan Vassily wick of famous memory, had a Sonne called by the name of Prince Deme-
try, and after his Fathers decease, there was giuen unto him and his Mother the Citie of Owglits.
But in the yeere 7095. being in the Reigne of the great Lord, Emperour and great Duke Theodore E-
uanowich of all Russia, this foresaid Demetry was murdered by the order and appointment of Boris
Godenoue. And at his Funerall was his Mother now called the Emperesse Martha, with her owne Bre-
thren by name Michaila and Gregory the Sonnes of Theodore Nahouo. Likewise to his burying,
there was sent from the Mosko Metropolitans, and Archimandrites, and Abbots: and the great
Lord, Emperour, and great Duke Theodore Euanowich sent to his Funerall many Nobles and Coun-
tiers of the Land which saw him buried in the chiefest and principall Church of Owglits. Moreover,
Martha the Dutches and Emperesse his Mother is yet living, and many of her Brothers and Nephews,
which doe at this present time serue vs the great Lord Emperour, and great Duke Vassily Euanowich
of all Russia sole Commander: Likewise in these last yeeres past, as in Anno 7111. and in Anno 7112.
and 7113. concerning that foresaid Traytour and Hereticke, the forsaken of God Gryshca Otreapyo-
ue, many of our Gentlemen, Captaynes and others our Officers did many times write from the North
parts of the borders of our Kingdome into Poland and Letto, and to others their inferiour Cities, to the
Rulers and Gouvernours of the same; as also our spirituall people: the Patriarke, the Metropolitan, Arch-
bishops, and Bishops wrote unto the spirituall people of Poland, declaring unto them what that Heretick
and Traytor was, likewise from whence he came and what manner of person he was; as also of his demea-
nour, and likewise of the occasion why hee runne away to them out of the Land, as also the manner of the
making away of the Prince Demetry, and withall requested the Rulers and Spirituall people of Poland,
that they knowing what Runnagate this was, would not giue credit unto him, nor to make a breach of the
late league concluded upon.

But

But the Gouvernours of the Dukedome of Poland and Letto, as also the spirituall men, according to the King of Poland his commandment, gave no credit unto our writings, but began, more then before to intice and perswade men to uphold the Traitor, and to aide him. Moreover, to make trouble and dissention in our Land, they tooke this forsaken of God, Gryshca unto them, and cald him by the name of Prince Demetry of Owglits: likewise the King gave unto him a chaine of gold, with many thousand peeces of Polish gold, to the defraying of his charges; as also sent in armes to our borders with one of his Lords, the Palatine Sendamersko, and another of his chiefest Lords, with many troopes of Poles. But when the Emperour Boris understood how that this Gryshca Otreapyoue was called, by the name of Prince Demetry Euanowich of Owglits, and withall, that they did aide and helpe him against the Kingdome of Russia: he caused his Counsell to send a messenger, as from themselves, to the Polish Lord Panameerada, which Messenger was named Smeernay Otreapyoue, being Vnckle to the said Gryshca Otreapyoue being the Son of one Iamateen Otrepayou, onely to declare unto them what this Gryshca was; but that Polish Lord Panameerada would not suffer him, and his Vnckle to be brought face to face. But he made answer to the said Messenger Smeernay, that they did not aide him, neither did they stand for him in any sort.

Polish aides.

Smeernay sent.

So after he had sent away the Messenger Smeernay, the King of Poland, and the Lord Panameerada did aide Gryshca Otreapyoue with men and treasure more liberally then before, purposing to make great strife and trouble, and to shed much blood in the Kingdome of Mosco. Also at the same time Sigismund, King of Poland, requested the aide of one of the Princes of Crim in Tartaria, named Cazateera; and to that end he should aide Gryshca with his forces, against the Kingdome of Mosko; and he in consideration, did promise to give unto the foresaid Crim, Prince, what hee would demand. Then the Emperour Boris understanding what practises were in hand, being altogether contrary to the league; thereupon purposely he sent to Sigismund King of Poland, another speciall Messenger, one named Polnicke Agareoue; likewise at the same time, the holy Patriarke of Mosco, and all Russia, with the Metropolitans, Archbishops, and Bishops, with all the rest of the holy Clergie, sent their Messengers with Letters to the State of Poland, and so the great Dukedome of Letto, to the Archbishops, and Bishops, and to all the Spirituallie. Moreover, in the said Letters, the Emperour Boris with the Patriarke, and all the holy assembly, wrote unto the Lord Panameerada concerning Gryshca, making it knowne unto them what he was, and wherefore he came away into Poland, and likewise that the Sonne of the great Lord Emperour, and great Duke Euan Vasilowich, the Prince Demetry was dead: And to that intent, that the King Sigismund should not give credit to the said Gryshca, and that they should not spill Christian blood, nor violate the league.

Crim Tartar.

Another Messenger.

Hereupon Sigismund King of Poland writ unto the Emperour Boris, and further, by word of mouth, both he and Panameerada delivered to the said messenger in his message, that hee did hold and keepe their League, and moreover, did not violate or breake his oath no manner of way: and likewise did write, that he did not ayde that foresaid Gryshca, neither did give credit unto him: withall denying that he was with him in his Kingdome: and further he did write, that if there were any out of Poland or Letto that did aide or assist him, that then they should be executed. But after he had dispatched away the messenger of Boris, not regarding his oath, still more and more did aide and helpe this Gryshca Otreapyoue. Also the Palatine Sendamersko, and Myhala Ratanisko came into the Kingdome of Mosco, to a place called, the Land of Seeuersko, putting the people of that Land in feare, and perswading them there, this Gryshca was the true Prince, and that the King of Poland and Panameerada, had found out the certaintie thereof: and therefore they will have Poland and Letto stand for him. Also from out of many other Kingdomes they goe to aide and assist him: likewise other inferior Kingdomes are willing to stand for him: moreover, that Gryshca in the foresaid Land of Seeuersko, and in other places of our Borders, by the meanes of his diuellsish practises and conirations did intise and tempt them to fall to him: likewise the people of those foresaid places of the Land of Seeuersko, and on the Borders, being simple people, and resorting seldome to the Citie of Mosco, and being intised by Gryshca, and the rest of the Gouvernours, could not withstand, but yeelded them unto them. Whereupon against those Polonians and Lettoes, and other enemies that were already entred the Kingdome of

Mosco, the Emperour sent his Nobles with a great Armie: but by the appointment of God, the Emperour Boris deceased; upon whose death, the chiefest of the Nobles departed the Campe. And after their departure, the Armie hearing of the death of the Emperour, and being drawne thereto by feare and otherwise, at last yeelded themselves over unto Gryshca, as the Borderers had done before.

Also the foresaid Gryshca, by the helpe of the Dinell, and King Sigismund, and Panameerada, came into the Citie and Kingdome of Mosco, to the great disquietnesse and trouble of the whole Land; by whom the Religion was corrupted, and by him were many true Christians put to exile, for denying his right and interest to the Kingdome of Mosco. And shortly after he was seiled in the Kingdome, and he tooke to wife the daughter of one Sandamersko, as was appointed by the King of Poland and Panameerada: the which wife of his was in Mosco with her Father and Brother Senatskoy, and with one Veshneuetskoy, with their Polish and Letto Lords, and other people, by whom Religion was prophaned: as also we were forced and driven to receive many wrongs and iniuries, which the people of the Kingdome of Mosco could not endure. Also, at last this Greehca, by the counsell of the Palatine Sandamersko his Father in Law, and by the counsell of Veshneuetskoy, and other Polish and Letto people, which

Mutation of Religion.

Romish Reli-
on and Iesuites

which he brought in with him, was purposed, by a secret politicke devise to haue put to death the Metropolitans, Archbishops, and Bishops, and all the holy and spirituall assembly, with the Nobles, and Courtiers, and diuers others which were of the better people, and so to haue sent others into Poland and Letto; withall to haue changed the Religion, and to haue established the Romish Religion, for which purpose he brought with him many Iesuites.

Large Empire
of Russia.

The which we the great Lord and great Duke Vasily Euanowich, of all Russia, with the Metropolitans, Archbishops, and Bishops, and with all the holy spirituall assembly, and with the Nobles, Courtiers, and Commons of the Kingdome of Mosco, well considering, and perceiving what an alteration this would be to our Christian faith, with the ouerthrow and viter undoing to our whole Kingdome: we then earnestly bewail'd and lamented, and withall hartly prayed to the almightie Trinitie our onely Lord God, that liueth and defendeth mankind, that it would please him to deliuer vs, and the Common-wealth from those vile, cruell, diuellish attempts, and deuises of theirs. Thus desiring the mercy of God, we all returned and stood stedfast to our former vnsported and true Christian faith, against that vsurper and counterfeit Gryshca and his Counsell, with a resolution to stand in the same manfully, and euen to the death, hoping and longing for the time that all people, and warlike men and Souldiers, and many others of the Empire of Mosco might come to gather themselves together, & that they might likewise perceine and discern this vsurping Heretick, and his diuellish courses, by which he did decline from the true Christian faith of our Religion. The largeness of the Kingdome of Mosco cannot be vnkowne vnto you our louing Brother, how farre it extendeth it selfe both to the South, and to the West, as also to other places, that in halfe a yeares space they could not gather themselves together. But when as the power and warlike Souldiers, and all other people were gathered together, then through the mercie and fauour of God, this enemy of Gods Commonwealt was discovered to all what he was. And the Emperesse Martha, being Mother of the true Prince Demetrey Euanowich, did certifie vnto vs before the Metropolitans, Archbishops, and Bishops, and before all the holy assembly, as also to the Nobles and Courtiers, and other Officers, and men of worth within our Empire, did shew deliuer, that her Sonne the Prince Demetrey was murdered beyond reason, at a place, call'd Owglits, by appointment of Boris Godenoue, and that he dyed in her armes; yet did this Gryshca falsely call himselfe by the name of him that was murdered.

See before.

Also we found in the custody of this Gryshca, the Copie of a writing, which was the contract and agreement that he made betwixt him and the Palatine, before his coming out of Poland; in which was written, that as soone as he did come to the Kingdome of Mosco, that then he would take to wife the daughter of the Palatine, and would giue her two Prouinces, called great Novogrod and Vobsko, with counsell, Courtiers, Gentlemen, and Priests, sitting to a Congregation, with inferior Castles and Lands, freely in those foresaid, to build and set up Monasteries, and also to set up the Romish Religion; And when he came to the Kingdome of Mosco, that then he should giue vnto the Palatine tenne thousand pieces of Polish Gold, which is by our Russia account, three hundred thousand Markes: and to his wife, in consideration of her long Iourney, he promised to giue cloth of Gold, and cloth of Siluer, and of all the best things that was in the Treasurie of the Kingdome of Mosco. Likewise, that hee the said Gryshca, at his coming to Mosco, would take order to bring these things to passe with all diligence, whereby he might draw all the Dominion of Mosco from our true Grecian Religion, and so to haue turned vs into the Romish Religion, and to haue destroyed the holy Church ouer all the Empire of Mosco, and so to haue built up the Religion of the Church of Rome: and for the performing of all this, the said Gryshca was sworne to the Palatine Sandamersko, in the presence of the Teachers of the Land, as before said; that he according to his owne hand writing, would hold all the said covenants, with all diligence, as likewise to bring all the Empire of Mosco to the Romish Religion. The which covenants and agreements the Generall Sandamersko himselfe hath confessed to our Maiestie, and Nobles, that the foresaid agreements and covenants betwixt him and the foresaid Gryshca were true, and how that they trusted one to another: moreover, the Palatine did certifie vnto our Nobles, how Gryshca sent him a Letter vnder his owne hand and Seale, in which he promised to giue him Smolensko, with all the Prouinces belonging thereto, and another place called Seuerow, as also giue him liberty to set up Monasteries, and the Religion of the Church of Rome. Further, there was found by him Letters which were sent to him from the Pope of Rome, and the Cardinals, and Priests, to that effect, that he should remember and withall be mindefull to take in hand speedily those matters and businesse vpon which he had giuen to Sigismund, and the Cardinals his troth and vow, the which was, as before said, to be himselfe of the Romish Religion, as also to bring all the people of the Kingdome of Russia into the same Romish Religion, not onely them that of themselves were willing thereto, but also others by compulsion, and to put them to death that sought to contrary the same. And not onely them of the Kingdome of Russia, but likewise other godly people of seuerall Religion: and that doe serue in the Kingdome of Mosco, as the Catholics, and the Calvinists, them likewise he should seeke to bring into the Romish Religion with all persuasions. Moreover, Gryshca himselfe, before vs, and our Nobles, and Courtiers, and before our Commons, did acknowledge as much, and thereupon yeelded himselfe to be in fault: as also that he did all with helpe of the Diuell, hauing forsaken God.

Popes Letter.

For which these his vile actions, this Gryshca, according to the true iustice, receined an end to his life, and was by abundance of people slain in the Mosco, where he lay three dayes in the midst of the Cite, to the

view

view of all such like usurpers, and disturbers. And because his body was loathsome unto us, we caused it to be carried out of the Citie, and there to be burnt.

This Enemy thus having ended his life, then the Kings sonnes of diuers Countries, now dwelling within our Kingdome, with the Patriarke, Metropolitanes, Archbishops, and Bishops, with the Nobles, Courtiers, and the Commons, made entreaty unto us Vasilii Euanowich, to raigne and gouerne over them and ouer all the Kingdome of Mosco, as their Lord, Emperour, and great Duke of all Russia. According to which entreatie made unto us by the said Kings sons of diuers Countries, as likewise by our Nobles, Courtiers, Merchants, and all the rest of the Commons of all the Kingdome of Mosco, we are come to the great Kingdome of Volodemar, Mosco, Nouogrod, and as also of the Kingdome of Ca-

Election of Swiskey.

zan, Astracan, and Siberia, and ouer all the Provinces of the Empire of Mosco: as also wee the great Lord Emperour, and great Duke of all Russia, are crowned with our Imperiall Crown: and for the said Kings sonnes of diuers Religions, and our Nobles, Courtiers, and Souldiers, and all manner of People, doe serue our Imperiall Maiesty with desire and good liking voluntarily, and not by delusions and coniuurations, as the Poles and Lettoes were bewitched by Grishca. But we the great Lord Emperour and great Duke Vasilii Euanowich, with great care stayed and restrained our People from the spoyle of the Poles and the Lettoes, defending them from death; and withall haue commanded to let goe many of them into Poland and Letto: but the chiefeest of them that were of the Councell, and that practised to bring trouble and dissention in the Kingdome of Mosco, are now taken. And we to doe an honour unto the dead body of the true Demetrie, haue (upon conference with our Metropolitanes, Archbishops, and Bishops, and all the holy Assembly, our Nobles and Courtiers, and all the Kingdome of Mosco) sent to the Citie of Owglets a Metropolitan, named Filareta, of Rostoue and Yeralloue, who was called before he was made Metropolitan, Theodor Neekete, which being one of the Nobles in times past, and with him the Archbishops of Astracan, called Feodosia, and our Nobles the Duke Euan Michalowich Vorotinskoy, with the rest of his fellowes, commanding them to bring up with them the body of the Prince Demetrie Euanowich, who was murdered by the appointment of Boris Godonoue, and to bring it vp to our Citie of Mosco with great honour, which body shall be buried in the principall Church of Mosco, called Michael the Archangel, neare to his father the great Lord Emperour and great Duke Euan Vasilowich of famous memorie, and by Gods power his body shall not be touched or abused any manner of way. Likewise will we, by the fauour of God, honour the Funerall of Demetrie Euanowich with speciall solemnities, which body performeth many cures, and worketh miraculously unto them, that come to him with Faith to be cured of their diseases.

Miracles.

And now most louing and deare brother, wee calling well to minde the great amitie and friendship that was betwixt the great Lord Emperour, and great Duke Euan Vasilywich, and his Sonne Theodor Euanowich, the Emperour Boris, and the great Lady Queene Elizabeth: the like brotherly loue doe we desire to haue with you, most louing and deare brother, to be established and continued betwixt us, as it was with them, during our lines. Therefore may it please you, our louing brother Iames, King of England, after the hearing of these great and strange dangers past, to reioyce with us, that he hath deliuered from such a vile enemy, and that he, our mercifull God, hath diuided and scatterd that wicked counsell, and that he hath turned their cruelty vpon their owne head, to their shame and confusion. And concerning your Merchants that were in our Kingdome, Iohn Merricke with his fellowes, we haue graced them with our Imperiall presence; as also haue giuen unto the said Iohn Merricke and his fellowes, a new priuiledge, and Letters of fauour, by which they shall come into our Kingdome, and to traficke with all manner of goods freely, without paying any Custome whatsoeuer, and as to them was granted in former time, and this fauour we haue giuen them to manifest vnto you our louing Brother, our Brotherly loue. And the reason that we haue not sent to you, louing brother, our Embassadour, is, because we had not time, in regard of many our Imperiall affaires, but hereafter doe purpose to send, to visite you in your Kingdome. Written at our Imperiall palace and Citie of Mosco, from the beginning of the World Anno 7114. the fourth day of Iune.

Sir Iohn Merricke.
New Patent.

Thus is Demetrius painted out by his Enemies, which perhaps were not altogether led with simplicitie of truth, but in many things made him worle, that they might make their owne cause (bad enough) to appeare better. They tell also of great outrages committed by the Poles, (like those sometimes here in England by the Danes) their proud insulting ouer the men, ravishments of women, fetching them out of their houses and husbands bosomes to serue their lusts: neither did Demetrius, as they say, punish them; one onely being sentenced, and hee violently rescued from execution by the Poles. They say also that Demetrius his body was plucked out of the grane and burnt, the ashes throwne into the aire, the seeds, as the sequels seemed to shew, of many Demetrii after.

1606.

Swiskey is also by some reported to haue bene chosen by lot in this manner. The Nobles cast lots foure times to receiue a Successor, as it were, by diuine sentence in lot-oracle: in euery of which times the lot fell vpon Swiskey (for as some say, there were three or foure neerer then hee) he modestly refusing and enforced by constancy of the various lot to accept that Scepter, whereof others thinke him as ambitious, as was modest Boris before him. Howouer, he hath left his name and memorie written in as blacke inke as either Boris or Demetrius, if Reports bee true, which

which say that he proued a wicked Prince, partly by poison, partly by the *Tartars*, making away all, whose blood might by Nobilitie threaten a probabilitie of their prouing his Corriuals. Yea, he is said to haue sent for Witches and Sorcerers, *Laps*, *Samoeds*, *Tartars*, or whatsoeuer other Nation yeelded such Hell-hags, incarnate Fiends, the Devils blacke guard, to consult about his Empire and succession; and (the Deuill is a murtherer) to haue sealed their predictions with blood. Thus being told that one *Mischalovich* should succeed, he is said presently to haue plotted the death of three *Grandes* of that name, his best seruants; yet the superstitious people obserue (after much chopping and changing) that in little time the State was settled on one of that Name, which still swaith the Scepter; Who then being a youth of no State-terror, was his attendant in Court, and bare an Axe (after their custome) before him.

One of his first Acts, was to send into *Poland* an Embassage, which could not bee admitted audience till Ianuarie. Hee thereby complained of *Sandomerskos* artes which obtruded that Changeling on *Russia*, whereby aboue two hundred of principall Nobilitie had lost their liues: demanding restitution of the moneys which that Impostor had caused to bee transported into *Poland*, and restitution of goods; otherwise hee would with *Charles* of *Sweden* Duke of *Suderman*, enter *Poland* with an Armie to bee reuenged for the league (which they had sworne) broken, &c. *Sigismund* answered modestly, with excuse of their helping the right Heire in their conceits, and that his desire was that peace should continue (being loth in times then tumultuous at home, to prouoke a forreine enemy, so neere in dwelling, so remote in affection) *Sandomersko* still remayned prisoner in *Russia*. But things being better settled in *Poland*, and growing worse in *Russia*, by the dislike conceiued against *Suiskey*, a double danger grew to him both from another reuiued *Demetrius* (yea many pretending that Name and Title did after arise, as out of his dispersed ashes) within *Russia*; and from the *Poles* without, willing both to assist him vnder colour of Reuenge, and with hope of Conquest also, to inuade and fish for themselves in troubled waters.

As for that *Demetrius* new risen from the dead (not to mention the others of inferiour note) I shall relate *Captaine Gilberts* reports which knew him and was by him entertayned, as I receiued them of a iudicious friend of mine, which had them from his owne mouth. Hee being at *Coluga* (as before is said) receiued a Letter from this new *Demetrius*, so written that it appeared to bee of the former *Demetrius* his owne hand: and thus also he vsed to doe to others being able to counterfeit his writing, and to relate such other particulars as seemed impossible to any but *Demetrius* to doe. Hereupon *Captaine Gilbert* went with his Guard of Souldiers to meete him and the *Polake* Generall which came with him. And whiles he was yet a good distance off, *Ab* (this *Demetrius* called to him) *my true seruant, where were you and my Guard, when the villaines hurt me? but if I had followed the counsell which you gaue me such a time in such a place* (relating the particulars) *I had prevented them*. This circumstance had moued him to beleue this to be the former *Demetrius*, had not he differed from this in person, as night from day. Thus also he said he affirmed to the *Pole* Generall, asking him how he liked this *Demetrius*, that This and That were as like as Night and Day (for the former was of goodly personage, and this a very deformed wretch.) The *Pole* replied, It is no matter, *Captaine*, this *Demetrius* shall serue our turne to bee reuenged of the perfidious and bloudie *Russe*. And this *Demetrius* acted the other so neerly, and could so cunningly and confidently relate particular passages of past occurrents, that the Lady of *Demetrius* was by him bedded. Thus was miserable *Russia* ground betwixt these two Mill-stones, the pretending *Demetrius* and the super-intending *Pole*. *Suiskey* is helped not a little by the *English*, which brought him strangely and aduenturously powder and munition to his Castle to *Mosco*, which yet at last by revolt of the Citizens deliuered vp it selfe and him to the *Poles*. And as for that pretending *Demetrius*, he was afterwards murdered in his Campe by a *Tartar*. But it is meet to take hereof larger view.

Sigismund King of *Poland* layeth claime to *Sweden*, as sonne to King *John* (who is said to haue vniustly deprived *Ericus* of his life and Kingdome) whose yonger brother Duke *Charles* first receiued his Nephew King *Sigismund* (then also elected and still continuing King of *Poland*) but vpon warres which after arose betwixt them, the issue was, that the *Pole* holds the Title; but *Charles* obtayned both Regall Title and Power, wherein his Sonne hath succeeded. *Suiskey* takes hold of this difference, and *Charles* assists him with an Armie sent vnder the command of *Pontus de la Gard* a French Coronell, consisting of *English*, *French*, and *Scots*. These march to *Mosco*, which the new *Demetrius* and *Poles* held besieged, and put *Demetrius* into such feare, that not trusting the *Pole*, and fearing his Aduersaries on both sides, he stole away by night with a small retinue: and the *Poles* obtayned Articles of composition and departed. But miserable were the distresses by famine, fire, sword, rapes, and other outrages in other parts of *Russia*, caused by other *Poles*; and yet these but as a beginning and prelude to other following. For the King of *Poland*, entred with a huge Armie (some say of an hundred thousand men) inuaded the *Muscovite*, and especially laid siege to *Smolensko*. He is reported thence to haue sent twentie thousand to besiege *Mosco*.

Suiskey had sent to King *Charles* for more aide, which he procured out of *England*, and other

Coun-

Countries, of which I had rather let you heare an eye-witnesse speake of this, as elsewhere other English men have related their owne voyages. This indeed deserueth relation, as a tragedie of meaner persons with manifold vicissitudes of miseries (attending voluntarie Souldiers) as before you have seene tragedies of Princes and Grandes. And first you may reade King Charles his compact and promised stipend to such voluntaries, which for the more vnderstanding Readers delight I haue here inserted.

- N**O: Carolus Nonus, Dei gratia Suecorum, Gothorum, Wandalarum, Finnonum, Coreliorum, Lapporum, Conanorum, Esthonorumq; in Liuania, &c. Rex. Notum facimus quod illustrem & generosum nobis sincere dilectum Dominum Iacobum Spentzium, Baronem Wolmerischorum in ministrorum nostrorum numerum clementer receptum, omnium qui nostris nunc militant, aut in posterum militaturi sunt auspicijs, Anglorum, Scotorumq; ducem & prefectum constituimus, ea conditione ut in nostrum, Regniq; nostri usum, pedes mille, & equites quingentos, spectata virtutis milites conscribat, adductosq; inuente vere ad 12. scilicet Maij sequentis Anni 1609. in Regno sistat. Cui nos ad dictos milites tam colligendos quam in regnum traducendos, in pedes quidem nouem, in equites vero quatuor thalerorum imperialium millia & quingentos assignauimus. Cum autem in regnum prefatus militum numerus appulerit, illis si equos & arma subministrauerimus, ea peditum quidem singulorum dimidij equitum vero duorum de cuiusq; stipendio menstruo thalerorum singulis mensibus donec pro armis & equis nobis satisfiat, detractioe soluentur. Ipsi duci primario Peditum vero singulis cohortibus (quarum quatuor ducentis Capitaneo, ceterisq; officiarijs una comprehensis constabat) mille septingentos thaleros in mensem dabimus. Equidem autem cohors qualibet centum equites continebit. Quod si pauciores fuerint, quot persona in prima lustratione defecerint, totidem thalero menstruo Capitaneorum, Equicunq; Magistrorum stipendio detrahentur: In sequentibus vero lustrationibus quae singulis mensibus semel institui debent, si qui forte interea ex hac vita decesserint, aut alio quocunq; modo, militum numerus fuerit ita diminutus, ut pedes cuiusq; cohortis ducentis pauciores sint (non tamen in eam paucitatem redactus ut ad tuendum, ornandumq; vexillum modo militari pedes impares inueniantur) Capitaneos nihilominus stipendium integrum ad sex menses persoluetur, quod si postea defectum non suppleuerit, ipse officio Capitanei carebit & pedes ipsius per ceteras cohortes, ad eorum supplementum distribuentur. Equites vero cohortis cuiusq; si centum pauciores fuerint, Magister equitum nihilominus donec numerus sexagenario maior fuerit stipendium integrum consequetur, idq; ad sex menses durat. His autem exactis, nisi praestitum, centum equitum numerum suppleuerit, ipse munere suo primarius, & equites per ceteras cohortes distribuentur. Magistro equitum centum, Vicario seu locum tenenti quadraginta, Signifero triginta, Decurioni viginti, singulis ductoribus viginti, cuiq; buccinatori sex, Equitibus vero singulis duodecim thaleri, in singulis mensibus munerabuntur. Ducto autem duci generali, ut sequentes officarios sibi adiungeret clementer sumimus: Vicarium generalem, cui quadringentos, prefectum vigiliarum, cui nonaginta, Secretarium cui octoginta, Praetorem cui sexaginta, Prefectum annonae cui sexaginta, Pastorem cui sexaginta, Chirurgum cui quadraginta, Archicustodem cui quadraginta, Inspectorem armorum cui quadraginta, Tympanistam cui sedecim florinos in singulos menses promissimus. Primus autem stipendij mensis intra decimum quantum diem a militum in regnum aduentu inchoabitur. Liberum quoq; habebit prefatus dux Primarius plenamq; iustitia exercenda potestatem in omnes suo imperio subiectos, idq; in omni criminis genere excepto crimine laesa Maiestatis; Peditum cuique subsidij loco thalerum unum; Capitaneis autem & reliquis officiarijs stipendij singulis designati dimidium; Magistro militum duodecim; Eius Vicario octo, signifero sex, cuiq; Decurioni quatuor singulis ex tribus ordinum ductoribus tres, Buccinatori unum cum dimidio, singulis vero equitibus duos in septimanam thaleros dabimus; Semestri quolibet exacto habitaq; accurata supputatione, quod de menstruo stipendio reliquum est, eis persoluetur habita tamen ratione numeri quem in singulis delectibus seu militum lustrationibus Capitanei equitumq; Magistri exhibuerint. Quod si dux militibus suis secundum aliquod praelium fecerit, aut arcem urbemq; aliquam vi expugnauerit, eo ipso die quo id contigerit priore finito nouus mensis inchoabitur. Liberum quoq; erit Ducibus singulis quoties necesse erit a cohortum supplementum adducendum aliquem mittere, qui dum absens erit stipendium suum nihilominus consequetur, pro singulis autem qui in supplementum adducti fuerint decem thaleri numerabuntur. Quod si in praelijs, velitationibus, excubijs aut alio quouis casu quonquam ducum, aut militum in hostium potestatem venire contigerit, idq; non spontanea deditione aut alia ratione subdola & fraudulenta accidisse compertum fuerit, is alius suae conditionis statusq; captui permutatione liberabitur. Hostium vero aliquis si captus ad nos nostrum exierit, Ducem a quoquam eorum perductus fuerit, quod pro sui liberatione captiuus praetium sponderit, id ei qui captiuum duxerit numerabitur. Quod si quisquae horum militum pila ictus tormentaria, aut alio quouis modo mutellus, aut manens euadat, ita ut ipse se alero victumq; quare nequeat, illi a nobis pro ut cuiusq; regni status & conditio, honestum stipendium per omnem vitam suppeditabitur: si vera diutius in hoc Regno nostra commorari noluerit, tum vnius mensis accepto stipendio integrum ei erit, quo libuerit commigrare. Cum cohortes, siue simul, siue sepe ratim exauctorabuntur, singulis officiarijs & militibus mensis vnius numerabitur stipendium. Si aut prefatus primarius aut alius inferiorum Ducum vel Officiariorum a S. R. M. Britanniae accersetur, persoluto quod tunc forte restabit stipendio, ipsosq; duce remunerato, libera dabitur discedendi facultas: In quorum euidetiorum

dentio rem fidei manus propria subscriptione Regia q. nostri sigilli appensione presentes munimus. Ex Regia nostra Stocholmenli die 7. Octobris, Anni Millefimi sexcentefimi octauis.

Subscript. CAROLVS.

1200. Souldiers
shipped from
England.

Colonel Cal-
uine.

A tempest.

Another tem-
pest of the mu-
tinious vulgar.

They land in
Putland.

About a fortnight before Midsummer, which was A. 1609. a companie of Voluntaries, to the number of a thousand and two hundred Souldiers, were at severall times shipped from England to passe into Sweden, to aide the King of that Countrey in his wartes against the King of Poland. To which aide diuers other Nations did likewise resort, as French, high Dutch, &c. Of the English Companies that went thither, the first was commanded by one Caluine a Scot, who by appointment was made Lieutenant Colonell, and chiefe of the other Captaines ouer the footmen.

After the first Companie was gone, a second number of three hundred men (of which the Relator of this, was one) were put into one ship belonging to Sweden, and came from thence for vs. We were assaulted with a great tempest, and were tossed so long, that all our victuals were almost spent: the miserie of which, threw vs into more desperate feares: now were wee assaulted by double deaths (Famine and Shipwrack) what course to take for our reliefe no man presently knew. Continue without foode it was impossible, and as impossible was it for vs. to recover the Land in any short time, without the assured destruction of vs all. At this season, our Commanders were these; Lieutenant Benson, Lieutenant Walton, who was Prouost Martiall of the field; and an Ancient of the Colonels companie. The common Souldiers vowed and resolved to compell the Mariners (seeing the present miseries, and no hopes promising better) to set vs all on shoare vpon the first Land that could be discovered. Our Commanders did what they could by dissuasion to alter this generall resolution, because they feared it would bee the losse of the greatest part of our Companies, if they came once to bee scattered: and besides, they knew that it would redound to their dishonour and shame, if they should not discharge the trust imposed vpon them by our Captaines, which trust was to conduct vs and land vs before, whilst our Chieftaines remayned a while behinde in England, to take vp the rest of our Companies. Yet all this notwithstanding, Land being discovered, there was no eloquence in the world able to keep vs aboard our ship, but euery man swore if the Master of the ship would not set vs on the shoare, the sailes should be taken into our owne hands, and what was resolved vpon (touching present landing) should in despite of danger be effected. Vpon this the Master of the ship and the Mariners told vs, that if we put to land in that place, we should all either perish for want of victuals, which were not to bee had in that Countrey, or elsie should haue our throats cut by the people. Wee resolved rather to trie our bad fortunes on the land, and to famish there (if that kind of death must needs attend vpon vs) then to perish on the Seas, which we knew could afford vs no such mercy: and on shoare wee went, as fast as possibly we could. When our Officers saw, that there was no remedie, nor force to detayne vs aboard, they then disheartned vs no longer, but to our great comforts told it, that the Master of the ship (which thing hee himselfe likewise openly confessed) knew both the Land and Gouvernour thereof (as indeed we proued afterwards he did:) and therefore desired they all our companies not to misbehaue themselves toward the people, for that it was an Iland called *Iutland*, vnder the Dominion of the King of Denmark, but subiect to the command of a Lord, who vnder the King (as his Substitute) was the Gouvernour.

And that we might be the better drawne to a ciuill behaviour towards the Inhabitants, our Officers further told vs, that they would repaire to the Lord Gouvernour of the Countrey, and acquaint him with the cause of our v unexpected landing there; vpon which we all promised to offer no violence to the people; neither was that promise violated, because we found the Inhabitants tractable, and as quiet towards vs, as we to them: yet the greater numbers of them ran away with feare, at the first sight of vs, because (as afterward they reported) it could not bee remembered by any of them, that they ever either beheld themselves, or ever heard any of their ancestors report, that any strange people had landed in those places and parts of the Iland: for they thought it impossible (as they told vs) that any ship should ride so neere the shoare, as ours did, by reason of the dangerous Sands.

Our Officers so soone as they were at land, went to the Gouvernour of the Iland, whilst the Souldiers (who stayed behind them) ran to the houses of the Ilanders, of purpose to talke with the people, and at their hands to buy victuals for a present reliefe: but when wee came among them, they could neither vnderstand vs nor we them; so that the Market was spoiled, and wee could get nothing for our money, yet by such signes as wee could make, they vnderstood our wants pitied them, and bestowed vpon vs, freely, a little of such things as they had. In the end, a happy meanes of our reliefe was found out by a Souldier amongst vs who was a Dane by birth, but his education hauing bene in England, no man knew him to be other then an English man.

This Dane made vse of his owne native language, to the good both of himselfe and vs, certifying

fying the people (who the rather beleued him because he spake in their knowne tongue) of the cause that compelled vs to land vpon their Coast, and that we intended no mischief, violence, or money: to which report of his they giuing credit, stood in lesse feare of vs then before, and thereupon furnished vs with all such necessaries, as the Countrey afforded to sustaine our wants. The foode which wee bought of them was onely fish, and a kinde of course bread, exceeding cheape. Of which foode there was such plentie, that for the value of three pence wee had as much fish as twentie men could eat at a meale, and yet none of the worst sorts of fish, but euen of the very best and daintiest, as Mackrels and Lobsters, and such like. In which our trading with the poore simple people, we found them so ignorant, that many, yea most of them regarded not whether you gaue them a Counter, or a Shilling: for the bigger the piece was, the more fish they would giue for it: but besides fish wee could get no other sustenance from them, or at least, could not vnderstand that they had any other. But obserue what happened in the meane time that we were thus in traffique with the Ilanders for victuals, our Officers (as before is said) being gone to the Lord Gouvernour, who lay about twelue *English* miles from the Sea side, the Master of our ship on a sudden hoysed vp sailes, and away he went, leauing one of his owne men at shoare, who accompanied our Officers as their guide, through the Iland. The cause of the ships departure, did so much the more amaze vs, by reason it was so vnexpected, and the reason thereof vnknowne to vs: But wee imagined the Maister of the ship and Mariners feared to receiue vs into the Vessell againe, because some of our men at their being at Sea, threatned the Saylers, and offered them abuses before they could be brought to set vs on land.

Fish cheape:

Ignorant Bores.

On the next day following, the Lord Gouvernour of the Iland came to vs, bringing our Officers along with him, yet not being so confident of vs, but that (for auoyding of any dangers that might happen) he came strongly guarded with a troupe of Horse-men well armed. And (vpon his first approach) demanding where our ship was, it was told him in what strange manner it stole away and forsooke vs: he then asked what we intended to doe, to which we all answered, that we would be ruled by our Officers: hereupon hee inquired of them, what they would haue him to doe in their behalves: they requested nothing else at his hands, but onely his fauourable Passe through the Countrey, and a ship to carry vs forward into *Sweden*: to which request hee made answer, that he could grant no such licence vntill he had made the King of *Denmarke* acquainted with our being there, for the Iland belonged to the King, he said, and he was no more but an Officer or Substitute vnder him. Yet in consideration that our ship had so left vs in a strange Land, he promised to doe all that lay in his power to effect our good: but withall told vs, that the people had inward feares, and were posselt with suspitions, that our intents of landing vpon such a Coast, were not, as we our selues affirmed, only to get foode, but rather to make spoile of the poore Inhabitants. And therefore, to remooue all such feares and ieaousies out of the peoples hearts, he held it most conuenient for the generall safeties of both parties, to separate our numbers, and to spreade vs abroad in the Countrey, one and one in a house, where it was agreed that we should receiue both a lodging, and meate, and drinke, vntill hee had sent to the King of *Denmarke* some of his owne men with our Officers, to vnderstand his Maiesties pleasure, and what should become of vs.

To this we all agreed, and accordingly for that purpose, were by the Lord Gouvernour, safely by these armed horse-men which were his guard, conducted to his owne house. To that place were al the people of the Iland summoned together, they came at the appointed day to the number of five or six hundred, circling vs round with Bils, Holbards, two-hand Swords, and diuers other weapons: And at the first sight of vs grew into such rage, that presently they would haue cut all our throats, and hewed vs to pieces, but that the authoritie of the Gouvernour kept them from offering violence, yet was hee faine to vse the fairest meanes of perswasion to allay their furie. For they would not beleue but that our arriuall there was to destroy them. Yet the Gouvernour shewed vnto them all our number, which was but three hundred men, and those all vnweaponed, and so consequently, neither likely nor able to vndertake any mischief against them: Charging the vnruely multitude, vpon paine of death, not to touch the least finger of vs, but to diuide vs equally into seuerall Villages, as it should seeme best vnto them, and so bestow kinde and louing entertainment vpon vs till they heard further from him, which command of his they accordingly performed.

Immediately vpon this setting of them and vs in quietnesse, one of our Officers with two of the Gouvernours men, were sent away to the King of *Denmarke*, to vnderstand his Highnesse pleasure, which Messengers were no sooner dispatched about the businesse, but the Ilanders growing more and more suspicious, came againe to the Gouvernour, and neuer would cease or giue ouer troubling him, vntill they had gotten him to make Proclamation (in hearing of vs all.) That if any of vs would freely discouer the true cause of our landing vpon that Coast, and reueale the plots of any dangerous enterprise intended against them, he should not onely be rewarded with great store of money, and haue new apparell to his backe, but also should without tortures, imprisonment, or death be set free, and sent backe againe into his owne Countrey. This Proclamation stricke vs all with feare and astonishment, because albeit we to our selues were not guiltie of

Ieaousie of the people.

nour.

Two Ships.

Hard v'sage.

any plot, or villany intended to the place or people, yet wee knew this might be a meanes to endanger all our liues, how innocent soeuer. Our suspicion of danger fell out according to our feares: for one *Thomas Griffin* a Welch man, one of our owne company, went and kneeled before the Gouvernour, and with a face counterfeiting a guiltinesse and fearefull destruction, told him that we came thither onely, and for no other purpose, then to surpris the Iland, kill the Inhabitants, make spoile of their wiues and goods, and hauing set fire of their Townes and Villages, to flye to Sea againe. Yet for all this would not the Gouvernour beleue him, telling him it was a matter very vnlikely, that so small a number, so distressed for want of foode, so weather-beaten and so disarmed, should venture vpon an enterprise so full of dangerous euents; but the villaine replied, that all those complaints of want, were but songs to beguile the people, for that vpon the least Allarum giuen, other ships that lay houering at Sea, and furnished both with men and armour, would on the sudaine, and that very shortly land for the same desire of spoyle, as these their fellows had done, and therefore counselled the Gouvernour to prevent such imminent mischiefs betimes.

The Gouvernour being thus farre vrged, presently called before him Lieutenant *Walton*, whose lodging was appointed in his house, and hauing related to him all that *Griffin* had discovered, and withall, demanding of Lieutenant *Walton* what he could say to this matter of treason and conspiracie: the Lieutenant at the first stood amazed, and vterly denied any such intended villany, protesting by the faith of a Souldiour, that this report of the Welch-man proceeded from the rancour of a vile traitors heart, and therefore on his knees intreated the Gouvernour, not to giue credit to so base a villaine, who for the greedinesse of a little money, went about to sell all their liues, and to make all the inhabitants of the Iland become murderers: The rest lay scattered about and knew nothing of the matter. Now soone after, iust as the traitor had told the Gouvernour, that more ships were not farre off, but were ready to second vs vpon our arriual, it chanced that in the very heat of this businesse, and their feares of danger where none was, two other shippes full of armed Souldiers came to the same place of the Iland where our shippe put in: These two ships had brought Souldiours out of the low Countries (a cessation of warres being there) and were going into *Swethland*, as we were, but by crosse windes and fowle weather, lay so long at Sea, that wanting victuals, they were driuen in hither for succour. Whose sudaine approach and arriual being signified to the Lord Gouvernour, the Welch-mans words were then thought true; all the Iland was presently vp in Armes to resist the strength and furie of a most dangerous supposed enemy: and so secretly did the Inhabitants put on Armes, that we who were kept like prisoners amongst them, knew not of these vproares. But night approaching, the Generall gaue speciall charge that secret watch should be set and kept ouer euery Souldior that lodged in any mans house: which by the common people was as narrowly performed, for they did not onely watch vs as the Gouvernour commanded, but amongst themselves a secret conspiracie was made, that in the dead of night, when wee should be fast asleepe, they should come and take vs in our beds, and there to binde vs with cords: it being an easie thing to doe so, when our company were diuided one from another ouer the whole Iland. At the houre agreed vpon, the plot was put in force, for they entred our Chambers, and bound euery Souldior as he lay, making them all ready like so many sheepe marked out for the slaughter. For mine owne part, I had five men and three women to binde me, who so cunningly tyed me fast with cords, whilst I slept, and felt nothing, nor deampt of any such matter, that with a twitch onely I was plucked starke naked out of my bed, and laid vpon the cold earth vnderneath a Table, with my armes bound behinde me, so extremely hard, as foure men could draw them together, my feete tyed to the foote of the Table, and my necke bound to the vpper part or bord of the Table.

In these miserable tortures lay I, and all the rest (in seuerall houses) all that night, and the most part of the next day, our armes and legges being pinched and wrung together in such pittifull manner, that the very blood gushed out at the fingers ends of many. The enduring of which torments was so much the more grievous, because none knew what we had done that could incense them to this so strange and spitefull cruelty, neither could we, albeit we inquired, learne of our tormenters the cause, because we vnderstood not their language.

Whilest thus the whole Iland was full of the cries of wretched men, and that euery house seemed a shambles, ready to haue Innocents there butchered the next day, and that euery Ilander had the office of a common cut-throate or executioner; Gods wonderfull working turned the streame of all their cruelty: For the two ships that came out of the low Countries, and whose arriual draue so many miserable soules almost vpon the rocks of destruction, hauing in that dolefull and ruinous night, gotten some prouision aboard, weighed Anchor, and departed towards *Swethland*. Which happy newes being serued vp at breakfast to the Lord Gouvernour betimes in the morning, and that the Shippes had offered no violence to the Countrey, but had paid for what they tooke: About eleauen of the clocke the very same day at noone, wee were all like vnto so many dead men cut downe, and bidden to stand vpon our legges, although very few had scarce legges that could stand.

Of one accident more that befell, I thinke it not amisse to take note, which began merrily, but ended

ended tragically, and in bloud; and that was this: Foure of our company being lodged in one Village, and they being bound to the peace, as you may perceiue the rest were; it happened that an Host, where one of them lay, had tiptled hard, and gotten a Horfes disease, called the Staggers: In comes he stumbling, to the roome where the poore *Englisman* was bound to the Table hand and foote: which thing the drunken Scot beholding, drew his Hatchet, which he wore at his girdle, according to the fashion of the Country, and because hee would be sure his prisoner should not escape, with his Hatchet he cleft his head. And thinking in that drunken murderous humour, he had done a glorious act, away he reeles out of his owne house to that house where the other three Souldiours lay bound, where beating at the doores and windowes, and the Host asking what he meant to make such a damnable noyse; he told him so well as he could stammer it out, that the Lord Gouvernour had sent him thither to put the three *English-men* to death. Vpon this, the diuell and he (hand in hand) were let in, the one standing so close at the others elbow, that he neuer left him till he had cleft two of their heads, that lay bound: and being then weary (it should seeme) with playing the butcher, he neuer ceased swearing and staring, and flourishing with his bloody Axe about their heads, till the people of the house had hung the third man vpon a beame in the roome. But they hauing lesse cunning in the Hang-mans trade, theri will to practise it, tyed not the halter so fast about his necke, as to strangle him: so that after hee had hung an houre, hee was cut downe, requied againe, was well, and afterwards was flaine in *Russia*.

Effects of
drunkenness;

20 This bloody feast being thus ended, and all stormes as we well hoped, being now blowne ouer to our freedome, and sitting at liberty from our tormentors; on the necke of these former miseries fell a mischiete more dangerous to vs then all the rest: for tidings were brought to the Gouvernour, that our Auncient, who traualled with the Gouvernours two men to the King, had trayterously murdered those his guides, and then ranne away himselfe: vpon this rumour, nothing but thundring and lightning flew from the common peoples mouthes: there was no way now with vs but one, and that one was, to haue all our throats cut, or our heads cleft with their Axes. But the Gouvernour pitying our misfortunes, laboured both by his authority, & by faire speeches, to keepe that many-headed dogge (the multitude) from barking. And in the end, when he saw nothing but the bloud of vs poore *Englishmen* would satisfie their thirst, because they still held vs in suspicion and feare; he most nobly, and like a vertuous Magistrate, pawned to the inhumane Rascals (to my knowledge) his honour, all that euer he was worth, yea, his very life vnto them, that within three dayes the messengers sent to the King, should retorne home, and that during those three dayes we should be of good behauiour to the Ilanders: and besides that, if they did not retorne in such a time, that then he would deliuer vs vp into their hands. Our Auncient with the Gouvernours two men, came home vpon the third day, to the Gouvernours house, and brought from the King of *Denmarke* his licence, to carry vs not onely through the Country, but commanding that we should be allowed shipping also at conuenient place, to carry vs to *Sueneland*, whither we were to goe: And according to this Licence the Gouvernour caused vs to be called all together the very next day; at which time, *Thomas Griffin* the Welch *Judas*, who had all this while lyen feasting in the house of the Lord Gouvernour, began to tremble and repent him of his villanie, begging most base forgiuenesse on his knees, both from the Gouvernour, and vs his Countymen and fellow Souldiours, protesting that what he did, came out of his feare to saue his owne life. But our Officers (vpon hearing him speake thus) had much adoe to keepe the companies from pulling downe the house where *Griffin* lay, because they would in that rage haue hewed the villaine in peeces.

Cruell cowardise and base
iealousie.

30 But leaving him and all such betrayers of mens bloud to the hell of their owne consciences, let vs set forward out of this infortunate Iland, and not stay in any place else, till in small Boates wee come by water to *Elzmore* in *Denmarke*, where wee ioyfully got aboard once more; and are hoysing vp sailes for *Sueneland*. Yet euen in this sun-shine day a storme falls vpon vs too: for our Officers not hauing sufficient money to furnish vs with victuals, wee were enforced to pawne our Auncient and Lieutenant *Walton*, for the safe retorne of the Shippe, with condition, that they should not be released vntill a sufficient summe of money was sent to defray all charges. So that we left our Officers behinde vs; but the King of *Sueneland* did afterwards release them, and then they came to vs. But before their coming, wee hauing a good winde, landed at a place called *Newleas* in *Suene*: and from thence were carried to *Stockholme* (the Kings seate) and there was the King at the same time; betweene which two places, it was a daies march on horsebacke.

King of Den-
marks bounty;

Elzmore

Stockholme.

40 Vpon this our arriual at *Stockholme*, wee met with the rest that had gone before vs, and with diuers others of our Countymen, that came out of the Low-countries, as before is related. In this place we lay so long, and had such poore meanes, that wanting money to buy foode, wee wanted foode to maintaine life, and so a number of vs were readie to starue: till in the end, our miseries making vs desperate, we fell together by the eares with the *Burgers* of the Towne: in which scrambling confusion and mutinie, euery man got one thing or other, of which he made present money to relieue his body withall: yet lay wee at the

Misery after
misery.

walles of the Citie, crying out continually for money, money, till our throates grew hoarse with bawling, but the stones of the walles gave more comfort to vs, then the Inhabitants. One day (aboue all the rest) wee heard, that the King was to ride a Hunting; and wee imagining that all the abuses, wrongs, and miseries, which wee endured, proceeded from some vnder-hand hard dealing, and packing of our Captaines and Officers, resolved to gather about the King at his comming forth, and to cry out for money: but the King being angry (as wee supposed) came riding amongst vs, drawing his Pistoll from the Saddle-bow, as if hee purposed to haue shot some of vs: but seeing none of vs to shrink from him, nor to be dismayed, hee rode backe againe, wee following him, and desiring, hee would either giue vs money, or else to kill vs our right; one amongst the rest (whose name was *William Attane*) spake to the King aloud, thus: *Hold it honour to dye by the hands of a King, but basely to starue to death, I will neuer suffer it.* Vpon these our clamours, the King looking better vpon our necessities, sent money the next day, and immediately after gaue vs a moneths meates in money, and two moneths meates in cloath, to make vs apparrell.

Captaines
cozenage.

Of the cloath wee received some part, but the money being payed, was by our Captaines sent into *England* to their wiues; no part of it euen comming to the poore common Souldiours hands: for presently vpon this, wee were commanded aboard the Ships, with promise that when wee were aboard, wee should haue our money. But being in the Shippes vnder hatches, away wee were carried with provision onely of one moneths victuals; when by reason of the weather, wee were forced to lye eight weekes at Sea: in all which time, wee had nothing but pickelled Herrings, and salt Stewings, with some small quantitie of hard dried meates: by which ill dyet, many of our men fell sicke, and dyed. In the Shippe wherein I was, wee liued foureteene dayes without bread, all our best foode being salt Herrings, which wee were glad to eate raw; the best of vs all hauing no better sustentance.

Finland.

At the last, it pleased God to send vs to a place called *Krasound* in *Fynland*, where wee landed, (*Fynland* being subiect to the King of *Sweneland*.) From *Krasound* wee were to goe to *Weyborough*, a chiefe Towne in the Countrey of *Fynland*: where wee no sooner arrived, but our Souldiours ranne some one way, and some another, so long that the Captaines were left alone with the Shippes: This running away of them, being done onely to seeke foode, so great was their hunger.

Dispersing.

By this carelesse dispersing themselves, they lost the command of the whole Countrey, which they might easily haue had, if they had bene vnited together: and not onely were deprived of that benefit, but of Horses also, which were allowed by the King for them to ride vpon. So that, what by the reason of the tedious Iourney (which wee were to trauell, being fourescore leagues) and what by reason of the extreame cold, being a moneth before Christmas, at which time the Snow fell, and neuer went off the ground untill Whistontide following; but all the Raine, and all the Snow that fell, freezing continually, diuers of our men were starued to death with the Frost. Some lost their fingers, some their toes, some their noses, many their liues: insomuch, that when wee all met at *Weyborough*, wee could make no more but one thousand and foure hundred able men; and yet when wee were landed at *Krasound*, wee were two thousand strong; the extremity of the cold Countrey hauing killed so many of our Souldiours in so little time.

Distresse by
Frost.

At our landing at *Weyborough* wee had good hopes to receiue better comforts, both of money and victuals: for the Inhabitants told vs, the King had allowed vs, and in that report they spake truth: yet contrary to our expectation, wee lay there about foureteene dayes, and had nothing but a little Rice, of which we made bread, and a little butter, which was our best reliefe. Drinke had we none, nor money: our Captaines gaue vs certaine letherne patches, onely made of Sheeps skins, to keepe vs from the cold.

Their miserable
march into
Russia.

At this place we received armes to defend vs against the enemy, and six Companies that were allowed by the King for Horsemen, received Horses there. From thence wee were to march into *Russia*, where our enemies continued. But the Iourney was long and vncomfortable: For wee marched from Newyears day vntill Whistontide, continually in Snow, hauing no rest, but onely a little in the nights. So that the miseries and misfortunes which wee endured vpon the borders of *Fynland*, were almost insufferable, by reason the number of them seemed infinite. For all the people had forsaken their houses long before wee came, because they were euen more oppressed by Souldiours: by which meanes we could get neither meate nor drinke; but were glad to hunt Cats, and to kill them, or any beasts wee could lay hold on, and this wee baked, and made them serue for daily sustentance. The greatest calamitie of all was, wee could get no Water to drinke, it had bene so long frozen vp, and the Snow so deepe, that it was hard to lay, whether wee marched ouer Water, or vpon Land. So that wee were compelled to digge vp Snow, and with stones redde hot, to melt in tubbes, and then to drinke it.

Want of meate
and of Water.

This

This affection continued about twelue or foureteene dayes, till we came into *Russia*. Vpon our very first entrance into which Kingdome, we marched ouer an arme of the Sea, that was eight leagues ouer, many of vs staruing to death in that passage, by the cold freezing windes that blew the same day. In which frosty iourney, I saw so much bread as a man might buy for twelue pence, sold away in little bits, for the value of fortie shillings. But this misery ended the next day, at our setting foot into *Russia*, where we found plenty both of corne and cattle; onely the people of the Countrey ranne away, leauing all their goods behinde them, but so cunningly hidden, that the best pollicie of ours could hardly finde them out. By this meanes of the peoples running away, we were glad to play the Millers, and to grinde all our corne our selues, to bake our bread, and to dresse our owne victuals. Then marched wee vp to *Nonogrod* (a chiefe Citie in *Russia*) where wee were to receiue all our meanes that rested behinde vn-
10 payed: but our Captaines beguiled vs, and kept it for themselues: yet to stoppe our mouthes, they told vs wee should goe into *Muscony*, and there all reckonings should be made euen.

Russians runne away.

Nonogrod:

Polake enemies.

They fled.

Sconce taken with store of Armes.

Wee had scarce marched about three dayes towards *Muscony*, but that newes came, how a certaine number of our enemies lay in a sconce by the way; the strength of them was not perfectly knowne, but it was thought they were not aboute seven hundred, and that we must vse some stratagem to expell them from thence: vpon which relation, our Captaines drew forth to the number of three hundred *English* horsemen, and two hundred *French* horsemen: so
20 that in all we were about five hundred that were appointed to set vpon the supposed seven hundred *Polanders*, (our enemies) that so lay insconced: vpon whom we went. Our chiefe Commander in that seruice was *Monsier la Veile*, a *French* man, who so valiantly led vs on, that the enemy hearing of our comming, fled ouer a water that was by the sconce; yet not with such speede, but that wee slue to the number of foure hundred of their side, and lost onely three men of our owne: but we tooke the sconce. About the sconce stood a faire Towne called *A-rioma*, with a riuer called the *Volga*, running through the middle, but no bridge ouer it; onely a few Boates and Sloates (made and cut out of trees) were there, to carry the people ouer from the one halfe of the Towne to the other. This sconce furnished vs not onely with great store of riches, but also with a number of *Polish* Horses, and as many armes as serued to arme five hundred men; our want of that commoditie being as much as of any thing besides: for of those five
30 hundred men that went vpon the seruice, there were not three hundred fixed armes; yet through the hand of him that deales victories, or ouerthrowes, as it pleaseth him best, the day was ours.

Ouer this riuer *Volga* the enemies were neuer driuen before, either by the Emperor of *Russia*, or by the King of *Swethland*: for which cause (as afterward wee heard) the next day when they departed from the other side of the Riuer, they burnt that halfe of the Towne on which side they were themselues, and in most bloody, barbarous, and cruell manner, made hauocke both of men, women and children, albeit (not aboute halfe a yeare before) the Inhabitants on that side had reuolted from their owne Emperour, and turned to them. In which tyrannicall
40 vprore, their custome was, to fill a house full of people, and then (the doores being locked vpon them, that none might issue forth) the house was fired about their eares: and oftentimes were yong children taken by the heeles, and cast into the midst of the flames: This inhumane tyrannie being practised not onely by the *Poles*, that were our enemies, but euen by those *Russes* that were traitors to their owne Emperour, and serued vnder the *Poles*, and were called *Cossakes*, whose cruelty farre exceeded the *Polish*.

Poles cruelties most execrable

The Towne being thus burnt to the earth, all the fixe thousand (which as I said before, fled ouer the Riuer, out of the sconce, and were by vs supposed to be but seven hundred) came downe in full battalion to the Riuer side with such fiercenesse, as if presently they and their horses would haue swom ouer, to fight with vs, which being perceiued, our poore five hundred stood
50 ready to resist them. But whether they feared our numbers to be greater then they were, and that wee had some other secret forces, I know not: but away they marched, the selfe same day in which they came downe in that brauery, not doing any thing: of which, wee for our parts, were not much sorry; because if the battailes had ioyned, wee knew our selues farre vnable to withstand them. And this was the seruice of the most noyse, that wee went vpon.

Two or three other sconces and Townes we tooke from our enemies, they not once daring to resist vs, because they knew nothing of our numbers and force. But the dishonnest dealings of our Captaines, made the whole Armie discontent; insomuch, that our Souldiours would oftentimes deny to goe forth vpon seruice, because they had bene almost a yeare in the Land, and had receiued no more but one *Rubble* (amounting to the value of ten shillings *English*). So
60 that vpon these discontents, fiftie of our men ranne away to the enemy at one time, and discovered to them our strength. After which, we durst not be so bold as before we had bene. The fire of a new conspiracie was likewise kindling, but it was perceiued, and quenched with the blood of the conspirators, of which, the chiefe were hanged. On therefore, we went when

Caytiffe Captaines.

Fugitiues.

HONDIUS his Map of Muscouia.

we came within fortie leagues of *Muscovia*, newes was brought, that the enemy had beleaguered seven thousand *Russes* that were our friends, and that vnlesse wee forced the siege to breake vp, the seven thousand *Russes* would euery man be starued where they lay. This sad report, (albeit we had resolued neuer to goe vpon any more seruice, vntill wee had our pay) so wrought in our hearts, that wee much pittied the miserie of others, because wee our selues had tasted of the like.

Our Generall (whose name was *Euverborne*) was a *Fynlander*, and with a company of *Fynland* blades (as they tearme them) well appointed on Horsebacke, was by the King of *Sweeland*, sent after vs, as our Conuoy, vntill wee should come to *Pontus le Guard*, who was chiefe Generall ouer the whole armie of strangers that came into the Land: so that according as he was sent and charged by the King, hee ouertooke vs before we came to *Ariona*. By the intreatic therefore of this *Fynlander*, and the flattering promises of our owne Captaines, we were contented to goe vpon this seruice, and to deliuer the *Russes*, or to dye our selues in the action. Yet with condition, that (as they promised to vs) we should by the way meete our chiefe Generall, *Pontus le Guard*, who with certaine numbers of *English*, *French* and *Dutch* (which the yeare before were come into the Land) was vpon a march out of *Muscovy*, not onely to meete vs, but to ioyne with vs, and pay vs all our money which remained good to vs; provided likewise, that so soone as euer wee should release the seven thousand *Russes*, our money should be payed downe. On these conditions (I say) wee yelded to goe vpon the businesse.

At length *Pontus le Guard* met vs (according to the promise) and with him was money brought to pay vs, and his word given that presently wee should receiue it. But the lamentable estate, in which the poore besiedged *Russes* were (within the sconce) being at the point of death for want of food, required rather speedy execution, then deliberation: so that the necessities of their hard fortunes craving haste, on wee went, hauing about nineteene or twenty thousand

thousand *Russes*, that were people of the same Countrey, ioyned to our Armie, to aide them in this enterprize. But as we all were vpon a march, the enemy hauing receiued intelligence of our approaching, let forward, to the number of eight thousand Landiers and more, to intercept vs by the way: and being within one dayes march of the place to which wee were likewise going, they set fire vpon three or foure Villages hard by the place where we lay at Grasse with our Horses, for a token that they were coming. And this was done vpon Midsummer day last in the morning, by breake of day. Then came they thundring wih shouts and cries to set vpon vs: but no sooner was the Alarum giuen, when the greatest part of those nineteene or twenty thousand *Russes*, that were ioyned to vs as our aide, fled most basely before any blow was giuen. This sudden cowardize of theirs somewhat amazed vs: but the houre being now come, wherein we were not to take of dangers, but to goe meete them, with our sixe companies of *English* horse, we brauely resisted the *Polanders*, and with great hurt to them, but with little losse vpon our part, charged them three seuerall times.

At last *Pontus le Guard* (our chiefe Generall) tooke his heeles and fled too, leauing vs vtterly destitute of all direction: which much astonished vs, as not well vnderstanding what to doe: for our greatest strength (being by their flight) taken from vs, none but wee strangers were left in the field, and of vs there was not in all, aboue twowithousand, and of that number there were aboue six hundred *French* horsemen, who seeing both the Generall gone, and the *Russes* fled, turned their backs vpon vs, and ranne away too most valiantly, yet not out of the field, but to the enemy.

Then were wee not aboue twelue or foureteene hundred at the most left to resist eight thousand at the least: vpon whom notwithstanding, our six companies of *English* horsemen, charged three seuerall times, without any great losse, but with much honor: And at the fourth time, for want of powers to second them (which the *French* should haue done) all our six companies were scattered and ouerthrowne with the losse of few of our colours. The Captaines ouer these sixe Companies of Horse, were these:

Captaine *Crale*, of whose company I was. Captaine *Kendricke*, Captaine *Benson*, Captaine *Carre*, Captaine *Colbron*, Captaine *Creyton*.

Which six Captaines had not in all their companies aboue five hundred men. In this battaile, Captaine *Creyton* was slaine in the field; Captaine *Crale* was shot in the knee, and within a short time after dyed of that wound; not aboue twelue of his companie escaping: Captaine *Kendrick* was wounded in diuers places of the head, and dyed. Captaine *Benson* was shot in the hand, and wounded in the head, and yet escaped, and liued: onely Captaine *Carre* and his Cornet escaped, but all his companie scattered and lost. Diuers other Officers were slaine, whose names I cannot remember.

Thus were all our *English* horsemen dispersed and ouerthrowne, to the number of five hundred and vpwards. Our Generall *Euerhorne* with his companies of *Finland*, or *Finsco* blades, were also put to retrait: so that there was not left in the field aboue sixe or seuen hundred, which were foot-men. And of these, one halfe was *English*, one halfe *Dutch*, who kept onely a certain place by a wood side, barricadoed about with wagons, hauing with them foure field pieces,

with which they did great spoile to the Enemy. But their number being but few, neither durst they venture on the Enemy, nor durst the Enemy enter vpon them, but kept them still (as it were besieged) in that place onely, because they could no wayes escape. The inconvenience of which cooping vp in so narrow a roome, being looked into, and the dangers on every side well considered, it was held fittest for safetie, to summon the Enemy to a parley. In which parley, the Enemy offered, that if they would yeeld, and fall to their sides, they should haue good quarter kept. And if any man had desire to goe for his owne Countrey, hee should haue libertie to goe with a Pasport from the King of *Poland*. Or if any would serue the King of *Poland*, hee should haue the allowance of very good meanes duly paid him. Vpon these compositions they all yeelded, and went to the Enemy, onely Captaine *Yorke* and his Officers, with some few of their Souldiers, went backe into the Countrey, and came not to the Enemy, as the rest had done: who from thence marched vp to the *Polish* Leaguer, being ten miles distant from the place, and there they continued. But such as desired to trauell to their owne Countries, were sent to the King of *Polands* Leaguer, which lay at that time at a place called *Smolensko*, and there accordingly had their Passe, to the number of one hundred, of which number I my selfe was one. What became of the rest I know not: but I with five more held together in trauell, vntill we came to *Dantzicke*, a great Towne in *Prussia*, being distant from *Smolensko* one hundred leagues.

To make an end of this Storie of the Foxe and the Beare, the pretending *Demetrius* and contending *Suiskey*; it is reported, that *Demetrius* seeing these perplexities of *Suiskey*, rayled a great Armie of such *Russes* as voluntarily fell to him (the *Pole* hauing now reiected him, except some Voluntaries) and againe laid siege to *Mosco*; *Zolkiewsky* for *Sigismund*, beleagred another part thereof with fortie thousand men, whereof one thousand and five hundred were *English*, *Scottish*, and *French*. *Suiskey* seeing no hope to withstand them, his Empire renouncing him, hee would

To make an end of this Storie of the Foxe and the Beare, the pretending *Demetrius* and contending *Suiskey*; it is reported, that *Demetrius* seeing these perplexities of *Suiskey*, rayled a great Armie of such *Russes* as voluntarily fell to him (the *Pole* hauing now reiected him, except some Voluntaries) and againe laid siege to *Mosco*; *Zolkiewsky* for *Sigismund*, beleagred another part thereof with fortie thousand men, whereof one thousand and five hundred were *English*, *Scottish*, and *French*. *Suiskey* seeing no hope to withstand them, his Empire renouncing him, hee would

seeme to renounce the Empire first, betaking himselfe to a Monasterie. But not the sanctitie of the place, nor sacred name of an Emperour might protect or secure him. The *Muscovites* yeelded vp their Citie and his Person to the *Pole*, and the Castle was manned for *Sigismund*. All ioyne against *Demetrius*, who betaketh him to his heeles, and by a *Tartar* (as before is said) was slaine in his campe. *Charles* King of *Sweden* dyed Octob. 30. 1611. and *Gustavus* his sonne succeeded. *Sigismund* obtayneth *Smolensko* also after two yeeres siege and more: in which time the Defendants had held out so resolutely, that the *Polish* Peeres and States (which in that Kingdom beare great sway) had called the King to their Parliament, the rather in regard of the King of *Denmarke* warring vpon *Sweden* (in which warre diuers thousands of our *English* voluntaries assisted the *Dane*) but he first desiring to trie his fortune, carried the Citie with two hundred pieces of Ordnance and other rich spoile. Many were slaine, and diuers great persons taken, of which was the Archbishop. Many were blowne vp (as was thought) by their owne voluntarie act, by fire cast into the store-houle, in which is said to haue bene (if our Author mistake not) fifteene thousand vessels of poulder; whereupon seemed to returne the very Chaos, or in stead thereof a Hell into the World. It is accounted one of the strongest Forts in *Christendome*, the walls able to beare two Carts meeting in the breadth. It was taken the twelfth of Iuly, 1610.

Suisky was carried into *Poland* and there imprisoned in *Waringborough* Castle, and after the losse of libertie and his Empire, exposed to scorne and manifold miseries, hee dyed in a forraine cuntry. But before that Tragedie, the *Poles* are said to haue more then acted others. For when they held him prisoner before his departure from *Mosconia*, they sent for many *Grandes* in *Suisk* keys name, as if he had much desired to see them before his fatall farewell, to take a friendly and honourable leaue of them. They come, are entertayned, and in a priuate place knocked on the head and throwne into the Riuer: and thus was most of the chiefe remayning Nobilitie destroyed. The *Poles* fortified two of the Forts at *Mosco*, and burnt two others, as not able to man them. But the *Muscovite* also there held them besieged till famine forced them to yeeld: the *Russians* finding there sixtie barrels of pouldred mans flesh (it seemeth of such as had dyed, or were slaine, that their death might giue life to the *Survuiuers*) a iust, but miserable and tragicall spectacle. We shall conclude this Discourse with giuing you two Letters, the one taken out of a Letter written from *Colmogro* Sept. 7. (the yeere is not dated) amidst these broiles; the other from Captaine *Margaret* before mentioned by *Tiburnus*: and after them, for further illustration and profitable vte of this storie, is added part of a Letter of Doctor *Halls*.

ON Thursday morning came George Brighouse from *Mosco*, he hath bene three weekes on the way, but by reason of his small staying here, I can learne but small occurrents, which is, still *Mosco* holdeth out, of late some of the Nobilitie issued out and gaue the *Enemie* a small skirmish, slue neere foure thousand of them, tooke prisoners one hundred and senentie, whereof eleuen *Polish* Gentlemen gallant men, are almost starued in prison. *Sandomirsky* is entred the borders with a new supply of Souldiers, the which *Demetrie* his sonne in Law hath long since expected.

The *Crim Tartar* is returned from thence into his owne Country, hath taken more then twentie thousand prisoners captiues out of *Resan* and thereabouts: *Knez Scopin* is two nineties from *Yerailaue*, he meanes to march from thence to *Mosco*, but by Georges speeches he makes no great haste.

Bouginsky that was Secretarie to *Demetrie*, is still under prestane with an Officer, was almost starued with hunger, but Master Brewster doth daily releene him to his great comfort.

George Brighouse came Poste by *Volodemer*: the Princeesse, wife to *Euan Euanowich*, that was eldest sonne to the old Emperour (shee to whom you gaue the good intertainment to) is there at his going vp and coming backe, made very much of him; he dined in her Presence: after dinner sent him a great Present of many dishes and drinckes for your sake, and often remembred you and your great kinnesse to her and hers: still remembring T. La. and kept him so a long time in her owne Cell.

There is a great conspiracy still in the *Mosco* against the Emperour *Vasili Euanowich*, onely the *Muscovites* stand with him, and very few of the Nobilitie. Daily there issueth out by force or stealth diuers of the Gentry, most of the Dutch, specially the Women are gone out of the *Mosco* to the *Tartar*. It is supposed that the Emperour cannot long hold out, and *Demetrie Euanowich* is reported to bee a very wise Prince.

Captaine MARGARETS Letter to Master MERICK from
Hamborough, Jan. 29. 1612.

Right worshipfull Sir, I could not omit this commoditie without commending my seruice to your Worship, and also briefly to aduertise you of the State of *Mosco*, which is not as I could wish. Also I left Master Brewster in good health at my departure; but three dayes after the Towne within the red wall was burnt with certaine fire Bals shot in by the *Russes*, so that there is but three houses left whole, the

Mosco yeelded.

Second *Demetrius* slaine.

the English house also being burnt. Master Brewster is constrained to haue his dwelling in a Seller vn- English house
der the Palace, without great friends except Mislofsqui. The Generall Cotqueuilsh is arrived there, burnt
and left a sufficient number of men to keepe the Castle, and the red Wall, hee himselfe with his Armie is
gone towards Relan, and he hath sent with much to doe, and vpon certaine conditions, to the River of
Sagia towards the Volga, to bring vittuals to maintayne them that are in the Castle besieged of the Mul-
couites. The King of Poland is altogether resolved to goe there in person this summer, and if the Russes
haue no forraine helpe, as there is no appearance, no question it will come to passe as I writ last to your
Worship, that they will be forced to yeeld. I write briefly to your Worship, because I hope to take my voy-
age to France through England, and there to meet with your Worship; intreating your Worship to ac-
cept these few lines as a testimony of the seruice I haue vowed to your Worship, &c. and so I end in haste.

Thus haue we finished foure Acts of this Tragedie: the first, ending with the end of Bealas fa-
mily; the second, with the ruine of that of Boris; the third, with that (whatsoever) Deme-
trius; the fourth, with this *Suskey*, attended with that shadow or ghost of another *Demetrius*.
Now as I haue seene sometimes the Spectators of Tragedies whiled with discourse of a Chorus,
or (as in our vulgar) entertayned with musicke, to remit for a time those bloudie impressions fix-
ed in attentiuie mindes; so haue we represented *Pheodores* Coronation added to the first; *Boris*
his Charter to the English to conclude the second; that of *Demetrius* to the third, and for this
fourth I haue here made bold with a Letter of my worthy friend (so am I bold to call that good
Man, zealous Protestant, elegant Writer, industrious Preacher, learned Doctor, and Reuerend
Deane, Doctor Hall, a Hall adorned with so rich Arras, and with all the ground, light, life, the
All of these, Christian humilitie) which may serue as a Letter of commendation to my intent,
as it was intended to another worke, which had it beene publike, might haue prevented the
greatest part of this: A worke of Master Samuel Southeby, in Sir Th. Smiths Voyage mentioned, Master S^{rs}
touching those Russian occurrents which he in part saw. As a Traueller he deserueth place here. Southeby
And howsoever I haue neither beene so happy to see the Worke nor the Workman, yet this E-
pistle tells what we haue lost, and my worke easily proclaimes the defect of such a Wardrobe,
being (as you see) like a Beggars cloke, all of diuersified patches; so much more labour to mee,
in both getting and stitching them, though so much lesse satisfaction to thee. Once, as I haue
placed this long Russian storie in the midit of Marine Discoveries, to refresh the Reader a while
on Land: so amidst these tragically, harsh Relations, I thus seeke to recreate thy wearie spirits
with this chat of mine, and after these *Minda* gates, more really, with this Letter so vsefull to
the present subiect, so pleasing in the stile. The whole, and the next following to *Bachinski*,
the Reader may finde in his so oft published Decades of Epistles.

Travell perfiteth wisdom; and observation giues perfection to travell: without which, a man may
please his eyes, not feede his braine; and after much earth measured, shall retorne with a weary
body, and an empty minde. Home is more safe, more pleasant, but lesse fruitfull of experience: But, to a
minde not working and discursive, all heauens, all earths are alike. And, as the end of travell is observa-
tion; so, the end of observation is the informing of others: for, what is our knowledge if smothered in
our selues, so as it is not knowne to more? Such secret delight can content none but an enuious nature.
You haue breathed many and cold aires, gone farre, seene much, heard more, obserued all. These two
yeares you haue spent in imitation of Nabuchadnezzars seven; conuersing with such creatures as Paul
fought with at Ephesus. Alas! what a face, yea what a backe of a Church haue you seene? what man-
ners? what people? Amongst whom, ignorant Superstition strines with close Atheisme, Treachery with
Cruelty, one Deuill with another; while Truth and Vertue doe not so much as giue any challenge of resi-
stance. Returning once to our England after this experience, I imagine you doubted whether you were
on Earth, or in Heauen. Now then (if you will heare mee, whom you were wont) as you haue obserued
what you haue seene, and written what you haue obserued; so, publish what you haue written: It shall
be a gratefull labour, to vs, to Posteritie. I am deceiued, if the sicklenesse of the Russian State, haue not
yeilded more memorable matter of Historie then any other in our Age, or perhaps in any Centuries of our
Predecessors. How shall I thinke, but that God sent you thither before these broiles, to bee the witnesse,
the Register of so famous mutations? He loues to haue those iust euils which hee doth in one part of the
World, knowne to the whole, and those euils, which men doe in the night of their secrecie, brought forth into
the Theater of the World; that the euill of mens sinne being compared with the euill of his punishment,
may iustifie his proceedings, and condemne theirs. Your worke shall thus honour him; besides your second
seruice, in the benefit of the Church. For, whiles you discourse of the open Tyrannie of that Russian Nero,
Iohn Basilus; the more secret, no lesse bloudy plots of Boris; the ill successe of a stolne Crowne, though
set vpon the head of an harmlesse Sonne; the bold attempts and miserable end of a false, yet aspiring
challenge; the perfidiousnesse of a seruile people, unworthy of better Gouvernours; the misse-carriage of
wicked Gouvernours, unworthy of better Subiects; the vniust usurpations of men, iust (though late)
reuenges of God; crueltie rewarded with bloud, wrong claimes with overthrow, treachery with bondage;
the Reader, with some secret horror, shall draw in delight, and with delight instruction: Neither
know I any Relation whence hee shall take out a more easie Lesson of Iustice, of Loyaltie, of Thank-
fulness.

But above all, let the World see and commiserate the hard estate of that worthy and noble Secretarie, Buchinsky. Poore Gentleman! his distresse recalls ever to my thoughts. Heops Storke, taken amongst the Cranes: He now nourishes his haire, under the displeasure of a forreigne Prince; At once in du-rance, and banishment. Hee served an ill Master; but, with an honest heart, with cleane hands. The Masters iniustice doth no more infect a good Seruant, than the truth of the Seruant can iustifie his ill Master. A bad Worke-man may use a good Instrument: and oft-times a cleane Napkin wipe a foule mouth. It ioyes me yet to thinke, that his pietie, as it euer held friendship in Heauen, so now it winnes him friends in this our other World: Lo, euen from our Iland unexpected deliuerance takes a long flight, and blesseth him beyond hope; yea rather, from Heauen, by vs. That God, whom hee serues, will beo knowne to those rude and scarce humane Christians, for a protector of innocence, a sauourer of truth, a rewarder of pietie. The mercy of our gracious King, the compassion of an honourable Counsellour, the loue of a true friend, and (which wrought all, and set all on worke) the grace of our good God, shall now lose those bonds, and giue a glad welcome to his libertie, and a willing farewell to his distresse. He shall (I hope) liue to acknowledge this; in the meane time, I doe for him. Those Russian Affaires are not more worthy of your Records, than your loue to this friend is worthy of mine. For neither could this large Sea drowne or quench it, nor time and absence (which are wont to breed a lingring consumption of friendship) abate the beate of that affection, which his kindnesse bred, religion nourished. Both rarenesse, and worth shall commend this true loue; which (to say true) hath bene now long out of fashion. Neuer times yeelded more loue; but, not more subtle. For euery man loues himselfe in another, loues the estate in the person: Hope of aduantage is the Load-stone that drawes the yron hearts of men; not vertue, not desert. No Age afforded more Parasites, fewer friends: The most are friendly in sight, seruicable in expectation, hollow in loue, trustlesse in experience. Yet now, Buchinsky, see and confesse thou hast found one friend, which hath made thee many, &c.

Q. V.
Of the miserable estate of Russia after SWISKEYS deportation, their election of the King of Polands Sonne, their Interregnum and popular estate, and chusing at last of the present Emperour, with some remarkable accidents in his time.

THUS haue we scene the Russian sinnes vtterly rooting vp so many Russian Imperiall Families and persons: the whole Family of Iuan exirpate, that of Boris succeeding, annihilate; two pretending Demetrij and Suiskie extinct: and yet haue wee greater abominations to shew you. No Tyrant, no Serpent, no Dragon is so exorbitant and prodigious as that which hath many heads: and therefore in diuine Visions Monarchies (how euer excessive and tyrannical) haue bene resembled by simpler and more vniforme beasts; but the Deuill in a great red Dragon with seuen heads and ten hornes, and the Beast likewise to which hee gaue his power and his seat and great authoritie, which opened his mouth in blasphemie against God, &c. On which sate the great Whore, the Antichristian Babylon. There was no King in Israel, is both Alpha and Omega, Preface and Conclusion in Diuine Writ to some misery in Israel, as if all Kings, and no King, were the Circumference of all the lines proceeding from Mischiefes Centre. And now was Russia a Monster of many heads, that is, a bodie fallen into many pieces. One man possessed of the Wife of that double Demetrius, got to Astracan, there seating himselfe to see vp an vsurped shop of Rule; the Southerne parts chose Prince Vladislau, Son of K. Sigismund of Poland; those of the North thought of other Princes; and at last when neither the Fig-trees sweetnesse nor Oliues fatnesse, nor cheering Wine from the Vine could take place in their inconstancie, the Brambles conceiued a fire which deuoured the Cedars of Libanus: a popular government happened; or if you will, a Confusion of the multitude bare sway, which killed and murthered euery Great Man, whom any Rascall would accuse to be a friend to the Poles, or to any of the dead Emperours, whom those popular inudicious Iudges fancied not. And now Russia blushed with impudencie, that is with shamelesse sight of the daily effusion and profusion of her best blood; now euery man was an Actor: and oh had they bene but Actors! too really did they present (not represent) bloudie Tragedies, of which their whole Countrey was become the Theatre; the Deuill the Choragus (a Murtherer from the beginning) and the whole World Spectator, stupid with admiration, quaking with horror of so vncouth a sight!

Now for the ouertures betwixt the Musconites, and Stanislaus Stanislawich Zolkiewskie, Generall of the Polakes, touching their Election of Vladislau Sonne of King Sigismund, and the Articles propounded: also the answere of Prince Vladislau to the same Articles, Anno 1612. I haue here exprest in Latine as I found them, fearing I should be over-tedious to translate them, especially seeing the businesse came not to effect: and the English Articles following of the Russian

Sigismundus Rex noster Poloniae miserebitur Imperij Moscouitici, & creabit Imperatorem Wlodjmi-
riensem, omniq; magnorum Imperiorum, totius Mulcoviae filium sacra sua Regiae Maiestatis Vladis-
laum

laum Sigmuntouiz. Cum verò iam Serenissimus Vladislaus Sigmuntouiz filius Serenissimi Regis Poloniz adueniret ad Arcem Sedis Imperatoria Moscouitice, tum coronabatur in Imperatorem Wlodimirensem, omniumq; totius Moscouice Imperiorum, ipsiq; Imperatoria Corona, & Diadema imponebatur à venerabili Hermogene Patriarcha totius Moscouice, & ab uniuerso venerabili Clero Græcæ Religionis, secundum pristinum morem & dignitatem. Factus verò Serenissimus S. R. Maiestatis filius Vladislaus Sigmuntouiz Imperator Moscouice, Templum Dei in Moscouia per omnes Arces, Vicos, vniuersumq; Imperium Moscouice repurgabit, & auget in omnibus ad pristinam consuetudinem, & ab omni incommode tutabitur, tum Sanctis Dei, & Dinorum imaginibus, & castissima Deipara, omnibus ossibus Sanctorum, quæ magna prodigia in Moscouia faciunt, debitum cultum flexis genibus præstare, illaq; adorare tenebitur. Et Poluica, nec non Spirituali viri, sexus Christianitati, omnibusq; vere Christianis, ut sint vera Christiana legis Græcæ Religionis non prohibebit. Romanæ Religionis aliarumq; diuersarum Sectarum Religionis Tempia, aut Synagogas, in Moscouitici Imperij Arcibus, & pagis, nullibi edificare debet ut nihilominus in Arce Moscouia præfata, vniuersum Romanum Templum esse possit, propter homines Polonos, & Lithuanos, qui penes Imperatorem filium Serenissimi R. Polo. sunt futuri, ea de re cum sacra R. Maiestate, & venerabili Hermogene Patriarcha Moscouice, omnibus spiritualibus, tum Heroibus, & Capitaneis collatio instituenda.

Religio autem sacrosancta Græca nullo in puncto violanda, aut perturbanda, vel alia quæpiam inuoluta introducenda est, in idq; danda opera, ut sancta, vera, Christiana Græca Religio, suam integritatem, & cultum retineat, iuxta morem antiquum, nec Imperium Moscouiticum, eiusq; incolæ veri Christiani, à Græca Religione ad Romanam, aut aliam quampiam, vi, seu robore, & seruitute, alijsq; his si-

Iudei in vniuersum Moscouice Imperium causa Mercatura, aut alterius cuiuspiam rei proficisci ne permittantur. Venerabilia & ossa Sanctorum, ab Imperatore filio Serenissimi R. Pol. Vladislao Sigmuntouiz sancta cum veneratione debent venerari. Et venerabilem Hermogenem Patriarcham Moscouice, Metropolitam, Archiepiscopos, Episcopos, Archimandrytas, Humeros, Presbyteros, Diaconos, & presentes spirituales, vniuersumq; Clerum Christianæ sacrosanctæ Religionis Græcæ, debito officere honore, in omnibusq; tutari, spiritualibus negotijs sese immiscendo, alienas sectas præter Græcam religionem introducere nullas debet. Quod autem Templum, Monasterij sue non Patrum dicatur, de varijs prouentibus, & qui dabantur antiquorum tempore Imperatorum Moscouice, utpote sacratæ panes, legumina, summa pecuniales, & his de varijs redditibus similia: hos prouentus Ecclesiæ dicatos, & omnium Imperatorum antiquorum Moscouice, nec Herorum, aut aliorum hominum donationes, si quas Templis, aut Monasterijs Dei dicauerunt, aut dicaturi sunt, adimere debet, nulla secundum antiquum morem constituta violando. Spirituales, & Regulares status nullo modo infringendo, Dimensuris omnia pensa spiritualia, & Regularia, quibus antiquitus dabantur, ex fisco Imperatorio omnia reddendo, ut solitum fuit, & ex Imperatorio Thesauro in Tempia & Monasteria, stipem variorum reddituum augendo. Heroes, Imperatorij Aulici, Capitanei, Primarij Dapiferi, Cubicularij, & cuiusvis generis Tennitarij, in omnibus negotijs, in omnibus Imperialibus, Castrensibus, & terrestribus causis, in Arcibus Palatini, Capitanei, sine Tennitarij & Telonarij, aut alij cuiusmodi Præfecti, & omnis conditionis homines, ut antiqua retineant Priuilegia prout constitutum est in Moscouitico Imperio, ab antiquis magnis Imperatoribus, in id Serenissimus Imperator incumbet seruo.

Poloni verò & Lithuani, in Moscouia nullis in terrestribus, forensibus negotijs, aut Arcibus Palatinorum, Capitaneorum esse deherent, nec successiones Præfecturæ, aut dignitatis in Arcibus illis tribuende sunt.

Quia autem Poloni, & Lithuani ex utraq; Imperio videtur consilium, ut præficiantur consilijs Arcibus ad absolutum leuamen huius Imperij, ea de re Serenissimus Imperator cum Heroibus collationem instituet suo tempore.

Iam vero vniuersa Respublica supplex Serenissimum Imperatorem precatur, ne ad executionem perducatur hanc conditionem, antequam fuerit hac in parte virumq; deliberatum.

Qui verò Poloni & Lithuani penes Serenissimum Imperatorem Vladislaum Sigmuntouiz sunt futuri, eos non solum honoraturi, sed etiam contentaturi pecuniari numeratione, & promotione secundum vniuersumq; merita sumus.

Moscouitici Imperij Heroes, Aulicos, Imperatorios, Capitaneos, Primarios Dapiferos, Cubicularios, Præfectos, Structores, Tennitarios, Arcium Præfectos, Sclopetariorum, omnesq; ad Aulam Imperatoriam pertinentes homines, & liberos Herorum, Aduenas, Mercatores, laculatores, velites, Fabros tormentarios, & omnis conditionis bellicosos homines, alijsq; heredes Imperij Moscouitici, Serenissimus Imperator debet habere in dignitate, honore, gratia, & amore, ut sint antiquitus apud priuilegijs magnos Moscouice Imperatores; Nec antiquos mores & status qui erant in Imperio Moscouice immutare, vel Moscouice Ducum, Herorumq; viduas Aduenas in patria, vel Tennitis elocare, aut deprimere.

Tributa pecunialia, stipendia reddere, & hereditates quas aliquis possidebat ad hæc usq; tempora, is etiamnum, & in posterum possidere debet.

Hæreditaria bona à nemine abalienare, sed semper omnibus hominibus Moscouitici Imperij præuidere perpendendo seruitia eorum, prout aliquis de Republica meritis est.

Aduenas omnibus qui vocati fuerant ex varijs Nationibus, à primis Imperatoribus Moscouice,

necessarijs providere, prout antea solum fuit: nec stipendia, Tenutas, & possessiones eorum ab his abalienare.

Herodibus, Aulicis, Cubicularijs, Dapiferis, & liberis Heroum, omnibusq; Aula Imperatoria inservientibus, Imperatoriam benevolentiam monstrare, & salaria debita, secundum antiquum morem reddere, Serenissimus Imperator tenebitur.

Quod si vero alicui salaria multiplicabuntur, possessionesq; aut tenuta, supra eius dignitatem, vel contra alicui minuentur, prater culpam ipsius, ea de re Serenissimus Imperator conferre, & consultare debet cum Herodibus Primarijs: & prout unanimis decreverint, idq; secundum aequitatem, ita sit facturum.

10 Qui vero Aulici, aut liberi Heroum sumunt beneficio Imperatoris, ex Arcibus omnibus stipendiarijs, quibus beneficia tempore prateritorum Magnorum Imperatorum Moscoviae ob merita ipsorum dabantur, illis quoq; iam & stipendia pecuniaria, & alimentaria, ex Mandato Imperatoris danda sunt.

In Arce dicta Moscovia, alijsq; Arcibus, Iudicia exequi debent, & observari ut solum, secundum statuta Moscovitici Imperij. Quod si vero aliqua essent corrigenda, ad corroboracionem Iudiciorum, conceditur Serenissimo Imperatori: sed cum consensu omnium Heroum Universitatis Moscoviae, ita tamen, ut respondeant aequitati.

25 Magnus autem Imperator Serenissimus Rex Poloniae, Magnus Dux Lithuaniae, cuiusq; totius Regni Poloniae, Imperia, necnon Magnus Ducatus Lithuaniae, cum Magna Imperatore filio Regis Poloniae Vladislao, Sigmuntoviz, cum omnibus Imperijs Moscoviae, in amicitia, societate, amore, aeternis temporibus ininvocabilitate, nec contra se invicem exercitus colligere, & bella concitare nullis modis debent.

Quod si autem aliquis hostium tentavit impetus facere in Imperium Moscoviae, siue etiam in Regnum Poloniae, & Magnum Ducatum Lithuaniae: contra istiusmodi omnes hostes iunctis viribus insurgere utrumq; Imperium tenebitur.

30 Caterum, in Tartarorum finibus quod si necessum fuerit servare utrumq; Imperij milites, cum iam coronatus fuerit filius Serenissimi Regis Poloniae, Imperator Imperij Moscovitarum: hac de re, collatio cum Herodibus instituenda, & cum Magna Imperatore Serenissimo Sigismundo Rege Poloniae, idq; decenter, animo sincero, absq; ulla machinatione damni alicuius, aut Tyrannidis illationis in homines Moscovitici Imperij: honorem, vitam, aut aliud quippiam istiusmodi nemini adimendo, cuiuscunq; contrarietatis ille fuerit: Aut si in Poloniam, vel Lithuaniam, alijsq; Imperia Moscovitici Imperij homines transmittendo, aut ex Lithuania in locum eorum alicuius alterius generis homines supponendo: Uxores, aut liberos alicuius dolo corruptendo, vel sobolis procreanda gratia sumendo, & ad exterius Nationes parentes cum liberis transmittendo.

Qui autem ex quocunq; Imperio istiusmodi facinoris reus, & poena dignus inveniretur: Is in Imperatoris, & terrestribus iudicijs prout meruit, puniendus esset: & decretum per Imperatorem, aut Heroes, vel Capitaneos de illo ferendum.

40 Uxores autem eorum, & liberi, fratres, & qui istud facinus nec perpetrarunt, nec ipsis fuit cognitum, aut illud perpetrandum consentire: Illi uedum puniendi, sed secundum aequitatem Privilegiorum suorum, patrimonium, tenutas, vitam, aulas, retinere debent.

Si vero reus non possit explorari, nemo tam Iudicio Imperatoris, at Heroum indicari, puniri, proscribi, vel incarcerari, aut ad alienos transmitti debet: sed unusquisq; in suis Tenutis & Aulis conservari.

Steriles autem, quia ex hac decesserint vita, bona ab illis relicta, vel consanguineis ipsorum, siue cuiuscunq; ipsi legaverint, tradenda: id tamen non absq; mutua collatione, & consilio esse debet.

Porro quoniam tempore praesentis seditionis multi perire, & multos ex Moscovitis prostratos constat a Polonis, & Lithuanis, & contra Polonos & Lithuanos a Moscovitis: istud factum, & nunc, & imposterum, nec commemorandum, nec ulla vindicta utrumq; pensandum esse debet.

50 Qui autem Poloni, & Lithuani Primipoli, Centuriones, alijsq; diversae sortis homines duxere captivitatem in Imperio Moscoviae, quorum aliqui adhuc in vinculis tenentur, illi ex Moscoviae Imperio redendi, siue ulla pecuniaria liberatione. Tum quoque vice versa Aulici, liberi Heroum, Iaculatores, Re-lites, Fabri tormentarii, omnesq; serviles & liberi homines, Aulicorum liberi, Iaculatorum, Favorum, tormentariorum, Sclopetariorum, & horum similium. Item Matres, Uxores, Liberi, & his similes, ex Imperio Moscovitarum, virilis aut muliebris sexus, in praesentem servitutem praesente primo Moscovitarum, virilis aut muliebris sexus, in praesentem servitutem praesente primo Moscovitarum, Imperatore Venceslao accepti in Poloniam vel Lithuaniam, illi ab Imperatore Serenissimo Rege Poloniae, restituendi a minimis ad maximas usq; absq; pecuniaria redemptione. Praesentis Imperatoris ex Arcibus, alijsq; possessionibus, cum ex tenutis & arendis census, omnesq; redditus, debet Serenissimus Imperator exigere, ut antea fecere Primi Imperatores, & prioris Magistratus mores, & statuta absq; consensu in nullis immutare.

60 Arces, aut Civitates, quae bello vastatae, ad eas mittere debet Serenissimus Imperator, & praecipere, ut conscribantur Registra eorum, quae per vastationem periere: ut vicissim sumptus praesentibus aliunde, secundum conscripta registra, possint reficiri.

Quorum vero Hereditates, Possessiones, vel Tenuta spoliatae, ijs lenamen dandum, sed non absq; con-

consensus Heroum. Et quæ regens vastata Arces, illas quamprimum restaurare, consilio inito cum Heroibus, & Nobilibus.

Mercatores Moscouitici Imperij omnium Cuiatum, in Polonia, & Lithuania, sic Poloni, Lithuani, in Moscouia, Polonia, Lithuania, merces coemere debent more usitato, ut antea: Istud tamen cauendum, ne inuicem sibi facessent negotia Mercatores, & alij Christiani in Lithuaniam ex Russia, & ex Lithuania in Russiam, sese transportando cum mercibus Heroes, & Aulici omnes, mancipia debent in seruitute detinere, prout solum.

In Volda, Dona, & Tekier Arcibus, velites, si illis opus fuerit, seruari debent: de quibus Serenissimus Imperator conferre debet cum Heroibus, & Nobilibus, postquam coronabitur.

Arces Moscouitici Imperij, ad Imperatorem pertinentes, tum illa, quæ in tenuis Polonis, & Lithuania tradita sunt, vel quas iam Vor præfatus sub potestatem suam subiecit: Ego Primarius Dux exercituum Regni Poloniæ, constitui cum Heroibus Moscouiæ, quod Serenissimus Rex Poloniæ, Filio sacra sua Regia Maiestatis Serenissimo Vladislao Sigmuntouiz, has arcas, cum omnibus quæ sunt vastata, Moscouitico Imperio restituere debet. Illustres vero Legati Moscouientes, hoc in negotio tractaturi sunt cum sacra Regia Maiestate de sumptibus, & expensis sacra Regia Maiestatis in milites expositis, & de persoluendis Polonis, & Lithuanis, sunt quoque consultaturi, quomodo absolui possint.

Demetrius
supposititius
secundus.

Vor autem præfatus, qui sese Cesaridem Moscouitici Imperij, Demetrium Euanouiz appellat: de illo, mihi Primo Duci Regni Poloniæ consilium inuendum, & omnis cura habenda, ut capi, vel penitus à vita tolli possit.

Qui postquam captus, vel occisus fuerit, Ego Primarius Dux exercituum Regni Poloniæ, cum exercitu sacra Maiestatis à primaria Arce, sedes Imperatorie, Moscouia præfata discedere ad Arcem Mozaisko, vel ubi fuerit opus, post collationem cum Heroibus institutam, ibiq; Legatos Moscouiæ, & mandatum sacra Regia Maiestatis, præstolari tenebor. Quod si nihilominus Vor præfatus contra Imperatoriam arcem Moscouiam sic dictam tentauerit insidiari, aut seditiones aliquas excitare; Ego Primarius Dux Regni Poloniæ, illum profligare, & armis persequi tenebor.

Domnum vero Sapieza, qui se Vor præfato adiunxit, ab illo & exercitum Polonicum, & Lithuanicum abducere; Quod si idem Vor præfatus, ex Moscouia cum Ruthenis discesserit, militum autem Polonorum, & Lithuanorum quosdam apud se detinuerit; Ego Primarius Dux Regni Poloniæ, cum exercitu sacra Regia Maiestatis, una cum Heroibus Moscouiæ, ne sanguicidium impostitum exordiat, sed Imperium pace publica asscuratum stabilietur, dabimus operam.

Demetrii primi
sup. vor. Pala-
malia.

Mulier vero, quæ cum eodem Vor præfato per Moscouiticum Imperium, cum exercitu passim grassatur, Imperatricem Moscouiæ sese ventiland; Illi prohibendum, ne eandem se impostitum cognominare, vel quippiam istiusmodi, aut aliquas difficultates, contra Imperium Moscouiticum moliri audeat: sed, quamprimum in Poloniam reducenda est. Imperator vero Serenissimus, filius Regi Poloniæ Vladislao Sigmuntouiz in omnibus antiquis, iura sancita, & pacta Magnorum Legatorum Moscouiæ, cum Serenissimo Sigismundo Rege Poloniæ, & confirmata priuilegia imitari debet.

Ciuitatem & Arcem Smolinsk præfatum quod attinet; Ego Dux Primarius exercituum regni Poloniæ supplicabo apud S. R. Maiestatem, ut prohibeat, ne milites in Ciuitate tanta homicidia exercent, & Arcem spolient.

De Baptismo
repetendo.

De baptismo vero, ut illud Imperator Vladislao Sigmuntouiz, filius sacra Regia Maiestatis suscipiat, & baptizetur in illorum Sacrosanctæ legis Græcæ religione, in illaq; persequeret, ut & de alijs nondum contractis actis, & conditionibus, & reliquis circumstantijs antiquis in Imperio Moscouitico, ad presentem usq; expeditionem bellicam obseruatis: Inter Serenissimos Imperatores & Imperia omnium, consilium & collatio institui debet, ut amor, & amicitia, vtrinq; augeri, & conseruari possit. Quæ de re, Ego Primarius Dux militia, cum iam à S. R. Maiestate commissa, & mandata nulla habeam, contuli cum Heroibus, quid ipsis responsi sum daturus: sed primam cum sacra Regia Maiestate hoc in negotio, tum etiam cum Serenissimo Imperatore Vladislao Sigmuntouiz filio sacra Regia Maiestatis, conferam.

Insuper, Ego Primarius Dux exercituum regni Poloniæ, in Arcem Moscouiam præfata, Polonos, Lithuanos, Germanos, & omnis generis bellicosos, qui sunt mecum, & cum Domino Sapieza, absq; permissu Heroum, vel ipsa necessitate, intromittere non debeo. In Arcem Moscouiam præfata, Mercatorum Polonorum, & Lithuanorum, mercium coemendarum gratia, ex omnibus Prouincijs regni Poloniæ, cum meis Imperialibus testimonialibus literis, non ultra viginti, vel paulo plures sunt intromittendi: absq; literis a me datis testimonialibus, in Arcem Moscouiam præfata, aut alibi, nemo proficisci debet.

Ob maius vero robur, & confirmationem Pactorum istorum, Ego Primarius regni Poloniæ Dux exercituum, Stanislaus Stanillaides, Zolkiewsky de Zolkwia sigillum meum apposui, & manum propriam subscripsi. Sic etiam Domini Primipoli, & Centuriones exercitus, qui tum temporis mihi aderant, ad hæc mea scripta nomina sua subscribere. Datum in Castris, apud Arcem sedis Imperatorie Moscouitici Imperatoris. Anno 1610. Augusti 27. die.

Respon-

Responsum ad Pacta inter Primarium Ducem Exercituum Regni Poloniae, & Heroes Mosconiae, Serenissimi Regis Poloniae, & Serenissimi V. L. A.

DISLAI SIGMUNT OVIZ Filij Sacrae
Regiae Majestatis.

Magnus Dei gratia Imperator Vladislaus Sigmuntoviz, Filius Serenissimi Regis Poloniae, Sueciae, &c. Amplissimi Moscovitarum Imperij universo venerabili Clero, Ministris Dei vigilarissimis, Heroibus, Capitaneis, Liberis Heroum, Advocatis velutim, Iaculatoribus, & Velitibus, Advenis, Mercatoribus, omnibus servilibus, & liberis hominibus significamus. Nos quandoquidem vobis Imperatorem totius Imperij Moscovitici, Caesarem, & Magnum Principem Wlodymiriensem, necnon universarum Moscovitici Imperij Provinciarum coronari petistis: Nos quoque post Legatorum vestrorum supplicationem, pro vobis intercessimus apud Serenissimum Tertium Regem Poloniae, Magnumq; Ducem Lithuaniae, Dominum parentem nostrum, ut secundum suae sacrae Regiae Majestatis misericordiam, consuetudinem, vestrae subveniat calamitati, & prout cepit, ad finem usq; vos, & totum Moscoviticum Imperium restauret, & pace confirmet: & sanguinem Christianum qui per malos quosdam pacis publica violatores, & per viros effunditur, coerceat: Serenissimus itaq; Rex Poloniae, Dominus Parens noster, post vestrum Legatorum supplicationem, & nostram filij sui intercessionem, Decretum nobiscum filio suo, in Moscoviticum Imperium, iter quamprimum suscipere: ut confirmetur Imperium, & sanguicidium sanguinis vestri cohibeatur, vobis vero pax, & Patria, ex integro restituatur. Et vobis venerabili Clero, Heroibus, Incolis, Capitaneis, & universis cuiuscumq; sortis hominibus, Spirituallibus, & Politicis, istud necessario sciendum est. Vos autem, qui Serenissimo Regi Poloniae, Domino Parenti nostro, & nobis, ad hoc usq; tempus fidem inviolatam conservastis, iam quoque nobis Magnis Imperatoribus vestris officia vestra, & promptitudinem animi conservabitis, aduentumq; nostrum in Imperium Moscoviticum, cum gaudio in pace expectabitis. Qui vero mala de nobis opinione, contumacia, & seditione Vor praefati, repulsam fecere, is ne amplius tergiversetur, promittendo illis nostram benevolentiam, & amorem, persuadere debetis, & ad nos Imperatores convertere, ut sint quoque vobiscum unanimis. Et supremi Cancellarij Exercitus, Serenissimiq; Regis Poloniae, Domini Parentis nostri, nostrisq; sese adiungant: Et cum supremo Cancellario, de nostris Imperatoribus, & terrestribus negotijs consultant, commodaq; Patria curent, ut quamprimum possit Imperium Moscoviticum, ad pristinum statum reduci, & paci, ac tranquillitati antiqua restitui: ac nos, donec venerimus, laei praestolentur. Seditionis, ac male de nobis opinantibus, nullam fidem habeant, nec ullis obediant, qui secundum animi sui praesumptionem falsam, se suamq; posteritatem Imperatoribus Moscoviticis successuram arbutantur. Et qui de sacra Regia Maestate, Domino Parente nostro, nobisq; metipsis, rumores nefarios, scriptis ad Arcium Praefectos literis sparsere, & disseminarunt, verbaq; aolose excogitata, inter homines dimisere, & iam disseminant: atque hac tyrannide, & malitia sua, recentes seditiones in Moscovia concitauerunt, quibus multam copiam sanguinis Christiani frustra effundi passi sunt. & totum Imperium diriserunt, & hac pertinacia, atque malitia sua, Dei ter Opt. Max. castissimaeq; Deiparae voluntati, necnon Serenissimi Sigismundi Dei gratia Regis Poloniae misericordia, & ipsius benivolo erga se animo aduersantur. Nobisq; Serenissimo Imperatori iuramentum exosculatione vini fisci Baptismatis praestitum violant. Quare quosdam eorum iam etiam propterea Deus Omnipotens, iusto suo iudicio, ex hac vita sustulit, & puniit: quosdam vero, eius atrocissima vindicta expectat, nisi a sua contumacia conversti, apud nos, Magnos Imperatores suos, culpam quamprimum supplices deprecantur. Insuper, omnibus vobis in universum sciendum est, quod ij, qui ad nos Magnos Imperatores suos, & nostram misericordiam, asylumq; confugerint, is secundum magnum affectum nostrum Imperatorum, miserebimur: panis remissis condonabimus omnia, & in tutelam eosdem nostrum recipiemus.

Sacrosanctam quoque Religionem vestram Legis Graece permittimus, earumq; secundum constitutiones Patrum Sanctorum, iuebimur, in nullo puncto violandam, & immutandam. Et universam venerabilium Patrum, Ministrorum Dei Confessorum vestrorum Coronam, debito in honore sumus habituri. Heroes, Aulicos, & cuiuscumq; sortis alios diligere, promovere, patriam possessionem, pecuniam, aliamque omnem provisionem, a nemine abalienando: sed suum unicuique attribueri promittimus, secundum antiquam consuetudinem: & insuper nostra Imperatoria provisione, unumquemq; secundum ipsius dignitatem, & merita promovere. Qui autem in malitia, & contumacia sua perserverare non cessabunt, ij, Deum Opt. Max. & castissimam eius Genitricem, strictissimo illos gladio puniuros certo sciant: & nostrum Imperatorum benivolum animum, in iram, & vindictam mutatum experientur. Non vult enim Deus Omnipotens, ut, ob malitiam, & contumaciam Rebellium, innocentium ulterius sanguis effundatur, Tempia Dei spoliarentur, & gloria sancti Nominis eius, magis, ac magis deprimatur. Vos omnes, apud animum vestrum diligentius perpendite, & his, qui adhuc nobis tergiversantur renunciate, ut animo mutato, ad veritatis agnitionem redeant, & seditiosos, & pacis publica diremptores relinquant.

Iam vero, ad quas Arces, & Civitates, haec litera nostra pervenerint, Mandamus, ut eorum Capitanei, & Tenentarii, omnia ad victum necessaria, & pecuniam colligant, in paratisq; habeant, ad nostrum aduentum. Interea Exercitus sacrae Regiae Majestatis, Domini Parentis nostri, nostrisq; proprijs, ne ullum detrimentum patiantur, sed una in fraterno amore, quoad venerimus, vinatis: Et donec Opt. Mat.

ex mera gratia sua, nostraq; Imperatorum cura, & diligentia, toto Imperio Moscovitico firmato, & restaurato, vobis potiri concesserit. Dabantur Varsovia, Anno Domini 1612. 9. die Martij.

Haluskin a Wor or Pretender.

BY what manner their naturall Lords ruled ouer them, they alleaged, to wit, beginning from *Borik*, who was of the blood of *Augustus Cesar*, Emperour of *Rome*, euen vnto the last Lord and Emperour *Pheodor Euanowich*, in whom their Race ceased.

That *Boris Godonow* abiding with *Pheodor Euanowich*, was created (by his owne force and power) Emperour or Lord: but after a little time, the pleasure of God so working, being thrust out of the Imperiall seate, departed this life shamefully, and by violent death, together with his Wife and Children.

That *Christophorus Otropitij* the *Rostrige*, being of base descent, vnder the Name which he did beare of Emperour, otherwise *Demetriy Euanowich*, slaine at *Owglets*, did fraudulently and by deceit (wherewith he deceived the common people, and others that beleued them) obtaine the Imperiall Seate by force, without the consent of the Spiritualltie, and all the chiefe Bishops and Lords, and great men of the Kingdome, who durst not withstand the same, seeing the Commons to yeeld thereunto.

How the excellent Lord *Palatin of Sandomire*, gaue his daughter in marriage to the *Rostrige*, and himselfe (many Gentlemen both of the Kingdome of *Poland*, and great Duchy of *Litow*, accompanying him) came into *Moscouia*.

Then, that *Vasili Euanowich Suiskey*, with his brethren, and many others associated to this attempt, and stirring vp other great men of the Land, did kill the *Rostrige*, with many Gentlemen of *Poland*, and the great Duchy of *Litow*, and put the rest into diuers Castles. And himselfe was made Emperour, although he were not elected by all the States. Whereupon many of our sort did not willingly acknowledge him Emperour, and many would not obey him.

How another named the *Wor*, did rise vp at *Kalusia*, and caused himselfe to bee named *Demetriy*, and so accounted. Whereof when many (both *Russes* and *Poles*) heard, they assembled vnto him, thinking him to be the true *Demetriy*: and the *Russes* did so much the more willingly draw vnto him, because of the murtherers.

How others called *Wors*, did name and call themselves sones of the slaine Emperour, as *Iuan*, *Peter*, *Pheodor*, and by many and diuers other names: and vnder the same names, did consume the State, and shed much blood.

How the Kings sacred Maiestie, comming to *Smolensko*, sent his Messengers the Lord of *Premislaue*, and other noble men, who comming vnto the Campe, the forenamed *Wors* fled away: but diuers of the *Russes* came vnto his Maiestie. And taking counsell with the *Boiarins*, at that time remayning with *Suiskey* in the chiefe Citie, we sent our Messengers to his Maiestie at that time, being at *Smolensko*, viz. *Michael Salticoue*, and others, requesting that his Maiestie would grant vs his Sonne to be our Lord.

How they were dispatched away, and what answere they brought from his Maiestie, with conditions engrossed, and signed with his hand and seale.

How that after the depoling of *Suiskey*, the noble Lord Generall of the Kingdome, comming into *Moscouia*, concluded all the said businesses and treaties: and confirmed them with the oath of himselfe, and his fellow Souldiers. And that they after that oath, likewise made their oath for the same. Then, that for the greater defence of the said principall Citie from the *Wors*, they sent Souldiers into the Citie, and sent also their Messengers from the whole Countrie *Fidareta*, the *Metropolitan* and *Vasili Galichin*, with others, vnto the Kings Maiestie, and required an oath in his Maiesties behalfe, of all the seuerall Prouinces.

How that his Maiesties Souldiers dwelled and behaved themselves in this capitall Citie of *Mosco*, before the troubles began, without iniuring any man, punishing the euill according to their deserts.

How the *Boiarins* handled other Gentlemen, and principall persons of the *Russe* Religion, although more inclined vnto them: but especially the Officers and Seruants of the *Wors*, as also such as had fled ouer.

It followeth, how they often sent word vnto the Citie of *Smolensko*, and willed them to deliuer vp the Citie vnto his Maiestie, to bee vnder his prosperous gouernment and power. As for the secret plots of their Messengers, *Galechin* and others, they said, they were ignorant, as also of some vnkowne practises, handled with the *Wor* called *Haluskin*. But they said, that they had written very often to the Citie of *Smolensko*, and commanded them to doe whatsoeuer stood with his Maiesties pleasure, and liked him, without further effusion of blood.

How

How also it befell in the chiefe Citie to *Lepan*, and *Sarnusky*, and the other Rebels, when they violated their fidelitie. *Lepan.*
Sarnusky.

That they certified his Maiesties Souldiers thereof, and that they, with them, did rise against the Rebels, and that euen to this present, they doe keepe, and will keepe their oath once made, and their due obedience vnto their Lord.

And, in that *Lepan* was punished of God for his treacherie, and departed this life with so shamefull a death, wee thinke it to bee for the good example of others, to reduce them into their former estate, to reuoke others vnto their fidelitie, and for keeping their oath already giuen.

10 Therefore, after many circumstances, they inferred, that they would presently send their Messengers to the generall Parliament: but mooued with the perswasion of the honorable Lord Generall, to wit, that his Maiestie would bee contented with their fidelitie once made, and performed vnder oath, and with their grieve for the same cause, and will cheerefully forgiue them: and doth not refuse to giue his Sonne to raigne ouer them. Adding withall, that many Kingdomes, to wit, the Kingdome of *Hungarie*, the Kingdome of *Bohemia*, and a great part of *Russia*, doe earnestly request, that he would receiue them vnder the happy gouernment of his Maiestie: that they might enioy the priuiledges of *Poland*, and *Litow*, to which, none in the whole world can be compared.

20 But, because his Excellent Maiestie, as a Christian Lord, reiecting all other Kingdomes, and Dominions, will graciously receiue vnder his Rule and gouernment the said Dominions, and that he is sorry for their destruction: he therefore now admonisheth them, if they will bee vnder his prosperous Rule, and enter into an vnion together with the Kingdome of *Poland*, and the great Duchy of *Litow*, and liue friendly with them: if they will performe, and consent therevnto, His Excellent Maiestie promisseth to remit their offence, and to receiue them vnder his happy gouernment and authoritie, and refuseth, and by no meanes will alter or change their faith and conscience, or places dedicated vnto God, or builded for deuotion: neither will impose on them any other Religion, or alter their ancient Manners, or Customes, but will bestow on them priuiledges and offices: and that the Rights and Priuiledges, which the *Poles*, with the great Duchy of *Litow* doe enioy, shall be conferred on them: and that they shall be equalled with the Kingdome and great Duchy of *Litow*, &c. which iurisdiccions and priuiledges, in former times, their Predecessors wanted.

30 For this perswasion therefore of the honourable Lord Generall, which he had in charge from his Maiestie to make, they yeeld all thanks: but notwithstanding they propound, and plainly adde, that their oath shall be so, that his Maiesties sonne shall succeed in their gouernment, with certaine additions, to wit, that they will haue none other ouer them but onely his Maiesties sonne, and that the whole Land doth make it knowne, and propound their iudgement and sentence, by way of denunciation, that by no meanes, but by offering his Maiesties sonne, these troubles of *Mosconia* can be extinguished. Adding withall, that at that time, in the first troubles, when the honourable Lord Generall came into the Country of *Mosconia*, and required the oath for the Kings Maiesties sonne: if his Maiestie had made any mention thereof, it is certaine, that the Commons and all the Nobilitie, would not haue consented thereunto by any meanes, and that greater effusion of blood had risen thereupon: And that they had taken for their Prince *Klutziusky*, called the *Wor*, to whom all were not assembled, who also at that time had a great power of men, as well of *Poles*, as *Russes* and *Litowes*. They therefore seeing the great discord amongst the people, taking counsell, did freely choose for their Lord and Emperour his Excellent Maiesties sonne, vnto whom they had a great affection, and who had a long time before layen in their hearts: assuring themselves also, that by this election of his Maiesties sonne, many troubles and dissentions would be pacified, and so reiecteth the aforesaid *Wor Klutziusky*: As also they receiued into their chiefe Citie the chiefe Generall. But, when it was heard that his Excellent Maiestie, would by no meanes giue vnto them his sonne for their Lord, and to rule ouer them, they fell into such effusion of blood and insurrections, As also the same time, the whole Country of *Mosconia* looked and expected nothing else then his Maiesties sonne. Calling to memorie, for their better aduice, that it was to be feared, least whilest his Maiestie came too late with his sonne, diuers parts of the Land should choose vnto themselves seuerall Lords. As to the Southward the Castles *Strachen* and others, to the King of *Persia*; part of *Pomerland* and *Siberia*, to the Kings of *Denmarke* and *England*; *Nonogrod*, *Plesco*, *Iuanogrod*, and others, to the King of *Sweden*: and that the other Cities would choose to themselves other Lords separate from the rest. In the meane season, they desire his Excellent Maiestie, to make a speedy end of these warres, according to his Obligation and promise ratified by the oath of the honorable Lord Generall, and the whole Armie: and that his Maiestie himselfe, with his sonne, would come into

40 50 60 *Mosconia*. They request also, that his Excellent Maiestie would retayne with himselfe and his Sonne, Counsellors, and Messengers of their Commonwealth, for the ordaining and concluding of perpetuall Conditions. They request also, that his Maiestie, in the name of his Sonne, would send vnto all the Inhabitants of the Townes, and write vnto the seuerall Cities, signifying his

rour.

Astracan.
Laplansky

comming into their Dominions, and willing, that out of the severall Prouinces, all sorts of men send their Messengers, to treat and conclude of the affaires of all sorts of People, and of perpetuall tranquillitie. Promising after the said Charge and Letters to all people in generall, and notifying from their said Lord, that (by Gods grace) there may bee throughout the whole Land of *Mosconia*, tranquillitie, peace, and securitie.

To conclude, they pray heartily vnto the Lord God, to grant vnto his Maiestie in this businesse begun, a prosperous and speedy end.

Russian inconstancy.

Thus haue wee seene dissolute resolutions, or resolute dissolutenesse, men onely constant in inconstancy, resolved vpon irresolution. As we often see sicke persons turning euery way, and no way eased; in the night time longing for day, and in the day for night; such was now the *Russian* sicknesse, they would and they would not, and yet would againe, and againe would not, they scarcely knew what or why; fluctuating in an inward storme of diuersified hopes, feares, desires, distracted affections, no lesse then in that outward broile of State. For it was not long that they looked toward *Poland*, whether for breach of conditions of that part, or out of inueterate hate to the *Pole*, or their Nationall ialousie and distrust of Strangers, or a naturall inconstancy; they fell off from that Prince: and their Chancellor (Father to the now reigning Emperour) employed there with others in Embassage) were detayned thereupon prisoners. It is also reported that they made secret ouertures to His Maiestie of Great Britaine, and that Sir *Iohn Merick* and Sir *William Russel* were therein employed: but the strong conuulsions and sharpe agues and agonies of that State could not, or would not endure the lingring of such remote phisicke; the wheele of Things being whirled about before such a Treatie might admit a passage of Messengers to and fro. Once that *Russian* Head grew so heady and giddy, that at last it bred innumerable Heads, yea the whole Body became Heads in the worst of tyrannies, a popular (gouernment shall I say? or) confusion. Neither were *Hydras* heads (monstrously multiplying two for each cut off) like this: for besides so many *Wars* after the first and second *Demetrius* (which might make vp that comparison) each limbe, nay almost each haire of this *Hydra* (not the Nobles alone, but the basest which had nothing but themselves, and were nothing but Numbers) became so many prodigious Heads; they also like *Pharaohs* leane kine deuouring the fat, and vpon light pretences beheading themselves in cutting off the heads and nobler Persons amongst them.

Many-headed body.

Ianson. A. 1612.

When they had thus made away almost all the *Grandes*, and left the South parts to the spoile of the *Poles*, which once againe were drawing neere to *Mosco* to besiege it; the *Poles* also suffered some disaster, their Souldiers mutinying for want of pay, and banding themselves to returne into *Poland*, there inuaded the Mints and Custome-houses, and some gouernments, detayning them for their pay; sending also threatening Letters to diuers Cities and Townes, forced diuers Nobles and Plebeians to composition. The *Turkes* and *Tartars* brake likewise into *Walachia*, *Moldauia*, and *Polonia*, so that *Zolkiewsky* or *Sulcosky* the Generall was forced to goe against them, of whom he made so great a slaughter, that the Great *Turke* committed the *Pollake* Embassadour at *Constantinople* to Ward, and threatned the *Poles* with inuasion. These mutinous Souldiers continued meane while that and the next yeere to spoile *Poland*, doing much damage to the King and the Bishops, challenging many millions due, as they said, for pay. Yea they passed further into *Prussia*, and made spoile in euery place, on the eight of Nouember 1612. passing with a great prey to *Thorn*, being parted into three Bands, the *Sapians*, the *Sborouians*, and *Smolenskians*. Another companie of them terrified *Silesia*. The *Tartars* likewise made impression and committed great spoile in *Podolia*.

Gods providence permits not the utter ruine of *Russia*.

Strange alteration of affaires by a Butcher.

Pozarsky chosen Generall, and a Butcher Treasurer.

Boris Licin.

Thus an Armie diuided could not conquer, nor so utterly exterminate *Russia* as otherwise opportunity was offered: the *Pole* Souldiers being herein like angry Elephants which sometime recoyle vpon their owne troupes and doe more spoyle then the enemy could either haue effected or expected. But whiles the Inuaders were thus inuaded, the *Russes* were forward to worke those executions on themselves, which their enemies could haue wished to them; till at last awakened with the horror of their owne euils, some began to thinke of a better course. In the North about the *Dwina*, a bold fellow, a Butcher, rayling at the Nobilities basenesse, and the Officers corruptions, said, if they would choose a good Treasurer and pay Souldiers well, they might haue those which would fight and expell the *Poles* their Enemies: provided, that they would first choose a worthy Generall, for which place he recommended to them a poore maymed Gentleman, called *Pozarsky*, who had done good seruice, but being neglected, now had retyred himselfe not farre off. The multitude approued the Butchers counsell, and chose *Pozarsky* for their Leader, and that Butcher for a Treasurer, deliuering into his hands what money they had, which he so faithfully disbursed, *Pozarsky* also discharging so well the trust reposed, that a great Army was gathered, and the siege of *Musco* thereby rayfed. And joyning with *Knes Demetry Mastroukswich* (a kind of *Tartar* which commanded an Army of *Cossaks* in seruice of the *Russe*) they fell in consultation with *Boris Licin*, the third Great Souldier of that Countrey, vpon choice of an Emperour. Their mindes herein disagreeing (some naming one, some another) some named *Mastroukswich* himselfe, other for further securitie against the *Poles*, and

and to recompence the sufferings and imprisonment of the *Russian* Chancellor in *Poland*, named his young Sonne *Micallowich*, vnder whose Empire (having a good Councell appointed) they might live happily. This was first approved by the *Cossaks*, and then by the other Armies, the Butcher also was taken to become a Counsellor, and those three Leaders aforesaid were made Militarie Commanders for the present Emperour against the *Poles*. Embassadors also were sent to diuers Princes to mediate betwixt them and the *Pole*; and betwixt them and the *Sweden*; and by his Majestie of Great *Brittaine* (whom God long preserve to reigne over vs) his countenance and intercession, there hath beene some agreement, and the young Emperour hath settled his Dominions in peace, making at last a truce for fourteene yeeres with the *Poles*, obtayning also in that Treatie his Father the Chancellor his libertie and returne out of *Poland*, who since is consecrated Patriarke of *Russia*.

His Embassador to the Emperour came to *Lintz* in December 1613: and thence was conueighed by the Emperours Officers to the Court, where hee had solemne audience, where after rich presents of Fures and his Letters, he deliuered his speech, that *Michael Phedorowich* was now by unanimous consent aduanced to the *Russian* Empire, and willing to entertayne and continue the ancient confederacie betwixt both Empires: desiring the Imperiall Majestie to dehoit the *Pole* from his vniust attempts, to deliuer the *Russe* Captiues, and not againe to infect the recovered *Musco*, but to enter into peace, and abstayne from Christian bloudshed. Likewise to send an Embassador to his Court, &c. This mediation *Cesar* promised, and gaue the Embassador liberal entertainment, and gentle dispatch.

Not long after in May 1614. the *Russian* Embassador had audience with the States of the United Provinces at *Hage*, and before that in *England*. I was present both at his arrivall at *Gravesend*, and his honourable entertaynement into *London*, and saw him also presently after the running at Tilt at *White-hall*, the foure and twentieth of March, admitted to his Maiesties presence, performing that *Russian* Rite of bowing with his face downe to or neere the ground, &c.

Anno 1615. The *Turkish* Embassador treated with the *Casarean* Majestie about the mediation betwixt the *Pole* and the *Muscovite*, who employed to that purpose *Erasmus Heidel* and the Baron of *Dahn*. The *Pole* notwithstanding sent an Army in his Sonnes challenge (who was shortly to follow to *Smolensko*) into *Muscovia*; *Pontus Telligard* the *Sweden* Commander infecting also the *Russians* at the same time. But the next yeere 1616. Sir *John Merike* Knight, a man of great experience in those Northerne parts, was employed his Majesties Embassador to negotiate betwixt those two Great Princes, the *Moscouite* and the *Sweden*, the Articles of whose composition I obtayned by the mediation of Sir *Thomas Smith* (my ancient Benefactor in this kind) and haue here communicated to thee, but in another Chapter as being now past our Tragick Thunders: as also the following *Russe-China* Newes, that you may see not only the face of *Russia* washed from her bloody pollutions, but her hands further then euer extended (fortunate in treaty of Commerce) as far as *China*: likewise the *Russe* Patent to the *Englisk*. Sweet is the name of Peace, and the thing it selfe a Heauen vpon Earth. BLESSED ARE THE PEACEMAKERS (His Maiesties word else-where, here his deed) for they shall be called (said the only begotten Son) the Children of God; euen the God of peace will make them his heires of Heauen, which (models of Deity) seeke to establish the peace of God vpon Earth. And let it not seeme tedious here to present these His Majesties Trauels, amongst our other Trauellers, but in a more glorious manner (like to God vnmoueable which moueth all things) who hath not only been our Sunne, and with lightsome heate and influence filled our *Brittish* Hemisphere, but hath dispersed his bright rayes of Light, and warmed with sweet quickning beames of heat, those remoter frozen Climates of *Sweden* and *Russia*, (not to mention, or but to mention the quarrels of *Denmarke* and *Sweden*) and after their long frostie Night (such is the nature, such was the state of those States) to reduce the faire day-light of Peace, the warmth whereof hath thawed the Ice hardened hearts of Enmity, and filled all things with sweets, and cheere of a returning Spring. *Nulla salus bello, pacem te poscimus omnes.*

CHAP. X.

A briefe Copie of the points of the Contracts betweene the Emperours

Maiestie, and the Kings Maiestie of Sweden, at Stol-

boun the seuen and twentieth of Febru-

ary, 1616.

Oblution of
former quar-
rels. Michaelo Pheo-
dorowich Em-
peror of Russia,
Gustavus Adol-
phus King of
Sweden.

Inprimis, and especially that all matters be set aside, forgotten, pacified, and renoun-
ced, which passed these former yeeres since the conclusion of peace at Taffina in the yeere
7003. betweene the former great Lords, Emperours, and great Dukes of all Russia, and
afterwards our great Lord, Emperour and great Duke Michaelo Pheodorowich of all
Russia, Sam. his Imperiall Maiestie, and Empire of Russia; and betweene their late
high, mightie Lord King Charles the Ninth of Sweden, the aboue named Kings Maiesties highly ho-
nored and beloued Father, especially their high mightie Lord King Gustavus Adolphus of Sweden, his
Kingly Maiesty and the Crowne of Sweden: As also both the Princes their Dominions, Lands, Ci-
ties, and people, chance or hap of the Subiects, which happened or was done by robbery, burning, killing,
or other enmitie: whatsoeuer might bee, or by whom it was done, that all those griefes and troubles in all
matters shall be set aside, and hereafter not be renewed or remembered of neither party, for ever and by
this present strong conclusion of peace betwixt our great Lord Emperour and great Duke Michaelo
Pheodorowich of all Russia, Sam. and betwixt their great mightie Lord, King Gustavus Adolphus
of Sweden, &c. and of other Dominions, Lands, Castles, aswell those of old, as those which by this
conclusion of peace are giuen and yeelde up, and betwixt all the Subiects and people to bee renewed, esta-
blished, confirmed and held vnremoneable in the manner of a peace for ever and ever, and sure friend-
ship perpetually: Also that the Emperours Maiesty, and the Kings Maiesty shall desire one anothers
best in all matters, and neyther seeke a better friend, but to deale faithfully and truly in all matters
reciprocally.

Great Nou-
grod, &c. return-
ed to the
Russe.

Churches re-
stored with
their goods,
&c.

Sir I. Merike
Ambassador.

Libertie of
persons.

2. Item, is giuen unto our great Lord Emperour and great Duke Michaelo Pheodorowich of all
Russia, Sam. his heires, successors and hereafter comming great Lords, Emperors, and great Dukes of all
Russia, and the Empire thereof, by their great Lord King Gustavus Adolphus of Sweden, for him-
selfe, his successors, and hereafter being Kings of Sweden, and for the whole Crowne of Sweden, doth
deliner and cleere by the power of this conclusion of peace, these Castles of the Empire in Russia with the
Townes and Suburbs which were taken in these yeeres, namely, great Nouogrod, Stararouffe, Porcoue,
Lodiga, Odo, with their Territories, Somerskey, Volost, with the Village belonging to the Emperours
Household, to Metropolis, Monasteries, Gentlemens Lands, Inheritances, Farmes, with all their profits
and reuenues according to former Borders and Limits, except those Castles which the Emperours Maie-
stie doth yeeld by power of this Contract of peace, as hereafter more certainly shall be exprest.

3. Item, The Kings Maiestie of Sweden doth giue unto the Emperours Maiestie, with the afore-
said Castles and Townes, all manner of Church ornaments which are in the Church of Sophia, The Sa-
pience of God, and within all Churches and Monasteries in Nouogrod, and in other Castles and
Townes which the Kings Maiesty hath giuen to the Emperours Maiesty without carrying any thing a-
way. Also the Kings Maiesty doth giue the Metropolitane and all the Spiritualltie, with all their goods,
as also all manner of Russe people what calling soeuer they be, which are in those Townes, Castles, and Ter-
ritories, dwelling now or planting themselves there with their Wives, Children, and all their goods what-
soeuer any hath. As also the Kings Maiesty shall giue all manner of Writings and Bookes, which are in
those Castles and Townes to be found in Roserades iudgement houses, or elsewhere with all Russe Ord-
nance, Munition, and Provisions there belonging, and the Bells in those aforesaid Castles and Townes, in
such manner as they were the twentieth of November last past, according to agreement made with the
Kings most excellent Maiesty of Great Brittaines Ambassador Sir Iohn Merick, except those Bells
which the people of Nouogrod themselves did sell after that agreement, for the payment of Souldiers, and
were carried away from Nouogrod, but those Bells which the Kings seruants and people did take per-
force without buying, shall be in right manner sought out and brought backe againe to Nouogrod and re-
stored there. Also which Bells the Kings Maiesties people bought at Nouogrod, it shall bee free for the
Nouogrod men to redeeme them backe againe at the same price they sold them for, and the Kings people
hereafter shall not buy any more Bells of the people of Nouogrod by no meanes whatsoeuer.

4. Item, the Kings Maiesties people of Sweden, at their departure out of the Emperours Maiesties
Castles and Towns aforesaid, namely, great Nouogrod, Stararouffe, Porcoue, Lodaga, Somersko, Vo-
loico, &c. shall use no violence to the Emperours Maiesties people by burning, robbing, or killing, neyther
carry any Russe people with them to the Kings Maiesties side, neither men, nor women, nor children, nor
any of their goods: and if any goods remayne of the Swethish people, at their going out of the aforesaid
Towne, which at that time they cannot take all with them, such goods shall be kept in safetie by those with
whom they are left, till such time as enery one of them shall come thither for his owne goods, or send some
bodis for them, and these people shall haue free libertie to goe without all molestation or let, to come for
their goods, and to returne againe at their owne convenient time.

5. Item,

5. Item, the Kings Maiesties Governours and Officers shall deliver unto the Emperours Maiesties Voyauodes and Commanders the aboue named Townes and Castles, to say great Nouogrod, Stararouie, Porcoue, with their Territories, and Somerskey, Volost in presence of the great Lords, James King, &c. his Maiesties great Ambassadour Sir Iohn Merike Knight, &c. or the said Kings Maiesties Gentlemen, the which the aboue said great Ambassadour shall send to that end cleansing and giving over the said Castles and Townes, two weekes after this contract is confirmed betweene vs both, great Commissioners by Writings, Hand, Seale, and Kissing of the Crosse of our side, and on their part, by oath upon the holy Euangelists.

Time of deli-
uerie;

10 6. And after that the Castle of Lodiga and Territories, shall bee delivered to the Emperours Maiesties Messengers by the Kings Maiesties Governour, three weekes after the confirmation of this contract, in presence of the aboue said great Lords, James King, &c. his Gentlemen, which to that purpose the great Ambassadour shall send, then the said Castle and Prouince to be redeemed and given up, with all the Russe Ordinance, people thereto belonging, none to be carried away, nor no violence to bee offered them by robbing, or otherwise spoyleing of them; nor no Russe Ordinance to bee carried away. But the Castle of Odow, and Prouince, and people is to remayne on the Kings Maiesty Gustavus Adolphus of Sweden, for a time, till this contract of peace be confirmed by both the Potentates, by their Writings, by the Emperours Maiesty with the Seale of the Empire, and by the Kings Maiesties hand and Seale of the Kingdome of Sweden, as also by the Emperours Maiesties kissing of the Crosse, and the Kings Maiesties Oath upon the holy Euangelists confirmed, and the borders divided and measured out iustly. And the Ambassadour which both the Princes shall send to that effect having bene with both the Princes shall returne againe to the borders, having well concluded the busines, as then two weekes after that time the Emperours Maiesties Voyauodes and Commanders, which his Maiestie shall send for the receiving of the said Castle and Prouince of Odow from Vlasquos shall receive the said from the Kings Maiesties Governours, with all the Russe people and Ordinance with all their goods, and what they haue, and as long as the Castle of Odow is on the Kings Maiesties side, all the people of Odow and the Prouince thereof shall give unto the Kings Maiesty their former Corne, and doe seruice as before for the mayntayning of those Souldiers that remayne there, the Kings Maiesties people in the meane time shall do to those people of Odow no violence nor robbery, neyther carry any Russe people, or Ordinance from thence, nor cause any to be conueighed away.

Odow to re-
mayne cauid
nary.

30 7. Item, the Kings Maiestie G.A. &c. best beloued brother Prince Charles Phillip, Prince hereditarie of S. &c. shall hereafter lay no claime or challenge to these Castles, and Townes, namely great Nouogrod, Porcoue, Stararouie, Somerskey, Volost, Odow, Ladogo, and all their confines, borders and Prouinces; nor come upon them with no manner of Warre, to seeke to attaine them: nor remember any more that oath which formerly the people of those places made to the Prince C. Ph. Also the Kings Maiestie G.A. shall promise not to give any aide of men or money to his aboue said Brother C. Ph. against the afore said Castles and Townes in no wise.

Charles Phillip
Prince of S
den not to lay
clayme.

40 8. And against or in lieu of the aboue said our great Lord Emperor, and great D.M.F. of all Russia, Sam. &c. for himselfe, his successors, and hereafter being great Lords, Zares, and great Dukes of all Russia, &c. and for the whole Empire of all Russia, &c. especially for the dominion of Nouogrod the great, hath given and yeilded unto their high mighty Lord King G.A. of S. &c. from the dominion of Nouogrod, from himselfe and the whole Empire of Russia, especially in respect of love and friendship, these Castles, Forts, and Land, following, which heretofore did adioyne to the Dominions of Nouogrod, as namely Euanoogrod, Yam, Coporea, Orieseke, with all unto them adioyning, Townes, Lands, and Prouinces, with all Townes, and Villages in the Countrey to them belonging, and due unto them, according to their former, iust, and auncient borders, with the people that dwell, and plant themselves there, with all other profits, reuenues, and payments, with the shoares of Rivers, with Lakes, nothing exempted, the Emperours Maiestie hath yeilded, and given to their Kings Maiestie, G.A. of Sweden &c. as proper and owne to him and his Maiesties successors, and hereafter being Kings of Sweden, and to the Crowne of Sweden for an everlasting propertie for them to hold, without causillation or any contradiction, by the Emperours Maiestie, or his Maiesties Successors, or hereafter being Emperours, and great Dukes of all Russia, as also by the whole Empire of Russia, and from the Dominion of Nouogrod, for everlasting times, in all points, as former great Lords, and great Dukes of all Russia, held and kept the same, namely the late, of blessed memory, great Lord Emperour, and great Duke Euan Vasiluwich, of all Russia, Sam. and the great Lord Emperour, and great Duke Pheodor Euanowich of all Russia, Sam. and the spirituallty, as Monkes, and all others in those Castles and Townes, as well Gentlemen, as other inhabitants of the said places, two weekes after the conclusion of this contract, when it shall be reuealed unto them, they shall haue free libertie, all such as desire to goe to the Emperours Maiesties side, with their wiues, children, families, all goods and chattels, which way soeuer they will into the Emperours Maiesties Lands and Townes. And that all Russe people, in the said Castles, Forts, and Townes, might know the same: it is here agreed and concluded, that as soone as the conclusion of this peace shall be effected and confirmed betwixt vs both, the great Potentates great Commissioners shall send their Posts and Messengers into all the aforementioned Townes and Castles, which they in presence of the Lord King James his great Ambassadors, Messengers, shall openly reueale and proclaime, that all spirituallty, with their goods, Courtiers, Gentlemen, Burgeses, and Townesmen, which are desirous to goe from thence within

Zat or Czar, is
a Title of the
great Duke.

Places yeeld-
ed by the
Maiconite to
the Swedes

two weeks after to the Emperours Maiesties side, they shall have libertie to go from thence with their wives, children, families, all their goods, and chattles and none of them to leane any thing behinde them against their wil, neither to be staied nor violated by the Kings Maiesties people, but moreover, to have connoys and prestanes, to bring them without all feare or wrong to the Emperours Maiesties next borders, in such manner that they be neither robbed nor killed, but especially and certainly, it is concluded and agreed on betweene vs both sides great Commissioners, that all Russe Countie Priests, and Husbandmen in the said Townes and Countries which are given and yielded by the Emperours Maiestie, shall by no manner of meanes be inticed or carried from thence, but shall remaine there with their wives, children, and familie, under the Sweths Crowne, as also all Courtiers, Gentlemen, and Burgeses, which doe not remoue from thence, in the foresaid two weekes.

Money to be
giuen to the
Sweden.

9. As also from the Emperours Maiestie, great Lord and great Duke M. F. of all Russia, Sam. &c. the Kings Maiestie, &c. shall haue 20000. rubbles, in ready good current inchangeable Silver deymings, and those monies immediately as soone as this contract of peace shall be concluded and confirmed betweene vs, shall be giuen to the Kings Maiestie of Sweden great Commissioners by the great Embassadour of the Kings most excellent Maiestie of great Brittain his great Ambassadour Sir John Merricke, Knight.

Ordinance and
Munition to
remaine.

10. And as for the Russe Ordinance in these Castles which shall be giuen to our Lord Emperour, and great Duke, &c. from the Kings Maiestie G. A. &c. which Ordinance shall remaine there, shall be giuen to his Maiesties Officers, and what munition of Artillerie, as prouision for Warres, and Bels, and other matters, which their Kings Maiestie hath taken in the Land of Russia out of those Castles, before the contract which the Kings Maiesties great Commissioners, and the great Lord King James &c. great Ambassadour Sir John Merricke, Knight, did erect, as the twentieth of Nouember, such Ordinance and prouisions shall remaine to the Kings Maiesties vse, and Crowne of Sweden, without all contradiction or cauillation.

The contract of
V. E. for Corelia
and the Terri-
tories, confir-
med to Sweden

11. And because the late great Lord Emperour, and great Duke Vasily Euanowich of all Russia, Sam. did giue and confirme by writings, unto their high, mighty, late Lord, King Charles the ninth of S. &c. and to the Crowne of Sweden the Castle Corelia, and the Prouince thereof, for that faithfull and good willing aide which was done unto him, against the Polish people: in like manner doth confirme, and establish the same by this contract of our great Lord Emperour, and great Duke M. F. &c. the same yeelding and donation of the great Lord Zare, and great Duke Vasily Euanowich, &c. for himselfe, his successours, and hereafter being Emperours, and great Dukes of all Russia, and for the whole Empire of all Russia, that the said Castle of Corelia, with all profits, reuenewes, and rents, by Land and by Water, according to their former auncient, and now being borderers, nothing exempted in all, accordingly as it was by former Emperours, and great Dukes of all Russia, as they posselt and held it, so hereafter it shall remaine to their Kings Maiestie, G. A. of S. &c. and to his Maiesties Successours, and hereafter following Kings of Sweden, and the Crown of Sweden, without all cauillation or contradiction for euerlasting times.

Commis-
sioners of both
sides to meete

12. And that hereafter there be no more difficulty or variance concerning the borderers of the Land, it is concluded and agreed upon, that in this yeare 7125. upon the first of Iune, our great Lord Emperour, and great Duke M. F. &c. and their high, mighty King G. A. &c. shall send on both sides, speciall good Courtiers, and Notaries, to meete between Lodiga and Oreseke, at the mouth of the Riuer Laua, whence it doth fall into the Lake of Lodiga, so that they shall meete upon the said Riuer, on the midst of the Bridge, which of both sides their people shall make upon that Riuer, and when there the one shall haue shewed the other their ample Commissions, and shall appeare that they are worthy to measure out the borders thereby, betweene the Emperours Maiestie, and the Kings Maiesties Lands: so that from the borders of Nouogrod, Lodiga, and Odow, with their Prouinces, and also from Somerskey, Volost, be deuided from the auncient and former precincts, and borders of Oreseke, Copora, Yam and Euanogorod, in iust manner as it ought to be, at the same time next ensuing the first day of Iune, then the said Courtiers and Notaries, three in presence in the said manner on both sides, shall meete together upon the borders of Nouogrod, betweene the Prouince of Olimets and Corelia at Salomensky Towne, by the Lake of Lodiga,; which Courtiers also shall view the same Prouinces according to the former borders, and as the former are exprest, how they haue bin, and confirme the same, and if they so chance, that they cannot happen upon the former auncient borders, then shall they, by iust inquisition, make new borders and Land-markes, in such manner, that hereafter there be no further controuersie concerning those borders, and those Courtiers or Gentlemen shall not part asunder of neither side, till they haue sufficiently and friendly ended that businesse in all manner, and what those Courtiers shall finish and effect in this manner, the same according as befiteth there shall expresse by writing upon parchment on both sides, and confirme the same by their subscription, Seales, kissing of the Crosse, and oath interchangeable: and as concerning the deuiding of borders, and the Gentlemen shall doe it, as namely of Nouogrod, Lodiga, Odow, Somerskey, Volost, of one part; and also betweene Oreseke, Copora, Yam, and Euanogorod, on the other side, and also betweene the borders of Nouogrod and Corelia, shall be set downe and written, the same shall be inremoueable and fast for euerlasting times, by our great Lord Emperour, and great Duke Michall Fedorowich of all Russia, &c. and the Kings Maiestie Gustauus Adolphus, &c. and their successours, and hereafter being on both sides, for euerlasting times, according to this contract of an euerlasting

lasting peace: and for more firme confirmation of the same, that it shall be held and kept; it shall be declared further in the Letters of contract, which shall be hereafter given betweene both Princes, from the Emperours Maiestie, by kissing the Crosse, and confirmation of his said Letters by his great Seale, and by the Kings Maiesties oath upon the holy Euangelists.

13. As also the former, of blessed and most famous memory, great Lord Emperour, and great Duke Fedor Euanowich of all Russia, Sam. our great Lord Emperour, and great Duke Michall Fedorowich, of all Russia, Sam, &c. Vnckle in conclusion of peace made at Tawlin, in the yeare 7103. did yeelde and give ouer all his pretention and claime to the Countrey of Leifland, as also the great Lord Emperour, and great Duke Vasily Euanowich, of all Russia, Sam. in a conclusion of peace made at Wyburgh, in the yeare 7117, did renounce the same; so it is now here concluded and agreed, that our great Lord Emperour, and great Duke M. F. &c. and his successours, and hereafter being Emperours and great Dukes, shall at no time for euer challenge unto themselves any right, or pretence to the Countrey of Leifland; neither shall our great Lord Emperour and great Duke M. F. of all Russia, Sam. nor his successours, great Lords, Emperours, and great Dukes of all Russia, hereafter write unto their great Lord, King Gustauus Adolphus, nor his successours hereafter, being Kings of Sweden, nor to the Crowne of Sweden, with the title of Leifland, or those Castles which the Emperours Maiestie hath now renounced to the Kings Maiestie for euer, neither by Letters of confirmation to write themselves, or name themselves in them, nor suffer his Voyauodes, Seruants and Commanders, to write themselves with the title of Leifland, or the Townes aforesaid, neither in writing nor speeches, to name themselves. As also our great Lord Emperour, and great Duke M. F. of all Russia, Sam. his successours, and hereafter being great Lord Emperour, and great Duke of all Russia, in their writings and speeches, shall give to their Kings Maiestie, and hereafter being Kings of Sweden, their accustomed title of Leifland, and Corella. Item, on both sides, the great Commissioners haue agreed, since at this Treatie we could not accord upon the full title of both the great Potentates; As to intitle the Emperours Maiestie, and of many other Dominions, Lord and Conquerour, and the Kings Maiestie, with the title of Ingermanland, wee haue of both sides great Commissioners, referred the same to both great Potentates liking therein; and if that either Potentate will be pleased to write the other with the full title, as to the Emperours Maiestie, the Kings Maiestie doth write the full title with the word Conquerour; and that the Emperours Maiestie also doe write to the Kings Maiestie his full title with Ingermanland, then both the Potentates are to send those titles by their Ambassadors, and nominate the same full title in one of their Letters of confirmation, and the other Letter to be written according to this our present agreement: and if in both the Letters, the titles be written to the full, as the Emperours Maiesties full title, with Conquerour; and the Kings Maiestie with Ingermanland, then both sides Ambassadors shall shew one the other the said Letters, and hauing shewen them, shall goe to each Prince with the same; if then on either side the Potentate shall not like thereof, and shall send the said Letters of confirmation with the short title, according to this our present agreement: the Ambassadors of both sides shall in like manner make knowne the same one to the other, and so proceede therewith to both Potentates.

14. Also it is agreed and concluded, that there shall be free commerce of Trade betweene both the great Kingdomes, the Empire of Russia, and the Kingdome of Swethen, and both Kingdomes subiects: so that all the subiects of our great Lord Emperour, and great Duke Michael Fedorowich, of all Russia, Sam. Merchants of the Dominions of Russia, from Nouogrod, Plefco, and other Cities and Townes, paying their due custome, shall haue free liberty without let to trafficke at Stockholme, Wiburgh, Reuall, Narue, and other Townes in the Countreys of Swethland, Fynland, and Leifland, and they that dwell and plant themselves at Iuangrod, Yam, Copora, Nettingburgh, and Coreilla, what Nation soener, either Russe or other people, shall haue free liberty without let to trafficke, and to trade, paying their due custome, in the right Customs houses, at Mosco, Nouogrod, Plefco, Lodiga, and other Townes of Russia, with the Emperours Maiesties subiects, and also haue libertie to trauell through the Dominions of our great Lord Emperour, and great Duke M. F. &c. for their trade of Merchandize within the Dominions of Russia.

15. And by reason heretofore our great Lord Emperour and great Duke Michall Phedorowich, of all Russia, &c. his Maiesties subiects Merchants, had their free house of merchandize at Reuall, also now by contract of Tawlin and Wiburgh, it is concluded they should haue a good place for a house, appointed them in Reuall, as also in other the Kings Maiesties Townes, as at Stockholme, and Wyburgh, they shall haue house and Diuine Seruice, according to their Religion, in the said houses, without let or hinderance, but at Reuall in their Church, as formerly they haue done: yet to set up no Church, according to their Religion. And as heretofore their Kings Maiesties his Subiects, haue had a free house of trade at Nouogrod, now also according to the contract of Tawlin, and Wyburgh, they are to haue a good place for a house, prepared them at Nouogrod, and the Emperours Maiesties other Cities, at Mosco and Plefco, house for the said purpose, and use their Diuine Seruice according to their Religion, in the house; but to build no Churches for that use any where.

For breuitie, I haue omitted the following Articles to the 29. the substance whereof is as followeth. The 16. determineth what debts shall be recouerable. The 17. Free passage of Subiects thorow each others Territories. 18. Freedome of Prisoners, on both sides. 19. Liberty of Inhabitants to stay in the places surrendered. 20. Fugitiues to be redeliuered. 21. Borderers

The title of Leifland resigned by V. E. at Wiburgh, Anno 7117, now confirmed.

Title to be giuen.

Commerce of Trade.

Merchants of both Kingdoms to haue houses and Churches in each others Countries.

to be restrained from robberies. 22. For ending of quarrels, if any happen. 23. 24. Confirmation of former contracts, of *Tawfina* and *Wiburge*. 25. No priuate or publike practise to be made against each other. 26. Shewing of Letters of confirmation at the meeting of Ambassadors of both sides. 27. Honorable conuoy for Ambassadors on either part. 28. And also for Interpreter's free passage.

29. Item, It is agreed and concluded, that if by the permission and pleasure of God, there happen an alteration of government in Sweden or Russia, then that Prince which shall newly come to his government first, shall reueale by his Ambassador to the other Prince from himselfe, and after that the other shall visit him by his Ambassador.

30. Item, If it so fall out at any time, that of both sides the Princes, as our great Lord, &c. & their great Lord King Gustavus Adolphus shall send one to the other their great Ambassadors, to confer of good matters, then those said great Ambassadors upon the borders shall meet without all controuersie or strife, either betweene Odow and Euangorod: or betweene Lodiga and Oreleke, where they shall thinke most fitting for them on both sides, in the midst of the diuision of the borders, and there to conferre of these good matters in friendly and louing sort, eyther by the Princes Commission or other commandement, as they shall haue.

31. Item, If it happen that the Emperours Maiesties Subiects and Merchants, their Boates, Lodies, and Merchants Vessels shall go to Reuell, Wybough, or other Townes and Castles of Swethen, Fynland or Lietland, or ships and other Vessels, whereupon the Emperours Maiesties Ambassadors and Messengers shall be going to the Emperours Maiestie, to the Pope, into England, or any other Kingdome, by the Kingdome of Swethen, or coming backe againe bee cast away and brought to the Swethish shoare, eyther upon the Salt Sea or the Lake of Lodiga, by tempests or other meanes, such people shall haue free libertie without hinderance to goe from thence with all the goods they can saue or shall get saued, and the Kings Maiesties people shall helpe them to saue their goods. In like manner if it happen with the Kings Maiestie Gustavus Adolphus of Swethen, &c. Subiects, and Merchants Boats, and Merchants Vessels with Commodities, or otherwise be cast away and brought to the Emperours Maiesties shoare upon the Ladigo or Plesco Lake, then these people shall haue free liberty to goe away with all their goods which they can saue or get to be saued without let or hinderance, and the Emperours Maiesties people shall helpe them to saue their goods.

32. Item, It is concluded and agreed on, that our great Lord, &c. shall not ayde or assist against the King Maiesty of Sweden Gustavus Adolphus, and the Crowne of Swethland, the Kingdome of Poland and Lettow, nor his Sonne Ladislaus and the Crowne of Poland, and the Dukedome of Lettow, nor all the Dominions of Poland and Lettow, nor shall helpe him with men or treasure, nor stand for him as one himselfe, nor any other Prince for him shall not practise or seeke any thing against the King of Sweden. Those Lands and Castles which belongeth to the Kingdome of Sweden of old, or those which now the Emperours Maiesty hath yeelded to the Kings Maiesty by this conclusion of peace, he shall not seeke to get them vnder him, or haue possession of them. In like manner the Kings Maiesty of Sweden shall not stand against the Emperours Maiesty &c. to assist the King of Poland and Lettow, and all the Dominions of Poland and Lettow, neyther with men nor treasure, and not to be with him as one. Nether shall the Kings Maiesty by himselfe or other Princes and Gouvernours seeke any practise against the Emperours Maiestie and his Lands and Castles which belong to the Emperour of Russia, hee shall by no meanes seeke to get vnder him or possesse the same. It is also agreed and concluded betweene vs, that those Ambassadors which the Emperours Maiesty shall send to the Kings Maiesty, and the Kings Maiesty to the Emperours Maiesty, for the confirmation of this conclusion of peace, shall haue full authority to assistance against Sigismond King of Poland, and the Crowne of Poland, and the great Dukedome of Lettow in such manner as shall be thought fit and requisite by both the Princes.

33. And for more certaine and firme assurance, that all this here hath bin concluded, and agreed on betweene vs the aboue said Emperours Maiestie, and Kings Maiesties great, ample, and powerfull Ambassadors, by the mediation and intercession of the great Lord King James his Maiesties great Lord, and great Duke M. F. of all Russia, Sam. and by his successours, and hereafter being great Lords, Emperours, and great Dukes; be kept faithfully, firmly, and vnmoueable, and shall be followed in all points, and finished without all fallshood or deceit: and our great Lords, Emperours, and great Dukes, &c. by his commandement, wee his great Commissioners, Ocholuech and Namestincke of Suddall Knefe Dannyll Euanowich Mezetskey. I the Emperours Maiesties Dwarenni and Namestincke of Shatskey Olexsey Euanowich Zuzen. I the Emperours Maiesties Duke, Dobrenia Semenou, haue confirmed this conclusion of peace, with the kissing of the Crosse, and thereunto set our hands and Seales: also the Kings Maiesties priue Chamber, for the more witnessing of the same, that this is also concluded here betweene vs, hath signed with his owne hand and Seale, both these obligations, and a confirmation, which wee the Emperours Maiesties ample Ambassadors, haue given to the Kings Maiesties great Commissioners; and against that we haue taken the like writing of confirmation, from the Kings Maiesties great Ambassadors

dours. Written at Stalbo, in the yeare from the creation of the World 7125, the seven and twentieth day of February.

Having here presented the fruits of his Maiesties mediation betwixt the Muscouite and Sweden: I thought good also to adde this other testimonie of *Beati Pacifici*, in the peaceable fruits of his endeouours betwixt the said King of Sweden, and the King of Denmarke, after bloody warres betwixt them, in which the English voluntaries were so great a part: of whom (if I mistake not) foure thousand serued the Dane, vnder the command of the right honorable the Lord Willoughby. The Articles of agreement betwixt them are these six, concluded January 16: 1613. translated out of the Dutch Copie, Printed at Copenhagen first, and after at Hamburge.

1. That the King of Sweden shall haue againe the Citie of Calmar, with all that belongeth vnto it, excepting Artillery, which shall be restored to the King of Denmarke, or to be sold for his profit.
2. That the King of Denmarke shall haue Elsborch and Orland, with all the forces and strength of Arensborch, in pawne, for the space of twelue yeares ensuing, for the sum of fiftene Ton of Gold; the which sum of money the King of Sweden shall pay vnto the King of Denmarke within the foresaid twelue yeares, at certaine times, in consideration of his charges during the said warres.
3. That the Navigation and passages by Seas and Land to Norway shall be used free without any hinderance of those of Sweden.
4. That Lapland shall be free without giuing of any contribution.
5. That the King of Denmarke shall haue Groneland free, without paying of any contribution vnto the King of Sweden.
6. That the King of Denmarke shall beare the three Crownes without any gaine-saying or contradiction of the King of Sweden (which was the first and principall cause of these foresaid bloody and vnnighbourly warres, and continuall irruptions.) Both Kings subscribing hereto.

CHAP. XI.

A relation of two Russe Cossacks trauailes, out of Siberia to Catay, and other Countries adioyning therevnto. Also a Copie of the last Patent from the Muscouite. A Copie of a Letter written to the Emperour from his Gouvernours out of Siberia.

TO our Lord Emperour and great Duke Michailo Fedrowich of all Russia, your Maiesties Vassals, Euan Koorakin, and Euan Koboolitin, doe knocke their heads, &c. Lord this present 7127. yeere (or 1619) we writ vnto your Maiestie by a Cozack of Tobolsko, Clement Obolskin, that there were come to Tobolsko Ambassadors out of the Dominions of Catay, and from the King of Altine, with the people of Tobolsko. Euanbko Petlin, and Andrusbko Madigene: And with them together doe go to you great Lord Ambassadors, out of the Dominions of Labin, and the Altine Char, from Skingia with presents, the which we dispatcht to your Maiestie, with Burnash Nikonene, the sixt of Iuly, and before them wee dispatcht to your Maiestie Euanbko Petlin and Patoy Kizall, by whom we sent vnto your Maiestie a Letter from Tambur, King of Cathay, and a Copie of the King Altines Letter translated, with a Card and description of the places, which way Euanbko Petlin, & Andrusbko Madigene, passed from the Castle of Tomao, into the Dominions of Catay, as also in what other Dominions they were. The Letter it selfe which came from Altine Char, Labatharshan doth carrie to your Maiestie: but as for the Letter out of Catay, there is none in Tobolsko to translate it.

Ambassador from Catay and from the King of Altine. See sup. pag. 527. & 552.

None able to translate the China Characters.

ple of *Iskirgi, Tubent, Mattara, & black Kolmaks* did not offer your Princely good Ambassadors to come to me, but did rob and spoile them. Now since ten of your Maiesties people are come to me, and I haue sent to you *Ichkmen Kichenga*, to do obeyfance vnto your Maiesty, and see your Princely eyes, whom your Maiestie vouchsafed to doe their obeyfance and see your Princely eyes. And to me you sent of your Grace three Cups of Silver, a Bow, a Sword, two Gunnes, and two Garment Clothes, all which your Princely fauours I haue receiued, and what shall bee behoufull for your Maiesty from hence, I will furnish you withall. As also I am to request your Maiestie in respect the Ambassadors doe passe betweene vs very miserably, and poore, by reason there are now some small warres betwixt vs and the blacke *Kolmaks*, and there are but small forces in *Tobolsko Castle*, and in the Castles of *Tenne, Turko*, and from the *Barhan* people. Now if so be your Maiestie will fauour me, and defend me with these people from *Karakula*; and will bee pleased to proceed on warre on your owne side, and I on mine, that matter will bee done betweene vs, and all good matters continue betwixt vs. And so by your Princely fauour, Ambassadors may continually passe betweene vs. *Iuan Tarchan Varchies* and *Andrej Tarchan Varchies*, did conduct two of your Maiesties Messengers into the Dominions of *Catay*, according to your Maiesties commandement, and they are returned to me againe out of *Catay*. Also (Lord) there is come vnto me the *Tarchan of Labaia*, and I haue sent vnto you with my Presents the said *Tarchan Labar* and *Kitibachij Anchaj*, and with them ten men, and two men of *Sirgos*; in their Letter is written that there is sent vnto your Maiestie three Leopards with their claws, an Irish with his claws, three Lizernes with their claws, a red and a yellow Damaske vpon a gold ground, a piece of Velvet, and an ambling Horse. And I am humbly to request your Maiestie, if it bee your Maiesties fauour to grace mee for your owne honour with a garment of cloth of Gold, and of diuers colours, five Garments of fine Cloth, a Head-piece, a shirt of Male, a Sword, a Bow, twentie Gunnes, a Flaggon of Gold, a Kettle of Silver, and five sorts of Precious Stones, of each one, a Iennet, a Dwarfie, and Workmen to make Guns and Powder, and two thousand pence. Your Maiesties name is growne renowned and famous euery where, therefore I doe reuerence vnto your Maiestie, because many Kings of many Countreyes haue spread abroad the fame of your Maiesties name euery where. And I request that Ambassadors may speedily passe betwixt vs, and now if it be your Maiesties fauour, I desire you to dispatch these my Ambassadors with speed to me backe againe.

Anno 7128. the three and twentieth of September in the Emperours Dominions at *Soldota*, a *Cazacke of Siberia*, called *Enashko Pettlin*, did report, being examined of his Trauels. The last yeere past 7127. hee said that the *Boiaren* and *Voyanod Knez Euan Simonowich Koorockin*, sent him from the Castle of *Tomo*, and his fellow *Andrashko*, to conduct the Kings *Altines* Ambassadors, as also to inquire or search the Kingdomes of *Catay*. They went from the Castle of *Tomo*, about the ninth of May, and trauelled from *Tomo* to *Kirgis*, with much expedition tenne dayes, and in *Kirgis* is a Duke subiect to the Emperours Maiestie, his name is *Nemi*, who gaue them victuals and post. Through this Land of *Kirgis* they went halfe a day, and came to the Dominion of *Mutalla*, to the *Altine* King, who gaue them provisions and post, and dispatched them thence: so they passed through his Land five weekes to the Country of *Sheremugaly*; where reigneth a Queene called *Manchika*, who caused to haue provision and post given them. In this Countrey of *Sheromogula* they trauelled foure dayes, and came into the Dominions of *Catay*, called *Crim*, where is a wall made of stone fiftene fathomes high, alongst the side of which wall they went ten dayes, where they saw pettie Townes and Villages belonging to the Queene *Manchika*; but in those ten dayes they saw no people vpon the wall at all. At the end of these ten dayes, they came to the gate, wherein lye very great Peeces of Ordnance, shooting shot as bigge as a mans head, and in the said gate standeth in watch three thousand men, and they come with their Merchandizes to traffique at the gate. The *Altine* men also come to the gate, with their Horses to sell to the *Catay* men; but are not permitted to come within the walls, except very few at once. Thus their whole trauell from *Tomo* Castle to this gate, was twelue weekes, besides some dayes that they stood still, and from the gate to the great Empire of *Catay* tenne dayes, and came to the Citie or Castle of *Catay* about the beginning of September, and were lodged in the great Embassadors house: and hauing bene there in *Catay* foure dayes, there vsed to come vnto them a Secretary with two hundred men vpon Asles very well apparelled, and did entertayne and feast them with Sacke and other Drinkes made of Grapes, and told them that the Emperour, or King *Tambur* had sent him to aske them wherefore they were come into the Dominions of *Catay*. Whereupon they answered that our great Lord and Emperour had sent them to discouer the Dominions of *Catay*, and see the King thereof; but hee answered them againe, that without presents they could not see the King, and withall gaue them a Letter, which Letter they brought with them to *Tobolsko*, and from thence is sent to the Emperours Maiestie by them. Out of *Catay* they went about the twelfth of October, and came to the Castle of *Tobolsko* about Whitsontyde the same yeere 1619.

A Description of the Empires of Catay and Labin, and other Dominions aswell inhabited, as places of Pasture * called Vlusses and Hords, and of the great River Ob, And other Rivers and Land passages.

From *Kirgis* to the River *Bakanna* is sixe dayes trauell, and from *Bakanna* to *Kinchike*, is nine dayes trauell, from *Kinchike* to the great Lake, (in which Lake Rubies or Saphires grow) is three dayes trauell, and the compasse of that Lake is twelue dayes trauell on horsebacke. There falleth also into the said Lake foure Riuer, to wit from the East, South, West and North, yet the water doth not increase in the Lake, nor decrease. There falleth yet another Riuer into the said Lake, which commeth from betweene the East and the North, and is called *Kitta*, vpon which we went fifteen dayes to the head of it, where we found the King *Altine* in progresse; the way is very stony. And from the King *Altine* to an *Vlusses* five dayes trauell; the *Vlusses* is called *Algunat*, and the Duke in it is called *Tormoshine*; from him to another *Vlusses* five dayes, the *Vlusses* is called *Chikursha*, and the Duke in it is called *Carakula*; from thence to an *Vlusses* five dayes called *Suldussa*, wherein is a King called *Chaksara*, from him to an *Vlusses* called *Bisut*, five dayes, the Duke's name is *Chichim*; from him to an *Vlusses* called *Iglethin*, five dayes, the Duke is *Taschils Chereket*, from him to an *Vlusses* called *Beskuta*, five dayes, the Duke is called *Cherkar*; from him to an *Vlusses* called *Girut*, foure daies without water, the Duke is called *Chichenons*. From him to an *Vlusses* called *Isut* five dayes, the Duke of it is called *Chechen*. From him to an *Vlusses* called *Tulent Vniens* foure dayes, the Duke is called *Tayku, Katin*. From him to the *Vlusses Togorsin* three dayes, there is a King called *Bakshuta*. From thence to an *Vlusses* of the yellow *Mugalls* called *Mugolchin*, wherein is a Dutchesse called *Manchika*, with her Sonne *Ouchai Tairchie*, it is within two dayes journey of the Land of *Mugalla*, a very dangerous passage through the clifffes of the Rockes, which being past they came into the Land of *Mugalla*, wherein are two Castles or Cities built of stone, they are called with them *Bashum*, in one of them is a Duke called *Talai Tashen*; and in the other the Duke is called *Egidon Tashen*; there is also a third Citie in it called *Lobin*, wherein doth gouerne a woman called Dutchesse *Manchika* with her Sonne, the said Dutchesse doth command all the Cities of *Mugalla*, and her command extendeth into *Catay*. If any man be to trauell ouer the borders, and into *Catay*, he must haue a Passe vnder her Seale; which if they haue not, they may not passe through *Catay*. The Land of *Mugalla* is great and large from *Baghar* to the Sea; all the Castles are built with stone foure square; at the corners, Towers, the ground or foundation is layd of rough, grey stone, and are couered with Tiles, the gates with counterwards as our *Russe* gates are, and vpon the gates alarum Bels or Watch-bels of twentie poode weight of metall, the Towers are couered with glazed Tiles; the houses are built with stone foure cornerd high, within their Courts they haue low Vaults, also of stone, the feelings whereof, and of their houses are cunningly painted with all sorts of colours, and very well set forth with flowres for shew. In the said Countrey of *Mugalla* are two Churches of Friers, or Lobaes, built of square stone, and stand betweene the East and the South; vpon the tops of them are made beafts of stone, and within the Church iust against the doore are set three great Idols or Images, in the forme of women of two and an halfe fathome long, gilt all ouer from the heads to the feet, and sit a fathome high from the ground vpon beafts made of stone, which beafts are painted with all manner of braue colours. Those Idols haue each in their hand a Vessell, and there burne before them three tallow Candles; on the right side of them are erected eight Idols more in the forme of men, and on the left side eight Idols more in the forme of Maydens, gilt all ouer from the head to the foote, their armes stretched out after the manner as the *Mugall* people, or Religious men vse to pray. And a little way from these Idols stand two Idols more made naked as a man is in all parts, not to be discerned, euen as though he were aliue, hauing before them Candles burning, as small as a straw, and burne without a flame only in an Ember or Corall.

Their seruice or singing in these Churches is thus. They haue two Trumpets of a great length, about two fathomes and an halfe long, and when they sound on these Trumpets, and beate vpon Drummes, the people fall downe vpon their knees and clap their hands againe, casting their armes asunder, they fall to the ground and lye so halfe an houre. Their Churches are couered with glazed Tiles. As for bread in the Land of *Mugalla* there groweth all manner of Graine, as *Prosse*, or *Russe* Rice, Wheate, Oates, Barley, and all sorts of other Graine in abundance, and their Wheate bread is as white as Snow. As for Fruit in *Mugalla* they haue of all sorts, as Apples, Melons, Arbutles, Pompeons, Cherries, Lemons, Cucumbers, Onions, Garlicke. The men are not faire, but the women exceeding faire, and weare for their Apparell, Veluets and Damasks, the Capes of their Garments both of the men and women hang downe to their shoulders. They distill *Aquanitz* out of all sorts of Graine, without Hops. As for Precious Stones and Gold they haue none, but for Siluer they haue great store out of *Catay*. Their Boots they weare of their

owne fashion. They haue no Horses, only Mules & Asses in abundance; they till and plough their ground with great and small Ploughes, as we doe in *Siberia* at *Tobolsko*. Their *Cutuffs* are in our Language Patriarkes, and both in *Mugalla* and *Catay* are but two *Cutuffs*; the one was about twentie, and the other thirtie yeeres of age. Within the Churches are made for them high places with seats whereupon they sit: the King doth honour them with bowing downe before them. Their *Lobas* are in our Language Friers, which are shorne about twentie yeeres of age, and know no women from their Mothers wombe, they eate flesh continually euery day, and haue both Beards and Mustachoes: their Garments are of Damaske of all sorts and colours, and their Hoods yellow, they say that their Religion and ours are all one, only the *Russe* Monkes are blacke, and theirs white.

Beyond the Land of *Mugalla* are three other Countreyes or Dominions, stretching towards *Bughar*, the one called *Ortus*, the Kings name there is *Enakan*, the Citie is of stone, and the Kingdome rich.

The other is called Dominions of *Talguth*, the Kings name is *Sanelanche*, his Cities are also of stone, and his Kingdome rich.

The third Countrey where the chiefe Citie is, is called *Shar*, and the King thereof is called *Zellezney*, or Iron King, his Kingdome is rich, and not farre from *Bughar*. From this Iron King come Diamonds, and all these three Kingdomes are vnder the South, and on the other side of the blacke *Mugalls* are the yellow *Mugalls*, stretching all alongst the Sea, aswel Townes as walking people, with their Families and Herds.

From the Countrey of *Mugalla*, where the Dutchesse *Manchika* dwelleth, to the Citie of *Shrokalgā* in *Catay*, is two dayes trauell on horsebacke: and the bordering or frontier wals stand vnder the South towards *Bughar*, two moneths trauell, all made of Bricke of fiftene fathome high, whereupon they told about a hundred Towres in sight, on both sides of them, but towards *Bughar*, and towards the Sea, the Towres are not to bee numbred, and euery Towre standeth from another about a flight shot distant. The said wall stretcheth downe towards the Sea foure moneths trauell. The people of *Catay* say, that this wall stretcheth alongst from *Bughar* to the Sea, and the Towres vpon it stand very thicke; it was made, as they say, to be a border betweene *Mugalla* and *Catay*. The Towres vpon it are to the end, that when any enemy appeareth, to kindle fires vpon them, to giue the people warning to come to their places where they are appointed vpon the wall. At the entring without the wall dwell the blacke *Mugalls*; and within is the Countrey and Cities of *Catay*. In the wall to *Catay* are five gates, both low, and straight or narrow, a man cannot ride into them vpright on horse-backe, and except these five gates there is no more in all the wall; there all manner of people passe into the Citie of *Shrokalgā*.

Within the borders or wall is a Citie or Castle of *Catay*, called *Shirocalga*, built of stone, the Gouvernour thereof is called Duke *Shubin*, who is sent thither for a time from *Tambur* King of *Catay*, the Castle is very high walled and artificially built; the Towres are high after the manner of *Mosco* Castle, in the Loope-holes or Windowes are Ordnance planted, as also vpon the Gates or Towres; their Ordnance is but short, they haue also great store of small shot, and the Watchmen euery-where vpon the Gates, Towres, and Wals, well appointed; and asloone as they perceiue the Sunne going downe, the Watch dischargeth their Peeeces of Ordnance thrice, as also at the breake of day in the morning, they shoot out of their Pieces thrice, and doe not open the Castle Gates till the sixt houre of the day. Within the Castle are shops built of stone, and painted cunningly with diuers colours, wherein they haue all manner of Merchandizes, as Veluets, Damaskes, Dorogoes, Taffataes, Cloth of Gold, and Tissue of diuers colours, sundry sorts of Sugars, Cloues, &c. in the Gouvernours house is a strong Watch of *Partisans* and Halberds, and their Drummes made like great Barrells. When the Gouvernour goeth abroad, they carry a Canopie ouer him, and make way before him with Rods, as before our Emperour in *Mosco*.

And from *Shirocalga* to the Citie *Tara* is three dayes trauell: this Citie is large, built of stone, and the circuit of it is two dayes trauell, with many Towres, and foure Gates to come in at, the Markets in the Citie are well and richly accommodated, with Iewels, Merchandizes, Grocerie, or Spices, the Citie well inhabited hauing no place void or waste in it. The houses and shops are built with stone, with streets betweene; the Gouvernours here are called Duke *Bym* and Duke *Iuchake*, heere they haue Post Stages as wee, their Markets haue a very odoriferous smell with Spices.

And from this Citie, to a Citie called *Tayth*, is three dayes iourney, it is built of stone, large, and high walled, & is in compasse two daies trauel about, at the first comming to it are five gates barred and bolted with Iron, very thicke and close, fastned with Nails; the houses and shops, or Ware-houses are all built of stone, wherein are all manner of Merchandizes, Spices, or Grocerie, and precious things more abundant then in the aforesaid Cities, they haue Tauernes or Drinking houses stored with all manner of Drinkes, as *Aquanita*, Meade, and Wines from beyond Seas in abundance, there they haue also their Watch, Ordnance, and Munition in great store; the Gouvernours of this place are one Duke *Taga*, and the other Duke *Zumia*, there wee saw *Sinamon*, *Anniseeds*, *Apples*, *Arbuzes*, *Melons*, *Cucumbers*, *Onions*, *Garlicke*, *Radish*, *Carrets*, *Parse-*

Parfenips, Turnops, Cabbage, Limons, Poppiseeds, Nutmegs, Rice, Almonds, Pepper, Rubarbe, & many other Fruits, which we know not, so that they want nothing whatsoever groweth in the World; the shops are within the Citie, stored of all manner of Commoditie as is said, as also victualling and drinking Houses, stored with all manner of Drinkes, where they haue also Dicers and Whores, as with vs. Their Prisons in the Citie are of stone, for theft they hang the theeues, and for Robberie or Murther they stake the Murtherers, or else head them.

And from *Shirokaga* to a Citie of *Catay*, called *Shirooan* is a dayes iourney: this Citie is built of stone high walled, and large in compasse, it is a dayes trauell, it hath twelue Towres; whereupon, as also on the Citie Gates is planted Ordnance and small shot great store, with a continuall Watch or Guard, night and day, at the first comming are five Gates well furnished with Ordnance and Warlike Munition; and from one Gate to the other through the Citie is halfe a dayes going. The Gouvernour of this place is called Duke *Sanchik*. For Victuals and Merchandizes, here is more then in the Cities mentioned, all their shops very full, and the Citie so populous, that one can hardly passe the streets for the throng of people. The Ambassadors Houses are also faire built of stone, their Wels couered with Brasse, so that this Citie is adorned more with precious things then the former mentioned, and much more populous.

Now from the Citie of *Tayth*, to a Citie called *White Castle*, is two dayes trauell: this Citie is built of white stone, and thereof hath his name, it is high walled and large, being in compasse or circuit three dayes trauell, at the first entry it hath three Gates vnder one Towre, the Gates are high and wide with strong Iron barres: and the Gates fastened with Iron Nayles whited with Tinne, it hath great Ordnance in the Gates and Towres: some Peeeces carrying shot of two Poode waight, the shops within the Citie reach from Gate to Gate, and betweene them are streets paved with stone, all their shops and houses are built of stone before their shops. They haue grates painted cunningly, with all manner of colours, flowres and such like, and vpon the shops are the houses painted cunningly with Pictures and flowres in diuers colours, and the painting within is vpon Pastboard adorned with Damaske and Veluets; heere is more abundance of Riches and Commodities then in any of the Cities afore mentioned. The Gouvernours names here were Duke *Toyan*, and Duke *Sulan*.

From this white Citie, or Castle, to the greatest Citie of all *Cataya*, called *Catay*, is two dayes journey, where the King himselfe dwelleth, it is a very great Citie, built of white stone foure square, and in compasse it is foure dayes iourney, vpon every corner thereof are very great Towres high built, and white, and amongst the wall are very faire and high Towres, likewise white and intermingled with Blue or Azure, vpon the Gates, Wall, and Towres, the Loop-holes or Windowes are well furnished with Ordnance, and a strong Watch. In the midst of this white Citie standeth a Castle built of *Magnet*, or Load-stone, wherein the King himselfe dwelleth, called *Tambur*; this Castle standeth so in the midst of this Citie, that euery way you haue halfe a dayes going to it from the Gates, through the streets which hath stone shoppes on both sides with all manner of Merchandizes; vpon their shops they haue their houses built of stone, cunningly painted more then the former Cities. The Castle of *Magnet* is curiously set forth with all manner of artificiall and precious deuices, in the midst whereof standeth the Kings Palace, the top whereof is all gilt ouer with Gold. And they would not admit vs. to come before their King without Presents, saying, it was not the manner of *Catay*, to come before their King without some Present, and though (said they) your white Emperour had but sent with his first Ambassadors to our King some thing of no great value, our King would haue sent him many precious things, and dismissed you his Ambassadors honourably, and haue sent his Ambassadors with you: but now hee only endeth his Letter to your Emperour. The Citie of *Catay*, where the King dwelleth, is built vpon an euen plaine ground, and is incompassed round about with a Riuer called *Tonga*, which falleth into the blacke Sea, which is from the Citie *Catay* seven dayes trauell, so that there come no ships neerer the Citie *Catay*, then seven dayes trauell off, but all things are transported in small Vessels and ship-boats. The Merchandizes the King doth send into all parts of his Dominions of *Catay*, and from thence are carried ouer the borders, into the Land of *Mugalla*, to the King *Altine*, to the blacke *Kollmages*, to the Iron King, into *Boghar* and other Dominions, their Patriarkes and Friers, trauell with the Commodities, as Veluets, Sattens, Damasques, Siluer, Leopard Skinnes, Turkeffes, and blacke Zenders, for which they buy Horses, and bring them into *Catay*, for in *Catay* are but few horses, only Mules and Asses, and Cloth they haue none, their Horses and Siluer goeth into strange Countreyes, or as they say, *Nemisy*, the Siluer is made in Bricks, which they call *Krisy*, valued each *Krisy* at fiftie two Rubles, their Apparell they weare with long broad hanging sleeues, like the Gentlewomens Summer-coats or *Lettinks* in *Russia*, the people are very faire but not warlike, timorous & most their endeavour is in great and rich traffick. They told vs that not long before our comming, the people of *Mugalla* had taken two Castles from them by deceit, also

shortnesse of their iourney admits not. Perhaps this chiefe Citie was but the chiefe of that Prouince where the Vice-roy resided, and they were willing to make the most of their trauels *Russica* side. Yet the neerenesse of the Sea, there also causeth scruple. I suppose rather that these *Russes* entred *China* but a little way, and receiued the Vice-royes Letter only (there obserued with Regall Rites) and had much by Relation, of that little which they tell. How euer I haue here offered this to thy view at more leisure to vse thy more iudgement.

Yuu a

they

Shirooan

White Castle

Catay greatest Citie of *Catay*. If *Catay* be the same with *China* (as before in *Goes* and the *Iesuites* is obserued) many difficulties arise. But this *Russian* Relation and that of *Chaggy Memet* seeme to agree to place some *Catay*, North from *China*, if this did not speake of the wall. The *Tartar* names so differ from those of the *Portugalls*, that it is hard to reconcile them. And the *Iesuits* make foure moneths trauell from the wall to *Peking*, which is here but a few daies: except we say the *Russes* entred the wall at the North East part of it: which the

Merchants.

Kartalla River.
Ob.

they told vs that their King hath a stone which lighteth as the Sunne both day and night, called in their Language *Sarra*, and in our Tongue *Iachant*, or *Rubie*; another stone they say hee hath, which driueth away water from it, it is also called a *Rubie*. There come to them Strangers, or *Nemtsy*, every yeere, with all manner of Merchandizes, and barter for Deere Skinnies, and *Loshids*, *Sables*, *Beuers*, *Veluets*, *Taffataes*, and *Zendews*, or *Calico*; these strangers, they say, come to them out of the blacke Sea, from the East and the South, also, they say, there is a Riuer called *Kartalla*: which falleth into the great Riuer *Ob*; but they know neyther the head, nor the fall of it, they imagine it commeth out of the blacke Sea, and falleth into it againe, vpon this Riuer dwell many people with walking Herds.

For a triple testimony of Sir *Iohn Merikes* honourable courtesie, I haue added this succeeding Patent, which howsoeuer in some things it concurre with the former of *Boris* and *Demetrius*; Yet those being obscurely translated or written, this may illustrate them; and it also presenteth both larger Priuiledges, the Patriarkes name ioyned with the Emperours, and the Golden Seale.

WE the great Lord Emperour and great Duke Michael Pheodorowich of all Russia, sole Commander of Volodemir, Moisco, and Nouogrod, Emperour of Cazan, Emperour of Astracan, Emperour of Siberia, Lord of Plesco, and great Duke of Smolensky, Twensky, Vgorli-ky, Plermesky, Vatsky, Bolgorsky, and others; Lord and great Duke of Nouogrod, in the lower Countreyes, Cheringosky, Rahansky, Rostouskey, Yaraslauskyy, Belozersky, Vdorskey, Obdorsky, Condinsky, and of all the Northerne parts Commander, and Lord ouer the Country of Iuersky, and Caberdynland, Cherkaskey, and of the Dukedomes of Igorskey, and of many other Kingdomes, Lord and Conquerour. Together with the great Lord Philleret Neketich, the holy Patriarke and Head of the Reuerend Clergie of the Imperiall Citie of Mosco, and of all Russia by the flesh our naturall Father, and by the power of the Holy Ghost our Spirituall Pastor and Ghostly Father.

Whereas there was sent vnto us the great Lord Emperour, and great Duke Michael Pheodorowich of all Russia, and to our Father, the great Lord, the holy Patriarke of Mosco, and of all Russia, From our louing Brother James, by the grace of God, King of England, Scotland, France, and Ireland; and of many others his Maiesties Ambassadour Sir Iohn Merike, Knight and Gentleman of his Maiesties Priue Chamber, vpon both our Princely Affaires.

The said Sir Iohn Merike, in the name of our said louing Brother King James requested our Imperiall Maiestie, and our Father the great Lord, the holy Patriarke, to bee pleased graciously to fauour the English Merchants, to grant them leaue to come with their skippes vnto our Port and Hauens of Archangell, with all kind of Commodities, and freely to traffique from the Sea side, to our Imperiall Citie of Mosco, and to our Patrimonie of great Nouogrod and Plesco, and vnto all other our Cities, Townes, and Countreyes of our Empire, with all sorts of Commodities, without paying of Custome in as ample manner as formerly hath bene granted to the English Merchants, and that our Imperiall Maiestie, together with our deere Father the holy Patriarke, would be pleased to grant a new our gracious Priuiledges vnder our Princely Seale, according as our Predecessors Emperours, and great Dukes of all Russia, haue heretofore granted vnto them.

We therefore the great Lord Emperour, and great Duke Michael Pheodorowich of all Russia, sole Commander; together with our deere Father the holy Patriarke of Mosco, and of all Russia; for the loue we beare to our most louing Brother the great Lord King James, with whom wee are willing and desirous euer to remayne in the strongest bonds of brotherly loue and friendship, haue graciously granted to his Kingly Maiesties Subject the English Merchants; Sir Thomas Smith Knight, Sir Iohn Merike Knight, Sir Richard Smith Knight, Sir William Russell Knight, Sir George Bowles Knight, Hugh Hamerley Alderman, Ralph Freeman, Richard Wytch, Morris Abbot, Robert Bateman, William Stone, Rowland Healing, Iob Hanby, Richard Ironside, Edward James, Iohn Callen, Benjamin Deicrow, Fabyan Smith, and their fellowes free leaue to come with their skippes into our Kingdomes, into our Countreyes of Dweena, vnto the Port of Archangell, and from thence to our Imperiall Citie of Mosco, and of Nouogrod the Great, and vnto Plesco, and into all other the Cities of our Empire, to trade and traffique with all kind of Merchandizes, free of all Customes, as well the great Customes as Tole: vnlading of Vessels or Boats, passages through any place by water or Land entries, Head-money, Bridge-money, Ferryings, or any manner of Customes, or Duties whatsoever can be named.

The English Merchants being thus licensed to trade in our Kingdomes free of all customes for their owne commodities, shall neither colour nor sell strangers wares, as their owne; neither shall our people sell for them any of their goods, nor yet shall they keepe any of our people vnder their protection: and into what Cities the English Merchants themselves, or their Factors, or Seruants shall come with their goods, it shall be lawfull for them freely to traffique and sell their owne commodities, in barter, or otherwise against Commodities of our Countrey.

And whensoever the said Merchants shall come into our Patrimony of great Nouogrod and Plesco, or into any other the Cities of our Empire; wee straightly command our Nobles in generall, and all o-

ther

ther our authorized people, that according to this our Imperiall letters of priuiledge, they suffer the fore-
said Merchants to passe without all manner of hindrance or lets, & without taking any manner of custome
of them for themselves, or for their goods; and into what place soener they shall come, or passe with their
Merchandize, and shall not desire to buy nor sell with our people; those our authorized people shall free-
ly let them passe without taking any manner of customes, according to this our Imperiall gracious
priuiledge.

And wherefoener the English Merchants shall happen to sell or barter any of their commodities with
our Merchants, they are to barter and sell them in their owne house by grosse sale, and not by retale, in
small measure and weight, as by the yard, pound and ounce; that is to say, their Cloath by whole Cloathes
and Packs: Damaske and Veluets by the Peece; and all other wares that are to be sold by weight accor-
dingly. Also the Wines by the great, viz. by the Butt, the Pipe, the Hogthead, and by the Anne, and not by
small measure, as Veders or Pots.

And the said English Merchants are to sell and barter their owne Commodities themselves in our
Empire. But the Russe Merchants shall neither sell nor barter for them, neither shall the English
carry or transport to or from any place, any Wares belonging to other Strangers, by way of their
owne goods.

And if the said English Merchants shall be desirous to sell any of their commodities, at Colmogro,
or upon the River of Dwina, or at Vologda or Yereclaue, or other the Townes and Cities of our Empire,
they may sell at their pleasures; as likewise at their owne choise and pleasure, they may transport their
goods into all or any part of our Dominions, and hire Carriers, Boats, and men at such price as they them-
selves can agree.

Also when the English Merchants themselves, or any of their Factors, doe trauell out of our Do-
minions into their owne, or other forraigne Kingdomes, and that wee shall be pleased to deliuer them of
our Treasure, they shall take it with them, and sell, and barter it for such commodities as wee shall thinke
fit and necessarie for our use, and Treasury: our Gouvernours, and all other our Officers, in all our Ci-
ties and Dominions, shall suffer them and their people freely to passe without taking any custome of them:
but when the English Merchants haue done their trafficke, and are going from our Citie of Mosco, they
shall giue notice thereof unto the Chancellour of our Office of Ambassadors.

Further, when any English Merchants shall come with their Shippes and Vessels by Sea, into our Do-
minions, and that any misfortune happen unto them by shipwracke on any of our shoares or coasts, our Go-
uernours and Officers shall cause search to be made for their goods, and shall aide and helpe them faith-
fully therein, and the goods gathered together shall be restored to the English Merchants, who shall be
at that time in our Kingdomes; and if there shall be at that time none of the English Merchants, or
people in our Kingdomes, the said goods shall be taken and laid up in safety, and deliuered
without delay to the English Merchants when they shall come into our Countrey, and shall challenge
the same.

Further, of our gracious goodnesse, we gave free leaue to the English Merchants, and Company, to
keepe the house in Mosco by Saint Maxtime behinde the Market place, and shall remaine after their
old manner, and therein shall haue one housekeeper a Russe, or else one of their owne Seruants, but no
other Russe people: the houses which the English Merchants haue in other places of our Dominions, as
at Yereclaue, Vologda, Collm. and at Saint Michael Archangell, they shall keepe and use at their
pleasure, according to our former gracious fauour, without paying any duetie, rent, taxe, or any man-
ner of custome whatsoener: neither shall the people of the said Townes take any thing of them, or theirs,
for any duetie whatsoener belonging to their houses: and the said English Merchants shall enioy their
said houses peaceably to themselves, without the annoyance of any Stranger or other to lodge in them, whe-
ther in time of their being there, or in their absence.

And in their houses at Yereclaue, Vologda, Collmogro, and Archangell, they shall likewise haue a
housekeeper of their owne people, or of our Subiects, a man or two of the meaner sort; but so, that those
our people be no merchants.

Their Housekeeper being a Russe shall not undertake to meddle or sell any of their wares with-
out themselves be present, and they the English Merchants, by vertue of this our gracious Letters
of priuiledge, shall lay their wares and commodities in their owne houses, and sell them to whom
they please.

And it shall be lawfull for the said Merchants, when they shall arrine at our Sea Port, to lade and
unlade their Merchandizes, as in times past, at their pleasures: and when they lade or unlade their
Shippes, it shall be lawfull for them to hire any of our Subiects to helpe them, and shall haue leaue to
carry their goods to and fro with their owne Vessels, and house them in their owne Ware-houses: onely
they shall giue a note vnder their hand to our Gouvernours, Customers, or smorne men, what goods they
bring in, and Shippe out; Whereby it may be knowne what goods cometh in, and goeth out of our King-
domes: but in no wise our Officers shall open or unpacke any of their Wares or Merchandize in any place
wherefoener.

Also when the English Merchants shall Shippe or transport any of their Countrie Commodities from
Saint Michael Archangell, to our royall Citie of Mosco, or Russe Commodities into their owne Coun-
trie: our authorized Officers and Customers, by vertue of this our Imperiall Letters of priuiledge,
shall

shall suffer them to passe with their goods in and out, without doing them any manner of hindrance.

And whensoever any of the said English Merchants or Factors shall haue occasion to send ouerland, out of our Dominions, any of their people, or Seruants, into their owne Countreie ouerland, they shall freely passe by this our speciall command, onely they are to take a passe letter from our Chancellour of the Office of Embassie.

And whosoener in any of our Cities, shall haue any matter against the English Merchants by way of contention, we command that none of our Gouvernours, nor other of our Officers, doe iudge the English Merchants, their Factors or people: neither shall they send Officers for them, except for matter of murder or theft, and that also not to be done, but by manifest token thereof: but the English Merchants, their Factors and people, shall onely haue triall, and be iudged in our Imperiall Citie of Mosco, by vertue of this our gracious Letters of priuiledge, before our Chancellour in this Office of Embassie, and in no other place or Towne, and he to heare their causes, and to giue iustice betwene both parties, according to equitie and right: and where the truth cannot be found out by Law, it shall be referred to oath and lot, and on whom soener the lot falls, to him shall the right be adiudged.

And if any of the English Merchants, in any of our Cities within our Kingdomes, doe complaine of any wrong offered them by our people, for debts growing by trade or otherwise: we command our Gouvernours, and all other our authorisid people, that they presently minister true iustice unto them. And for any wrong or other matter of controuersie that the English Merchant shall haue against any of our Subiects, our Gouvernours and other our authorisid people upon their complaint for all controuersies (matters of debt excepted) shall giue our Subiects so offending upon suretie, setting them time to appeare at Mosco, to answere the same with the English Merchants, face to face, before our Chancellour, in the Office of Embassie: and in these matters our Chancellour shall truly examine the businesse, and minister true iustice: and what by examination cannot be found, shall be referred, as before, to oath and lot: the Iudges and Iustices through our Dominions shall take no kinde of duetie of the English Merchants for their matters of Law.

We will and command, that these our Imperiall gracious Letters of priuiledge, be strictly obserued in all points in all parts of our Dominions, and by all our Subiects, Gouvernours, Secretaries, and other Officers, without disobeying in any thing.

And whosoener shall not obey this our Princely and gracious Letters of priuiledge, but shall offer wrong to the English Merchants, those our Subiects shall be with vs in our high displeasure.

These our gracious Letters of priuiledges, are sealed with our Imperiall Seale of Gold, in our Princely Pallace of our Imperiall Citie of Mosco, in the yeare from the Worlds creation 7129. in the moneth of May, the eleuenth day.

Subscribed by our Imperiall Maiesties Chancellour of our Office of Embassie, and our priuie Chancellour Euan Corbatouefin Gramotin.

Sealed with
the Golden
Seale.

But it is now high time to leane Russia, and all that Barbarous shoare, of Samotees and Tartars: onely we will borrow helpe of some Barbarians to shippe vs thence to Sea. And although Finch, Gourdon, and others haue in the former Booke inserted so great light: yet seeing Master Marsh hath entered other guides, we will take Sea by Ob, and thence set forth on further discoueries.

CHAP. XII.

Notes concerning the discouery of the Riuer of Ob, taken out of a Roll, written in the Russian tongue, which was attempted by the meanes of ANTONIE

MARSH, a chiefe Factor for the Moscouie Company of England, 1584. with other notes of the North-east.

First he wrote a Letter from the Citie of Mosco, in the yeare 7092. after the Russe accompt, which after our accompt was in the yeare 1584. vnto foure Russes that vied to trade from Colmogro to Pechora, and other parts Eastward: whose answer was:

By writings receiued from thee, as also by reports, wee vnderstand thou wouldst haue vs seeke out the mouth of the Riuer Ob; which we are content to doe; and thou must giue therefore fiftie rubbles: it is requisite to goe to seeke it out with two Chimaes, or companies; and each Cochima must haue ten men: and wee must goe by the Riuer Pechora vpwards in the Spring, by the side of the Ice, as the Ice swimmeth in the Riuer, which will aske a fortnights time; and then we must fall into Onson Riuer, and fall downe with the streame before we come to Ob, a day and a night in the Spring. Then it will hold vs eight dayes to swimme idowne the Riuer Ob, before we come to the mouth: therefore send vs a man that can

How to finde
out Ob from
Pechora
Onson Riuer.

can write; and assure thy selfe the mouth of *Ob* is deepe. On the *Russe* side of *Ob* sojourne *Samoeds*, called *Ugorskai* & *Sibierskie*, *Samoeds*; and on the other side dwel another kinde of *Samoeds*, called *Monganei*, or *Mongaisky*, *Samoeds*. We must passe by five Castles that stand on the Riuer of *Ob*. The name of the first is *Tesuo Gorodok*, which standeth vpon the mouth of the Riuer *Paddou*. The second small Castle is *Nosoro-gorodok*, and it standeth hard vpon the side of *Ob*. The third is called *Necheionr-goskoy*. The fourth is *Charedmada*. The fift is *Nadesneaa*, that is to say, *The Castle of comfort, or trust*; and it standeth vpon the Riuer *Ob*, lowermost of all the former Castles toward the Sea.

Vgoriskai and Sibierskie.

Heretofore your people haue bin at the said Riuer of *Ob*s mouth with a Ship, and there was made shipwracke, and your people were slaine by the *Samoeds*, which thought that they came to rob and subdue them. The Trees that grow by the Riuer are Firres, and a kinde of white, soft and light Firre, which we call *Yell*. The bankes on both sides are very high, and the water not swift, but still and deepe. Fish there are in it as Sturgeons, and Cheri, and Pidle, and Nelma, a dainty fish like white Salmons, and Moucoun, and Sigi, and Sterlidi: but Salmons there are none. Not farre distant from the maine, at the mouth of *Ob*, there is an *Island*, whereon resort many wilde beasts, as white Beares, and the Morfes, and such like. And the *Samoeds* tell vs, that in the winter season, they oftentimes finde there *Morfes* teeth. If you would haue vs travell to seeke out the mouth of *Ob* by Sea, we must goe by the Isles of *Vaygats*, and *Noua Zembla*, and by the Land of *Matpheone*, that is, by *Matthewes Land*. And assure thy selfe that from *Vaygats*, to the mouth of *Ob*, by Sea, is but a small matter to sayle. Written at *Pechora*, the yeare 7092. the twenty one of February.

A shipwracke at the mouth of *Ob*.

An *Island* neere the mouth of *Ob*.

The way to discover *Ob* by Sea
Matpheone or Matthewes land
After our stile 1584.

Master MARSH also learned these distances of places and Ports, from Caninos to Ob by Sea.

FROM *Caninos* to the Bay of *Medemsky* (which is somewhat to the East of the Riuer *Pechora*) is seuen dayes sayling. The Bay of *Medemsky* is ouer a day and a halfe sayling. From *Medemsky* *Sanorost* to *Carareca*, is fixe dayes sayling. From *Carska* Bay to the farthest side of the Riuer *Ob*, is nine dayes sayling. The Bay of *Carska* is from side to side, a day and a nights sayling.

Caninos.

Medemsky.
Carareca.
Carska.
Ob.

He learned another way by *Noua Zembla* and *Matfuschan Yar* to *Ob*, more North-eastward. From *Caninos* to the *Island* of *Colgoiene*, is a day & a nights sayling. From *Colgoiene* to *Noua Zembla* are two dayes sayling. There is a great *Osera* or Lake vpon *Noua Zembla*, where wonderfull store of Geese and Swannes doe breede, and in moulting time cast their feathers, which is about Saint *Peters* day: and the *Russes* of *Colmogro* repaire thither yearly, and our *English* men venture thither with them seuerall shares in money: they bring home great quantitie of Doune-Feathers, dried Swannes, and Geese, Beares skinned, and Fish, &c. From *Naromske* *Reca* or Riuer to *Matfuschan Yar*, is fixe dayes sayling. From *Matfuschan Yar* to the *Peronologli* *Teupla*, that is to say, To the warme passage ouer-land, compassing or sayling round about the Sands, is thirteene dayes sayling: And there is vpon the Sands at a full Sea, seuen fathomes water, and two fathomes at a low water. The occasion of this highing of the water, is the falling into the Sea of the three Riuers, and the meeting of the two Seas, to wit, *The North Sea*, and *The East Sea*, which make both high water and great Sands. And you must beware that you come not with your Shippe neere vnto the *Island* by the Riuer *Ob*. From *Matfuschan Yar* to this *Island*, is five dayes sayling. *Matfuschan Yar* is in some parts fortie Versts ouer, and in some parts not past six Versts ouer.

The aforesaid *Anthonie Marsh* sent one *Bodan* his man, a *Russe* borne, with the aforesaid foure *Russes*, and a yong youth, a *Samoed*, which was likewise his Seruant, vpon the discouery of the Riuer of *Ob*, by Land, through the Countrey of the *Samoeds*, with good store of commodities to trafficke with the people. And these his Seruants made a rich Voyage of it, and had bartered with the people about the Riuer of *Ob*, for the valew of a thousand rubles in fables, and other fine Fures. But the Emperour hauing intelligence of this Discouery, and of the way that *Bodan* returned home by, by one of his chiefe Officers lay in waite for him, apprehended him, and tooke from him the aforesaid thousand Markes worth of Sables, and other Merchandises, and deliuered them into the Emperours Treasurie, being sealed vp, and brought the poore fellow *Bodan* to the Citie of *Mosco*, where he was committed to prison, and whipped, and there detained a long while after, but in the end released. Moreover, the Emperours Officers asked *Anthonie Marsh*, how he durst presume to deale in any such enterprife: To whom he answered, that by the priuiledges granted to the *English* Nation, no part of the Emperours Dominions were exempted from the *English* to trade and trafficke in: with which answer, they were not so satisfied, but that they gaue him a great checke, and forfeited all the aforesaid thousand Markes worth of goods, charging him not to proceede any further in that action: whereby it seemeth they

Anthonie Marsh sent two of his men vpon the discouery of *Ob* by land with foure *Russes*.
Bodan Master *Marsh* his man brought to *Mosco*.

Russian ielousie of discouery

they are very iealous that any Christian should grow acquainted with their Neighbours that border to the North-east of their Dominions, for that there is some great secret that way, which they would referue to themselves onely. Thus much I vnderstood by Master Christopher Holmes.

The report of Master FRANCIS CHERRY a Moscouie Merchant, and
Master THOMAS LYNDES touching a warme Sea to the
South-east of the Riuer Ob, and a Note of
FRANCIS GAULLE.

A warme Sea
beyond Ob.

Master Thomas
Linde.

After Francis Cherry, one of the chiefe Merchants of the Moscomy Companie, which was the Emperour Iuan Basiluich his Interpreter, and hath trauielled in person into Permia farre to the East in Russia, saith, That he hath eaten of the Sturgeon that came out of the Riuer of Ob. And that in those parts it is a common receiued speech of the Russes that are great traual- lers; that beyond Ob to the South-east there is a warme Sea. Which they expresse in these words in the Russe tongue; *Za Obyreca moria Teupla*, that is to say, *Beyond the Riuer Ob is a warme Sea*. Furthermore, Master Thomas Lynde an honest and discreet English Merchant, which hath likewise liued many yeeres in those parts of Moscomy, saith, That this Sea beyond Ob, is by the report of the Russes, that are traualers, so warme, that all kinde of Sea fowles liue there as well in the Winter as in the Summer, which report argueth, that this Sea pierfeth farre into the South parts of Asia.

Third Volume
of English voy-
ages, pag 446.

Francis Gaulle that passed the Ocean betweene Japan and Nona Hispania, in the Latitude of 37. degrees and a halfe, writeth thus. Prouing a great Sea to come from the North-east parts of Tartarie; running thus East and East and by North about three hundred leagues from Japan, we found a very hollow water, with the streame running out of the North and North-west, with a full and very broad Sea, without any trouble or hinderance in the way that we past. And what winde soeuer blue, the Sea continued all in one sort with the same hollow water and streame, vn- till we had passed seuen hundred leagues. About two hundred leagues from the Coast of New Spaine we began to lose the said hollow Sea, whereby I perswade my selfe that there you shall finde a Channell or strait passage betweene the firme Land of New Spaine and the Countrie of Asia and Tartaria. We found all this way Whales, Tunnies, Bonitos, which are fishes that keepe in Channels, Straits, and running Waters, there to disperse their seede, which further con- firmeth me in that opinion.

See of these
voyages. Hak.
Tom. I.

But seeing thus we are shipped from Russia, and haue againe taken Sea, that which Ice permitted not to Stephen Burrough, Pet and Iackman, nor others, English and Dutch, which haue attempted that North-east passage; and that which Master Bassin said to me, that if he might haue employment, he would aduenture to discover from the Coast of China and Japan on the North of Asia hitheward; all this shall be suddenly pernious to our swifter and vnstayable thoughts, to set vs in a new discovery by Danish and English assistance for a North-west passage, so often, not so fortunately attempted, as by Reason it seemeth probable and almost certaine, especially that way where Sir Th. Button and Nelson left. But we will discover these Discoveries more methodically and historically to you, that you may see the English ancient right, as I may say, to those parts of the new World.

CHAP. XIII.

Discoveries made by English-men to the North-west: Voyages of Sir SEBAS-

TIAN CABOT, Master THORNE, and other Ancients:
and of Master WHEYMOUTH.

WE haue before giuen some light of the North-west, in Hudsons and other mens Voyages. The desire of Riches in some, of Knowledge in others, hath long whet- ted mens industries, to finde out a more compendious way to the East Indies, by a shorter cut then the vsuall passage, which in going to the places of principall Trade there, and the returning thence by enforced compassings, is made no lesse a Voyage for time, cost, danger and labour, then the immediate compassing of the whole Globe, as in Master Candishes circumnauigation (not to mention others) is euident. But if either by the North-east, or North-west, or North, a passage be open, the sight of the Globe (the Image of the site of the World) easily sheweth with how much ease, in how little time and expence the same might be effected, the large Lines or Meridians vnder the Line containyng fixe hundred miles,

con-

contracting themselves proportionably as they grow neerer the Pole, where that vast Line and Circumference it selfe becomes (as the whole Earth to Heauen, and all earthly things to heauenly) no Line any more, but a Point, but Nothing, but Vanitie. Hence such laborious searches from *Columbus* his first discoverie (that also occasioned by a conceit of finding the East by the West, whereupon he named *Hispaniola* *Ophir*, thinking he had then arrived at the East Indies) especially the *English*, seated commodiously for that discoverie, and to reigne ouer the Northerne and Westerne Ocean, haue herein beene more then industrious.

Doctor *Powell* in his historie of *Wales* saith, that *Madoc* sonne of *Owen* *Gwyneth* left the Land in contention betwixt his brethren, and prepared certaine ships with men and munition, and sought adventures by Sea, sayling West, and leauing the Coast of *Ireland* so farre North, that hee came vnto a Land unknowne, where he saw many strange things. There hee left many of his people An. 1170. and returned for more of his owne Nation and Friends to inhabite that large Countrey, going the second time thither with ten sailes. This westerne Land is like to be some part of the West Indies, though the vniuersall sauagenes of those parts make it questionable where. But he which seeth how some of our *English* in small time haue growne wilde in *Ireland*, and become in language and qualities *Irish*, few of whom doe in exchange become ciuized and *English* (euen as healthfull men are easier infected in a contagious aire, then sicke men recovered in that which is wholesome and sound) will not wonder that in so many Ages the halfe ciuized *Welsh*, amongst *Barbarians*, without succession of Priests and entercourse of these parts, might wholly put on fentie. *Meredith* ap *Rise* a *Welsh* Poet, which liued before *Columbus* had begun his discoverie, hath these verses.

Madoc wyf, myedic wedd, lawn Genan, Owyn Gwynedd
Ni finnum dir, fy enaid oedd Na da Mawr, ond y moroedd. that is.

Madoc I am the sonne of *Owen* *Gwynedd*, With stature large and comely grace adorned,
No lands at home nor store of wealth me please, My mind was whole to search the Ocean seas.

Columbus also sent his brother *Bartholomew* to King *Henrie* the seuenth, to make offer of his seruice in the New-Worlds discoverie, which fell by the way into the hands of *Pirats*, whereupon pouertie assaulted him with sicknesse in a forraine Countrey, so that hee was forced to get somewhat about him by making of Maps: one whereof had this more ancient then elegant inscription.

*D. F. Colon de vis-
ta patris Chri-
stop. Col. c. 13.*

*Ianna cui patria est, nomen cui Bartholomaeus
Columbus de Terra Rubra, opus edidit istud
Londonijs An. Domini 1480. atq; insuper anno
Octauo decimae, die cum tertia mensis
Februarij. Landes Christo cantentur abunde.*

Whose Countrey *Genna* is, whose name *Bartholomew*
Colon de Terra Rubra, this worke set forth new
At London, A thousand foure hundred eightie
Februarie thirteenth, sing praise to *Christ* on height.

One of these Maps hee presented to King *Henrie* with the said offer, who cheerfully accepted the same, and sent to call his brother into *England*, who before he could effect it, was imployed by the Kings of *Castile*.

Columbus his fortunes awakned others industrie, amongst the rest *Iohn Cabota* a *Venetian*, and his three sonnes *Lewis*, *Sebastian*, and *Sancius*, who obtayned a Patent of King *Henrie* the seuenth for discoverie with five ships with *English* Masters, Mariners, and Colours also, the same to erect in whatsoever Lands vnkowne before to Christians, to hold the same to them and their Heires as Vassals and Lieutenants to the Crowne of *England*, paying the fifth part of their gaine at *Bristol*, &c.

See Hak. tom. 3.
pag. 5.

In the yeere 1497. *Iohn Cabot* a *Venetian*, and *Sebastian* his sonne (these are the wordes of the great Map in his Maiesties priue Gallerie, of which *Sebastian Cabot* is often therein called the Author, and his Picture is therein drawne, with this Title, *Effigies Sebast. Caboti Angli, filij Io. Ca. Venetiani, Militis Aurati, &c.*) discovered that Land which no man before had attempted Jun. 24. about five in the morning. This Land he called *Prima vista* (primum visam, or first seene) because that was first descried from Sea. That lland which lyeth out before the land, he called *Saint Iohns* lland, because on that feast day it was discovered. The Inhabitants weare beasts skins and as much esteeme them, as we doe garments most precious. In their warres, they vse Bowes, Arrowes, Pike, Darts, Clubs of wood and Slings. The soile is barren in some places and yeeldeth little fruit, but it is full of white Beares and Stags of vnusnall greatnesse. It aboundeth with Fishes and those great, as Seales and Salmones; Soles also an elle long. Especially there is great store of those fishes which they call commonly *Bacallaos*. There breed also Hawkes as blacke as Ravens, Partridges and blacke Eagles.

This Map,
some say, was
taken out of
Sir Seb. Cabots
Map by Clem.
Adams 1549.

Thus wee see New-found Land discovered by *English* Ships, Mariners and iurisdiction. Sir *Sebastian Cabot*, for his *English* breeding, conditions, affection and aduancement, termed an *English* man, thus reported of this voyage; That vpon occasion of the admiration of *Columbus* his voyage into the East, where Spices grew, by the West, so rife then in the Court of King *Henrie* the seuenth, there arose in his heart a great desire to attempt some notable thing. And vnder-

W. Purchas.

Thorne and Eliot
first finders of
America.

standing by the Sphere (saith he) that if I should saile by the North-west, I should by a shorter Tract come into *India*; I thereupon caused the King to be aduertised of my deuise; who immediately commanded two Caruels to bee furnished with all things appertayning to the Voyage; which was, as farre as I remember, in the yeere 1496. in the beginning of Summer. I beganne therefore to saile toward the North-west, not thinking to find any other Land then that of *Cathay*, and from thence to turne toward *India*. But after certaine dayes I found that the Land turned toward the North, which was to me a great displeasure. Neuerthelesse, sayling along by the Coast to see if I could finde any Gulfe that turned, I found the Land still continent to the 56. degree vnder our Pole. And seeing that there the Coast turned toward the East, despayning to finde the passage, I turned backe againe, and sayled downe by the Coast of that Land toward the Equinoctiall (euer with intent to finde the said passage to *India*) and came to that part of this firme land, which is now called *Florida*; where my victuals sayling I returned towards *England*; the tumults and preparations of warres against *Scotland* caused that then no more consideration was had to this voyage. Whereupon I went into *Spaine*, &c. By the King and Queene there he was set forth and discovered the Riuer of *Plate*, and sayled into it more then fixe score-leagues. After this he made many other voyages, &c. Sir *Seb. Cabot* was after by King *Edward* the sixth constituted grand Pilot of *England* with the annuall stipend of one hundred and sixtie six pounds thirteene shillings and foure pence, and was Author of the *Russian* and North-easterne discoveries. *Fabian* in his Chronicle *A. R. Hen. 7. 14.* hath this testimonie. This yeere also were brought vnto the King three men taken in the New-found Land, in *William Purchas* time being Major. These were clothed in beafts skins, and did eate raw flesh, and spake such speech that none could vnderstand them, and in their demeanour like to brut beafts, whom the King kept a long time after. Two yeeres after I saw two of them at *Westminster*, apparelled like *English*, &c.

Master *Robert Thorne* writes, that his Father and Master *Hugh Eliot* a Merchant of *Bristol*, were the first discoverers of New-found Land: and if the Mariners would haue bene ruled and followed their Pilots minde, the West *Indies* had bene ours: so that it seemeth this Discoverie was before that of *Columbus*. Master *Hakluyt* hath published the particulars of these things more fully, as also diuers Treatises touching the North-west of Sir *Humphrey Gilbert* and others: to which I referre the Reader; and no lesse for the Voyages made by diuers *English* into those parts: three by Sir *Martin Frobisher*, in the yeeres 1576, 77, and 78. Two of Captaine *Iohn Davies*, in 86, and 87. that of Master *Hore*, *An. 1536.* that of Sir *Humphrey Gilbert*, 1583. that of Master *Charles Leigh* to *Ramen*, *An. 1597.* and before in 1593. that of *George Drake*; with those of *Iaques Cartier*, and diuers others. My purpose is not to steale Master *Hakluyt*'s labours out of the World, by culling and fleecing them for our purpose, but by this *Index* to instruct men where they may haue festiuall store in this kinde. I had rather giue you new things. Such are to the World, these that you had before in *Hudsons* voyages set together, as also those of *Greenland*: and such are those of *Waymouth*, *Knight*, *Hall*, *Bassin*, &c. And first, as Foreman of our Quest, we will giue you Sir *Humphrey Gilbert*'s Letter, written with his owne hand from *New-found Land*, whereof he tooke formall possession to the Crowne of *England*, and was as a Martyr of those Discoveries. It was written to Sir *George Peckham* (a great Aduenturer in that voyage, and a greater in one of longer life, his written Treatise of Westerne planting, extant in Master *Hakluyt*'s third Tome) and I haue here inserted, it being hitherto vnprinted, as a memorial of both their worths; and after it (though in time before) wee will recreate you with a plaine Mariners Letter endorfed in homely phrase, To the Honorable Kings Grace of *England*, here (as I thinke) giuen you from the Originall. I haue also another written to Cardinall *Wolsey* touching the same voyage in Latin, by *Albertus de Prato*; for the antiquitie, rather then any remarkable raritie, worthy here to be mentioned.

Sir George, I departed from *Plymouth* on the eleventh of *Iune* with fine sailes, and on the thirteenth the Barke *Rawley* ran from me in faire and cleere weather, hauing a large winde. I pray you sollicite my brother *Rawley* to make them an example of all *Knaues*. On the third of *August* wee arrived at a Port called *Saint Iohns*, and will put to the Seas from thence (God willing) so soone as our ships will be ready. Of the New-found Land I will say nothing, vntill my next Letters. Be of good cheare, for if there were no better expectation, it were a very rich demaynes, the Country being very good and full of all sorts of victuall, as fish both of the fresh water and Sea-fish, Deere, Pheasants, Partridges, Swannes, and diuers Fowles else. I am in haste, you shall by euery Messenger heare more at large. On the fifth of *August*, I entred here in the right of the Crowne of *England*; and haue engrauen the Armes of *England*, diuers Spaniards, Portugals, and other strangers, witnessing the same. I can stay no longer; fare you well with my good Lady: and be of good cheare, for I haue comforted my selfe, answerable to all my hopes. From *Saint Iohns* in the New-found Land, the 8. of *August*, 1583.

Yours wholly to command, no man more,

H. M. GILBERT.

I mer-

I mentioned before Master *Thornes* fathers finding *New-found Land*, with Master *Ellier*. These animated King *Henrie* the eight to set forth two ships for discouerie, one of which perished in the North parts of *New-found Land*. The Master of the other, *John Rut*, writ this Letter to King *Henrie*, in bad *English* and worse Writing. Quer it was this superscription.

Master *Grubbs* two ships departed from *Plymouth* the 10. day of *Iune*, and arrived in the *New-found Land* in a good Harbour, called *Cape de Bas*, the 21. day of *Iuly*: and after we had left the light of *Selle*, we had neuer sight of any Land, till we had sight of *Cape de Bas*.

10 PLeasing your Honorable Grace to beare of your seruant *John Rut*, with all his Company here, in good health, thanks be to God, and your Graces ship. The *Mary* of *Gilford*, with all her crew: thanks be to God: And if it please your honorable Grace, we ranne in our course to the Northward, till we came into 53. degrees, and there we found many great Ilands of Ice and deepe water, we found no sounding, and then we durst not goe no further to the Northward for feare of more Ice, and then we cast about to the Southward, and within foure dayes after we had one hundred and sixtie fathom, and then wee came into 52. degrees and fell with the mayne Land, and within ten leagues of the mayne Land we met with a great Iland of Ice, and came hard by her, for it was standing in deepe water, and so went in with *Cape de Bas*, a good Harbor, and many small Ilands, and a great fresh Riuer going vp farre into the mayne Land, and the mayne Land all wildernesse and mountaines and woods, and no naturall ground but all mosse, and no inhabitation nor no people in these parts: and in the woods wee found footing of diuers great beasts, but we saw none not in ten leagues. And please your Grace, the *Samson* and wee kept company all the way till within two dayes before wee met with all the Ilands of Ice, that was the first day of *Iuly* at night, and there rose a great and a maruailous great storme, and much foule weather; I trust in *Almightie Iesu* to beare good newes of her. And please your Grace, we were considering and a writing of all our order, how we would wash vs and what course wee would draw and when God does send foule weather, that with the *Cape de Sper* shee should goe, and he that came first should tarry the space of sixe weeks one for another, and watered at *Cape de Bas* ten dayes, ordering of your Graces ship and fishing, and so departed toward the Southward to seeke our fellow: the third day of *August* we entered into 30 a good Hauens, called *Saint Iohn*, and there we found eleuen saile of *Normans*, and one *Brittaine*, and two *Portugall* Barkes, and all a fishing, and so we are readie to depart toward *Cape de Bas*, and that is twentie fine leagues, as shortly as we haue fished, and so along the coast till we may meete with our fellow, and so with all diligence that lyes in me toward parts to that Ilands that we are commanded by the grace of God, as we were commanded at our departing: And thus *Iesu* saue and keepe your honorable Grace, and all your honourable Reuer. in the Hauens of *Saint Iohn*, the third day of *August*, written in haste. 1527.

By your seruant *John Rut*, to his vttermost power.
of his power.

40 I haue by me also *Albert de Prato's* originall Letter, in *Latin stile*, almost as harsh as the former *English*, and bearing the same date, and was indorsed; Reuerend. in Christo Patri Domino Domino Cardinali & Domino Legato Anglia: and began, Reuerendissime in Christo Pater salutem. Reuerendissime Pater, placeat Reuerendissima paternitati vestra, scire, Deo fauente postquam eximus a Plemut qua fuit x. Iunij &c. (the substance is the same with the former, and therefore omitted) Datum apud le Baya, Saint Iohan in Terris Nouis, die x. Augusti, 1527. Reuer. Patr. vest. humilis seruus, *Albertus de Prato*. (the name written in the lowest corner of the sheet.)

50 The voyage of Captaine *GEORGE WEYMOUTH*, intended for the discouerie of the North-west Passage toward *China*, with two flye Boates.

ON Sunday the second day of *May*, 1602. in the afternoone, I weighed anchor and set saile from *Redcliffe* with two Fly-boates, the one called the *Discouery*, of seuentie Tunnes; and the other called the *God speed*, of sixtie Tunnes, to discouer the North-west passage, hauing in my ships fve and thirtie men and boyes, throughly victualled and abundantly furnished with all necessities for a yeere and an halfe, by the right Worshipfull Merchants of the *Mosconie* and *Turkie* Companies: who for the better successe of the voyage provided mee of a great traualer and learned Minister one Master *John Cartwright*. The Master vndermee in the *Discouery* was one *William Cobreth*, a skilfull man in his profession; and in the *God speed*, one *John Drewe*, and Mate in the said ship one *John Lane*.

The first of *Iune*, we descried *Bughamnes* in the Latitude of 57. degrees. The second day we saw the Point of *Bughamnes* North-west from vs, being a very smooth land; and the land by

*Mosc. and Tur-
kie Compa-
nies.
Master Cart-
wright had bin
in Persia and
Turkie. See the
former Tome,
Bughamnes.*

by it to the Southward riseth with many Homocks. There lyeth a ledge of Rockes hard by the Nesse, in a sandie Bay faire by the shore. When we came neer the land, we met with a fisher Boat, and I agreed with one of the fisher men to carry me betweene the Isles of *Orkney*, because I was not acquainted with the coast. The fourth day, at ten of the clocke, wee descried the Isles of *Orkney*. Some of those Southerne Ilands are prettie high land; but the Northerne Iland, which is called the *Start*, is very low land. There is no danger, giuing the shore a good birth, vntlesse it be by the Norther point of the *Start*: there doth a ledge of Rockes lye a mile from the shoare.

Orkney. At noone I found my selfe to be in the latitude of 59. degrees and 30. minutes, the point of the *Start* bearing West: and at one of the clocke in the afternoone, we saw a faire Ile, which bare North-east and by North from vs: and at eight of the clocke at night, wee were North of the *Start*: Then I directed my course West and by North. The fifth day about ten of the clocke in the morning, we ranne some tenne leagues, and then we saw two small Ilands, some two leagues off: and at eight and nine of the clocke we saw foure or five Boats of Fisher-men, and spake with one of them, and they were *Scottish-men*. The sixt, in the morning fell much raine, and lasted till nine of the clocke: and at ten of the clocke it cleared vp, and became very faire weather, and very temperate and warme, and our course was West. The seauenth, the winde was at East and by North, faire weather, and our course West. The eight, at noone I obserued the Sunne, and found vs to be in 59. degrees and fortie seuen minutes, and we ran West South-west.

The Start. The twelfth day we held our course West, the winde at East North-east, with fogge in the morning: at noone I obserued the Sunne, and found my selfe in 57. degrees, and 55. minutes. The variation here was nothing at all. The thirteenth at noone, our course was West and by North, the winde at North-east, with fogge some three or foure houres, and then cleare againe: the ayre very warme, as in *England* in the moneth of May. The foureteenth was faire weather, and the winde at East North-east, and our course West and by North. The fifteenth much raine all the forenoone, our course West, the winde at East and by North. The sixteenth, the winde was at North North-east, with much raine, winde and fogge. In the forenoone, being very cold, and at noone, I obserued the Sun, and found vs to be in 57. degrees and 35. minutes: we found the variation to be eleuen degrees Westward; and by that meane I found my selfe to be one degree more to the Southward, then we should haue bin by our course; for we could not see the Sunne in 96. houres before this day at noone, and at our last obseruation before this, which was the twelfth day, we could not finde any variation at all. Then we stood close by a winde to the Westward, the winde being at North North-east. The seauenteenth wee ranne North and by West, the winde at North North-east, faire weather. This day we saw many gray Gullies, and some Pigi- ons. The eighteenth at noone I obserued the Sunne, and found our selues to be in the latitude of 59. degrees, and 51. minutes. And then we first descried a great Iland of Ice, which lay North from vs, as farre as we could ken it from the head of our maine topmast: and about two of the clocke in the afternoone, we saw the South part of *Groneland*, North from vs some ten leagues. As we coasted this Ice to the Northward, we found it to be a maine banke of Ice; for we saw the other end of it to beare West North-west from vs; the winde being at South South-west, little winde: Then we ranne West South-west, to cleere vs of the Ice. The nineteenth, the winde was at East South-east, with some small raine. The twentieth, our course was West North-west, the winde being at North and by East, little winde. This day sometimes we came into blacke water as thicke as puddle, and in sailing a little space the water would be cleare againe. Seeing this change of water, so often to be thick, and cleare againe so suddenly, we imagined it had bene shallow water: then we sounded, and could fetch no ground in one hundred and twenty fathomes: and the Sea was so smooth, that we could discerne no current at all. At this time I reckoned the *Cape of desolation* to beare North North-east twentie foure leagues from vs. The one and twentieth, the winde was variable. The two and twentieth, we were in the latitude of 60. degrees and 37. minutes: the winde being at West, wee ranne North and by West. The seauen and twentieth, the winde was at West South-west: then our course was North-west and by North, the weather faire and warme, as in *England*, in the moneth of May. This day we saw great store of Gullies, which followed our Ship sundry dayes.

Store of Gulls. The eight and twentieth, the winde being at North and by West, wee directed our course to the Westward; and about twelue of the clocke the same night, we descried the land of *America*, in the latitude of 62. degrees and 30. minutes; which we made to be *Warwick's* foreland. This Headland rose like an Iland. And when we came neere the *Foreland*, we saw foure small Ilands to the Northwards, and three small Ilands to the Southward of the same *Foreland*. The *Foreland* was high land: all the tops of the hils were couered with Snow. The three small Ilands to the Southward were also white, that we could not discerne them from Ilands of Ice: also there was great store of drift Ice vpon the Eastside of this *Foreland*: but the Sea was altogether voide of Ice: the Land did lye North and by East, and South and by West, being six leagues of length.

America descried in 62. degr. and 30. min. The nine and twentieth, at sixe of the clocke in the morning, wee were within three leagues of this *Foreland*: then the winde came vp at North-east and by East, a good stiffe gale with fogge,

fogge: and wee were forced to stand to the Southward, because wee could not wether the Land to the Northward: and as wee stood to the Southward along by *Warwicks Foreland*, we could discerne none otherwise, but that it was an Iland. Which if it fall out to be so, then *Lumleys Inlet*, and the next Southerly Inlet, where the great Current setteth to the West, must of necessitie be one Sea; which will be the greatest hope of the passage that way. The thirtieth, the winde was at North-east, with fogge and Snow. This day wee came into a great whirling of a Current, being in the latitude of 61. degrees, and about twelue leagues from the coast of *America*.

Warwicks Foreland supposed to be an Iland. The greatest hope of the North-west passage. A current Westward in fixtie one degrees.

The first day of Iuly, the winde was at West, with fogge and Snow; the ayre being very cold. 10 This day wee came into many Ouerfals, which seemed to runne a great current; but which way it did set, wee could not well discerne. The greatest likelihood was, that it should set to the West. But hauing contrary windes some fixteene or seenteene dayes, we alwayes lay in trauerse among these ouerfals; but could neuer finde any great current by our courses: wee sounded sometimes, but could get no ground in one hundred and twentie fathomes.

A current likely to set to the West.

The second day, wee descried a maine Banke of Ice in the latitude of 60. degrees: the winde was at North North-west, and very faire weather. Wee wanting fresh water did sayle close to this Land of Ice, and hoyed out our Boate, and loaded her twice with Ice, which made vs very good fresh water. Within twenty leagues of the coast of *America*, wee should oftentimes come into many great ouerfals. Which doth manifestly shew, that all the coast of *America* is broken Land.

A maine bank of Ice in 60. degrees. The North coast of *America* seemeth to be broken land.

The third, the winde was at South-west, very foggie: and as wee stood toward the coast of *America*, wee met with another maine Banke of Ice. The fogge was so thicke, that we were hard by the Ice, before wee could see it. But it pleased God that the winde was faire to put vs cleare from this Ice againe; and presently it began to cleare vp, so that wee could see two or three leagues off; but we could see no end of the Ice. Wee iudged this Ice to be some tenne leagues from the coast of *America*. We found the water to be very blackish and thicke, like puddle water.

Blacke puddle water.

The eight, the winde was at North North-west, very faire weather; wee standing to the 30 Westwards met with a mighty maine Banke of Ice, which was a great length and breadth, and it did rest close to the shoare. And at eleuen of the clocke in the forenoone, wee descried againe the Land of *America*, in the latitude of 63. degrees and 53. minutes, being very high Land: and it did rise as Ilands, the toppes being couered with Snow. This Land was South-west and by West, some fise leagues off vs: we could come no neerer it for the great quantitie of Ice, which rested by the shoare side.

America againe descried in 63. deg. 53. min.

The ninth, the winde being at North-east and by East, blew so extreame, that we were forced to stand to the Southward, both to cleare our selues of the Land, and of the Ice: for the day before we passed a great banke of Ice, which was some foureteene leagues to the Eastward of vs, when the storme began; but thanks be to God, we cleared our selues both of the Land 40 and of the Ice. This day in the afternoone the storme grew so extreame, that we were forced to stand along with our forecourse to the Southward.

The seenteenth was very foggie, the winde being at East: and about two of the clocke in the afternoone, wee saw foure great Ilands of Ice, of a huge bignesse: and about foure of the clocke we came among some small scattered Ice, and supposed our selues to be neere some great Banke. The fogge was very thicke, but the winde large to stand backe the same way wee came in; or else it would haue indangered our liues very much. And at nine of the clocke at night we heard a great noyse, as though it had bin the breach of some shoare. Being desirous to see what it was, we stood with it, and found it to be the noyse of a great quantity of Ice, which was very loathsome to be heard. Then wee stood North North-west, and the fogge continued so thicke, that wee could not see two Shippes length from vs: whereupon we thought 50 good to take in some of our sayles; and when our men came to hand them, they found our sayles, ropes, and tacklings, so hard frozen, that it did seeme very strange vnto vs, being in the chiefe time of Summer.

The loathsome noyse of Ice.

The eighteenth day, the winde was at North-east and by North, the ayre being very cleere and extreame cold, with an exceeding great frost; and our course was North-west. This day in the forenoone, when we did set our sayles, we found our ropes and tacklings harder frozen then they were the day before: which frost did annoy vs so much in the vsing of our ropes and sayles, that wee were enforced to breake off the Ice from our ropes, that they might runne through the blockes. And at two of the clocke in the afternoone, the winde began to blow very hard, with thicke fogge, which freezed so fast as it did fall vpon our sayles, ropes, and tackling, 60 that we could not almost hoyse or strike our sayles, to haue any vse of them. This extreame frost and long continuance thereof, was a maine barre to our proceeding to the Northward, and the discouraging of all our men.

Sayles, ropes and tackling frozen.

Thick fogge freezing as fast as it fell.

The nineteenth day, the winde was at North and by East, and our course to the Eastwards.

Xxx

The

Mutinie.

The same night following, all our men conspired secretly together, to beare vp the helme for England, while I was asleepe in my Cabin, and there to haue kept mee by force, vnill I had Iworn vnto them, that I would not offer any violence vnto them for so doing. And indeede they had drawn in writing, the causes of their bearing vp of the helme, and thereunto set their hands, and would haue left them in my Cabin: but by good change I vnderstood their pretence, and preuented them for that time.

The twentieth day, I called the chiefe of my Company into my Cabin, before Master *Iohn Cartwright* our Preacher, and our Master, *William Cobreth*, to heare what reasons they could alleadge for the bearing vp of the Helme, which might be an ouerthrow to the Voyage, seeing the Merchants had bin at so great a charge with it. After much conference, they deliuered mee their reasons in writing:

Concluding, that although it were granted, that we might winter betweene 60. and 70. degrees of latitude, with safetie of our liues and Vessels, yet it will be May next before we can dismore them, to lanch out into the Sea. And therefore if the Merchants should haue purpose to proceede on the discouerie of these North-west parts of America; the next yeare you may be in the aforesaid latitudes for England, by the first of May, and so be furnished better with men and victuals, to passe and proceede in the aforesaid action.

Seeing then that you cannot assure vs of a safe harbour to the Northward, wee purpose to beare vp the Helme for England; yet with this limitation, that if in your wisdom, you shall thinke good to make any discouery, either in 60. or 57. degrees, with this faire Northerly winde, we yeelde our liues with your selfe, to encounter any danger. Thus much we thought needefull to signifie, as a matter builded vpon reason, and not proceeding vpon feare or cowardise.

68. deg. 53. min

Then, wee being in the latitude of 68. degrees and 53. minutes: the next following, about eleuen of the clocke, they bare vp the Helme, being all so bent, that there was no meanes to periwade them to the contrary. At last vnderstanding of it, I came forth of my Cabin, and demanded of them, who bare vp the Helme? They answered me, One and All. So they hoysed vp all the sayle they could, and directed their course South and by West.

They returne
fro the North.Mutiners pu-
nished.

The two and twentieth, I sent for the chiefe of those, which were the cause of the bearing vp of the Helme, and punished them seuerely, that this punishment might be a warning to them afterward for falling into the like mutinie. In the end, vpon the intreatie of Master *Cartwright* our Preacher, and the Master, *William Cobreth*, vpon their submission, I remitted some part of their punishment. At twelue of the clocke at noone, wee came hard by a great Iland of Ice: the Sea being very smooth and almost calme, wee hoysed out the Boates of both our Shippes: being in want of fresh water, and went to this Iland to get some Ice to make vs fresh water. And as wee were breaking off some of this Ice (which was verie painefull for vs to doe; for it was almost as hard as a Rooke:) the great Iland of Ice gaue a mightie cracke two or three times, as though it had bin a thunder-clappe; and presently the Iland began to ouerthrow, which was like to haue sunke both our Boates, if wee had not made good haste from it. But thanks be to God, we escaped this danger very happily, and came aboard with both our Boates, the one halfe laden with Ice. There was great store of Sea Foule vpon this Iland of Ice.

A great Iland
of Ice cracked
like a thunder-
clap, and was
ouerthrowne.Great store of
Sea Foule vp-
on the Ice.An Inlet in 61.
degrees & 40.
minutes.

The five and twentieth and six and twentieth, the winde being at East, did blow a hard gale, and our course was West and by South, with fogge. This day in the afternoone I did reckon my selfe to be in the entering of an Inlet, which standeth in the latitude of 61. degrees and 40. minutes.

The returne out
of the Inlet.

The seven and twentieth, the winde was at South South-east, and blew very hard, our course was West. The eight and twentieth and nine and twentieth, our course was West and by South, the winde blowing very hard at East South-east, with fogge and raine. The thirtieth, the winde came vp in a showre by the West North-west, blowing so hard, that wee were forced to put a fore the Sea. Now because the time of the yeare was farre spent, and many of our men in both Shippes sicke, wee thought it good to returne with great hope of this Inlet, to bee a passage of more possibilitie, then through the Straight of *Danis*: because I found it not much pestered with Ice, and to be a straight of some leagues broad. Also I sayled an hundred leagues West and by South, within this Inlet; and there I found the variation to be 35. degrees to the Westward, and the needle to decline, or rather incline 83. degrees and an halfe.

The variation
35. degrees
Westward.An Iland on
the coast of A-
merica in 55.
deg. & 30. min.

The fifth of August (the winde all that while Westerly) wee were cleare of this Inlet againe. The sixth the winde was at East South-east with fogge. The seauenth, eight, and ninth, we passed by many great Ilands of Ice. The ninth day at night, we descried the land of America, in the latitude of 55. degrees, and 30. minutes. This Land was an Iland, being but low land and very smooth: then the night approaching, and the weather being something foggie and darke, we were forced to stand to the Northward againe. This night we passed by some great Ilands of Ice, and some bigge peeces, which did breake from the great Ilands: and we were like

to strike some of them two or three times : which if we had done, it might haue endangered our Shippes and liues. Our confort, the *Godspeede*, strooke a little piece of Ice, which they thought had foundred their Shippe; but thanks be to God they receiued no great hurt, for our Shippes were very strong.

The *Godspeede* strooke vpon a piece of Ice.

The tenth day, the winde was at North-east and by North, with fogge and raine; and our course was to the South-eastward: for we could by no meanes put with the shoare, by reason of the thicknesse of the fogge, and that the winde blew right vpon the shoare, so that we were forced to beare faile to keepe our selues from the land, vntill it pleased God to send vs a cleare, which God knoweth we long wanted. At fixe of the clocke in the afternoone, it was calme; and then I iudged my selfe, by mine account, to be neere the Land: so I sounded, and had ground in 160. fathomes, and fine grey Osie Sand: and there was a great Iland of Ice, a ground within a league of vs, where we sounded, and within one houre it pleased God to send vs a cleare. Then we saw the land some foure leagues South-west and by South from vs. This land lyeth East and by South, and West and by North, being good high land, but all Ilands, as farre as wee could discern. This calme continued vntill foure of the clocke in the afternoone of the eleuenth day: the weather being very cleere, we could not discern any Current to goe at all by this Land. This day the Sea did set vs in about a league neerer the Land, so that wee iudged our selues three leagues off. Here we sounded againe, and had but eightie fathoms.

The variation of the Compasse we found to be 22. degrees and 10. minutes Westward. At five of the clocke there sprung vp a fine gale of winde, at East South-east, and being so neere night, wee stood to the Southward, thinking the next day to seeke some harbour. But it pleased God, the next day, being the twelfth, to send vs a storme of foule weather, the winde being at East and by South, with fogge: so that we could by no meanes get the shoare. Thus wee were forced to beate vp and downe at Sea, vntill it should please God to send vs better weather.

The variation 22. degrees to West.

A Storme.

The foureteenth, I thought good to stand to the Westward to search an Inlet, in the latitude of 56. degrees. I haue good hope of a passage that way, by many great and probable reasons.

The fifteenth the winde continued at the South, with exceeding faire weather, and our course was West. We were this day at noone in the latitude of 55. degrees and 31. minutes: and I found the variation to be 17. degrees and 15. minutes, to the Westward. And about seuen of the clocke at night, we descried the Land againe, being tenne leagues to the Eastward of this Inlet. This Land did beare from vs South-west, some eight leagues off: and about nine of the clocke the same night, the winde came to the West; which blew right against vs for our entering into this Inlet.

55. deg. 31. min. Variation 17. deg. 15. min. They discerie the land againe.

The sixteenth, the winde was at West North-west, and was very faire weather, and our course South-west: about nine of the clocke in the forenoone, we came by a great Iland of Ice; and by this Iland we found some peeces of Ice broken off from the said Iland: And being in great want of fresh water, wee hoysed out our Boates of both Shippes, and loaded them twice with Ice, which made vs very good fresh water. This day at noone wee found our selues to be in the latitude of 55. degrees and twentie minutes: when we had taken in our Ice and Boates, the weather being very faire and cleare, and the winde at West North-west, we bent our course for the Land, and about three of the clocke in the afternoone, we were within three leagues of the shoare. It is a very pleasant low Land; but all Ilands, and goodly sounds going betweene them, toward the South-west. This Land doth stand in the latitude of 55. degrees; and I found the variation to be to the West 18. degrees and 12. minutes. This coast is voide of Ice, vnlesse it be some great Ilands of Ice, that come from the North, and so by windes may be driuen vpon this coast. Also we did finde the ayre in this place to be very temperate. Truly there is in three seuerall places great hope of a passage, betweene the latitude of 62. and 54. degrees; if the fogge doe not hinder it, which is all the feare I haue. At fixe of the clocke, wee being becalmed

55. deg. 20. min.

by the shoare, there appeared vnto vs a great ledge of rockes, betweene vs and the shoare, as though the Sea did flye ouer it with a great height. As we all beheld it, within one houre, vpon a sudden it vanished cleane away; which seemed very strange vnto vs all. And to the Eastward of vs, some two leagues, we saw a great Rocke, lying some three leagues off the Land: we then supposing it to be shoald water, by this broken ground, sounded, but could get no ground in one hundred and sixtie fathoms. About seuen of the clocke, there sprung vp a gale of winde, by the South South-east, which was a very good winde to coast this Land.

A pleasant low land, being all Ilands.

55. degrees. The variation 18. deg. and 12. min. Westward. Temperate ayre.

Great hope of a passage in three places.

A great ledge of Rockes strangely vanishing.

A great Rocke

But the seuenteenth in the morning, the winde being at the South, it began to blow so extremely, that we durst not stay by the shoare, for it was like to be a great storme: then our course was East North-east, to get vs Sea roome. This storme still increasing, our flye-boates did receiue in much water; for they wanted a Sparre-decke, which wee found very dangerous for the Sea. About twelue of the clocke at noone, this day there rose vp a great showre in the West, and presently the winde came out of that quarter with a whirle, and taking vp the Sea into the ayre, and blew so extremely, that we were forced alwayes to runne before the Sea, howso-

A Whirlewinde taking vp the Sea.

ever the winde did blow. And within twelue houres after this storme beganne, the Sea was so much growen, that we thought our flye Boates would not haue beene able to haue endured it.

They were carried 30. leagues into an Inlet in 56. degrees. They returned for England. This Book was also subscribed by W. Cobweth and Iohn Drem. The lands end.

The eighteenth, the winde was at North-west, and the storme increased more extreame, and lasted vntill eight of the clocke in the morning of the nineteenth day, so furious, that to my remembrance, I neuer felt a greater: yet when we were in our greatest extremities, the Lord deliuered vs his vnworthy seruants. And if the winde, with so great a storme, had bin either Northerly, or Southerly, or Easterly but one day, we had all perished against the Rocks, or the Ice: for wee were entred thirty leagues within a Head-land of an Inlet, in the latitude of 56. degrees. But it pleased God to send vs the winde so faire, as we could desire, both to cleare our selues of the Land and Ice. Which opportunitie caused vs for this time to take our leaues of the coast of *America*, and to shape our course for *England*.

The fourth, in the morning, wee descried the Iland of *Silly* North-east and by East, some foure leagues off vs. Then wee directed our course East and by North: and at tenne of the clocke in the forenoone, wee descried the Lands end, and next day were forced to put into *Dartmouth*.

CHAP. XIV.

JAMES HALL his Voyage forth of Denmarke for the discovery of Greenland, in the yeare 1605. abbreviated.

May 30.

May 1605.

July 13

Iohn Cunningham.

Iohn Knight, of whom after.

N the name of God Amen, we set sayle from *Copeman-hauen* in *Denmarke*, the second day of May, in the yeare of our redemption 1605. with two Shippes and a Pinnace: The Admirall, called the *Frost*, a shippe of the burthen of thirty or forty last, wherein was Captaine, and chiefe commander of the whole Fleet, Captaine *Iohn Cunningham*, a *Scottish* Gentleman, seruant vnto the Kings Maiestie of *Denmarke*, my selfe being principall Pilot. The *Lyon* Viceadmirall, being about 30

the foresaid burthen, wherein was Captaine, one *Godscalo Lindenhofe*, a *Danish* Gentleman, and Steereman of the same, one *Peter Kilson* of *Copeman-hauen*. The Pinnace, a Barke of the burthen of twelue Lasts, or thereabouts: wherein was Steereman or commander, one *Iohn Knight*, my Country-man. So setting sayle from *Copeman-hauen*, with a faire gale of winde Easterly, wee came vnto *Elsonure*, where we anchored, to take in our water.

The third day we tooke in our water, at which time, the Captaines, my selfe, with the Lieutenants, and the other Steeremen, did thinke it conuenient to set downe certaine Articles, for the better keeping of company one with another, to which Articles or couenants wee were all feuerally sworne, setting thereunto our hands.

The sixth we came to *Flecorie*, into which harbour, by Gods helpe, we came at two a clocke in the afternoone. The seauenth day we supplied our wants of wood and water. The eighth day, about two a clocke in the afternoone, we set sayle forth of the harbour of *Flecorie*, about six a clocke it fell calme, till about eight, about which time, the *Nase* of *Norway*, by the *Danish* men, called *Lyndis-nose*, bare next hand North-west of vs, sixe leagues off; at which time I directed my course West North-west, finding the compasse varied 7. degrees 10. minutes, to the Eastwards of the true North.

The thirteenth, we had sight of the Iland of *Faire Ile*, and also of the South-head of *Shotland*, called *Swimborne head*, which are high Lands: at noone, the Iland of *Faire Ile* bearing West half a point Northerly: foure leagues off I made obseruation, and found vs in the latitude of 59. degrees 20. minutes. This night about seuen a clocke, wee came about an *English* league to the Northwards of the North-west end of *Faire Ile*, wee met with a great race of a tyde, as though it had beene the race of *Portland*, it setting North North-west. Being out of the said race, I directed my course West and by North, hauing the winde North-east and by North: this evening *Faire Ile* bearing East South-east foure leagues: *Swimborne head*, North-east and by North eight leagues: the Iland of *Foole*, North-east and by East, seuen leagues. I found by exact obseruation, the compasse to be varied to the East-ward of the true North 60. degrees 10. minutes.

Variation obserued.

The fourteenth in the morning, the winde came to the East South-east, wee steering West and by North away: this morning the Iland of *Faire Ile* did shew in my sight to bee about ten leagues off, at which time we did descrie two of the Westermost Ilands of *Orkney*, which did beare South-west and by South.

The eighteenth, the winde at North-west and by West, wee laid it away South-west and by West, and sometimes South-west. This day at noone wee were in the Latitude of 58. degrees

40. mi-

40. minutes. The nineteenth day, the winde at South-west and South-west and by West, wee lying as the night before, being at noone in the Latitude of 59. degrees and a halfe. The foure and twentieth day, the winde at North-east and by East, we steering still with a fresh gale West South-west, this evening we looked to haue seene *Busse Island*, but I doe verily suppose the same to be placed in a wrong Latitude in the Marine Charts. The fixe and twentieth at noone, wee were in the latitude of 57. degrees 45. minutes. The thirtieth day in the morning betweene seven and eight, the weather began to cleere, and the Sea and winde to waxe lesse, wee looking for the *Lion* and the *Pinnasse*, could haue no sight of them, we supposing them to bee afterne off vs, we standing still vnder our courses. This day the winde came to the North-east and by East, being very cold weather, we lying North North-west away. Making my obseruation at noone, I found vs in the latitude of 59. degrees 15. minutes, our way North North-west fortie leagues. This afternoon between one and two a clock we descried Land, it bearing North North-east off vs about ten leagues off North-east & by North off vs about ten leagues, it being a very high ragged land, lying in the latitude of 59. degrees 50. minutes, lying alongst South-east and by South, and North-west and by North.

Busse Island
wrong placed.

First sight of
Groenland.

Cape Christian.

This Head-land wee named after the Kings Maiesties of *Denmarke*, because it was the first part of *Groenland*, which we did see. This afternoone about one a clock, bearing in for the shoare we saw an Island of Ice, which bore West South-west of vs three leagues off, so hauing the wind at East South-east, we bore in for the shoare, where wee found so much Ice that it was impossible either for vs or any other ship to come into the shoare without great danger: yet wee put our selues into the Ice as wee thought conuenient, being incumbered and compassed about with the same in such sort, as the Captaine, my selfe, the Boatswaine with another of our companie, were forced to goe ouerboord vpon an Island of Ice, to defend it from the ship, at which time I thought it conuenient to stand off into the Sea againe, and so being cleere of the Ice, to double *Cape Desolation*, to the North-westwards of which I doubted not but to find a cleer coast, so standing away all this night West South-west, to cleere vs of the Ice, which lay farre from the shoare, being very thicke towards the Land with great Islands of Ice that it is wonderfull. This evening, the *Cape Christian* bearing North-east and by East fise leagues, I found the Compasse varied 12. degrees 15. minutes to the North-westwards. Moreouer, standing to Seaward from the foresaid Cape, we came in blacke water, as thicke as though it had bene puddle water, we sayling in the same for the space of three houres.

The shoare full
of Ice.

Cape Desolation.

Compass varied.

Black water.

The one and thirtieth in the morning faire weather, with the winde somewhat variable, wee steering away North-west and by West, betweene foure and fise in the morning we had sight of the *Lion* againe, but not of the *Pinnasse*. They being a Sea-boord off and hauing espied vs, they stood with vs, at which time the Captaine, Lieutenant, and Steereman came aboard vs, earnestly intreating mee to bestow a Sea Chart of the Steerman, and to giue him directions if by tempestuous weather they should lose vs, they protesting and swearing that they would neuer leaue vs as long as winde and weather would permit them to keepe companie with vs. By whose speeches I being perswaded did giue them a Sea Chart for those Coasts, telling them that if they would follow me, that by Gods assistance I would bring them to a part of the Land void without pester of Ice, and also harbour the ships in good Harbour, by Gods helpe; they swearing and protesting, that they would follow mee so long as possibly they could, with which oathes and faire speeches I rested satisfied, thinking they had thought as they had sworne, but it fell out otherwise. So hauing made an end with vs about noone, they went aboard againe, wee being this day in the latitude of 59. degrees 45. minutes, hauing stood all the night before, and this forenoone also, so nigh the shoare as wee could for Ice, the *Cape Christian* South South-east and North North-west, and from the Cape to *Cape Desolation*, the Land lyeth East and by South, and West and by North about fiftie leagues. This day betweene one and two a clocke, the Vice-admirals Boat, being newly gone aboard, it fell very hase and thicke, so that wee could not see one another by reason of the fog, therefore our Captaine caused to shoote off certaine Muskets with a great peece of Ordnance, to the intent the *Lion* might heare vs, which heard of them they presently stood with vs, at which time the fogge began somewhat to cleere, wee hauing sight one of another and so stood alongst the shoare, as nigh as we could for Ice.

Sight of the
Lion.

June 1605.

The first of Iune, wee had a fresh gale of winde at South-west, wee steering North-east and by North into the shoare, about three in the morning there fell a mightie fogge, so that we were forced to lye by the lee, for the *Lion* playing vpon our Drum to the intent for them to heare vs, and to keepe companie with vs, they answering vs againe with the shooting of a Musket, wee trimming our sailes, did the like to them, and so stood away North-east and by East: larboord tackt aboard halfe a glasse, when we were hard incumbered amongst mightie Islands of Ice, being very high like huge Mountaines, so I caused to cast about and stand to the Westwards North-west and by West. About twelue of the clocke this night it being still calme, wee found our selues suddenly compass round about with great Islands of Ice, which made such a hideous noyse as was most wonderfull, so that by no meanes wee could double the same to the Westward: wherefore wee were forced to stand it away to the Southwards, South South-West, stem-

Islands of Ice.

rent setting
North North-
west.

ming the Current, for by the same Current wee were violently brought into this Ice, so being incumbered and much to doe to keepe cleere of the mightie Ilands of Ice, there being as both I and others did plainly see vpon one of them a huge rocke stone, of the weight of three hundred pounds or thereabouts, as wee did suppose. Thus being troubled in the Ice for the space of two or three houres, it pleased God that we got thorow the same.

The second day in the morning about three a clocke, I came forth of my Cabin, where I found that the Shipper whose name was *Arnold* had altered my course which I had set, going contrarie to my directions North North-west away, whereupon hee and I grew to some speeches, both for at this time and other times hee had done the like. The Captaine likewise seeing his bad dealing with we, did likewise roundly speake his minde to him, for at this instant wee were nigh vnto a great banke of Ice, which wee might haue doubled if my course had not bene altered, so that we were forced to cast about to the Southwards, South and by East and South South-east, with the winde at South-west and by South or South-west till ten a clocke, when we stood againe to the Westwards, lying West North-west and North-west and by West, being at noone in the latitude of 60. degrees 18. minutes, Cape *Desolation* is, I did suppose, bearing North and by West three or foure leagues off, the weather being so thicke and hachie that wee could neuer see the Land.

The fourth day betweene one and two a clocke in the morning, it began to blow a fresh gale Easterly, we steering away North and North and by West, we being at noone in the latitude of 59. degrees 50. minutes, hauing made a West and by North way foure and twentie leagues. This euening about seuen a clocke we had very thicke water, and continued so about halfe an houre: about nine a clocke we did see a very high Iland of Ice to the windward of vs, and about halfe an houre after with some drift Ice, they in the *Lion* thorow the fearefulnesse of their Commanders presently cast about standing away larboord tackt, till they did perceiue that I stood still away as I did before, without impediment of the Ice, they cast about againe and followed vs.

The fift in the morning, being very faire weather with the winde at East South-east, our course North North-west, some of our people supposed they had seene the Land: our Captaine and I went aboard the Pinnasse, when after an houre of our being there wee did see the supposed Land to be an hachie fogge, which came on vs so fast that wee could scarce see one another. But the *Lion* being very nigh vnto vs, and it being very calme, wee laid the Pinnasse aboard of her, and so the Captaine and I went aboard of them.

The ninth day about foure a clocke, it began to blow an easie gale at South-east and by South, I directing my course still North North-west, when some of our people would not be perswaded but they did see Land, and therefore I stood in North and by East and North North-east, till about three a clocke in the afternoone, when wee met with a huge and high Iland of Ice, wee steering hard to board the same, and being shot a little to Northwards of it, there fell from the top thereof some quantitie of Ice, which in the fall did make such a noyse as though it had bene the report of fise Cannons. This euening wee came amongst much drift Ice, being both windwards and to leewards of vs, yet by Gods helpe we got very well through the same, when being cleere I directed my course againe North North-west.

The tenth day the winde at South-west and by West, I steering still North-west and by North. This forenoone also wee met with great Ilands of Ice, it being very hachie and thicke weather, the which did driue them in the *Lion* into great feare, and calling to vs very fearfully perswaded me to alter my course and to returne homeward, saying that it was impossible for vs by any working, and course keeping to sease vpon the Land, which did driue all our companie into such a feare, that they were determined, whether I would or not, to haue returned home, had not the Captaine as an honest and resolute Gentleman stood by mee, protesting to stand by me so long as his blood was warme, for the good of the Kings Maiestie, who had set vs forth, and also to the performing of the Voyage. Which resolution of his did mitigate the stubbornnesse of the people: yet nothing would perswade those fearfull persons in the *Lion*, especially the Steerman, who had rather long before this time haue returned home, then to haue proceeded on the action, as before the said Steerman had done when he was imployed eight yeeres before in the said action or discouerie. Therefore our Captaine and my selfe seeing their backwardnesse now, as before we had done, went our selues the same euening into the Pinnasse, hauing a mightie banke of Ice of our larboord side, and spake to them very friendly, giuing order both to our owne Ship and to them, that they should keepe a Seaboord of vs (for I did suppose this banke of Ice to lye in the narrowest of the Streight, betweene *America* and *Groenland*, as indeed by experience I found the same to be) therefore I determined to coast the Ice alongst till I found it to bee driuen and fall away, by reason of the swift current that setteth very forcibly through the said Strait, and then by the grace of God to set ouer for a cleere part of the coast of *Groenland*, so all this night we coasted the Ice as close aboard as we could East North-east and North-east and by East, till about midnight, when we found the said banke to fall away.

The eleuenth day, being cleere of the Ice, I stood away North North-east till sixe a clocke, when

banke of Ice.

when we met with another great banke of Ice, at which time the Commanders of the *Lion* being now againe very feartull as before, came vp to our ship, perswading the Shipper and Companie to leaue vs, and to stand to Seaboord with them. But the Shipper who was also Lieftenant of the ship, being more honestly minded, said, that he would follow vs so long as he could: with which answere they departed, vsing many spitefull wordes, both of the Captaine and mee, saying we were determined to betray the Kings ships, at which time they shot off a peece of Ordnance, and so stood away from vs. I seeing their peruerse dealing let them goe, wee coasting alongst the Ice North North-east with a fresh gale, it being extreme cold with snow and hayse, the Sea also going very high by reason of a mightie current, the which I found to set very forcibly through this Strait, which being nigh vnto *America* side, setteth to the Northwards, and on the other side to the contrarie, as by prooffe I found. So coasting alongst this mayne banke of Ice, which seemed as it had bene a firme Continent till about eleuen a clocke, when wee espyed the Ice to stretch to windward, on our weather bow wee setting our starboord takes aboard, stood away East and by South with the winde at South and by East, till wee had doubled a Seaboord the Ice, at which time I directed my course directly ouer for the cleere coast of *Groimeland*, East and by North, which course I directed all the *Frost* to goe, wee standing away our course all this night, it being very much snow and fleete.

The twelfth day in the morning about foure a clocke, we espyed the Land of *Groenland*, being a very high ragged Land, the tops of the Mountaines being all couered with snow, yet wee found all this coast vtterly without Ice, wee standing into the Land espyed a certaine Mountaine boue all the rest, which Mount is the best marke on all this Coast, the which I named Mount *Cunningham* after the name of my Captaine. We comming into the shoare betweene two Capes or Head-lands, the Land lying betweene them North and by East, and South and by West, the Southmost of which Forelands I named *Queene Annes Cape*, after the name of the *Queenes* Maiestie of *Denmarke*, and the Northermost of the two I called *Queene Sophias Cape*, after the name of the *Queene* Mother.

So standing into the Land, we came amongst certaine Ilands, where sayling in still amongst the same vnto the Southermost foot of the foresaid Mount, wee came into a goodly Bay, which wee did suppose to be a Riuer, being on both sides of the same very high and steepe Mountaines, wee named the same King *Christianus Foord*, after the name of the Kings Maiestie of *Denmarke*. So sayling vp this Bay, which wee supposed to bee a Riuer, the space of fixe or seuen *English* leagues, finding in all that space no anchoring, being maruellous deepe water, till at the length we had sayled vp the Bay the foresaid distance, at length I brought the Ship and Pinnasse to an anchor in sixteene fathom shelly ground, at which time our Captaine and I went aland, giuing thanks vnto God for his vnspeakable benefits, who had thus dealt with vs as to bring vs to this desired Land into so good an Harbour; which done, the Captaine and I walked vp the Hills, to see if wee could see any of the people, hauing our Boat to row alongst with vs. Hauing gone alongst the Riuer side vpon the tops of the Hills the space of three or foure *English* miles, at length looking towards our Boat, wee saw vpon the Riuer side foure of the people standing by their Houses or rather Tents, couered ouer with Seale-skins. Wee comming downe the Hills towards them (they hauing espyed vs) three of them ranne away vpon the Land, and the other tooke his Boat and rowed away leauing their Tents. Wee being come downe the Hills called to our men in the Boat, and entring into her rowed towards the Saueage who was in his Boat made of Seale-skins. Hee holding vp his hands towards the Sunne, cryed *Yota*; wee doing the like, and shewing to him a knife, hee presently came vnto vs and tooke the same of the Captaine. When hee had presently rowed away from vs, wee rowed a little after him, and seeing it was but in vaine wee rowed aland againe and went into their Tents, which wee found couered (as is aforesaid) with Seale-skins. Wee finding by the houses two Dogs being very rough and fat, like in thape to a Foxe, with very great abundance of Seale fish, lying round about their Tents a drying, with innumerable quantities of a little fish like vnto a Smelt (which fish are commonly called *Sardeenes*) of which fish in all the Riuers are wonderfull skuls, these fishes also lay a drying round about their Tents in the Sunne in great heapes, with other sundrie kindes. Then entring into their Tents, wee found certaine Seale skins and Foxe skins very well drest; also certaine Coates of Seale skins and Fowle skins with the feather side inward: also certaine Vessels boyling vpon a little Lampe, the Vessell being made after the manner of a little Pan, the bottome whereof is made of stone, and the sides of Whales finnes; in which Vessell was some little quantitie of Seale fish boyling in Seale oyle; and searching further, wee did finde in another of their Vessels a Dogs head boyled, so that I perswaded my selfe that they eate Dogs flesh. Moreouer, by their houses there did lye two great Boates, being couered vnder with Seales skins, but aloft open after the forme of our Boates, being about twentie foote in length, hauing in each of them eight or ten tofts or seates for men to sit on, which Boates, as afterwards I did perceiue, is for the transporting of their Tents and baggage from place to place, and for a saile they haue the guts of some beast, which they dresse very fine and thin, which they sow together.

stones againe.

Also the other sorts of their Boats are such as Captaine *Frobisher*, and Master *Iohn Davis* brought into *England*, which is but for one man, being cleane couered ouer with Seale skins artificially dressed except one place to sit in, being within set out with certaine little ribs of Timber, wherein they vse to row with one Oare more swiftly, then our men can doe with ten, in which Boates they fish being disguised in their Coates of Seale skinnes, whereby they deceiue the Seales, who take them rather for Seales then men; which Seales or other fish they kill in this manner. They shoot at the Seales or other great fish with their Darts, vnto which they vse to tye a bladder, which doth boy vp the fish in such manner that by the said means they catch them. So comming aboard our ships hauing left certaine trifles behind vs in their Tents, and taking nothing away with vs, within halfe an houre after our comming aboard, the Sauage to whom wee had giuen the Knife with three others, which we did suppose to be them which we saw first, came rowing to our ships in their Boats, holding vp their hands to the Sunne, and striking of their breasts, crying *Tota*. We doing the like, they came to our shippe or Captaine: giuing them bread and Wine, which, as it did seeme, they made little account of; yet they gaue vs some of their dried fishes, at which time there came foure more, who with the other bartered their Coats, and some Seale skinnes, with our folke for old Iron Naailes, and other trifles as Pinnes and Needles, with which they seemed to be wonderfully pleased, and hauing so done, holding their hands towards the Sunne they departed.

The thirteenth, there came fourteene of them to our ship, bringing with them Seale skinnes, Whale Finnes, with certayne of their Darts and Weapons, which they bartered with our people, as before. This day I made obseruation of the latitude, and found this Roadsted in the latitude of 66. degrees 25. minutes, and the mouth of this Bay or Sound, lyeth in the latitude of 66. degrees 30. minutes. Also here I made obseruation of the tydes, and found an East and West Moone to make a full Sea, vpon the Full and Change, more it floweth, three fathome and an halfe water, right vp and downe.

The fourteenth and fifteenth dayes we rode still, the people comming to vs, and bartering with vs for pieces of old Iron, or Naailes, Whale Finnes, Seales Skinnes, Morfe Teeth, and a kind of Horne which we doe suppose to be Vnicornes Horne, at which time the Captaine went with our Boat, to the place where we had seene their Tents, but found them removed; and the other fish and the Seale fish lying still a drying: the Captaine taking a quantitie of the Sea fish into the Boat, caused some of the Mariners to boyle it ashore, the Sauages helping our men to doe the same, the Captaine vsing them very friendly, they hauing made about a barrell and an halfe of Oyle, leauing it aland all night, thinking to bring the same aboard in the morning. But the Sauages the same night let the same forth. Yet notwithstanding, the Captaine shewed no manner of discontent towards them.

The sixteenth day, I went into the Pinnasse, to discouer certaine Harbours to the Northwards, the wind being at East South-east, I loosed and set saile, but instantly it fell calme, and so continued about an houre. When the wind came opposite at the West North-west a stiffe gale, we spending the tide till the floud being come, I put roome againe, and came to an Anchor a little from the *Frost* in twelue fathomes sandie ground. About one in the afternoone, the *Frost* departed from vs further vp the Bay, which we did suppose to be a Riuer, promising to abide our returne two and twentie dayes.

The seuenteenth day, the wind continuing at the West North-west blowing very hard, wee rode still, the people comming and bartering with vs.

The eighteenth day, the winde and weather as before, wee riding still. This forenoone there came to the number of thirtie of them, and bartered with vs as they had done before, which done, they went alhoare at a certaine point about a flight-shot off vs, and there vpon a sudden began to throw stones with certaine Slings which they had without any iniury offered at all; yea, they did sling so fiercely, that we could scarce stand on the hatches. I seeing their brutish dealing, caused the Gunner to shoot a Falcon at them, which lighted a little ouer them, at which time they went to their Boates, and rowed away. About one a clocke in the afternoone, they came againe to vs crying in their accustomed manner, *Niont*, they being sixtie three in number, the slipper inquired of me whether they should come to vs or not. I willed him to haue all things in a readinesse, they comming in the meane time nigh to the Pinnasse, I did perceiue certaine of them to haue great bagges full of stones, they whispering one with another began to sling stones vnto vs. I presently shot off a little Pistol which I had for the Gunner, and the rest of the folke to discharge, which indeed they did, but whether they did hurt or kill any of them or not, I cannot certainly tell, but they rowed all away making a howling and hideous noise: going to the same point, whereas in the forenoone they had beene, being no sooner come on Land, but from the Hills they did so assaile vs with stones, with their slings, that it is incredible to report, in such sort that no man could stand vpon the Hatches, till such time as I commanded for to lose sailes and bonnets two mens height, to shield vs from the force of the stones, and also did hide vs from their sight; so that we did ply our Muskets and other Peeeces such as wee had at them: but their subtiltie was such, that as soone as they did see fire giuen to the Peeeces, they would suddenly

ducke

ducke downe behind the Clifles, and when they were discharged, then sling their stones fiercely at vs againe. Thus hauing continued there till foure a clocke, they departed away.

The nineteenth day in the morning, about foure a clocke it beeing calme, I departed from this Roadsted, so causing our men to row alongst the shoare, till the tide of the ebbe was bent, at which time it began to blow a fresh gale at North-west and by West, we turning downe till about two a clocke, when the tide of flood being come: when I came to an Anchor in an excellent Hauen, on the South side of *Cunninghams Mount*, which for the goodnesse thereof, I named *Denmarkes Hauen*.

10 The twentieth day, in the morning the weather beeing very rainie with a little aire of wind, I loosed and caused to row forth of the foresaid Harbour, and comming forth betweene the Ilands and the maine, the people being as it seemed looking for vs espied vs: making a hideous noise, at which time at an instant were gathered together about seuentie three Boats with men rowing to vs. I seeing them, thought it best to preuent the worst, because we were to come hither againe: therefore to dissemble the matter, I thought it best to enter into barter with them for some of their Darts, Bowes and Arrowes, wee finding euery one of them to bee extraordinarily furnished therewith: so rowing forth to Sea amongst the Ilands, there stil came more Boats to the number of one hundred and thirtie persons, they still rowing by vs, made signes to vs to goe to anchor amongst some of the Ilands: but I preuenting their deuices, made certaine Skonces with our sailes, to defend vs from their Stones, Arrowes and Darts. They seeing this, went certaine of them from vs rowing to certaine Ilands, to which they did thinke wee would come: 20 leauing no more but about ten men and Boates about vs, who rowed alongst the space of an houre with vs, making signes of friendship to vs. At length perceiuing, that wee were not minded to goe forth amongst these Ilands, vpon which the rest of their folke were, they threw certaine shels and trifles into the Boat, making signes and tokens to fetch them, the which my Boy called *William Huntries* did. He being in the Boat, they presently shot him through both the buttockes with a Dart, at which time they rowed from vs, they mustering vpon the Ilands to the number of three hundred persons, keeping themselves farre enough from our danger. About sixe a clocke this Euening it began to blow a faire gale Easterly, we getting off to Sea, stood all this night North and by East alongst the Land.

The people come againe.

The subtiltie of the Sauages.

My Boy shot with a Dart.

A Topographical Description of the Land as I did discover the same.

NOW hauing proceeded for the discouerie of the Coast and Harbours so farre, and so long time as the time limited to me, therefore I thinke it conuenient, to make a brieue description of the same, according as by my short experience I found the same to be.

40 The Land of *Groenland* is a very high, ragged and mountainous Countrey, being all alongst the Coast broken Ilands, making very goodly Sounds and Harbours, hauing also in the Land very many good Riuers and Bayes, into some of which I entred sayling vp the same the space of ten or twelue *English* leagues, finding the same very nauigable, with great abundance of fish of sundrie sorts. The Land also in all places wheresoever I came, seemed to be very fertile, according to the Climate wherein it lyeth: for betweene the Mountaynes was most pleasant Plaines and Valleys, in such sort as if I had not seene the same, I could not haue beleueed, that such a fertile Land in shew could bee in these Northerne Regions. There is also in the same great store of Fowle, as Ravens, Crowes, Partridges, Pheasants, Sea-mewes, Gullies, with other sundry sorts. Of Beasts I haue not seene any, except blacke Foxes, of which there are very many. Also as I doe suppose there are many Deere, because that comming to certaine places where the people had had their Tents, we found very many Harts Hornes, with the bones of other beasts 50 round about the same. Also going vp into the Land wee saw the footing and dunging of diuers beasts, which we did suppose to be deere, and other beasts also, the footing of one which wee found to be eight inches ouer, yet, notwithstanding we did see none of them: for going some two or three miles from the Pinnasse we returned againe to goe aboard. Moreouer, in the Riuers we found sundry sorts of Fishes, as Seales, Whales, Salmon, with other sorts of fishes in great abundance. As concerning the Coast, all alongst it is a very good and faire Land, hauing very faire shoalading of the same: for being three *English* leagues off the same, I found very faire shoalading in fifteene fathomes, and comming neerer the same fourteene, twelue, and tenne fathomes very faire sandie ground. As concerning the people, they are (as I doe suppose) a kinde of *Samoites*, or wandring Nation traouelling in the Summer time in Companies together, first to one place, and hauing stayed in that place a certayne time in hunting and fishing for Deere and Seales with other fish, straight they remoue themselves with their Tents and baggage to another. They are men of a reasonable stature, being browne of colour, very like to the people of the East and West *Indies*. They be very actiue and warlike, as we did perceiue in their Skirmishes with vs, in vsing their Slings and Darts very nimbly. They eat their meate raw, or a little per-

perboyled either with bloud, Oyle, or a little water, which they doe drinke. They apparell themselves in the skinnies of such beasts as they kill, but especially with Seales skins and towle skins, dressing the skins very soft and smooth, with the haire and feathers on, wearing in Winter the haire and feather sides inwards, and in Summer outwards. Their Weapons are Slings, Darts, Arrowes, hauing their Bowes fast tyed together with sinewes; their Arrowes haue but two feathers, the head of the same being for the most part of bone, made in manner and forme of a Harping Iron. As concerning their Darts, they are of sundry sorts and fashions. What knowledge they haue of God I cannot certainly say, but I suppose them to bee Idolaters, worshipping the Sunne. The Countrey (as is aforesaid) seemeth to be very fertile, yet could I perceiue or see no wood to grow thereon. Wee met all alongst this Coast much Drift-wood, but whence it commeth I know not. For coasting all this Coast alongst from the latitude of 66. degrees and an halfe, vntill the latitude of 69. degrees, I found many goodly Sounds, Bayes, and Riuers: giuing names vnto diuers of them, and purposing to proceed further, the folke in the Pinnasse with me did earnestly intreate me to returne to the ship againe, alleaging this, that if we came not in conuenient time, the people in the ship would mutinie: and so returne home before we came: the which indeed had fallen forth, if the Captaine as an honest Gentleman had not by seuerer meanes withstood their attempts, who would needes contrarie to their promises haue beene gone home within eight dayes after my departure from them. But the Captaine respecting his promise to mee, would by no meanes consent, but withstood them both by faire meanes and other wayes. So that vpon the seuenth day of Iuly, I returned again into the Kings Foord, which they in the ship had found to be a Bay, and comming to the place where wee had left the ship hoping to haue found them there, I saw vpon a certaine point a Warlocke of stones, whereby I did perceiue that they were gone downe the Foord. So the tide of ebbe being come, it being calme we rowed downe the Foord, finding in the mouth of the same amongst the Ilands, many good Sounds and Harbours.

The tenth day of Iuly the wind being at North North-west, I beeing in a certaine Sound amongst the Ilands, it being high water I weighed, stood West forth of the Foord going to Sea on the South side betweene a little Iland and the Maine, which Iland at our first comming, we called *Frost Iland*, after the name of the ship: we espied on the South sides certaine Warlockes set vp, whereupon I suspected that the *Frost* might be there, commanded the Gunner to shoot off a Peece of Ordnance, they presently answered vs againe with two other. We seeing the smoake (but heard no report) bore in to them, comming to an Anchor in a very good Sound by them, and found them all in health: the Captaine being very glad of our comming, forasmuch as hee had very much trouble with the company for the cause aforesaid. Also in the time of our absence the people did very much villanie to them in the ship, so that the Captaine tooke three of them; other of them also he slew, but the three which he tooke he vsed with all kindnesse, giuing them Mandillions and Breeches of very good cloth, also Hose, Shoes, and Shirts off his own backe. This afternoone, I with my Boy came againe aboard the ship, taking in this Euening all our prouision of water.

The eleuenth day, the wind being at North North-east, we set saile forth of the Sound which we named *Frost Sound*, but before our comming forth of the same our Captaine commanded a young man whose name was *Simon*, by the expresse commandement of the State-holder of *Denmarke* to bee set aland, wee also in the Pinnasse set another aland, they both being Malefactors, the which was done before our comming away, we giuing to them things necessarie, as victuall and other things also. Thus hauing committed both the one and the other to God, wee set saile homewards, we standing forth to Sea South-west, and South-west and by West till noone, when making obseruation, Queene *Annes* Cape bearing South and by East halfe Easterly some ten leagues, I found my selfe in the latitude of 66. degrees 10. minutes, when I directed my course South South-west till fixe a clocke when wee were amongst much Drift Ice, being to leeward two points vpon our lee-bow, so that I was forst to lie off West North-west till we were cleere of the same, at which time I directed my course South-west and by South, wee sayling so all the night following.

The twelfth day, the wind at North North-east, wee went away South-west and by South till ten a clocke, when we were amongst more Drift Ice, wee being againe to lie West North-west, to get cleere of the same, which we did about noone, we hauing this day and the Euening before a mightie hollow Sea, which I thought to be a current, the which setteth thorow *Fretum Davis* to the Southwards, as by experience I proued: for making obseruation this day at noone, we found our selues in the latitude of 62. degrees 40. minutes, whereas the day before we were but in the latitude of 66. degrees 10. minutes, hauing made by account a South and by West way about ten leagues. This afternoone I directed my course South South-west.

The thirteenth day, the wind as before, we steered still South and by West, being at noone in the latitude of 60. degrees 17. minutes, going at the same time away South and by East. This foresaid current I did find to set alongst the Coast of *Gronland* South and by East. The fourteenth day, close weather, being an easie gale we steering South-east and by East. The fifteenth day, still

All close weather til noone, we steering as before, being in the latitude of 59. degrees. This day at noone I went away East South-east; this afternoon it was hase and still weather, when we had sight of some Drift Ice. The 16. day, close weather with the wind at North-west and by West, our course East South-east til about ten a'clock, when we met with a mightie bank of Ice to wind-ward of vs, being by supposition seven or eight leagues long, wee steering South South-east to get cleere of the same. We met all alongst this Ice a mightie scull of Whales. Moreover, wee sight with a great current; which as high as we could suppose, set West North-west over for America. This day at noone, the weather being very thicke, I could haue no obseruation, this Evening by reason of the Ice, wee were forced to lye South and by West, and South South-west, to get cleere of the same, amongst which we came by diuers huge Ilands of Ice.

The seuenteenth day, being cleere of the Ice, about foure in the morning, I directed my course South-east by South till noone, at which time I went away East and by South, the weather being very haytie and thicke: about midnight it fell calme, the wind comming vp Easterly.

The eighteenth day, the wind still Easterly, we lying East South-east, away vnder a couple of courses larboord tackt. This day in the forenoone, we saw certayne Ilands of Ice. The nineteenth day, the wind still Easterly with the weather very hase.

The first day of August also it was very thicke weather, with a faire gale at South-west and by West. This forenoone wee met with a scull of Herrings, so that I knew wee were not farre from the Iles of Orkeney, so hauing a shrinke at noone, I found vs in the latitude of 58. degrees 40. minutes, at which time I sounded with the deepest Lead, finding 42. fathomes redde sandie ground, with some blacke dents. This Evening betweene five and sixe a clocke wee sounded againe, when we had no more but twentie fathomes dent ground, whereby I knew that we were faire by the shoare, when some of our men looking forth presently, espied one of the Ilands of Orkeney, it being very thicke, wee cast about, and stood with a small sayle to Seaboord againe, we lying West North-west off all this night.

The tenth day, about five in the morning, we came thwart of the Castle of Elsonuere, where we discharged certaine of our Ordnance, and comming to an Anchor in the Road, the Captaine with my selfe went ashore, and hearing of his Majesties being at Copeman-Hauen, wee presently went aboard againe, and set sayle: comming thither about two a clocke. The Pinnasse also which he had lost at Sea, in which my Countreyman John Knight was Commander, came also the same night about foure a clocke, both they and we being all in good health, praised bee Almighty God. Amen.

CHAP. XV.

The second Voyage of Master I. A. M. HALL, forth of Denmark into Groenland, in the yeere 1606.

contracted.

WE departed from Copeman-Hauen, the seven and twentieth of May, in the yeere of our Redemption 1606. with foure ships and a Pinnasse. The Fleet being Admirall, wherein went for principall Captaine of the Fleet Captaine Godske Lindeno a Danish Gentleman with my selfe, being vnder God Pilot Maior of the Fleet. In the Lyon which was Vice-Admirall, went for Captaine and Commander, Captaine John Cunningham a Scottish Gentleman, who was with me the yeere before. In the Teyren went Hans Browne, a Gentleman of Norway. In the smal ship called The Gilleflowre, went one Castine Rickerfon a Dane. In the Pinnasse called the Car, went one shipper Andres Noll, of Bergen in Norway. So by the providence of God, wee weighed and set saile about sixe a clocke in the Evening, with a faire gale at South South-west, comming to an Anchor in Elsonuere Road to take in our water.

The nine and twentieth in the morning, we shot off a Peece of Ordnance, for all the Captaines and Commanders to come aboard of vs, who being come, our Captaine commanded the Kings Orders to bee read, which done, they returned aboard, at which time wee weighed with a faire gale at East North-east, standing away North and by West till I had brought the Cole North-east and by East off, when I steered away North North-west, and North-west and by North. This Evening about five a clocke, I set the Annold, it bearing West halfe Northerly, three leagues and an halfe. All this Evening wee stood away North-west and by North.

The thirtieth day, the wind at East South-east, wee steering as before, this morning about sixe a clocke, the Lesold bore West and by North of vs sixe leagues off. At five this Evening, the Sam bearing West South-west five leagues, I directed my course West North-west, with the wind at North-east and by East.

The one and thirtieth in the morning, very hase weather with a stiffe gale at East North-east,

Bergen.

East, we steering West North-west away, till about nine a clocke, when we had a shrink of the Land which was the wester gate of *Mardo*, we steering alongst the Land. Wee came to an anchor in *Flecorie*, where we were to make and take in wood and water.

The second of June we weighed, and came forth of the Harbour of *Flecorie* about sixe in the morning, hauing a fresh gale at East North-east. About eleuen at noone, I set the Nafe of *Norway*, it bearing North North-west foure leagues off. The fourth day in the morning about two a clocke, we were faire by the high Land of the *Teddoe*, I caulding to cast about stood to the Southwards, West and by South and sometimes West. This day at noone, I found my selfe in the latitude of 57. degrees 45. minutes, the Nafe of *Norway* bearing East North-east two and twentie leagues off. This day at noone also I cast about and stood to the Northwards, lying North with the stemme, hauing the winde at North North-west. This afternoone dyed one of our *Groenlanders* called *Oxo*. All this euening, and the night following, the winde as before, we lying also North with little winde.

One of our *Groenlanders* dyed.

The sixt and fixt most what calme.

Shotland.

Our *Groenlander* dyed.

The seventh day, the winde at South-west and by South and South South-west, we steering West and West and by North. This day at noone we were in the latitude of 58. degrees 40. minutes. The tenth day about foure in the morning, it began to blow a fresh gale at East and by South, at which time we stood alongst the Land to the Southward, till I had brought the South Head of *Shotland*, called *Swinborne Head*, North-west and by North about three leagues off; and *Faire Ile* next hand South-west and by South eight leagues off, at which time I directed my course away West with a fresh gale at East South-east about halfe an houre to three. I set the South head of *Shotland* it bearing North-east eight leagues off, *Faire Ile* next hand South-east seven leagues off, foule next hand North foure leagues, wee still steering away West with a fresh gale at East South-east. All this afternoone and the night following it was very thicke and raynie weather, the winde continuing as before. This night at midnight dyed the *Groenlander* which we had aboard vs, named *Omeg*.

The fourteenth day, the winde as the night before a faire gale, we steering as we did before, with hayse weather hauing a shrink, at noone I found vs in the latitude of 58. degrees 40. minutes, hauing made a West and by South way Southerly two and thirtie leagues, differing to the Westward from the Meridian of the Nafe 19. degrees 45. minutes. This afternoone we had a faire gale at South-east with thicke weather, we steering away West.

The fifteenth day, the winde as before, we steering away West, being by my imagination in the latitude of 58. degrees 40. minutes. The three and twentieth day, the winde at the North-east a faire gale, we steering betweene the West North-west, and the West and by North, being at noone in the latitude of 56. degrees 10. minutes, hauing by reason of a Northerly current contrarie to my expectation, made a West way Southerly two and twentie leagues. The Compasse also as I doe suppose, being varied more then a Point to the westwards.

Sight of Land with Ice.

The first of Iuly wee saw Land being eight leagues off, with a great banke of Ice lying off South-west, wee setting our tacks aboard laid off East and by South and East South-east, to double the same, about two a clocke hauing doubled the same, wee went away West and by South all this euening and night following. This Land I did suppose to be *Busse* Island; it lying more to the Westwards then it is placed in the Marine Charts.

A current.

The Pinnasse came foule of the *Lion*.

South current.

Variation obserued.

The second day thicke weather with the winde at North North-west, we steering West and by North. This afternoone we were in a great Current setting South South-west. The which I did suppose to set betweene *Busse* Island and *Freseland* ouer with *America*; wee steering West North-west with a faire gale at North. This night about nine a clocke, the Pinnasse came foule of the Vice-admirall, where with her anchor shee tore out about a foot of a planke a little above water, and broke downe the beakes head.

The sixth making obseruation, I found vs in the latitude of 58. degrees 50. minutes, contrarie to my expectation, whereby I did see the Southerly Current to bee the principall cause. The seventh day, the winde at North and by East, we lying West North-west, being at noone in the latitude of 59. degrees 40. minutes, our way North-west two and twentie leagues. This euening I found the North Point of the Compasse to be varied 12. degrees 5. minutes, to the Westward of the true North.

The eighth day, the winde came vp more Southerly betweene the South-west, and the South-west and by West with an easie gale, we steering away North-west and by West; being at noone in the latitude of 59. degrees 30. minutes, hauing by reason of the Current and Variation made a West way Southerly about ten leagues.

The ninth day close weather, it being calme all the forenoone, wee perceiving by our ships which lay becalmed, a violent Current setting South-west. This day at noone, we were in the latitude of 59. degrees 40. minutes. The tenth about foure in the morning, the winde came vp to the North North-west. I casting about stood to the Westwards, lying West with the stemme, being in the latitude of 60. degrees 16. minutes. We saw the coast of *America* about nine leagues off, at which time I made obseruation of the variation, and found the Needle varie 24. degrees to the Westwards of the true North.

A current setting South-west.

Sight of *America* in 58. degrees and 30. minutes.

The

The Hill tops were covered with snow, and the Shoare to the Northwards full with Ice, but to the Southwards it seemed cleere. Here I found a great Current to set West into the shoare, which about midnight did bring vs to bee incumbred with very many Ilands of Ice, hauing much to doe to get cleere off the same without danger: but by Gods helpe it being faire weather with a fresh gale at South-west, wee got cleere off the same, standing East South-east and South-east and by East.

A Current.

The fourteenth in the morning being cleere of the Ice, I went away East North-east and North-east and by East till eight a clocke, when I directed my course North-east and by North, being at noone in the latitude of 59. degrees, the Cape or Head land which wee saw that night bearing West South-west sixteene leagues off. All this afternoone and night following it was for the most part still weather: this euening I found the variation 23. degrees 55. minutes.

Variation obserued.

The sixteenth faire weather with a fresh gale at East South-east, our course as before, being in the latitude of 60. degrees 20. minutes, the ships way North and by East northerly twentie leagues. This afternoone and the night following the wind as before, we steering still North-east and by North.

The eighteenth also thicke weather, being forced to stand away North North-west to double a great banke with great Mountaines of Ice almost incredible to be reported, yet by the helpe of God wee passed the same, sayling all this day by great and huge mountainous Ilands of Ice, with the winde at South-west and by South, being at noone in the latitude of 63. degrees 45. minutes. Wee did see our selues beset round about with mightie bankes of Ice, being forced to make more saile, and to lye to and againe all this night to keepe vs cleere of great and small Ilands of Ice, where many times we were in such danger, that we did looke for no other thing then present death, if God had not bene mercifull vnto vs and sent vs cleere weather, where by his assistance we kept our selues very hardly and with great difficultie cleere of the Ice.

Compassed about with Ice.

The nineteenth day in the morning cleere weather with a fresh gale at South-west, wee plying amongst the Ice to see if wee could get a gut to get cleere of the same, at which time wee saw the Land of America about the latitude of 64. degrees, it lying next hand South and North, being high ragged Land couered with snow, the shoare being all beset with Ice. So lying off and on amongst the Ice in great perill till about noone, when God of his goodnesse sent vs to espie a little gut where wee went through, and stood South South-east away, coming still by many Ilands of Ice. Heere I did finde both by my course and reckoning (the variation also of the Compasse respected) that wee were carried with a mightie Current to the Westwards, as both now and afterwards wee did probably prooue and see the same. For I setting my course from the coast of America in the latitude of 58. degrees and a halfe for the coast of Groenland North North-east with a compasse, whose wyers were placed more then two third parts of a Point to the Eastwards of the North, the variation being 23. degrees 30. minutes Northwesting and 24. degrees, as by obseruation I found betweene the latitude of 58. and a halfe and 54. degrees, yet I did finde my selfe contrarie either to mine owne, or to any of their expectations which was in the Fleet with mee, carried almost foure Points with the Current to the westwards ouer our iudgements.

Land of America.

A mightie current setting to the westward.

Note.

The twentieth, wee still sayled to the Eastwards by many great Bankes and Ilands of Ice, being still compassed in, wee being forced to stand to the Southwards to get cleere, where being sometimes becalmed, wee did plainly see and perceiue our selues carried into the Ice to the westward very violently. This Current setteth West North-west. The twentieth in the euening I found the Compasse varied 23. degrees.

Here I did giue direction to the other steerman to direct their course for Groenland. Variation obserued.

The one and twentieth day in the morning faire weather, wee espyed a gut through the Ice, it seeming cleere to the Southwards of the same, where bearing into the same about noone, wee were cleere of all the Ice by the mercifull prouidence of God. Here I obserued the latitude, it being 63. degrees 33. minutes. Now hauing the one and twentieth day at afternoone caused the Admirall to call the other Captaines and Steermen aboard, with whom wee might conferre, and hauing shewed briefly my reckoning with the other euents, which contrarie to my expectation had happened, the cause whereof at that instant they did plainly see and perceiue: They confessing, the Current as they did now plainly see, to bee the cause of the same. So hauing done, I gaue to the other Steermen directions, that being cleere of the Ice they should goe betweene the East and the East and by North ouer for the coast of Groenland and not to the Northwards of the East and by North, because of the former euents. And now at this instant, by Gods helpe, being cleere I called to them, giuing the same directions. This afternoone and the night following it was calme. This euening I found the Compasse varied 23. degrees 25. minutes.

The Current.

Variation obserued.

The two and twentieth day at noone I found vs in the latitude of 63. degrees 20. minutes. The three and twentieth faire weather, the ayre very cold, as with vs in the moneth of Ianuarie, the winde variable betweene the East North-east, and the South-east and by East, being at noone in the latitude of 63. degrees, hauing made a South-east and by South way

Yyy

eleuen

Variation ob-
serued.

eleuen leagues. This day at noone I cast about to the Westwards, the other ships doing the like, lying North-east and by North with the stemme, finding this euening the Needle varied to the Westwards 23. degrees 30. minutes.

Wee lost the
Lion and *Gilliflowre*.

The foure and twentieth, the winde variable betweene the South South-east and the South-east and by South with raine and fogge. This day about eleuen a clocke wee did see much Ice to leeward, wherefore I cast about to the Southwards, the winde comming to the East North-east, wee lying South-east with the stemme, supposing the ship to haue made a North and by West way halfe Northerly two and twentie leagues. This afternoone, by reason of the fogge, we lost sight of the *Lion* and the *Gilliflowre*, wee looking earnestly forth for them, and shooting both we and the *Urin* diuers pieces of Ordnance, but wee could neither see nor heare them, at which time the winde came vp Southerly, we standing away our course betweene the East and East and by North.

The five and twentieth, wee had sight of *Greenland*, being about ten leagues to the Southward of *Queene Annes Cape*. Wee standing away East South-east in with the Land with the winde at South. All this night it did blow very much, wee steering North by West and North North-west.

The siluer
Myne.

The place of
the siluer
Myne.

The seuen and twentieth day in the morning was reasonable cleere weather with a fresh gale at South South-west. This morning betweene foure and five of the clocke, I espyed *Queene Annes Cape* to beare East by South next hand of mee, and *King Christians Foord* South South-east of me, being thwart of *Rumels Foord*, *Queene Sophias Cape* bearing North halfe westerly, about five leagues off. Therefore I thought it conuenient to put into *Cunninghams Foord* where the siluer was, both in regard that I had sworne to his Maiestie as concerning the same; and also because wee were expressely commanded to bring home of the same. So hauing a faire gale at West South-west, wee came into the aforesaid Riuer, anchoring in a very good Sound, hard by the *Vre* in sixteene fathoms, at the mouth of *Cunninghams Foord*, about five of the clocke. There came presently foure of the Countrey people vnto vs after their old accustomed manner. This euening about fixe of the clocke the *Vrin* anchored by vs. This night the Admirall, my selfe, and Captaine *Browne* went on Land to see the Myne of siluer: where it was decreed, that we should take in as much thereof as we could.

Barter for
Seales skinnies
and Whales
finnes.

Many greene
Ilands.

Another foord.

Queene Sophias
Cape.

Reine Deere.

Rumels Foord.
A hollow Sea.

Fos Bay.

No ground at
100. fathoms
in the midst
of *Fos Bay*.

On Sunday the third of August, the Sauages seeing our curtesie toward them, bartered Seales skinnies and Whales finnes with vs, which being done, wee went to our Boat, and rowing away, three of them taking their Boats, rowed with vs vp the Foord, calling to other of the people, telling them and making signes to vs, of our dealing towards them. Then they also came to vs and bartered with vs for old Iron and Knives, for Seales skinnies and coates made of Seales skinnies, and Whales finnes, and rowed still all with vs. In the end, hauing rowed five or fixe leagues vp the Foord, and seeing it to bee but a Bay, wee returned alongst many greene and pleasant Ilands, where wee found good anchoring: the people still followed vs to the number of five and twentie persons till about fixe of the clocke; when it fell thicke with some raine, and the winde being Southerly, wee rowed in among the Sounds, at which time they went from vs: wee rowing our Boat to one of the Ilands went to supper. And hauing supped, wee rowed some three leagues vp an other Foord, where we found very shallow water, in which place we stayed with our Boat all that night.

The fourth day in the morning about three of the clocke, wee returned to our ship againe with a gale of winde Southerly, being somewhat thicke and raynie weather, sayling by the Land among the Ilands, till we came three leagues to the Northwards of *Queene Sophias Cape*, when going without the Ilands, wee met with a very high Sea, so that wee had much to doe, but by the prouidence of Almighty God, the Boat was preserued from being swallowed vp of the Sea. In the end, wee got againe among the Ilands, and so about noone wee came to our ships. The fift day, some of our men went on Land among the Mountaines, where they did see reine Deere.

The sixt day, I casting about, stood into the shoare South-east, till wee had brought *Rumels Foord* East and by North off vs, bearing roome for the same Foord. There goeth a very hollow Sea betweene the Ilands of the *Kings Foord* and *Rumels Foord*. The winde being somewhat still, wee towed on head with our Boats till wee came thwart of a Bay, in which I was in the *Vrin* Boat, which I named *Fos Bay*, after the name of *Philip de Fos*, Pilot of the *Urin*. But the Admirals wilfulnesse was such, that I could by no meanes counsaile him therein though night were at hand, but hee would goe vp the Foord, till wee came on the starboord side of the Foord to fixe and twentie fathomes sandie ground. The *Vrin* let fall anchor by vs, but the winde comming off the Land (our Captaine and Companie being so obstinate and willfull, that I could by no meanes get them to worke after my will) the ship draue into the mid-foord, where wee could haue no ground at an hundred fathoms, till the Tyde of flood came, when the flood set the ship to the shoare: but I laying out a Cage-anchor got the ship off; and setting our foresaile, stood for another roade vp the Riuer.

The eight day about foure in the morning, wee came to an anchor in twentie fathomes sandie ground,

ground, having very faire shoalding within vs. About noone the *Urin* came and anchored by vs. It floweth in this Riuer South-east and North-west, and it standeth in the latitude of 66. degrees and 25. minutes.

Fos Riuer in 66. degrees 25. minutes. A Town found ten leagues vp the Riuer.

The ninth in the morning, our Captaine with the Captaine of the *Urin*, went with their Boates vp the Riuer, where they did come to see their winter houses, which were builded with Whales bones, the balkes being of Whales ribbes, and the tops were couered with earth, and they had certaine Vaults or Sellers vnder the earth foure square, about two yards deepe in the ground. These houses were in number about some fortie. They found also certaine Graues made vp of stones ouer the dead bodies of their people, the carkasses being wrapped in Seales skins, and the stones laid in manner of a Coffin ouer them.

10 This day, in this place we set a man on Land, which had serued our Captaine the yeere before, which for a certaine fault committed by him our Captaine left behinde in the Countrey. About noone our men came aboard againe; and after Dinner some of the people came vnto vs, of whom wee caught five with their Boates and stowed them in our ships, to bring them into *Denmarke*, to enforme our selues better by their meanes of the state of their Countrey of *Groineland*, which in their owne language they call *Secanunga*, and say, that vp within the Land they haue a great King, which is carried vpon mens shoulders.

A man left on Land.

Five of the people taken againe. Groenland called by the Inhabitants Secanunga.

The tenth of August in the morning, the winde being at East South-east, we weighed and came forth of *Rombes Foord*, but being come forth to Sea amongst the Ilands, the winde came 20 vp to the South-west and by South, the Sea going maruellous high, we lying West and West and by North to Sea, doubling certaine Ilands and Rocks. Where the Sea going so wonderfull high had set vs vpon the Rocks, where we had all dyed, if God of his mercy at that instant, when wee saw nothing before our eyes but present death, had not sent vs a great gale of winde at South South-west, whereby wee lay West North-west away with a flawne sheat, wee doubling of the Ilands and Rocks, were forced to goe betweene certaine little Ilands, which lye off Queene *Sophias* Cape foure leagues into the Sea. The which Ilands I named the yeere before, *Knights Ilands*, after the name of *John Knight*. So hauing passed these Ilands not without great danger, wee found betweene them many blinde Rocks, and being cleere in the Sea. The thirteenth at noone, we were in the latitude of 66. degrees 50. minutes, being off Cape *Sophia* West and by North halfe westerly about sixteene leagues.

Knights Ilands.

30 The eighteenth about foure in the morning, we got cleere off the Ice, steering South and by West away, it being very thicke weather till noone, when it cleered vp: at which time wee saw the shoare rising like Ilands, being very high and stretching South and by East, and North and by West about foure and twentie leagues, the shoare being beset all full with Ice, so that in that place it is impossible for any ship to come into the shoare. Also of the Southermost of these two Capes, lay such a great Banke of Ice stretching into the Sea, that wee were forced to lye West and by North to double the same.

All this afternoone, wee were almost compast with Ice, we bearing to the same, the winde comming vp to the East South-east, we standing South to the Ice were forced to loofe for one 40 Iland, and to beare roome for another till about foure a clocke, when by Gods helpe wee got cleere off the same, the winde comming vp to the South-east and by South, wee lay South-west and by South off all this night.

The two and twentieth thicke weather, the winde as before. This morning about seuen a clocke we saw a saile West and by South of vs, we standing to him, for it was our Vice-admirall the *Lion*, who had beene greatly troubled with the Ice, wee being glad to meete one another againe.

We met againe with the Lion.

The eight and twentieth about foure in the morning, the storme ceased, the winde comming vp to the West South-west. About three a clocke wee set our sailes standing South-east away. But being vnder saile, we spyed great bankes and Ilands of Ice to leeward of vs, lying off 50 East and by South, which Ice I did iudge to lye off Cape *Desolation* about eight leagues off: the which by reason of the fogge we could not see.

The nine and twentieth about sixe in the morning, the winde came vp to the North-east and by North, we making saile went South South-east away till noone with a stiffe gale, wee seeing in the morning pieces of drift Ice to windward of vs; hauing at noone a shrink of the same I found vs in the latitude of 59. degrees 46. minutes, hauing from noone to noone made a South-east and by South way eight leagues.

The one and thirtieth, the winde continuing, wee holding still our course with the winde still at North North-west, with faire and cleere weather it blowing very much, so that wee stood away vnder a couple of courses low set, the Sea very much growne, being in the latitude 60 of 59. degrees 10. minutes, hauing made an East South-east way somewhat Easterly foure and thirtie leagues. This afternoone after my obseruation, wee saw some Ilands of Ice with some drift Ice, I something maruelling of the same, knowing both by my account and my noones obseruation, that we were shot too farre from any part of *Groineland*, that was described in the Ma-

rine Chart. For the southermost part described therein is not in the latitude of 60. degrees, and we being now in the latitude of 59. degrees ten minutes, Cape *Desolation* bearing West North-west halfe Northerly about sixtie foure leagues, and Cape *Christian* which was the next known part of *Greenland* North-west and by West westerly eight and thirtie leagues, so holding our course East South-east away, about foure a clocke we had sight of Land, being very high Land, it lying alongst East South-east about sixteene leagues, the westermost part seemed either to fall away East North-east, and the southermost point bearing East northerly, fell away East and by North. This Land is very high, hauing the Hills covered with snow, the shoare being very thicke with Ice: this place because I knew not whether it was of the Mayne or an Iland, I named *Frost Iland*, after the name of the ship.

The first of September, at noone, I made obseruation, and found vs in the latitude of 58. degrees, hauing made a South-east and by South way southerly fixe and twentie leagues. This day at noone I directed my course East and by South, This afternoone about fixe a clock it fell calme, and so continued all the night following. This euening I found the variation 10. degrees 50. minutes North westing.

The fourth day the winde at East and by South, welying South and by East, hauing a shrink of the sunne about noone, I did suppose vs in the latitude of 57. degrees 20. minutes, hauing made a South-east and by South way southerly about ten leagues; all this day and the night following we lay as before.

The eighth day faire weather, the winde as before, it being almost calme, wee going away as before, being at noone in the latitude of 58. degrees 36. minutes, hauing made an East North-east way northerly twentie leagues, by reason of the great southerly Sea. All this afternoone and the night following it was for the most part calme. This euening I found the Compass varied about two degrees 45. minutes north westing.

The ninth day also faire weather, the winde southerly a fresh gale, our course still East, being at noone in the latitude of 58. degrees 40. minutes, our way East and by North easterly twelue leagues. This afternoone the winde came vp to the South or South and by East with raine. This night about midnight thicke weather with raine, the winde comming to the South-east, welying East North-east and North-east and by East with the stemme.

The tenth day about two in the morning, the winde came vp to the South South-west, wee steering our course East, being at noone in the latitude of 59. degrees 10. minutes, hauing made an East and by North way easterly foure and fortie leagues, wee hauing a fresh gale westerly. This day wee saw one of the Fowle the which are on the Iland of *Bas* in *Scotland*, called *Bas Geese*. This euening I found the variation 1. degree 4. minutes northeasting.

The eighteenth, this forenoone about nine a clocke, wee espyed land, rising somewhat ragged, the Eastermost point of the same bearing South-east and by South, and the Westermost part South and by West about eight leagues. These Ilands by my account and obseruation, I found to be the Ilands of *Ferri*, being at noone in the obseruation of 62. degrees 5. minutes.

The nineteenth I set a little Rocke, called the *Monke*; which lyeth off to the South-east end, it being about fixe a clocke, East South-east of vs three leagues off. This night about ten a clocke it fell calme.

The twentieth, wee did see the streame had set vs to the Northwards. This streame setteth vnder the Ilands of *Farre* next hand East and West. So casting about wee stood to the westwards, lying West South-west and sometimes West and by South, and sometimes South-west, it being very raynie weather, about midnight it fell calme and so continued all night vnto the morning.

The first of October in the afternoone about foure of the clocke, we had sight of *The Holmes*. The second day, wee steered away South-east and by South and South South-east for *The Col*. And about eight of the clocke this night wee came into *Turco*; where wee rode all the day following. The third day at night the winde came to the North-east; so wee weighed and came into *Elsenor Road*. The fourth day, by the prouidence of God, we arriued in our desired Port of *Copen Hawen*, 1606.

The seuerall burthens and numbers of men employed in the ships of the Fleet aforesaid, were as followeth.

The *Trust* being Admirall, was of sixtie tunnes, had eight and fortie men. The *Lion* Vice-admirall, was of seuentie tunnes, had eight and fortie men. The *Vrin* or *Eagle* Reare-admirall, of one hundred tunnes, had fiftie men. The *Gillisflowe* was of fortie tunnes, had sixteene men. The Pinnasse called the *Cat*, was of twentie tunnes, had twelue men. *Bredaranses Foord* is most Northerly. *Cunninghams Foord* is next in sixtie seuen degrees and odde minutes. The Foord wherein they saw the Towne ten leagues vp the same, is two leagues to the South of *Cunninghams Foord*. The Kings Foord is in sixtie fixe degrees and an halfe.

William

William Huntris of Stowborow in Yorke-shire, is Master Hall his man, and is allowed thirtie pound by the yeere of the King of Denmarke, for his skill in Nauigation.

I haue also Master Halls Voyage of the next yeere 1607. to Groenland from Denmarke, written, and with representations of Land-fights curiously delineated by Iofias Hubert of Hull, but the Danes (envious perhaps that the glory of the Discouery would be attributed to the English Pilot) after the Land saluted, mistimed, and in fine forced the ship to returne for Island. For which cause I haue here omitted the whole.

CHAP. XVI.

The Voyage of Master IOHN KNIGHT, (which had bene at Groenland once before 1605. Captaine of a Pinnasse of the King of Denmarke) for the Discouery of the North-west Passage, begun the eighteenth of Aprill 1606.

Set sayle from Grauesend in a Barke of fortie tunnes, called the *Hope-well*, well April 18. 1606. victualled and manned at the cost of the Worshipfull Companies of *Moscouie*, and the *East Indie* Merchants, for the Discouerie of the North-west Passage the eighteenth of Aprill 1606. and arriued the sixe and twentieth of the same month in the Ile of *Orkney*, in a Sound called *Pentlefrith*. Heere wee were stayed with contrary winds at West and North-west, and with much storme and foule weather about a fortnight. In which meane space, I entertained two men of this Countrey, which are both lustie fellowes at Sea and Land, and are well acquainted with all the Harbours of these North parts of *Scotland*. These men brought vs into a very good Harbour, called *Saint Margarites Hope*, where we had the Sea open to vs for all winds that are good for vs to proceed on our Voyage. In this Countrey we found little worthy of Relation. For it is poore, and hath no wood growing vpon it. Their Corne is Barley and Oates. Their fire is Turffe, their houses are low and vnseemely without, and as homely within.

Pentlefrith, in Orkney.

Saint Margarites Sound.

Vpon Munday the twelfth of May, I set sayle from *Saint Margarites Sound* or *Hope* in *Orkney*, at nine of the clocke in the morning, our course being West and by South: and at eight of the clocke at night, the Hill called *Hoyce*, did beare West Southerly eleuen or twelue leagues, and the *Stacke* South and by East Easterly three leagues and an halfe, the winde beeing at East South-east.

This day was for the most part calme, and sometimes wee had a fresh gale of winde: our course was West and by South, halfe a point Southerly. This day I passed by two small Islands. The one of them is called, the *Clete*, and the other the *Ran*. They are distant foure leagues the one from the other. The course betweene them is South-west and North-east. The Southermost is called the *Clete*, and is the lesser of the twaine: it is distant from the North-east part of *Lewis*, called the *Bling-head*, seuen leagues: and the course betwixt them is North-west and South-east. Also this *Bling-head*, is distant from the *Farro Head*, of the *Hieland* of *Scotland* West and by North halfe a point Westerly, and is distant seuentene leagues. Also the course betweene *Bling-head* and the North-west part of *Lewis*, is West and by South halfe a point Westerly, and faire low Land without Wood. There is good riding all along the shoare, the winde beeing off the Land, and in some places are very good Harbours for all winds. From eight to twelue at night, we ran sixe leagues West South-west.

Two small Islands.

The Bling-head the North-east part of Lewis.

This morning we had a fresh gale of wind at East North-east: our course was South-west and by West two houres five leagues. From two to ten South-west, and by South 20. leagues. From ten to twelue West South-west sixe leagues. The latitude at noone was 58. degrees 27. minutes.

Fifty eight degrees 27. min.

From Wednesday at noone till Thursday at noone, was for the most part raine and fogge, the wind at North-east and by East: our course was West halfe a point Southerly: our latitude at noone being Thursday, 58. degrees 23. minutes. From Thursday at noone till Friday at noone, being the sixteenth, our way was West Southerly about twentie leagues: the latitude at noone was 58. degrees 19. minutes. This night the wind was sometimes variable betweene the South and by West and South-east, with faire weather, the Magneticall Declination 18. degrees: the height of the Pole was 58. degrees 10. minutes. Also in the morning the Sunne beeing tenne degrees above the Horizon, was distant from the East to the North-wards of the East twentie two degrees.

Eightene degrees of variation.

From Friday at noone vntill midnight was little wind Southerly, and sometimes calme, and from midnight till twelue at noone the next day a stiffe gale of wind at East North-east. This foure and twentie houres I judged our way to be made good West, something Southerly thirtie leagues.

leagues. The latitude at noone was 58. degrees 10. minutes. Also the sunne did rise fiftie degrees to the Northward of the East.

From Saturday at noone being the seventeenth, till Sunday at noone being the eighteenth, our course was West and by South a stiffe gale of wind fiftie leagues, being close weather, we made no obseruation of latitude.

From Sunday at noone till Munday at noone I steered away West and West and by South, hauing a storme at East and by North: our course was West and Southerly fiftie leagues.

From Munday at noone till midnight, our course was West and Southerly: and from that time till noone West and by North and West among. I iudged wee sayled fortie leagues these foure and twentie houres, being for the most part foggie. The latitude at noone was 57. degrees 50. minutes.

A current to the Northward

From Tuesday at noone till noone on Wednesday, our course was West and by North fortie fife leagues, being foggie weather without obseruation. Here wee had a current, which I iudge setteth to the Northwards.

From Wednesday at noone till Thursday at noone, being the two and twentieth, our course was West and by North fiftie leagues with much fogge and close weather, and much winde at North-east and by East.

Many Gullies and much Rock-weed.

From Thursday at noone till midnight, our course was West and by North. Then the winde came to the North: wee tooke in our mayne course, and I spooned away with our fore-saile till Friday, the winde being at North North-east, I iudged our way West South-west, the twelue houres that I spooned about fiftene leagues, the other twelue houres West Northerly fife and twentie leagues. This three and twentieth day, wee saw many Gullies and much Rock-weed.

A current to the North east ward.

From Friday at noone till Saturday at noone, I iudged our way to bee made South-west and by West, but it proued West and by South, rather Westerly, twentie leagues by reason of a current, that I iudge setteth to the North-eastward. The latitude at noone was 57. degrees 53. minutes. The variation of the Compasse was about a point to the Westward. This forenoone and all night the wind was at North a very hard gale; wee spooned with our fore-saile. Also this forenoone, we saw much Sea Tange and Rock-weed.

The variation 13. degrees Westward.

From Saturday at noone till Sunday at noone, our course was Southward about twentie leagues, the wind being Northerly. This day we saw much Rock-weed and Drift-wood. The latitude was fiftie seuen degrees. The variation was to the Westward thirteene degrees or thereabout. The sunne being fife degrees high in the morning, was twentie foure degrees to the Northward of the East.

An Owle.

From Sunday at noone till two of the clocke the next day in the morning, beeing Munday, our course was West North-west, we made our way West and by North twentie leagues, hauing a fresh gale at South-east and by East: it fell calme till foure of the clocke: then it blew an easie gale at West South-west, wee stemming North-west, &c. betweene that and North North-east the wind being variable. The wind freshed toward noone. This morning we saw an Owle.

The variation 14. degrees and an halfe to the West.

The latitude at noone the eight and twentieth, was 57. degrees 57. minutes. The variation of the Compasse was fourteene degrees and an halfe to the West. This day wee had blacke water, and many ouer-falls, streame leeches, and sets of currents, as it seemed to the Northward, and some to the Westward.

Fiftie eight degrees of latitude. White fowles. Dead Cowes.

The thirtieth, we found our latitude to be fiftie eight degrees. Heere it seemed that we were in a tyde gate, which I iudged to set North and South, or that it was the Eddie of the currents, which we saw the other day. Also wee saw white Fowles, which cheeped like Spar-hawkes. Also we saw driuing many dead Cowes.

The variation of the Compasse 24. degrees North westward. Iune 1.

The one and thirtieth, the sunne being fiftie degrees above the Horizon, I found it to bee twentie seuen degrees to the Eastward of the South: againe in the afternoone, the sunne beeing fiftie degrees high, it was distant from the South to the Westward fiftie one degrees: at noone it was 55. degrees 6. minutes, the height of the Pole was 58. degrees 3. minutes. The variation of the Compasse was twentie foure degrees toward the North-west. Our way made these twentie foure houres was not aboue sixe leagues West, being little wind for the most part.

Many blacke wild fowles.

From Saturday at noone till two of the clocke it was calme: then it began to blow an easie gale at North. At night I obserued the sunne setting, and found it to set twentie one degrees to the Westward of the North, the winde continuing variable betweene the North and the West North-west till noone, being the first of Iune. Then I found my selfe by obseruation to be in the latitude of 57. degrees 35. minutes. I iudged our way from noone to noone West and by South or thereabout thirteene leagues.

From Sunday at noone till ten of the clocke the same Euening, it was calme. Then it began to blow a stiffe gale of wind at South South-east. Our course was West till noone, the next day being Munday, twentie three leagues. This day wee saw many blacke Fowles like Willocks flying in flockes together.

The fourth my latitude at noone, was 56. degrees 40. minutes. The latitude next day at noone

noone was fiftie fixe degrees. The variation of the Compasse by the Scale was twentie degrees, and by my other Instrument twentie foure degrees to the West. The sunne was twentie two degrees and an halfe high, and to the North of the West thirtie degrees by the Instrument, and twentie fixe degrees by the Scale.

Latitude 56. degrees.
Variation 24. degrees Westward.
Fifty eight degrees.

Our latitude at noone the eleuenth, was fiftie eight degrees. And at night the sunne did set fourteene degrees to the Westward of the North, and did rise fiftie degrees to the Eastward of the North.

The thirteenth, the Ice seemed to be disperfed thinner with the wind, or some other accident: then I set sayle with our two courses, but was forced to take them in againe, and moored to another great Iland of Ice, about a mile to the Westward of the other. Here setteth some smal current to the South-westward. For the great flakes of Ice that were somewhat deep, draue to the Southward, and the other small Ice which was flotie draue with the wind, which was variable betwixt the North-west and the North. Here we were in sight of Land, which bore West South-west from vs, shewing in some parts like Ilands. Our latitude at noone was 57. degrees 25. minutes.

A small current to the South-west. Sight of Land like Ilands.

From Friday at noone till eight of the clocke at night, wee continued moored to the said Ice: then it fell calme, and I loosed and rowed to the Westward with our Oares, hoping to get thorough, till twelue of the clocke, then the Ice grew very thicke. I moored againe till foure of the clocke the next morning. Then we rowed and sayled with an easie gale of wind till eight of the clocke the next morning being Saturday. Then it began to blow a fresh gale Easterly, and we cunnd the ship among the Ice with our Oares till noone. Our latitude was fiftie eight degrees. From Saturday at noone till midnight wee guided our shippe to the Westward among the Ice with our Oares, hoping to get thorough: but wee were suddenly compassed about with many great Ilands of Ice, and continued so distressed with a sore storme of wind at South-east, being foggie and thicke weather: we were so bruised betweene mightie great Ilands of Ice, that we were in danger euery minute to be crushed in pieces with force of the heauing and setting of the said Ice with the great Sea that the wind made, had not God of his mercie provided for vs: for our owne endeouours did little auaille to our helpe, though wee employed all our industries to the vttermost of our powres.

The nineteenth, we descryed the Land of *America*, which riseth like eight Ilands: the Northernmost part of it did beare North and by West about fiftene leagues from vs. I obserued the latitude, and found my selfe to be in 56. degrees and 48. minutes. The variation of the Compasse was twentie fve degrees to the Westward. All this Coast sheweth like broken Land or Ilands; and the tyde of flood commeth from the Northward.

The Land of *America* descryed in 56. degrees 48. minutes. *America* here sheweth like broken Ilands.

Tuesday the foure and twentieth all the morning, there blew a storme Northerly, and such a suffe of the Sea, and so much Ice came in, that our fasts brake that were fast on shoare, and our Rudder was driuen from our sterne with the force of mightie Ilands of Ice; so that we were forced to hale close into the bottome of the Coue to saue our clothes, furniture and victuals: wee did our best, but before we had done, our ship was halfe full of water: the night comming vpon vs being wearie, we tooke a little rest.

On Wednesday, we went hard to worke when the ship was on ground, to get the water out of her, and to stop so many of her leakes as we could come by, and to saue so much of our bread as we could; and some went to building our shallop. Also I caused our Boate to be lanched ouer the Iland; and sent my Mate *Edward Gorrell*, with three others, to seeke for a better place where to bring our ship on ground, if it were possible, to mend her againe. But they returned without any certaintie by reason of the abundance of Ice, which choked euery place. They found wood growing on the shoare.

Edward Gorrell the Masters Mate.

Thursday being faire weather. Here Master John Knight ended writing in this Iournall. On this Thursday the sixe and twentieth of Inne in the morning, our Master caused some of our men to goe aboard our ship, to saue what things they could. And hee and *Edward Gorrell* his Mate, and his brother, and three more of our Company tooke the Boate, carrying with them foure Pistols, three Muskets, fve Swords, and two halfe Pikes for to goe ouer to a great Iland, which was not aboue a mile from our ship, to looke if they could find any Harbour or any Coue, to get our ship into for to mend her. Also he carried an Equinoctiall Diall with him, and per to make a Draught of the Land. When they were passed ouer to the other side, our Master, his Mate, and his brother, and one more went on shoare, leauing two of vs in the Boate with one Musket, one Sword, and an halfe Pike to keepe it: which two stayed in the Boate from ten of the clocke in the morning, vntill eleuen of the clocke at night, but could heare no newes of them after their departure vp into the top of the Hill. Then did the Trumpettor sound two or three times, and the other did discharge his Musket two or three times, and so they came away to the other side to the West of the Company, where the ship was: where they were watching for our comming; who seeing vs two comming and no more, they maruelled where the rest of the company were. When wee came on shoare, they enquired for our Master and the rest of our company. But we could tell them no newes of them after their departure out of the Boat, but that we did see them goe vp to the top of the Iland. Which report did strike all our men into a great

M. John Knight with fve more passeth ouer to a great Iland, where he and three of his company seeme to haue bin intercepted by the Sauages.

of the Sauages

A great Cur-
rent setting to
South,

great feare to thinke in what extremitie we were, because we did want our Master and three of our best men, and our Ship lay funke, and we had nothing to trust to but our Shallop, which was not at that time halfe finished. This night lying on shoare in our Tent, which was betweene two Rocks, we kept very good watch, for feare of any peoples sudden assaulting of vs: or if our Master and his company had traualled so farre, that they could not come againe that night, and would shoote a Musket, that wee might heare them. But they came not at all.

The next day being Friday, and the seuen and twentieth of Iune, wee consulted to goe ouer seuen of vs with our Boate, to try if we could see or learne any news of our Master, or any of our men; for we were afraid that they were either surprisid by the Sauages of the Countrey, or else deuoured by the wilde Beasts. So we tooke with vs seuen Muskets, and Swords, and Targets, and such prouision as we had in the Ship, and went downe to the Sea-side, but wee could not get ouer for Ice. At length we returned, with much adoe to get on shoare, and went to our Ship, to saue what things we could all that day.

On Saturday, the eight and twentieth, we did likewise saue what things we could, and gat all our things out of our Ship, and made her cleane in hold, hauing faire weather, hoping in God to saue her, and to mend all things, as well as we could; for she lay vpon hard rocks: wherefore we kept her as light as we could, for beating and bruising of her hull. That night about nine of the clocke, it began to raine very sore, and so continued all night: and about one of the clocke at night, our Boate-Swaine and our Steward being at watch, and their watch almost out, the Steward went aboard the Ship to pompe, leauing the Boate-Swaine at watch. Some Musket shot length from our Tent: while he was in pumping, there came ouer the rocks a great sort of the Countrey people toward the place where the Boate-Swaine was: who when they saw him, they shot their arrowes at him, running toward him as fast as they could. Whereupon hee discharged his Musket at them, and fled to our Tent as fast as hee could. Whereupon hee dis- vs, they were so many of them in sight. The Steward hearing his Musket goe off, came out of the Ship, and as he was comming, saw the Sauages running to our Shallop, and cryed out to vs that were asleepe in our Tent, to come to rescue the Boate-Swaine, and the Shallop. We made what haste we could; when we came towards them, and saw so many of them in our Shallop, we were afraid we were betraid. At this time it rained very sore; yet calling our wits together, we sent two of our men backe vnto our Tent, the rest of vs made toward them, and shot at them some three or foure Muskets: who when they saw vs shoote, they stood in our Shallop, and held vp their hands vnto vs, calling one to another. Then thought we with our selues, that we were better to dye in our defence in pursuing of them, then they vs, being but eight Men and a great Dogge. When they saw vs marching toward them so fiercely, our Dogge being formost, they ranne away: but we durst not pursue them any further, for it was in the night, and they were in sight about fiftie men. Thus we recovered our Shallop. Then we sent some more of our men to our Tent to keepe it; and the rest followed toward the place whither they fled. But before we could ouertake them, they were gotten into their Boates, and were rowing away. through the Ice; which was so thicke, that they could not passe away, but stucke fast; for their Boates were very great: wee seeing them sticke fast in the Ice, some setting with Oares, and some rowing, came so neere them, as we could, and shot at them some dozen shot, before they could get cleere: which shot caused them to cry out very sore one to another; for their Boates were full of men. As farre as we could iudge, they be very little people, tawnie coloured; thin or no beards, and flat nosed, and Man-eaters.

On Sunday, the nine and twentieth, all day long we gat such things as we could aboard our Shippe, for feare they should come ouer with more men, and beset vs, our Ship lying betweene two great Rocks, and all without so full of Ice, that we could not passe any way to Sea, no not with a Boate. That day, two of our men kept watch vpon the Rocks, to giue vs warning, if they did come ouer with Boats. Then did our Carpenter make what shift hee could with our Shallop, and did tench her in some places, but neither calked her, nor pitched her. Then did wee take her, and bring her downe close to the Shippe, and there shee did stand all night.

On Munday, the thirtieth day in the morning we went to worke to cut the Ice with Axes and Pick-axes, to get our Shippe; for all about the land was nothing but Ice, and no place to ride free neither with Shippe nor Boate. That night it pleased God, that wee got her out, and came away rowing with our Oares; but she was exceeding leake, and our Shallop too: and, which was worse, we had neuer a Rudder to stirre our Ship withall. Wee rowed all that night among the Ice.

The first and second dayes of Iuly, we continued also rowing vp and downe among the floting and driving Ice, with little hope of recovering our Countrey.

The third of Iuly, we had a gale of winde at North, and a great current setting to the Southward: Then made we fast our Ship to an Island of Ice, and went to worke, and to stow her things within boord, to make her stiffe; for wee had neuer a whit of balast in her. Then did our Carpenter make what shift hee could, to hang our Rudder, hauing nothing conuenient in our Shippe

Ship to make Gudgeons, nor Pintels. Then were we forced to breake open our Masters Chest, and to take all the Iron bands off it, to make fast two Pick-axes, for two Pintels, and to binde our Rudder withall. So, as it pleased God, that night we hanged our Rudder, having but two Pintels and a Cable through the middle of it, to keepe it to with two tacks. Then were we in good hope to get cleare of the Ice, because wee had some steerage, though it was but bad: for before, we durst beare but little sayle, our Ship being so leake, and her stemme so sore beaten with the rocks and Ice, and having no steerage, but were forced to rowe with our Oares, till wee were all sore and weary.

Pintels are small Iron pins made fast to the Rudder, and hung the Rudder to the Stern-post, &c.

The next day about tenne of the clocke in the morning, the winde came to the West North-west, and was faire weather: so we steered away East and by North, to get vs out of the Bay: And at noone, the watch being out, which was the third watch that we had after we came out of the Countrey (for before, continually we did watch all, to keepe our Shippe cleare of the Ice, as neere as we could) we began to Pumpe our Shippe, but could not make her sucke in a thousand stroakes, if she had stood but one halfe houre unpumped. Then were wee forced to vnmorage our Ship, to see if we could finde our leakes. We soone found a great many of leakes, but not that which caused vs to Pumpe so sore. At the last, we found it close abaft our forefoot, where her keele was splintred in two or three places, where the Sea came running in so fast, that it was not possible to keepe her free with both our Pumps, and wee could not come to it to stop it; for it was vnder the timbers. Then did wee take our maine Bonnet, and basted it with Oecom, and put it ouerboard, right against our leake, which eased vs some foure or five hundred stroakes in an houre. Then vpon consultation had among our selues, wee resolved to shape our course towards *Newfound Land*, to see if we could get any place to mend our Ship, hoping there to meete with some *English* or *French* men. At this time we had one of our men very sicke, and another had his hand very sore splitted; and most of vs all were so sore with rowing and pumping, that we were scarce able to stirre, but that we must perforce.

They get out of the Bay, where they rode.

Our Shipps Keele was splintred in two or three places. They consult to touch at *Newfound Land*.

The fift of Iulie, wee shaped our course for *Newfound Land*, with the winde at West South-west.

The one and twentieth, the winde was at South South-west; and we fell with the Land, being nothing but broken Ilands. Then we stood to the Westward, being in the latitude of 49 degrees and an halfe.

Broken Ilands in 49. degrees and a halfe, of latitude.

The two and twentieth was faire weather, and the winde very variable: and about sixe of the clocke at night, the winde came to the West North-west. Then we steered in among the Ilands, to see if we could finde any harbour to mend our Shippe; for she was very leake. When we were come in among them, we found nothing but broken Ilands, and a great current, which did see from Iland to Iland, and had no ground at an hundred fathoms. That night we were very sore intangled with sunken Rocks, and in great danger of casting away our Ship, having very thicke weather: wherefore we kept to and fro all that night.

Many broken Ilands, which were the *Illes de Fogo*.

Sunken Rocks.

The foure and twentieth of Iulie, in the morning, we spied some dozen Shallops, which were fishing some two leagues from vs. Then wee made what way wee could toward them, &c. We remained in this Bay of *Fogo*, in repairing our Shippe, and refreshing of our selues, vntill the two and twentieth of August. Then taking our leaues of our kinde and louing friends, with giuing them most heartie thankes for their goodnesse towards vs, we put forth to the Sea, and with an indifferent and reasonable good passage we arriued safely in *Dartmouth* in *Devonshire*, and sent word to *London* vnto our owners, of the losse of our Master and his three companions, and of the dolefull successe of our Voyage, the foure and twentieth day of September, 1606.

Twelue Shallops of Fishermen.

The rest of this Iournall, from the death of Master *John Knight*, was written by *Oliuer Browne* one of the Company.

CHAP. XVII.

The fourth Voyage of *JAMES HALL* to *Groeneland*, wherein he was set forth by *English Aduenturers*, Anno 1612. and slaine by a *Greenlander*.

Written by *WILLIAM BAFFIN*.

Ednesday, the eight of Iulie, 1612. in the morning I perceiued the Sunne and the Moone, both very faire aboue the horizon, as I had done diuers times before. At which time I purposed to finde out the longitude of that place, by the Moones comming to the Meridian. Most part of this day I spent about finding of the Meridian line; which I did vpon an Iland neere the Sea, hanging at the extreames of my Meridian line two threds with Plummetts at them, instead of an index and sights.

Thursday, the ninth day very early in the morning I went on shoare the Iland, being a faire morning,

morning, and obserued till the Moone came iust vpon the Meridian. At which very instant, I obserued the Sunnes height, and found it 8. degrees, 53. minutes, North: in the eleuation of the Pole 65. degrees 20. minutes. By the which, working by the doctrine of sphericall triangles, hauing the three sides giuen, to wit, the complement of the Poles eleuation; the complement of the Almecanter; and the complement of the Sunnes declination, to finde out the quantitie of the angle at the Pole: I say, by this working, I found it to be foure of the clocke, 17. minutes, and 24. seconds. Which when I had done, I found by mine Ephemerides, that the Moone came to the Meridian at London that morning at foure of the clocke, 25. minutes, 34. seconds: which 17. minutes, 24. seconds, subtracted from 25. 34. leaueth 8. 10. of time, for the difference of longitude betwixt the Meridian of London (for which the Ephemerides was made) and the Meridian passing by this place in Greenland. Now the Moones motion that day, was 12. degrees 7. minutes: which conuerted into minutes of time, were 48. minutes, 29. seconds: which working by the rule of proportion, the worke is thus: if 48. minutes, 29. seconds; the time that the Moone commeth to the Meridian sooner that day, then she did the day before, giue 360. the whole circumference of the earth, what shall 8. minutes 10. seconds giue, to wit, 60. degrees, 30. minutes, or neere there about: which is the difference of longitude betweene the Meridian of London, and this place in Greenland, called *Cockins Sound*, lying to the Westward of London.

60. degrees 30. minutes difference of longitude betweene the meridian of London and Cockins Sound in Greenland.

Obiection.

Answer.

This finding of the longitude, I confesse is somewhat difficult and troublesome, and there may be some small errour. But if it be carefully looked vnto, and exactly wrought, there will be no great errour, if your Ephemerides be true. But some will say, that this kinde of working is not for Marriners; becaule they are not acquainted to worke propositions by the table of signes, and an instrument is not precise enough to finde out the houre, minute, and second. For the losse of one minute of time, is the losse of 7. degrees of longitude. I answere, that although the most part are not vsed to this worke, yet I know some of the better sort, which are able to worke this and the like propositions exactly. And those which yet cannot, and are desirous to learne, may in short space attaine to such knowledge as shall be sufficient for such things. And how necessary it is, that the longitude of places should be knowne, I leaue to the iudgement of all skilfull Marriners, and others that are learned in the Mathematicks.

This afternoone it was agreed by the chiefe of our Company, that our Master, *James Hall*, should goe in the smaller Ship, farther to the Northward.

Cockins Ford in 65. deg. 20. min. Variation 23. deg. 58. min.

The foresaid Thursday in the euening, he departed out of the *Patience* into the *Haris-case*, to get forth of the Harbor, which our Master called *Cockins-ford*, in remembrance of Alderman *Cockin* one of the Aduenturers: which place, is in the latitude of 65. degrees, 20. minutes. And the variation of the compasse is 23. degrees, 58. minutes, to the Westward. That euening was very calme, and we towed our Shippe forth with the Shallops and Ships Boat. But within an houre or two after we were got into the Offin; the winde being at North, it blew a great storme, which continued all that night.

Many good Rodes.

The foureteenth, our Master turned the Ship vp to the Riuer againe, toward the Riuer where the supposed mine should be. But the tyde was so farre spent, that we could not get to Sea, but were constrained to Anker in a roade at the South side of the Riuer, some three leagues from the *Patience*, in which place are many good Rode-steeds to be found.

Great footing.

Thursday, the sixteenth day, the winde was at North-west, and blew so stiffe a gale, that we could not get to Sea that day. That night, eightene of vs went into the Ilands to looke for some Deere, but found none. But we perceiued the foote-steps of some great Beast, which wee supposed to be of some great Elke: the foote was as bigge as any Oxe foote.

Ramels Riuer.

Tuesday, the twentie one, the weather still continued in such sort, that wee could not by any meanes get to the Riuer, where the supposed Myne should bee. Wherefore our Master bare roome for *Ramelsford*, being a Riuer Southward of another, called *Cunninghams ford*, some twelue leagues. And we came to an Anchor at the entrance on the Southside of the Ford, about seuen of the clocke.

James Hall deadly wounded by a Savage.

Wednesday, the two and twentieth day, about nine or ten of the clocke, the Sauages came to barter with vs, being about fortie of them, and continued about an houre and an halfe: At which time our Master *James Hall*, being in the Boate, a Sauage with his Dart strooke him a deadly wound vpon the right side, which our Surgeon did thinke did pierce his liuer. We all mused that he should strike him, and offer no harme to any of the rest: vnlesse it were, that they knew him since he was there with the *Danes*; for out of that Riuer they carried away five of the people, whereof neuer any returned againe: and in the next Riuer, they killed a great number. And it should seeme that he which killed him, was either brother, or some neere kinsman to some of them that were carried away: for he did it very resolutely, and came within foure yards of him. And, for ought we could see, the people are very kinde one to another, and ready to reuenge any wrong offered to them. All that day he lay very sore pained, looking for death euery houre, and resigned all his charge to Master *Andrew Barker*, Master of the *Haris-case*, willing him to place another in his roome Master of the small Ship.

Thursday,

Thursday, the three and twentieth, about eight of the clocke in the morning he dyed, being very penitent for all his former offences. And after we had shrowded him, wee carried him in the Shallop, to burie him in some out Iland, according to his owne request while he was living. After we had buried him, we went in the Shallop to seeke for the mine, which we had expected so long. All that day we rowed along toward the North, passing by a Cape called, *Queene Sophias Cape*. That night we staid at an Iland, some three leagues short of the River.

The death of James Hall.

Queene Sophias Cape.

Friday, the foure and twentieth, in the morning, wee rowed along, and came to the place, which is on the South-side of the entrance of *Cunninghams River*: And we found diuers places, where the *Danes* had digged; it was a kinde of shining stone, which when our Goldsmith, *James Carlile*, had tried, it was found of no value, and had no mettall at all in it: but was like vnto *Mosconic* fludde, and of a glittering colour. That day after we had dined, wee rowed vp that River some foure leagues, where diuers of our company went vp into the Mountaines, and found a Valley more pleasant, then they had seene in the Countrey. That euening we returned, and came to the place where the *Danes* had digged their supposed Mine, and tooke some of it in our Boate to carry with vs, and returned toward our Ship. That night we rowed and sailed, and the next morning about nine of the clocke, we came to our Ship.

Cunninghams River.

The supposed Mine found to be of no value. A pleasant Valley.

Saturday, the five and twentieth, being Saint *James* his day, in the forenoone, we came to our Shippe, lying on the South side of the River, called *Ramels River*. And as soone as our Master found, that the people came no more to trade with vs, he determined to depart with the Shippe into the Kings Ford to the *Patience*: and rowing about the harbour, where we lay to finde some neerer way out to the Sea, we found among the Ilands, where many of their winter houses had bin, and some of their Tents were but lately carried away. In which place wee also found one of their long Boates, made of wood, and bound together for the most part, with shiuers of Whales fins, and couered with Seales skinnies, being some two and thirtie foote in length, and some five foote broad, hauing tenne thoughts or seates in it. That day about twelue of the clocke we weighed anchor, and departed out of *Ramels Ford*, which lieth in the latitude of 67. degrees, and the variation of the compasse is 24. degrees 16. minutes, being a very faire River, and one of the most principall, which wee saw in that Countrey, stretching in East and East and by South. This night, about one of the clocke, we came to the *Patience*, lying in the Kings Ford.

Many of their winter houses in Ramels River. The fashion of their greater Boates.

Ramels Ford in the latitude of 67. degrees. The variation is 24. degrees 16. minutes.

Sunday, the sixe and twentieth, Master *Andrew Barker*, and our Merchant, Master *Wilkinson*, with other of the Company, were in conference about returning home, because that since our Master was slaine, none of the Sauages would trade with vs, as they were wont.

Wednesday, the nine and twentieth, we were likewise occupied about taking in of ballast, for our Shippe was very light: and that euening it was agreed, that *Andrew Barker*, Master of the *Harts-ease*, should goe Master of the *Patience*, which was sore against the minde of *William Gourdon*: and *William Huntrice* was appointed Master of the *Harts-ease*, and *Iohn Gartenby*, one of the quarter Masters of the *Patience*, was Masters mate of the *Harts-ease*.

William Huntrice Master of the Harts-ease.

Tuesday, the fourth of August, in the morning the winde being Northerly, a very small gale we got to Sea, where the winde came to the Southward, and we tacked sometime on the one boord, and sometime on the other, making small way on our course.

They come out of harbour.

Munday the tenth, was raine and foule weather, as it had continued euery day since wee came from harbour, sauing the seuenth day, which was somewhat faire: For commonly while the winde is South, it is very thick and foule weather. We tacked sometimes on one boord, and sometimes on the other, making a South by West way, at noone sixe leagues.

Thick and foggy weather, the winde being South.

Wednesday, the twelfth, it waxed calme, we being somewhat Southward of a Cape, called *Burnils Cape*: and about three or foure of the clocke in the afternoone, the winde came to the North and by West, an easie gale, with faire weather.

Burnils Cape.

The eighteenth, at noone we were in 58. deg. 50. min. The seenteenth day, I tooke the variation of the compasse, finding it to be 13. degrees 22. minutes, contrary to the obseruations of others in this place. And if any doe doubt of the truth thereof, they may with a little paines proue it. The eighteenth of August, the declination of the Sunne was 9. degrees 58. minutes, for the Meridian of *London*. But we being almost foure houres of time to the Westward thereof, there are three minutes to be abated from the rest: and so the declination was 9. degrees 55. minutes; and his height aboue the horizon was 24. degrees 40. minutes in the latitude of 59. degrees 0. min. and his distance from the South to the Westward, by the compasse, was 81. degrees. And for truth of the first obseruation, I tooke another shortly after, finding them not to differ aboue 4. minutes.

Variation 13. degr. 22. min.

Wednesday the nineteenth, the winde still continued with thicke and hase weather, we being at noone in the latitude of 58. degrees 30. minutes, or thereabout, making a South South-east way, about ten leagues.

Thursday the twentieth, was faire weather, the winde at East North-east, wee steered away South-east and South-east and by East, making at noone a South-east and by South way, about thirtie leagues, being at noone in the latitude of 57. degrees 20. minutes. This day in the afternoone, I tooke the variation of the compasse, and found it about 11. degrees 10. minutes.

Variation 11. degr. 10. min.

Friday,

Friday the one and twentieth, faire weather, with the winde at North and North by East, and we made an East South-east way, halfe Southerly twentie foure leagues, being at noone by obseruation, in the latitude of 56. degrees 50. minutes.

Saturday the two and twentieth, faire weather, the wind at North and North by East, wee made an East way halfe Southerly, some twentie two leagues, being at noone in the latitude of 56. degrees 47. minutes.

Variation 7.
degrees 23.
minutes.

Sunday the three and twentieth, faire weather, the wind at West North-west, we making an East and East by North way about twentie foure leagues. This day I tooke the variation of the Compasse, and found it to be 7. degrees 23. minutes, being at noone in the latitude of 57. degrees 26. minutes.

Variation 7.
degrees 20.
minutes.

Munday the foure and twentieth, being *S. Bartholomewes* day, faire weather with an North North-west, wee making an East North-east way, halfe Northerly about twentie seven leagues, and were at noone by obseruation in the latitude of 58. degrees 4. minutes. This day I obserued and found the Compasse to be varied 7. degrees 20. minutes.

The true variation 6. deg.
4. minutes.

Tuesday the five and twentieth, faire weather and calme: the winde at North, wee made a North-east and by East way seenteene leagues, being at noone in the latitude of 58. degrees 30. minutes. This day I found the common Compasse to be varied one point, and the true variation to bee 6. degrees 4. minutes.

Wednesday the sixe and twentieth faire weather also, with the wind North North-west, we made a North-east and by East way halfe about twentie two leagues, being in the height of 59. 20 degrees 10. minutes.

Thursday the seven and twentieth indifferent faire weather, with a stiffe gale of wind at the North North-west, we making a North-east way about thirtie one leagues, being at noone in the latitude of 60. degrees 10. minutes.

Friday the eight and twentieth, the wind at South-east with a stiffe gale, wee made good about noone a North-east and by East way about twentie nine leagues. This day in the afternoon it blew so great a storme, that wee were in great distresse, the winde at East South-east. But about eleuen of the clocke it came to the North-west, and North-west by North. And we ranne some twentie leagues.

Saturday the nine and twentieth, it blew so stiffe, that wee could beare none but our fore-30 saile, making an East and by South way halfe Southerly, about thirtie leagues.

Sunday the thirtieth, all the forenoone it blew a very stiffe gale, and about noone the winde came Southerly; and it blew a very great storme, which continued all that day and that night in such sort, that we could not saile at all, but all that night lay at hull.

Munday the one and thirtieth, in the morning about foure of the clocke, the winde came to the South-west a very stiffe gale. At which time we set our fore-saile. The wind continued all this day and night, we steered away East and by South, making at noone an East North-east way about thirtie foure leagues.

Tuesday the first of September, the wind still continued at South-west, blowing a very stiffe gale, we steered away East and by South, making an East way about fiftie leagues. This day at 40 noone we were in the latitude of 60. degrees 45. minutes.

Wednesday the second faire weather with the wind at South-west, wee made an East and by South way halfe a point Southerly about fortie two leagues, being at noone in the latitude of 60. degrees 10. minutes. This day I obserued, and found the Compasse to be varied three degrees to the Westward.

Thursday the third day faire weather, the wind at South-west: wee made an East by North way at noone about twentie leagues. This day in the after-noon, the winde being at North North-west, it blew a very stiffe gale for two Watches; and toward seven or eight of the clocke the storme so increased, that our shippe was not able to beare any saile. And all that night wee lay at hull.

Friday the fourth, the storme still continued, and we could beare no saile all that day till about 50 foure of the clocke in the afternoon, at which time we set our fore course, and our maine course. The night before in the storme, we lost *The Haris-case*. This day wee made some twelue leagues East and by North. And we fell to lee-ward lying at hull some five leagues South by West.

They lose company of their
confort, *The*
Haris-case.

Saturday the fift calme weather, but very thicke and close all the forenoone: the wind continued still at North North-west, we making from the time wee set our courses the day before, about twentie leagues East halfe Southerly; being at noone in the latitude of 59. degrees 53. minutes.

Variation 6.
degrees to the
East.

Ground found.

Sunday the sixt, faire weather, the wind at North North-west, we steering away East North-east, and East and by North, made an East by North way, halfe Northerly some 29. leagues, 60 being at noone in 60. degrees 10. minutes. This day the Compasse was varied to the East sixe degrees. This afternoon it was almost calme: and wee sounded, and found ground at sixtie eight fathomes. This Evening about ten of the clocke the wind came to the South-east.

Munday the seventh, very faire weather, the wind South-east and South-east by East, wee racked

tacked in the morning to the North-ward, and ranne East North-east and East by North vntill seuen or eight in the afternoone: at which time we tacked vp to the Southward, and went away South-west till toward twelue a clocke that night twentie leagues.

Tuesday the eight, in our morning Watch I found our selues to be in 59. degrees 20. minutes: And about five of the clocke I espied Land, which we supposed to bee the Iles of Orkney, as afterward we found them to be the same. And toward three of the clocke, we came to an Anchor in a Channell running betweene the Ilands, where the people came to vs, and brought vs Hennes, Geese, and Sheepe, and sold them to vs for old clothes and shooes, desiring rather them then money. There are about eightene of these Ilands, which are called by the name of the

10 Orkeneis.

Wednesday the ninth, it was thicke weather, and the winde so Easterly that wee could not weigh Anchor.

Thursday the tenth, faire weather, and the wind came to the North-west, and about noone we weighed Anchor, and toward five of the clocke we were cleere off the Iles. The Channell for the most part lyeth North-west and South-east. All that night we stood away South-east.

Friday the eleuenth, faire weather, with the wind at North North-west. And about nine of the clocke in the morning, we steered away South South-east. At which time wee had sight of *Bugham-hesse*: And about two of the clocke we were thwart of it. The tenthenth, we came to an Anchor in *Hull Road*, for which the Lord bee praysed.

20 Here I thinke it not amisse briefly to relate the state and manners of the people of Groenland, forasmuch as I could learne: As also what likelihood there is of a passe into the Sea, which lyeth vpon *Tartarie* and *China*.

The North-west part of *Groenland* is an exceeding high Land to the Sea-ward, and almost nothing but Mountaynes; which are wonderfull high all within the Land, as farre as wee could perceiue: and they are all of stone, some of one colour, and some of another, and all glistering, as though they were of rich value; but indeed they are not worth any thing. For our Goldsmith *James Carle* tried very much of the Vre, and found it to bee nothing worth. If there bee any Metall, it lyeth so low in the Mountaynes, that it cannot bee well come by. There are some Rocks in these Mountaynes, which are exceeding pure Stone, Sner,

30 and whiter then *Alabastr*. The sides of these Mountaynes continually are couered with Snow for the most part, and especially the North sides, and the North sides of the Valleys, hauing a kind of Moss, and in some places Grasse with a little branch running all along the ground, bearing a little blacke Berrie, it runneth along the ground like Three-leaved Grasse heere in *England*. There are few or no Trees growing, as farre as wee could perceiue, but in one place some fortie miles within the Land, in a Riuer, which wee called *Balls Riuer*. There I saw on the South-side of an high Mountayne, which we went vp, and found (as it were) a yong Groue of small Wood, some of it fixe or seuen foot high like a Coppice in *England*, that had bene some two or three yeeres cut. And this was the most Wood that wee saw growing in this Countrey; being some of it a kind of Willow, Iuniper, and such like.

40 We found in many places much *Angelica*. We suppose the people eate the Roots thereof, for some causes. For we haue seene them haue many of them in their Boats.

There are great store of Foxes in the Ilands, and in the Mayne, of sundry colours: And there are a kind of Hares as white as Snow, with their furre or haire very long.

Also there be Deere, but they are most commonly vp within the Mayne very farre; because the people doe so much hunt them, that come neere the Sea. I saw at one time seuen of them together, which were all that wee did see in the Countrey: But our men haue bought diuers Coates of the people made of Deeres skinnes, and haue bought of their Hornes also. Besides, we haue diuers times seene the foot steps of some beast, whose foote was bigger then the foot of a great Oxe. Furthermore, the Inhabitants haue a kinde of Dogges, which they keepe at their Houses, and Tents, which Dogges are almost like vnto Wolues, liuing by fish, as the Foxes doe. But one thing is very strange, as I thought: for the Pizzles of both Dogges and Foxes are bone.

50 The people all the Summer time vse nothing but fishing, drying their fish, and Seales flesh vpon the Rockes for their Winter Prouision. Euery one both man and woman haue each of them a Boate made with long small pieces of Firre-wood, couered with Seales skinnes very well drest, and sewed so well with linewes or guts, that no water can pierce them through, being some of them about twentie foot long, and not past two foot, or two foot and an halfe broad, in forme of a Weauers shuttle, and so light, that a man may carrie many of them at once for the weight. In these Boates they will row so swiftly, that it is almost incredible: for no ship in the World is able to keepe way with them, although the haue neuer so good a gale of wind: and yet they vse but one Oare, who sitting in the middle of their Boate, and holding their Oare in the middle, being broad at each end like our Oares, will at an instant goe backward and forward, as they please.

Land descryed.

The Iles of Orkney.

The lying of the Channell in Orkney.

Bugham-hesse. They arrive at Hull.

High Mountaynes of stone very pure.

No profitable Vre.

Continuall Snow. Grasse. No Trees. *Balls Riuer*. A Groue of small wood.

Foxes. White Hares. Deere.

These seeme to be Elkes, or Loshes. Dogges like Wolues. The pizzles of Dogges and Foxes are bones, so also is the Marles pizzle, of which I haue by me one of stone. The great swiftnesse of their Boats. Their Oares broad at both ends.

Salmons and
Morfes, &c.
Angles and
Lines.

Their great
Boats 32. foot
long.

They worship
the Sunne.
Their salutation.

Their burials.

They burne
the weapons
and all other
Furniture of
the dead.

They vse fire.

They are not
Man-eaters.

Nayles & old
Iron greatly
desired of the
Sauages.
Men are not
to goe among
Sauages with-
out their wea-
pons.

In these Boates they catch the most part of their food, being Seales and Salmons, Morfes, and other kinds of fishes. Some they kill with their Darts, and other some with Angles, hauing a Line made of small shiuers of Whales Finnes, and an Hooke of some fishes bones: with which Line and Hookes, we also haue caught very much fish.

Also they haue another kinde of Boate, which is very long. For wee haue seene one of them thirtie two foot in length, open in the toppe like our Boates; hauing tenne seates in it. In which when they remooue their Dwellings, they carrie their Goods or House-hold-stuffe: for they remooue their Dwellings very often, as their fishing doth serue, liuing in the Summer time, in Tents made of Seales skinnies, and in Winter in Houses some-what in the ground.

Wee could not particularly learne their Rites or Ceremonies: but generally they worship the Sunne, as chiefe Authour of their Felicitie. At their first approach vnto vs they vsed with their hands to point vp to the Sunne, and to strike their hands vpon their breasts, crying *Ihont*; as who would say, I meane no harme: which they will doe very often, and will not come neere you, vntill you doe the like; and then they will come without any feare at all.

They burie their dead in the Out-Ilands neere the Seaside. Their manner of Buriall is this. Vpon the tops of the Hills they gather a company of stones together, and make thereof an hollow Caue or Graue, of the length and breadth of the bodie, which they intend to burie, laying the stones somewhat close like a wall, that neyther Foxes, nor other such beasts may deuoure the bodies, couering them with broad stones, shewing asfarre off like a pile of stones. And neere vnto this Graue where the bodie lyeth, is another, wherein they burie his Bow and Arrowes, with his Darts and all his other Prouision, which hee vsed while hee was yet liuing. Hee is buried in all his Apparell: and the coldnesse of the Climate doth keepe the bodie from swelling and stinking, although it lye about the Ground.

They eate all their Food raw, and vse no fire to dresse their Victuals, as farre as wee could perceiue. Also wee haue seene them drinke the Salt-water at our shippes side: But whether it bee vsuall or no, I cannot tell. Although they dresse not their meate with fire, yet they vse fire for other things, as to warme them, &c.

Diuers of our men were of opinion, that they were Man-eaters, and would haue deuoured vs, if they could haue caught vs. But I doe not thinke they would. For if they had bin so minded, they might at one time haue caught our Cooke, and two other with him, as they were filling of water at an Iland, a great way from our ship. These three I say were in the ships Boate without eyther Musket, or any other Weapon, when as a great company of the Sauages came rowing vnto them with their Darts, and other Furniture, which they neuer goe without, and stood looking into the Boate for Nayles, or any old Iron, which they so greatly desire, while our men were in such a feare, that they knew not what to doe. At length our Cooke remembred that hee had some old Iron in his pocket, and gaue each of them some, as farre as it would goe, with his Key of his Chest. And presently they all departed without offering any harme at all. But this I speake not, that I would haue men to trust them, or to goe among them vnprouided of Weapons.

CHAP. XVIII.

A true Relation of such things as happened in the fourth Voyage for the
Discouerie of the North-west Passage, performed in the
yeere 1615. Written by WILLIAM
B A F F I N.

The first by
Hudson in
which hee pe-
rished; the se-
cond by Sir
Thomas Button,
the third by
Captaine Gib-
bins.

After three sundry Voyages towards the North-west, to the great charge of the Adventurers: the last being vnder the command of Captaine Gibbins (in which was little or nothing performed.) Yet the Right Worshipfull Sir Dudley Digges Knight, Master Wostenholme Esquire, Master Alderman Iones, with others being not therewith discouraged, This yeere 1615. againe set forth the Discouery, a ship of fiftie five tunnes or thereabouts, which ship had bene the three former Voyages on the action. The Master was Robert Bileth, a man well acquainted that way: hauing bene employed in the three former Voyages: my selfe being his Mate and Associate, with fourteene others and two Boyes.

The sixteenth, we weighed Anchor at Saint Katharines, and that tyde came to Blackwall, the winde being at South South-west. The seuenteenth, wee went downe to Granesend, and the eighteenth to Lee, where we anchored that night.

Vpon

Vpon the sixt of May, we saw Land on the Coast of *Groenland*, on the East side of *Cape Farewell*: and that night we had a great storme: so wee kept a Southerly course to get about the *Ile* which lay on that shoare, and then kept our course vntill the seuenteenth day of May, all which forenoone we sayled by many great flands of Ice, some of which were about two hundred foot high above water (as I proued by one shortly after) which I found to be two hundred and fortie foot high, and if report of some men be true, which affirme, that there is but one seuenth part of the Ice above water, then the height of that piece of Ice, which I obserued was one hundred and fortie fathomes, or one thousand sixe hundred and eightie foote from the toppe to the bottome: this proportion I know doth hold in much Ice, but whether it doe so in all, I know not.

Groenland.
Cape Farewell.

High Ice
flands.

10 This seuenteenth of May, about noone we were come to the firme Ice, as one would suppose, being in the latitude of 61. degrees 26. minutes or thereabout, being the latitude of the South part of the *Ile of Resolution*: we comming to this Ice, our Master asked my opinion concerning the putting into the Ice: My iudgement was it would be best for vs to stand, and ply it vp to the Northwards. Hee answered, we were on the North side of the South Channell, and much Ice we must passe through, and if that we could get some two or three leagues within the Ice, it would euery tide open, and we should get some thing onward of our way, hauing all the Channell to the South-wards of vs. So with this resolution we put within the Ice, the wind being at East North-east: this first entrance I liked not very well, scarce finding any place to put in our ships head, and being neere thirtie leagues from the shoare, towards Euening wee were fast amongst the Ice.

Ile of Resolution.

20 But sometimes each day the Ice would a little open, we making what way we could towards the North-west in for the shoare till the two and twentieth day, hauing had the wind all Southerly. Yet we plainly saw that we set to the Southwards, for all that wee could doe.

The two and twentieth day, the wind came vp at North North-west: then our Master determined to stand forth againe. For if the wind should haue come to the North-east, it would be vnpossible for vs to fetch any part of the Channell, seeing wee droue so fast to the Southwards, with Southerly winds, and hauing so farre into the shoare, not hauing seene the Land.

30 Our Master was also determined to spend some twentie, or foure and twentie dayes in *Fretum Davis*, to see what hopes would be that wayes, supposing there would be little good to be done in *Hudsons Streights* for this time limited: then we plying to get to Sea-ward, and so by eight a clock at night, the three and twentieth day, we were cleere of the thicke Ice: againe, the Lord make vs thankfull, the wind at North-west and by North faire weather: but no sooner were we forth of the Ice, but that our Master changed his opinion: and being cleere of this thicke Ice wee stood to the Northward as much as the Ice and winde would giue vs leaue, running some thirteene leagues true North-east by North, being in the latitude of 61. degrees 50. minutes. The foure and twentieth day faire weather: the five and twentieth day, also faire weather, the wind at North and by West, till sixe a clocke, we hauing made a North-east by North way about twelue leagues and an halfe, our latitude at noone 62. degrees 20. minutes, at sixe a clocke the wind was at the North North-east. The sixe and twentieth day, all the forenoone

40 faire weather and cold: but in the afternoone it blew very hard, being close haffie weather, that about two a clocke this afternoone wee tooke in our sailes and hulled with our ship till the next morning at foure a clocke, all the time that we sayled this day we past through many ledges of Ice: hauing great quantitie to the Northward of vs, and hauing runne about twentie one leagues true vpon a West course. And note where I put this word *true*, I meane the true course, the variation of the Compasse, and other accidents allowed.

50 The seuen and twentieth day close foggy weather with much snow freezing on our throwds and tackling: the like we had not all this yeare before: but towards foure a clocke in the afternoone it began to cleere vp, and about sixe a clocke we saw Land, being the *Ile of Resolution*, and bearing West from vs about thirteene or fourteene leagues. This morning we set sayle, and stood to and fro as the Ice would suffer vs, and at ten at night, wee moored our ship to a piece of Ice, the wind being at West.

The eight and twentieth day being Whitfunday, it was faire weather, but the winde was at the West, and West by North: all this day we were fast to the piece of Ice. Yet we plainly perceiued that we set a great deale more into the Streights with the flood: Then we set forth with the ebbe the nine and twentieth day, the wind was variable, and faire weather: about eleuen a clocke we set saile and tacked to and fro along by the Land. And about two a clocke the next morning, the wind came to the South South-east, but we had so much Ice that we could doe but little good with a faire wind, the wind continued all this day and night a stiffe gale: this night (or rather Euening, because it was not darke at all) we were set within the point of the Land: so that now we were within the Streights.

No night.

60 The one & thirtieth day also faire weather, the wind for the most part at North North-west, the afternoone being cleere wee saw the point of the South shoare, called *Buttons Ile*, to beare from vs due South by the Compasse, which is indeed South South-east, somewhat Eastward, because here the Compasse is varied to the Westwards twentie foure degrees.

Variation 24 degrees.

The first of Iune, wee had some snow in the forenoone, but very faire weather in the afternoone, the wind at West North-west. We perceiuing the Ice to be more open close aboard the shoare, made the best way we could to get in, and to come to Anchor, if the place were conuenient; and by seuen a clocke we were in a good Harbour, on the North-west side of the Iland of *Resolution*, where an East South-east Moone maketh full Sea, or halfe an houre past seuen on the change day, as Sea-men account the water doth rise and fall, neere foure fathomes; the Compasse doth vary to the West 24. degrees 6. minutes, and is in longitude West from *London* 66. degrees 35. minutes. The breadth of the South Channell, or the distance betweene the Iland and the South shoare, is sixteene leagues, and the North Channell is eight miles wide in the narrowest place.

Vpon this Iland we went on shoare, but found no certaine signe of Inhabitants, but the tract of Beares and Foxes, Rockes and stonie ground, hardly any thing growing thereon: it is indifferent high Land to the Northward, hauing one high Hill or Hummocke on the North-east side, but to the Southward it falleth away very low.

The second of Iune in the morning the wind came vp at East South-east, with much snow and fowle weather: about noone wee weighed Anchor, and stood vp along by the Iland, so well as the Ice would giue vs leaue to get to the North shoare. Wee continuing our courses so neere the North shoare, as conueniently we could, with much variable weather and windes, but stedfast in continuance among Ice, till the eight day, hauing the wind full contrary to vs, and being somewhat neere a point of Land, or rather a company of Ilands, which after wee called *Savage Iles*, hauing a great Sound or In-draught, betweene the North shoare and them. At sixe a clocke we came to Anchor neere one of them, being the Eastermost sauing one. But whiles wee were furling our sailes, we heard and saw a great company of Dogges running vp and downe, with such howling and barking, that it seemed very strange. Shortly after we had moored our ship, we sent our Boat somewhat neerer the shoare, to see if they could perceiue any people; who returning, told vs that there were Tents and Boats, or Canowes, with a great many Dogges, but people they saw none. After Prayer, when our men had sapt, wee fitted our Boate and our selues with things conuenient: then my selfe with seuen others landed, and went to their Tents, where finding no people, we marched vp to the top of a Hill (being about a flight shot off) where we saw one great Canow or Boat, which had about fourteene men in it, being on the furthest, or North-west point of the Iland, and from vs somewhat more then a Musket shot. Then I called vnto them, vsing some words of *Groenlandish* speech, making signes of friendship. They did the like to vs; but seeing them so fearefull of vs, and we not willing to trust them, I made another signe to them, shewing them a Knife and other Trifles, which I left on the top of the Hill, and returned downe to their Tents againe. There wee found some Whale Finnes to the number of fortie or fiftie, with a few Seale skinnies which I tooke aboard, leauing Kniues, Beades, and Counters instead thereof; and amongst their houses I found a little bagge, in which was a company of little Images of men; one the Image of a woman with a child at her backe, all the which I brought away.

Among these Tents being five in number, all couered with Seales skinnies, were running vp and downe, about thirtie five or fortie Dogges; most of them muzzled. They were of our mungrell Mastiffes, being of a brinded blacke colour, looking almost like Wolues. These Dogges they vse in stead of Horses, or rather as the *Lappians* doe their Deere, to draw their sleds from place to place ouer the Ice: their sleds are shod or lined with great bones of fishes to keepe them from wearing, and their Dogges haue Collars and Furniture very fitting.

These people haue their Apparell, Boots, Tents, and other necessities much like to the Inhabitants in *Groenland*, sauing that they are not so neate and artificiall, seeming to bee more rude and vnciuill, ranging vp and downe as their fishing is in season. For in most places where wee came ashoare, we saw where people had beene, although not this yeere; but where their Habitation or their abode in Winter is, I cannot well coniecture.

This Iland lyeth in the latitude of 62. degrees 30. minutes, and in longitude West from *London*, 72. degrees or neere thereabouts, being sixtie leagues from the entrance of the Streights: here the Compasse doth varie 27. degrees 30. minutes, and a South-east Moone foure degrees East maketh a full Sea: it doth ebbe and flow almost as much water, as it doth at the *Resolution*, and here the floud commeth from the Eastward, although our Master was of opinion to the contrarie.

The tenth day in the morning, at sixe a clocke we set sayle, the winde at North, which continued not, but was very variable till noone, and then it came to North-west, we hauing sayled along by the shoare, about some nine leagues and an halfe North North-west, the Ice lying so thicke in the offen, that wee could not well get out of it: then perceiuing a good Harbour betweene two small Ilands and the Mayne, wee went in with our ship, where wee moored her, and stayed till the twelfth day at Euening.

In this place it is high water on the change day, at nine of the clocke, or a South-east Moone maketh a full Sea: the latitude of this place is 62. degrees 40. minutes; and the floud doth come from

from the Eastward, although our Master was perswaded otherwise, as well in this place, as at *Saluage* Ilands: for being among Ilands, euery point hath his feuerall set and eddie. But I going to the top of the Iland, plainly perceiued the Ice to come from the South-east, and from the North-west on the ebbe. In this place is no signe of people, as we could perceiue.

The sixteenth day, lying still in the Ice, the weather being very close and hasey, as it hath beene these six dayes: and being neere a great company of Ilands, in the afternoone, the winde being at West North-west, wee stood in amongst these Ilands, and in the euening we moored our Shippe to one of them in a small cove, the better to defend her from the Ice. In this place wee stayed all the seuenteenth day: and vpon the eighteenth, being Sunday, about eleuen a clocke
10 we set sayle, being almost calme, making the best way wee could to get forth. Here are a great company of Ilands, each hath his feuerall set and eddy, that the Ice doth so runne to and fro, and with such violence, that our Shippe was in more safetie further off then in this place: the latitude of the Ile we rode by is 63. degrees 26. minutes, and longitude West from *London*, neere 72. degrees 25. minutes: the Compasse hath variation 27. degrees 46. minutes; and at a quarter of an houre after nine on the Change day, doth make a full Sea. This Euening, and the next morning, wee had a faire steering gale of winde at South-east, wee standing along by the Land, it being all small broken Ilands, to a point of Land about twelue leagues in distance from the Ile wee put last from: which Point, I called *Broken Point*, it being indeede a point of broken Iles.

Many Ilands
and feuerall
tyde Sets.

20 On the nineteenth day, by twelue a clocke at noone, wee were about foure miles from the Point before named, fast inclosed with Ice, very faire weather; and well we might haue called this Point *Fairenesse* or *Faire Point*, for from this day till the thirtieth day, the weather was so faire, and almost, or altogether calme, that in few places elsewhere, finer weather could not be; and till the seuen and twentieth at night, wee were so fast inclosed vp with Ice, that at some times one could not well dippe a pail of water by the Ship sides: while wee were thus fast in the Ice, vpon the one and twentieth day, I saw both the Sunne and Moone at one time, as indeede it is vsuall in faire weather.

Broken Point.

This one and twentieth, being faire weather, as afore is said, and I seeing both the Sunne and Moone so faire: I thought it a fit time to make an obseruation for the longitude.

Obseruations
of longitude.

30 But the two and twentieth day being very faire and cleage, and also calme, being almost as steedy as on shoare: it was no neede to bid me fit my Instrument of variation to take the time of the Moones coming to the Meridian, hauing also my quadrant ready to take the Sunnes almicanter, it being indifferent large, as of foure foote semideamiter: haue taken the variation of my needle as precisely as possible I could, which was 28. degrees 20. minutes West, and if any be desirous to worke the same, they may, but my worke was as followeth.

The Sunnes almicanter, at the instant when the Moone was on the Meridian, was 26. degrees 40. minutes: and the Sunnes declination for that time 23. degrees 6. minutes. By which three things giuen, I found the houre to be fise a clocke 4. minutes 52. seconds, 1. third 4. fourths, or 76. degrees, 13. minutes, 16. seconds, of the equinoctiall afternoone: and according to *Searles* Ephemerides, the Moone came to the Meridian at *London* at foure a clocke 54. minutes, 30. seconds: and after *Origanus* the Moone came to the Meridian at foure a clocke 52. minutes, 5. seconds, at *Wittenberge* the same day. Now hauing this knowne, it is no hard matter to finde the longitude of this place sought. For according to the Moones meane motion, which is 12. degrees a day, that is in time 48. minutes: and to this account, if she be on the Meridian at twelue a clock this day, to morrow it will be 48. min. past 12. So I hauing the time found by obseruation at this place, viz. 5. houres, 4. minutes, 52. seconds, 1. third 4. fourths: but in this I neede not come so precise: and at *London*, at 4. houres, 54. minutes, 30. seconds: which subtracted from the former, leaueth 10. minutes, 22. seconds, 1. third, 4. fourths, now the Moones motion thae foure and twentie houres, was 22. degrees, 38. minutes: which conuerted into time, is 50. minutes 25. seconds 20. thirds: then the proportion standeth thus; If 50. minutes, 25. seconds, 20. thirds, giue 360. degrees, what shall 10. minutes, 22. seconds, 1. third, 4. fourths giue? the fourth proportionall, will be 74. degrees 5. minutes, which is West of *London*: because the Moone came later by 10. minutes, 22. seconds, and by the same working by *Origanus* Ephemerides, the distance is 91. degrees, 35. minutes, West of West. But whether be the truer, I leaue to others to iudge: in these workings may some error be committed, if it be not carefully looked vnto: as in the obseruation, and also in finding what time the Moone commeth to the Meridian, at the place where the Ephemerides is supputated for, and perchance in the Ephemerides themselves: in all which, the best iudicious may erre: yet if obseruations of this kinde, or some other, at places farre remote, as at the Cape *Bonaesperanze*, *Bantam*, *Japan*, *Noua Albion*, and *Magellan* Straits, I suppose wee should haue a truer
60 Geography then we haue. And seeing I am entred to speake of celestiall obseruations, I will note another which I made the twenty sixt of April, being outward bound at Sea, by the Moones coming in a right line, with two fixed Starres; the one was the *Lyons heart*, a Starre of the first magnitude; the other a Starre in the *Lyons* rumpe, of the second magnitude, as followeth: The circumference or outward edge of the Moone, being in a right or straight line, with those

two Starres before named : at the instant I tooke the altitude of the South ballance, which was 2. degrees 38. minutes, because I would have the time : but in this it is good to waite a fit time, as to have her in a right line, with two Stars not farre distant, and those not to be much different in longitude, because the Moon will soone alter the angle or position, and such a time would be taken when the Moone is in the nintieth degree of the eclipticke above the horizon, for then there is no parallell of longitude, but onely in latitude : but who so is painefull in these busineses, shall soone see what is needefull, and what is not : my observations were as followeth :

Lyons heart	Right ascension	46. deg. 28. min. 30. sec.	Lyons heart	Right ascension	163. deg. 23. min. 00. sec.
	Declination	13. deg. 57. mi. 30. sec.		Declination	22. deg. 38. min. 00. sec.
	Longitude	24. deg. 29. mi. 45. sec.		Longitude	5. deg. 53. min. 45. sec.
	Latitude	00. deg. 26. min. 30. sec.		Latitude	14. deg. 20. min. 00. sec.
	Almicanter	33. deg. 40. min. 00. sec.			
Moones	Parallax	00. deg. 47. min. 46. sec.	Moones	Parallax	00. deg. 47. min. 46. sec.
	Latitude	03. deg. 20. min. 00. sec.		Latitude	03. deg. 20. min. 00. sec.
	Almicanter	37. deg. 00. min. 00. sec.		Almicanter	37. deg. 00. min. 00. sec.
		Latitude of the place			56. deg. 43. min.

These notes I have set downe, that if any other be desirous to trie, they may spend a little time therein; my selfe have spent some therein, and more I would have spent, if leisure would have permitted : but finding it not to my minde, I have not here set downe my particular worke :

Master Rudson. the working of this observation I received from Master Rudson.

But if it had pleased God, we had performed the action we were bound for, I would not feare but to have brought so good contentment to the Adventurers, concerning the true scituation of notable places, that small doubt should have beene thereof: but seeing so small hopes are in this place, I have not set downe so many observations as otherwise I would.

We lying here inclosed with the Ice with faire & calme weather (as before is said) till the seven and twentieth day at evening, at which time we set sayle; the winde at South-east, an easie gale: all the eight and twentieth and nine and twentieth dayes, we made the best way through the Ice we could, but the nine and twentieth day, the Ice was more open then it had beene these ten dayes before, and at noone we saw Salisbury Iland, it bearing due West from vs.

The first of Iuly close foggie weather, with much raine, the winde at South South-east : by noone this day we were some three leagues from the Land : but having much Ice by the shoare, we stood along the Iland to the Northward : and the next morning wee were faire by another small Ile, or rather a company of small Ilands, which after we called Mill Iland, by reason of grinding the Ice, as this night we made prooffe thereof : at noone, being close to this Ile, wee took the latitude thereof, which is neere 64. degrees. Here driving to and fro with the Ice all this day, till seven or eight a clocke, at what time the Ice began to open and seporate; The Ice, as is said, beginning to open : we had not stood along by the Ile, on the East side thereof, an houre; but the Ice came driving with the tide of flood from the South-east, with such swiftnesse, that it over went our Shippe having all our sayles abroad with a reasonable gale of winde, and put her out of the streame, into the eddy of these Iles.

This Iland or Iles, lying in the middle of the channell, chauing many sounds running through them, with many points or headlands, encountering the force of the tide, caused such a rebound of water & Ice (which ran one way, and the streame another) our ship having met the Ice with the first of the flood, which put her so neere the shoare, that she was in the partition betweene the Ice, which the eddy caused to runne one way, and the streame the other, where shee endured great distresse; but God, which is still stronger then either Ice or streame, preserved vs and our Shippe from any harme at all. This continued till towards a high water, which was about one a clocke; then with no small trouble we got into the channell, and stood away to the North-west ward. After we had past some distance from this Iland, wee had the Sea more open then it was since we put first into the Straits; and sailed all the next day through an indifferent cleare Sea, with the winde at South-west : but towards eight a clocke at night, wee were come againe into much Ice; this Ice being more thicker and bigger then any wee had beene among : this place where we began to be inclosed againe, is fixe and twenty leagues distant from the small Iland we were at last : and our true course North-west by West : after wee were fast in the Ice, we made but small way, yet we perceived a great tyde to set to and fro. The next day, wee founded, and had ground at one hundred & twentie fathoms, soft Osey ground: standing more Northerly: the next morning we had ground at eightie fathoms, then the winde came to the North, and we setting somewhat Southward, had ground at a hundred and ten fathoms. Thus seeing this great abundance of Ice in this place, and the more we got to the North-west ward, the shoalder it was, the Ice also being foule and durty, as not bred farre from shoare: our Master determined to stand to the Eastward, to be certainly informed of the tide.

The sixt day in the morning, we brake in a planke and two timbers in our Ships bow, which after we had mended, we proceeded for to get to the East side, which we called the North shoare, because it is the Land stretching from the Resolution, on the North side of the Straits.

The

The seventh day we saw the land, it being but low land, and the Sea is shoald, in respect of other places, having ten or twelve fathom about a league off from shoare, some thirty fathoms five or six leagues off shore; but further off some twenty or eightene leagues, there is a hundred or a hundred and five fathoms; having very good channell ground, as small stones & shels, some twelve or foureteene leagues from shoare, but the further off the more Osey: and also here is a very great tide runneth to the Northward, which this evening we found to be the tyde of ebbe, for comming with our Shippe neere the shoare, about seven a clocke, we hoysed out our Boate, then I with five other went on shoare, and found it to ebbe: we staid on shoare about an houre and a halfe, in which time the water fell about three foote and a halfe, and a South-south East Moone maketh a full Sea, or halfe an houre past tenne, as Sea men account: we saw no signe of people to be here this yeare, but in yeares heretofore they have beene, as we might well see by diuers places, where their tents had stood: and perchance their time of fishing was not yet come, there being such great abundance of Ice as yet.

The eight day the winde was at West, and the ninth almost calme: wee reeking neere to this shoare the tenth day, our Master determined to stand for *Nottingams* land, to make triall of the tide there; yet the winde was at South-west, so that we were forced to turne, but towards night it came to the North North-west, so that then we stood away to the West wards, leaving the search of *Nottingams* Ile, having a great swelling Sea, come out of the West with the winde which had blowne, which put vs in some hope: the eleventh day in the morning, we saw Land West from vs, but had no ground at one hundred & thirty fathoms: so standing along by the Land which here lay about North-west by North, the next morne we were thwart of a Bay: then standing over to the Northwards towards a faire Cape or head land which we saw, in the afternoon it was almost calme, and being about a league from shoare, we hoysed out our Boat, and sent some of our men in her, to see what tide it was by the shoare, and from whence it came; they went from the Ship at five a clock, and came aboard againe at eight, who brought vs word, that it was falling water, and that it had eb'd while they were on shoare somewhat about two foot: also they affirmed, that the flood came from the Northward in this place, the which we also perceived by the setting of our Ship, she setting a pace to the Northward, although no whit of winde: also we might see by the rocks, that the water was now falne: this put vs in great comfort and hope of a passage in this place.

Then our Master called this Cape or head land, *Cape Comfort*, for the reasons before said; also we had one hundred and fortie fathoms in depth, not a league from the shoare: and here a South by East Moone maketh a full Sea: the latitude of this Cape is 65. degrees 00. min. and 85. degrees 20. minutes West from *London*. But this our sudaine comfort was as soone quailed, for the next day having doubled the Cape, and proceeded not past ten or twelve leagues, but we saw the land trending from the Cape to the Westward, till it bare from vs North-east by East, and very thicke pestered with Ice, and the further we proceeded, the more Ice, and the more Northerly, the shoul-der water and small shew of any tide. At six a clocke this afternoon, we sounded, & had ground in one hundred and thirty fathoms, soft Osey, having had at noone one hundred & fiftie fathoms.

This was the farthest of our Voyage, being in the latitude of 65. degrees 26. minutes, and longitude West from *London* 86. degrees 10. minutes: for seeing the land North-east by East, from vs about nine or ten leagues off, and the Ice so thicke: our Master was fully perswaded, that this was nought else but a Bay, and so tacked and turned the Shippes head homewards, without any farther search.

The fourteenth day, the winde was for the most part at South-east, that we could make but small way backe againe: and the next morning very foule weather, we comming to an Anchor in a small Inlet, neere the *Cape Comfort*, on the North-west side thereof; here wee found, as on the other side; a South by East Moone, to make a full Sea; but from whence the flood came, we could not well see, it being so foule weather at Sea: in the afternoon the winde came to North by West: then we waied, and stood along to the Southwards by the shoare, with a stiffe gale of winde, and very hasey.

By the sixteenth day at noone we met with a great quantitie of Ice, lying some few leagues within the point of the Land: among this Ice we saw a great number of Sea Morse, not seeing any more in all the Straits but here, and these very fearefull, not suffering a Ship or Boat to come neere them: by eight a clock we were come to this Southern point, which I called *Sea Horse point*, where we came to anchor open in the Sea, the better to try the tide: here most apparently we found to all our companies sight, that in this place the tide of flood doth come from the South-east, and the ebbe from the Northwest. We weighed, and stood over with a stiffe gale of winde, which continued all this day, and toward night very foule weather & a fore storme: by tenne a clocke we were come to Anchor on the North-west side of *Nottingams* Ile,

where are two or three smal Iles, lyeth off from the greater, which make very good Sounds & Harbors: about this Ile we had store of Ice, but nothing as we had heretofore in other places. We staid about this Ile til the seven and twentieth day, having much foule weather, many stormes, often fogs, and vncertaine windes, many times we weighed anchor to goe to that side of the Ile, where this Ship roade when Captaine *Button* was in her: finding in other places of this Ile the tyde of

Nottingams
land.

Cape Comfort.

Sea Horse point.

flood

flood to come from the South-east ward, and the time of high water on the change day, to be at halfe an houre past ten, and not at halfe an houre past seuen, as they supposed. In these ten dayes we staid about this Ile, we fitted our Ship with ballast, and other necessaries, as we had neede of.

Then proceeded as followeth the sixe and twentieth day, being indifferent faire weather, we passed betweene *Salisbury Ile* and *Nottingham Ile* at the South Point thereof, I meane of *Nottingham Ile*, where are many small low Iles, without the which had bene a fit place for vs to haue anchored, to haue found out the true set of the Tyde. But our Master being desirous to come to the same place where they had rode before, stood along by this Ile to the Westward, and came to an anchor in the eddy of these broken grounds, where the ship rode at no certaintie of Tyde.

The seuen and twentieth, the next morning the weather proued very foule with much raine and winde, so that our Reger anchor would not hold the ship at eightie fathoms scope, but was driuen into deepe water, that wee were forced to set saile, the winde being at East, and then come to the East North-east and about noone at North-east, still foule weather, being vnder saile, we stood away towards *Sea horse Point*: our Master (as I suppose) was perswaded that there might bee some passage betweene that Point of Land and that Land which they called *Swan Island*: so this afternoone we saw both *Sea horse Point* and *Nottingham Island*, the distance betweene them is not past fifteene or sixteen leagues, bearing the one from the other North-west and South-east.

The eight and twentieth day in the morning, wee were neere to *Sea horse Point*, the Land trending away West South-west so farre as wee saw, and very much pestred with Ice. At seuen a clocke our Master caused vs to tacke about, and stood away South-east and by South.

The nine and twentieth the next day at eleuen a clocke, we came to anchor at *Digges Ile*, hauing very foule weather. At this place where we rode it lyeth open to the West, hauing two of the greatest Iles, breake off the force of the Flood, till the Tyde be well bent; for after the water were risen an houre and a halfe by the shoare, then would the ship ride truly on the Tyde of Flood all the Tyde after. Now the time of high water on the change day, is halfe an houre past ten or neere thereabout.

The thirtieth day, being faire weather, wee weighed and stood along close by *Digges Ile*, where we presently perceiued the *Saluages* to bee close on the top of the Rocks: but when they saw we had espyed them, diuers of them came running downe to the water side, calling to vs to come to anchor, which we would haue done if conueniently we could. But in this place the water is so deepe, that it is hard to finde a place to ride in, which we seeing lay to and fro with our ship, while some of our men in the Boat killed about some seuentie fowles, for in this place is the greatest number of fowles (whom we call *Willocks*) that in few places else the like are not seene, for if neede were we might haue killed many thousands, almost incredible to those which haue not seene it. Here also as we lay to and fro with our ship, wee had sufficient prooue of the set of the Tyde: but when our men were come aboard againe, we set all our sailes for homewards, making the best expedition we could; but on the third of August, wee were forced to come to anchor about thirtie leagues within the *Resolution Ile* on the North shoare. The next day wee weighed anchor: And the fifth day in the forenoone, we past by the *Resolution Island*, but saw it not: Thus continuing our courses (as in the brieue Iournall may be seene) with much contrarie windes and foule weather.

Wee had sight of *Cape Cleere* in *Ireland* the sixt of September: the next morning by day light, we were faire by *Seely*, and that night at two a clocke the next morne, we came to anchor in *Plymouth Sound* with all our men liuing, hauing onely three or foure sicke, which soone recouered.

The next yeere being againe employed in discouerie, amongst other instructions they receiued this. For your course you must make all possible haste to the *Cape Delolation*, and from thence, you William Baffin as Pilot, keepe along the Coast of *Groenland* and vp *Fretum Davis*, untill you come toward the height of eightie degrees, if the Land will giue you leaue. Then for feare of inbaying, by keeping too Northerly a course, shape your course West and Southerly, so farre as you shall thinke it conuenient, till you come to the latitude of sixtie degrees: then direct your course to fall with the Land of *Yedzo* about that height, leauing your farther sayling Southward to your owne discretion, according as the time of the yeere and windes will giue you leaue, although our desires be, if your voyage proue so prosperous that you may haue the yeere before you, that you goe so farre Southerly as that you may touch the North part of *Iapan*, from whence or from *Yedzo*, if you can so compasse it without danger, we would haue you to bring home one of the men of the Countrey, and so God blessing you with all expedition to make your returne home againe.

CHAP. XIX.

To the Right Worshipfull Master Iohn Wostenholme Esquire,
one of the chiefe Adventurers for the discouerie of a passage
to the North-west.

Worthy Sir; there neede no filling a Iournall or short Discourse with preamble, comple-
ment, or circumstance, and therefore I will onely tell you, I am proud of any Remem-
brance, when I expose your Worth to my Conceit, and glad of any good fortune, when
I can avoid the imputation of ingratitude, by acknowledging your many fauours: and
seeing it is not unknowne (to your Worship) in what estate the businesse concerning the
North-west hath beene heretofore, and how the onely hope was in searching of Fretum Davis, which
if your selfe had not beene the more forward, the action had well nigh beene left off: Now it remaineth
for your Worship to know, what hath beene performed this yeere: wherefore I entreat you to admit of my
custome, and pardon me if I take the plaine highway in relating the particulars, without using any resi-
ned phrases and eloquent speeches.

Therefore briefly, and as it were in the forefront, I intend to shew you the whole proceeding of the voy-
age in a word: as namely, there is no passage, nor hope of passage in the North of Davis Streights, wee
hauing coasted all or neere all the Circumference thereof, and finde it to be no other then a great Bay, as
the Map here placed doth truly shew: wherefore I cannot but much admire the worke of the Almightye,
when I consider how vaine the best and chiefe hopes of man are in things uncertaine. And to speake of no
other matter, then of the hopefull passage to the North-west; How many of the best sort of men haue set
their whole indouours to prone a passage that mayes, and not onely in Conference, but also in Writing and
publishing to the World, yea what great summes of money hath beene spent about that action, as your
Worship hath costely experience off. Neither would the vaine-glorious Spaniard haue scattered abroad so
many false Maps and Iournals, if they had not beene confident of a passage this way, that if it had pleased
God, a passage had beene found; they might haue eclipsed the worthy praise of the Adventurers and true
Discoverers; and for my owne part, I would hardly haue beleened the contrarie, untill mine eyes became
witnesse of that I desired not to haue found, still taking occasion of hope on every little likelihood, till such
time as we had almost coasted the Circumference of this great Bay. Neither was Master Davis to be
blamed in his report and great hopes, if he had anchored about Hope Sanderlon, to haue taken notice of
the Tydes: for to that place which is in 72. degrees 12. minutes the Sea is open, of an vnsearchable depth,
and of a good colour, onely the Tyde keepe no certaine course, nor rise but a small height, as eight or nine
foote, and the flood commeth from the Southward, and in all the Bay beyond that place the Tyde is so small,
and not much to be regarded, yet by reason of snow melting on the Land, the Ebbe is stronger then the
Flood, by meanes whereof, and the windes holding Northerly the fore-part of the yeere, the great Iles of
Ice are set to the Southward, some into Fretum Hudson, and others towards New found Land, for in
all the Channell where the Sea is open are great quantities of them drining up and downe, and till this
yeere not well knowne where they were bred.

Howsoever the
passage this
way was em-
bayed; yet that
former discou-
erie of Sir
Tho. Button
(then by him
kept secret for
some intent of
his) is both
more probable
and to the most
iudicious more
then probable;
and that by
that Tyde ar-
gument from
the West, as in
Master Briggs
his Map and
notes appea-
reth.

Now that the worst is knowne (concerning the passage) it is necessarie and requisite, your Worship
should understand what probabilitie or hope of profit might here be made hereafter, if the voyage bee at-
tempted by fitting men. And first for the killing of Whales, certaine it is that in this Bay are great
numbers of them, which the Biscainers call the Grand Baye Whales, of the same kinde which are killed
at Greenland, and as it seemeth to me easie to be strooke, because they are not used to bee chased or bea-
ten, for we being but one day in Whale Sound (so called for the number of Whales that wee saw there)
sleeping and lying aloft on the water, not fearing our ship or ought else, that if wee had beene fitted with
men and things necessarie, it had beene no hard matter to haue strooke more then would haue made three
ships a sauing voyage, and that it is of that sort of Whale there is no feare. I being twice at Greenland,
tooke sufficient notice to know them againe; beside a dead Whale wee found at Sea, hauing all her finnes
(or rather all the rough of her mouth) of which with much labour, we got one hundred and sixtie the same
euening we found her; and if that soule weather, and a storme the next day had not followed, wee had no
doubt, but to haue had all or the most part of them, but the winde and Sea arising shee broke from vs, and
we were forced to leaue her. Neither are they onely to be looked for in Whale Sound, but also in Sir Tho.
Smiths Sound, Wostenholme Sound, and diuers other places.

Store of Grand
Bay Whales.

Baffin twice at
Greenland.

For the killing of Sea Morse, I can giue no certaintie, but onely this, that our Boat being but once a-
shoare in all the North part of this Bay, which was in the entrance of Alderman Iones Sound, at the re-
turne, our men told vs, they saw many Morfes along by the shoare on the Ice; but our ship being under
saile, and the winde comming faire, they presently came aboard without further search, besides the people
inhabiting about 74. degrees, told vs by diuers signes, that toward the North were many of those beasts,
hauing two long teeth, and shewed vs diuers pieces of the same.
As for the Sea Unicorn, it being a great fish, hauing a long horne or bone, growing forth of his fore-
head or nostrill (such as Sir Martin Frobisher in his second voyage found one) in diuers places we saw of
them, which if the horne be of any good value, no doubt but many of them may be killed.

Morfe.
Sea Unicorn.
The horne is
still kept in the
Robes at Wind-
fore (where I
haue scene it)
neere seven
foot long and
crested, &c.

And

And concerning what the Shoare will yeeld, as Beach finnes, Morse teeth, and such like, I can little say, because we came not on shoare in any of the places, where hope was of finding them.

But here some may object and aske, why we sought that Coast no better: to this I answer, that while we were thereabout, the weather was so exceeding foule wee could not, for first wee anchored in Wostenholme Sound, where presently our ship drove with two anchors a head, then were we forced to stand forth with a low saile. The next day in Whale Sound, we lost an Anchor and Cable, and could fetch the place no more; then we came to anchor neere a small Iland, lying between Sir Tho. Smiths Sound, and Whale Sound, but the winde came more outward, that we were forced to weigh againe: neuerthelesse if wee had beene in a good harbour, hauing but our Ships Boat, we durst not send her farre from the ship, hauing so few men (as seuentene in all) and some of them very weake; but the chiefe cause wee spent so little time 10 to seeke a Harbour, was our great desire to performe the Discoverie, hauing the Sea open in all that part, and still likelihood of a passage: but when we had coasted the Land so farre to the Southward, that hope of passage was none, then the yeere was too farre spent, and many of our men very weake, and withall we hauing some belife that ships the next yeere would be sent for the killing of Whales, which might better doe it then wee.

And seeing I haue briefly set downe, what hope there is of making a profitable voyage, it is not unfit your Worship should know what let or hinderance might be to the same. The chiefe and greatest cause is, that some yeere it may happen by reason of the Ice, lying betwene 72. degrees and a halfe, and 76. degrees no minutes, that the ships cannot come into those places, till toward the middest of Iuly, so that want of time to stay in the Countrey may bee some let: yet they may well tarry till the last of August, in which 26 space much businesse may be done, and good store of Oile made: neuerthelesse if store of Whales come in (as no feare to the contrarie) what cannot bee made in Oile may bee brought home in Blubber, and the Finnes will arise to good profit. Another hinderance may bee, because the bottome of the Sounds will not be so soone cleere as would be wished, by meanes thereof now and then a Whale may be lost (the same case sometime chanceth in Greenland) yet I am perswaded those Sounds before named, will all be cleere before the twentieth of Iuly: for we this yeere were in Whale Sound the fourth day among many Whales, and might haue strooke them without let of Ice. Furthmore, there is little wood to bee expected, either for fire or other necessities; therefore Coles and other such things must bee provided at home, they will bee so much the readier there.

Thus much I thought good to certify your Worship, wherein I trust you will conceiue, that much time hath not beene spent in vaine, or the businesse ouer carelessly neglected, and although wee haue not performed what we desired (that is, to haue found the passage), yet what wee promised (as to bring certaintie and a true description) truth will make manifest, that I haue not much erred.

And I dare boldly say (without boasting) that more good discoverie hath not in shorter time (to my remembrance) beene done, since the action was attempted, considering how much Ice we haue passed, and the difficultie of sayling so neere the Pole (upon a transe) and about all, the variation of the Compasse, whose wonderfull operation is such in this Bay, increasing and decreasing so suddenly and swift, being in some part (as in Wostenholme Sound, and in Sir Tho. Smiths Sound) varied above five Points or 56. degrees, a thing almost incredible and matchlesse in all the world beside, so that without great care, and good obseruations, a true description could not haue beene had. In fine, what soeuer my labours are or shall be, I esteeme them too little, to expresse my thankesfull minde for your many fauours, wherein I shall be euer studious, to supply my other wants by my best endeuours, and euer rest at 40

Your Worships command,

WILLIAM BAFFIN.

A briefe and true Relation or Iournall, contayning such accidents as happened in the first voyage, for the discoverie of a passage to the North-west, set forth at the charges of the right Worshipfull Sir Tho. Smith Knight, Sir Dudley Digges Knight, Master Iohn Wostenholme Esquire, Master Alderman Iones, with others, in the good ship called the Discoverie of London, Robert Bileth Master, and my selfe Pilot, performed in the yeere of our Lord 1616.

March 26.

IN the Name of God, Amen. The forenamed ship being in full readinesse vpon the twentieth sixe of March, we set saile at Grauesend, being in number seuentene persons, hauing very faire weather, which continued till the second of April: by that time we were off Portland, then the winde comming Westward with foule weather, we kept Sea till the fourth day, then being not able to fetch *Plimouth*, bore roome for *Dartmouth*, where wee stayed eleuen dayes, in which time was much foule weather and westerly windes.

The

The fifteenth day of Aprill, being cleere of *Dartmouth*, we were forced the next day to put into *Plimouth*. The nineteenth day we set saile from thence, and the twentieth in the morning we past betwene the Lands end and *Silly* with a faire winde. Continuing our course, as in the briefe Table or Iournall is set downe, with euery particular from noone to noone, that here I need not make a tedious repetition, nothing worthy of note hapning, but that we had a good passage, and the first Land we saw was in *Fretum Davis*, on the coast of *Groenland* in the latitude of 65. degrees 20. minutes. On the fourteenth of May in the forenoone, then sixe of the people being a fishing came to vs, to whom we gaue small pieces of Iron, they keeping vs companie being very ioyfull, supposing wee had intended to come to anchor: but when they saw vs stand off from shoare they followed vs a while, and then went away discontented, to ouer seeming.

20 We prosecuting our Voyage, were loth to come to anchor as yet, although the winde was contrarie, but still plyed to the Northward, vntill we came into 70. degrees 20. minutes: then wee came to anchor in a faire Sound (neere the place Master *Davis* called *London Coast*.) The twentieth of May at euening, the people espying vs fled away in their Boates, getting on Rocks wondring and gasing at vs, but after this night we saw them no more, leauing many Dogs running to and fro on the Island.

At this place we stayed two dayes, in which time wee tooke in fresh water and other necessities: here we had some dislike of the passage, because the Tydes are so small as not arising aboue eight or nine foot, and keepe no certaine course, but the neereft time of high water on the change day is at a quarter of an houre past nine, and the Flood commeth from the South.

20 The two and twentieth day at a North Sunne, wee set saile and plyed still Northward, the winde being right against vs as we stood off and on. Vpon the sixe and twentieth day in the afternoone, we found a dead Whale, about sixe and twentie leagues from shoare, hauing all her finnes. Then making our ship fast, wee vsed the best meanes wee could to get them, and with much toile got a hundred and sixtie that euening. The next morning the Sea went very high and the winde ariling, the Whale broke from vs, and we were forced to leaue her and set saile, and hauing not stood past three or foure leagues North westward, came to the Ice, then wee tacked and stood to the shoare-ward, a fore storme ensued.

By the thirtieth day in the afternoone, wee came faire by *Hope Sanderfon*, the farthest Land Master *Davis* was at, lying betwene 72. and 73. degrees; and that euening by a North Sunne we came to much Ice, which we put into, plying all the next day to get through it.

The first of Iune, we were cleere of the Ice before named, and not farre from shoare, the winde blowing very hard at North North-east, then we put in among diuers Ilands, the people seeing vs fled away in all haste leauing their Tents behinde, and vpon a small Rocke they hid two young Maides or Women. Our ship riding not farre off, we espyed them, to whom our Master with some other of our companie went in the Boate, they making signes to be carried to the Island where their Tents were close adioyning. When they came thither, they found two old women more, the one very old, to our esteemation little lesse then fourescore, the other not so old. The next time we went on shoare, there was another Woman with a child at her back, who had hid her selfe among the Rocks, till the other had told her how well wee had vsed them, in giuing them pieces of Iron and such like, which they highly esteeme, in change thereof they giue vs Seales skinnies, other riches they had none, saue dead Seales, and fat of Seales, some of which fat or blubber afterward we carried aboard, the poore women were very diligent to carry it to the water side to put into our caske, making shew that the men were ouer at the Mayne, and at an other small Island something more Eastward. Then making signes to them that wee would shew them our ship and set them where the men were: the foure youngest came into our Boate; when they were aboard they much wondred to see our ship and furniture: we gaue them of our meate, which they tasting would not eate. Then two of them wee set on the Island, where they supposed the men to be; the other two were carried to their Tents againe. Those that went to seeke the men could not finde them, but came as neere the ship as they could, and at euening wee set

50 them ouer to the other. This place wee called *Womens Ilands*; it lyeth in the latitude of 72. degrees 45. minutes: here the Flood commeth from the Southward, at nepe Tydes the water ariseth but fixe or seuen foote, and a South South-east Moone maketh a full Sea. The Inhabitants very poore, liuing chiefly on the flesh of Seales, dried, which they eate raw, with the skinnies they cloathe themselves, and also make coverings for their Tents and Boats which they dresse very well. The Women in their apparell are different from the men, and are marked in the face with diuers blacke strokes or lines, the skin being rased with some sharpe instrument when they are young, and blacke colour put therein, that by no meanes it will be gotten forth.

60 Concerning their Religion, I can little say: onely they haue a kinde of worship or adoration to the Sunne, which continually they will point vnto and strike their hand on their breast, crying *Nyont*; their dead they burie on the side of the Hills, where they liue (which is commonly on small Ilands) making a pile of stones ouer them, yet not so close but that wee might see the dead body, the aire being so piercing that it keepeth them from much stinking sauour. So likewise I haue seene their Dogs buried in the same manner.

Vpon the fourth day we set sayle from thence, hauing very faire weather, although the winde were contrary, and plyed to and fro betweene the Ice and the Land, being as it were a channell of seuen or eight leagues broad: then on the ninth day, being in the latitude of 74. degree 4. minutes, and much pestered with Ice, neere vnto three small Ilands, lying eight miles from the shore, we came to anchor neere one of them.

These Ilands are vsed to be frequented with people in the latter part of the yeare, as it seemed by the houses and places where the tents had stood: but this yeare as yet they were not come; here the tides are very small, especially the flood, which riseth not aboue five or six foot, yet the ebbe runneth with an indifferent streame, the cause thereof (in mine opinion) is the great abundance of Snow, melting on the Land all this part of the yeare.

The tenth day wee set sayle from thence, and stood through much Ice to the Westward, to try if that further from the shoare, wee might proceede; but this attempt was soone quailed, for the more Ice we went through, the thicker it was, till wee could see no place to put in the Ships head.

Seeing, that as yet we could not proceede, we determined to stand in for the shoare, there to abide some few dayes, till such time as the Ice were more wasted and gone (for we plainly saw that it consumed very fast) with this resolution we stood in, and came to anchor among many Ilands, in the latitude of 73. degrees 45. minutes. On the twelfth day at night here wee continued two dayes without shew or signe of any people, till on the fifteenth day in the morning, about one a clocke, then came two and fortie of the Inhabitants in their Boaces or Canoas, and gaue vs Seale skinnies, and many peeces of the bone or horne of the Sea Vnicorne, and shewed vs diuers peeces of Sea Mors teeth; making signes that to the Northward were many of them: in exchange thereof, we gaue them small peeces of Iron, Glasse Beads, and such like: at foure seuerall times the people came to vs, and at each time brought vs of the aforesaid commodities, by reason thereof we called this place *Horne Sound*.

Here we stayed six dayes, and on the eighteenth day at night, we set sayle, hauing very little winde; and being at Sea, made the best way we could to the Northward, although the winde had beene contrary for the most part this moneth, but it was strange to see the Ice so much consumed in so little space, for now we might come to the three Ilands, before named, and stand off to the Westward almost twenty leagues, without let of Ice, vntill we were more North (as to 74. degrees 30. minutes) then we put among much scattered Ice, and plyed to and fro all this month, still in the sight of shoare, and many times fast in the Ice, yet every day we got something on our way, nothing worthy of note happening, but that at diuers times we saw of the fishes with long hornes, many and often, which we call the Sea Vnicorne: and here to write particularly of the weather, it would be superfluous or needelesse, because it was so variable, few dayes without Snow, and often freezing, in so much, that on Midsummer day, our shrowds ropes and sailes were so frozen, that we could scarce handle them; yet the cold is not so extreame, but it may well be endured.

The first of Iuly we were come into an open Sea, in the latitude of 75. degrees 40. minutes, which a new reuiued our hope of a passage, and because the winde was contrary, wee stood off twenty leagues from the shoare, before we met the Ice: then standing in againe, when we were neere the Land, we let fall an anchor to see what tyde went, but in that we found small comfort. Shortly after the winde came to the South-east, and blew very hard, with foule weather, thicke, and foggie: then we set sayle, and ran along by the Land: this was on the second day at night. The next morning we past by a faire Cape, or head land, which wee called *Sir Dudley Digges Cape*, it is in the latitude of 76. degrees 35. minutes, and hath a small Iland close adioyning to it; the winde still increasing, we past by a faire Sound twelue leagues distant from the former Cape, hauing an Iland in the midst, which maketh two entrances. Vnder this Iland we came to anchor; and had not rid past two houres, but our Ship droue, although we had two anchors at the ground, then were we forced to set sayle, and stand forth: this Sound wee called *Wostenholme Sound*: it hath many Inlets or smaller Sounds in it, and is a fit place for the killing of Whales.

The fourth day at one a clocke in the morning, the storme began againe at West and by South, so vehement, that it blew away our forecourse, and being not able to beare any sayle, wee lay a drift till about eight a clocke, then it cleared vp a little, and we saw our selues imbayed in a great Sound: then we set sayle and stood ouer to the South-east side, where in a little Coue or Bay we let fall an anchor, which we lost with cable and all, the winde blowing so extreame from the tops of the hills, that we could get no place to anchor in, but were forced to stand to and fro in the Sound, the bottome being all frozen ouer; toward two a clocke it began to be lesse winde, then we stood forth.

In this Sound we saw great numbers of Whales, therefore we called it *Whale Sound*, and doubtlesse if we had beene provided for killing of them, we might haue strooke very many. It lyeth in the latitude of 77. degrees 30. minutes. All the fifth day it was very faire weather, and wee kept along by the Land till eight a clock in the euening, by which time we were come to a great banke of Ice, it being backed with Land, which we seeing, determined to stand backe some eight leagues,

leagues, to an Iland we called *Hackluts Ile*, it lyeth betweene two great Sounds, the one *Whale Sound*, and the other *Sir Thomas Smiths Sound*: this last runneth to the North of seventy eight degrees, and is admirable in one respect, because in it is the greatest variation of the Compasse of any part of the World known: for by diuers good Obseruations I found it to be about five points or fifty six degrees varied to the Westward, so that a North-east and by East, is true North, and so of the rest. Also this Sound seemeth to bee good for the killing of Whales, it being the greatest and largest in all this Bay. The cause wherefore we minded to stand to this Iland, was to see if we could find any finnes or such like on the shore, and so indeed this night wee came to anchor, but with such foule weather, that our Boat could not land. The next day wee were forced to set
10 sayle, the Sea was growne so high, and the wind came more outward. Two dayes wee spent and could get no good place to anchor in: then on the eight day it cleered vp, and wee seeing a company of Ilands lye off from the shoare twelue, or thirteene Leagues, wee minded to goe to them, to see if there we could Anchor. When wee were something neere, the winde tooke vs short; and being loth to spend more time, we tooke opportunitie of the wind, and left the searching of these Ilands, which wee called *Careyes Ilands*, all which Sounds and Ilands the Map
* doth truly describe.

So we stood to the Westward in an open Sea, with a stiffe gale of wind, all the next day and till the tenth day at one or two a clocke in the morning, at which time it fell calme and very
20 foggie, and wee neere the Land in the entrance of a faire Sound, which wee called *Alderman Jones Sound*. This afternoone being faire and cleere, we sent our Boat to the shoare, the ship being vnder sayle, and assoone as they were on shoare, the wind began to blow; then they returned againe, declaring that they saw many Sea Morfes by the shoare among the Ice, and as farre as they were, they saw no signe of people, nor any good place to anchor in along the shoare. Then hauing an easie gale of wind at East North-east, we ranne along by the shoare, which now trendeth much South, and beginneth to shew like a Bay.

On the twelfth day we were open of another great Sound, lying in the Latitude of 74. degrees 20. minutes, and we called it *Sir James Lankasters Sound*: here our hope of passage began to be lesse euery day then other, for from this Sound to the Southward, wee had a ledge of Ice betweene the shoare and vs, but cleare to the Sea ward, we kept close by this ledge of Ice till the
30 foureteenth day in the afternoone, by which time wee were in the latitude of 71. degrees 16. minutes, and plainly perceiued the Land to the Southward of 70. degrees 30. minutes, then wee hauing so much Ice round about vs, were forced to stand more Eastward, supposing to haue beene soone cleare, and to haue kept on the off side of the Ice, vntill we had come into 70. degrees, then to haue stood in againe. But this proued quite contrary to our expectation: for wee were forced to runne about threescore leagues through very much Ice, and many times so fast, that wee could goe no wayes, although we kept our course due East; and when wee had gotten into the open Sea, wee kept so neere the Ice, that many times we had much adoe to get cleare, yet could not come neere the Land, till we came about 68. degrees, where indeede we saw the shoare, but could not come to it by eight or nine leagues, for the great abundance of Ice. This was on the
40 foure and twentieth day of Iuly: then spent we three dayes more to see if conueniently wee could come to anchor, to make triall of the tides, but the Ice led vs into the latitude of 65. degrees 40. minutes. Then wee left off seeking to the West shoare, because wee were in the indraft of *Cumberlands Iles*, and should know no certaintie, and hope of passage could be none.

Now seeing that we had made an end of our discouery, and the yeare being too farre spent to goe for the bottome of the Bay, to search for drest Finnes; therefore wee determined to goe for the Coast of *Groineland*, to see if we could get some refreshing for our men: Master *Hu- bert* and two more, hauing kept their Cabins about eight dayes (besides our Cooke *Richard Way- nam*, which died the day before, being the twenty six of Iuly) and diuers more of our company so weake, that they could doe but little labour. So the winde fauouring vs, we came to anchor in
50 the latitude of 65. degrees 45. minutes, at six a clocke in the euening, the eight and twentieth day, in a place called *Caukin Sound*.

The next day going on shoare, on a little Iland we found great abundance of the herbe called *Scuruie Grasse*, which we boyled in Beere, and so dranke thereof, vsing it also in Sallets, with *Sorrell* and *Orpen*, which here groweth in abundance; by meanes hereof, and the blessing of God all our men within eight or nine dayes space were in perfect health, and so continued till our arriual in *England*.

Wee rode in this place three dayes before any of the people came to vs; then on the first of August, six of the Inhabitants in their *Canoes*, brought vs *Salmon Peale*, and such like, which
60 was a great refreshment to our men: the next day following, the same six came againe, but after that we saw them no more vntill the sixth day, when we had wayed anchor, and were almost cleere of the harbour; then the same six and one more, brought vs of the like commodities, for which we gaue them *Glasse Beads*, *Counters* and small peeces of *Iron*, which they doe as much esteeme, as we Christians doe *Gold* and *Siluer*.

Sir Thomas Smiths Sound in 78. deg.

Variation of the compasse 56. degrees to the West.

Which may make questionable D. Gilberts rule. Tom. 1. l. 2. c. 1. that

where more earth is, more attraction of the compasse happeneth by variation to-

ward it. Now the known con-

tinents of Asia, &c. must be vn-

speakably more then here there can be, and yet

here is more variation then about Iapan or

Brasil, Peru, &c. Caries Ilands.

* This Map of the authour for this and the

former Voyage with the Table of his iournall

and sayling, were somewhat troublesome and too costly

to insert. Alderman Jones Sound.

Sir James Lankasters Sound. They see Land

and find themselves embayed Cumberlands Iles.

Caukin Sound.

Scuruie Grasse.

Six men.

Plenty of Salmon.

In this Sound we saw such great Scales of Salmon swimming to and fro, that it is much to be admired: here it floweth about eightene foote water, and is at the highest on the change day at seven a clocke: it is a very good harbour, and easie to be knowne, hauing three high round hills like Piramides close adioyning to the mouth of it, and that in the midst is lowest, and along all this coast are many good harbours to be found, by reason that so many Ilands lye off from the maine.

The sixt of August, by three a clocke in the afternoone, wee were cleere of this place, hauing a North North North-west winde, and faire weather, and the Lord sent vs a speedy and good passage homeward as could be wished: for in nineteene dayes after, wee saw Land on the coast of Ireland, it being on the five and twentieth day: the seven and twentieth at noone we were two leagues from Sully, and the thirtieth day, in the morning wee anchored at *Douer* in the roade, for the which and all other his blessings the Lord make vs thankfull.

CHAP. XX.

A brieue Discourse of the probabilitie of a passage to the Westerne or South Sea, illustrated with testimonies: and a brieue Treatise and Mappe by Master

BRIGGES.

Thought good to adde somewhat to this Relation of Master *Baffin*, that learned-vnlearned Mariner and Mathematician; who wanting art of words, so really employed himselfe to those industries, whereof here you see so euident fruits. His Mappes and Tables would haue much illustrated his Voyages, if trouble, and cost, and his owne despaire of passage that way, had not made vs willing to content our selues with that Mappe following of that thrice learned (and in this argument three times thrice industrious) Mathematician, Master *Brigges*, famous for his readings in both Vniuersities, and this honourable Citie, that I make no further Voyage of Discouery to finde and follow the remote Passage and extent of his name. Master *Baffin* told mee, that they supposed the tyde from the North-west, about *Digges* Iland was misreported, by mistaking the houre, eight for eleuen: and that hee would, if hee might get employment, search the passage from *Japan*, by the coast of *Asia*, or (*qua data porta*) any way hee could. But in the *Indies* he dyed, in the late Ormus businesse, slaine in fight with a shot, as hee was trying his Mathematicall proiects and conclusions.

Baffins death.

The King satisfied touching the passage.

Buttons hope.

Now for that discouery of Sir *Thomas Button*, I haue solicited him for his Noates, and receiued of him gentle entertainment and kinde promises: but being then forced to stay in the Citie vpon necessary and vrgent affaires, he would at his returne home, seeke and impart them. Since I heare that weightie occasions haue detained him out of *England*, and I cannot communicate that which I could not receiue: which if I doe receiue, I purpose rather to giue thee out of due place, then not at all. Once he was very confident in conference with me of a passage that way, and said that he had therein satisfied his Maiestie, who from his discourse in priuate, inferred the necessitie thereof. And the maine argument was the course of the tyde: for wintering in *Port Nelson* (see the following Mappe) hee found the tyde rising euery twelue houres fifteene foote (whereas in the bottome of *Hudsons Bay* it was but two foote, and in the bottome of *Fretum Davis* discovered by *Baffin*, but one) yea and a West winde equalled the nepe tydes to the spring tydes; plainly arguing the neighbourhood of the Sea, which is on the West side of *America*. The Summer following he found about the latitude of 60. degrees a strong race of a tide, running sometimes Eastward, sometimes Westward; whereupon *Iosias Hubbard* in his plat, called that place *Hubbarts Hope*, as in the Map appeareth. Now if any make scruple, because this discouery was not pursued by Sir *Thomas Button*, let him consider, that being Prince *Henries* Seruant, and partly by him employed (whence I thinke he named the Country *New Wales*) the vntimely death of that Prince put all out of ioint; nor was hee so open, that others should haue the glory of his discouerie.

And if any man thinke that the passage is so farre, as the Maps vse to expresse *America*, running out into the West: it is easily answered, that either of negligence, or ouer-busie diligence, Maps by *Portugals* in the East, and *Spaniards* in the West, haue bene falsely proiected. Hence that fabulous strait of *Anian*, as before by *Francis Ganles* testimonie and nauigation is euident: And hence the *Portugals* to bring in the *Moluccas*, to that moiety of the world agreed vpon betwixt the *Spaniards* and them, are thought to haue much curtalled *Asia*, and the longitude of those Ilands, giuing fewer degrees to them then in iust longitude is requisite. So the older Maps

of America make the Land from the *Magelane* Straits to the South Sea, runne much West, when as they rather are contracted somewhat Easterly from the North. The like is iustly supposed of their false placing, *Quinira*, and I know not (nor they neither) what Countries they make in America, to run so farre North-westward, which Sir Francis Drakes Voyage in that Sea (his *No-ua Albion*, being little further Westward then *Aquaticulo*) plainly euince to be otherwise. Yea the late Map of *California* found to be an Island, the Savages discourses in all the Countries Northwards and Westwards from *Virginia*: fame whereof filled my friend Master *Dermer* with so much confidence, that hearing of strange Ships which came thither for a kinde of Vre or earth, the men vsing forkes in their diet, with Caldrons to dresse their meate, &c. things nothing su-
 10 table to any parts of America, hee supposed them to come from the East, neere to *China* or *Ja-pan*, and therefore he made a Voyage purposely to discover: but crossed with diuers disasters, hee returned to *Virginia*, frustrate of accomplishment that yeare, but fuller of confidence, as in a Letter from *Virginia* he signified to me, where death ended that his designe soone after. But how of-
 20 ten are the vsuall Charts reiected by experience in these Navigations, in this worke recorded? Painters and Poets are not alwayes the best Oracles.

* This easily appeareth in obseruing his Voiage, & comparing that be- fore of *Fr. Gault* therewith.

For further proofes of a passage about those parts into the West Sea (or South, as it is called from the first discovery thereof to the South, from the parts of *New Spaine*, whence it was first descried by the *Spaniards*) there is mention of a *Portugall* (and taken in a Carricke in *Queene Elizabeths* dayes, of glorious memory) confirming this opinion; Sir *Martin Frobisher* also from
 20 a *Portugall* in *Guinie*, receiued intelligence of such a passage, he saying he had past it. The Pilots of *Lisbone* are said generally to acknowledge such a thing; and the Admirall of *D. Garcia Geoffroy Louisa* of *Cite-Real*, in the time of *Charles* the fifth, is reported by the Coast of *Baccalaos* and *La-
 30 brador*, to haue gone to the *Moluccas*. *Vasco de Coronado* writ to the Emperour, that at *Cibola* he was one hundred and fiftie leagues from the South Sea, and a little more from the North. *Anto-
 nio de Herera*, the Kings Coronist & Maior (part of whose worke followeth) maketh with vs also, in the distances of places by him described. But to produce some authority more full, I haue here presented *Thomas Cowles* a Marriner, and Master *Michael Locke* Merchant, and after them, a lit-
 40 tle Treatise ascribed to Master *Briggs*, together with his Map. And if any thinke that the *Spa-
 niard* or *Portugall* would soone haue discovered such a passage: these will answere, that it was not for their profit to expose their East or West Indies to *English*, *Dutch*, or others, whom they would not haue sharers in those remote treasures by so neere a passage. First, *Thomas Cowles* auereth thus much.

Some of our Merchants are said not to be so willing for like causes with this discovery.

I Thomas Cowles of *Bedmester*, in the Countie of *Somerset*, Marriner, doe acknowledge, that six
 40 yeares past, at my being at *Lisbon*, in the Kingdome of *Portugall*, I did heare one *Martin Chacke*, a
Portugall of *Lisbon*, reade a Booke of his owne making, which he had set out six yeares before that time,
 in Print, in the *Portugale* tongue, declaring that the said *Martin Chacke* had found, twelve yeares
 now past, a way from the *Portugall* Indies, through a gulfe of the New found Land, which he thought
 to be in 59. degrees of the eleuation of the North Pole. By meanes that hee being in the said Indies,
 50 with foure other Shippes of great burden, and he himselfe in a small Shippe of fourescore tunnes, was
 driuen from the company of the other foure Shippes, with a Westerly winde: after which, hee past alongst
 by a great number of Islands which were in the gulfe of the said New found Land. And after hee
 ouer shot the gulfe, he set no more sight of any other Land, untill he fell with the Northwest part of *Ire-
 land*; and from thence he tooke his course homewards, and by that meanes hee came to *Lisbone* foure
 or fwee weekes before the other foure Ships of his company that he was separated from, as before said. And
 since the same time, I could neuer see any of those Books, because the King commanded them to be called
 in, and no more of them to be printed, lest in time it would be to their hindrance. In witnesse whereof I set
 to my hand and marke, the ninth of *Aprill*. Anno 1579.

A Note made by me *MICHAEL LOK* the elder, touching the Strait of Sea,
 commonly called *Fretum Anian*, in the South Sea, through the
 North-west passage of *Meta incognita*.

When I was at *Venice*, in *Aprill* 1596. happily arrived there an old man, about threescore
 yeares of age, called commonly *Iuan de Fuca*, but named properly *Apostolos Valerianos*,
 of Nation a Greeke, borne in the Island *Cefalonia*, of profession a Mariner, and an ancient Pilot
 60 of Shippes. This man being come lately out of *Spaine*, arrived first at *Ligorno*, and went thence
 to *Florence* in *Italie*, where he found one *Iohn Dowglas*, an *Englishman*, a famous Mariner, ready
 comming for *Venice*, to be Pilot of a *Venetian* Ship, named *Ragasona* for *England*, in whose com-
 pany they came both together to *Venice*. And *Iohn Dowglas* being well acquainted with me be-
 fore, he gaue me knowledge of this Greeke Pilot, and brought him to my speech: and in long
 talke

talke and conference betweene vs, in presence of *Iohn Dowglas*: this *Greeke* Pilot declared in the *Italian* and *Spanish* languages, thus much in effect as followeth.

First he said, that he had bin in the *West Indies* of *Spaine* by the space of fortie yeeres, and had sailed to and from many places thereof, as *Mariner* and *Pilot*, in the seruice of the *Spaniards*.

Also he said, that he was in the *Spanish* Shippe, which in returning from the *Ilands*, *Philippinas* and *China*, towards *Noua Spania*, was robbed and taken at the *Cape California*, by *Captaine Candish Englishman*, whereby he lost sixtie thousand Duckets, of his owne goods.

Also he said, that he was *Pilot* of three small Ships which the *Viceroy* of *Mexico* sent from *Mexico*, armed with one hundred men, *Souldiers*, vnder a *Captain*, *Spaniards*, to discouer the Straits of *Anian*, along the coast of the *South-Sea*, and to fortifie in that Strait, to resist the passage and proceedings of the *English Nation*, which were feared to passe through those Straits into the *South Sea*. And that by reason of a mutinie which happened among the *Souldiers*, for the *Sodomie* of their *Captaine*, that Voyage was ouerthrowne, and the Ships returned backe from *California* coast to *Noua Spania*, without any effect of thing done in that Voyage. And that after their returne, the *Captaine* was at *Mexico* punished by iustice.

Also he said, that shortly after the said Voyage was so ill ended, the said *Viceroy* of *Mexico*, sent him out againe Anno 1592. with a small *Carauela*, and a *Pinnace*, armed with *Mariners* onely, to follow the said Voyage, for discouery of the same Straits of *Anian*, and the passage thereof, into the Sea which they call the *North Sea*, which is our *North-west Sea*. And that he followed his course in that Voyage West and North-west in the *South Sea*, all alongst the coast of *Noua Spania*, and *California*, and the *Indies*, now called *North America* (all which Voyage hee signified to me in a great Map, and a Sea-card of mine owne, which I laied before him) vntill hee came to the Latitude of fortie seuen degrees, and that there finding that the Land trended North and North-east, with a broad Inlet of Sea, betweene 47. and 48. degrees of Latitude: hee entred therein, sayling therein more then twentie dayes, and found that Land trending still sometime North-west and North-east, and North, and also East and South-eastward, and very much broader Sea then was at the said entrance, and that hee passed by diuers *Ilands* in that sayling. And that at the entrance of this said Strait, there is on the North-west coast thereof, a great Hedland or *Iland*, with an exceeding high *Pinacle*, or spired *Rocke*, like a pillar thereupon.

Also he said, that he went on Land in diuers places, and that he saw some people on Land, clad in Beasts skins: and that the Land is very fruitfull, and rich of gold, *Siluer*, *Pearle*, and other things, like *Noua Spania*.

And also he said, that he being entred thus farre into the said Strait, and being come into the *North Sea* already, and finding the Sea wide enough euery where, and to be about thirtie or fortie leagues wide in the mouth of the Straits, where hee entred; hee thought he had now well discharged his office, and done the thing which he was sent to doe: and that hee not being armed to resist the force of the *Saluage* people that might happen, hee therefore set sayle and returned homewards againe towards *Noua Spania*, where hee arrived at *Acapulco*, Anno 1592. hoping to be rewarded greatly of the *Viceroy*, for this seruice done in this said Voyage.

Also he said, that after his comming to *Mexico*, hee was greatly welcommed by the *Viceroy*, and had great promises of great reward, but that hauing sued there two yeares time, and obtained nothing to his content, the *Viceroy* told him, that he should be rewarded in *Spaine* of the *King* himselfe very greatly, and willed him therefore to goe into *Spaine*, which Voyage hee did performe.

Also he said, that when he was come into *Spaine*, he was greatly welcommed there at the *Kings* Court, in wordes after the *Spanish* manner, but after long time of suite there also, hee could not get any reward there neither to his content. And that therefore at the length he stole away out of *Spaine*, and came into *Italie*, to goe home againe and liue among his owne Kindred and Countymen, he being very old.

Also he said, that hee thought the cause of his ill reward had of the *Spaniards*, to bee for that they did vnderstand very well, that the *English Nation* had now giuen ouer all their voyages for discouerie of the *North-west* passage, wherefore they need not feare them any more to come that way into the *South Sea*, and therefore they needed not his seruice therein any more.

Also he said, that in regard of this ill reward had of the *Spaniards*, and vnderstanding of the noble minde of the *Queene* of *England*, and of her warres maintayned so valiantly against the *Spaniards*, and hoping that her *Maiestie* would doe him iustice for his goods lost by *Captaine Candish*, he would bee content to goe into *England*, and serue her *Maiestie* in that voyage for the discouerie perfectly of the *North-west* passage into the *South Sea*, and would put his life into her *Maiesties* hands to performe the same, if shee would furnish him with onely one ship of fortie tunnes burden and a *Pinnasse*, and that he would performe it in thirtie dayes time, from one end to the other of the Streights. And he willed me so to write into *England*.

The straight to be discouered in 30. dayes.

Captaine Candish.

And vpon this conference had twise with the said Greeke Pilot, I did write thereof accordingly into England vnto the right honourable the old Lord Treasurer Cecill, and to Sir Walter Raleigh, and to Master Richard Hakluyt that famous Cosmographer, certifying them hereof by my Letters. And in the behalfe of the said Greeke Pilot, I prayed them to disburse one hundred pounds of money, to bring him into England with my selfe, for that my owne purse would not stretch so wide at that time. And I had answere hereof by Letters of friends, that this action was very well liked, and greatly desired in England to bee effected; but the money was not ready, and therefore this action dyed at that time, though the said Greeke Pilot perchance liueh still this day at home in his owne Countrey in Cefalonia, towards the which place he went from me within a fortnight after this conference had at Venice.

And in the meane time, while I followed my owne businesse in Venice, being in Law suit against the Companie of Merchants of Turkie, and Sir Iohn Spencer their Gouvernour in London, to recouer my pension due for my office of being their Consull at Aleppo in Turkie, which they held from me wrongfully. And when I was (as I thought) in a readinesse to returne home into England, for that it pleased the Lords of her Maiesties honourable Priuie Counsell in England, to looke into this Cause of my Law suit for my reliefe; I thought that I should be able of my owne purse to take with me into England the said Greeke Pilot. And therefore I wrote vnto him from Venice a Letter, dated in Iuly 1596. which is copied here-vnder.

Al Magco. Sigor. Capitan IUAN DE FUCA Piloto de Indias,
amigo mio charmo. en Zefalonia.

Muy honrado Sennor, siendo yo para bueluerme en Inglatierra dentre de pocas mezes, y acuerdandome de lo tratado entre my y V. M. en Venesia, sobre el viago de las Indias, me ha parecido bien de scriuir esta carta a V. M. para que si tengais animo de andar con migo, puedaís escribirme presto, en que manera quereis consentaros. Y puedaís embiarmi vuestra carta, con esta nao Ingles que sta al Zante (sino hallais otra coientura meier) con el sobrescrito que diga, en casa del Sennor Eleazar Hyman Mercader Ingles, al tragetto de San Thomas en Venesia. Y Dios guarde la persona de V. M. Fecha en Venesia al primer dia de Iulio, 1596. annos.

Amigo de V. M. Michael Lok Ingles.

And I sent the said Letter from Venice to Zante, in the ship Cherubin. And shortly after I sent a copie thereof in the ship Mynyon. And also a third copie thereof by Manca Orlando Patron de Nave Venetian. And vnto my said Letters he wrote mee answere to Venice by one Letter which came not to my hands. And also by another Letter which came to my hands, which is copied here-vnder.

Al Illmo. Sigor. MICHAEL LOCH Ingles, in casa del Sigor. LASARRO Merca.
der Ingles, al tragetto de San THOMAS en Venesia.

Muy Illustre Segor. la carta de V. M. receni a 20. dias del Mese de Settembre, por lo qual veo Loche V. M. me manda, io tengo animo de complir Loche tengo prometido a V. M. y no solo yo, mas tengo vinte hombres para liuar con migo, porche son hombres vaglientes; y assi esso esperando, por otra carta che auise a V. M. parache me embiais los dinieros che tengo escrito a V. M. Porche bien saue V. M. como io vine pouer, porche me glieno Capitan Candis mas de sessanta mille ducados, como V. M. bien saue: embiandome lo dicho, ira a servir a V. M. con todos mis compaÑeros. I no spero otra cosa mas de la voluntad e carta de V. M. I con tanto nostro Sigor. Dios guarde la Illustre persona de V. M. muchos annos. De Cefalonia a 24. de Settembre del 1596.

Amigo & seruitor de V. M.

Iuan Fucas.

And the said Letter came to my hands in Venice, the 16. day of Nouember, 1596. but my Law suite with the Companie of Turkie was not yet ended, by reason of Sir Iohn Spencers suite made in England at the Queenes Court to the contrarie, seeking onely to haue his money discharged which I had attached in Venice for my said pension, and thereby my owne purse was not yet ready for the Greeke Pilot.

And neuertheless, hoping that my said suite would haue shortly a good end; I wrote another Letter to this Greeke Pilot from Venice, dated the 20. of Nouember, 1596. which came not to his hands. And also another Letter, dated the 24. of Ianuarie, 1596. which came to his hands. And thereof he wrote me answere, dated the 28. of May, 1597. which I receiued the first of August

The Ship *Santa Anna*.

The Streight of *Nova Spania* thirtie dayes journey in the Streight.

1597. by *Thomas Norden* an English Merchant yet living in *London*, wherein he promised still to goe with me into *England*, to performe the said voyage for discoverie of the North-west passage into the South Sea, if I would send him money for his charges according to his former writing, without the which money, he said he could not goe, for that he said he was vndone vtterly, when he was in the ship *Santa Anna*, which came from *China*, and was robbed at *California*. And yet againe afterward I wrote him another Letter from *Venice*, whereunto he wrote me answere, by a Letter written in his *Greeke* language, dated the 20. of October, 1598. the which I have still by me, wherein he promisetht still to goe with me into *England*, and performe the said voyage of discoverie of the North-west passage into the South Sea by the said streights, which he calleth the Streight of *Nova Spania*, which he saith is but thirtie daies voyage in the streights, if I will send him the money formerly written for his charges. The which money I could not yet send him, for that I had not yet recovered my pension owing mee by the Companie of *Turkie* aforesaid. And so of long time I stayed from any further proceeding with him in this matter.

And yet lastly, when I my selfe was at *Zante*, in the moneth of Iune 1602. minding to passe from thence for *England* by Sea, for that I had then recovered a little money from the Companie of *Turkie*, by an order of the Lords of the Priuie Counsell of *England*, I wrote another Letter to this *Greeke* Pilot to *Cefalonia*, and required him to come to me to *Zante*, and goe with mee into *England*, but I had none answere thereof from him, for that as I heard afterward at *Zante*, he was then dead, or very likely to die of great sicknesse. Whereupon I returned my selfe by Sea from *Zante* to *Venice*, and from thence I went by land through *France* into *England*, where I arrived at Christmas, An. 1602. safely, I thanke God, after my absence from thence ten yeeres time; with great troubles had for the Company of *Turkies* businesse, which hath cost me a great summe of money, for the which I am not yet satisfied of them.

A Treatise of the North-west passage to the South Sea, through the Continent of Virginia, and by Fretum Hudson.

The noble plantation of *Virginia* hath some very excellent prerogatiues aboue many other famous Kingdomes, namely, the temperature of the aire, the fruitfulnessse of the soile, and the commodiousnesse of situatione.

The aire is healthfull and free both from immoderate heate, and from extreme cold; so that both the Inhabitants and their Cattell doe prosper exceedingly in stature and strength, and all Plants brought from any other remote climate, doe there grow and fructifie in as good or better manner, then in the soile from whence they came. Which though it doe manifestly prooue the fruitfulnessse of the soile, yeelding all kindes of Graine or Plants committed vnto it, with a rich and plentifull increase; yet cannot the fatnesse of the earth alone produce such excellent effects, vnlesse the temperature of the aire be likewise so fauourable, that those tender sprouts which the earth doth abundantly bring forth, may bee cherished with moderate heate and seasonable moisture, and freed both from scorching drought, and nipping frost.

These blessings are so much the more to be esteemed, because they are bestowed vpon a place situated so conueniently, and at so good a distance both from *Europe*, and the *West Indies*, that for the mutuall commerce betwixt these great and most rich parts of the habitable world, there cannot bee deuised any place more conuenient for the succour and refreshing of those that trade from hence thither: whether they be of our owne Nation, or of our Neighbours and Friends; the multitude of great and nauigable Riuer, and of safe and spacious Harbours, as it were inuiting all Nations to entertaine mutuall friendship, and to participate of those blessings which God out of the abundance of his rich Treasures, hath so graciously bestowed some vpon these parts of *Europe*, and others no lesse desired vpon those poore people: which might still haue remayned in their old barbarous ignorance, without knowledge of their owne miserie, or of Gods infinite goodnesse and mercy; if it had not pleased God thus graciously both to draw vs thither with desire of such wealth as those fruitfull Countries afford, and also to grant vs so easie, certaine, and safe a meanes to goe vnto them: which passage is in mine opinion made much more secure and easie by the commodious Harbours and refreshing which *Virginia* doth reach out vnto vs. The coasts of *Florida* to the West, being not so harberous; and of *New England* to the East, somewhat more out of the way, amongst so many Flats, and small Ilands not so safe. Neither is the commodiousnesse of *Virginia's* situation onely in respect of this West *Atlanticke* Ocean, but also in respect of the *Indian* Ocean, which we commonly call the South Sea, which lyeth on the West and North-west side of *Virginia*, on the other side of the Mountaines beyond our Falls, and openeth a free and faire passage; not onely to *China*, *Iapan*, and the *Moluccaes*; but also to *New Spaine*, *Peru*, *Chili*, and those rich Countries of *Terra Australis*; not as yet fully discovered. For the Sea wherein Master *Hudson* did winter, which was first discovered by him, and is therefore now called *Fretum Hudson*, doth stretch so farre towards the West, that it lyeth as farre Westward

ward as the Cape of *Florida*: So that from the Falls about *Henrico* Citie, if we shape our iourney towards the North-west, following the Riuer towards the head, wee shall vndoubtedly come to the Mountaines, which as they send diuers great Riuer Southward into our Bay of *Chesepiock*, so likewise doe they send others from their further side North-westward into that Bay where *Hudson* did winter. For so wee see in our owne Countrey, from the ridge of Mountaines continued from *Derbshire* into *Scotland*, doe issue many great Riuer on both sides into the East *Germane* Ocean, and into the Westerne *Irish* Seas: in like sort from the Alpes of *Switzerland* and the *Grizons*, doe runne the *Danubie* Eastward into *Pontus Euxinus*, the *Rhene* into the North *Germane* Ocean, the *Rhosne* West into the *Mediterrane* Sea, and the *Po* South into the *Adriatike* Sea. This Bay where *Hudson* did winter, stretcheth it selfe Southward into 49. degrees, and cannot be in probabilitie so farre distant from the Falls as two hundred leagues; part of the way lying by the Riuer side towards the Mountaines from whence it springeth; and the other part on the other side cannot want Riuer likewise, which will conduct vs all the way, and I hope carry vs and our prouisions a good part of it. Besides that Bay, it is not vnlikely that the Westerne Sea in some other Creeke or Riuer commeth much neerer then that place: For the place where Sir *Thomas Button* did winter, lying more Westerly then Master *Hudsons* Bay by one hundred and ninetie leagues in the same Sea, doth extend it selfe very neere as farre towards the west as the Cape of *California*, which is now found to bee an Iland stretching it selfe from 22. degrees to 42. and lying almost directly North and South; as may appeare in a Map of that Iland which I haue seene here in *London*, brought out of *Holland*; where the Sea vpon the North-west part may very probably come much neerer then some doe imagine: who giuing too much credit to our vsuall Globes and Maps, doe dreame of a large Continent extending it selfe farre Westward to the imagined Streight of *Anian*, where are seated (as they fable) the large Kingdomes of *Cebola* and *Quinira*, hauing great and populous Cities of ciuill people; whose houses are said to bee five stories high, and to haue some pillars of *Turgueses*. Which relations are cunningly set downe by some vpon set purpose to put vs out of the right way, and to discourage such as otherwise might be desirous to search a passage by the way aforesaid into those Seas.

Gerardus Mercator, a very industrious and excellent Geographer, was abused by a Map sent vnto him, of foure *Euripi* meeting about the North Pole; which now are found to bee all turned into a mayne Icie Sea. One demonstration of the craftie falshood of these vsuall Maps is this, that Cape *Mendocino* is set in them West North-west, distant from the South Cape of *California*, about seenteene hundred leagues, whereas *Francis Gaule* that was imployed in those discoveries by the Vice-roy of *New Spaine*, doth in *Hugo Linschotten* his booke set downe their distance to be onely five hundred leagues.

Besides this, in the place where Sir *Thomas Button* did winter in 57. degrees of latitude, the constant great Tydes euery twelue houres, and the increase of those Tydes whensoever any strong Westerne winde did blow, doe strongly perswade vs that the mayne Westerne Ocean is not farre from thence; which was much confirmed vnto them the Summer following; when sayling directly North from that place where they wintered, about the latitude of 60. degrees, they were crossed by a strong Current running sometimes Eastward, sometimes Westward: So that if we finde either *Hudsons* Bay, or any Sea more neere vnto the West, wee may assure our selues that from thence we may with great ease passe to any part of the East *Indies*: And that as the World is very much beholding to that famous *Columbus* for that hee first discovered vnto vs the West *Indies*; and to the *Portugal* for the finding out the ordinarie and as yet the best way that is knowne to the East *Indies*, by Cape *Bona Speranza*: So may they and all the world be in this beholding to vs in opening a new and large passage, both much neerer, safer, and farre more wholesome and temperate through the Continent of *Virginia*, and by *Fretum Hudson*, to all those rich Countreies bordering vpon the South Sea, in the East and West *Indies*. And this hope that the South Sea may easily from *Virginia* be discovered ouer Land, is much confirmed by the constant report of the Sauages, not onely of *Virginia*, but also of *Florida* and *Canada*; which dwelling so remote one from another, and all agreeing in the report of a large Sea to the Westwards, where they describe great ships not vnlike to ours, with other circumstances, doe giue vs very great probabilitie (if not full assurance) that our endeouours this way shall by Gods blessing haue a prosperous and happy successe, to the encrease of his Kingdome and Glorie amongst these poore ignorant *Heathen* people, the publique good of all the *Christian* world, the neuer-dying honour of our most gracious Soueraigne, the inestimable benefit of our Nation, and the admirable and speedie increase and aduancement of that most noble and hopefull Plantation of *Virginia*; for the good successe whereof all good men with mee, I doubt not, will powre out their prayers to Almighty God.

H. B.

VOYAGES,

As the Cape of Horns is situated from the Strait of Magellan, it is the passage out to the South Sea, which is the most direct way to the Indies, and the most commodious for the carrying of goods. The Spaniards, who first discovered this passage, called it the Strait of All Saints, because they found it open on the feast of All Saints. The English, who afterwards discovered it, called it the Strait of Magellan, in honour of the first discoverer. The Spaniards, who first discovered this passage, called it the Strait of All Saints, because they found it open on the feast of All Saints. The English, who afterwards discovered it, called it the Strait of Magellan, in honour of the first discoverer.

THE FIFTH BOOKE.

CHAP. I.

A Description of the West Indies, by ANTONIO DE HER-
RERA * his Maiesties Chiefe Chronicler of the Indies,
and his Chronicler of Castile.

To the Licentiate PAVL of Laguna, President of the Royall and
Supreme Councell of the Indies.

He Licentiate Iohn of Obando, Predecessor of your Lordship (in
whose time the Office of chiefe Chronicler of the Indies was institu-
ted, for writing with greater authoritie, foundation, and truth,
the Acts of the Castilians in the New World, and to see and examine
that which the other Chroniclers should write (for I finde that
almost to all that is written no credit could be given, for ouer-much
licence, wherewith untill then it was done) hee used great diligence
in gathering the most certaine Relations that were found as well in
the Indies, as in Spaine, of that which happened in the Discoveries
of those Regions, the foundations of those Townes and Customes of
the people. And many yeers being past after his death, without making
any beginning of this History, your Lordship being provided for Presi-

dent of the Royall and Supreme Councell of the Indies, knowing how much it behoued, that deeds so worthy

rude, obscure and in very many places vtterly sencelesse. But hauing none to write for mee but my owne hands, I rather chose
to amend this as I could, then to translate it anew. I haue seene it also in French. The Latine is exceeding false in some numbers, as
2000. for 20000. diuers times, &c. which I note for their sakes which read that and haue not the Spanish. I haue not contracted this
(as I haue done diuers other Relations) because it is a brieue contraction of the Spanish-Indian Contrattation, presenting the
Spanish Proceedings, Colonies, Townes, Officers and Government Spiritual and Temporall in the Indies. This Author hath written
eight Decades of the Spanish Acts in the West Indies, which giue great light to those parts, but would be too long for this Worke.

* I found this
Worke transla-
ted in M. Hak-
luyts Papers;
but I can scarc-
ly call it Eng-
lish, it had
so much of the
Spanish garbe,
in litterall and
verball affec-
tion and obscu-
ritie. I haue
examined it
with the Spa-
nish Originall,
and compared
it also with the
Latine Transla-
tion, with great
gaines for thy
greater plea-
ture & profit,
correcting and
illustrating the
phrased and
licence, being
before very

of

Ramusio vncharitably taxed: for he doth but blame the folly of Spanish Authors which are more curious to set downe the names, &c. of those which haue there done any thing though but rebellions, then the description of the beasts, fishes, fowles, plants, Earth, Heauen, &c. in the Indies: for which hee there commends Quiedo.

of memorie should no longer be buried, and that they should be written by a Royall Chronicler (seeing so much fruit is gotten of Historie, that it exceedeth so much the Picture, as the soule, the bodie, against the opinion of a moderne Writer.) Providing all the meanes necessarie with liberalitie and diligence, haue bene the meere and onely Instrument; following the opinion of S. Augustine, that this Historie, and the Description that followeth hath come to the present estate. And because it hath not bene of least importance to honour the Author, animating him to goe forward with so great a labour, conforming your selfe with the vniuersall opinion of the much that is due to the watchings, and labours of the Writers; placing this Office of Chiefe Chronicler in that point and reputation that so noble an Exercise deserueth, (as the most famous men of the World haue iudged it, and it is esteemed and talked of among all Nations be they neuer so barbarous) your Lordship shall be prayesd eternally, and thanked of all that are interessd in it; by which is procured the making mention of their Fathers, and Predecessors with their Names and Countrey, all that hath bene possible, against the barbarous and most vnjust opinion of Iohn Baptista Ramusio, in his Proeme in the third Volume of the Navigations, where hee saith to bee a vaine thing, and ridiculous, that the Spanish Authors should take paines in writing the names and Countrey of those which serued in the matters of the Indies. wherein he sheweth the venime of the enuie conceined of the glorious deeds of these Catholike Kings, and of the Castilian Nation, seeing the Chronicles doe serue to honour the good, and to reproch the euill, for an example of those to come; which could not be obtayned with the opinion of this Ramusius, whom the saying of Cato against the Grecians doth fit. But the opinion of your Lordship hath bene according to your prudence and valour, of the which as it is iust, there will be a perpetuall memorie, and for that which this Nation is indebted vnto you for the same, you shall bee reknowledged of it eternally. God keepe your Lordship, from Vallyadolyeede the fiftenth of Oct ober 1601.

Chap. 1.
Of the bounds
and diuision
of the West
Indies.

1 The Spaniards
haue surpassed
all Nations of
the World, in
Navigation
of high built
ships. Remem-
ber that a Spa-
niard speaks
it.)

know any Pa-
lage.

a How the de-
grees of longi-
tude are rec-
koned.

The compasse of the Earth is 360. degrees, which being reduced to leagues of Castile are 6300. and by the compasse of the Earth is vnderstood the Sea together with it, which two Elements make the Globe; whose vpper face in part is Earth, and in part is Sea: The Ancients diuided the Earth in three parts, and gaue to euery one his name. The first they called *Europe*, more celebrated then any of the other. The second *Asia*, which is greater then the rest, and containeth the great Kingdome of *China*. The third *Africa*. And men being in a supposition that the World containd no more then was rehearsed, not contenting themselves with it, entred in the Art of Nauigating, and in the inuention of ships of high building, fitting them in such order that they might abide the force of the waues of the Sea, & in this Art the Spaniards haue surpassed all the Nations of the World. For whiles there reigned *Ferdinand* in Castile and in *Lyon*, the famous Kings Catholike *Ferdinando* the First, and *Isabelle* a most wise, prudent, and most puissant Queene; and *Don Iohn* the Second, called the *Pellican*, reigned in *Portugall*, (hee that euer will be worthy of memory) *Don Christopher Colom* first Admirall of the Indies, hauing liued many yeeres married in *Spain*; with the counsell of *Martin* of *Bohemia*, a *Portugall* borne in the Iland of *Fayall*, a famous Astrologian; and especially a Iudicarie, and of others with whom he communicated it, gaue a beginning to the Discouery of that which at this day is counted the fourth part of the World, and the greatest of them all, and taking his course toward the Sunne setting, going from *Pallos* a Village of the Earle of *Miranda*, in the Coast of *Andaluzia*, he sayled so much by the Ocean, that hee found this great Land, which the Equinoctiall Line cutteth in the middest, and it goeth so farre toward the South, that it reacheth to fiftie two degrees and an halfe, and goeth so high to the North, that it hides it selfe vnder the Pole Articke; without knowing any end.

The greatnesse of this fourth part hath set the people in great admiration, whose description shall here be handled, vnder the name of *Ilands*, and firme Land of the Ocean Sea, because they are compassed with this Sea, and placed to the West, and are commonly called, the *West Indies*, and the *New World*, and comprehended within the limits of the Kings of *Castile* and of *Lyon*. Which is an Hemisphere, and halfe of the World, of 180. degrees, beginning to reckon from Meridian Circle, which passeth by thirtie nine, or by fortie degrees of longitude, Occidental from the Meridian of *Toledo*, through the mouth of the Riuier *Maranyon*, and to the Orientall, through the Citie of *Mallaca*, in sort, that at twentie leagues sayling for a degree, these bounds haue from the one part to the other 3900. *Castilian* leagues, euery one of 3000. paces, of five foot of a *Castilian* yard, which men say are sixtie *Italian* miles, from the Orient to the Occident, which the Sea-men doe call East and West. And this account of twentie leagues to a degree, is according to *Ptolomie*, and to the opinion of many curious men. It hath seemed to others that the miles of euery degree are seuentie, and that they make no more then seuentene leagues and an halfe of *Castile*, which is held for the truest account.

The degrees of longitude, which are those that are reckoned by the Equinoctiall, which goeth from East to West, through the middest of the Orbe, and Globe of the Earth, haue not bene able to bee taken well, because there is no fixed signe in the Heauen. Degrees of altitude are those which are taken, and reckoned from the Pole which fall out certayne, because it is a fixed

There is discovered, and navigated from the North to the South, from 60. degrees of Septentrional altitude, vnto fittie three Austral, which are 1977. leagues of ground, which hath in breadth, at the broadest 1300. and thence downewards vnto eighteene, which is the narrowest by *Nom- bre de Dios*, or *Portobelo*, vnto *Panama*, whereby Nature diuided this Land, leaving almost the halfe of it to the North, and the rest to the South, which are the two parts of these bounds. The third, is the Ilands and firme land, that lye to the East of *Mallaca*, where through passeth the Line of the partition, betweene the two Crownes of *Castile* and *Portingall*, the which although they are part of the East *India*, they are named of the West in respect of *Castile*, as shall bee seene in the generall Map that followeth.

Chap. 2.
Of the Naviga-
tion of the
Indies.
How many
Navigations
there bee to
these Indies.

Difficultie in
going out of
the Barre of
Saint Lucar.
In what times
these Naviga-
tions are to be
made.
Monsons.

The voyage of
the Fleets till
they come to
the place wher
they goe.

What thing
the Brises are.

They take wa-
ter alreadie in
the Ile of Gua-
dalupe, where
the Courses
are diuided.

Which is the
best Navigati-
on from that
Cape of S. An-
tonie, to S. Iohn
de Vlva.

The Ocean that is toward the East, is called the *North Sea*, and that which falleth to the West, *Mar del Sur*, or the *South Sea*: this washeth *Noua Hispania* and *Peru*: that washeth those Regions which are situated on the South coast of *Brasile* toward the *Magellan* Streight: and especially the North coast from *Brasile* toward *Castile*, and other *Septentrional* parts. These two vast Seas are diuided into other lesser Seas and Gulfs, and are sayled by foure principall Navigations. The first and most ancient, from *Castile* to *Terra firme*, and to *Noua Hispania*. The second, from *Castile* to the River of *Plate*, and the Streight of *Magellan*. The third, from the coast of *Noua Hispania* to *Guatimala*, and *Panama*, to *Peru*, *Chile*, and the Streight. And the last, and newest, from *Noua Hispania* to the Islands of the West, and trafficke of *China*, as it is seene in the Table preceding.

The first Navigation, because it is most vsed, called *Carrera de las Indias*. The course of the *Indies*, is diuided in two, one to the port of Saint Iohn of *Vlva* in *Noua Hispania*, whitherto from *Spain* is sayled about one thousand and seven hundred leagues in two moneths and an halfe: and another to *Nombre de Dios*, and now to *Porto bello*, which is in the Kingdome which they call *Terra firme*, of one thousand and foure hundred leagues, in two moneths large, and both goe by one course, till they come to the Islands of the North Sea, from Saint *Lucar* of *Barrameda*, whence yee cannot take Sea without a Pilot skilfull in the Channell, a fit winde and spring Tydes, and light of the day, or lights, for to see the markes of the Barre.

The Times for to begin these Navigations, are diuers. For *Noua Hispania*, the winter being past, from the beginning of April vnto the end of May, and not after, that they may not come to the Islands of the North Sea after August, when the North windes begin to reigne, and the *Vra- canes* doe begin, which are stormes and great gusts arising of contrarie windes. And to *Terra firme*, the Navigation is before the entring of the Winter, in all August and September, that they may come to *Porto bello* from Nouember forward, when by the beginning of the North windes that Coast is alreadie least diseased, and more healthfull.

From Saint *Lucar* they goe to the *Canaries*, whither there is about two hundred and fiftie leagues of Navigation, of eight or ten dayes, through the Gulfe of *las Teguas*; which in winter is very dangerous for stormes: and in the Port of *Canarie* they cast anker when they thinke it good, or else in the Port of *Gomera*, which is the best of those Islands. From the *Canaries* they saile to *Deseada*, which stands in 15. degrees and little more; and to *Dominica*, whither they make seven hundred leagues, through the great Ocean, and they stay five and twentie dayes, whereby they cannot returne, because the Brises are ordinarie, and contrarie at their returne. The Brises are windes which comprehend all the Easterne windes with all their quarters, and are so ordinarie and firme, because the swift motion of the *First Moouer*, doth carry after him the Element of the Aire, as the other superior Orbes: and so the Aire followeth alwaies the motion of the Day, going from East to West, neuer varying, and the effectuall motion of the Aire carrieth after him also the vapours and exhalations that doe arise from the Sea, and therefore the Brise winde which runneth from the East, is so continuall in those parts. This voyage from the *Canaries* to *Dominica*, Peter Arias of *Anila*, which was called *Gentill* and the *Iuster*, made the first, the yere of 1514. when hee went with an Armie for Gouvernour and Captaine generall of the Kingdome of *Golden Castile*, now called *Terra firme*, since which the Navigation hath bene ordered, that vntill then went out of order.

Because it is now ordered that fresh water and wood be not taken in the Iland of *Deseada*, and in *Dominica*, the Fleet of *Noua Espanna* goe hence to *Ocoa*, a Port of the Iland *Hispaniola*, to take refreshing, and they stay long because the stormes from *Cuba* doe overtake it. And they that goe for *Noua Espanna*, doe water in the Iland of *Guadalupe*, and there they diuide the courses. The fleet of *Noua Espanna* goeth in demand of the Cape of Saint *Antonie*, which is in the furthest part and most Occidentall of the Iland of *Cuba*, to which place they saile about five hundred leagues in twentie dayes ordinarily, in sight of Saint Iohn of *Porto Rico* and of *Espannola*, two leagues off the Port of Saint *Domingo*, running along the coast by the Point of *Nizao*, and betweene the Islands of *Cuba* and *Iamayca*, they goe with great heede of the shoales, which are called the *Iardines*, neere to the midst of the coast of *Cuba* where many ships haue bene lost, passing afterward in sight of the Iland of *Pinos* and Cape *Correntes* twelve leagues short of the Cape of Saint *Antonie*. From whence there are two courses to the Port of *Venacruz*, both of ten or twelve dayes; one which they call *Within Land*, of two hundred and fiftie leagues, for the Summer time from May to September, when there bee no North windes which are crosse windes on the coast of *Yucatan*, whereby they passe; and another which they call *Without*, for the time of Winter, of about two hundred and eightie leagues somewhat higher in altitude: and the best Navigation, for to goe to the Port of Saint Iohn of *Vlva*, is to leane to the coast of *Florida*, and the Playnes of *Almeria*, that no contrarie wind stay him from seasonable attayning the Port of Saint Iohn de *Vlva*.

The fleets that went from *Dominica*, and now goe from *Guadalupe* to *Terra firme* (whither is about foure hundred leagues voyage of fiftene dayes) they goe in demand of *Cartagena*, farre off the

the coast of *Terra firme*, where the Brises are almost perpetuall, and contrarie to the returne, and the Southerne windes continuall in Summer, and the Northerne in Winter, which are crosse windes. They doe reknowledge by the way the Cape de *Vella*, between *Santa Martha* and *Venezuela*, and the Cape *del Aguja* neere *Cartagena*, where they vnlade the merchandise that are to goe to *New Kingdome*; and those which are to passe to *Peru*, are carried to *Porte bello*, whitherto from *Cartagena* are ninetie leagues, foure or fixe dayes sayling, reknowledging the Point of *Captina*, and from the *Canaries* to *Cartagena* is fve and thirtie dayes sayling.

Those that goe to *Hunduraz* and *Guatemala*, goe in companie with them of *Noua Espanna*, vnto Cape *Tiburron*, the vtmost Western part of *Espannola*, from whence running along by the Iland of *Jamayca* on the North side, vnto the Point of the *Negrillo*, the vttermost of it, they put to Sea in demand of the Cape of the *Cameron*, the beginning of the Gulfe and Prouince of *Hunduraz*, from whence they goe to anker to *Truxillo* fiftene leagues to the West from the Cape, where the merchandize are vnladen that are to remaine there, and the rest doe passe to the Port of *Canallos*, and to *Golfo Dulce*, along the coast by the Gulfe of *Hunduraz*, to transport them to *Guatemala*.

The returne from the *Indies* to *Spain*, cannot be made by the course which they take in going thither, and therefore they must come to a greater height, going out of the Tropicks to seeke fresh windes which doe blow from towards the North; all the Fleetes doe meete in the Port of *Hauana*, about the moneth of Iune, to come to *Spain* before Winter; for the East winde is against them, and is trauerse in the Channell, and the South also is trauerse in the Coast from the Cape *Saint Vincent* to *Saint Lucar*. The fleet of *Terra firme*, departeth from May forward from *Porte bello*, when the North windes doe already cease; and returneth to *Cartagena* to take the freight of Silver and Gold from the new Kingdom of *Granada*; and also for to auoid the Coast of *Veragua*, and the streame of *Nicaragua*, whence they can hardly get out if they ingulfe themselves by reason of the Brises, and contrarie and dangerous Currents that are in the way. From *Cartagena* they goe for Cape *Saint Antonie*, the furthest West of *Cuba* about two hundred leagues, voyage of ten dayes, with care of the shoales that are in the way of *Serrana* and *Serranilla*, and *Quitasueno*, and from the Cape of *Saint Antonie* to the *Anana*, are neere fiftie leagues: and the ships that come from *Hunduraz*, doe come also to reknowledge the Cape of *Saint Antonie*.

The fleetes of *Noua Espanna* doe depart in the beginning of May, while the North windes doe last, which doe serue for the returne to the *Anana*; ascending a little in altitude vnto the Sound, which they call *las Tortugas*, vnto which place they saile about three hundred leagues in fiftene dayes.

The ships of *Santa Martha* and *Venezuela*, to come to *Castile*, came out betweene *Cuba* and *Hispaniola*, to reknowledge the Cape of *Saint Nicholas* in the Western part of it, from whence through the middest of the Iles of the *Lucayos*, they goe take the course of the fleets, and when they come in sight of the Cape of *Saint Antonie*, they goe to the *Anana* for feare of Pirates.

From the *Anana* to *Castile*, hauing past the Channell of *Bahama* (which the Pilot *Antonie* of *Alaminos* sayled first of all, the yeere 1519.) they doe saile through the Gulfe which is called of the North, or of the *Sagarzo*, about nine hundred or a thousand leagues or more (a sayling of fve and twentie or thirtie dayes with ordinarie windes) by two wayes, one for Summer, in a greater height, till they come to thirtie eight or thirtie nine degrees, in the which stand the Ilands of *Azores*; and another for Winter, by a lesser height, because of the stormes and showres which doe come alwayes neere vnto it, whereby they goe vnto thirtie nine degrees no more, wherein standeth the Iland of *Santa Maria*, one of the Iles of *Azores*, and they ascend one degree more for to touch in the *Tercera*, where the fleets doe alwayes come to take refreshing, without permitting any one to goe ashore. And from the Ilands of *Azores* vnto *Saint Lucar* of *Barrameda*, the Mariners make three hundred leagues of Nauigation in fiftene dayes, others in thirtie for the many Brises that doe reigne in this Gulfe of the *Azores*, whereby they saile till they come vpon the Coast of *Portugal*, and the doubling of the Cape *Saint Vincent*; and after in sight of the Coast vnto the Port of *Saint Lucar*.

The Nauigation from *Castile* to the River of *Plata* (whitherto there is one thousand and fixe hundred leagues, and to the Streight of *Magelanes* neere two thousand) hath bene much longer in the time then in the distance of the way, because being necessarie to come to those Prouinces in their Summer, which is from September forward, they cannot depart from *Castile* at such time as not to passe the Equinoctiall by Iune or August, when in it the Calmes are many and very great, and therefore they stay fve moneths in the Voyage, which might bee made in two or three, if from *Siuil* they did depart by August or before; and touching in the *Canaries* they goe North and South; to eight or nine degrees on the other side of the Equinoctiall, from whence some doe saile East and West, to reknowledge the Cape of *Saint Augustine* in *Brasile*, and afterward in sight of the Land vnto the River of *Plata* and the Streight. Others from the eight degrees haue gone straight through the South Sea to the Streight, although few haue come to passe

it, before the Summer bee ended, which is very short and full of stormes, because it stands in so great a height, whereby this Navigation is very difficult.

Navigation of
the South Sea.
Navigation of
Panama to the
Citie de los
Reyes.

The Navigation of the South Sea hath alwayes beene along the Coast, and because the South windes are very continuall, and the Current of the Streight ordinarie to the North; The Navigation of *Panama* to the Citie of *The Kings*, is wont to continue two moneths, and the returne lesse then thirtie dayes, and the same from the *Kings* to *Chile*, from whence to *Panama* are sayled nine hundred leagues in lesse then two moneths, eight being needfull for the going, which is already shorter then it was: for putting to the Sea they finde better windes to performe it.

Navigation of
the West In-
dies.

The Navigation to the Westerne Ilands, *Malucas* and *Philippinas*, from *Castile* to the Streight of *Magellane* passeth foure thousand leagues, and so for being so long as for the difficultie of passing the Streight of *Magellanes*, it is held for difficult to vse it, and from *Nova Espanna* through the Westerne Gulie, which is in the South Sea. This Navigation was made from the Port of the *Natiuitie* in the Coast of *Nova Espanna*: at this time it is made from the Port of *Acapulco*, from whence to the *Malucas* and *Philippinas*, they doe make a voyage of one thousand sixe hundred, or a thousand and seuen hundred leagues, which is sayled in two moneths, or two and a halfe, departing in Nouember which is the time most free from calmes. And the returne to *Nova Espanna* is longer, because not being able to returne the way they went, it is necessarie to ascend to 39. degrees, and depart in May and Iune, when the Brises bee lesse, and they stay foure moneths in sayling two thousand leagues that may bee in the journey.

Chap. 4.
Of the Indies
of the North.
Here was inser-
ted a Map of
the North parts
of America. But
Master Briggs
hath in the
former booke
giuen you a
farre farre bet-
ter, to which I
referre you.
Which bee the
Indies of the
North and
which of the
South.
Wherefore it
was called *New*
Spain.
Great pastures
in *New Spain*.
* The wea-
thermost or
vpper Ilands.

Nature hauing diuided these western *Indies* in two parts, by the Isthmos or narrowesse from *Porto bello* to *Panama*, placed the one to the North, and the other to the South; wherefore wee will call them the *Indies* of the North, and of the South. The Kings of *Castile* and *Lion*, with the aduice of the supreme Councell of the *Indies*, haue ordayned, that in each place there bee a Vice-roy, Courts, and Gouvernements, and Bishopricks, as hereafter shall bee shewed. And first shall be entreated of the Northerne *Indies*, which commonly they call *Nova Hispania*, because the first discoverers (which were *Iohn Gryalua* and his Companions) hauing not seene in the Ilands houses of stone, nor other things as in *Spain*, which here they found with people apparelled, and more ciuill; They named it *New Spain*: which exceedeth the other part of the *Indies* in pastures, and therefore they haue innumerable Cattle of all sorts: and it exceedeth also in husbandrie and fruits: it hath no wine, because generally the grapes doe not ripen with perfection, the raines of Iuly and August not suffering them to ripen. The vpper Ilands haue also great Pastures, and a pleasant prospect: for all the yeere they are Greene and flourishing, with great pleasantnesse, and great *Arcahuicos*, which are very thick Groues and Inclosures, and in the Playnes are great Lakes and Quagmires. Neither Bread nor Wine grow in them; for the great ranknesse of the ground doth not suffer it to ripen nor eare: the Riuer for the most part haue gold, *Florida*, *Nicaragua*, and *Guatemala* are almost in this manner, as of all more particularly wee will rehearse in their place, and in the Table following shall the bounds of these Northern *Indies* bee scene.

Chap. 5.
Of the bounds
of the iurisdic-
tion of Saint
Dominicke.

The Court of the Iland *Hispaniola*, which in time and place is the first, being neere vnto *Castile*, it hath of bounds East and West five hundred and fiftie leagues, and North and South more then three hundred, wherein are included the Ilands and Gouvernements of *Hispaniola*, *Cuba*, *Saint Iohn*, *Iamayca*, *Margarita*, and the fishing of the Pearle: the Prouince and Gouvernment of *Venezuela*, and for neernesse the Prouinces of new *Andaluzia*, *Guayana*, and *Florida*, with all the Ilands of the North Sea, which doe passe a hundred which are named, and are about sixe hundred great and small: and those which doe leane toward the Coast of *Terra firme*, the Mariners doe call of the *Leeward*, and the other to the *Weatherward*. The temperature of them all is commonly moist and exceeding hot, and although they be plentiful in Pastures and Trees, they are not so of the Seedes of *Castile*, nor of Wheat, Barly, Vines, nor Oliues: but there is great store of great Cattell and small, as Kine, Mares, Swine, and Sheepe, and therefore their principall trafficke is Hides and Sugar, for there is great store; and although in the most of them there is gold; it is not sought for.

Chap. 6.
Of the Iland
Hispaniola and
of *Cuba*.

The Countre-men called the Iland of *Hispaniola*, *Ayiti* and *Quisqueya*, which signifieth Roughnesse, and a great Countre. The figure of it is like a Chesnut leafe: it stands in nineteene degrees and a halfe of eleuation of the Pole, it compasseth about foure hundred leagues and somewhat more, and hath in length East and West an hundred and fiftie, and North and South from thirtie to sixtie where it is broadest, it is very plentiful of Sugar, and Cattell, and of *Tuca*, the roote whereof maketh the *Cazabi*, the bread of the Countre-men. They haue no Millet nor Wheat, although they begin to reape some in the inward parts and coldest. It is rich of Copper mynes and other metals, and some veine of Gold though but little is gotten, for want of workemen: it hath ten *Spanish Townes*.

Cazabi bread.
Ten Spanish
Townes.

HONDIVS his Map of Hispaniola, Cuba, &c.

- 40 The Citie of Saint Dominicke or Domingo neere the Coast of the South, on the River of Ozama. The Citie of Saint Dominicke, stands in the said 19. degrees and a halfe, and 60. of Occidentall longitude from the Meridian of Toledo, from whence vnto it there may bee by direct line one thousand two hundred fortie seven leagues, it hath aboute fixe hundred households. There is resident in it the Audience or Councell, the Officers of the Goods and Royall Treasure; a Mint house, and the Cathedrall Church. And the Archbishopricke hath for Suffraganes the Bishopricks of the Conception de la Vega (which is vnited with that of Saint Dominicke) those of Saint Iohn, Cuba, Venezuela, and the Abbotship of Iamayca; and in the Citie are Monasteries of Dominicans, Franciscans, Mercenaries, and other two of Nunnes, a Grammar Schoole, with foure thousand * Pesos of Rent, and an Hospitall with twentie thousand. The Hauens which is great, and capable of many ships, is in the mouth of the River Ozama, and hath the Citie on the West, which the Deputie Don Bartholomew Collon did build the yeere 1494. on the East side, better and wholsomer in situation, and the chiefe Knight of Alcantara, Nicholas of Ouando being Gouvernour of Hispaniola, An. 1502. remoued it where now it is, from the other side the Riuer to the East, vpon occasion that the Citie had fallen by a great Earthquake. The Village of Saluatyon of Ygney, eight and twentie leagues from Saint Dominicke to the East, of the Archbishopricke; the Capitaine, Iohn of Esquivel, did people it. The Village of the Zeybo, twentie leagues from Saint Dominicke to the East, toward the Iland of Saona; the Capitaine also planted it in the time of Nicholas of Ouando. The Village of Cotuy, sixteene leagues from Saint Dominicke to the North, and very close in his circuit, Roderick Mexia of Trillo, founded it. The Village of Azua in Compostella, in the coast of the South, foure and twentie leagues from Saint Dominicke to the West, in his borders are many sugar Mills; it was peopled by the President James Vellazques, it was called Compostella by a Gallizian Knight, which held an Heritage in that situation, and Azua is the name of the place which the Indians had there. The first that carried sugar Canes to the Indies, and began to make triall of them there, was one Atienza, and the Bachellor Velosa. The Village of Yaguana, which they call

Where they
tooke armes
the first time
against Indians.

The Citie of the *Concepcion of the Valley*, is in the Kingdome of *Guarinoex*, which the first Admirall *Don Christopher Collon* built, neere to the which he obtayned the victorie in the great battle of the *Valley Royall*: it is twentie leagues from *Saint Dominicke* to the North-east, where is a Cathedrall Church (although there is no Prelate, for it is vnited to the Church of *Saint Dominicke*) it hath one Monasterie of religious *Franciscans*, where is the wood of the Crosse which the *Indians* could not burne, cut, nor ouerthrow, which hath done many miracles.

Saint Iago de los Canalleros is ten leagues from the Citie de la Vega directly to the North-east; it was first a Fortresse which the first Admirall made in the Countreies of the *Cacique Guanacamel*, for the securitie of the Valley, and the Fort *Magdalene* which was foure leagues off.

The chiefe Knight of *Alcantara*, *Nicholas* of *Ouando*, An. 1502. did people the Port of *Plate* in the North coasts, fise and thirtie or about fortie leagues from *Saint Dominicke*, because the ships of *Castile* might more commodiously trafficke, and because it was no more then ten leagues from the great *Valley*, where in other ten leagues stood the Village of *Saint Iames*, and the *Concepcion* within sixteen, and within twelue the Mynes of *Cibao*, and it was of the Bishoprick of the *Valley*, the Port of *Plate* stands in little more then twentie degrees. The Village of *Monte-Chryste*, is in the coast of the North fourteene leagues, to the West of Port of *Plate*, and fortie from *Saint Dominicke*, is of the Bishoprick of the *Valley*; it hath a good Hauen, and certaine salt Pits in it; 20

There was in old times in this Iland the Citie of *Isabella*, now disinhabited, which the first Admirall built the yeere 1493. the Village of *Verapaz* in *Xaragua*, which *Iames Velazques* built in the yeere 1503. and the same yeere peopled also *Saluatierra* of the *Zabana*, which signifieth *Playnes* and *Pastures*, in the *Indian* language: and that Prouince is plaine and faire. Hee also peopled (betweene the two mightie Riuer *Neyba* and *Yagui*) the Village of *Saint Iohn* of the *Maguana*, in the midst of the Iland, where the Church continueth yet; and heere reigned *Coanabo*, who tooke *Alonso de Oieda*. Hee also planted *Villanueva de Yaguime* vpon the Hauen, where *Oieda* cast himselfe to swim, being prisoner in a ship, with two paire of fetters; and it stands in the South coast, which the Admirall did call the Coast and Hauen of *Brasile*. The Village of *Bonao* is neere vnto *Cotuy*, which the first Admirall also built, where hee made a Port for the securitie of the Mynes, which were the first that were found in this Iland. The Village of *Bonaenventura* is eight leagues from *Saint Dominicke* to the North, and *Lares de Guababa*, which *Nicholas* of *Ouando* peopled, being *Comendador Lares*.

This Iland flourished so much, that there were in it fourteene thousand *Castillanes*, many of them Noble people, and the Plantations of other parts which happened afterward, caused it to be disinhabited, for from it, and from the Iland of *Cuba*, went all the substance for the new Countreies that were found.

The Ports, Roades, Capes, and Points most famous, and the Ilands pertayning to the Coast of this Iland, are in the South Coast, the Point of *Nizao*, ten leagues from *Saint Dominicke* to the West. The Port of *Ocoa*, eightene, which is a Bay where the Fleets which goe for *Noua Hispania* doe anchor and take refreshing, when they doe not anchor in the nooke of *Zepezepin*, which is neere vnto it, or in another which they call the *Faire Hauen*, two leagues before they come to *Ocoa*. *Azuua* a Port and Towne twentie foure leagues beyond *Ocoa la Calongia*, a large Point thirtie leagues, right against the Ilands of *Boata* and *Altobelo*, fise leagues from the Coast, and the *Beatados*. *Yaguimo* about thirtie foure more to the West, and *Abaque*, an Iland neere the Cape of *Tiburou*, the furthest West of *Hispaniola*: *la Nabaza* ten leagues to the Sea East and West from the Cape, and Cape *Rojo* twelue leagues from it to the North: the *Roques*, or *Hermanos* these, and *Guanabo* another Iland of eight leagues in length, in the nooke of *Yaguana*. The Port of *Saint Nicholas*, the furthest West on the North side of the Iland. A little further the Port of * *Mosquitos*, in the North Coast, and twentie leagues forward the Port of *Valparayso*, or of the *Concepcion*, North and South, with the *Tortuga* an Iland neere the Coast of fise leagues in length: Port *Royall* twelue leagues to the West from *Monte-Chryste*, which is as much, or a little more before *Isabela*, and this from the Port of *Plate*, other twelue leagues: *Cabo Frances*, and *Cabo del Cabron*, in the turning, which the Coast maketh to the East, before the Gulfe of *Samana*, which entrech fise or sixe leagues the Land inward, vnto the place where the Towne of *Santa Cruz* stood. And in the Riuer of *Samana*, was the first time that Armes were taken against the men of the *Indies*; because they would haue done violence to the first Admirall. The Cape of *Deceit*, (*Cabo del Enganno*) is the furthest West of the Iland where the Coast returneth by the South to the West, at the beginning of the which stands the *Saona*, an Iland which the fleets doe reknowledge, when they goe, and somewhat more towards *Saint Dominicke* is another little Iland, which is called *Saint Katherine*; and all the names rehearsed were given by the first Admirall. 60

The

The Iland of *Cuba* which first was called *Iuana*, or *Ioane*, by the Father *Don Iuan*, and after *Cuba*, it was commanded to be called *Fernandina* by his Father. The Captaine *Sebastian* of *Ocampo*, made an end of compassing the yeere of our Lord 1508. by order of *Nicholas* of *Onando* : for vntill then it was not wholly believed that it was Land, and the yeere 1511. the President *James Velazquez* went ouer with three hundred *Spaniards*, by order of the second Admirall to pacifie it. It hath two hundred and thirty leagues from the Cape of *Saint Antonie*, vnto the Point of *Mayzi*, going by Land, although by the Sunne, and by water there are not so many. It hath in breadth from the Cape of *Crosses*, to the Port of *Manati*, fortie fue leagues, and then it be- ginneth to streighten, and goeth to the last Cape, or Occidentall Point, where it is narrow, of twelue leagues, little more or lesse, from *Matamano* to the *Anana*. Her situation is within the Tropicke of *Cancer*, from twentie to twentie one degrees, the Countrey is almost all plaine, with many Forrests, and thicke Woods : from the Easterne Point of *Mayzi*, for thirtie leagues it hath most high Mountaynes, and likewise in the middest it hath some, and there runne from them to the North, and to the South, very pleasant Riuer, with great store of fish. On the South side it hath the little Ilands, which the first Admirall called the *Queenes Garden*, and the other on the North side, which *James Velazquez* called the *Kings Garden*, the trees are of many diffe- rences, and wild Vines as bigge as a man : they gather no Wheate nor other Seedes of *Spaine*, but great abundance of Cattle : it hath great Copper Mynes, and of Gold, and is it found in the Riuer, though it be base in the touch.

- 10 *James Velazquez* peopled first the Citie of *Saint Iames* in the South Coast, fortie leagues from the Cape of *Tiburón*, which is in *Hispaniola*, and two leagues from the Sea, neere to a Port, one of the best in the World, for securitie and greatnesse. The Citie came to haue two thousand Inhabitants; now it hath few with a *Gouernours* Deputie: the Cathedrall Suffragane to *Saint Domingo*, is resident in it, and a Monastery of *Franciscan* Friers. The Village of *Baracoa*, is a Towne furthest East of the Iland of *Cuba*, at the beginning of the North Coast 60. leagues from the Citie of *S. Iames* toward the East North-east, which was also an inhabiting of the President *James Velazquez*. The Village of *Bayamo*, which *James Velazquez* also built, is 20. leagues from *S. Iames* to the North-west, it is the soundest Town of the Iland, of a more open soyle, and of a good disposi- tion. The Village and Port of the Prince, in the Coast of the North, is about fortie leagues from *Saint Iames* to the North-west. The Village of *Sancti Spiritus*, is a Port on the South side, be- tweene the *Trinidad*, and the *Cayo de Basco Porcallo*, of *Figueras*, about fiftie leagues from *Saint Iames*, a Colonie of *James Velazquez*.

Sancti Spiritus.

- 30 The Village and Port of *Saint Christopher* of the *Abana*, is in the North Coast, almost op- posite to *Florida*, in twentie two degrees and an halfe in height, of more then fixe hun- dred Houholds; where the *Gouernour* resides and the Officers Royall. The Port is mar- uellous in greatnesse and securitie, especially since that King *Philip* the Second, the pru- dent, sent the Campe-master *John* of *Texeda*, and *Baptista Antonelli*, to fortifie it: in it all the Fleetes of the *Indies* doe meere for to come for *Spaine* in company. It was first called the Port of *Carenas*: and *James Velazquez* built this Village, and all the rest of the Iland, with the assistance of the Father *Bartolome de las Casas*, which afterward became a *Dominicke* Frier, and Bishop of *Chiapa*.

El Abana, or the Hauana.

Puerto de Ca- renas.

- 40 The Ports and Capes, and point of the Coast of *Cuba*, and the Ilands belonging to it besides those which are rehearsed are in the South Coast, the Port of the Citie of *Saint Iames* in twentie degrees, and twentie fue leagues to the West: the Port of *Sancti Spiritus*, Cape of the *Crosse* twelue leagues forward, and the *Queenes Gardens*, which is a great shelte of Ilands and shoales: the Port of *Trinitie* in twentie one degrees, about thirtie leagues from the Cape of the *Crosse*, and ten more to the West, the Gulfe of *Xagua*, a great defence with some Ilands, in the middest, and forward the *Two Sisters*, two Ilands at the beginning of the great shelve, and Ilands, and shoales, which they call *Camarco*, betweene the Coast and the Ilands, which is of ten leagues in length, and seuen in breadth twelue leagues from the Cape of *Correutes*, which is as many from the Cape of *Saint Antonie*, the furthest West of this Iland. In the North Coast standeth the Port of *Abana*, and thirtie leagues to the East is the Port of *Slaughters* where was a Towne, and was cal- led *de Matangas*, of the *Slaughters*, because the *Indians* killed certaine *Spaniards*, which they car- ried in their *Canoos* vnder securitie to the other side, only one escaping, and two women whom they kept sometime with them. From the *Matangas* to the Port of *Yucanaca*, are fiftie leagues to the *Kings Garden*, which is a great shelte of little Illets and shoales, and at the end of the Iland *Obahana*, eight leagues before the Port of the Prince, foure or six from the Port of *Fernando Alanse*, and six to the East of this, *Cubana* which is a point. The Port of *Varacoa* is about twentie leagues before the point of *Matzi*, the farthest West of *Cuba*, and the hidden Port and Gulfe neere to Cape *f. Roio*, in the South-coast, about twentie leagues from the Port of *Pidge- ons*, which is about ten leagues from the Port of *Saint Iames*.

Wherefore it was called the *Slaughters*.

* Or *Slaugh- ters*.

f Or *Red*.

this Iland.

THE Iland of Iamaya was so abundant of victuals, and breedings, that it gaue great pro-
uision of Cotton, Horses, Swine, and *Cozabi*, for the new Discoveries, and the first Admi-
rall called it *Saint Iames*, when hee discovered it: and the first that passed to inhabit it, was the
Captayne *Iohn Esquinnell*, the yeere 1509. by order of the second Admirall *Don Diego Colon*. It
stands in seuentene degrees and an halfe of altitude in the midst of it, and twentie leagues
from *Cuba* to the South, and as many from *Hispaniola*, direct to the West. It hath in compasse
one hundred and fiftie leagues, it hath East and West fiftie, and twentie in breadth. There are in
it three Villages, *Siuill* in which is the Seat of the Colledge, toward the North Coast somewhat
Westerly; *Iohn Squinnell* a Gentleman of *Siuill* peopled it: *Melilla*, which stands in the
North Coast, fourteen leagues from *Siuill* to the East: *Orifon* in the South Coast towards the
West fourteen leagues from *Siuill*, and are Plantations of the President *Francisco de Garay*,
which gouerned in it. But of the Towne of *la Vega*, whence the Admirals Lords of this I-
land tooke the Title of Dukes, nor of other two Plantations painted in some Maps, there is
no notice.

There is in the Coast of this Iland, the Point of *Moranta* the vttermost West of it, by the
North Coast ten leagues to the West, the Port of *Ianta*, and tenne leagues forward the Port of
Melilla, where they say the first Admirall arrived, and called it *Santa Gloria*, when hee returned
lost from *Veragua*; and heere happened to him the mutiny of the *Porras* of *Siuill*: and it was the
first Ciuill Warre of the *Indies*. Other ten leagues thence standeth the Port of *Siuill*, before the
Point *Negrillo*, from whence the Coast windeth, vnto the *Cabo de Falcon*, neere to *Orifon*, and
goeth by the South to the Port of *Guayano*. And five leagues from this Coast, are the *Har-
mingas*, a dangerous shoale, and seven leagues further *las Vuoras*, small Ilands compassed with
shoales, and to the South of them the *Serrana*, and a little Iland compassed with shoales, with o-
ther foure or five neere vnto it, and to the North-west of it, the *Serranilla*, and to the West of
it the *Roncador*, another Rocke, and to the South-west of it, *Saint Andrewes*, an Iland compas-
sed with shoales North and South, with *Nombre de Dios*, about fortie leagues from it, and neere
from thence another called *Santa Catalina*; the *Caymanes* directly West from *Iamaya*, twen-
tie five leagues from the little *Blackmoore*, which are two little Ilands fixe leagues the one
from the other, and the great *Cayman* another Iland of seven leagues in length, fiftene leagues
from the *Caymanes* to the West, and to the North Coast, betweene *Cuba* and *Hispaniola*, another
shoale which is called *Abre-oio*.

The Iland of *Saint Iohn* of *Port Rico*, which the *Indians* called *Barriquen*, lyeth betwixt
twelue and fiftene leagues from *Hispaniola*, to the East, of fortie five leagues in length, East
and West; and from North to South, betwixt twentie and thirtie, very plentifull of all that
Hispaniola hath, and of Millet, Yuca, and of Mynes of Gold. The temperature is good, and
almost one all the yeere, except in December and January. There is in it three *Spanish* Townes
with a Government, and a Bishoppricke: the President *Iohn Ponce* of *Lion* passed to discover this
Iland the yeere 1508. being *Gouernour* in the Prouince of *Ygney*, for *Nicholas* of *Onando* in *Hi-
spaniola*, and returned the yeere 1510. by order of the King to people it. The Citie of *Saint*
Iohn, is in the beginning of the North Coast, on the East side in eightene degrees of height,
and they call it of *Port Rico*, for the excellencie of the Hauens. The Bishop and the *Gouernour*
are resident in it, and the Officers of the Kings Reuenues: and it is Suffragane to *Saint Domingo*.
Arrecibo stands thirtie leagues to the West from *Port Rico*: the Towne of *Guadianilla*, or *Saint*
German the New, in the Westerne Coast three and thirtie leagues from *Port Rico* to the
South-west.

There was in old time in this Iland another Towne which was called *Guanica*, in the South
Coast, at the end of it where now is the Port of *Mosquitos*, which is very good, from whence
it was remoued to another situation of the Westerne Coast, which they call *Aguada*, or the *Wa-
tering*, with name of *Soto-Mayor*: there is in this Iland a row of Mountaynes, that diuide it in
the midst East and West vnto the Sea, and Borders of *Saint German*, and heere is found the
Tree called *Tabernaculo*, which yeeldeth white Rozen, like Gumme-*Anime*, and it serueth for
Pitch for the ships, and for fire or light, and it tis medicinable to take out the colde or num-
nesse, and to cure wounds.

There are few Ports in this Iland, for all the Coast of the North is very foule with shoales,
and Rockes: those that are, are to the East from the Port of *Saint Iohn*. The Riuer of *Luyfa*,
and that which they call *Canoba*, and *la Cabeça*; the farthest East point of the Iland, neere to
the Hill of the *Loquillos*, and in it a Port which they call *Saint Iames*; three leagues further is
another called *Tabucoa*, and three leagues from the Coast, on this side of the passage, is a little
Ilet, and at the beginning of the South passage, another which they call *Boyqui*, and forward
the Iland of *Saint Anne*, *Guayama* a Port, and afterward the Riuer *Neabon*, and *Xania*, six leagues
before the Port of *Guadianilla*, two leagues to the East of the Riuer of *Mosquitos*, in whose mouth
is the Riuer called *Guanica*, and six leagues from it, the Cape *Roio*, the furthest West of the South
Coast: and to the West of it, toward *Hispaniola* is the Iland of *Mona*, and to the North of it
the

the *Manico*, and *Zeebeo*, other two little Ilands: the Port of *Pines*, and the Port of *Mayaguez*, and the Bay of *Saint German* the old, and the mouth of the River *Guanabo*, or the *Watering*, and that of *Gnabataca* more forward, and afterward in the North Coast, that of *Camay*, and of *Cibuco*, and *Tea*, neere to Port *Rico*, and in the middest of the Coast of the South Sea, leaning vnto it the *Haberianas*, foure or fiue little Ilands. There is also much Ginger gathered in this Island, which is a Root like vnto Madder, or Saffron, which the *Portugals* brought from the East, to this Island of *Barlouto*.

Who carried the Ginger to the Ilands of *Barlouto*. The Ilands of the *Lucayos*.

The Ilands which are to the North of *Saint Iohn*, *Hispaniola*, and *Cuba*, of which none is inhabited with *Spaniards*, are called the *Lucayos*. One the most Septentrionall, is about twentie seuen degrees of altitude, which is called *Lucayoneque*, or *Tucayoneque*, which hath almost to the West *Bahama* another Island in twentie fixe degrees and an halfe, of thirteene leagues in length, and eight in breadth, from whence the Channell of *Bahama* betweene *Florida* and the shoales *Delos Mimbres* taketh the name, whereby the Currents of the Sea doe goe so swift to the North, that although the wind be prosperous the ships cannot enter it, and although they be contrary they goe with the Currents.

Where the Channell of *Bahama* is. Admirable Current. *Baxos de Bimini*

The shelles of *Bimini*, are so called of an Island in the middest of them, of fiue leagues in length, which the first Admirall gaue the name the first time he came to *Cuba*, and it is that which *Iohn Paul* of *Lyon* did agree to inhabit. *Abacoa*, is another in the middest of the said shelle of twelue leagues in length: *Cigato* of twentie fiue. *Curateo*, another small Island in twentie fixe degrees: and *Guanima* fiteene leagues of length, and ten in breadth, and neere vnto it *Guanabani*, the first Land of the *Indies*, which the first Admirall discovered, which he called *Saint Sauour*; *Tuma* of twentie leagues, and eight in breadth, in twentie foure degrees and an halfe, which the Admirall named *Isabella*, in honour of the famous Queene *Donna Isabella* his particular Protectresse, and that gaue him this Discoverie. *Iumeto* in twentie three degrees and an halfe, fiteene leagues in length, to the North of *Hispaniola*. *Samana* seuen leagues ouer, betweene *Iumeto* and *Guanima*, three square of eight leagues in length, in twentie foure degrees, *Tabaque* of ten leagues, in twentie two degrees and an halfe. *Mira-par-vos*, are three little Ilands in triangle, compassed with shelles, to the South of *Iumeto*. *Mayaguana*, twentie leagues in length and ten in breadth, in twentie three degrees. *Tuagua* of ten leagues, in twentie degrees and an halfe. The *Caycos*, an Island of fiue leagues, in twentie one degrees, and to the North of it is another, called *Hamaua*, and another *Concina*. *Macarey* stands in twentie degrees compassed with shelles. *Abrecois* is a great shelle of fiteene leagues, the middest of it in twentie degrees, and among these Ilands are many little ones without name.

Guanabani the first Land that was discovered in the *Indies*.

The Ilands that are from the Island of *Saint Iohn* of *Porte-Rico*, to the East of it, toward the coast of *Terra firme*, were called the *Canibals*, by the many *Caribes*, eaters of humane flesh that were in them: and in their language, *Canibal*, is to say *Valiant man*; for they were held for such of the other *Indians*. All these Ilands are dangerous for shelles, and the nearest to *Saint Iohn*, are *Santa Cruz*, to the South-west from it, in 16. degrees, and a halfe of fiteene leagues, and *Sabala*, *las Virgines*, two little illets compassed with shelles, and other eight or ten Ilands, the greatest of ten leagues: *Virgen gorda*, and the *Blancos* or *White Ilands*, Westward from *Virgen gorda*, *La Aneгада*, of seuen leagues in length, in 18. degrees and a halfe compassed with shelles, as *Sambro* is, a little Island neere vnto it: and these Ilands which are called the *Weather Ilands* or *Barlouto*, the first Admirall discovered: and in particular, the men of *Santa Cruz*, and others, had a custome to goe and hunt for men to the Island of *Saint Iohn*, for to eate, and at this day they of *Dominica* doe it. They did eate no women, but kept them for slaues. Now they say, that with in this little while, they of *Dominica* did eate a Fryer, and that all they which did eate his flesh, had such a fluxe, that some dyed, and that therefore they haue left eating humane flesh: and it may be, because instead of men, with lesse danger, they steale Kine and Mares, for the great quantitie there is of them, and with this they satisfie their raging appetite.

The *Canibals*. Or *Indian Canibals*. What a *Canibal* signifieth.

Anguilla hath ten leagues of length, it standeth in 18. degrees. *Saint Martin* in 17. degrees and a halfe, it is of fiteene leagues, compassed with little Illets: and neere vnto it *Saint Eustace*, *Saint Bartholomew*, and *Saint Christopher*, euery one of tenne leagues. The *Barbada* in 17. degrees and a halfe, compassed with shelles, neere to the *Redonda* and the *Snower* or *Nienes*, and of *Mouferrate*, of fiue leagues euery one, in 15. degrees and a halfe. The *Antigua*, *Guadalupe*, and *Todos Santos*, from 14. to 15. degrees. The *Deseada* to the East of *Guadalupe*, about fixe leagues, the first which the Admirall *Don Christopher* discovered, in the second Voyage that he made to the *Indies*, in 14. degrees and a halfe, for which the fleet goe alwayes from the *Canaries*. *Marigalante*, the name of the Shippe the Admirall had, fiue leagues to the South-west from the *Desired*, and from the *Dominica*, in 13. degrees, twelue leagues in length, where the Fleetes take in water and wood, for it hath good roads, although with danger of the *Canibals*. Neere vnto *Dominica* to the South, stands *Matinino*, *Santa Lucie*, and the *Barbudos*, the which because they fall on the left hand of the Fleetes, when they goe, they call them already of the Ilands of the *Leeward* (*de Sotauento*) which appertaine to the coast of *Terra firme*: and of them the greatest, the first, and the most Orientall is the *Trinidad*, neere two hundred leagues from *Hisp*

nezuela, or lit-
tle Venice.

The Citie of
Coro.

Our Lady of
Carnalleda.

Hispaniola, North and South with the *Dominica*, about sixtie leagues from it. It hath fiftie leagues in length East and West, and almost thirty in breadth. The Admirall discovered it the year 1498. the third Voyage that he made to the *Indies*, and called it the *Trinitie*, because having great trouble in the Voyage, he had promised to God to giue such a name to the first Land that he should finde, and presently the Mariner that was in the top, saw three points of Land, whereby the name fitted every way to his vowe: then hee discovered also the mouthes of the *Dragon*, and of the *Serpent*, the gulfe of *Paria*, and all the firme Land vnto *Cumana*, which iniustly *Americus Vesputio* claimes to himselfe, whose name vnworthily is giuen to the port which they call *Peninsula Australis* or *Indies* of the South. This land of *Trinidad* is knowne that it is no good Countie, though it hath many *Indians*; it hath thirtie five leagues of longitude, and others say more, and twentie five of latitude, it stands in 8. degrees: the most orientall part of it, is a point on the North side, which is called *de la Galera*: and to the North of it a small land, compassed with little Iles, which they call *Tabago*: and in the South coast a Cape which they call the *Round Point*: at the East, the point of *Anguilla*, at the West in the gulfe of *Paria*, which is that that is from the land to *Terra firme*, which may be eight leagues of distance, because the firme Land maketh an oblique semicircle, as a Diadem; and in the entrance of the East is the distance recited; in the entrance of the West, the straightnes is much, and with great depth, and two little Ilands at the end of the North coast; by the West, which is called the *Dragons mouth*: and to the North *S. Vincent*, and *Granada*, other two little Ilands.

The land of *Margarita*, so named by *Christopher Colon*, the first Admirall (as also all the rest, a most sufficient proote of the Finder, to the confusion of those which deprived him of the glory of the discovery of the firme Land, attributing it to themselves, although changing the times) it is twentie leagues from *Trinidad* Westward, and one hundred and seventy from *Hispaniola*: it hath sixteen leagues in length East and West, and yet some say twenty, and the halfe in breadth; it hath no store of water, although it is very plentifull of Pastures for Cattle. There is in it two Townes, one neare the Sea, which reacheth to a fortresse where the Gouverneur is resident, and another two leagues within the Land, which is called the Valley of *Sancta Lucie*: there is in his coast a good port, and a nooke, and many beds of Pearles, whither the fishing of them is removed, which before was in *Cubagua*; and they say it went away from thence, for the rumour of the ordinance of the many Shippes that resorted to this land, to the trafficke of the Pearles, which was very great. *Cubagua* stands one league from *Margarita* to the East, there is no water in it, and yet the new *Cadix* was built there, and they carried their water seven leagues, from the Riuer of *Cumana*. To the East of *Cubagua* are foure little Ilets, close by the shoare, which the first Admirall called *Los Frayles*: and to the East betweene them and *Granada*, other foure or five, which he called (*Los Testigos*) the *Witnesses*, and to the West after *Cubagua*, another little land which he named (*Tortuga*) the *Tortoise*, neere to the point of *Araya*: and from hence the discovery being made from below *Paria*, he went to *Hispaniola*, with a purpose to finish the discovery of *Terra firme*: and as here after shall be seene, hee went after to discover, and found the Ilands of the *Guanaos*, and from before *Veraagua*, vntill he passed *Nombre de Dios*. The Officers and Royall treasure are in *Margarita*; and it, and the land of *Cubagua*, are in eleven degrees, a little more.

The Government of *Venezuela* parteth the bounds in the coast of *Terra firme*, to the East, with the new *Andaluzia*, from whence to the Riuer of *Hacha*, and Government of *Sancta Marta*, with which it ioyneth by the West, is an hundred and thirty leagues, and within the land about eightie, vnto the bounds of the new Kingdome of *Granada*. In this Countie are vaines of Gold of more then two and twentie carraets and a halfe: it is plentifull of Wheate, because there is two harvests in the year, and most abundance of all kinde of Cattle, great and small. There goeth from this Prouince great store of Meale, Bisket, Cheese, Bacon, and much Cotten-linnen: and in the port of *Guayra*, in the Prouince of *Caracas*, are laden many Cowe-Hides, and *Sarsaparilla*. There is in it eight *Spanish* Townes: and the name *Venezuela* was giuen it, because when the *Belzares*, *Almaines*, went to gouerne in this Prouince the year 1528. by a couenant which they made with the Emperour, they thought to inhabit in a Rocke and hills that are in the mouth of the Lake of *Maracaybo*, where it falleth in the Sea, a Towne which they named *Venezuela*. It stands in 8. degrees, a little more, and from hence the Couernment tooke the name. His first Towne is the Citie of *Coro*, which the *Indians* call *Coriana*, which commonly they call now *Venezuela*, it stands in 11. degrees of altitude, and 79. degrees one third part from the Meridian of *Toledo*, one thousand and five hundred leagues from it: here the Gouverneur is wont to be resident, and there is the Cathedrall Church suffragane to the Archbishop of *S. Dominicke*. *John of Ampues* built first this Citie, and then those that went for the *Belzares* made their abode in it, the first was *Ambrosio Alfinger*: it is so healthfull, and of so good an ayre, that there is no neede of Physitians.

The second place is our Lady of *Carnalleda*, in the Prouince of *Caracas*, neere to the Sea, East from *Coro* eightie leagues, and with a bad Hauen: *Don Francisco Faiardo* built it the year 1560. which

which went for that purpose from the *Margarita*. *S. James* of *Lyon* in the same Province, seven leagues within the Land, and three from *Carnalleda* to the South, and sixtie from *Coro*, where at this time the Gouvernour is most resident. The new *Valencia* sixtie leagues from *Coro*, and twentie five from *S. James* of *Lyon*, seven from the port of *Burburata*. The Captaine *Villacinda* peopled it. The new *Xerez* about fifteene leagues, almost South from the new *Valencia*, and twentie from the new *Segonia*, and sixtie from *Coro* to the South-east, a new Towne. The new *Segonia*, in the Province of *Bariquizimito*, twentie leagues from *Xerez* to the South, and tenne from *Tucuyo*, and eightie from *Coro* to the South-east, where the Officers royall, the Gouvernour, and the Lieutenants are resident at times: *John* of *Villegas* peopled it in the year 1552. The Citie of *Tucuyo* is famous, because in it they slew the tyrant *Lope* of *Aguirre*, it stands tenne leagues from *Segonia*, to the South-west, eightie five from *Coro*; it is the habitation of the Captaine *Carnajal*. *Truxillo*, or our *Ladie of Peace*, in the Province of *Cuyas*, about eightie leagues almost to the South, direct from *Coro*, somewhat to the East, and twentie five from *Tucuyo*, directly to the West.

S. Iago de Leon.

Xerez.

Segonia.

Tucuyo.

Truxillo.

The Auditor *Vallejo* discovered this the yeate 1549, the Bacheller *Tolosa* being Gouvernour in it: and the year 1559. the Captaine *James Garcia* of *Paredes* inhabited *Truxillo*: and there may be in this Government more then 100000 *Indies* tributaries, and in them are not comprehended from eighteene vnder, nor above fiftie yeares, because the supreme Counsell of the *Indies* hath provided, that in no place of this Orbe, these doe pay tribute: and because daily they increase and diminish in number, it cannot be said precisely and perfectly how many there are.

The Lake of *Maracaybo*, which the *Castilanes* call of our *Ladie*, is of fresh water, it entreth fortie leagues within the Land, from the Sea, and hath more then tenne in breadth, and eighty in compasse, with many Townes vpon his Borders: in the end of it entreth a Riuer that descendeth from the new Kingdome of *Granada*, by the which, and the Lake, Marchandise are transported which came to the new Kingdome of *Castile*, and to other places; some of the men of this Lake doe liue in Boates, their houses being made in the Trees within the water, and at the Border, whence it tooke also at the first, the name of *Venezuela*; sayling by some parts of this Lake, ye can see no Land: there enter into it other great Rivers, it runneth to the Sea, it hath about halfe a league of mouth, and in it the shoale and rocks abovesaid.

The Lake *Maracaybo.*

The Ports, Capes, and Points of the coast of this Government, and those annexed vnto it, are to the West, *Marcapana*, the *Vrchila*, an Island against the Riuer *Oynare*, neere to another called *Rocke of the Ilets*, and afterward the Cape of the *Codora*, and *Puerto Flecharado*, and the Hauen of *Sardinas* or *Pilchers*: and opposite the Ile of *Aues* or *Birds*, before *Burburata*, a maruellous hau-
 30 uen, which the Bachiler *Tolosa* peopled, and is a Scale or Port for the new Kingdome (*Nuevo Reyno*) & Provinces of *Peru*, and after that is *Gulfo triste*, and to the North of the *Bonayre*, an Island of ten leagues in length, and eight in breadth, and afterward *Punta seca*, and right against it *Curacao*, and a little forward *Curacante*, foureteene leagues in length, right against the Cape of *S. Roman* to the South of the Island of *Aruba*. *S. Roman* entreth twentie leagues into the Sea, it standeth twelue from *Coro*, the *Indians* doe call it *Paraguana*, it lacketh a little to be an Island: it
 40 may haue in compasse twenty five leagues and more of plaine ground, with a Mountaine almost in the middest: it is discovered a great way into the Sea. There is at the beginning of the Gulfe of *Venezuela*, the entrance and channell of the Lake of *Maracaybo*, and at the entrance of it the Riuer *Murave*, and to the West the *Monkes*, three little Ilets close by the Point and Cape of *Coquibacoa*, where onely in all the *Indies* was found waight and touch for the Gold, and afterwards the deepe *Baye* (*Bahia Honda*) and the *Portete*, the Cape of *Vela*, which the Captaine *Alfonso* of *Ojeda* named, when *Americo Vespucio* went with him the first time, much after that the Admirall discovered this coast, which stands in 12. degrees, somewhat more. And there is from the Cape of *Vela*, to the Riuer of *Hache* eighteene leagues, without any stone in them, nor water,
 50 but raine water. This Government remained destroyed, since the time of the *Almaines*, because they would not inhabit, onely seeke to make slaues, and to waste the Countrie.

The ports and points of the Government of *Venezuela.*

They called first the Riuer of *Hache*, our *Ladie of the Snomes*, and after of the *Remedies*, neere vnto the Sea, betweene *Venezuela*, and *Sancta Marta*, to the East, thirtie leagues from it, and sixtie from *Coro* to the West, North and South with the Cape of *Vela*, with eight leagues of bounds betweene *Venezuela* and *Sancta Marta*, without shoues of Gold. It is gouerned by *Alcaldes* immediate to the Counsell of *Hispaniola*, and the Spiritualltie is of the Bishopricke of *Sancta Marta*. The Towne is 1000. paces from the Sea, on a little hill: the Hauen hath the North for tra-
 90 uers, it is a most fertile Countrie, and yeeldeth whatsoeuer is in *Castile*: there are many Tigers, Beares, Ants, and Lizards in the Rivers, much Gold, and Stones of diuers vertues, for the Spleene, the Kidneys, for the Milt, and Flx, and they haue good Salt-pits. *Nicolas Federman* for the *Belzars*, was he that began to inhabit this Towne. The gouernment of *Serpai*, which they call the new *Andaluzia*, and in the Indian Language *Guayana*, extends the limits. From the Island of *Margarita* vnto the riuer *Marayon*, three hundred leagues to the East, and as many North and South within the Land, wherein the *Indians* *Omagues* are included, and the *Omygas*, with

with the Provinces of Dorado, to the south of this Gouvernement, wherein falleth by the Coast the Province of Maracapaná, in the bounds of Venecuela, where the mouths of Santa Fe were inhabited, in whose Borders is the knob of Unare, and neere vnto it a great Lake with great store of fish and salt, and the Indians which are called of Perito, twentie leagues within the Land, and the Indians Palenques, so called for the Poles wherewith they fortified themselves, and the Province of Cumana, North and south with the Margarita, where is a Towne of Spaniards, which is called new Cordona, which the Captayne Gongalo of Ocampo built, when he went to chastise the Indians of Cumana, for the destruction of the Monastery of the Religious Franciscans. And to the East or the Iland of Trinidad, and the River of Saint John of the Amazonas, is the Province of the Indians Aruacas, part of the Caniballs, and all Warlike, that neuer are quiet or peaceable.

After the point of Paria, which stands in seven degrees, and the Dragons Mouth neere vnto Trinidad stands the point Del Gallo, or Anegada, to the South of the Trinitie, and the River of Paria, or Orinico, which some call Tuyapari, and others will haue that these two, and the River of Saint John, and of Orellana be all one thing, and also the Marañon; but in this they are deceived. There be other Rivers in the Province of the Aruacas that are well knowne, the River of Saint John, or of Orellana springeth in the Andes of Peru, right against Cuzco, from whence it runneth fiftene hundred leagues, or more, winding vnder the Equinoctiall, by Countreyes well inhabited, though not well discovered, till it came to run into the North Sea, whose mouth hath in breadth fiftie leagues; and in the first five hundred from the mouth vpwrd, many Ilands inhabited; and eightie or a hundred leagues more to the West, stands the River of Morayon, almost in the bounds whereby passeth the Line of the Diuision betweene Castile and Portugall, and is great and terrible, having fiftene leagues of mouth, and the streame commeth from the parts of the South, and the Provinces of Brasil, and they say that the spring is vnder Popayan, and the bounds of the new Kingdome of Granada.

in the coast of

Terra firme, the

yeare 1530. very

admirable.

Margarita.

Florida.

Seven leagues from Cumana stands the Iland of Cubagua, where stood as was said, the new Cadiz, which was disinhabited because the fishing for Pearles fayled: this Iland had no water that could be drunke, nor trees, nor beasts; for all is brackish, except those Hogges that haue the Nauell in their backe-bone, and some small Conies, and hauing so great inhabiting, they went seven leagues to the river of Cumana for water, although there was an opinion that it bred webbes in the eyes. In this River and coast, hapned in the yeare 1530. the first of September, the haueen being cleare, the Sea did rise foure fadomes from his ordinary course, and entring into the earth it began to shake, and the fortress which the Captaine Iacome of Castellon had built by order of the Counsell of Hispaniola, fell, and the earth did open in many places; where-out sprang much salt water as blacke as inke, and did stinke of brimstone, and the mountaine of the gulfe of Cariaco remained open with a great rift: many hogges fell, many people died drowned, and with feare, and taken with the earth quake. Margarita one league from Cubagua a more pleasant Iland, the Bachiller Marcelo of Villalobos did people it.

The Province and Gouvernement of Florida, bordering on the Counsell of Hispaniola, according to the Gouvernement of Peter Melendez, is all that which lyeth from the River of Palmes, which doth confine with the Gouvernement of Panuco in new Spaine, limits of the Counsell of Mexico, which is neere the tropicke in 22. degrees, vnto the point of Bacallao, which falleth in 48. degrees, and a halfe, in the which are 1258. leagues of Coast, and from thence to 73. degrees of altitude to the North by the Coast, and within the Land all that which hee discovered. Of this hath bene coasted and discovered, from the River of Palmes vnto the Point of Santa Helena, and the River Jordan, which are about 600. leagues; it is a firme Land of a good climate, plentiful, and well inhabited in many places, as those that went through it with Hernando de Soto did know it, the yeare 1536. and 1537. Iohn Pardo borne in Cuenca, went by Land from Florida to new Spaine, in lesse then two yeares, and it is the neereft Europe of any part of the Indies, & from the Bay of S. Ioseph, which is eightie leagues from Panuco. There is also discovered vnto New found Land, but that which is particularly taken for Florida, is the point that goeth into the Sea North and South, with the Iland of Cuba, of a hundred leagues in length, and twentie five in breadth East and West, and (when it is most) thirtie. Iohn Ponce of Lyon discovered it Anno 1512. on Easter day, and for this cause he called it Florida: and afterward returned the yeere 1521. and retired wounded to Cuba, where he dyed, leauing a report that he sought the Fountaine or River which the Indians said that old men washing themselves therein, became yong. This Province is according to the temperature of Castile, and many fruits were found there like the fruits of Spaine, and it seemeth fit for Cattle and Corne. There is no Gould, neither seemeth that the Indians did know it, nor Siluer; for it hath bene seene that they haue found the Chests with bars of it and money in their coasts, and made no account of it: yet Hernando de Soto, within the inward parts of the great River, found great abundance of Pearles.

The spring which Iohn Ponce did seeke that renewed the old men.

They of Florida knew neither Gold, Siluer, nor Monie.

There are but two Fortresses in this Province with men in Garison, both in the Coast that looketh to the East: the one is called Saint Marke, in the point of Saint Helena, about one hundred leagues from the Havana, and another of Saint Augustin, which is the principall, because the

HONDIVS his Map of New Spaine.

40 The Councell is Resident in *Mexico*, and the Vice-roy governeth in it, and three Judges, the Officers of the Reueneue and Royall Treasure, a Founding House, and a Mint House, and the Archiepiscopall Metropolitane, that hath for Suffraganes the Bishopricks of *Tlascala*, *Guaxaca*, *Mechoacan*, new *Gallicia*, *Chiapa*, *Tucatan*, *Guatemala*, *Verapaz*, and the *Phillipinas*. And Don *Fernando Cortes* was he that built this great Church, and set for Bales of the Pillars certayne Idols of stone which are seene to this day, and the Bishop, President and Gouvernour of New Spaine, Don *Sebastian Ramirez* of *Fuenleal*, continued the building with great speed. The first Bishop of *Mexico* was Frier *John de Zumarraga* of the Order of Saint *Francis*, of great vertue and example, borne in *Durango*, in the Lordship of *Birkeye*, which also was the first Archbishop.

50 There are in *Mexico* Monasteries of *Dominican*, *Franciscan*, and *Austine* Friers, the company of *Iesus*, *El Carmen*, *la Merced*, the Bare-foot, and *Trinitarie* Friers; ten Monasteries of Nunnes, one Colledge of *Indian* children, and another of *Arrepentidas*, the *Repentantes* m and n *Recogidas*, or *Retired*, and the Vniuersitie, where curious and learnedly the Sciences are read with other Colledges and Hospitals. And the *Spaniards* which inhabit the bordering Townes of the *Indians*, and *Granges*, are about three thousand, and there are reckoned about two hundred and fiftie Townes of *Indians*, in which the chiefe places of Doctrines are one hundred and fve: and in them and thereabouts are six thousand *Granges*, more then five hundred thousand tributarie *Indians*, and more then one hundred and fiftie Monasteries of *Franciscan*, *Dominican*, and *Austine* Friers. And the Doctrines (or Schooles) of Priests and Friers, to teach the Faith Catholike to the *Indians*, are without number, besides the Fathers of the Company, and *Mercenarie* Friers: there is also Resident in *Mexico*, the holy Office of the Inquisition, whereof we will ipreat hereafter.

60 In the Coast bounding on this Archbishopricke towards the South Sea, and the Province of *Acapulco*, is the good Port of *Acapulco*, in seenteene degrees height, sixe leagues from the River *Tapes*, whereby the Archbishopricke is joyned with the Bishopricke of *Tlascala*. And other

Suffraganes of the Archbishopricke of *Mexico*, m Se. of the life they led in the Stewes. n From the World. * Los ciento y cinco cabeceiras de doctrina. I thinke he meaneth some Parishionall division, in each of which the *Indians* had their peculiar Priests and Schooles of priests to teach them religion. After in cap. 28 he calls them *beneficios curados*, *Benefices*, with Cure as *Personages*. eight

eight more to the West, the Riuer of *Citala*, and other foure, the Riuer of *Mula*. In the Coast of the North, it hath that which falleth in the Gouernment of *Tanuco*. In the limits of this Councell are the Mynes of *Puchuca*, fourteene leagues from *Mexico*, and the Mynes of *Tasco* twentie two, those of *Tsmiquilpo*, which are of Lead, twentie two, the Mynes of *Talpuiana* twentie foure, the Mynes of *Temazcaltepeque* eighteene, those of *Cultepeque* 22. those of *Zacualpa* twentie, those of *Zupanguo* 40. those of *Guanaxato* sixtie, those of *Commaia*, seuen. From *Guanaxato*: those of *Achichica*, eighteene from the Citie of *los Angeles*, and those of *Gantla*, or *Zumatlan*, and *Saint Lewes of the Peace*, and in them all there may bee about foure thousand *Spaniards*, which with industrie and labour doe attend these Mynes, all of Silver except one, which as hath bene said, is of Lead, and procuring that the *Indians* taking example of them, may liue politickly: and the first that with maruellous cunning and wisdom, brought in the breedings of cattell and tillages, which haue bene the mightiest meanes for the preferuation of the Mynes, was the aboue said President *Don Sebastian Ramirez* of *Fuenleal*, originall and the foundation of all the good of those Realmes.

Don Sebastian Ramirez brought in the breeding and ploughing. Gouernment of *Panuco*.

The Prouince of *Panuco* to the North of *Mexico*, *Nunno* of *Guzman* had in government: it hath fiftie leagues in breadth, and in length, and after it was incorporate with the limits of the Councell or Audience of *Mexico*. The Countrey that looketh toward *New Spaine* is the best, plentifull of victuals, and hath some Gold. That which runneth toward *Florida* is miserable, from whence till yee come to his bounds, are more then fise hundred leagues. This gouernment hath three *Spanish* Townes, *Panuco*, in somewhat more then twentie three degrees, and by another name the Village of *Saint Stephen* of the Hauen; which *Gonzalo* of *Sandonall* built, by order of the Marquesse *Don Fernando Cortes*, when they went to resist *Francisco Garay*, and to pacifie the *Indians* of *Chila*, the yeere 1520. and it standeth sixtie fise leagues from *Mexico* to the North North-east, eight leagues from the Sea, neere to a Riuer whose entry is a Hauen: it is a chiefe *Alcaldia*, or Iusticeship, prouided by the Vice-roy of *New Spaine*. The Village of *Saint James of the Valleys*, twentie fise leagues from *Panuco* to the West. The Village of *Saint Luys de Tampico*, eight leagues from *Panuco* to the North-east, neere to the Sea: and although in the Coast of this gouernment are many Riuers, & some rode vnto the Riuer of *Palmas*, they are not knowne in the Gulfe of *New Spain*, but the Riuer of *Panuco*, & his hauen, which is not very good.

S. Iago de los Valles.

Los Angeles.

The Bishopricke of *Tlascala*, which by another name is called *de los Angeles*, betweene the Archbishopricke of *Mexico*, and the Bishopricke of *Guaxaca*, is of 100. leagues, and more in length, from the Coast of the South to that of the North, and betwixt the confines of the Archbishopricke, and of *Guaxaca* 80. and as many in breadth, by the Coast of the North Sea, and no more then 18. or 20. by that of the South. There is not in it all more then three *Spanish* Towns, which is the City or Towne of the *Angels* 22. leagues from *Mexico* to the East, somewhat inclining to the South, of 1500. households in foure streets: it is a chiefe Iusticeship where the Cathedral Suffragane to the Archbishopricke of *Mexico* is Resident, with Monasteries of *Dominicks*, *Franciscan*, and *Aufine* Friers, one of Nuns, & one Colledge of more then 300. *Indian* children, to be instructed, with 10000. *Pezos* rent, which the Bishop *Don Sebastian Ramirez* built, which sent the Batchelor *Salmeron* Auditor of the Councell to build this City, and although he had determined to haue made it in *Tlascala*, he left it because he would not endamage the *Indians*, nor touch their Lands; for he had a great regard in generall to the good of the *Indians*, and in particular for those of *Tlascala*, being so well deseruing of the Crowne Royall.

The Bishop *Don Sebastian Ramirez* built the Citie of the *Angels*.

A *Vulcan* or *Bolcan*, is a place whence fire issueth, as *Etna*, *Hecla*, &c.

The Citie was built in the bounds of *Cholula*, from whence went 25000. men to warre, and it was seated in a Plaine called *Cuetlaxcoapa*, neere to a Valley called *Atlixco*, on the border of a small Riuer that commeth out of the *Vulcan*, where they gather Wheate, Wine, and all the Fruits of *Castile*, Sugar and Flaxe, and all manner of Herbs. For it is a temperate Countrey, more hot then cold, although the Corne of the grounds neere the Citie, are somewhat blasted: and a little space from *Tlascala*, spring Fountaynes whence groweth a Riuer that when it commeth betweene the Citie of the *Angels* and *Cholula*, it goeth very great and without fish, it passeth through the Prouinces of *Mechoacan*, and enteth into the South Sea by *Zacatula*, and there bee in it so many *Caymanes*, or Crocodiles, that they haue dispeopled some places.

Tlascala.

The Valley of *Atlixco* famous.

In *Tlascala* to the North of the *Angels*, which stands in more then twenty degrees in height, where the Cathedral Church was till the yeere 1550. when it was remooued to the Citie: the first Bishop was Frier *Iulian Garces*, the Valley of *Atlixco*, which may haue in breadth about one league and an halfe, where the Corne is neuer blasted, and there is gathered in it about 100000. *Hauages*, and there are more then 1000. *Spaniards* that do traffick in it, and 7. leagues from the Citie to the East, is the Valley of *Ocumba*: and in the Prouince of *Tepeaca*, the Marquesse of the Valley built a *Spanish* Towne, which he called *Segura*: and in the Valley of *S. Paul*, may be other 1300. households of *Spaniards*, in Farmes and Grangeries of cattle, that multiply so much, that there were men that with two shag-haired sheepe came to haue about 40000.

La Veracruz, *San Juan de Ulua*.

The Citie of *Veracruz*, one way stands sixtie leagues from *Mexico*, and by another sixtie fise, it stands one quarter of a league from the Sea, it is of more then two hundred *Spanish* households. There is in it Treasurie Royall, and House of Contractation. The Port is called *Saint Iohn of Vl-*

na, a name which the Captayne *Iohn Grijalua*, which discovered it the yeere 1518. and the frame of the Key that it hath, the Vice-roy *Don Antonio of Mendoza* began. It is five leagues from the mouth of the River of *Veracruz*, between the Coast and the little Iland, which is about one league in compasse, compassed with shelues, and so low that the tydes doe couer it right against the mouth of the River of *Saint Iohn of Vlua*. They goe into this Hauen by two Channels: the most frequented is that of the Flat, the other is called the *Gallifian Channell*, which is very deepe, and there the ships doe fasten themselves to a great wall of more then foure hundred foot with Rings of Iron and Brasse, and when the North winds are very strong, they are not very sure. The *Veracruz* stands in eightene degrees, somewhat more, and there was wont to be the vnloading of the Fleets, and they stayed foure or five monethes in vnloading, because it stands five leagues from *Saint Iuan of Vlua*, therefore it is now made in the Port of *Buytron*, which is from the Port of *Saint Iohn of Vlua* about eight hundred paces, and it is finished in one moneth and an halfe, and it is called *Buytron*, by a House that was there of one called *Buytron*, and they begin to make a Towne there in that situation.

There are in this Bishopricke two hundred chiefe Townes of the Indians, and one thousand subiect, although there may be two hundred fiftie thousand Tributarie Indians, in thirtie six charges of * Doctrines of Priests, and thirtie Monasteries of *Dominicke*, *Franciscan*, and *Austine* Friers: and in the Coast of this Bishopricke on the North Sea, is the River of *Aluarado*, where the bounds of the Bishopricke of *Guaxaca*, and the River of *Almeria* doe ioyne neere to the River of *Saint Iohn of Vlua*, where the Towne of *Medellin* was built by *Andrew of Tapia*, the yeere 1522. when the Marquesse *Don Fernando Cortes* sent the said *Andrew of Tapia*, and *Gonzalo of Sandenall*, to conferre with *Christopher of Tapia*, which had Warrants to take away the Government of *New Spaine* from the Marquesse, and the Factor *Salazar*, and the Ouer-seer *Peralmindez* dispeopled. The River of *Almeria* springeth in the long *Rome*, in the Prouinces of *Totonagues*, and *Micantle*, and betweene Mountaynes it goeth into the North Sea, and against this River is the Iland of *Sacrifices*, which the Captayne *Grijalua* gaue the name vnto, and the River of *Zempoala* to the North from *Veracruz*, and vpward the River of *Saint Peter* and *Saint Paul*, which springeth in the same *Rome*, and the River of the *Caxones*, *Tuspa*, and *Tamiagua*, neere the Government of *Panuco*.

30 The Bishopricke of *Guaxaca* (so called by the Prouince wherein it is, and *Antequera* by the Citie where the Cathedrall is resident betweene the Bishopricke of the *Angels*, and the Bishopricks of the Councell of *Guatemala*) is of one hundred and twentie leagues, from the one Sea to the other, by the Confines of the Bishopricke of *Tlascala*, and sixtie by the Confines of *Chiapa*, and one hundred in breadth by the Coast of the South Sea, and fiftie by the North Sea, wherein are included the Prouinces of *la Miseca*, high and low; the high fortie leagues from *Antequera* to the West, & the low more to the South Sea. *Iohn Nunnez Sedeno*, and *Fernando of Badaioz* inhabited first the Citie of *Antequera*: and after the first Councell of *Mexico* inhabited it againe; the only Iudges therein were Batchelour *Iohn Ortiz of Matienzo*, and *Delgadillo*, which was the first, that as a man of *Granada*, began to breed Silke in *Mexico*. The President and Gouvernour, the Bishop *Don Sebastian Ramirez*, began the Cathedrall Church, the beginning of the good of those Kingdomes: the Church hath all the Pillers of Marble of one piece, very great and bigge, and the Citie hath about foure hundred Spanish Households.

This Valley of *Guaxaca*, from whence the Marquesse of the Valley taketh his Title, beginneth from the Mountayne of *Cocla*, in the bound of *Guaxolotlan*. In it is gathered much Silke, Corne, and Millet; it hath the *Zapoteca* Tongue. There hath beene in it good Mynes of Gold. The situation of the Citie of *Antequera* (which as hath beene said) they call *Guaxaca*, was inhabited with people of *Mexico*, which lay in Garrison by order of the second *Motexuma*, and the many Garrisons that the Kings of *Mexico* had through their Empire made general in it the *Mexican* Tongue. The River of this Citie doth sinke vnder the ground, against *Cimatlan*, and riseth two leagues off, at the Mountaynes of *Coatlan*, other two from *Guaxaca*; and at a halfe a league from the Citie right against a Hill that stands to the North, is a point of a little Hill, and there goeth a glade of a Valley all plaine, for the space of eight leagues, which is the abovesaid faire Valley of *Guaxaca*, pleasant, and temperate, and of a most healthfull Ayre, where plentifully are gathered all kind of things, and especially fruits of *Castile*, most pleasant. To the South west stands the Prouince of *Tutepeque*, which hath many Townes by the Sea-coast, and is of more then sixtie leagues: and that of the River of *Aluarado*, betweene the North and North-east: and that of the *Zapotecas* to the North-east from *Antequera*, and *Guaxacoalaco* in the Confines of *Tabasco*, all rough Countrey, & notwithstanding the rich Mynes of Gold, little is gotten because of the roughnesse. There are foure Spanish Townes. The said Citie of *Antequera* is eightie leagues from *Mexico*, to the South-east in the high way of *Chiapa*, and *Guatemala*: and the first that entred to pacifie this Prouince, was *Iohn Nunnez of Mercado*, the yeere 1522. by Commission of *Don Fernando Cortes*, and from thence were men of War sent to serue the King *Quartimoc*, in the defence of *Mexico*, when *Don Fernando Cortes* subdued it.

* A kinde of Parish or Schoole diuision, Sp. *partidos de doctrina*.

Chap. 10.

Of the Bishopricks of *Guaxaca*, *Mechuacan*, and *Yucatan*: & of the Prouince of *Tabasco*, which is the rest of the bounds described.

Guaxaca Title of the Marquesse of the Valley.

Stinking River

Tutepeque.

- S. Alifonso of the Zapotecas.** The Treasurer *Alfonso* of *Estrada*, when he did gouerne in *Mexico*, inhabited the Village of *Saint Alifonso de los Sapotecas*, twentie leagues from *Antequera*, toward the North-east. They liue in it by Gold, Cotton-wooll, and Miller; there are about thirtie thousand *Indians* tributaries. It stands betweene most high Hills. *Saint Iago de Nexapa* is in the Valley of *Nexapa*, twentie leagues from *Antequera* to the East, in the way of *Chiapa*, and *Guatemala*. The Village of the Holy Ghost in the Prouince of *Guazacoalco*, at the Coast of the North Sea, in the Confines of *Tabasco*, is ninetie leagues from *Antequera*. *Gonzalo* of *Sandonall* inhabited it in the yeere 1522. It hath about fiftie Townes of *Indians*, it stands on the border of the Riuer, on the side of *Chiapa*: this Riuer springeth in the Mountaynes of the *Mixes*, and *Chontales*, neere to *Tecoantepeque*, and with the waters of the Neighbour Prouinces of *Chiapa*, and the *Chontales*, it goeth into the North Sea, there enter into it ships of one hundred tun.
- Golden Riuer.** In all this Bishopricke there is no Riuer that doth not yeeld Gold, and the *Indians* doe liue without want if they will worke, for they lacke nothing for backe nor belly: and they haue the *Cacao*, a Fruit like Almonds, which serueth for Money, and they make Wine of it, and it is eaten tosted, and is held for a great sustenance. They are wholesome Countreyes, and pleasant. The Silke was before nourished by the *Castilians*, with the Mulberie Trees of the Countrey, wherewith the *Indians* serued themselves, for to make Paper of the second barke: and the *Spaniards* haue planted so many of *Castile*, that they grow infinitely: and if the *Indians* did pay tithes of it, and of other things, fise Bishoprickes might be made; but none doe pay tithes but the *Castilians* onely.
- Cacao-money and Wine.** This Bishopricke hath three hundred and fiftie Head-townes of *Indians*, and in them, and in three hundred Granges of more then an hundred & fifty thousand tributary *Indians*, & one hundred and twentie Monasteries of *Dominicke* Friars, and the rest Schooles of Priests for Doctrine.
- The *Indians* should pay no Tithes.** The Coast of the North Sea of this Bishopricke, beginneth in the Riuer of *Aluaro*, that cometh from the Mountaynes of the *Zapotecas*, and betweene many other it goeth to the Prouince of *Chinaulta*, and crossing ouerthwart the Mountaynes whence it sprung, goeth out into the North Sea, betweene the Riuer of *Guazacoalco*, and *Saint Iohn of Ulua*, and there is also the Riuer called *Agnalulco*, whose mouth may serue for a Haven; and the diuided Rocke, a point of the Land that cometh from the Mountaynes of *Saint Martine*, named by ships that haue bin lost vpon a shoale full of Rockes vnder water, which lye along the Coast right against them in the Coast of the South Sea. This Bishopricke hath the Haven of *Guatulco* in fiftene degrees and an halfe, great, good, and frequented. The President *Don Peter* of *Aluaro* set this Prouince of *Guatulco* in obedience, and the Port of *Tecoantepeque* is neere, which also is reasonable; and the Towne is great, and there is in it a great fishing for Shrimps, and other fish which they carrie to *Guaxaca*, and in the high way of *Cuztata* is a Myne of Chrystall-borill. *Tecoantepeque* is fortie fise leagues from *Antequera*, they passe by the Mountaynes of the *Chontales*, *Nixapa*, and *Mexcalpeque*, whitherto this Bishopricke extendeth, and hath many Townes subiect by the Coast of the Sea.
- Riuer of *Aluaro*.** The Bishopricke of *Mechoacan* (which is a Prouince betweene the Archbishopricke of *Mexico*, and the new *Galicia*) hath in breadth by the Coast of the South Sea, about eightie leagues, and sixtie within the Land, with open bounds, by the Septentrionall parts: in it are included the Prouinces of *Zacatula*, and of *Colima*, both in the Coast of the South Sea. The Citie of *Mechoacan*, or *Pazcuaro*, in little more then nineteene degrees, and fortie seuen leagues from *Mexico*, of plaine way. In *Guayangareo* called *Kallodolid*, is Resident the Cathedrall Suffragane *Christopher* of *Olid* built *Mechoacan*, the Cathedrall was first Resident in *Zinzonza*, vnto the yeere 1544. that he remoued it to *Pazcuaro*. The Bishop was *Don Basco de Quiroga*, and it hath one Monasterie of *Franciscan*, another of *Austine* Friars, and it stands seuen leagues from *Mechoacan*, to the East.
- Guatulco.** The Mynes of *Guanaxnato*, are twentie eight leagues from *Mechoacan*, to the North, toward the *Zacatecas*, wherein there are about sixe hundred *Castilians*, in two Campes * which they haue with their chiefe *Alcade* or Commissioner, and the seate and dwelling of those that follow the Mynes is a *Reall* or Campe. The Village of *Saint Michael*, in the Prouince of *Mechoacan*, is thirtie fise leagues from *Pazcuaro*, to the North-east, in a rough Countrey. And the Village of the Conception of *Salaya*, which was built by commandement of the Vice-roy, *Don Martin Enriquez*, the yeere 1570. for to assure the way of the *Chichimecas*. The Village of *Saint Philip* fiftie leagues off *Mechoacan*, toward the North, and sixtie two from *Mexico* to the North-west, with one Monasterie of *Austine* Friars, in a barren soyle and cold; it was built for the securitie of the way of the *Zacatecas*.
- The Bishopricke of *Mechoacan*.** The Prouince and Village of *Zacatula*, in the Coast of the South Sea, stands in more then 18. degrees, and fortie leagues from *Mechoacan*, to the South-west, neere the Sea; *Iohn Rodriguez* of *Villanorte*, and *Sinon* of *Cuenca*, built it the yeere 1523. it stands ninetie leagues from *Mexico*, and the Prouince and Village of *Colima*, in little more then 18. degrees, in the Coast of the South Sea, and in the confines of new *Galicia*, fiftie leagues from *Mechoacan*, to the South-west, with a chiefe

chiefe Commissioner, in a hot soyle, and plentifull of *Cacao*, and *Cassia Fistola*, with Gould, and well conditioned people. *Gonzalo* of *Sandonal* built it in the yeare 1522. All the Countrey of *Mechoacan* is most plentifull of Wheate, Millet, and all kinde of *Spanish* Fruits, and Cattle, stored of Fish: it hath Graine, Cochinilla, and Cotten wooll, and the people is industrious, and giuen to labour.

There are in this Bishopricke one hundred and thirtie Townes, the nintie foure head Townes with Schooles of Doctrine: this Bishopricke reacheth no Coast of the Sea of the North, in the South Sea are many Riuer, and in the furthest West of the Prouince, almost in the border of the new *Galicia*, is the port of *Nauidad*, in the height of 19. degrees, good and frequented, from whence the Nauigation is made to the *Phillipinas*; and more to the East, neere the Port of Saint *James*: there are very good Copper Mines in these bounds, of the which the *Indians* make very curious Vessels, for it is pleasant, and other so hard that they digge the ground with it instead of Iron, which they could neuer doe till the *Spaniards* taught it.

The Prouince and Gouernment of *Yucatan* (which tooke this name when the Captaine *Franciscus Fernandez* discovered it, and our *Ladie of the Remedies*, when *Iohn* of *Grijalua* discovered *Cozumel*) was at the first held for an Island, because it was almost compassed with Sea, in sort that it may be called *Peninsula*, and it compasseth more then two hundred and fiftie leagues: it is in length where it extends it selfe East and West, about one hundred leagues, and as many North and South, from the Coast that looketh to the North, ynto the part that doth confine with the Prouinces of *Guatemala*, whereby it hath ouert what about fise and twentie leagues. The temperature is hot, and very moist, and though there be no Riuer, nor running water in it all, the water is so neare for Wells, and they finde so many shels of Sea-fish vnder the stones, that this, and the Coast being so low, hath giuen occasion to suspect that it hath beene Sea in other times: it is much compassed with Wood: they gather no Corne, nor seedes of *Castile*, there is no Gould, nor any other kinde of Mettall, whence is knowne the inuention (or deceit) of those which said that there were found in this Prouince, when the *Spaniard* entred in it, Crosses of Latten, which was neuer found in any Prouince of the *Indies*: it is very plentifull of game, especially wilde Boares and Deere, they breede vp in it great store of Poultry: they gather much Cotten wooll, and Azure, the people multiplieth and liueth long; a man there was which attained to three hundred yeares: it hath all the kinde of Cattle of *Spaine*, and good Horses.

There are in this Gouernment without that of *Tabasco*, which goeth ioyntly with it, foure *Spanish* Townes, and one Bishopricke: and the Townes are buildings of the first Gouernour, the President *Don Francisco* of *Monteio*. The Citie of *Merida* is in twentie degrees height, almost in the midst of the Prouince, neerer to the coast of the North Sea, twelue leagues within the Land. In it are resident the Gouernour, the Officers of Reuenues, and treasure Royall, and the Cathedrall suffragane to *Mexico*, with a Monasterie of *Franciscane Fryers*, they called it *Merida*, for the great and auncient building that it hath like *Merida* in *Castile*; and it causeth admiration, that hauing no kinde of Mettall in this Prouince, so great Stones could be wrought, in the which were found engrauen naked men, with eare-rings, whereof is inferred that they were Temples, and that it was a very famous Countrey. The Village of *Valladolid* is thirtie one leagues from *Merida*, toward the South-east with a most sumptuous Monasterie of *Franciscan Fryers*, and 15000. tributarie *Indians* in the limits. The Village and port of Saint *Franciscus* of *Campeche*, in 20. degrees, in the Coast that looketh to new *Spaine*, about fiftie leagues from *Merida* to the West, declining to the South, it hath a reasonable Hauē, though little depth for being a Bay. *Don Francisco* of *Monteio* gaue it the name. The Village of *Salamanca* the President called so by his owne Countrey. In the Prouinces of *Bacalar*, and *Chetamal*, seuentie leagues from *Merida*, North and South, leaning to the West, and other seuentie from *Valladolid*, neere to the Coast of the gulfe of *Honduras*: there are in this Prouince Monasteries of *Franciscanes*, and six Schooles of Priests for Doctrine.

The Coast of all this Prouince is so shallow, that in few parts ye can ride at anker at lesse then foure or fise leagues from the Land, and so there is no Port but for small Shippes, and it floweth and ebbeth more in this Coast then in any other place of these Prouinces of new *Spaine*. The Ports that are, be these: *Ciclo*, and *Teliebaque*, *Cical* and *Canguil*: the Riuer with two mouthes, *Campeche* in the Coast that looketh to new *Spaine*, and in it the small Cape from whence the Coast beginneth to winde to the East, and neere to the Point a little Island which is called *la Desconocida* or the *Vnthankesfull*, compassed with shelles: and to the West from this, about eighteene leagues, another which they call the *Zarza*, and the *Triangle*, which are three small Islands, close by another little Island compassed with shelles, other sixteene leagues from *Cabo Delgado*, Islands de *Arenas* (of *Sandes*) and the *Redde* (la *Bermeia*) and another Island thirtie leagues from the said Cape to the North, and *los Negrillos*, three little Ilets compassed with shelles, to the East from the *Redde*, about thirtie fise leagues, and the *Scorpion* twentie leagues of the coast North and South, with *Merida*, and the Cape of *Contoche*, the Point most to the East of *Yucatan*, from whence goe foure little Islands, which are called de *Mugeres* of *Women*, leaning to the Coast in the which is the Island of *Cozumel*, named by the famous *Idoll* Place in it, whither

all the people of the Prouince went in Pilgrimage; it stands foure leagues to the Sea, at the be-
ginning of the Gulfe of *Honduras*, almost North and South with *Valladolid*, more inward to the
Gulfe, other three little Ilets with shelues, almost ouer against the Lake of *Bacalal*, which is with-
in the Land thirtie leagues from the Lake of *Chetemall*, in the Coast that goeth painted with I-
lands vnto *Salamanca*, which is the first *Pantoia*, neere one thelfe called * *Quitafuenno*, and another
Zaratan, and another *Lamanay*, and the last *Tllob*.

The Prouince of *Tabasco*, which goeth with the Gouernment of *Tucatan*, and falleth vpon the
Coast of the North Sea in the gulfe of new *Spaine*, hath in length East and West, about fortie
leagues, from the confines of *Tucatan*, vnto the confines of *Goazacoalco*, wherewith it ioyneth
on the East, and as much North and South from the North Sea, vnto the confines of *Chiapa*. It
is all plaine ground of Marshes, Lakes and Quagmires, and so they goe ouer it in Boates, and Ca-
noes; it is very moist, and hot, and therefore very plentiful of Pastures for Kine, and of Millet
and Cacao, which is the greatest stocke or substance of this Prouince, wherein is onely one Town,
which is *Tabasco*, and by another name, the Village of our *Lady of the Victorie*, so called for the
Victory that *Don Hernando Cortez* had there of the *Indians*, when hee went to new *Spaine*, the
yeare 1519. The tribute which the *Indians* doe pay in this Prouince, is two thousand Xi-
quipiles of *Cacao*, and euery Xiquipill are eight thousand Almonds, and one load maketh three
Xiquipiles or Terces. In the Coast of this Prouince besides other Riuers and Marishes, is found
the Lake of *Xicalango*, or *Port Royall*, great and capable, with two little Ilands at the mouth,
and it was the Captaine *Lewis Martin*, that by order of *Don Fernando Cortes*, made an end of pa-
cifying this Prouince.

The bounds of the Counsell of new *Gallicia* or of *Xalisco* (which *Nunno* of *Guzman* said hee
had discouered, and *Don Fernando Cortes*, that the Captaine *Goncalo* of *Sandouall*,
did it in his name, when hee sent him to pacifie the *Colimas*) it parteth bounds with
the Counsell of new *Spaine*, neere by the Port of the *Natiuitie*, and the Lake of *Chiapa-
la*, going toward the North-east, whereby (and by the North, and somewhat of the West,
for it is not all discouered) it hath the bounds open, for the rest to the West is all Sea:
that which is inhabited on the one side, and the other, may come to one hundred leagues,
wherein are comprehended the Prouinces of *Guadalaiaara*, *Xalisco*, the *Zacatecas*, *Chiametla*, *Culi-
acan*, the new *Bizkey*, and *Cinoloa*; and for Circuit the discouerie of the Prouinces of *Cibola*, and
of *Quibira*.

The temperature of the Prouince, and borders of *Guadalaiaara*, is good, and the Countrie plen-
tifull of Corne, and Millet, and other Seedes of *Spaine*, and many Vaines of Siluer: there are
in it *Spanish* Townes. *Nunno* of *Guzman* peopled the Citie of *Guadalaiaara*, the head of this
Kingdome, the yeare 1531. and gaue it the name of his Countrie: it stands in 106. degrees and a
halfe of longitude from the Meridian of *Toledo*, 1780. leagues by a direct Voyage, & in 20. degrees
one third part in height, eightie seuen leagues from *Mexico*, betweene the North and the West,
more toward the West: in it is resident the Counsell, the Officers of the reuenues, & Royall trea-
surie, and the Cathedrall suffragan to *Mexico*, since the yeare 1570. for before it was commanded
to be built in *Compostella*: it hath one Monasterie of *Franciscan*, another of *Austine* Friers. *Nunno*
of *Guzman* built also the Village of the *Holy Ghost* in *Tepique*: and the Village of *Santa Marie*
of the Lakes, stands thirtie leagues from *Guadalaiaara* to the South-east, with the chiefe Com-
missioner. It was built for to be sure of the *Chichimecan* *Indies*, that are in Countries between the
North and the East, a barbarous people, which liue scattered in the field, without any taste of hu-
manitie or policie, liuing in Canes, & in the Groues like sauage beasts; they liue vpon wilde chase
and fruits, they know no riches, nor pleasure; they goe naked, and some couered with Beasts skins:
their weapons are Bowes and Arrowes, they are well bodied, great eaters, they make wine of cer-
taine rootes wherewith they drinke themselves drunke.

In the Prouince of *Xalisco*, which is plentiful of Millet, more then of Sheepe, or Horses, there
is onely the Citie of *Compostella* neere the Sea, three and thirtie leagues from *Guadalaxara*, to
the West, where the Counsell was at the first, and commanded to build the Cathedrall, vntill
the yeare 1560. that they remoued to *Guadalaiaara* to be more in the borders: there is in it a Mo-
nasterie of *Franciscan* Friers; and it was also inhabited by *Nunno Guzman*, the yeare 1531.
which trauelled two yeares in these Countries, which they called the greater *Spaine*, in emu-
lation of *Don Fernando Cortes*, in all that time nothing being knowne of him in *Mexico*. The
Village of the *Purification*, to the South-west, from *Guadalaiaara*, and thirtie leagues from
it, neere the port of the *Natiuitie*, in the confines of the bounds of this Counsell, and of
that of *Mexico*, in a very hot and sickly Countrie: and vnto the end of the yeare 1531. *Nunno*
of *Guzman* discouered one hundred and fiftie leagues of Land by the Coast of *Xalisco*, which stand
in somewhat more then 22. degrees.

In the Prouince of the *Zacatecas*, are rich mines of Siluer, and want of Water, Corne and
Millet: there are three Townes of *Spaniards*, and foure Camps appointed of mines: those which
they call of the *Zacatecas* are the principall, fortie leagues from *Guadalaxara* to the North, and
eightie

eightie from *Mexico*, wherein are ordinarie more then five hundred *Spaniards*, five hundred *Slaties*, one thousand *Horses* and *Mules*, and one Monasterie of *Franciscane* Fryers; and there is resident alwayes one of the Officers Royall of *Guadalajara*. In this Prouince also are the Mines of *Auinyo*, in the confines of the *Zacatecas*, and those of *Saint Martin* seuen and twentie leagues from the *Zacatecas*, to the North-west, wherein are wont to be about foure hundred *Spaniards*, and *Xerez* of the Frontier, thirtie leagues from *Guadalajara*, to the North, and tenne from the mines of the *Zacatecas*, in the way to them. There are besides these other Reales or Campes, whereof no mention is made, because they are so famous. The Village of the *Erena*, & the Mines called of the little * *Hat*, are five and twenty leagues from *Zacatecas* to the North-west, neere to those of *Saint Martin*, and others that are in the limits. The Village of * *Nombre de Dios*, is sixtie
10 eight leagues from the Citie of *Guadalajara*, and tenne from the Mines of *Saint Martin* to the North, with a Monasterie of *Franciscan* Friers, abundant in Corne, and Millet, and good Mines in his Borders. The Village of *Durango*, in the Borders of the Mines of *Saint Martin*, and the Valley of *Saint Salvador*, eight leagues from *Nombre de Dios*, a wholesome Countrie, & many Riuers, with whose watering they gathered great store of Corne, and Millet, and of other Prouisions, and in the Borders are the Mines of *Saint Luke*, and a very good Salt-pit. And the *Indians* of this Kingdome in many places were in armes, and the *Chichimecas*, and *Guachachiles* did great hurt in the way of *Guadalajara* to the *Zacatecas*, and this warre was very cottly, and tedious, and was ended, the Marquesse of *Villamanrique* being Viceroy. The *Indians* are diuided in this precinct in one hundred and foure partitions or tribes.

*The Name of
God.

20 The Prouince of new *Bizkie*, is North-westward from the *Zacatecas* fiftie leagues from them; a Countrie of Prouisions, and much Cattell, and of good Siluer Mines, the Mines of *Hindebe* are in it, of *Santa Barbola*, and of *Saint John*, and in it is the Prouince of *Topia*; and in this discovery, and inhabiting, *Franciscus Tharra* did many seruices. The Prouince of *Chiametla*, twenty leagues broad and long, in the Coast of the South Sea, about fortie leagues from *Xalisco*, hath Mines of Siluer, and in it stands *Saint Sebastian*, a Village of *Spaniards*, which was first of the Counsell of *Mexico*, and it stands in more then 22. degrees. *Culiacan* is a gouernment in the South Sea, more to the East, and West from *Chiametla*; it is a plentifull Countrie of Viſtuals, and shoues of Siluer Mines, whereof there is a Campe peopled, which they call of the *Virgins*. The Village of *Saint Michael*, eightie leagues from *Compostella*, and one hundred and three from *Guadalajara*, *Nunno* of
30 *Guzman* inhabited it the yeare 1531.

Nueva Vizcaya.

Chiametla.

S. Michael.

The Prouince of *Cinaloa*, the last, and most Septentrionall of the new Kingdome of *Galicia*, two and fortie leagues from *Culiacan*, one hundred and fiftie from *Guadalajara*, to the North, was a Towne built in it that was called *Saint John* of *Cinaloa*; of *Spaniards*, and could not be kept. This Prouince was discovered, *Don Antonie* of *Mendoza* being Viceroy in new *Spaine*, and they said there was a Citie scene wrought with stone, which they called *Granada*, and that those *Indians* were warriors, and that in the Countrie was great store of Viſtuals. *Quibira*, stands in fortie degrees, of a temperate and fruitfull soyle. *Cibola*, stands thirtie leagues from *Culiacan*, toward the North, and *Quibira* two hundred from *Cibola* to the East; it is all of poore people; for that they haue no Cotten, they weare Deere skinnies, and of the Countrie Kine, which haue a lumpe on the ridge of the backe, and long haire in the fore parts, the hornes
40 lesser then ours; and in them consisteth the greatest part of the sustenance of the people, for of the skinnie they cloathe, and make Shooes, and Cords; they eat the flesh, and make tooles of the bones: they haue sundry languages in this Prouince, because they communicate little the one with the other.

Cinaloa.

Quibira.
Cibola.

California is a great point of the Land that putteth out to the Sea in the vttermost West of new *Spaine* in two and twentie degrees height, from whence it extendeth to the North-west, neere about two hundred leagues, although of it there is no certaine notice, nor of the Ports, and Ilands of the Gulfe *California*, which is made betweene the said point, and Gulfe of new
50 *Spaine*, which goeth along that way, as to the North-west; in the which although there be many Riuers, Capes, and Points, and landing-places, there is no particular notice had of them, because they are not much frequented. At the beginning, and entrance of this Gulfe are very long and narrow Ilands along the Coast, and very close with it, which is called the *Guaymall*, that reacheth from the Riuer of our *Ladie*, or of *Sebastian* of *Bora*, vnto the Riuer of *Christmas* in *Culiacan*. The Riuer of the Village of *Saint Michael* is called *Ciguatlan*; and neerer to new *Spaine* is the Riuer of *Pasita*, and against it the *Desart* Iland, and after ward the Riuer of the *Holy Ghost*, and the port of *Xalisco*, and to the South of the point of *California*, is *Annublada* or the *Cloudie* Iland, and the Iland of *Saint Thomas*, and the Iland of *Flores*, and another which is called *Las Monias*.

California.

60 It was first called the Counsell of *Guatemala* of the confines, because it was commanded first to be built in the confines of the Prouinces of *Nicaragua*, and *Guatemala*, without assigning any certaine Towne. It hath in length East and West two hundred and fortie leagues, and from the Meridian from 84. to 98. of longitude, and North and South, in breadth one hundred and eightie,

tie, from 9. to 10. degrees of height, vnto eigheteene or nineteene, in the which are comprehended the Prouinces of *Guatemala*, *Soconusco*, *Chiapa*, *Suchitepeque*, the *Verapaz*, *Honduras* and *Cacos*, *Saint Sauour*, and *Saint Michael*, *Nicaragua*, *Choluteca*, *Taguzgalpa*, and *Costarica*, and in euery one of these Prouinces they alter in speech: and according to the opinion of Religious men, it was the worke of the Diuell, for to plant dissentions and discord betweene these Nations which were bloody and reuengefull. The Gouernment and Prouince of *Guatemala* on the South Sea coast, in length of it may be about seuentie leagues, and in breadth North and South thirtie: it is a Countrie of a good temperature, plentifull of Millet, Cotten wooll, Corne and other fruits, though they preferue not the Seede of one yeare for the other: the waters are few, 10 but when it raineth they are very violent from Aprill to October, the windes are North and South, and the North lasteth but fifteene or twentie dayes, and it is very cold, and furious. There are in it five Spanish Townes, buildings of the President *Don Pedro* of *Aluvarado*, in the yeare 1524. and 25. The Citie of *Saint James* of *Guatemala*, whose situation was called *Cachequill*, which signifieth an *Eagle*, because the Generall of this Nation, when hee went to warre, did beare an Eagle for his Plume: it is the head of the Gouernment, where the Counsell is resident, in 24. degrees and a halfe of height, and 93. degr. from the Meridian of *Toledo*, from whence it may bee distant by a greater circle of one thousand sixe hundred and sixtie leagues, and it is twelue from the Sea, and a towne of sixe hundred Spanish households: the Officers of the goods and Royall Treasure, are resident there, the melting house, and the Cathedrall Suffragane to *Mexico*, with one Monasterie of *Dominicans*, and another of *Mercenarie* Friars, and one Hospitall, and 20 in the bounds five and twentie thousand tributarie *Indians*. This Citie is seated in a very pleasant Valley, with fruits of diuers sorts, and all kinde of prouision and dainties.

The Citie of *Saint Sauour*, which in the *Indian* language is called *Cuzcatlan*, is fortie leagues from *Saint James* to the South-east, with one Monasterie of *Dominicans*. The Village of the *Trinitie*, which in the *Indian* tongue was called *Conzonate*, sixe and twentie leagues from *Saint James* to the South-west, foure leagues from the Port of *Axacutla*. It is a chiefe Commissionership with title of his Maiestie, with one Monasterie of *Dominicans*, in a plentifull soile of Cacao, and the *Indians* of it are of the iurisdiction of *Saint James*, it is a place of great trafficke, and the Port a touch for the ships of *Pern*, and of *New Spaine*. The Village of *Saint Michael* sixtie two leagues from *Saint James*, and two and twentie from *Saint Sauour* to the South-west, two leagues from 30 the Sea and Bay of *Fonseca*, which serueth it for Hauen, and in the bounds are eightie Townes of *Indians*. The Village of *Xerez* of the frontier, in the *Indian* speech called *Choluteca*, in the confines of *Guatemala* and *Nicaragua*, eightie leagues from *Saint James*, and twentie from *Saint Michael* to the South-east, both plentifull of Cotton wooll and Millet. Neere the Citie of *Saint James* is that * *Volcan* so famous of *Guatemala*, and in all the *Indies* are many of these *Vulcanes* (but the most famous are those of *Guatemala*, which hath burst out diuers times, casting fire, stones, and ashes, with great hurt of the Countrie.) That of *Arequipa*, of *Blascula*, *Quito*, and others. In this Countrie are many springs of water, hot, and of sundrie properties and colours: there is much and good Balme, which the *Spaniards* knew without learning it of the *Indians*, against the which some Author speaketh, and also liquid Amber, Gumme-anime, Copall, and Suchicopall, 40 and other Gummes, and Liquoris most perfect, and beasts that breed the Bezar stone, they gather great store of Cacao, which is great riches: it is a meane Tree, the leaues like a Chesnut though bigger, it giueth flower and fruit euery Moone, and the same doe in that Countrie the Orange trees. The Cacao is a tree that loueth moisture better then the Sunne, and therefore they plant neere him another tree to shadow him.

The Ports of this Gouernment in the South Sea, beside the rehearsed, are the Bay of *Fonseca* neere to *Saint Michael*, in twelue degrees and a halfe of height, *Gil Gonzales* of *Ayula* gaue it the name in the yeere 1522. for the Bishop *Iohn Rodrigues* of *Fonseca*, President of the Councell of the *Indies*. And within the Bay is an Iland which he named *Petronilla*, by a Neece of the Bishop. The Port of *Axacutla*, neere to the *Trinitie*, in twelue degrees height, is the best of this Gouernment for *New Spaine* and *Pern*, and the Bay of *Guatemala* twelue leagues from it, and the Riuer 50 of *Xicalapa* seuen leagues from the Bay to the West. On the North side this Prouince hath no coast, for it commeth not to the Sea by fortie leagues, vnto a landing place which they call the Port of the fresh Gulfe, from whence the merchandize that goe from *Spaine*, are conueighed by the Gulfe of *Honduras*, into the Land with carriages vnto *Guatemala*, *Saint Sauour*, and the *Trinitie*, and twelue leagues before *Guatemala*, in the high way of *Mexico*, is the great Lake of *Atitlan*, of ten leagues in compasse, and foure in breadth, without bottom.

The Prouince and Gouernment of *Soconusco* is the furthest West from *Guatemala* vpon the coast of the South Sea, of length and breadth about foure and thirtie leagues, plentifull of Cacao (the greatest trafficke of it, and of all that in it is sowne except Wheat) there is no more then one Spanish towne, which is called *Guenetlan*, founded by *Don Pedro* de *Aluvarado*, where the Gouernour is resident; her coast which is in the South Sea, beginneth seuen leagues from the Riuer of *Ayula* to the West, and presently the Riuer *Coatlan*, *Capanercalte*, *Colatl*, *Haxatlan*, *Amituc*, and *Quizatlan*. 60

The

The Prouince and Bishopruck of *Chiapa* is Mediterranean, betweene *Soconusco* by the South, *Chiapa*, and the vttermost of *New Spaine* by the West, and by the North and the East, betweene *Tabasco* and * *Verapaz*, in length East and West about fortie leagues, and some lesse in breadth, some * Or true lesse fertile of Wheat and Miller, and other Seedes, and of Cattell, except Sheepe that are not peace. many. It hath one Towne of *Castilians*, which is called *Citie Royall*, seuentie leagues from Saint *James* of *Guatemala* toward the North-east, which by a particular priuiledge is gouerned by ordinarie Iustices. The Cathedrall is resident here with one Monasterie of *Dominicke* Friars, and many *Indian* Townes in her limits: *Chiapa* is the principallest Towne of them, from whence the Prouince tooke the name. The Countre-men haue skill in breeding of Horses, that those of this
10 Countre become the best that are in *New Spaine*: they are Musicians and Painters, and learne any Trade that doth consist in arte: they were in old time of *Nicaragua*, and the Captaine *James* of *Mazariegos*, the yeere 1531. built this Citie in a Valley where now it stands, round, of a maruellous situation in 18. degrees and a halfe, sixtie leagues from the North Sea, and as many from the South.

The Prouince of *Verapaz* (a name which the *Dominicke* Friars gaue it, because they pacified *Verapaz*. it with preaching) is also Mediterranean betweene the bounds of *Soconusco*, *Chiapa*, *Yucatan*, *Honduras*, and *Guatemala*, of thirtie leagues ouer, and as many from Saint *James* of *Guatemala*; a moist Countre, and therefore the better for the Millet that in it is gathered twice a yeere, and for Wheat. There is Cotton wooll, and some Cacao, and much Fowle of those that giue the co-
20 loured feathers for the pictures which the *Indians* doe make, which is a merchandize of this Prouince, and the Kings of *Mexico* carried them from this Prouince, which was the most esteemed thing they had, and it was iudged for a great sinne to kill these Fowles, but to plucke them and to let them flie. There is in this Countre but one Monasterie of *Dominicke* Friars, with one *Indian* Towne of seuentene *Indian* children that are there, by order of the religious men for to instruct them the better; for before they liued scattered and like sauages, and now they liue like Christians, and in temporall things politickly.

In this Prouince there is no Gouvernour, but a chiefe Iustice, prouided by the Councell. The Riuer of *Zacatula* diuideth this Prouince from the Prouince of *Guatemala*, from the which it extendeth vnto the fresh Gulfe, whither all the Riuers of it doe runne, whereby and by the many
30 falls of waters that descend from most high Hills, the Countre was so moist, that the Millet rotted; but it is bettered in the temperature, since the cutting downe of the Woods: it hath many Lions, Tigres, and Buffes, whose flesh the *Indians* doe eat although it be luscious and soft; it is called the *Fresh Gulfe*, for the multitude of the Riuers which on that side doe enter into the Sea. *Golfo dulce*. The water is fresh, and there are exceeding great Fishes, and specially the *Manati*, which is the *Manati a fish* Sea calfe, which swimmeth so delicately, that being very great he maketh no noyse; when hee fleeth he goeth to the Deepe, and waxeth angrie and fierce against them that seeke him, and giueth great strokes; his flesh is very fat like vnto fat beefe. described.

THE Prouince and Gouvernement of *Honduras* hath in length East and West, by the coast of the
40 North Sea, more then one hundred and fittie leagues, and in bredth from the Sea vnto the bounds of *Costa Rica* and *Guatemala*, in parts eightie: it hath many Hills, and is plentifull of Millet, Wheat, and all sorts of Cattell, and some Mynes of gold and silver: there is in it fixe *Spanish* Townes in one Bishoprucke, and the first Bishop was Friar *John* of *Talauera*, Prior of *Prado*, of the Order of Saint *Ierome* of *Spaine*.

The Citie of *Valladolid*, in the *Indian* language, is called *Comayagua*, in more then sixteene degrees, stands sixtie leagues from Saint *James* of *Guatemala* to the East, and about fortie from the North Sea: in it is the Gouvernour resident, and the Cathedrall, since the yeere 1558. when it went from *Truxillo*, whereat first it was; and one Monasterie of *la Merced*. The Captaine *Alonso* of *Caceres* pacified this Countre, by order of *Don Peter* of *Aluaro*: it stands in the mid-
50 dest of the two Seas, and from the one to the other are three and fittie leagues, from the Port of *Cauillos* or of *Horses* in the North Sea, vnto the Bay of *Fonseca* in the South Sea, and the Inginer *Baptista Antoneli* visited this way, by order from the King; because many thought that by it the trafficke of the North Sea was more easie to the South Sea, and hee found that it had many inconueniences.

The Citie of * *Gracias a Dios*, is thirtie leagues from *Valladolid* almost to the West; the Captaine *Gabriel* of *Rojas* peopled it 1530. for the benefit of the Mynes of gold that were thereabouts, and had great encounters with the *Indians*, which assaulted him many times in a Fort that he had. But the Gouvernours of *Honduras* and *Nicaragua*, not succouring him by reason of grudges betweene them, hee was forced to forsake it. And in the yeere 1536. Captaine *Gonzalo* of
60 *Aluaro*, inhabited this Citie againe. The Village of Saint *Petro* is thirtie leagues from *Comayagua* to the North, somewhat aside to the West, and eleuen from the Port of *Cauillos*, where the Officers Royall are resident, because the Port of *Cauillos* is sickly, whither the dispatches of the ships doe come. The President *Don Peter Aluaro* built it 1536.

The Village of Saint *John* of the Port of *Cauillos* is in 15. degrees of altitude, eleuen leagues
from Saint *John*.

- from Saint Peter, foure from *Comayagua*, it is inhabited with Factors of the Merchants, and with Black-moores, because it is an vnwhollsome Port; for although it be a Bay, it is a good one, it was called the Port of *The Horses*, because some were cast in the Sea by a storme. The Citie of *Truxillo* is sixtie leagues from *Comayagua* to the North-east, and fortie from the Port of *Horses* to the East, and one from the North Sea: the Cathedrall was here, the Hauen is called *Saint Gil*, it is good, though it be a Bay dead and sheltered, where the ships that goe for *Guatemala* doe touch first. *Francisco de las Casas*, began to inhabit this Citie 1524. and because they were all people of *Estremadura*, he called it *Truxillo*, and *Don Hernando Cortes* ended the inhabiting of it when he went to the *Ybueras*. The Village of *Saint George of Olancho*, is fortie leagues from *Comayagua* to the East, of fortie households, and in her borders sixteene thousand tributarie Indians, and much gold, chiefly in the Riuer of *Guayape*, ten leagues from this Towne. This Valley of *Olancho* is very pleasant and profitable, and in it was much gold gotten, and the Governours of *Honduras* and *Nicaragua*, had in other times great differences: for euery one would haue it in his iurisdiction, and therefore here it was where *Gil Gonçales Dauila* tooke one hundred and twentie thousand *Pesos* of gold of *Hernando of Soto*, and dismissed the people which *Pedrarías Dauila* had for his defence; and here *Gabriel of Rojas*, defended the entrance of *Gonçalo of Sandomal*, for *Don Hernando Cortes* did send him from *Truxillo*, and here the Indians killed *John Grijalua*, a very famous Captaine, and others.
- The coast of this Prouince is all in the North Sea, in the Gulfe which they call *de Honduras*, which is all the Sea coast betweene this Prouince and *Yucatan*, to the place where it ioyneth with it by *Verapaz*, where it was called the Gulfe of *Guanajos*, the first Point is of the *Ybueras*, so called, because they first found many pompions on the Sea, which they call *Ybueras* in the language of *Hispaniola*; it stands in sixteene degrees of height. Neere to the *Fresh Gulfe* a Port for *Guatemala*, where *Saint Gil* of *Bonauista* was built, neere to the Cape of *Three Points* to the East from the *Fresh Gulfe*, and *Gil Gonçales Dauila* peopled it 1524. And more to the East is the Riuer *Piche*, and *Rio Baxo*, and the Riuer of *Ulua*, by another name *Balabama* before the Port of *Horses*, which stands in fiftene degrees. And afterward the Riuer and Point *de la Sal*, and *Triumpho de la Cruz*, a Cape of three points, where the yeere 1524. the Master of the field *Christopher of Olid* planted; and the Riuer *Hulma* or of *Xagua*, and to the North of his mouth the Island of *Vila*; and to the North-east, *Guayana*, *Helen*, and *Guanaja*, and *Saint Francis* North and South with the Point of *Truxillo*, which are the Islands of the *Guanajos*. The said Point is called by another name, *Cabo Delgado*, the *Small Cape*, or of *Honduras*, from whence to the Cape of ** Camaron*, in search whereof they goe from *Jamayca*, are thirteene Riuers, and at the Point of the Cape a plazell or great shelve of more then twentie leagues into the Sea, and in the midst of it neere to the Coast a great Iland, which is called the Iland *de los Baxos* (of the shelues) and another to the North, neere the shelve called *Saint Millan*, and hauing passed the shelve, the Bay of *Cartago*, and the *Deepe Bay*, before the Cape of *thanks be to God*, which stands in fourteen degrees one third part, and to the North of it three Islands, which they call the *Viciosas*, and *Quita sueno* or *Take away sleepe*, and *Roncador*, the *Suorter*, two dangerous shelues, and hauing passed the Cape, the Gulfe of *Nicuesa*, where hee was lost in the yeere 1510. and the Riuer of *Tare* in thirteene degrees, where the Governments of *Honduras* and *Nicaragua* are ioyned.
- The Islands of the *Guanajos*, which are the rehearsed, the first Admirall *Don Christopher Colon* discovered 1502. in the last voyage he made to the Indies, when he discovered *Terra firme* in the coast of *Veragua*, where his ill lucke appeared; for if as he went to *Veragua*, hee had gone to the other side, he had discovered *New Spaine*.
- The Prouince and Government of *Nicaragua*, which the Governour *James Lopez* of *Salzedo*, called the *New Kingdome of Lion*, on the West ioyneth with *Guatemala*, and on the North with *Honduras*, and on the South with ** Costa Rica*. It is of one hundred and fiftie leagues East and West, and eightie North and South, a plentifull Countrie of Miller, Cacao, Corton wooll, store of Cattell, without Corne or Sheepe, it hath five *Spanish Townes*, *Lion* of *Nicaragua* is one hundred and foure leagues from *Saint James* of *Guatemala* about the South-east, and twelue from the South Sea, neere to the great Lake of *Nicaragua*, where the Governour is resident, the Royall Officers, and the Cathedrall, and *James Alvarez Ossorio* was the first Bishop. It hath five Monasteries of Mercenaries, and in her bounds one hundred and twentie thousand tributarie Indians. The Citie of *Granada* is sixteene leagues from *Lion*, which and *Lion* were built by the Captaine *Franciscus Hernandez* 1523. and *Granada* stands by the border of the great Lake, and foure and twentie leagues from the Port of *Realcio*, besides the great Lake, stands the Lake of *Lindiri*, and the famous *Vulcan* or *Fierie mouth* of *Massayatan*. The great Lake ebbeth and floweth, it hath many Islands, it runneth into the North Sea, by the Riuer which is called *El Desaguadero*, or *The Voyding*, it hath great store of Fish and many Lizards. At two leagues from it, and seuen from *Granada* is the great fierie mouth of *Mombacho*, very high with many Groues of diuers fruits, of which much refresh the Countrie. A Friar perswading himselfe that that masse of fire that in so many yeeres burned without consuming within the mouth of *Massaya* was gold, hauing made by a certaine arte certaine Cauldrons with their chaines to draw it, they scarcely came at the fire, when the Cauldron and the Chaines were melted like Lead.

Lake of Nicaragua. Vulcan of Massayatan and Mombacho.

The new *Segovia* which was the beginning of *Peter Arias* his plantation, is thirtie leagues *Segovia*. from *Lion* to the North, and as many from *Granada*, somewhat Northward also, in which limits much gold is gotten. And *Iaen* a Citie is thirtie leagues from the North Sea, in the end of the *Iaen*. great Lake, whereby the River which they call the *Voyding*, and the merchandize which are carried from *Nombre de Dios*, and now from *Porte bello*, are conuayed in it. The Village of *Realejo* one league from the Port of the *Possession*, which commonly is called of the *Realejo*, stands in e- *Realejo*. leuen degrees and a halfe, and is one of the best Ports and surest in all that Coast, wherein are made good ships by reason of the good prouision of Timber there.

There are in this Gouvernment many Townes of *Indians*, and in them store of tributaries, and 10 in the Confines of this Gouvernment, and of *Costa Rica*, and of *Nicoya* eight and fortie leagues from *Granada*, in the South coast, is a Corregidorship; in which, and in the Iland of *Chyra*, which is of the iurisdiction thereof eight leagues to the Sea, are many tributarie *Indians* of the Crowne Royall, subiect in other times to the Councell of *Panama*, vnto the yeere 1573. at which time it was incorporated in *Costa Rica*; whose Gouvernour placeth a Deputie, and the Bishop of *Nicaragua* a Vicar. There is in it a reasonable Port, in the coast of this Prouince on the North Sea. After this is the River *Tare* that diuideth it from that of *Honduras*, the River of *Tairepa*, before Ports and Ri- uers of this coast. the River and Port of Saint *Iohn*, which is called the *Voyding* or *Desaguadero*, with a great Iland at the mouth, and after, some other Rivers common to *Costa Rica*. In the South Sea, it hath be- sides the *Realejo*, the Port of Saint *Iames*, before the *Chira*, and the Port of *Paro* right against 20 *Nicoya*, in the Gulfe called of the *Salt-pits*, before the Point of Saint *Lazarus*, and the Cape of *De Salinas*. *Borrica*, at the East side whereof are the Ilands of Saint *Marie*, Saint *Martha*, *Cobaya*, and *Se- baco*, neere to the bounds of *Veragua*, common to *Costa Rica*.

In the Coast of *Nicaragua*, on the South side, the Village of *Bruxelles* was peopled 1529. and *Bruxelles*. *Iames Lopes* of *Salcedo* disinhabited it, because they had receiued in it *Pedro de los Rios*, Gouver- nour of *Castilla del Oro*, which went to take the Gouvernment of *Nicaragua*, where *Salcedo* had thrust himselfe, and had gone from *Honduras* his owne Gouvernment vnto it. Captaine *Francis- cus Hernandez* planted it 1524. in the doubtfull Streight, in the seate of *Vritina*, and on the one side it had the Sea, on the other the Playnes, and on the third side the Mountaine of the Mynes, and in all this Orbe there are no *Indians* more expert in the *Castillan* tongue then those of *Ni-*

30 *caragua*. The Prouince and Gouvernment of *Costa Rica*, the furthest East of the Northerne *Indies*, and *Costa Rica*. Councell of *Guatemala*, hath in length East and West ninetie leagues from the Confines of *Ve- ragua* vnto those of *Nicaragua*, with which it ioyneth by the North, and by the West. In it are two Townes, it is a good Countrey, with many shoues of Gold, and some of Siluer. The one Towne is the Village of *Aranjuez* five leagues from *Chomes Indiantes*, a Towne of the iur- *Aranjuez*. *Cartago*. risdiction of *Nicoya*. The Citie of *Cartago*, fortie leagues from *Nicoya*, and twentie from the Sea almost in the middest of the Prouince, hath a Port and landing place in the Coast of the South Sea, and the North Sea, wherein there is some Rivers betweene *Nicaragua* and *Veragua*, common to this Gouvernment, and the Bayes of Saint *Ierome* and of *Caribaco*, neere the limits 40 of *Veragua*.

THE part of the *Indies* of the South is vniustly called *America*, it is all that is discovered *Chap. 14.* from *Nombre de Dios* and *Panama* to the South, wherein is included *Terra firme*, the *Of the Indies* *of the South*. Kingdomes of *Piru*, the *Piru Chile*, which the *Indians* call *Chille*; The Prouinces of the Streight, the River of *Plate* and *Brasile*, where are five Councels of *Panama*, new Kingdome of *Granada*, Saint *Francise* of *Quito*, *Lima*, the *Charcas*, and the eleuen Gouvernments: part of their Coast toucheth in the North Sea, and part in the South: in the which for the most part reigneth the South and the South-west, which contrarie to his nature is there pleasant; and doth mitigate the great heate, whereby that Countrey may bee inhabited, although it ne- 50 uer rayneth nor hayleth in it, but in a very little distance. And the two rowes of Mountaines that runne equally through all these *Indies*, haue a great difference, though they are in one al- titude of the Pole: for the one is well replenished with Trees and it alwayes rayneth in it, and it is hot: the other is all bare, and cold in Summer and Winter. These rowes are called *Andes*, and *Sierra* or the *Mountayne*; they haue most high Hills, and goe in sight the one of the other one thousand leagues, almost equally. In the Hill are bred sundrie beasts, and in the parts where they open they make Valleys, which is excellent dwelling, as that of *Xanxa*, and *Guaylas*, and *Yucay*. In the *Andes* also are bred sundrie beasts, and past the Citie of *Cuzco*, these rowes doe diuide themfelues, leauing in the middest a great champaine Countrey, which is the Prouince of *Collao*, where are infinite Rivers, Lakes, and Pastures, without Trees or Wood, for the distemperature of the Countrey, though wholesome and much inhabited. There follow- 60 eth after it the Prouince of the *Charcas*, hot and of great plentie, with very rough Hills of great riches of Mynes: and the figure of these *Indies* is seene in the Table before going.

her bounds,

Panama.

THE limits of the Counsell of Panama, which was first called *Castilla del Oro*, and afterwards *Terra Firme*, are very small, for the Counsell is principally resident there, for the dispatch of the Fleetes, and Merchants, which goe and come to *Pirú*: it hath in length East and West, about nintie leagues, from the confines of the gouernment of *Cartagena*, and *Popayan*, vnto the Castle of *Veragua*, and in breadth from the South Sea to the North sixtie leagues, and thence downward vnto eightene by *Nombre de Dios*, or *Porto bello* to *Panama*: it is a ground generally very rough with Mountaines, full of quagmires, the ayre close with vapours, moist, hot, and for this cause very sickly from May vnto Nouember, a barren soyle, and destitute of many things: for there groweth nothing but Millet, and very little, though there be good Pastures for Kine, and breeding of Cattle. The gouernment of *Veragua* stands in the bounds of this Counsell, and in it, and in that of *Panama* these Townes following.

The Citie of *Panama* is in the coast of the South Sea, neere vnto it, in 9. degrees of latitude, and 82. of longitude from the Meridian of *Toledo*, from whence it is distant by direct way one thousand five hundred and fixtie leagues. It is a Towne of six hundred households, the most are Merchants and dealers. And with the Counsell are resident the Kings Officers, and Royall treasure, which doe goe already to *Portobello*, when there is any Fleete to the dispatching of it, and likewise the Cathedrall suffragan to the Archbishopricke of the Kings (*delos res*) is here resident with three Monasteries, of *Dominicke*, *Franciscane* and *Merced* Eriers. The Port of this Citie is reasonable, although at low water the Ships remaine dry, and therefore in Summer they ride in the strand, and in winter in the haven of *Perico*, two leagues from the citie. *Pedrarías* *Daniela* peopled it, being Gouernour of *Castillo del Oro*, or of the Gold, against the will of the dwellers of *Santa Marie*, the auncient of *Darien*, the year 1519. and a little after the Cathedrall Church was removed thither; and it might haue had a better seate, and more wholesome, and to the purpose

purpose for the trafficke of the South Sea, not going very farre from whence the Citie now stands.

The Citie of *Nombre de Dios*, was by *James of Nicuesa* first planted 1510. and afterward by *James of Albitz*, by order of *Pedrarias*, and he was the first Admirall that discovered her port. It is removed to *Portobelo*, for the first Admirall discovered it, and gaue the name, because it was more wholesomer, and fitter for the loading and vnloading of the Fleetes, and for their securitie, and of the new Citie of *Saint Phillip*, which is built there: the Inginer *Baptista Antonelli*, hath made a Castle, and appointed another on the other side the hauen, for to keepe the entrie. The Merchandize are carried from *Portobelo* to *Panama* by two wayes, one by Land with carriage, which is eightene leagues of lesse difficultie then by the way of *Nombre de Dios*: the other by Sea, and the Riuer of *Chagre*, whose mouth is eightene leagues from *Portobelo*, to the West, whereby the Merchandize goe vp when the water reacheth to the vent of the Croffes, and from thence they go in carriages fise leagues to *Panama*.

The Village of *Nata* stands thircie leagues from *Panama* to the West, in the Coast of the South Sea, Captaine *Franciscus* Companion peopled it, by order of *Peter Arias*, for the warre with the *Casique Urraca*. The inhabiting of *Acla*, and Captaine *Gabriel* of *Rois* finished by commandement of *Peter Arias* in the Coast of the North Sea, and entrance of the Gulfe of *Vraba*, right against the Island of *Pinos*, whereof at this present there is no more memory then that there was the death of that famous Captaine, whose memory will last eternally, the President *Basco Nunez* of *Balboa*, and of his company. In the breach of *Almagro*, and in the head of the Riuer *Chiepo*, there is Gold, and in times past was much gotten. In all these Riuers are many Lizards or Crockadiles, and very great, which put the first discoverers and pacifiers to great trouble, and did deuoure some men. It happened that a man being in a Boate neere to the Kings House in *Panama*, a Lizard came and snatched him from the Stearne of the Boate, and carried him away to eate him on certaine Rockes, and hauing begunne to teare him in pieces, they shot at him with a Caliuier and killed the Lizard, so that he before his death receiued the Sacraments of the Church.

The Prouince of *Veragua*, which stands in somewhat more then tenne degrees, doth confine with *Costarica*, on the West side: it hath in length East and West fiftie leagues, and in breadth fise and twentie: a Mountainous Countrey, full of bushes, without Pastures or Cattle, Wheate, Barley, little Millet, or little Pulse; but full of Gold with many vaines of it, and rich Mines in the Riuers, and breaches, and those Indians that are, are in warre: it hath the Citie of the *Conception* fortie leagues from *Nombre de Dios*, to the West, where the Gouvernour and the Officers (which they of *Panama* at this present doe prouide) are resident. The Village of *Trinitie* stands six leagues to the East of the *Conception* by Sea (for yee cannot goe by Land) neere to the Riuer of *Bethlesem*, at three leagues from the Sea. The Citie of *Santa Fe* stands twelue leagues from the *Conception* to the South, with melting houses, and Deputie Officers. The Citie of *Charles*, in the coast of the South Sea, neere to the Sea, fiftie leagues from the Citie of *Santa Fe*, to the East: all the Indians of this gouernment are in warre.

There is no Port of name in the two Coasts South, and North, of this gouernment, and in all the bounds of the Counsell, are the Riuers, Ports, and points following. The Bay of *Carabaco*, or of *Saint Hierome*, in the coast of the North Sea, and the confines of *Veragua*, and to the East of it, and of the Riuer of the *Trinitie*, of the *Conception*, and of *Bethlesem* (where was the first inhabiting that the first Admirall made in *Terra firme*, of all that Orbe, in the yeare 1503. which continued not: and right against the *Shield*, an Island, and the Riuer of *Chagre*, and more to the East a league the *Portete*, to the place where the Admirall came discovering the same yeere, and the Ports of *Langostas* twelue leagues from *Nombre de Dios*, to the West, and the Port of *Gallinas* or of *Hennes* nine degrees, and the Port of *Bonaenture* six, *Portobelo* fise, and right against it the Islands of the *Lookings*, and those of the *Prouisions* or *Bastimentos*: and hauing *Nombre de Dios* two leagues, the Riuer of *Sardinilla*, and the Island of *Sardina*, fouré; and the Riuer of *Millet* or *Mayz*, and the Riuer of *Snakes*, or *Culebras*, eight; and at the entry of the Gulfe of *Vraba*, where in the yeare 1509. the Bachiller *Enciso* built the Citie of *Santa Marie* of *Darien*. This Bachiller *Enciso* was he that published that in the Prouince which was called *Castilla del Oro*, there were places where the gold was fished with nets, which encouraged many people to goe to the Indies, which passed in the yeare 1514. with *Peter Arias Danila*: and the President *Basco Nunez* of *Balboa*, went 1513. from the *Darien* in demand of the South Sea, and discovered it. The Point of the Island of *Captina*, stands right against the Mountaines of *Saint Blas*, and the Island of *Comagre*, and the Island of *Pinos*, more within the Gulfe of *Vraba*, and in the inward Port of it, the Port of *Nilcos*, neere to the mouth of the Riuer of *Darien*, which diuideth the bounds of this Counsell, and those of the Gouvernement of *Cartagena*, and there is *Culata de Vraba*, where in the yeare 1510. *Alonso* of *Oieda* inhabited *Saint Sebastian* of *Vraba*. This Gulfe stands in 8. degrees, it hath foureteene leagues of longitude into the Lands, and in the entrie it hath six in breadth, and a little forward fiftie,

The bounds of the Countsell of the *New Kingdome* hath in length East and West, three hundred leagues, and as many North and South, wherein are comprehended the Prouinces of the *New Kingdome*, the governments of *Sancta Martha*, and *Cartagena*, and part of that of *Popayan*; & for borders the Prouinces of the *Dorado*, or new *Stremadura*: the Prouince of *New Kingdome*, which is that which the Countsell gouerneth: it hath in length from East to West foureteen leagues, and eightie in breadth North and South of plaine ground, for the most part with Valleys and hills, and good Pastures for all sort of Cattle, which are in abundance, and in many places, Wheate, Miller, and the fruits of *Castile*, and generally much Gold and very fine, and Mines of Copper & Steele: and the Countrie men for the most part are able men, great traffickers, and doe weare Cotten cloath. And the Townes that be in the Kingdome of *Spaniards*, are the Citie of **Sancta Fe* of *Bogota*, which was built at the foote of *Bogota*, so called by the *Cazique* which was called *Bogota*, which the President *Gonzalo Ximenez* of *Quesada* built, and gaue the name to the Citie and to the Kingdome, because he was of *Granada*, though in the discouery the President *Belalcazar*, and *Nicholas Federman* had part: it stands 72. degrees and a halfe of longitude from the Meridian of *Toledo*, which by a greater circle may be one thousand foure hundred and fortie leagues, and 4. degrees on this side of the Equinoctial, it hath more then six hundred households, in it is resident the Countsell, the Kings Officers and Royall treasure, and Melting house, the Cathedrall Metropolitane, whose suffragans are, *Popayan*, *Cartagena* and *Sancta Marta*, with a Monasterie of *Dominicke* and another of *Franciscane* Friers, and in her borders more then fiftie thousand tributarie *Indians* and the Lake of *Guatania*, which was a worshipping place of the *Indians*, where it is reported that they did cast great summes of Gold in offering to the Idols.

The Village of Saint *Michael* in the bounds of *Sancta Fe*, twelue leagues from it to the North, was built for trafficke with the *Panche Indians*, because being of a hot Countrie it did them hurt to goe to *Sancta Fe*, which is cold. The Citie of *Tocayma* fiftene leagues from *Sancta Fe*, to the West, somewhat inclined to the North, with a Monasterie of *Dominicke* Friers, was inhabited the yeare 1545. by the Captaine *Hernando Vanegas*, in the border of the maine Riuer *Pati*, which runneth into the Riuer *Magdalene*. It hath no gold, and is most hot, and by night there falleth no Dew in it. In all the Kingdome there is no generall tongue, that which is most vnderstood, is that of the *Panches*. In the Prouince of the *Musor*, and *Colimas*, which by another name are called *Canupeis*, five and twentie leagues in length, to the North-west of *Bogota*, a rough Countrie, sound, plentifull of Pastures, Gold, and Emeralds: there are two Townes; the Citie of the *Trinitie* twentie leagues from *Sancta Fe*, to the North-west, which the Captaine *Lanchero* inhabited the yeere 1582. when hee went to warre with the *Indians* * *Moscas*, a quicke and fearefull Nation: and in these bounds stands the rich Mine of the Emeralds, with many *Indians* which yet are peaceable, and in the Prouince of *Chiagnachi*, which signifieth *Snailles*, for there be many.

The Village of *Palma* in the *Colimas*, of a temper hotter then cold, fiftene leagues from *Sancta Fe* to the North-west, the Captaine *Don Gutierre* of *Onalle* built it 1572. in the Prouince of *Tunia*, which tooke the name of the *Cazique*, almost to the North, direct to that of *Bogota*, and in all like vnto it: The Citie of *Tunia* stands two and twentie leagues from *Sancta Fe*, to the North-east, on a high hill, a strong scituation, for the warre with the *Indians*. There goe out of this Citie aboue two hundred Horse-men, and it is the most abundant of Victuals of all the Borders, and there is the greatest Market in all the Realme: it hath one Monasterie of *Dominicke*, another of *Franciscane* Friers. The Captaine *Gonzalo Xarez Rondon* built it, for the President *Gonzalo Ximenez* of *Pulsada*. The Citie of *Pamplona* seuentie leagues from *Sancta Fe* to the North-east, hath one Monasterie of *Dominick* Friers; much Gold is gotten in it, it hath abundance of Cattle: the Bachiller *Michael Diaz* of *Armendariz* peopled it. The Village of Saint *Christopher* is thirteene leagues from *Pamplona* to the North, the Captaine *Franciscus* of *Caceres* built it neere the Prouince of * *Grita*, so called because the *Indians* came out of the high wayes to shoute and crie after the *Spaniards*, and to kill them: little Gold is gotten in it, and it hath commoditie for to breede Cattle.

The Citie of *Merida*, in the bounds of the government of *Venezuela*, and the *New Kingdome*, fortie leagues from *Pamplona* to the North-east: it is a plentifull Countrie of Mines of Gold,

Gould, and of Wheate. The Citie of *Belez* thirtie leagues from *Sancta Fe* to the North, and fiftene from *Tunia*, hath one Monasterie of *Franciscane* Fryers: the Captaine *Goncalo Ximenez Roudon* inhabited it. It is a Countrie where many thunderboults fell, and there fall not so many since the holy Sacrament of the Altar is there abiding: it hath one *ferie mouth* that casteth many stones. The Citie of *Mariquita* of *Ybague*, by another name *Saint Sebastian of the Gould*, is fortie leagues from *Sancta Fe* to the North-west, the Captaine *Pedroso* peopled it 1551. in certaine Meadows, leaning to the hill, the temper is very hot. The Citie of *Ybague* is three hundred leagues from *Sancta Fe*, almost to the West: it is the first Towne of the *New Realme*, that doth confine with *Popayan*, the Captaine *Andrew Lopez* of *Galarza* peopled it 1551. by commission of the Counsell, for to eschew the harmes these *Indians* did with those of *Tocayma*, and *Cartago*, and for to open the way to the government of *Popayan*, it hath a Monasterie of *Dominicke* Friers.

Belez.
Thunderbolts.
Mariquita.
Ybague.

The Citie of the *Victorie of the Remedies*, fiftie leagues from *Sancta Fe*, to the North-west, is very rich of Mines. The Citie of *Saint Iohn* of the *Plaines*, fiftie leagues from *Sancta Fe* to the South, is a Countrie of much Gould. The Citie of *Tudela* which the Capraine *Peter* of *Vrsua* built, by order of the Bachiller *Don Michael Dinz* of *Armendariz* was disinhabited, because the *Indians* * *Moxcas* received hurt by it. And there are of the limits of the Countsell of the new Realme, seuen Townes of the government of *Popayan*, *Sancta Fe* of *Antiochia*, *Caramanta*, *Arma*, *Anzerma*, *Cartago*, *Saint Sebastian of the Silver*, and *Saint Vincent de las Pazas*.

Victorie de los Remedios.
Saint Iohn of the Plains.
* Or *Flyes.*

The Merchandize enters this Kingdome, by the great Riuer of *Magdalene*, from the * *Baranca* of *Malamba*, of the iurisdiction of *Cartagena*, and the first that sent to discouer this Riuer, was *Garcia* of *Lerma*, Gouvernour of *Sancta Martha* 1531. It entreteth into the Sea so broad and strong, that at the passing, the Ships are wont to be in danger, if they goe not somewhat distant, for the combat of the current, and working of the Sea. It hath an Iland in the mouth, it is nauigated more then one hundred and fiftie leagues, and in more then three hundred it is not waded: it cometh from about *Popayan* from two Fountaines that are fortie leagues distant, by which ioyning the Riuer is made: it was called of *Magdalene*, because on that day was the mouth discovered, in 12. degrees of height, and six and twenty leagues from *Cartagena*.

* Or *Water-course.*
Rio Grande of Magdalen Riuer.

The Prouince and Government of *Sancta Martha* in the coast of *Terra firme* is seuentie leagues in breadth and length, betweene *Cartagena* and the Riuer of *Hache*: it is a plentiful Countrie of Millet, and Potatoes, much Gould, and Copper, and some Emeralds, and other Stones: in it are five *Spanish* Townes; and though there be many of the Countrie-men, the most are in warre. The President *Bastidas* peopled the Citie of *Sancta Martha* 1525. neere to the Sea, in 10. degrees of latitude, and 74. of longitude, one thousand foure hundred and twentie leagues from *Toledo*, where is resident the Gouvernour, and Officers Royall, and the Cathedrall suffragan to the *New Kingdome*. The Port is reasonable. This Gouvernement hath foure Prouinces, *Pozignay*, *Betona*, *Chimica*, and *Tayrona*, which signifieth a *Forge*, and with great reason, because in that Countrie are an infinite quantitie of diuersitie of Mettals, and Stones of great esteeme and value.

Sancta Martha.

Tenerife stands by the border of *Rio Grande* or the great Riuer (which is that of *Magdalene*) fortie leagues from *Sancta Martha* to the South-west, part by the Sea, and part by Land: *Franciscus Euriques* did people it, by order of *Goncalo Perez* which gouerned in *Sancta Martha*, by Commission of the President *Lugo*. *Tamalameque*, or Village of the *Palmes* is sixtie five leagues from *Sancta Martha* to the South, and twentie from *Tenerife*, two leagues from the *Great Riuer*: the Captaine *Bartholomew Dalua* peopled it 1561. The Citie of *los Reyes* in the Valley of *Vpari*, is plentiful of Millet, Prouision, and Cattle, and of much Copper, to the South-east of *Sancta Martha*, fiftie leagues from it, and thirtie from the Riuer of *Hache*: the Captaine *Saint Anne* peopled it, by commandement of the Bachellor *Michael Dinz*, * *La Ramada* was built before, called first new *Salamanca*, fortie leagues from *Sancta Martha* to the East, and eight from the Riuer of *Plate*, at the overflowings of the *Snowie Mountaine*. It stands in the Valley of *Vpari*, where there is as much Copper as Stone. The Merchandize of this Gouvernement goeth vp to the *New Kingdome* by the marsh of this Citie, which is eight leagues from it by the Sea, and afterward twelue vnto the *Barranca* of *Malambo*, in the great Riuer. *Ocanna* is also in this Gouvernement, which the Captaine *Franciscus Hernandez* inhabited 1572. and was first called *Sancte Anne*. There is in the Coast of this Gouvernement the Riuer of *Buhia*, neere *Ramada*, and the Riuer of *Piras*, and that of *Palomino*, where a Captaine of this name was drowned, and the Riuer of *Don Iames*, the *c* *Ancones* of *Buritaca*, and the Cape of *d* *Aguia* neere *Sancta Martha*, right against the hill of *Bonda*, and the Riuer of *Gajra*, to the West.

Tenerife.
Tamalameque.
The Kings.
* *Sancta Ramada*

The Prouince and Government of *Cartagena*, in the Coast of *Terra firme*, and the North Sea, hath in length East and West, from the Riuer of the *Magdalene*, vnto the Riuer of *Darien*, eightie leagues North and South, and as many vnto the confines of the *New Kingdome*, though mett say it is more in Voyage. The Countrie is Mountainous of Hills and Valleys, of high Trees, rainie and moist: the feedes of *Castile* beare no feede, there is no Wheate, nor Gould, but in some places.

Ocanna.
b Or *Yong Pigeon.*
c Or *Noakes.*
d Or the *Needle.*
Cartagena.

There is much rozen made in some Mountaines of this Gouernment, and Gums aromaticke, and other liquors which they get out of the Trees, and great quantitie of *Sanguis Draconis*, and a very fragrant balme of great vertues.

Citie of Cartagena.

The Citie of *Cartagena* stands neare the Sea, two leagues from the Point of *Canon*, to the West, in tenne degrees of latitude, and seuentie six of longitude, one thousand foure hundred and sixtie leagues from *Toledo*, of more then five hundred houtholds, among them about two thousand women. In it is resident the Gouernour, the Kings Officers, & treasure Royall, and the Cathedrall suffragan to the *New Realme*, with Monasteries of *Dominick* and *Franciscan* Friers. The situation is plain, and almost like an Iland, the Sea compasseth it on the North side, & it is a rough coast, and very shallow; and on the land side it hath an arme of the Sea which reacheth to a Marsh, which is the Lake of *Canapote*, which ebbeth & floweth after the order of the Sea, & at the same houre, and they passe from the Citie to *Terra firme*, by a Bridge and a manner of a Cause, which hath about two hundred and fiftie paces. The Citie is built on Sand, & within two fathoms they finde fresh water, though sometimes it is vnwholesome, not so much as the coast of *Nombre de Dios*; for the ayres in respect of the Marsh are wont to cause diseases, but for the most part it is wholesome. The Hauens is one of the least of the *Indies*, though the great Ships doe ride farre from the Citie. It hath at the entrie an Iland like that of *Escombrera* in *Cartagena* of *Castile*, whereby they called it *Cartagena*, and the Iland was called *Codego*, now they call it *Caxes*, it hath two leagues in length, & little more then halfe a league in bredth: it was wont to be inhabited with *Indian* Fishers, & it hath no water. The first that saw *Cartagena*, in the year 1502. was *Roderick Bastidas*, & the year 1504. *Iuan de la Cosa* or *Iohn of the Thing* went a shore, and found *Lewes Guerra*, and they were the first that began the warre with the *Indians*, which were proud and bould, and both men and women fought, with venomd arrows. Afterward returned *Alonso of Oieda* with *Iohn of the Thing* for Pilot Maior, & *Americo Vesputio* for Mariner, & some years after *Gregorie of Obiedo* took vpon him to inhabit *Cartagena*, & performed it not. The year 1532. went *Don Pedro* of *Eredia* born in *Madrid*, and inhabited it, and pacified a great part of the Countrie, though with labour and cunning, because the people were very warlike, and there was a woman that before they could take her, being about eightene yeeres old, slew with her Bow eight *Spaniards*.

Amazonian women.

El Dorado.

Guiana.

The Village of *Saint Iames* of *Tolu*, is six leagues from the Sea to the South-west of *Cartagena* two leagues from it, part by Sea (for by Land it cannot be gone) and part by the Marshes and Mountaines. It is a sound Countrie, of great breedings, and tillage, and fruits of *Castile*: the President *Don Peter* of *Heredia* peopled it. The Village of *Marie* thirtie two leagues from *Cartagena*, to the South, is also the inhabiting of *Don Peter* of *Heredia*, in the year 1534. The Village of * *Sancta Cruz* of *Mopox* is seuentie leagues from *Cartagena* by the Sea and Riuer of *Magdalene*, neere whose border it stands, & whereby they goe about more then halfe the way, it is not found being among *Quagmires*. A Captaine of *Don Peter* of *Heredia* peopled it, 1535. The year of 1509. the *Bachiller Enfisco* (as hath been said) inhabited *Sancta Marie*, the auuncient of the *Darien*, which is in this Gouernment, forsaking the Village of *Saint Sebastian* of *Bona vista*, which the same Captaine *Alonso de Oieda* had inhabited, in the furthest place of *Vraba*: & afterward the Captain *Alonso* of *Heredia* inhabited *Saint Sebastian* againe, for the President his Brother, in certaine little hills, almost halfe a league from the Sea. And in the year 1537. the *Bachiller Iohn* of *Vadillo* went out of *Saint Sebastian* with a good number of Souldiours, and passing many troubles, & most rough Mountains, & thick woods, came to the Citie of *Antioquia*, of the gouernment of *Popayan*, & there was a Souldior that from thence came to the Citie of the *Plate*, in the *Charcas*, which is 1200. leag. The * *Barranca* of *Malambo*, which is a Custome house of the iurisdiction of *Cartagena*, thirtie leagues from it, on the border of the great Riuer, and twenty from *Sancta Martha*, & six from the Sea, where the Merchandize that are carried by Land to the *New Realme* are vnloaden, & from the *Barranca* are carried vp by the Riuer in *Canoes*. Lower then *Nepox* entreth the Riuer of *Canoa* into the Riuer of *Magdalene*, which also springeth about *Popayan*: & more toward *Cartagena* and to the West, standeth the *Knobbe*, and the point of *Zamba*, and *Burrio del gato* or *Arbolera*, and the seuen Cottages, and the point of the *Canowe*, two leagues from *Cartagena*, and the point of *Yacosa* at the entrie of the port, right against the Iland of *Carax*, and the point of the Ship in *Terra firme*; at the other lesser entrie of the port, and almost to the North, is a little Iland which is called *Sardina*, and in the coast of *Tolu* the Ilands of *Baru*, which are six, and at the entrie of the Gulfe of *Vraba* the six, which are called of *Saint Bernard*, right against the Riuer *Zenu*: and more within the Gulfe, the strong Iland, and the *Tortoyse*. The port of *Zenu* stands five and twenty leagues from *Cartagena*, it is a great Bay that hath his entrance by the East, it is secure: here they make store of Salt, and it tooke the name of the Towne *Zenu*, which standeth on the Riuer.

In the Prouinces of the *Darade*, or new *Estremadura* (which circuit pertaines to the bounds of the Counsell of the *New Realme*) many Captains haue entred by Sea, and by sundry parts of the Land, and haue neuer found the riches which the same promifeth. They fall on the other side of the Riuer of *Saint Iohn* of *Amazones*, by another name *Orellana* (which some erroneously wil haue to be the *Meranyon*) and here is the *Orinico*, and other great Riuers, and the Gulfe of *Paria* which maketh the firme land, with the Land of the *Trinitie*, & the mouthes of the *Serpent*, & the *Dragon*, which

which the first Admirall named, where he saw himselfe in great danger, for the conflict which the fresh waters make there with the salt, whereof he had yet no notice, and here beginneth the flowing of the Sea to be very great, vnto the streight of *Magellan*, and goeth continuing through all the coast of *Piru*, and *New Spaine*.

Great Tydes.

The Prouinces of *Piru* (whole name hath extended it selfe more then it was at the beginning) *Piru*, or *Pern*, include all the Empire of the *Ingas*, or more; for when it was won it was diuided in two gouernments, that of *Don Francisus Pizarro*, called the *New Castile*, from the *Quito* vnto the *Cuzco*, sixtie leagues below the *Chincha*; and that of *Don Iames of Almagro*, called the *New Toledo*, two hundred leagues toward the Streight from *Chincha*; which gouernments were distinct vntil the Councell de los Reyes was established, and a Vice-roy prouided for the Kingdomes of *Piru*, in whose gouernment are included, the Councell of Saint Francis of the *Quito*, that of *Lima* (or de los Reyes of the Kings) that of the *Charcas*, the gouernment of *Chile*, & countries of the Streights, the Ilands of *Salomon* to the West, and for borders the Prouinces of the Riuer of *Plate*, and that which determinately is comprehended vnder the gouernment of the Vice-roy. It hath in length North and South from two thousand leagues vpward, and East and West, that which is discovered from the South Sea to the North Sea. The two Rowes that haue beene spoken of, doe passe through all the Prouinces of *Piru* North and South, that of the *Andes* from *Popayan*, and yet many will haue, that from *Terra firme* and *New Spaine*, till it ends in the Streight, and the other lesse, from the *Quito* vnto *Chile*, along the coast, twelue leagues distant, little more or lesse.

The two Rowes of the Indies of the South. * Of *Magellan*.

The two wayes passed betweene these two Mountaines, the one which they called of the *Ingas*, by the *Andes* from *Pasto* vnto *Chile*, which hath nine hundred leagues in length, and five and twentie foote of Cawse, and euery foure leagues very sumptuous houses, which they call *Tambos*, where was prouision of victuals and apparell, and euery halfe league men that were in postes for to carry messages, and orders from hand to hand. The other way went through the midst of the Playnes, along the coast of five and twentie foote broad, betweene two walls of a mans height, from *Pirra* vnto *Chile*, where both the wayes met. And it is to be noted, that all the Indies of the South are not to be vnderstood by *Piru*, for as hath beene said, it is not but that which beginneth from Saint Francis of *Quito*, which is vnder the Equinoctiall Line, and runneth along vnto *Chile*, going out of the Tropicks, which may bee fixe hundred leagues, and fiftie in breadth, though toward the *Chachapoyas* there is more, and it is diuided in three parts: The Playnes, which haue ten leagues in breadth, and in parts lesse, they are the coast of the Sea: The Hills, which haue about twentie, and is all Hills and some Valleys: and the *Andes* other twentie, which are most thicke Groues and Woods, and in so little space as fiftie leagues equally distant from the Line and Pole: there is so great diuersitie, that in the one place almost it rayneth alwayes, and in the other almost neuer, which is the Coast, and in the third which is the Mountaines that fall in the midst of these extreames, sometime it rayneth, and sometime not, for it hath his Summer and Winter as in *Castile*: and the causes of not rayning in the Coast, and rayne in the *Andes*, are spoken of in the beginning of the Historie.

The two great wayes of *Piru*.

Postes.

Piru is not all the Indies of the South.

Diuerstie of nature.

The bounds of the Councell resident in *Quito*, and confining Northward with that of *Panama*, in the Port of *Bonauentura*, and on the North-east with the *New Realme*, and on the South with that of *Lima*; hath in length by the South coast, which is the place where it lengthens most, about two hundred leagues from the Port of *Bonauentura*, which is in the Gulfe of *Panama*, or of Saint Michael, the Port of *Payta* in the coast of *Piru*, and from thence crosse to the vttermost of *Popayan*, more then other two hundred and fiftie, the limits remaying open on the East side: in it is included three Gouernments, besides those of the Councell, which are *Popayan*, *Quixos*, la *Cancla*, and that of *Iuan de Salinas*, of the *Pacamoros*, and *Gualfango*, diuided in two Bishopricks.

The Prouince and Gouernment of *Quito*, which the Councell gouerneth, hath in length eightie leagues, from neere the Equinoctiall to the other side, and in it these Townes of Spaniards following. The heauen and earth thereof, although it stands vnder the Equinoctiall, is like to that of *Castile*, cleere and faire, rather cold then hot, and in parts where the snow continueth all the yeere, it rayneth from October to March, which they call the winter; and in the other months they cut their Grasse, which though it be not long it is fit for the Cattrell of *Castile*, whereof there is great store; and of Wheat and Barley, and gold in some places: and in this Region they liue pleasantly, for there is nothing more pleasant for humane life, then to enioy a wholesome and cleere skie, for they haue no Winter to trouble them with cold, nor Summer to molest with heat. The Townes are, the Citie of Saint Francis of *Quito*, where *Athauvalpa* Emperour of *Piru* was borne, it stands in halfe a degree of height from the Equinoctiall, and eightie two from the Meridian of *Toledo*, by a greater circle one thousand fixe hundred eightie six leagues from it, and sixtie from the South Sea; it is of five hundred households: In it is resident the Councell for matters of Iustice, for those of the Gouernment are at the Vice-roy his charge. There are also in this Citie the Officers of the Kings Rents and treasure Royall, and the Cathedrall of this Bishopricke,

shopricke, Suffragane to the Archbishop of *The Kings* (*los Reyes*) there are three Monasteries of *Dominicke, Franciscan, and Mercenarie* Friars; and in her iurisdiction eightie seven Townes, or parcialities of *Indians*. In the situation where this Citie was built, were certaine great lodgings which the King *Topaynga* built, and his sonne *Guaynacapa* beautified, and were called *Quito*, from whence the Citie tooke the name; the President *Sebastian* of *Belalcazar*, a souldier of *Don Francisco Pizarro* built it, a loyall man to the King, by order of the President *Don James* of *Almagro*, which left him for Gouvernour of the Prouince when hee went vnto it, hauing ended the agreement with the President *Don Peter* of *Aluárado*.

Riuer Bamba. The Riuer *Bamba* in the Prouince of the *Puruaes*, is a Countrie to *Castile* in the temperature, of herbes, flowres, and other things: it is a towne of shepheards, it stands fise and twentie leagues to the South-west of *Saint Francis* of *Quito*, the way to the *Kings*, wherein are fortie thousand head of cattell, the greatest part sheepe. Here the *Yugas* had certaine Royall houses, and here the President *Belalcazar* had a tedious battaile with the *Indians*, and ouercame them, and in this place was the agreement rehearsed of *Don James* of *Almagro* and *Don Peter* of *Aluárado*, and in it was the Citie of *Quito* first built.

Chuenca. The citie of *Chuenca* (which the Marques of *Canyete* commanded to be built, being Vice-roy of *Piru*, which by another name is called *Bamba*, one and fiftie leagues from *Quito* to the South) is a Corregidorship provided of the Vice-roy, with one Monasterie of *Dominicke*, another of *Franciscan* Friars. In her iurisdiction are rich mynes of gold, some of siluer, and rich mynes of quick-siluer, copper, Iron, and Brimstone. The citie of *Loxa*, otherwise called *la Zarca*, eightie leagues from the citie of *Quito* toward the South, and thirtie from *Chuenca*, is a Gouvernourship provided by the Vice-roy; it hath Monasteries of *Saint Dominicke* and of *Saint Francis*, it stands in the way from *Cuzco* to *Quito*, from whence it is eightie leagues, in the faire Valley of *Cuxibamba*, betweene two Riuers. Captaine *Antonie* of *Mercadillo* built it in the yeere 1546. for to pacifie the countrimen which were somewhat disordered. The citie of *Zamora*, which is called of the *Alcaydes*, is ninetie leagues from *Quito* South-eastward, hauing passed the *Rome* of the *Andez*: it is a Gouvernment provided by the Vice-roy: it hath a Monasterie of *Franciscans*; they reape no Wheat because the countrie is very raynie: it hath rich Mynes of gold, wherein they find graines of foure pound waight and more: the Captaine *Mercadillo* peopled it the yeere 1549. by a covenant with Captaine *Benaute*: It stands twentie leagues from *Loxa*, hauing past the *Rome* which diuideth the bankes of the South Sea from the North, the *Indians* did call it *Zamara*: that part of the countrie is called *Poroanca*, which signifieth *Indians of warre*: much gold is gotten there, and there hath beene graines brought to his Maiestie of twelue pound waight, and there are Salt-pits of salt-water.

Laen. The citie of *Laen* is fise and fiftie leagues from *Loxa*, and thirtie from the *Chachapoyas*; Captaine *James Palomino* built it 1549. in the Prouinces of *Chuquimayo*, in that of *Chacaynga*. The citie of *Saint Michael* of *Piura* is in the Prouince of *Chila*, six hundred and twentie leagues from *Quito* South-eastward, and fise and twentie from the Port of *Payta*, where the bounds of this Councell doth end. It is a Gouvernment at the providing of the Vice-roy: it hath one Monasterie of *Mercenaries*. Though in this countrie rayne is holden for a wonder, there are good watered grounds, that beare good Wheat and Miller, and the seedes and fruits of *Castile*. The port of *Payta* stands in the iurisdiction of this Citie, in fise Southerne degrees, which is good, great, and secure, where the ships that goe from *Guatemala* to *Piru* doe touch. The Marques *Don Francisco Pizarro* built it in the yeere 1531. the first of these Kingdomes, and where the first Temple was erected in the honour of God, and the holy Mother Church of *Rome*. All the Prouince and borders of the Valleys of *Tumbez* are drie, and the high-way of the *Ingas* passeth through these Valleys of *Piura*, betweene trees and pleasant shadowes, and betweene the principall Valley are ioyned two or three Riuers: the Citie was built at the first in *Tangazala*, from whence it was remooued because it was a sickly situation, and now it stands betweene two Valleys, and yet is somewhat sickly, especially for the eyes, for the great windes and dusts of the Summer, and great moistures of the Winter.

San Iago de Guayaquil. The Citie of *Saint James* of *Guayaquil*, by another name *las Culata*, sixtie leagues from *Quito*, and fiteene from the Sea to the South-west, it is a Gouvernment provided by the Vice-roy: the President *Belalcazar* peopled it, and many of the *Indians* hauing rebelled, and slaine many *Spaniards*, the Captaine *Franciscus* of *Orellana* peopled it againe 1537. it is a most plentifull and pleasant Countrie, and hath great store of hony in the hollow places of trees: The waters of this Riuer which runne almost vnder the Equinoctiall, are thought healthfull for the *French* disease, and other such like. Many people went to the Riuer to recouer health, for the multitude of the rootes of *Zarzaparrilla* that are in the Riuer: it is not very great, nor those that run to the South Sea are so bigge as those that runne into the North Sea, because they runne but a little way; but notwithstanding they are strong and with sudden floods, because they fall from the Mountaine. The *Indians* doe vse many shifts for to passe them; they haue in some places a rope ouer it, and a basket on it, and the passenger being put into it, they pull him from the other side. In other Riuers the *Indian* goeth riding on a trusse of straw, and carrieth the passenger behinde him: in other

The Riuers that goe to the North Sea are greater then those that goe to the South Sea. How the riuers are passed in *Piru*.

ther places they haue a great Net of gourds, vpon the which they lay the cloathes and the persons, and the *Indians* fastened with certaine coardes goe swimming and pulling as coach-hories; and a thousand other artes they vse for to passe the Riuer. The Port of this Citie stands neere vnto it, for the Riuer is very broad, whereby they bring vp the merchandise from the Sea, and they goe by land to *Quito*. The yeere 1568. Captaine *Contero* planted the citie of *Castro*, in the Valley of *Vili*, the Licentiate *Lope Garcia* of *Castro* being Gouvernour. *Vili* is in the Prouinces of *Bunigando*, *Imdiuono*, and *Gualapa*, which they call the Prouince of the Emeralds, and he went about it from *Guayaquil*, and discovered all these Prouinces from *Passao* vnto the Riuer of Saint *John*, which entreteth into the South Sea.

- 10 The Citie of *Puerto Viejo* is about eightie leagues from Saint *Francis* of *Quito* to the West, though not of open way, and other fiftie from Saint *James* of *Guayaquil*, whereby yee goe from *Quito*: in her borders stands the *Passao*, which is the first Port of the countrie of *Piru*, and from it, and from the Riuer of Saint *James*, began the gouernment of the Marques *Don Franciscus Pizarro*: and because this countrie is so neighbour to the Equinoctiall line, that it stands in one degree; some beleue it is vnwholsome, but in other parts as neere the Line men liue with much health, plentie and abundance of all things for the sustenance of man, against the opinion of the ancient: and so it is that the *Indians* of this countrie doe not liue long, and in many of them there breede certaine red warts in the foreheads and noses, and other parts, which beside the disease being grieuous, it disfigureth them very much, and it is beleued that it proceedeth of eating some fish.
- 20 In these bounds stands the towne of *Manta*, whither great riches haue beene brought from within the Land; and it is held for certaine, that here is a Myne of Emeralds, which are the best of the *Indies*, and they grow in a stone like Cristall, and they making like a veine, and by little and little congealing and refining themselves, and of halfe white and halfe greene, they goe ripening and recovering their perfection. The Captaine *Franciscus Pacheco* peopled this citie 1535. by order of *Don James de Almagro*: it hath many *Indians* in warre: there is in it a Monasterie of *Mercenarie* Friars, they gather no Wheat, for it rayneth the eight moneths in the yeere from October forward, and there are many good shoues of gold.

- In the coast of this Gouvernment are the Ports, Ilands, and Points following. The *Ancon* of *Sar dinas*, before the Bay of Saint *James*, which is fiftene leagues from the Point of *Manglares* to the South, and then the Bay of Saint *Matthew*, and after the Cape of Saint *Francis*; and past it *Quiximies*, foure Riuer before *Portete*, where the blacke *Moor*es that saued themselves of a ship that was cast away, ioyned with the *Indians*, and haue made a towne; the *Passao*, a Point or Port of *Indians*, where they say the Equinoctiall line passeth, neere the Mountaine of *Queaque*, and the Bay of *Carta* which is before old Port, one degree from the Equinoctiall to the South, and fife leagues from thence the Cape of Saint *Lawrence*, and neere from thence the Iland of *Plate*, and forward the Ports of *Cylo*, and *Calango*, before the Point of Saint *Helen*, in two degrees hight; the Riuer of *Tumbez* in foure degrees, and the Iland of the *Pana* neere vnto it, and the Iland of *Santa Clara* somewhat more to the Sea, and *Cabo blanco* fiftene leagues from *Tumbez* to the South, and then the Point of *Parina*, and to the South the Iland of *Lobos*, foure leagues from the Port of *Payta* abouesaid, and *la Silla*, before the Point *del Aguia*, and the Port of *Tangora*.
- 40 The men of this countrie say, that in old time there came by Sea in Balsas (which are many pieces of timber fastened one vpon another) men so bigge that had as much from the knee downward, as an ordinarie man in all his body, and that they made certaine Wells most deepe in a quicke Rocke, which at this day are seene very fresh and cold in the Point of Saint *Helen*, and that because that they vsed most abominable finnes, fire fell from heauen and consumed them all, and now are found in that situation exceeding great bones of men, and pieces of teeth of foureene ounces weight, and in *New Spaine* in the bounds of *Tlascala*, are bones found of the like bignesse. There are in this Point of Saint *Helen*, eyes and veine of Tarre, so perfect that they might calke
- 50 with it, and it commeth out very hot.

The gouernment of *Popayan* one hundred and twentie leagues North and South, from the confines of the Prouince of *Quito*, vnder the Equinoctiall vnto the confines of *Cartagena* by the North, and another one hundred from the confines of new *Realme* by the East vnto the South Sea, wherein are some *Spanish* townes, part of the Councell of *Quito*; and part of the new *Realme*. The countrie is commonly rough and very raynie, and therefore they haue little Miller, and lesse Wheat, and no store of Cattell; but it is rich of Mynes of gold, and the Townes are these following.

- The citie of *Popayan* stands in two degrees and a halfe to the Septentrionall part of the Equinoctiall, and 78. and a halfe of longitude, one thousand fife hundred and eightie leagues from *Tolado*: in it is resident a Lieftenant Gouvernour, the Cathedrall, and one Monasterie of *Mercenarie* Friars. The President *Sebastian* of *Belalcazar* peopled this citie 1537. the people of these Prouinces are farre different from that of *Piru*, for these are of greater vnderstanding, and liued in more policie: the men of this gouernment liued as in liberties. It was called *Popayan*, of the name of the

Chap. 18.

Of Popayan, Quixos, Canelas, Pacamoros, and Gualfango, which are the rest of the bounds of the Councell of Quito. The Citie of Popayan.

the *Cazique* Lord of it: it hath part in the coast of the South Sea, and high Mountaines that goe Eastward: and on another side the *Rov* of the *Andes*, and on both sides spring many Riuer, and the Riuer of the *Magdalene* is one, which runneth into the North Sea: in this gouernment are many coole and wholesome townes, and others hot and sickly.

- Cali.* The Citie of *Cali* stands in foure degrees; and two and twentie leagues from *Popayan*, and eight and twentie from the South Sea, it was inhabited 1537. by the Captaine *Michael Munoz*; and *Sebastian* of *Belalcazar* made it first in the townes which are called the * *Gorrones*; it hath the seate in a plaine Valley, leaning to the foot of a Hill, the temper is hot, the Gouernour, the Officers, and the Kings treasure are resident in it; a melting house, a Monasterie of *Mercenaries*, another of *Augustine* Friars. The Port of *Bonauenture* falleth in his iurisdiction in three degrees 10 and a halfe of altitude: in it are some households resident for to receive the merchandize. The *Indians* of *Cali* are of a good condition, and good Christians, their old Lord was called *Lisupete*.
- Antiochia.* The village of *Santa Fe* of *Antiochia*, is more then an hundred leagues from *Popayan* to the north-east, in the borders of the Riuer *Cauca*, of the bounds of the Councell of the *New Realme*, and Bishopricke of *Popayan*, rich in Mynes of gold, neere to the Hill of *Buritaca* famous for the much gold that was in it; it is seated in certaine Plaines. The countrey people are good folkes, well made and white, and the temperature is such that they goe to sleepe on the houses, without any offence of the deaw: they breede much Cattell, many fruits, and fish in the Riuer and Plashes: the Captaine *Gaspar* of *Rhodes* inhabited it by commission of the President *Belalcazar*, the yeere 1541.
- Caramanta.* The Village of *Caramanta* is sixtie or seuentie leagues from *Popayan* to the North-east, neere to the great Riuer *Cauca*, of the bounds of the *New Realme*, gouernment and Bishopricke of *Popayan*, plentifull of Milles and other feedes, without Wheat, and with little Cattell, though they haue many Swine, they goe by the Riuer in five or sixe houres to *Antiochia*, though it bee fiftie leagues; for it runneth very swift: it is the plantation of the President *Belalcazar*. The village of *Santa Lames* of *Arma*, which hath many Mynes of gold, is fiftie leagues from *Popayan* to the North-east, declining to the East, it is of the Councell of the *New Realme*, the gouernment and Diocesse of *Popayan*; without Wheat or feedes of *Castile*, but plentifull of the countrey feedes. The President *Belalcazar* inhabited this village, and here hee beheaded the Marshall *George Robledo*. It stands sixteene leagues from *Ancerna*: the people of the countrey are so butcherly that 30 the quicke are the sepulchre of the dead, for it hath beene seene the husband to eate the wife, the brother the brother or sister, the sonne the father, and hauing fatned any captiue, the day that they are to eate him, they bring him forth with many songs, and the Lord commandeth that an *Indian* doe goe cutting off euery member, and so aliue they goe eating him, and after the inhabiting of *Arma* they haue eaten more then eight thousand *Indians*; and some *Spaniards* haue also suffered this martyrdome.
- Ancerna.* The village of *Santa Fe* of *Ancerna* is fiftie leagues from *Popayan* to the North-east, in the border of *Cauca*, of the Councell of the *New Kingdom*, gouernment and Bishopricke of *Popayan*, without Cattell or Wheat, very much annoyed with thunder bolts: the Captaine *George Robledo* built it by order of *Laurence* of *Aldana*. Likewise the men of this countrey are eaters of 40 humane flesh; they goe naked, they haue no Idols, nor any thing to worship: there are in this iurisdiction good Mynes of gold; the climate is hot, and many thunder-bolts doe fall. The citie of *Cartago*, five and twentie leagues from *Popayan* about the North-east, is of the Councell of the *New Realme*, Gouernment and Bishopricke of *Popayan*, without Wheat or any feedes of *Castile*: it is a temperate and wholesome countrey, of little gold, it rayneth much, they breede no other cattell but Kine, and Mares: they haue many Mountaines, in the which breede many Lions, Tigres, Beares, and * *Dantas*, and wilde Boates: they haue a Monasterie of *Franciscan* Friars: the Captaine *George Robledo* inhabited it, and it was called *Cartaga*, because all the inhabitants were of *Cartagena*. The village of *Timana* is fortie leagues from *Popayan* to the South-east, and sixtie from *Santa Fe* of *Bogota*, and thirtie from the Prouinces of *Dorado*; here is a Lieftenant of 50 the Gouernour, which also hath at his charge *Santa Sebastian de la Plata*: the *Indians* of their borders doe decay, for they are so inhumane that in many places they haue publike shambles of men which they take captiue. They haue their seate in the beginning of the Valley of *Neyua*, the temper is most hot: in their bounds is a Mountaine where they digge the Load-stone, and the *Indian Paeces* are neere, and the *Pixaos*, which also are * *Caribes*.
- Inhumanitie of these Indians.* Where the Load-stone is found. * Or eaters of humane flesh. *Buga.* The Citie of *Guadalajara* of *Buga*, is fiftene leagues from *Popayan* to the North-east, is of the bounds of the Councell of *Quito*, and Diocesse of *Popayan*. The Citie of *Santa Sebastian* of the Plate, in the confines of this Gouernment is thirtie five leagues from *Popayan*, and thirtie to the South-west from *Santa Fe*, Diocesse of *Popayan*, where are many Mynes of siluer, and in her borders twentie foure repartitions: it is three leagues from the Port of *Onda*, in the great Riuer of 60 *Magdalen*, where those that come vp from *Cartagena* doe land: it is built in a Plaine, neere to the Riuer *Guala*: there are many Earthquakes, and in Winter it is more hot then cold. The Countrey-men goe to decay, because the * *Caribes* which they call *del Rincon* doe eate them and haue publike shambles of them, without any remedie for it: and the President *Belalcazar* built this Citie. The

The Citie of *Almaguer* is twentie leagues from *Popayan* to the South-east; it is plentifull of Wheate and Millet, and other feeds, and cattle, and it hath Gold: the Captaine *Alonso* of *Enemayor*, by order of the Licentiate *Brizeno* Gouvernour, and *Judge of Accounts*, of *Popayan* peopled it, being seated in a Hill of *Zabana*, and the climate is fresh, and the people doe weare Cotton-cloth.

S. Iohn of Truxillo, and by another name *Yscauce* is thirtie leagues from *Popayan* to the South-east. The Citie of *Madrigall*, or *Chapanchica*, thirtie five from *Popayan* about the South, a rough Countrey, where they neither reape Wheate, nor bread cattell, though they gather Millet twice a yeere in their jurisdiction: and for the roughness of the Countrey, the men are euill to pacifie, and in this Citie, and in the Citie of *Agreda*, and *Almaguer*, are Mynes of Gold. *Agreda*, and by another name *Malga*, stands fortie five leagues from *Popayan* to the South-west. The Citie of *Saint Iohn of the Pasture*, so called because it is a Countrey of many Pastures, it stands fiftie leagues from *Popayan*, about the South-west, and as many from *Quito* about the North-east, and in one degree from the Equinoctiall Diocesse of *Quito*, in a good soyle, of a good climate, and plentifull of Millet, and other prouisions, with Mynes of Gold; In her borders are 24000. *Indians* of fee, which are not *Canibals*, but of euill visages, filthy, and simple: they had no Idols in the time of their Paganisme, they beleued that after death they should goe to liue in more ioyfull places. The Riuer which they call *Whoate*, is betweene *Pasta*, and *Popayan*, it is of a very delicate water, and passed this Riuer is the Mountayne whither *Gonzalo Pizarro* did follow the Vice-roy *Blasco Nunyez Vela*, and vnto the Riuer *Angasmayo*, which is in this Prouince came the King *Guaynacapa*.

Beyond the Riuer *Caliente* or *hor* Riuer in a Mountayne, is a *fire mouth*, that casteth store of smoake, and it brake forth in ancient times, as the Countrey men doe say. The Philosophers being willing to declare what these *fire mouthes* or *Aetnaes* are, doe say, that as in the Earth are places that haue vertue to attract a vaporie substance, and to conuert it into water, whereof the continuall springs are made: there are also places that doe attract to themselues dry and hote exhalations, which are conuerted into fire and smoake, and with the force of them they cast also another grosse substance which is dissolved into ashes, or into stones, and these are the *fire mouthes*. *Saint Iohn de Pasto* hath Monasteries of *Dominicke*, *Franciscan*, and *Mercenarie* Friers: it is a cold Countrey, with abundance of victuals, it hath Sugar Mills, and many Fruites of the Countrey and of *Castile*: when the Captaine *Lawrence* of *Aldona* built it, hee called it *Villa viciosa de Pasto*, it stands fortie leagues from the South Sea, towards the Iland *Gorgona*.

There hath bene disinhabited, or diminished in this Prouince, the Citie of *Antiochia*, the Village of *Neyna* in the Valley of *Neyna*, twentie leagues from *Tumana*, and it was through the rigour of the *Indian* *Paezes*, and *Pixas*, and for the *Manipos*, in the Valley of *Saldanya*, and the Citie of *Saint Vincent* of the *Paeza*, sixtie leagues from *Saint Iohn of the Plaines*, in the confines of *Popayan*, which *Domingos Lozano* built, and the Citie of *los Angeles*, twentie two leagues from *Tocayma*, and nine from *Neyna*. There is in the Coast which this government extendeth on the South Sea, from the *Cape of Corrientes*, that stands in five degrees Septentrionall from the Line, the Riuer of *Solinas*, betweene the *Cape of Corrientes* and the Iland of the *Palmes* in foure degrees one third part, and in the Coast that lyeth vnto *Gorgona*, the Riuer of *Saint Iohn* among many other which make the Countrey boggie, and right against the mouth, the Iland of *Gorgona*, two leagues compass, where *Don Francisco Pizarro* was forsaken of all his men, with his thirteene companions. The Riuer of *Saint Lucar*, and the Riuer of *Nicardo*, before the Riuer of *Zedros*, in two degrees from the Line, in which stands the *Ile del Gallo*, and after the Port of the *Crosse*, and the point of *Manglares*, where beginneth the Coast of *Quito*.

Of the government of the *Quixos*, and *Canela*, there is no more notice, but that it falls to the East of the Prouince of *Quito*, and part of the South, toward the government of *Iohn of Salinas*; there are in it three *Spanish* Townes, with a Gouvernour which the Vice-roy of *Piru* prouideth, and in spirituall respect it is of the Bishopricke of *Quito*: the Countrey is rough and Mountaynous, without Wheate, and little Millet, with certayne Trees which seeme of *Cinnamon*. The first Towne is *Basca*, eightene leagues from *Saint Francis of Iuito*, toward the South-east, where the Gouvernour is Resident: the Citie of *Archidona* is twentie leagues beyond *Basca*: the Citie of *Anila* stands to the North of *Archidona*.

The government and Prouince of *Pacamoros* and *Gualfango*, or of *Iohn of Salinas* whose bounds and limits are one hundred leagues, which were assigned him to the East, from twentie leagues before the Citie of *Zamora*, in the *Rowe* of the *Andes*, and as many more North and South. It is a good Countrey in temper and disposition for Wheate, seeds, and cattle, of rich Mynes of Gold where they haue pieces of great bignesse: there are in it foure Townes of the Bishopricke of *Quito*, for the Captaine *Iohn of Salinas* did build them. The Citie of *Valladolid* is in seven degrees height, twentie leagues from *Loxa* to the South-east, hauing past the *Rowe* of *Piru*, the Citie of *Loyola*, or *Cumbrania* is sixteene leagues to the East from *Valladolid*: the Citie of *Saint James* of the Mountaynes, fiftie leagues from *Loyola*, toward the East, and in her borders much gold, and very high in touch, and as touching the gold we need not intreat of his excellencies, being

In how many
sorts the gold
is gotten out
in *Piru*, and o-
ther places.

being holden for the Supream power in the World. It is gotten in these *Mynes* in three man-
ners: The first is in *Pippens*, which are whole pieces without mixture of any other Metall, that
need not to be purified by fire, and these graines commonly are like a Pompeon Seed, and some-
times bigger: of this gold is found but litle, in respect of the rest. The second sort is in *stone*, which
is a vaine that groweth in the stone it selfe, and these stones are found in the gouernment of *Iohn*
of *Salinas* very great, all passed through with gold, and some which are halfe Gold, the which is
found in Pits and *Mynes*, and it is hard to worke. The third, is gotten in *powder*, and is the grea-
test quantitie, and this is found in *Riuers*, or in places where some streame of water hath passed,
and the *Riuers* of these *Indies* haue many, especially in the Kingdoms of *Chile*, *Quito*, *New Realme* 10
of *Granada*, and in the beginning of the Discoueries, there were many in the *Weather I-*
lands. The highest in touch is that of *Carabaya* in the *Piru*, and that of *Valdunia* in *Chile*, for it
reacheth to twentie three Charraets and an halfe, and yet it passeth.

Sea cooleth.

That which is called *Piru*, is proper and particularly the bounds of the Councell of *los Reyes*,
and is comprehended North and South, from sixe vnto seuen Southerne degrees of altitude,
which are two hundred and twentie leagues, though in Voyage they put three hundred from the
point del *Aguia*, beyond *Payta*, whereby it ioyneth with the Councell of *Quito*, till passing the
Citie and Port of *Arequipa*, where beginneth the Councell of the *Charcas*, East and West. The
inhabited part of this Councell hath about one hundred leagues from the Coast of the South Sea
toward the East, whereby her bounds remayne open vnto the Prouinces of the *Riuier of Plate*, and 20
of *Brasill*, that which is from the *Rowe*, where, as hath beene said, it rayneth continually, vnto
the Sea, they call the *Plaines of Piru*, in the which it neither rayneth nor thundreth, because
the great height of the Mountain doth shelter the *Plaines* in such sort, that it permitteth no wind
from the Earth to blow, whereby the Sea wind reigneth, which hauing no contrary doth not re-
presse the vapours that doe arise to make raine, in sort that the shelter of the Hill hindereth the
thickning of the vapours: and this want of matter causeth that in that Coast the vapours are so
thinne, that they make no more then a moy st or dankish mist, which is profitable for their sow-
ings, which haue not without the mist so much vertue, be they neuer so much watered. The
Countrey is all sandie grounds, except the Valleys which are made by courses of the *Riuers*,
that descend from the Mountayne, where much Corne is gathered by the waterings, Wine, 30
Oyle, Sugar, and the other Seeds, and Fruits, of *Castile*, and of the Countrey. In the skirts and
hills sides of the Mountayne, are great Pastures and breedings of cattell, and the temper variable,
and as would be desired; for the height is cold, and the low hot, and the middlemost partakers of
the extreames, as they are more or lesse neere them. The gouernment of this Councell, and of
Quito, and of the *Charcas*, is in the charge of the Vice-roy, and there are the Townes following
in the circuit of this Councell.

The Citie of the Kings (or of *Lima*, because the Valley is so called, which was the name of
the *Cazique*, and it is the greatest and broadest Valley, of all those that are from *Tumbez* vnto
it) stands neere the South Sea, in twelue degrees of Southerne altitude, and eightie two from the
Meridian of *Toledo*, distant from it about one thousand eight hundred and twentie leagues by a 40
greater circle: it hath about three thousand households: the Marques *Don Franciscus Pizarro*
built it, in the beginning of the yeere 1533. because suspecting that the President *Don Peter* of
Aluarado would come downe to the Sea coast, when hee went with an Host from *Guatemala*
to intercept him the passages of the Sea. Neere this citie, on the East side, passeth a *Riuier* from
whence all the houses doe take water, and their gardens, wherein are excellent fruits of *Castile*
and of the Countrey, and it is one of the best Climates of the World, seeing there is neither fa-
mine nor pestilence; nor doth it rayne or thunder, nor fall there any thunder-bolts or light-
nings, but the Heauen is alwayes cleere and very faire.

In this Citie is resident the Vice-roy, the Royall Councell, an assembly of chiefe Iustices, the 50
Officers of the Kings Rents, and treasure Royall, the Tribunall of the holy and generall Inqui-
sition, which was founded when the Inquisition of *New Spaine* was. The Inquisitor generall in
these Kingdomes was then the Cardinall *Don Iames* of *Espinosa* Bishop of *Siguença*, it hauing
proceeded with mature deliberation, for the augmenting of our holy Catholike Faith, and Chri-
stian Religion. There is also in this Citie an Vniuersitie, where very learnedly the Sciences are
read, and Schooles of diuers languages of the *Indians*, in the which the Fathers of the Companie
of Iesus are very diligent, to reape fruit in the preaching of the Gospell. In this Citie is the Arch-
episcopall resident, whose Suffraganes are the Bishops of *Chile*, *Charcas*, *Cuzco*, *Quito*, *Panama*,
Nicaragua, and the *Riuier of Plate*. There are three Parishes, and five Monasteries of the foure
leagues from it, great, capable, and very good, where are store of houses, one of Iustice, a custome 60
House, one Church, and one Monasterie of *Dominicke* Friars: here hath beene seene the Wine
and the Water set to coole in the Sea in flaggons, whence it is inferred that the Ocean hath the
vertue to temper and refresh the ouer-much heate. Many doe affirme that in this Citie are
twelue

twelve thousand Women of all Nations, and twentie thousand blacke-Moors.

Women and
Negros.
Arnedo.

The Village of *Arnedo* in the Valley of *Chanca*, is ten leagues from *The Kings*, and halfe a league from the Sea, with a Monasterie of *Dominicke* Friars, rich of Vines: the Earle of *Niua* built it. The Village of the * *Parrilla*, or *Santa*, is by the Valley where it stands, fiftie fve leagues from *The Kings*, and fteene from *Truxillo* neere the Sea, neere to a great and faire Riuer, with a good Haven, in nine degrees, where the ships that saile by the coast of *Piru* doe touch. The Citie of *Truxillo* is in the Valley of *Chimo*, which *Don James* of *Almagro* plotted first, and after-

* Or *Gridiron*

Truxillo.

ward the Marques *Don Francisco Pizarro* built it in the yeere 1533. It hath many Vines and fruits of *Castile*, and Wheat: it is all watered ground, and a wholefome Countrey, and there bee great Orchards of Oranges, and breeding of Poultry. It stands in seven degrees and a halfe, eightie leagues from *Lima* neere the Sea, with Monasteries of *Saint Dominicke*, *Saint Francis*, and *Saint Augustine*, and another of the *Mercenaries*, and Officers Royall, provided by the Vice-roy: and in her bounds about fiftie thousand tributarie *Indians*, in two and fortie repartitions. The Port is two leagues off in an open Bay, euill, and of little securitie. The Village of *Miraflores* is in the Valley of *Zana*, ninetie fve leagues from the Citie of *The Kings* to the North side, and neere to the Sea. The Citie of *Chachapoyas*, or *Saint John* of the Frontier, is about one hundred and twentie leagues from the Citie of *The Kings* to the North-east, it hath one Monasterie of the *Mercenaries*, and another of the *Franciscans*: in her bounds are Wheat, Millet, and Flaxe, many Mynes of gold, and more then twentie thousand tributarie *Indians*, which held out valorously

Miraflores.
Chachapoyas.

a long time against the *Ingas*, but in the end they were ouer-come, and for greater quietnesse of the Countrey they carried many of them vnto *Cuzco*, and they inhabited in a Hill which is called *Carmenga*. These are the whitest and best fauoured *Indians* of all the *Indies*, and the Women very faire. The Marshall *Alfonso* of *Aluara*, entred in this Prouince the yeere 1536. by order of the Marques *Don Francisco Pizarro*, and pacified it, and built the said Citie in a strong situation called *Leuanto*, and afterward he passed to the Prouince of the *Guancas*.

Faire *Indians*.

The Citie of *Saint James* of the Valleys, or *Moyobamba*, more then one hundred leagues from *The Kings* North-eastward, and fve and twentie from *Saint John* of the Frontier, stands in a very raynie soile, and plentifull of Cattell. The Citie of *Lion* of the *Guano*, fiftie leagues from the Citie of *The Kings* to the North, neere the high-way of the *Ingas*, fom what distant towards the East, hath Monasteries of *Dominicans*, *Franciscans*, and *Mercenaries*, and in her bounds thirtie thousand tributarie *Indians*, Anno 1539. for the warre that the Tyrant *Yllotopa* made to this Prouince, the Marques *Don Francisco Pizarro* sent Captaine *Oomez* of *Aluara* which built it, and

Saint James of
the Valleys.

Lion of *Guano*.

afterward it was disinhabited, and *Peter Barroso* reedified it, and after the battell of *Chupas* the Licentiate *Vaca de Castro*, sent Captaine *Pedro de Puellas* to make an end of the plantation. It stands in a good and wholefome situation, abundant of victuals and Cattell: it hath Mynes of filuer, and the people is of good capacite. They reape much Wheat, for the *Indians* haue learned to be good husbandmen: for as before in these *Indies* there was no Wheat, nor Barley, nor Millet, nor Panick, nor any seede of the bread of *Castile* of *Europe*, and they knew other kindes of Graine and Rootes, only of the which Mayz or Millet was the principall, being found in all the *Indies*; the Countreymen haue since delighted much in it, and haue receiued it well in those places where it is gathered, because the Mayz is not so strong nor of so much substance as the Wheat: it is fatter, and hot, and engendreth bloud, it groweth in Canes, and beareth one or two bunches, and some *Spaniards* doe eate it where they haue no other shif.

Qualities of
the Millet.

The Citie of *Guamanga*, or *Saint Iuan* of the Victorie, sixtie leagues from *Lima* to the South-east, in the way of the *Ingas*, Bishoprick of *Cuzco*, hath Monasteries of *Dominicans*, *Franciscans*, and *Mercenaries*, and one of Nunnes, and in her bounds more then thirtie thousand tributarie *Indians*: it is plentifull of Wheate and Wine, and rich of filber Mynes. The Marques *Don Francisco Pizarro* built this Citie 1539. and placed it the first time in a towne of *Indians* called *Guamanga*, neere to the great Row of the *Andes*, and left for his Lieutenant the Captaine *Francisco de Cardenas*. Afterward it was remoued to the Playne where now it is, neere to certaine small Hills on the South side, and nigh to a Brooke of good water. In this Citie are the best houses in *Piru*, of stone and bricke; the seate is healthfull, without offence of the Sunne, the Aire, the Dew, or the Moisture, or the Heate. There are found in her borders certaine great building

Guamanga.

Great build-
ings.

(which the *Indians* say certaine white men with beards, which came thither before the *Ingas*, did build) much differing from the building of the *Ingas*: the most of the Countreymen of this Countrey are *Mitimaes*, which is to say, *Transplanted*, for the *Ingas* did vse for the greater securitie of the Empire, to take from one Prouince the people they did not trust, and send them to liue in another.

Transplanting
as of *Egyptians*
Gen. 42. 21. the
Isachites, 2. Reg.
17. lewes to
Bab. &c.

Guamanga is sixtie leagues from *Cuzco*; and in the way are the Hills and Playne of *Chupas*, where *Vaca de Castro*, and *Don James* of *Almagro* the yonger did fight; and forward are the buildings of *Vilca*, in the high way to *Andabaylas*, eleuen leagues from *Guamanga*, which was the centre of the *Ingas*; and here was the great Temple of the Sunne. The Prouince of the *Andabaylas* is long and hath much tame Cattell, and victuals; from thence they come to the Riuer of *Abancay*, nine leagues neerer *Cuzco*, where the President *Don James* of *Almagro* the elder ouer-

Temple of the
Sunne.

threw

threw and apprehended *Alonso* of *Alvarado*, Generall of the Marques *Don Francisco Pizarro*. There followeth the River of *Apurima*, eight leagues from *Passado*, or the *Passage*, which is very great; and then the Hill of *Vilcaconga*, where the said President *Almagro* over-came a great battell of the *Indians*, before he won *Cuzco*, and the Valley of *Xaquixaguana* is neere betweene two rowes of Hills, not broad nor long, where the President *Pedro la Gasca*, by the vertue of those valiant and faithfull Captaines *Inojosa*, *Peter* of *Valdibia*, *Gabriel* of *Rojas*, *Alfonso* of *Alvarado*, and others (of the which in their place shall be made mention particularly) did over-throw *Gonzalo Pizarro*, and tooke him: and from this Valley to the Citie of *Cuzco* are five leagues: and in this Valley they gather great store of Wheat, and haue great store of Cattell.

Chap. 20.
Of that which
remayneth of
the Councell
of the Kings.

Eight or ten leagues from the Citie of *Guamanga*, somewhat North-westward, are the Mynes of *Guancabelica*, which they call *El Asiento de Oropeza*, where ordinarily are resident more then three hundred Spaniards. The *Indians* did worke in them to take out the red Oaker, to paint themselves when in the time of their Paganisme they went to warre, which is the Vermillion: and the Licenciado *Lope Garcia* of *Castro*, gouerning in *Piru* in the yeere 1566. a Portu- gall called *Henrie Garces*, considering that of the Vermillion the quick-silver is gotten, went to make a triall, and found it to be so. This metall the *Romanes* carried from *Castile* in stone, and out of it they got quick-silver, and held it for great riches. The *Indians* knew it not, nor minded any more then the vermilion. The greatest profit it yeeldeth, is to purifie the silver from the earth, Lead, and Copper, wherewith it groweth: it eateth all the other metals, and pierceth them as the Tin, Iron, and Lead, and therefore they carry it in leather, or vessels of earth. Quick-silver serueth also for other effects, and medicinall matters.

Profit of quick
silver.

Spring turning
into stone, and
killing.

Hot and cold
Bathes.

Salt spring.
Cordilleras or
rowes diuided,
Collao.

In this seat of *Guania Velica* is a spring, that as it springeth it congealeth in a soft stone, of the which they make their houses, and the Men or Beasts that doe drinke it, die: for within the body it conuerteth into a stone. In the Bathes that are called of *Inga* neere the *Cuzco*, are two spouts of water the one neere the other, the first is hot, and the second cold, that it seemeth God did place them there for to temper themselves. In the same bounds is a Spring, that as it springeth it becomes good and white salt: in this place the two great *Rowes* doe begin to separate themselves, and make in the middest a great Champaine ground, which is called the Province of *Collao*, where are very many Rivers, and there is the great Lake of *Titicaca*, and great pasture grounds. Though it be a plaine Countrie, it hath the same height and distemperature of the Hills; it hath no Trees, nor Wood; the bread that is eaten are rootes that are called *Papas*, which grow also in all *Piru*; it is a healthfull Countrie, and much inhabited, and multiplieth every day; it hath store of Cattell of all sorts.

The Lake Titi-
caca.

The Lake of *Titicaca* compasseth eightie leagues, and in some places it hath eightie fathom deepe, and in this, and in the waues are rayed when there is any winde, so that it seemeth as a Bay of the Sea, from which it stands about sixtie leagues, twelue or thirteene Rivers enter into it, and many Brookes, and from it goeth a River into another Lake, which they call the *Aulagas*, which hath no voyding place, though because some Eyes of water have bene seene that vnder ground goe into the Sea, it is iudged that it might bee the water of these Lakes did goe, opening a way through the entrails of the Earth vnto the Sea. Round about the great Lake are many Townes, and in it great Ilands, with great Tillage in them, and there were the *Indians* wont to keepe their most precious things for greater securitie.

Cuzco.

The great Citie of *Cuzco*, Seate Royall of the *Ingas*, and Head of their Empire (and now of the Kingdomes of *Piru*, by a Title which it hath of it from the Kings of *Castile* and *Lion*) stands in thirteene degrees and a halfe height, seuentie eight of longitude, one hundred and five and twentie leagues from the Citie of *The Kings* to the South-east, of more then one thousand Spanish households; the Marques *Don Francisco Pizarro* founded it. It hath eight Parishes, and foure Monasteries of the foure Orders, of *Saint Dominicke*, *Saint Francis*, *Saint Augustine*, the *Mercenaries*, and the Companie of *Iesus*, and one of Nunnes. Heere is resident the Cathedral, Suffragane to the Archbishopricke of *The Kings*. There goe from this Citie since the time of the *Ingas* from the Market place foure high ways towards the foure parts of the world; one called *Chinchasuyo* to the North, toward the Playnes and Province of *Quito*; another *Condesuyo*, to the West toward the Sea; the third called *Collasuyo*, to the South and *Chile*; and the fourth to the East, which they call *Andesuyo*, which goeth to the *Andes* and skirts of the Mountaine. It stands in a soile of a good temper, moderately fresh and healthfull, free from all venemous wormes, and plentifull of all things, with a thousand kindes of fruits of *Castile*, and smelling herbes and flowres at all times which are of great delight. In her iurisdiction is the Valley of *Toyma*; there is great trafficke of *Coca*, and shoues of Gold, Silver, and Quick-silver, and there may bee in her borders about an hundred thousand tributarie *Indians*. In all the parts of these *Indies* the *Indians* haue a great delight in carrying ordinarily in the mouth Rootes, Boughes, or Herbes, and that which they most vse in all *Piru*, is the *Coca*, for as they say, they feele little hunger, and finde themselves with great vigour

Foure high
ways most
admirable.

No venemous
wormes.

Coca a tree.

chewing

chewing it alwaies, though it rather seemeth a custome inherited, or a vice. This is planted, and groweth to small trees, which are cultivated and cherished, and yeeld a leafe like myrtle, and dried they carry it in baskets to sell, and much mony is gotten by it.

In the Valley of *Vulcambamba*, stands *Saint Francis of the victorie* in *Andesuyo*, between the *Rom* of the *Andes*, about twentie leagues from *Cuzco* to the East side, with a Gouvernour provided by the Vice-Roy: it is of the Bishopricke of *Cuzco*, in a rough ground, and of great Mountaines.

The village of *Saint John del Oro*, is in the Province of *Curabaya* eightie leagues from *Cuzco* to the East South-east, and thirtie to the East from the Lake of *Collao*, and it is called *del Oro*, of the Gold, for the great store that is in her borders. The Citie of *Arequipa* is in sixteen degrees somewhat more, one hundred and thirtie leagues from the Citie of *The Kings*, almost to the South-east as the Coast runneth, and sixtie from the Citie of *Cuzco*, of the Bishopricke of *Cuzco*: it hath Monasteries of *Dominicks*, *Franciscans*, and *Mercenaries*; it hath fiftie thousand tributarie *Indians*, and is of most pleasant temperature to live in of all places in *Piru*. They gather in her borders great store of Wine, and Wheat. The Port is at the entrie of the River *Chilo*, which passeth neere the Citie where the merchandize is unladed.

Arequipa stands in the Valley of *Quilca*, fourteene leagues from the Sea. In her iurisdiction is the Province of *Condesuyo*, the Townies of the *Hubinas*, *Gollaguas*, *Chiquiguanita*, and *Quimsaca*; the Marques *Don Francisco Pizarro* built it 1534. it is very subiect to earth-quakes as all these *Indies*, especially the Sea coasts. In the yeere 1582. there was an earth-quake that almost

ruinated this Citie; and since there hath bene another, and a breaking out of a *ferie month*, whereof they tell strange things, in the yeere 1586. There was another in the Citie of *The Kings* the ninth of Iuly, which ran one hundred and seuentie leagues in length by the Sea side, and fiftie within the Land; it spoyle the Citie, indangered few people, because they went out into the fields, and a little after the earth-quake was past, the Sea went out of her bounds, and entred a great way within the Land fourteene fathom deepe. Such another earth-quake was in *Quito* the next yeere, in the Citie of *la Paz* in the yeere 1581. a great high Rocke fell which tooke vnder it a great many *Indian* witch trees, and the earth which fell did run one league and a halfe. In *Chile* was another great earth-quake that ouer-threw Mountaines and Valleys, stopped the Current of the Rivers, brought the Sea out of her limits the space of some leagues, cast downe whole Townes, and slue many men. The Philosophers say that the earth-quake proceedeth from the heate of the Sunne, and of other celestiaall Bodies, which not onely doe draw the exhalation to themselves, and the vapour of the superficies of the earth, but that also which is in the bowels of it, which comming out engendreth windes and raynes; and if it happen that the earth is so close that the exhalation cannot come out any way, then it mooueth from one part to another through the pores of the earth, with great violence breaking forth, as the powder in a Myne, tearing with such a furious rage, that it renteth the earth where it is, and openeth it selfe a way with great furie, and so much more furious it is, how much more the exhalation inclosed is greater.

The Village of *Saint Michael de la Ribera* is fixe leagues from the Sea, in the Valley of *Camana*, one hundred and thirteene leagues from *The Kings*, two and twentie from *Arequipa* to the part of the Equinoctiall, of the Bishopricke of *Cuzco*. The Village of *Valverde* in the Valley of *Yca*, five and thirtie leagues from the Citie of *The Kings*, ten from the Port of *Saugalla*, is of the iurisdiction of *The Kings*, and of the Archbishopricke; her borders are plentifull of Wheat, Millet, and Fruits, and of much Wine.

The Village of *Canyete*, or of *Guarco*, by the Valley where it stands, is distant from *The Kings* five and twentie leagues to the South, one league and a halfe from the Sea: her bounds are plentifull of bread the best of this Kingdome, whence is carried great quantitie of meale to *Terra firme*. Before the comming to this Valley, are the Valleys of *Chilca*, and *Mala*; in the first it neuer rayneth, neither passeth any Fountaine nor Brooke through it, and they drinke of the Wells, and it is full of arable grounds, and fruits, which grow onely by the dew of the Heauen. They catch many Pilcherds in the Sea, and with euery graine of Millet they put into the hole where it is sowne one or two of the heads, and with that moysture it groweth well. In the Valley of *Mala*, *Don James* of *Almagro*, and *Don Francisco Pizarro* being in quarrell, the father *Bonadilla* of the *Merced* or *Mercenarie* Order, as an Arbitrator resolved their differences; through this Valley passeth a great River, which doth them great pleasure. Fiue leagues forward is the River of *Guarco* in a Valley most plentifull in all things, where the Countymen maintayned the warre foure yeeres against the *Incas*, and to preferue it they caused to build a Citie, and called it *Cuzco*, and erected for the triumph of the victorie a great Fortresse on a Hill, that the waues of the Sea doe beate vpon the stayres. Sixe leagues from *Guarco* is the Valley of *Chincha*, famous, pleasant, and very plentifull, where a Monasterie of *Dominicke* Friars was built in stead of the Temple of the Sunne which the *Indians* had, with the Monasterie of the *Virgins*. Then followeth the Valley of *Yca*, which is no lesse, nor lesse plentifull, going out of the Valleys, and Rivers of the *Nasca*, and the principall is called *Caxamalca*, where excellent Wines are made. They goe from these Valleys to that of *Huari*, where stands *Ocanna*, *Camana*, and *Quilca*, which is the Port of the Citie of *Arequipa*, and forward are the Valleys of *Chuli*, and

Tambopalla, and the Deylo, and them of Tarapaca, Rivers and plentifull, with good Mynes of silver, and neere the Sea; the Indians of the Lands of The Seales doe carry great store of Fowles dung for their grounds, wherewith of a barren, they make a plentifull ground.

There are in the coast of this Counsell from the Point del Agua, of the Needle, wherethe ioyneeth with that of Quito, in sixe degrees of Southerne altitude, the Lands and Ports following; two Lands which they call de Lobos in seven degrees, the one foure leagues from the Coast, and the other more to the Sea; and forward another called of Saint Roque to the South-east, neere to Pazcamayo, and forward Puerto de Mal Abrigo, ten leagues before the Port of Traxilla, in seven degrees and a halfe, and seven leagues from the Port of Guanaque, and of Santa in nine degrees, and five leagues from this to the South, Porta Ferrol, and six from it that of Cuzco; and after ward eight leagues the Port of Guarmey at the mouth of a River, and the Barranca twentie leagues to the South; and the Port of Gaura where is a very great Salt pit; and after this the Island of Lima, at the entrie of the Port of Collao; and twentie leagues to the South the Point of Guarco, and one Island de Lobos Marinos, or Seale fishes neere to it, and the Point of Chica in fittene degrees, and neere to the Nasca; and forward the Point of Saint Laurence, in the Valley of Quilca, and neere the River of Arequipa, and the Creeke of Chulien; and after ward the River of Nombre de Dios, where the limits doe ioyne by the Coast of the Counsell of The Kings, and of Charcas.

Chap. 21.
Of the Bounds
of the Counsell
or Audience of
the Plate, or of
Charcas.

The bounds of the Counsell of Charcas (which parteth limits with that of The Kings, stands in twentie degrees and a halfe of Southerne altitude, by the River of Nombre de Dios, and the beginning of the Lake of Collao) hath in length three hundred leagues vnto the Valley of Coptapo, beginning of the Prouince of Chile in eight and twentie degrees of height, though in voyage they are reckoned neere foure hundred leagues East and West, that which is betweene of the South Sea vnto the North Sea, or South which answereth to the Prouinces of the River of Plate, which though it is not altogether discouered, it is vnderstood that by placing all the Countrie of this Counsell in much altitude, it is more cold then hot.

The Government of this Counsell, is at the charge of the Vice-roy of Piru, as that of the Counsell of Quito, and of The Kings: there are two Gouvernours, and two Bishopricks, that of Charcas and Tucuman. The Prouince of the Charcas (which commonly is named that which is from the bounds of the Counsell of The Kings, till they passe Potosi) hath in length North and South about one hundred and fiftie leagues, and as many East and West; a Countrie not very plentifull, though abundant of Cattell, especially in Collao, that is from the Lake of Titicaca vnto Charcas, where the Winter and Summer are contrarie to Europe: it is a plentifull Countrie of all Cattell, especially of sheepe, which are many, and of a very fine wooll.

In this Prouince are foure Townes of Spaniards of one Bishopricke, which are the Citie of the Plate, which the Captaine Peranzures inhabited, in the yeere 1583. by order of the Marques Don Francisco Pizarro. It stands in seuentie two degrees of longitude from the Meridian of Toledo, from whence it may be distant by a greater circle one thousand seven hundred and eightie leagues, and in nineteene degrees of latitude, one hundred seuentie five leagues from Cuzco to the South, or Antartick Pole within the Tropicks, in the vttermost of the Torrid Zone. There are in the borders of this Citie in Chacaras (which are manured grounds) eight hundred Spanish households. It is a Countrie extreme cold, whereas it should be temperate or hot, according to the height of the Pole it stands in: the Counsell and the Cathedrall is resident in this Citie, and there are Monasteries of Dominicks, Franciscans, Augustines, and Mercenarie Friars, and in her iurisdiction sixtie thousand tributarie Indians, diuided in nine and twentie repartitions, and the feedes of Castile doe grow well, and there are many rich mynes of silver.

The Citie of our Lady of the Peace, by another name the New Towne, and Chuquiabo, in the midst of the Collao, one hundred leagues from Cuzco, and eightie from the Plate, hath Monasteries of Franciscans, Augustines, and Mercenaries, with store of Wines and Cattell. Captaine Alfonso of Mendoza built it 1549. when was President the Gouvernour of Piru, the Licenciado Pedro de la Gasca, after ward Bishop of Siguença. The Prouince of Chichuito in Collao, somewhat North-east from the Prouince of Plata, more then an hundred leagues from it, inhabited by Indians, with a Spanish Gouvernour, of the Bishopricke of Charcas, and one Monasterie of Dominicks, hath much Cattell, and it stands at the border of Titicaca. Oropesa, is a plantation of the Vice-roy Don Francisco de Toledo, in the Valley of Cochabamba, twentie leagues from the Citie of la Plata; their husbandrie is crops of Wheat, Millet, and Cattell.

The Imperiall Towne of Potosi is in nineteene degrees of altitude, eightene leagues from the Citie of the Plate, and about eight from the Lake of the Amagas to the East, in the skirt of the Hill of Potosi, that looketh to the North-east; it hath five hundred households of Spaniards which doe attend the mynes, and of Merchants, and about 50000. Indians of ordinarie goers and commers to the trafficke of the silver. And though it be a Towne of it selfe, it hath no Ruler, but that of the citie de la Plata. There reside the Officers, and Royall treasure of this Prouince, for the mynes of the Hill of Potosi, which a Castillane discovered 1545. called Villareal, by meanes of certain

Heredades de
grangetias.

Our Lady of
the Peace.

Chichuito.

Oropesa.

Potosi.

taine Indians; and it is called *Potosi*, because the Indians doe so call Hills and high places; and the siluer was so much that they got at the beginning in the yeere 1549. euery Saturday; that when they cast it, there came to the Kings fifts from fise and twentie to thirtie thousand Pesos. The Hill is flat and bare, their habitation drie and cold, vnpleasent, and altogether barren. It bringeth forth no fruit, graine or herbe, and because of the siluer it is the greatest inhabiting of the *Indies*, which hath about two leagues in circuit, and where all kinde of dainties are found, and plentie, though brought thither by carriages. The colour of the ground of the Hill draweth towards red, darke. The forme is like a Sugar loafe, that ouer-peareth all the other Hills that are neere it: the going vp is rough, and yet they goe vp on horse-backe; it extendeth a league, and from his top to the foote is about a quarter of a league. It hath on all sides rich veines of siluer, from the top to the foote, and the Port of *Arica* whereby the merchan-

dize come, and the siluer of this Hill is carried; is from it about ninetie leagues, almost West. Sixe leagues from the aforesaid Hill in the way of the Port of *Arica*, is the Hill of *Porco*, an ancient seat of Mynes of siluer: whence it is affirmed the *Incas* got the greatest part of the siluer that was in the Temple of the Sunne of *Curianche*, whence yet is and will much siluer be gotten.

Santa Cruz de la Sierra stands one hundred leagues from the *Charcas* to the East, in the way whereby they goe from the *Charcas* to the *Assumption*, in the Prouinces of the Riuer of *Plate*, whitherto they make three hundred leagues iourney, with a Gouvernour provided by the Vice-roy, of the Diocesse of the *Charcas*, and one Monasterie of *Mercenaries*, in a Countrie scarce

of water, though plentiful of Wheat, Wine, and Millet. This Prouince hath neighbour- hood with many Nations of Infidell Indians, and many of them are already baptized, and the first that strooke a deuotion in the Countymen, was a *Spanish* Souldier, * that was among them, fled for faults; which for a great anguish they were in for water made them a great Crosse, and perswaded them to worship with great deuotion that same Crosse, and to aske water; and God for his mercy heard them, and sent them much raine in the yeere 1560. The Cap- taine *Nuslo* of *Chanes* went out of the Citie of the *Assumption* in the Riuer of *Plate*, to disco- uer, and comming to *Santa Cruz* of the Hill, hauing made great discoueries, the people came vnto him, and seeming to him that hee was neere to *Piru*, went to the Citie of *The Kings*, where the Marques of *Canyete* was Vice-roy, and with his order, and for Lieutenant of his sonne *Don Garcia* of *Mendoza*, the Captaine *Nuslo* of *Chanes* went againe to inhabit this Citie, though he came out of the Riuer of *Plate*, with purpose to discouer the Prouinces of the *Dorado*.

In the Coast of this Countie, which beginneth in seuenteene degrees and a halfe in the Ri- uer of *Nombre de Dios*, or *Tambopalla*, is the Port of *Hilo* neere to a Riuer, in eightene de- grees and a halfe, and more to the South, *El Morro de los Diablos*, and the Port of *Arica* in nineteene degrees one third part, and that of *Tacama* in one and twentie, and the Point of *Ta- rapaca* to the South, and more forward the Riuer of *Pica*, and that of *de la Hoia*, or of the *Leafe*, and of *Montelo*, the Port of *Mexillanes*, and more to the South the Point of the *Beacones*, or *Morro Moreno*, before the Bay and Riuer of *Santa Clara*, and more to the South the *Breach*, and the *White point*, and the *Deepe breach*, and the Riuer of *Santa Clara*, about thirtie leagues from the Riuer of *Copapo*, where the Coast of *Chile* beginneth, and the Coast of the *Charcas* endeth. The Prouince and Government of *Tucuman*, is all Mediterrane; her bound begins from the Countrie of the *Chichas*, which are of the iurisdiction of the Imperiall village of *Potosi*: it stands in the same Line of the Citie of the *Assumption* of the Riuer of *Plate*, about an hundred leagues from the South Sea coast; it doth confine with the Prouince of *Chile*, it is a Countrie of a good temper, reasonably plentiful, and vntill now without Mynes of siluer, or gold. There is in it some *Spanish* Townes in one Bishopricke, which are of the Citie of *Saint Jago del Estero*, which at the beginning they named *del Varco*, or of the *Boate*, in eight and twentie degrees of altitude, one hundred eightie fise leagues from *Potosi* to the South, declining somewhat to the East: the Gouvernour and the Officers of the goods, and treasure Royall, and the Bishop, and the Cathedrall are resident here.

The Citie of *Saint Marie* of *Talauera*, is fise and fortie leagues from *Saint James* to the North, and fortie from *Potosi* in fise and twentie degrees. The Citie of *Saint Michael* of *Tucuman* eight and twentie leagues from *Saint James* to the West, in the way of the *Charcas* in seven and twentie degrees. There were inhabited in this Government in the time of *Don Garcia* of *Men- doza*, his father the Marques of *Canyete* being Vice-roy, the *New London*, and *Calchaque*, which they called *New wisdom*, in the Prouince of the *Iurias*, and *Draguira*, which after- ward were dishabited within a few yeeres. The people of this Countrie goeth clothed in wool- len, and in wrought leather, made by arte like the guilt or wrought leather of *Spaine*: they breed much Cattell of the Countrie, by reason of the profit of their wooll: they haue the Townes ve- ry neere the one to the other, and the Townes are small, because there is but one kindred in eue- ry one, they are compassed round about with *Cardones*, and thornie trees for the warres that they had among themselves. They are great husbandmen, and it is a people that is not drunke, for they are not giuen to drinke, as other Nations of the *Indies*. There are in the Prouince seven mayne Riuers, and more then eightie Brookes of good waters, and great pastures: the Winter

and the Summer are at such times as in *Spaine*: it is a healthfull Countrie and of a good temper, and the first that entred in it, were the Captaines *Diego de Rojas*, *Philip Gutierrez*, and *Nicolas de Heredia*; they discovered on this side the *Riuer of Plate* vnto the Fortresse of *Gabota*.

Chap. 22.
Of the bounds
of the King-
dome of *Chile*.

Rio de la Sal.

On *Diego de Almagro* was provided the yeere 1534. in *Toledo* for Gouvernour of two hundred leagues of ground beyond the Gouvernment of the Marques *Don Francisco Pizarro*, toward the Streight of *Magellan*, intituling this part, *The new gouernment of Toledo*. Hee went to pacifie this Countrie, and because he forsooke it, it was giuen in charge to the Marques *Don Francisco Pizarro* 1537. and he commended it 1540. to the Captaine *Peter of Valdinia*; who went thither with one hundred and fiftie *Spaniards*. All the Countries of this Kingdome lye to the South of the Equinoctiall, in a more Southerne altitude then the Kingdome of *Piru*, and her Prouinces within the Torride, from the Equinoctiall vnto the Tropicke of *Capricorne*, which passeth a Desart, which they call of *Atacama*, which is from twentie three to twentie fixe degrees, and then beginneth the Kingdome of *Chile*, which the *Indians* call *Chille*, and before the inhabited Countrie is the *Riuer of The Salt*, in three and twentie degrees and three quarters; which from the East side of the *Row* of Mountaines, runneth to the West into the Sea, through a very deepe Valley, and though it hath the water very cleere; all that the Horses are wet with it when they drinke, is congealed with the heate of the Sunne; and it is so meere salt that it cannot bee drunke, and in the borders it is congealed: the *Riuer* is before the entring in the first Prouince of *Chile* two and twentie leagues where the *Xagneyes* are, which are Wells of water, for there is no other in the two and twentie leagues, and all the Kingdome stands within the Zone; which the ancient men called *Deserte*, which is inhabited with white *Indians*, and it is situated on the borders of the South Sea, which is *Mare Magnum*, which is included betweene her Coast and the Coast of *China*.

This Gouvernment taken largely vnto the Streight, hath in length North and South, from the Valley of *Copisapo* where it beginneth in seuen and twentie degrees, five hundred leagues, and in breadth East and West, from the South Sea to the North Sea, from foure hundred to five hundred of ground to be pacified, which doth straighten it selfe, till it remayneth by the Streight in ninetie or in an hundred leagues. That which is inhabited of this Gouvernment, may bee three hundred along the North Sea coast, and the breadth of it twentie leagues and lesse, vnto the *Rowe* of the *Andes*, which doe end neere the Streight, and it passeth through this Kingdome very high, and almost couered at all times with snow. All the Countrie is plaine, at the least there is no great roughnesse, except where the *Rowe* of *Piru* doth reach, and doth end within two or three leagues of the Coast.

The temper and qualitie of it (though it bee not without some difference for the varieties of the heights it standeth in altogether) is of the best, and most inhabitable that is in the *Indies*, in temperature like vnto *Castile*, in whose opposite altitude it falleth almost all, and in abundance and goodnesse of victuals, and plentie of all things, riches of Mynes and Metals, and force and vigour of the Countymen, which for being so great warriors haue alwayes bene euill to pacifie, and there bee many out in the Mountaines, and Breaches of the end of the *Rowe*, the Prouinces of *Arauco*, *Tucapel*, and the Valley of *Puren*, the bounds and borders betweene the Citie of the *Conception*, and *los Confines*, and *la Imperial*.

Saint Iames.

In this Gouvernment are eleuen Spanish Townes, with a Gouvernour placed in the matters of the Gouvernment to the Vice-roy, and Councill of *Piru*, after the Councill that was in the Countrie was taken away; and there is in it two Bishopricks Suffraganes to the Archbishoprick of the Kings. In the Bishopricke of *Saint Iames* are foure Townes. The Citie of *Saint Iames*, in the time of the first inhabiting of *Chile*, founded by Captaine *Peter of Valdinia*, it stands in thirtie foure degrees and a quarter of altitude, seuentie seuen of longitude, one thousand nine hundred and eightie leagues from *Toledo* by a direct Line, fiftene from the Sea, and ten beyond the Valley of *Chile*, which they named at the first *New Extreame*. In it is the Cathedrall resident with Monasteries of *Dominicke*, *Franciscan*, and *Mercenarie* Friars, in a plentifull soile of wheat, Wine, and other things, and of very rich Mynes of gold, and in her iurisdiction more then eightie thousand *Indians* in fixe and twentie repartitions. This Citie is serued of the Port of *Valparaiso* at the mouth of the *Riuer Topocalma*, which passeth neere vnto it.

The Serena.

Raines seldome
and neuer
Coquimbo.

Mendoza.

Saint Iohn of

the Frontier.

Captaine *Valdinia* peopled also *la Serena* in the yeere 1544. neere to a good Hauens; it is the first Towne of *Spaniards*, at the entrie of *Chile* sixtie leagues from the Citie of *Saint Iames*, somewhat North-west neere to the Sea in the Valley of *Coquimbo*, with Monasteries of *Franciscan*, and *Mercenarie* Friars. It rayneth in it but three or foure times a yeere, and in the Countries before it, it neuer rayneth. The Port which they call of *Coquimbo*, stands in two and thirtie degrees, it is a good Nooke where the ships of *Piru* doe make a stay. In the Prouince of *Chuchito*, which is on the other side of the *Rowe* of the *Andes*, in a cold and barren Countrie, doe stand the Citie of *Mendoza*, and of *Saint Iohn* of the Frontier; for *Don Garcia* of *Mendoza* peopled them both. The Citie of *Mendoza* is of the same height with *Saint Iames*, about thortie leagues from it, of a difficult way, for the snow that is in the *Andes*. The Citie of *Saint Iohn* of the Frontier stands to the South of the Citie of *Mendoza*.

In

In the Bishopricke of the Imperiall are seuen Spanish Townes, which are the Citie of the *Conception* in seuen and thirtie degrees of height, seuentie leagues to the South of the Citie of *Saint Iames*, neere to the Sea, *Peter Valdinia* inhabited it in the yeere 1550. The Gouvernours are resident in it, since the Councell (that was there from the yeere 1567. vnto 1574.) was taken away. There are Monasteries of *Dominicans*, *Franciscans*, and *Mercenarie* Friars. The Port of this Citie stands in a nooke at the shelter of an Island. The Citie of the new village of *los Infantes*, or *los Confines*; *Don Garcia* of *Mendoza* peopled it, and the Gouverneur *Villagran* commanded it to be called *de los Confines*. It stands sixteene leagues from the *Conception* to the side of the Streight, eight leagues from the *Row* of the *Andes*, and foure from that which goeth along the Coast. It hath one Monasterie of *Dominicans*, another of *Franciscan* Friars. The warlike *Indian* come to the bounds of this Citie, and the mayne River *Biobio* by them, and others which doe enter into it, and the River *Ninequeten*.

Now village of the Infants.

Peter of *Valdinia* peopled the Citie of the Imperiall 1551, which is in nine and thirtie degrees of height, nine and thirtie leagues from the *Conception* toward the Streights side, three leagues from the Sea, where the Cathedrall is resident with one Monasterie of *Franciscans*, another of *Mercenarie* Friars; and in her bounds are more then eightie thousand *Indians*, with many other that in her bounds are in armes. The River *Cauten* passeth neere it, which is nauigable to the Sea, though the Hauen bee not good nor secure. Captaine *Valdinia* peopled also the Rich Village, sixteene leagues from *Imperiall*, about the South-eastward, and about foure and fortie from the *Conception*, neere to the *Snowy Row*, with one Monasterie of *Franciscans*, another of *Mercenaries*, in a Countrey cold and barren of Bread and Wine.

The Imperiall.

Hisp. Villavica. d Cordillera Nevada.

The Citie of *Valdinia* is two leagues off the Sea, and fiftie from the *Conception* to the Streight ward: peopled also by Captaine *Valdinia*, with Monasteries of *Dominicans*, *Franciscans*, and *Mercenaries*, in a plentifull Countrey of Wheat, and Seedes, and in places of good pastures for Cattell, and without Vines. The merchandize comes vp by the River of *Valdinia*, which passeth neere it, and the Port stands in the mouth of it in fortie degrees of height. The Citie of *Oorno*, *Don Garcia* of *Mendoza* peopled, sixtie leagues or more from the *Conception* to the port of the Streight, seuen leagues from the Sea. It hath one Monasterie of *Dominicans*, another of *Franciscans*, with another of Nunnes, in a cold Countrey, scarce of victuals, but of much gold, and in her bounds two hundred thousand *Indians* of repartition. The Citie of *Castro*, which was inhabited by the Licentiate *Lope Garcia de Castro*, being Gouverneur of the Kingdomes of *Piru*, the which is called in the *Indian* tongue *Chilue*, which is the last of the inhabited in *Chile*, in an Island of those that are in the Lake of *Ancud*, or *Chilue*, and the *Archipelagus* stands in three and fortie degrees of altitude, one and fortie leagues to the South of *Oorno*, with a Monasterie of *Franciscans*, with twelue thousand *Indians* of repartition in her bounds, for it is an Island of fiftie leagues in length, and from two vntill nine in breadth, which the Sea made with other great ones, tearing the Land vnto the *Row* of the *Andes*. It is a mountaynous Countrey, and close, plentifull of Wheate, and of Millet, and Mynes of flying & Gold, on the Strand a thing fewe times, or seldom seene.

Valdinia.

Oorno.

Castro.

Orobolador.

The Gouverneur *Villagran* tooke away the name of the Citie which was *Canyete*, that *Don Garcia* of *Mendoza* inhabited, and commanded to call it *Tucapel*, and afterward disinhabited it. There are in this Gouvernement which beginneth in two and twentie degrees, the Port and River of *Copeapo*, and to the South of it, the Port of *Guafoin* another River, and the River of *Coquimbo* in two and thirtie degrees: and past this the Port of the *Cigua* in the River, and the Port of *Quintero* at the mouth of the River of *Concagua*, before the Port of *Saint Iames*, or *Valparayso*, and the Port of *Topocalma* in the River of *Maypa*: and past the River of *Mauls* the Port of the *Herradura*, at the mouth of the River *Itata*, before the Port of the *Conception* in the great River of *Biobio* to the North, the Island of *Saint Marie* right against the State of *Aranco*, and the Port of *Canyete*, and the Island of *Mocha* more to the South, and the Port of *Cauten*, which is that of the Imperiall, and to the South the landing place and the River of *Tolten* before the Port of *Valdinia*, and past this the Point of the Galley, and more to the South the great Bay or Port of *Oorno* in the River *de las Canoas*, and to the South of it about thirtie leagues to the Lake of *los Coronados* the broadest River of this Realme, and at the end of this Realme the Lake of *Ancud*.

Ports and Rivers of this government.

e. Or Horse-shoe.

Men doe call the Streight of *Magellanes*, that which is past the River of *Plate* by the South Sea; from the last of *Chile*, vnto the Streight two hundred leagues before it, from two and fortie or three and fortie degrees of altitude, vnto two and fiftie and more, for although men haue sayled through both the Seas diuers times, and seene people in them vnto the Streight it selfe, it hath not bene pacified, nor made inhabiting, but that which the fleete that *Diego Flores de Valdes* carried to the Streight left in the mouth of the Streight on the North side, in the yeere 1582. which was called the Citie of *Saint Philip*, which for being in so much altitude could

Chap. 24. Of the Prouinces of the Streight.

Sir Richard
Hawkins.

Streight of
Magellan.

The Ports, Capes, and Points of the Coast of the one and the other Sea vnto the Streight, although they be many, and some are not pointed in the Cardes of Navigation, it appeareth not wholly, neither is there any certaine relation of all. And the most knowne of the Coast from Chile vnto the Streight, which runneth from *Valdivia* about an hundred leagues to the West South-west are, the Cape of Saint Andrew in seven and fortie degrees, from whence the Coast turneth directly to the South vnto the Streight, by the Cape of Saint Roman in eight and fortie degrees, and neere vnto it the Island of Saint Catalina, neere to the great Bay which they call *Hartichoked*, and within it the Bay of our Lady, and the Island of Santa Barbara, and more forward the Ports of *Hernan Gallego* in eight and fortie degrees two third parts, and the Bay of *The Kings* eightene leagues from the Port of *Hernan Gallego*, and the Bay of Saint John in fiftie degrees one third part, the Cape of Saint Francisco in one and fiftie, whereby some Channels doe enter into the Land, and the Island de la Campana, or of the Bell, eleven leagues from Saint Francisco: also with some Channels which haue not beene navigated within the Land, and the Bay of Saint Lazarus in two and fiftie degrees, with Channels on the sides, which enter very broad and long to the one and the other parts, which haue not beene navigated, and a great Sea of Islands which alwayes was said to bee at the South side neere to the mouth of the Streight, the which Sir Richard Hawkins denyeth; for hee saith, That at this mouth of the Streight on the South side, he found no more then foure small Islands, and one in the middest like a Sugar loofe, and that at the least they are distant from the mouth of the Streight fixe leagues, and the great Sea is on the one side, and he holdeth for certaine it is that which they say is the firme Land of the South side of the Streight, and that there is no firme land. The Streight though they haue past it from the South to the North side, by order of the Vice-roy Don Francisco of Toledo, Peter Sarmiento, and Antonio Pablo Corso, and it is knowne it stands from 52. to 53. degrees of altitude, where it draweth most to the South, and that in length it hath one hundred and ten leagues,

leagues, or one hundred and fiftene, little more or lesse, and in breadth from one to tenne: it hath neuer bene navigated to an end from the South Sea to the North Sea, nor the Pyrats that haue past it from the North to the South, are vnderstood to haue returned by it. The aboue said Sir *Richard Hawkins* saith, that he sailed many dayes by the Straight, and affirmeth that all the Countrie on the South side is no firme Land, but many Ilands which reach to 36. degrees; the which he might know, because he sayled to the same 36. degrees through the middelt of those Ilands, and seeing he found nothing but Sea, hee followed his course againe through by the Straight, and that this cannot be so farre, the differences of Seas, which the many entrings doe cause that are among those Ilands, and that the habiting of them is of people on the North side, which doe passe to those Ilands to sustaine themselves of fishings, and in their seasons returne to their Countreies; and that he comprehended this of many things especially of not hauing seene any seated Inhabitating, but some Cabbins which the *Indians* doe make for a time. The same said Sir *Francis Drake*, that it hapned him when he passed the Straight, the yeare 1579. who after his comming out into the South Sea, he ran along with tempests compassing this Sea, vnto the mouth of the North Sea, and by the same way he had runne, he made sure his navigation to the South Sea.

This is not true: for Cap-
taine Winter &
others haue
done it; which
howeuer he
calls Pirats, yet
they haue bet-
ter descouered
these Straights
then the *Spani-
ards*.

The parts most famous of the Straight at the entring of the South are the Cape *Deseado*, or *Desired*, in 53. degrees, and the Channell of all *Saints*, two and twentie leagues from the mouth, very broad, and large, and past it the port of the *Treason*, and afterward another great large Chan-
nell which runneth to the North-west, and *Rowlands Bell*, a great Rocke in the middelt at the be-
ginning of a Channell. They gaue it this name of one of *Magellanes* fellowes called *Rowland*,
who went to reacknowledge it, which was a Gunner: the point of possession which is foure
leagues from the Cape of *Virgenes*, at the entring of the North Sea in 52. degrees and a halfe of
altitude, when *Peter Sarmiento*, and *Antonie Pablo Corso* by order which they had to reknow-
ledge the Straight, for it had bene commanded long before for to see if it were a more ea-
sie navigation to the South Sea, then that of *Panama*: they viewed the two narrow places, that
at the entrie of the North, and it seemed to *Peter Sarmiento* that the one was so narrow, that
with Artillerie it might be kept, and so much he perswaded it, that although the Duke of *Alua*
affirmed it was impossible, the Armie which *James Flower* carried vnfruitfully was sent about it,
and in the end was knowne that that navigation is dangerous, and the flowing of two Seas which
come to meete in the middelt of the Straight, doe withdraw themselves with such furie, ebbing
in some places more then sixtie fathoms, that when the *Shippes* did carry nothing but Ca-
bles to preserue themselves from loosing that which they had sayled, they would goe full
froaghted.

*Or Vine Twig;
Or Ordinance,

In foure hundred leagues, there is of Coast from the mouth of the Straight, vnto the Riuer of
Plate, which runneth altogether North-east and South-west, there is the Riuer of *Saint Ilesofus*
twelue leagues from the Cape of the *Virgenes*, the *Gallaxian* Riuer, and the Bay of *Saint James*,
foureteene leagues from the Riuer of *Santa Cruz*, in 50. degrees, and at the mouth an Iland called
of the *Lyons*, and the Port of *Saint Iulian* in 49. degrees, and the Riuer of *Iohn Serrana* to the South
of the Ilands of *Duckes*, in 47. degrees, the Riuer of *Cananor* in 45. degrees, the Cape of *Saint*
Dominicke, before the Cape of three Points, and the Land of *los Hamos* or of the *Smoakes*, in
38. degrees, the Point of *Santa Hellene*, and of *Saint Apollonia*, in 37. degrees before the White
Cape, at the entrie of the Riuer of *Plate* on the South side.

*His Rio Galie-
go:

Iohn Dias de Solis discovered the Riuer of *Plate* 1515. and *Sebastian Gaboe* an *English-man*, going
with an Armie by order of the Emperour, in pursuit of the Fleete which *Frier Garcia de Lo-
aysa* Commander, had carried to the Ilands of the *Malucos*, and conceiuing hee could not ouer-
take them, he thought good to busie himselfe in something that might be profitable; and entred
the yeare 29. discovering the Riuer of *Plate*, where he was almost three yeares; and being not
seconded, with relation of that which he had found, returned to *Castile*, hauing gone many
leagues vp the Riuer, he found *Plate* or *Siluer* among the *Indians* of those Countreies, for in the
warres which these *Indians* had with those of the Kingdomes of *Piru* they tooke it, and from
hence it is called the Riuer of *Plate*, for before it was called the Riuer of *Solis*. These Prouinces
are ioyned with those of *Brasil*: by the line of the markes they haue no determined bounds, but
by the Coast of the Sea that falleth to the North, and entrance of the Riuer of *Plate*, of the which
the Countrie hath taken the name; and the mouth of this Riuer may stand sixteene hundred
leagues from the Bay of *Saint Lucar* of *Barrameda*.

Plentifulnesse
of the Prouin-
ces of the Ri-
uer of *Plate*.

All these Prouinces are very plentifull of Wheate, Wine, and Sugar, and all other seedes and
fruites of *Castile* doe grow well: they haue great Pastures for all sorts of Cattle, which haue
multiplied infinitely, especially the Horses, and though they haue bene many yeares without
thinking there were any Mines of Gold, or of *Siluer*, they haue already found a shoue of them,
and of Copper, and Iron, and one of very perfect Amathists. All these Prouinces are of one Go-
uernment, with title Royall, subordained for nearenesse to the Vice-roy of *Piru*, with one Bi-
shopricke wherein are three *Spanish* Townes, and a great multitude of the Countrie men, of big
bodies,

bodies, and well conditioned. And the Townes are; the Citie of our *Lady of the Assumption*, the first inhabiting, and the head of this Prouince, it stands in 25. degrees and a halfe of altitude: the Captaine *Iohn of Salazar* built it by order of the Gouvernour *Don Peter Mendoca*. The territory thereof was first called *Gurambare*: it hath *Brasil* at the right hand two hundred and eightie leagues, and in this compasse it hath the Citie Royall at eightie leagues, which the *Indians* call *Guayra*. And on the side of *Piru*, which is East and West, it hath at foure hundred and eightie leagues, the Citie of *la Plata*, and at two hundred and eightie, the Citie of *Santa Cruz de la Sierra* or of the Hill, which *Nuslo of Chanes* built. To the South side which is toward the Straight of *Magelane*, it hath very great and rich Countries, and this Citie stands three hundred leagues from the mouth of the Riuer of *Plate*, built neere to the Riuer *Paraguay*, on the East side, with foure hundred *Spanish* Households, and more then three thousand children of those that were borne to them in the Countrie (which they call *Mestizos*) in it are resident the Gouvernour, and Officers Royall, and the Cathedrall which is called the *Bishopricke of the Plate*, suffragan to the Archbishopricke of the *Kings*, and in her iurisdiction more then 400000 *Indians*, which doe increase daily.

Citie Royall was called by another name *Ontineros*, built by *Ruidias de Melgareio*; it stands eightie leagues from the *Assumption* North-east, toward the Land of *Brasil*, neere to the Riuer *Parana*; it stands in a good soyle of *Viſuals*, and *Vines*, and much good *Copper*, and great number of *Indians*, which also doe much increase. In this Riuer *Parana*, neere the Citie Royall, there is a great fall, that no man dare come neere it by Land within two hundred paces, for the great noyse, and mist of the water, and by the Riuer no Canoe, nor Boate dare come neere by a league; for the furie of the water doth carry it to the fall, which is aboue two hundred fadomes off a steep Rock, and it is so narrow, and the water goeth so close, that it seemes ye may throw ouer it with a dart.

* *Buenos ayres* is a Towne which in old time was disinhabited neere the place where now it is built againe, in the Prouince of the *Morocotes*, in the borders of the Riuer of *Plate*, in a plentifull soyle, where all things of *Castile* doe grow very well; the Gouvernour *Don Peter of Mendoca* built it 1535. which caused all that which *Gabote* forsooke to be discovered. All this Countrie is commonly plaine: for except the *Cordilleras* or *Romes* (which are on the Sea coast, and may be twentie leagues toward *Brasil*, afterwards compassing all the Countrie toward the Riuer *Maranyon*) and the *Romes* of the Kingdomes of *Piru*, all is plaine, except some small hills.

There are knowne in the Coast of these Prouinces from the Land of *Brasil*, vnto the Riuer of *Plate* five or six reasonable Ports, the Port of *Saint Vincent*, in 33. degrees height, right against *Buenabriga*, an Iland where the line of the repartition passeth; and six leagues to the South the Riuer *Vbay*, and the Port, and the Iland of *la Cananea* in 35. degrees; and forward the Riuer *de la Barca*, before the Port of *Bahia* or Riuer of *Saint Francis*, and the Iland of *Santa Catalina*, by another name the Port of *Vera*, or Port of the *Dukes (de Peros)* and the Port of *Don Roderigo*, twentie leagues to the South from *Santa Catalina*, an Iland 29. degrees and more to the South, five leagues a *Close Haven*, and fiftene the *Inhabited Riuer*, and as much the *Deepe-Bay* from this, and the Riuer *Tiraqueri*, in 32. degrees and a halfe, before the Cape of *Saint Marie*, which is in 35. 40 degrees at the entrie of the Riuer of *Plate*.

This Riuer is called in the *Indian* language *Paranaguazu*, and commonly *Parana*; hath his entrie and mouth in the South Sea, from thirtie five vnto thirtie six degrees of altitude, between the Capes of *Saint Marie*, and Cape *Blanke*, which is from the one to the other about thirtie leagues of mouth, and from thence inward other tenne leagues in breadth, with many Ilands in the middest, and many very great maine Riuers, which enter into it by the East and West side, vnto the Port of the *Kings*, which is a great Lake called of the *Xarajes*, little lesse then three hundred leagues from the Riuer of *Plate*, where enter many Riuers that come from the skirts of the *Andes* and they may be of those Riuers that proceede in the Prouinces of the *Charcas* and *Cuzco*, which runne toward the North, whereby entreteth another maine arme into the said Lake, which hath giuen occasion to thinke that this Riuer doth communicate with the Riuer of *Saint Iohn* of the *Amazones*; others say that it commeth from the Lake of the *Dorado*, which is fiftene iournies from the Lake of the *Xarajes*, though there be opinions that there is no *Dorado*.

The Captaine *Salazar* gouerning in these Prouinces by the death of *Don Peter Mendoca*, in the yeare 1545. a *Spaniard* being in his bed and his wife by him on the out side, in the night there came a Tigre and gaue the man a blow that he killed him, and carried him away, and betweene certaine Caues he did deuoure him: in the morning the Captaine *Salazar* went forth with fittie Souldiours to seeke the Tigre, and going through a wood, hee went alone by a path, and as soone as hee discovered the Tigre, hee being fleshed set vpon him, and at the time hee lifted vp the pawe for to strike him, the Captaine let flee the Shaft out of his *Crosse-bowe*, and strooke him to the heart, and he fell downe dead; an exploit of great courage, heede and dexteritie.

The

THe Prouinces and Countrie of *Brasil* in the Coast of the North Sea, and *Terra firme*, is called all that which falleth to the East from the line of the repartition, from twentie nine degrees of longitude from the Meridian of *Toledo*, vnto thirtie nine, which are two hundred leagues from East to West, and foure hundred and fiftie North and South, from two degrees of Southerne altitude, by the Cape de *Humos* or of *Smoakes*, vnto five and twenty, by the Iland of *Buenabrigo* or *Good-harbour*. And from the first inhabiting, vnto the last of *Brasil*, there are three hundred and fiftie leagues. *Vincent Yanes Pinzon* discovered first this Countrie by commandement of the Kings Catholike, and presently after him *James of Lepe*, in the yeare 1500. and six moneths after *Poraluarez Cabral*, going with a *Portugall* armie to *India*, which to auoide the Coast of *Guinea* did put so much to the Sea that he found this Countrie, and called it *Santa Cruz*, because on that day he discovered it. All of it is very hot in Winter and Summer, and very rainie, and compassed with Woods and Mists, vnhealthfull, and full of venemous Wormes, plentiful in Pastures for Cattle, and not for Wheate, nor Millet; there are in it great shewes of Silver and Gold, but as the *Portugals*, haue no stocke to make any profit of the Mines, they leaue them as they are.

The principall foode of this Countrie is the *Cazabi* which they make of the *Tuca*, and the greatest trafficke is Sugar, and Cotten Bumbast, and *Brasil* Wood, which was it that gaue it the name. There are in all the Prouince nine Gouvernements, which are called Captainships, and in them seuentene *Portugal* Townes: in it may be about three and thirtie hundred households, and great multitude of warlike *Indians*, which haue not suffered the *Portugals* to build but on the Coast, in which are many Riuer, Landings, and many Ports, and very safe, where any Ships may come in, be they neuer so bigge.

The Colonie of the first Captainship, and the most auncient is *Tamaraca*, the second *Pernambuco*, five leagues from *Tamaraca* to the South, in eight degrees of altitude, and there is a house of the Fathers of the Companie of *Iesus*: the other is, that of all *Saints*, one hundred leagues from *Pernambuco* in thirteene degrees, and there the Gouverneur, the Bishop, and the Auditour generall of all the Coasts are resident, and it hath a Colledge of the Company: the fourth Captainship of the Ilands is thirtie leagues from the Bay of *All Saints*, in foureteen degrees & two third parts, it hath a House of the Fathers of the Companie. In this Captainship is found a Tree where out they take a precious Balme. The Captainship of the *Sure-hauen* is thirtie leagues from the Ilands in sixteene degrees and a halfe: it hath three Inhabicings, and a House of the Fathers of the Companie. The Captainship of the *Holy-Ghost* fiftie leagues from *Puerto seguro*, in twentie degrees, where they gather much *Brasil*, and there is one house of the Company. The Captainship of the Riuer of *Genero* is sixtie leagues from the *Holy-Ghost*, in twentie three degrees and one third part, with a house of the Fathers of the Company, and they cut in their iurisdiction much *Brasil* Wood; the Riuer is very faire, with fine and profitable borders. The last Captainship is *Saint Vincent*, sixtie leagues from the Riuer of *Genero*, in foure and twentie degrees, it hath a fortresse in an Iland for a defence against the *Indians* and Pirates, and a house of the said Fathers, which haue done great profit in the inhabiting of this Countrie, and conuersion of the *Indians*, and their libertie. The Cattle that are in these Prouinces are many, and great breeding of Swine, and Hens, they gather much Amber which the Sea casteth vp with stormes at the spring tides, and many persons haue enriched themselves with it. Their Summer is from September to February, and the Winter from March vnto August; the dayes are almost as long as the nights, they increase and diminish onely an houre, in the winter the winde is alwaies at South and South-east, in Summer North-east and East North-east.

There are in this Coast eight or tenne Ports more principall then the rest, which are the Riuer of *Saint Dominicke* and *de las Virtudes* to the North-east of *Pernambuco*, and *Tamaraca*, which is an Iland, and as it is said, the first Plantation, and before the Cape of *Saint Austine*, which stands in nine degrees, the Riuer of *Saint Francis* in ten degrees and a halfe, which is great and mightie: the Bay of *All Saints* three leagues broad, and thirteene into the Land vnto *Saint Saniour*, the Riuer and Port *Trenado*, where the Ships doe touch that goe this Voyage, and the Riuer of *Canamum* in thirteene degrees and a halfe, the Riuer of the *Beades* or of *Saint Austine* is foureteen degrees and a halfe; and the Riuer of the *Virgenes* in sixteene. *Portesecure* in seuenteen degrees: the Riuer of *Parayua* in twentie degrees, neere to *Saints spiritus*: the Riuer of *Genero* neere to *Saint Sebastian*, and *Cold Cape* in three and twentie degrees beyond *Saint Vincent*.

Indies of the West, are all the Ilands and firme Land comprehended within the markes of the Crowne of *Castile*, and of *Lyón*, at the Occidentall end of the said bounds; whose line as is said passeth on the other side the world, through the Citie of *Malaca* from whence toward the East, and *New Spaine*, is a great Gulfe of infinite Ilands great and small, and many pieces of Coasts, and firme Land, which are diuided into the Ilands of the *Spicerie*, or of the *Malucos*, I. Ilands *Philippinas*, the Coast of *China*, Ilands of the *Lequios* and *Iapones*, Coast of the new *Guinea*, Ilands

Chap. 26.
Of those which men call the Indies of the West, which are the Ilands *Philippinas*, coast of *China*, *Iapan*, and the *Lequios*.

Ilands of *Salomon*, and of *Ladrones* or the *Theenes*: the temper of all these Ilands and Lands in generall is moitt, and temperately hot, plentifull of Victuals, and Beasts, with some Gold, but bale, no Siluer, store of Wax, and the people of sundry colours, and the ordinary colour like *Indians*, and some white among them, and some cole-blacke.

The Ilands of the *Spicerie* (which properly are called so, because all the Pepper, Cloues, *Sinamon*, *Ginger*, *Nutmegs*, and *Masticke* that is spent in *Europe*, is brought from them) are many, though the most famous of that Gulfe are five small Ilands vnder the Equinoctiall in one hundred nintie foure degrees from the Meridian of *Toledo*, included in the morgage which the Emperor *Charles* the fit made of them to the King of *Portugall* for three hundred and fiftie thousand Duckets, which are *Terrenate* of eight or nine leagues compasse, with a Port called *Talan- game*, and in it reigned *Corala*, which yeelded himselfe for subiect to the King of *Castile*, when the Shippes that remained of *Magelanes* fleete found these Ilands. The Iland of *Tidore* stands one league from *Terrenate* to the South, it hath tenne leagues compasse. The Iland of *Mail*, or *Mutier* is of foure leagues compasse, and is vnder the Equinoctiall; and *Maquin* three leagues to the South, of seven in compasse, and tenne leagues to the South. *Batan* or *Baquian* is twentie leagues in compasse. In the Iland of *Tidore* reigned *Almanzor*, which also gaue himselfe for subiect of the King of *Castile*, the which, and *Carala* did write and *Iohn Sebastian* of the *Cano*, borne in the Village of *Guitarca*, in the Prouince of *Guipuzcoa* brought their Letters; the which departing from *Tidore* in the year 1522. touched in the Iland of *Zamatia*, and going vp to almost fortie two degrees toward the Antarctic Pole, he arriued at the Iland of *Saint James* of the *Greene Cape* or *Cabo Verde*, and from thence to *Sinill* with the Shippe called the *Victorie*, hauing spent seuen moneths time little lesse in comming from the Iland of *Tidore*. *Patian* is the fift Iland like the other; Moores inhabited in it, and Gentiles also, which knew not the immortallitie of the soule. And when the Shippe of the fleete of *Fryer Garcia* of *Loaysa* came, *Rodrigue* reigned in *Tidore* of thirteene yeares of age, and againe acknowledged the King of *Castile*, and also the King of *Gilolo* called *Sultan Abderta meniani*, and confirmed it with an oath. *Gilolo* is an Iland vnder the line foure leagues distant from those rehearsed; it is of two hundred leagues compasse, without *Spicerie*: the Iland of *Ambon* in three degrees and a halfe to the South, from the Iland of *Gilolo* without *Spicerie*. The Ilands of *Bandan* are in foure degrees of Southerne altitude, where the *Nutmegge* is gathered, and *Mace*; and the *Burro*, which is to the West of *Ambon*, and *Timor*, another Iland to the South-west from *Bandan*, almost one hundred leagues, without *Spicerie*, but rich of *Sandal*, *Zeinda*, fiftie leagues from *Timor*, to the North-west of forty leagues compasse, plentiful of Pepper, and the Iland of *Celebes*, which is very great, & *Borney* greater, neere the straight of *Malaca*, which is made in the firme Land; & *Zamatia*, which in old time they called *Taprobana*. There be other manie great Ilands, and small, which remaine to the South side, neere *Iana Maior* & *Minor*, and to the North toward the Coast of *Chyna*: the *Portugals* haue a fortresse in *Terrenate*, and other in the Citie of *Malaca* at the entrie of the *Archipelagus*.

The Ilands *Philippinas* are a Sea of thirtie or fortie great Ilands, besides many other small ones which are together in lesse then two hundred leagues in length North and South, and one hundred in breadth betweene *New Spaine*, and the Gulfe of *Bengala*, and they are about seuentene hundred leagues from the Port of the *Natiuitie* in *New Spaine*, from six to fiftene or sixteene degrees of Septentrional altitude, of a reasonable temperature, and plentifull of victuals, specially of *Rice*, and some base Gold in some places, and in some Ilands are *Cinamon trees*, and long *Pepper*. The Countriemen are of a good shape, and in some Ilands they are blacke, and those which liue in the center of the Countie are whiter then those that liue in the Sea coasts. There are good Ports, and Timber for Shipping, the names of the principallest Ilands are *Mindano*, which is the greatest, and most Southward, of a hundred leagues in length, and three hundred in compasse, a rough Countie, but plentifull of *Miller*, *Waxe*, *Rice*, *Ginger*, and some *Cinamon*, and Mines of Gold, with good Hauens, and Rodes: the Iland of *Good-tokens*, and *Saint Iohn* leading to *Mindanao*, on the East side, of twenty leagues in length North and South; *Behol*, ten leagues more to *Mindanao* on the North side, ninetene leagues in length.

The Iland of *Buglas* or of *Negros*, by reason of those that are in it, is in the midst of that Sea to the West, of fortie leagues in length North and South, and foureteen in breadth, and in her coast are some *Pearles*: the Iland of *Zubu* in the midst of all, of thirtie leagues in length North and South, and in it a *Spanish Towne*, called the Village of *Iesus*, on the East side, with one good Hauen, besides other that are in the Iland, the Captaine *Ferdinando Magellanes* discovered this Iland, in the year 1520. the King yeelded then himselfe for subiect to the Crowne of *Castile*, and before he discovered the Ilands, which he called *de las Velas Latinas*, because they sailed in their Shippes with sayles of Mats made of Palme tree leaues after the *Latine* fashion; and from *Zubu* *Magellanes* went with the King, to warre against the King of *Matan*, in a little Iland close to that of *Zubu* on the South side, where being too valiant and confident he was slaine; and the *Spaniards* following their Voyage in demand of the Ilands of the *Spicerie*, they discovered *Quelpindo*, *Puluan*, and *Borney*, which is a great, rich, and plentifull Iland of *Rice*, *Sugar*, *Goates*, *Swine*, *Cammels*: it wants *Wheate*, *Asses*, and *Sheepe*; it hath *Ginger*, *Camphire*, *Mirabolans*, and

and other Drugges. *Aluaro of Saavedra* discovered also the *Philippines*, and tooke possession of them in the year 1527. for the Crowne of *Castile*, which by order of the Marquess of the *Valley* went from the Port of *Ciuitlancio* in *New Spaine*, in demand of the *Ilands of the Spicerie*, and particularly he was in *Mindanao*: and this digression hath not bin out of purpose.

Aluaro of Saavedra tooke possession of the *Philippine* for the Crowne of *Castile*, in the year 1527.

Returning to the order of the *Philippines*, there followeth the above said *Abuyo*, or *Babay* thirtie leagues in length North and South, and tenne in breadth, in which are good Mines, and Pearles, in her coast: *Tandayala* most famous of all, which for being first discovered, is called *Philippine*, of which all take the name, in memory of the invincible King *Don Philip* the second, the *Prudent*. It hath fortie leagues on the North side, and of the East North North-east, and South South-west, and twelue leagues in breadth where most, with good Hauens and Roades: *Masbat* a meane land to the West of *Tandayala*, of seuentene leagues in length, and fiftene in breadth, with one Hauens: *Mindoro* of five and twentie leagues in length North and South, and halfe in breadth; there is Pepper in it, and Mines of Gold: the land of *Luzan*, called the *New Castile*, as great or greater then *Mindanao*, the most Septentrionall of the *Philippines*, in the which is built *Manila*, a Citie of *Spaniards*, with title of *Famous*, where the Gouverneur, Officers of the goods, and chest Royall, and the Cathedrall are resident: it is a plentifull soyle of Victuals, with many Mines of Gold: the Hauens of this Citie is bad, and for all that there is great trafficke with the *Chynas*, which bring Porcelane Vessell, Tinsels, coloured silkes, and other Merchandize: *Lugon* hath in length two hundred leagues, and it is very narrow.

The Citie of *Manilla*

In all these Ilands are many *Mahometanes*, wether they came by the *East India*, and could easily plant their fallhood amongst those blinde *Gentiles*. Captaine *Magellanes* as above said discovered these Ilands, the year 1520. going with an Armie of the Crowne of *Castile*, in search of the Ilands of the *Malucoes*, and tooke possession of them, and afterward *Michael Lopez* of *Legazpi* made an end of discovering them, the year 1564. with an Armie which hee tooke from *New Spaine*, by order of the Vice-roy, *Don Lewis* of *Velasco*: it is iudged that those Ilands doe amount to eleauen thousand great and small. There are pacified about fortie of them, and conuerted more then a Million of men vnto the Catholike Faith, with so many expences of the Crowne Royall, not hauing had vntill now any profit from those Countreies; for euery Religious man of those that are sent thither, doth cost to set there one thousand Duckets. Those which hitherto haue laboured in that Vineyard, with most great fruite of the soules, are the Religious *Dominicans*, *Franciscans*, *Barefooted*, and *Austine* Fryers, and the Company of *Iesus*; and from these Ilands hath bene begun to bridle the *Mahometanes*, which from the Coast of *Asia* went by little and little extending through these, and other Ilands, and also to the *Chin* and *Iapones*, and the *Portugals* had already lost the Ilands of the *Malucoes*, if the *Spaniards* of the Prouinces of the *Philippines* had not holpen and succoured them diuers times and many wayes.

His volage yett haue before. 11000. Ilands.

Since, the *Hollanders* haue expelled the *Portugals*.

China: see our former Relation.

There is already a plainer notice had of the *Chynas*, by the commerce of the *Philippines*, and their riches and plenty is knowne: it is of the richest and mightiest Kingdomes of the World, and from *Manila* may be to the coast of *China* three hundred leagues, of eight dayes sayling, and the coast of that Countreie goeth running as to the North-east, more then seuen hundred leagues, from twentie one to twenty two degrees of Septentrional latitude, and vpward, and it is known that crosse ouer the Countreie in ward is a Voyage of five or fixe moneths, to the confines of *Tartaria*; being a Countreie of great Cities, with many Townes, and the people politicke, and prepared for their defence, but not warlike, and the Coast much inhabited with maine Rivers, and good Hauens: it extends from seuentene vnto fiftie degrees North and South, and East and West it occupieth two and twentie: the Citie of *Paguan*, where the King hath his Court, stands in fortie eight degrees of our Pole, it is diuided in fiftene Prouinces, fixe *Maritime*, and nine *Mediterrane*, and the one are deuied from the other with certaine Mountaines like the *Pirineus*, and there are but two passages whereby they doe communicate.

Thomas Perez Ambassadour of the King of *Portugall*, was from *Canton* to *Nanqui* foure Moneths, traouelling alwayes to the North: and to the largenesse of this Kingdome is ioyned the plentie of the Countreie, which is great, for the which the multitude of the nauigable Rivers that do water it, are a help, wherewith it seemes a pleasant Forrest or Garden, and the abundance is doubled by many wayes, for the Kings spare no cost to make the Countreie watered in euery place, cutting great hils, and making great Valleys plaine; and the heate not wanting in any place, for all the Countreie almost is contained in the bounds of the temperate Zone, nor the moisture by the clemencie of nature, and by the industrie of men it is incredibly all multiplied, and all being compelled to busie themselves in something, there is not one foote of ground left vnprofitable. In *Canton* among other notable things they say there are a great number of blinde men that doe labour in something, euery one as he is able, and being forbidden the going out of the Kingdome without licence, the which is neuer granted, but for a limited time it is necessary that the propagation increasing continually, the number of the people be without end, especially that they hold for a certaine, that for five persons that doe dye, there are seuen borne, and the purenesse of the ayre is so much, that they doe not remember, there hath bene any vn-

The Prouinces and Kingdome of *China*.

China: see our former Relation.

uerfall plague, and with all these good things they haue their troubles also, for there are earthquakes that destroy whole Cities, disinhabit the Countrey, and suppress the auncient Riuer, and raise others, and doe make great Mountaines plaine, with a miserable misfortune of that people.

The yeare 1555. there burst out of the intrailles of the earth such abundance of water, that it ouer-flowed the space of sixtie leagues, and destroyed seuen Cities with their iurisdictiones. And this as touching the continent of *China*. There is through all the Coast a multitude of Ilands, the greater part are vnto vs vnkowne. Not farre from *Nanqui*, is the Cape of *Lampo*, the Iland of *Aueniga*, *Abarda*, *Sumbar*, *Lanqui*, and the Iland of *Horses*, of the which no particular notice is had. Passing the Citie of *Chincheo*, stands *Lamao*, and a great number of Ilands are seene about *Cantan*, and these are the most celebrated, *Lantao*, *Macao*, *Veniaga*, where is the Port of *Tamo*, *Lampacao*, *Sancoan*, in all the which the King of *China* hath Garrisons on Sea and Land, except in *Lampacao* which is not inhabited.

Macao

In *Macao*, by another name *Macan*, the *Portugals* haue a Towne, and the *Chinas* knowing the valour of the *Portugals*, and the fauour they haue of the *Castillans* of the *Phillippines*, suffer it with an euill will, but the *Portugals* seeke to preferue themselves, for their profitable commerce in *China*. *Sancon* is thirtie leagues from *Cantan*, where sometimes the *Portugals* haue touched, and no Iland of *China* is of greater importance then *Anian* in the mouth of the Gulfe of *Canchinchina*, fve leagues from the *Firme Land*, and one hundred and eightie from the *Phillippines*, and it is so bigge, that they affirme it to haue thirtie Fortresses; in it is a fishing for small Pearles. It is abundant of Victuals, and of many Fruits: vnder the Government of *Cantan*, the principall Port of *China*, and the Countrey men are grosse and rude people.

Anian.

*Or Terra firme

Japan.

Japan is many Ilands diuided with small armes of the Sea, in three and thirtie Kingdomes, whose head is the Citie of *Meaco*, distant variable from *China*, and they count from the Iland of *Goto* in *Iapon* to *Lampo* in *China* sixtie leagues, which is the necest. The *Iapones* doe greatly molest the *Chinas*, more with piracies, and thefts, then with iust war, because *Iapan* being diuided in sundry Ilands, and diuers Princes, they can make no warre against the *Chinas*, but with weake forces. They are more warlike and valiant then the *Chinas*: it is a temperate Countrey, plentifull of Seedes, Cattle and Fowle of Europe, it hath Mines of Iron and Steele: the Countrey men are strong, valiant, and for much labour: those Ilands stand in thirtie fve degrees of the Pole, little more or lesse, according to the distance of euery Iland. The *Iapones* doe not vnderstand the *Chinas* but by writing, because of the Characters, or Letters being one for them all, and though they signifie the same, they haue not the same name, for they are to declare things, and not words, as the figures of Arithmetike, that if a 9. be set, the *French*, the *Castillan*, and the *English* man doe vnderstand it, that it signifieth 9. but euery one doe name it after their owne fashion.

Characters as
Ciphers.

By another side the *Iapones* doe confine with the *Phillippines*, from whence there is commerce with them, and a great encouragement is giuen to the Fathers of the Company, for to labour in the conuersion of the people of those Kingdomes, where notable fruite hath beene gotten, for the which these Ilands are much celebrated in the world; and by the comming of the Ambassadors of the new Christendome to the Pope, and to the King *Phillip* the second, the *Prudent*: and so as nature placed them in a scituation separated from the rest of the Land, the men of that Region are differing in customes from other people. In the yeare 1592. *Nobunaga* which caused himselfe to be called Emperour of *Iapan*, interprised with eightie Vessels, and 20000. men, certaine Prouinces tributarie vnto *China*, and wan it.

Lequios.

From the Iland of *Simo*, which is among them of *Iapan* the greatest, is extended a row of small Ilands, called the *Lequios*, and doe prolong themselves toward the Coast of *China*; the two greater, which is euery one of fiftene or twentie leagues, neere the Coast of *Iapan*, are called the greater *Lequio*, and other two also great, though not so much, which are at the end of the Rowe, they call *Lequio* the lesser: some are inhabited of well shapen people, white, politicke, well apparelled, warlike, and of good reason, they abound in Gold more then others of that Sea, and not lesse in Victuals, Fruits, and good Waters. Neere vnto the lesser *Lequio* stands *Hermosa*, or the beautifull Iland, which hath the same qualitie, and say it is as big as *Sicilie*.

West Indies.
The *Lequios*.
Sir R. *Hawkins*.

The Coast of new *Guinea* beginneth one hundred leagues to the East of the Iland of *Gilolo*, in a little more then one degree altitude, on the other side of the Equinoctiall, from whence it is prolonged toward the East three hundred leagues, till it come to fve or six degrees. It hath beene doubted vntill now, whether it be an Iland or firme Land, because it doth enlarge it selfe in so great a Voyage from being able to ioine with the Countreies of the Ilands of *Salomon*, or Prouinces of the Straight of *Magellanes* by the South side; but this doubt is resolued with that which those do affirme that sailed on the South side of the Straight of *Magellanes*, that that is not a continent, but Ilands, and that presently followeth a spacious Sea, and among those that doe affirme it is Sir *Richard Hawkins*, an *English* Knight, which was fve and fortie dayes among the same Ilands.

From

From the Sea the Land of this coast of Guinea seemeth good, and the men that have been seene are cole black, and in the coast are many Ilands with good roads, and ports whereof is no particular notice: for having sailed it few times, those which are found in some cards are *Agnada* or the watering to the East thirty five leagues from the first Land, is in one degree of Southern altitude; and eightene forward the port of Saint James, and the Iland of the *Crespos* of sixteene leagues long neere the coast, right against the Port of Saint Andrew, and neere to it the River of Saint Peter, and Saint Paul, before the Port of Saint Ierom, and a small Iland neere the *thrust out Point*, 40. leagues from S. Austin, which they call of *Good-peace*, and more forward from it, the *Shelter*, and *Euill people*, two little Ilands, and the Bay of Saint Nicholas, fiftie leagues from *Punta Salida*, and among other Ilands one of white men, and the *Mother of God* before *Good Baye*, and of the *Nativity of our Lady*, the last of that which is discovered; and as to the North from it the *Cay-*

toward

10 *mana*, an Iland without in the Sea among others which have no name.
The Meridionall coast is not yet known, the first that discovered the new Guine was *Aluaro* of *Saavedra*, being lost with many stormes from his course, returning to new Spain, when in the year 1527, the Marques of the *Valley* sent him that on that side he should seek the Ilands of the *Spicerie*.
The Ilands of *Salomon* are eight hundred leagues from *Piru*, & the opinion that is held of their riches, gaue them this name, the which properly are called of the *West*, because they fal to the West from the Prouinces of *Piru*, from the place that *Aluaro* of *Mendoça* made discovery of them by order of the Licentiate *Lope Garcia de Castro*, his Vnckle, Gouvernor of the Kingdomes of *Piru*, in the year 1567, the first that saw the Land of these Ilands was a yong man, called *Treio*, in the top of a Ship: they are from seven degrees of altitude on the other side of the Equinoctiall about 1500. leagues from the Citie of the Kings, they are many in quantity & greatnes, and eighteen the most famous, some of 300. leagues in compasse, and two of 200. and of 100. and of 50. and thence downward, besides many which are not yet made an end of coasting, and they say that they might beaward, besides the coast of the new Guiney, and the Countries to be discovered toward the West of the straight: the Countrie of these Ilands seemeth of a good temper, and habitable, plentifull of victuals, and Cattell: there were found in them some fruits like those of *Castile*, Swine & Hens in great number: the Countrie men some of a brown colour like *Indians*, others white & ruddie, and some cole blacke, which is an argument of continuance with the Countries of the new Guine, whereby there may so many differences of people be mingled of those which resort to the Ilands of the *Spicerie*.

30 The greatest and most renowned are *Santa Isabel*, from eight to nine degrees of altitude, of more then 150. leagues in length, and eightene in breadth, and one good port called of the *Star*: *Saint George* or *Borbi* to the South of *S. Isabel* one league and a halfe, of thirty leagues compasse. *Saint Marcos*, or *Saint Nicholas* of one hundred leagues compasse to the South-east of *Saint Isabel*; the Iland of the *Shelues* as great as the former to the South of *Saint Isabel*, and *Saint Ierome* to the West of 100. leagues compasse; and *Gudalcanaall* to the South-west greater then all: and to the East of *Saint Isabel*, the Iland of *Buenanista*, and *Saint Dimas*, and the Iland of *Florida* of twenty leagues circuit euery one; and to the East of it, the Iland of *Ramos* of 200. leagues compasse, and neere to it *Malayta*, and *Atreguada* of thirty, and the three *Maries*, certaine little Ilands, & the Iland of *Saint Iohn* of twelue leagues compasse betweene the *Atreguada* and the Iland of *S. Iames* to the South. *Malata* of 100. leagues circuit, and to the South-east of it, the Iland of *Saint Christopher* as bigge as it: and *Saint Anne*, and *Saint Catherine*, two small Ilands fast by it: the *Name of God*, a small Iland distant from the other fiftie leagues, in seven degrees of altitude, and in the same *Rumbe* to the North of *Saint Isabel*, the *Shelues*, which they call of *Candelaria*.

40 There is in the voiage that is made from *Piru* to the Ilands of *Salomon*, an Iland called of *S. Paul*, in fifteen degrees of altitude, 700. leagues from *Piru*, nineteen degrees; 300. leagues of Land, others which may be those that they called of *Salomon*, and they say also that they might be others which this little while haue beene discovered in the same *Rombe* of *Chile*.

50 The Ilands of the *Theenes* are a row of 16. smal Ilands together which runne North and South, with the middest of the coast of Guiney, from twelue degrees of altitude vnto seenteene Septentrionall or more, not farre from the *Phillippinas* to the East. They are all barren ground, and miserable, without Cattle, or Mettals, scarce of Victuals, inhabited with poore people, well shapen, naked, and much inclined to steale, euen to the nayles of the Shippes that came there, whereby *Magelane* named them of the *Theenes*, in the year 1520. when he came to them going in demand of the *Spicerie*. Their names are, the *English*, the most North, and after it *Ota Mao*, *Chemechoa*, *Gregua*, *Agan*, or *Pagan*, *Oramagan*, *Gugnan*, *Chareguan*, *Natan*, *Saejan*, *Botata*, *Volia*. There are among these Ilands *Phillippines*, other eightene or twenty, called of the *Kings*, *Archipelagus*, or Ilands of the *Corral*, and the *Gardens*, another quantity of little Ilands, and *Pialogo*, *Saint Vilan*, another little Iland, the *Gardens*, and the Iland of the *Matalotes*, and that of the *Shelues*, and of *Saint Iohn*, or of *Palmes*, neere the *Malucos*, and on the North side of the *Theenes*, five or six little Ilands together, called the *Volcanes*, where is store of *Cochinilla*; and *Malpelo* another small Iland, where are *Cualoes* very fine, and on the East side of the *Theenes*, the two Sisters, two little Ilands in ten degrees, and *Saint Bartholomew* in foureteene and more

toward new Spaine, the *Shelues*, Look how thou goest, Take away sleep, or See thou sleep not; & neere to them the Island of *Martine*, and Saint *Paul*, another small Island with *shelues*, and the inhabited the most Eastward toward new Spaine, *Aluaro* of *Saavedra* was also in the Island of the *Theenes*, in the yeare 1527. returning from the Island of *Spicerie* to new Spaine.

Chap. 28.
Of the suprem
Counsel of the
Indies, and of
the spirituall
government,
and Ecclesiasti-
call Royall Pa-
tronage.
Counsell of
the Indies.

The Catholike King of *Castile*, and of *Lyon* continuing in their auncient, and Christian pietie, presently after these new Countries were discovered, and ioyned with this faire Monarchie, procured to plant, and settle the Catholike Religion in them, and temporall pollicie, with so much care and aduice of the wisest men of these Kingdomes. For as the discoveries did increase the buisnesses, they formed a particular Counsell with President and Councillours, that busying themselves in no other thing, with more diligence they might resort to that which so much pertained to the seruice of our Lord God, and government of that Orbe. And because hereafter mention shall be made of the persons which from the beginning haue laboured, and serued in the supream Counsell of the *Indies*, which hath carried so great a waight vnto this present houre, first shall be spoken of the spirituall and temporall government, and the rest worth the knowing, that the order of that Monarchie may be vnderstood, with all breuitie.

How many
Archbishop-
ricks, Bishop-
ricks, Mona-
steries, and
Schooles of
Doctrines are
in the Indies.
So Humillade-
ros is said to
signifie the
translator had,
Shrines: the la-
tine hath Pe-
nitentiary.

The first thing that these godly Kings did charge and command the first Discoverer, and from man to man commanded the other Discoverers and Gouvernours of that new World with very straight orders, was, that they should procure that the people which they carried, with the Christian life, and with their good customes, should giue such example to the *Indians*, that they might be glad to imitate them, and should binde them vnto it; entring first according to the Euangelicall Law, the religious men preaching it, that so rather with the sweetnesse of it, then with the force and noyse of Armes it should be admitted, and that iustice should be administred with such equalitie to all men, that it might be much respected & esteemed. All went forward, the townes went augmenting in such manner, that with the zeale of the seruice of God, and good of the men it hath come to such a point, that at this day there are found built and established in all that Orbe of this Crowne possessed, as before hath beene seene, *five Archbishopsricks, twentie senen Bishopricks, two famous Vniuersities*, where with great learning and doctrine all the Sciences are read, more then *four hundred Monasteries* of religious *Dominicks, Franciscans, Augustines, Mercenaries*, and the Companie of Iesus, with some *Monasteries of Nunnes, and Colledges, infinite Hospitals, and Fraternities*, innumerable store of *beneficed Cures*, which are called *Doctrines*, for to teach those new Conuerts, and *Heremites*, and *Chappels* in the high-way erected on pillars, hauing *Crucifixes* in them, without number. All the which was begun at the charge of the Crowne, and at this day it goeth forward where there is no maintenance for it. In effect, this Catholike pietie by the clemency of God goeth from good to better, augmenting with so much reuerence and honour of God, that in no place of Christendome it is done with more order or care, by the care of the supreme Counsell of the *Indies*. Of the which is inferred, that the Concession of the Apostolike *Roman Sea* made to the *Crowne of Castile*, and of *Lion*, of the Patronage Ecclesiasticall of that new World was a very great remedie, in the which our Lord God (as Hee which onely is Hee that seeth, and preuenteth all things to come) did a thing worthy of His greatnesse, seeing Hee hath shewed the experience that if this had beene gouerned otherwise, it had beene impossible to haue proceeded with the harmonie, and euen concent as it hath, of Religion, Iustice, and Government, with so much obedience and quietnesse.

How the Ec-
clesiasticall
Patronage is
gouerned.

The Ecclesiasticall Patronage is gouerned in the same manner that in the Kingdome of *Granda*, the Kings Catholike presenting to the chiefe Bishop onely the Archbishops, and Bishops, that from his holy hand they may receiue these Prelacies, and may dispatch their Bulls, procuring alway that they be persons of a religious life, and great learning. All the other Dignities and Benefices are provided by the King, and consultation of the *supreme Councell of the Indies*, and they go not to *Rome* for Bulls: and their rents consist in tithes and first fruits which arise of the *Spanish* inhabitants. For in the most places of these *Indies* the Countre men paie not, and where the tithes are wanting, it is supplied out of the goods royall: and touching the tithes and first fruits that are to be paid, many ordinances and rates are made according to the stile of these Kingdomes, that the men of each Colony, it is iust it should follow her customes. And though the Kings of *Castile*, and of *Lyon*, are Lords of the tithes by Apostolike concession, & might take them to himselfe, supplying where it wanteth with that which in other places doth excede, he leaueth them to the Prelates & Churches, providing of his own goods Royall with the liberality of so Catholik Princes, to all the necessities of the poore Churches, giuing to euery one that is built anew the greatest part of that which is spent in the building, with a Chaliz, a Bell, and a painted Table.

* Of Images
or Pictures.

That the distribution of that which proceedeth of the tithes, and of that which is bestowed out of the goods Royall in maintenance of the Prelates, Dignities, and Canons of the Cathedral Churches, and Benefices, Cures, and persons that are occupied in the diuine Seruice, and instructing of the *Indians*, may be fruitfully imployed according to the holy intention of the Kings, the supreme Counsell hath made good ordinances. First, that all the said persons be of an approued life and customes, & especially those that doe meddle in the *Doctrines*, being first examined touching learning,

Orders for the
goods of the
deceased.

come so wholly as they might, nor so soone to the hands of the heyres, by will of the said deceased, for many causes, whereby the heires receiued great damage, and the testaments were not performed: for a remedy, it was provided, that whatsoeuer *Spaniard* shall come to any Village, or Towne of those parts, he shall present himselfe before the Clarke of the Countell, where he shall Register the name, and surname of such a one, with the place of his aboad or birth, that his death happening, it may be knowne where those that are to be his heires may be found. That the ordinary Iustice, with the most auncient Ruler, and the Clark of the Counsell shall take charge of the goods of the persons that shall dye, and shal set them in an Inuentorie, before a Scriuener and Witnesses: and the debts that he did owe, and were owing him, and that which is in Gold & Siluer, small Pearle, and other things shall be sold, and put in a Chest of three Locks, whose Keyes the three persons abovesaid shall keepe. That the goods be sold in a publike out-cry, with the Testimony of a Scriuener: that if neede be, an Attorney shall be constituted. That the said Iustices doe take accompt of all those that haue charge of dead mens goods, and recouer all that they are behinde hand without any appeale, and doe put it in the Chest of the three Keyes. That hauing any Will of the deceased where he dyeth, and the Heires or Executors, the Iustice shall not meddle in any thing, neither take the goods, taking only notice who be the Heires of the said deceased. That the said Iustices, Rulers, and Scriueners doe send also to the *Contratacion-honse* of *Seuill*, all that which they shall recouer of the goods of the deceased, declaring the name, surname, and aboad of of euery one deceased, with the Copy of the Inuentory of his goods, that they may be giuen to his Heires, by the order that touching the same is giuen. That when they take accompt of those that haue had goods of men deceased, it shall be sent to the supreme Counsell of the *Indies*, with a very particular relation, and reason of all. That the Iustices doe with care enforme themselves carefully of those which haue in possession the goods of men deceased, whether they haue done any fraude, and preiudice to the goods they haue had in possession, & send to the Counsell notice thereof, that they may giue accompt with paiment to the Iustices aboue said. That accompt be giuen euery yeere, and the memoriall of the dead that haue bene that yeere shall be shewed to the Gouvernor of the Country, & of the goods they had, that they may be sent to *Seuill*, & be giuen to his heires, and the Testaments be fulfilled, with good accompt and reason that is behoouefull. For in euery Counsell, one of the Iustices is Iudge of the goods of the deceased, the one succeeding another, from the yongest to the eldest, by their turne, which doth send his Commissaries through the bounds to take accompt of the houlders, and there be any carelesse, the Iustices are charged therewith in the visitations which are made of them, and before when there are any Plaintifes.

Touching married men.

Those Catholike Kings being informed that in the *Indies* were many married *Spaniards*, which liued separated from their wiues, of the which, besides the offence that was done to our Lord God, there followed a great inconuenience to the Plantation of those Countries, for that such not liuing seated in them, were not continued, neither did they attend to build, plant, breed, nor sowing, nor doing other things, which the good inhabitants are wont to doe, whereby the Townes doe not increase, as is behoofefull, and as they would do if there came inhabitants with their wiues & children, as true Townsmen: being willing to remedy the abovesaid, commanded that all and euery person or persons that should be found to be married, or betrothed in these Kingdomes, should come vnto them for their wiues, and not returne to the *Indies* without them, or with sufficient proof that they are dead. And the same order was giuen for all the Kingdomes, of that new world, and sundry times hath bene reiterated, and commanded to be executed vpon grievous penalties.

The holy Office of the Inquisition.

Proceeding from the yeare 1492. when the discouery of this Orbe was begun, in directing and setting the spirituall gouernment, as hath bene seene, for greater perfection, and enduring of it: The Catholike King *Don Phillip* the second, called the *Prudent*, considering that among the great benefites that the *Indians* haue receiued, their illumination to receiue the Euangelicall Doctrin was the greatest, which hath extended it selfe, and considering also the singular grace which God for his mercy hath vsed with them, in giuing them knowledge of our holy Catholike Faith; that it was necessary to haue a speciall vigilancy in the conseruing of the deuotion, and reputation of the inhabitants, and *Castillane* pacifiers, which with so many labours procured the augmenting of the Religion, and exalting of the Catholike Faith (as in those parts like faithful & Catholik Christians, and good naturall and true *Castillans* they haue done) & seeing that those which are out of the holy Catholike & Apostolike *Roman* Church, obstinate, and stubborne in their errors, and heresies, do alwayes procure to peruert the faithful Christians, labouring to draw them to their false opinions, scattering certain damned Books, wherof hath followed great hurt to our sacred Religion; and hauing so certain experience that the best meanes to preuent these euils, consisteth in the separating the communication of heretical persons, punishing their errors, according to the disposition of the sacred Canons & laws of these Kingdomes (which by this holy means, by the diuine clemency haue bene preserued from this wicked contagion, and is hoped they will be preserued hereafter) to the end that the Orbe doe not receiue so much hurt, where the inhabitants of these Kingdomes haue giuen so good example of Christianity, & the Country-born haue not peruered themselves with erroneous doctrines of the hereticks: It seemed good to his Maestie, with the aduice of the Cardinal *D. James of Espinosa*, Bishop of *Signenca*, Inquisitor generall in these Kingdomes, a man of great

prudence,

prudence; and of many rare parts and vertues, for the which he made election of his person, to help him to beare the burden of so many Kingdomes, and Lordships, and of the Counsels of the holy, and general Inquisition, and of the supreme Counsell of the *Indies* (for it behoued to place one Counsell of the holy Office in *Mexico*; for the Kingdomes of *New Spaine*; and the rest of the *Indies* of the North, and another in the Citie of the Kings, for the Kingdomes of *Piru*, and the adherents, which are called the *Indies* of the South) which the authority that the Counsels of these Kingdomes haue, so that as yet they should not meddle with the cases of the *Indians*, but onely of the *Castillanes*, & other Nations that should be found in the *Indies*, and so that the appeals should come to the supreme Counsell that is resident in this Court, as it is done in *Spaine*, and in the accomplishing thereof, in the yeare 1570. the King *Don Phillip* the second, called the *Prudent*, gaue a

10 general power to the Towne of *Madrid*, the 16. of August, that the Apostolike Inquisitors that should be named for the present, and for hereafter against the hereticall perversnesse, & Apostacie; and the Officers and Ministers necessary for this holy Office, which was commanded to be seated in the Cities of *Mexico*, and of the Kings, should exercise & vse their Offices, and royall warrants; that *Don Martin Enriquez*, and *Don Francisco* of *Toledo*, Viceroyes, and Captains general in the Kingdomes of *New Spaine*, and *Piru*, and the Counsels, and Iudices, Gouvernours, and other persons should giue all aide, and fauour to the holy Office, and the Inquisitors, and Officers were nominated, as in their owne place shall be spoken more at large.

20 These Catholike Kings, most wisely constituted the *Supreme Counsell of the Indies*, that they might helpe them to beare so great a burden, as is already the government of that Orbe, and the Counsell consisteth in one President, and eight or more Counsellors, as necessitie requireth, with one Attourney, Secretaries, Clerkes of the Chamber, Relators, and other Officers, and an Office of Accounts, where a notice is had of all the goods Royall of those parts. And that proceeding might be according to rule and order, they declared first that the Counsell should meet three houres euery day in the morning, and two in the afternoone; three dayes in the weeke that bee no holy dayes, and that they should firme the Warrants that should be deliuered for these Kingdomes; but that those that were for the *Indies*, should haue the seale Royall: and that in those parts it should haue supreme iurisdiction, and might make Lawes, and Decrees, to see and examine whatsoeuer

30 Statutes, Constitutions of Prelates, Senates, Chapters, and Conuents of the Religious, and of the Vice-royes, Courts, and Counsels; and that in the *Indies*, and in these Kingdomes, in matter dependant of them it should bee obeyed: that the government of the *Indies* should bee like this of these Kingdomes, and that more in particular the Counsell doe occupie it selfe in the matters of government. That in Suites remitted those of the Counsell Royall shall come to giue their voyces to that of the *Indies*, and that two voyces shall make a Sentence in suites of 500. Pesos, or vnder. That there be a second Supplication in a case of 10000. Pesos: that they deale not in the repartitions of the *Indians* in those parts, but the Processe well perused in the Courts according to a Law, called of *Malinas* (for there it was made) they shall come to the *Supreme Counsell*: touching order to be held in matters of seruices, that the Counsell doe see them all; and in matters of

40 rewards, that which the greatest part doth determine, shall be done, and that in these there be a Supplication, and that no expedient suite be seene the third time: and that in the matters they doe resoluue with breuitie, that the charges be giuen to the best deseruing, and that they be not giuen to the allied and kinsmen of them of the Counsell; neither may such bee Solicitors, nor Attorneys; in the prouidings of the Offices no price shall be admitted: nor that they of the Counsell haue any *Indians* of repartition, and they shall assist in their houses, that the Suiters may find them there, when they goe not to Counsell: and that due secrecy be kept in all things, and aboue all that the Counsell haue a particular care of the Conuersion and good Instruction of the *Indians*, and of the spirituall government; and that of 600000. Marmediz vpward the appeale shall come to the Counsell; that they may appeale from the Sentences in the five Cases of naturall death, or

50 mayming of a member, or other bodily punishment, publike shame, or racking, and the appeales shall come to the Counsell, with many other laudable orders, which are omitted for breuities sake.

That the President being a learned man, shall haue a voice in matters of Government, gratuities, and fauours, visitations, and accompts, and not in suites, because he may be the more free for the government of the Counsell; and being vnlearned he shall haue no voice, but in matters of grace, government, and fauour, and that he may assemble the Counsell in his owne house, and haue a noate of the businesse, and that the Counsellors doe not accompany with the Suitors. And because it seemed a necessary thing that one *Fiscad* or Attourney should assist in Counsell, it was commanded he should haue the same stipend that the Counsellors, and that they deliuer him the dis-

60 patches of the Office, that he haue a care to know how that is accomplished which is provided for the *Indies*; that necessary Papers be giuen him for his Office, that he doe see the visitations before Counsell: that he haue a book to register all the capitulations that are taken with the King, another wherein he may set down the Attorneys Pleas: that he delay not the suites: that his demands, or those that are against him be admitted, if the Counsell think it good: that he keep a book of that which is concluded for the cases; that he haue a care to know the Officers that doe omit to send a relation euery yeere to the Counsell.

Appeales. Which is 100. pound English, taking two Ryals for one shilling.

Which as we accompt 441. pound 3. shillings and one third part of a pennie.

He continueth the orders of the supreme Counsell.

Institution of
the Courts
royall of the
Indies.

Having ordained all that which appertaineth to the Counsell, which is the head of this Government, with many other orders which are not rehearsed for breuitie; they proceeded in ordering all the Prouinces of the *Indies*, in the matters of iustice, as neede required: and these Catholike Kings desiring the common good of that new world, that their subiects that should possesse it, hauing a zeale to the seruice of our Lord God, good, profit, & ease of the said Subiects, & to the Peace, and quietnesse of the Towns, as the King is bound vnto God, and to them, for to accomplish with the Office that he hath in earth, hee thought good to command to place the Courts and Royall Chanceries, that (as hath bene said) are in the *Indies*, with the Statutes, and orders that hath bene giuen them, that the Ministers may doe their office, and iustice be well administred, and the Townes obtained the benefit pretended.

The Court of
the Hispaniola.
* Or Ordinary
Iustice, &c.

The first Court that was established, was in the Citie of Saint *Dominicke*, in the Iland *Hispaniola*, with one President a learned man, though now because of the warre he is a Souldiour, with title of Captaine Generall, and foure Iustices that beare rods, like an *Alcalde*, and deale in ciuill and criminall matters, in a degree of apeale, and in the instance in matter of Court, and the Government is onely commended to the President (which now is in *Don Antonio Ossorio*) and the limits thereof. The second Court was established in the Citie of *Mexico*, in *New Spaine*: the first President which was *Nunyo of Guzman*, had no authoritie, for he was placed but for a season: with the second Court, the Bishop *D. Sebastian Ramirez* (for he was so in the Court of *Hispaniola*) he had the Government of the Kingdome, and the supream authoritie, and hee left that, established that which belonged vnto it, and vnto iustice, as at this present it is. The President of this Court is the Vice-roy (which now is the Earle of *Monterrey*) there are eight Iustices, which doe iudge in ciuill matters, and in the appeale of the cases of government which the Vice-roy establisheth. There are three Iustices of criminall cases, which beare rods, and deale in criminall cases, and two Attornies, one of ciuill, another of criminall causes, and hee prouiderh the Rulers charges that are not referred to the King, and the other Officers, and helpe of cost in releases, and vacations in the limits of this Court of *Mexico*, and in that Counsell of new *Galicia*.

The Court of
Mexico.

The Court of
Panama.

Wherefore it
was called *Terra firme*.

The third Court was that of *Panama* in *Terra firme* (for this name was giuen to it, because it was the first place where from the Ilands the *Castillanes* went to inhabit, and as their common speech was to say that they went and came from the *Firme Land*, though other Prouinces were found in the firme land of that Orbe) this Prouince continued this name, loosing that of *Castilla del Oro*, wherewith the Kings commanded it should be called: and when the affaires of *Peru* grew greater, in the year 1542. It was thought good that this Court should be removed to the Citie of *The Kings*, where the Vice-roy (which now is *Don Lewis of Velasco*) hath at his charge the government of these limits, and that of the Courts of the *Charcas* and *Quito*. There is in this Court of the Kings eight Iustices, three Iustices of Court, and two Attornies, in the same order as in *Mexico*: and the Vice-roy is resident in the Citie of the Kings, and is the President of this Court, and shall be in the other two, when he is present in them, and doth diuide all the repartitions of *Indians* that are voide in the bounds of them.

Court of the
Citie of the
Kings.

The Court of
Guatemala.

The fourth Court was established in the Prouince of the *Confines*, and seeming it was needlesse it was dissolved, and the year 1570. it was established againe in the Citie of Saint *James*, of the Kingdome of *Guatemala*: in it is one President which is the Doctor *Criado of Castile*: foure Iustices with rods, and one Attorney. They sit on ciuill and criminall cases, in appeales, and in the first instance: in matters of Court the President onely hath the Government, and assigneth the *Indians*, prouideth the Rulerships, and other Offices temporall. The fift Court was established in the Citie of *Santa Fe de Bogata*, in the new Kingdome of *Granada*, with one President (which now is the Doctor *Francisco de Sande*) foure Iustices with rods, and one Attorney, with the same authority that the former. The sixt was established in the Citie of *Guadalajara*, of the new Kingdome of *Galicia*, with one Regent, three chiefe Iustices, which dispatched a great while without Seale, and the matters increasing, the Seale was giuen, and a Register, and a President was placed, which now is Doctor *Sanctiago de Vera*: and three Iustices with rods, one Attorney, and the Viceroy of *New Spain* hath the Government. The seuenth Court, was placed in the Citie of Saint *James*, of the Prouince of *Piru*, where there was also a Regent, chiefe Iustices without Seale, and afterward the Court was established with a President (which now is the Licentiat *Miguel de Vnarrar*) with three Iustices with rods, & one Attorny with the same faculty of *Guadalajara*, the government, & the rest remaining to the Vice-roy of *Piru*, as abouesaid. The eight Court was in the Citie of the *Plate*, in the Prouince of the *Charcas*, with a Regent and chiefe Iustices: after there was placed a President, foure Iustices with rods, Attorney, Seale, and Register, and now is President the Licentiat *Cepeda*, with reueruation of the prouiding the charges, and the rest to the Vice-roy of *Piru*. The ninth Court, is that which was established againe in the Citie of *Panama*, with a President of Sword and Cloake, because of the matters of warre, which is now *Don Alonso de Sotomayor*, with the title of Captaine Generall of *Terra firme*: there are three Iustices with rods, which doe deale in Appeales of ciuill and criminall cases, and at first instance in mat-
tine of *Chile*, was placed the tenth Court, and because it seemed needelesse, it was dissolved,

ued, and a Gouvernour was provided, which dependeth on the Viceroy of *Piru*. In the Citie of the *Philippinas*, called *Manila*, was a Court; and it was dissolved, because it seemed needeleffe: a few yeares since it was established againe, with a Captaine Generall which is *Don Peter* of *Acuña* which is President, and foure Iustices, and one Atturney, with the same authoritie that the other Courts. For the Catholike Kings of *Castile*, with the aduise of the supreme Councell of the *Indies*, doe alwayes provide with a sincere and iust minde, that which is conuenient for the preservation, and augmenting of the spirituall and temporall things of those parts, without any spare of expences, or labor: and euery Court hath according to the vse of these Kingdomes, Secretaries, Relators, Sergeants, Porters, and the Officers which are necessarie.

10 **T**he harmonie and agreement of this great Monarchie, is such, that to euery Minister hath beene given the authoritie that as well by reason of estate, as for the reputation of iustice hath seemed to be conuenient, referuing to the supreme Maiestie that which hath beene iudged to be necessarie to his authoritie. For to the Vice-royes and Presidents, that they may haue to reward the well-deseruing, and they be more respected, there are Offices assigned which they may provide, and matters wherein they may gratifie, and to the providing of the Person Royall haue remayned, with consultation of the supreme Councell of the *Indies* the offices following.

20 For the Kingdome of *Chile* a Gouvernour and a learned Iustice, with facultie to incommend or authorise the *Indians*: another for *Tucuman*, with the same facultie: another for the Prouinces of the Riuer of *Plate*, for *Popayan*, *Sancta Martha*, *Cartagena*, and *Veragua*, with their Gouvernour in euery one with the same power. In the Prouinces of *Nicaragua*, and the *Rich Coast*, one: in the Island of *Cuba*, one Gouvernour, and Captaine which is resident in the Citie of *Saint Christo-pher* of the *Auana*: there are besides the Gouvernours of the Island of *Saint Iohn* of *Porte-rico*, *Venezuela*, *Socomsco*, *Yucatan*, *Cozumel*, and *Tabasco*, which is all one government with authoritie to commend the *Indians*. His Maiestie prouideth also the governments of *Honduras*, the *Margarite*, *Florida*, new *Bisque*, *Dorado*, those of the new Realme of *Lion*, and that of *Pacamoros*, *Tgual-sango*, which are for terme of life, and the same in the Prouinces of *Choco*, *Quixos*, the *Cynamom*, Islands of *Salomon*, *Sancta Cruz of the Hill*, and the last is that of the new *Andalusia*.

30 Likewise there are provided by his Maiestie the Rulerships following. The *Cuzco*, the Citie of the *Plate*, and the seate of the mynes of *Potosi*, and the prouince of *Chicuito*, the *Andes* of *Cuzco*, the citie of *Truxillo*, *Arrequipa*, *Saint Iames* of *Guayaquil*, *Guamanga*, the citie of the *Peace*, *Chiquiabo*, *Saint Iohn* of the Frontier, *Lion* of *Guanuco*, *Old Hauen*, *Zamora*, the inhabiting of the mynes of the *Zacatecas* in new *Galicia*, *Cuenca*, *Loxa*, *Tunja*, the citie of *Mexico*, the citie of the *Kings*, the prouince of *Nicoya*. Chiefe Iusticeships, are those of the village of *Saint Sauour* of the prouince of *Guatemala*, the inward part of *Hispaniola*, * *Nombre de Dios*, the village of *Chuluteca*, prouince of the *Chiapa*, *Zapotitan*, the village of *Nata*, *Sancta Marie* of the victorie in *Tabasco*. And the chiefe Bayliwickes are, in the citie of *Saint Dominicke* in *Mexico*, in *Guadalajara*, *Saint Iames* of *Guatemala*, *Panama*, holy *Faith* of *Bogota*, *Saint Francis* of *Quito*, the citie of the *Kings*, the *Plata*. In the Cities recited in euery one is a chiefe Bayliefe, which hath a voice in Councell as a Ruler, and Deputies named, for the vse of his Office, and in euery Court is another chiefe Bayliefe with facultie to name other two Deputies.

40 For the government of the goods Royall are provided by his Maiestie, with the opinion of the supreme Councell of the *Indies*, many Officers, Factors, Treasurers, Tellers, and Ouer-seers, which all doe giue assurance in *Castile* and in the *Indies*, of good and faithfull administration: and because this new Commonwealth doth augment so much, it seemed behoofefull to the seruice of God, and of the King, to ennoble and authorize it more, with placing two Vice-royes, one in *New Spaine*, another in the Kingdomes of *Piru*, that in the Kings name they should gouerne and provide the things belonging to the seruice of God, and of the King, and to the conuersion and instruction of the *Indians*, sustayning, continuing, inhabiting, and ennobling of the said Kingdomes, which experience hath shewed, that it hath beene conuenient: to the which Vice-royes instructions are given very particular of that which is recited, and that they may haue in protection the holy office of the Inquisition, and with their strong arme to defend and protect it, that this conformitie as a fast knot, may be the pure and true preservation of the spirituall and temporall Estate, which is the best and truest estate, and most according to the Euangelicall estate.

50 The Vice-royes are commanded also, and likewise the Iudges, not to haue houses proper, nor to trafficke, nor contract, nor be serued of the *Indians*, neither haue any * Grangeries, nor meddle in Armies, nor Discoueries; that they receiue no gifts nor presents of any person; nor borrow money, nor any thing to eate; nor pleade, nor receiue arbitrements. That no Lawyer may plead where his father, father in law, brother in law, cousin, or sonne is Iudge. That no Vice-roy, President, Iustice, Iudge of the criminall Cases, Solicitor, nor their children may marry in the *Indies*. That no Gouvernours, Rulers, nor their Deputies, may buy Lands, nor build Houses, nor trafficke in their iurisdiction. That they may not farme the Bayliwickes, nor laylorships, nor other offices. That no Gouvernour, Ruler, nor chiefe Bayliefe, during the time of his office, may marry in the bounds of his iurisdiction. That no Iudge be provided for a Ruler, neither shall the said

* Where herds of Cattell are bred.

saide Iudges, or Bayliefs, haue any charge in which they are to make any abience from their offices: neither shall any office of iustice be giuen to the sonnes, sonne in law, brothers in law, nor fathers in law of Presidents, Iustices, nor Solicitors, nor to the Officers of the Courts, and of the goods Royal, neither to seruants nor allied of theirs: and the same is commanded the Vice-royes. And that none of the abovesaid Ministers, doe accept warrant for recoueries nor other things, nor serue themselves of the *Indians* without paying them. That no Aduocate, Scriuener, nor Relator, doe dwell in the house of Iudge, nor Bayliefe, nor the Suiters serue the Iudges. That the Iudges of *Panama*, doe not accompanie themselves with the Dealers, nor giue leaue to their wiues to accompanie them. And that no Iustices of all the Courts, shall haue much communication with the Suiters, Aduocates, nor Attorneys: neither in body of a Court to goe to Marriages, Funerals, nor Spousals, except it be a very weighty matter: neither visite any Neighbour for any cause. That they doe not meddle in matters of the Commonwealth, nor any Iustice, nor other minister of the Court, may haue two offices in it. And besides these many other Ordinances, and good Lawes, which are all concerning administration of iustice.

men.

* Or accompts
of the Iudges,
or Iustices.

That they be
no slaues.

And because these Catholike Kings haue left nothing which most wisely they haue not pro-
vided for according to their dutie, the first thing they command the Vice-royes, and all the
Ministers in generall and particular is, the good vse of the *Indians*, and their preservation, and
the accomplishing of the Orders which are made as touching this, for to punish the Offenders
with great rigour: and as the *Indians* doe learne the *Castilian* policie, and can complaine, and
know in what things they receiue wrong, for their greater ease it is provided, that they giue no
place that the ordinarie writings be made in the suites betweene, or with the *Indians*, neither
make any delayes, as it is wont to happen, by the malice of some Aduocates, and Attorneys, but
that summarily they be determined, keeping their vses and customes, not being manifestly in-
iust, and that by all meanes possible, they doe provide the good and short dispatch of them. And
hauing notice that in the interpretation of the *Indians* languages, there were some fraudes; for to
preuent all, it was ordayned, that euery interpretation be made by two Interpreters, which shall
not confer both together about that which is controuerted by the *Indian*: and that before they
be receiued to the vse of the office, they shall take their oath to administer it faithfully, and that
they receiue no gifts of the *Indians* suiters, nor of others. That they doe assist at the Agree-
ments, Courts, and visitations of the Prisons. That in their houses they heare not the *Indians*,
but to carry them to the Court. That the Interpreters be not Solicitors, nor Attorneys of the
Indians. That they aske them nothing. And for their greater good, it is provided, that the At-
turney of the supreme Councell of the *Indies*, bee Protector of the *Indians*, and defend them in
their suites, and aske in the Councell all the necessarie things for his instruction, preservation,
and politike life: and now there are appointed Protectors in the Kingdomes of *Pern*, and *New
Spaine*, with new orders for their better vse.

It is also commanded, to set vp Schooles of the *Castilian* tongue, that the *Indians* may learne
it, and may doe it from their childhood; and that no vagabond *Spaniard* doe dwell or remayne
in the Townes of the *Indians*, nor among them, but that the Vice-royes and the Courts, doe put
all diligence in driuing such out of the Land, shipping them for *Castile*: and the Countrie borne
be compelled to serue and to learne Trades. And as well to the Prelates, as to the Vice-royes,
Courts, Gouvernours, and Rulers, and other whatsoever Iustices, is ordayned, and particular care
is had they doe accomplish it, that they doe provide how the offences that were done to God
may cease, in the *Indians* marrying whiles they are children, without hauing respect of age:
the *Caziques* marrying with more then one woman, though he be an Infidell: in hindering that
when some *Cazique* did die they should kill another to bee buried with him, and other like abo-
minable vses. That it be permitted to the *Indians* that they may dispose of themselves what they
list, as free men, and exempted from all manner labour, though it shall bee procured that they
doe labour and not be idle, and may haue libertie to dispose of their goods, the Lands being set to
sale by out-cry thirty dayes, and the moueable nine, the Iustice being present. That the Lands
remayning of any *Indian* deceasing without a Will, shall remayne in the Townes where they
dwelt. That they make the Markets freely, and sell in them their merchandize. That their good
vses and ancient customes be approued. That they may send to these Kingdomes *Indian* Attur-
neys for three yeeres. That the * Residencies be published in the *Indian* Townes, to see if any will
demand iustice. That in euery Towne of the *Indians* there bee an Hospitall with the things
necessarie.

In this matter of the *Indian* slaues, there were in the beginning of the Discoveries diuers opi-
nions, and orders, governing themselves as the time required and the state of the things: but af-
ter the Bishop *Don Sebastian Ramirez* came for President of *New Spaine*, this vse was absolutely
abolished, notwithstanding the ancient one which the *Indians* had to make themselves slaues one
to another: neither might they buy of them, nor receiue them, neither that any person may
bring to these Kingdomes any *Indian* in title of a slaue, though he be taken in lawfull warre: and
for this are so straight orders giuen that they are effectually kept, and so in no place of the *Indies*
are

are Indian slaues, though they be out of the bounds of *Castile* and *Lion*. And to eschew this inconuenience the more, the bringing *Indians* to these parts for whatsoever title it bee, is forbidden.

And the quietnesse for the Commonwealth being about all very necessarie, facultie is giuen to the Vice-royes, Presidents, Gouvernours, and other Iustices, that they may driue away, and banish from the *Indies* all vnquiet persons, and send them to these Kingdomes, iudging it so to bee conuenient for the quietnesse of those, but that it bee not for hatred or passion, nor for any such reason.

And that it may be some bridle to the Superiors, they are commanded, that they hinder no man the writing to the King, to his Councell, and to other persons, what they will: neither open, nor take any papers, or letters, vnder great penalties, and that they permit to passe and repasse through the Countrey them that will, prouiding wayes and bridges in the places where they are wanting.

As touching the matters of Warre, it is also prouided with great deliberation, for the Vice-royes greater authoritie, facultie is giuen them to haue a Guard on foot, and on Horse-backe: to make a casting place for Ordnance and Bullets, and a building for munitions, to leuy men, arme ships, and make fortifications, and prouide all the rest conuenient for the defence of those Kingdomes, and how the excesses of the Souldiers may be eschewed, as well by Land as by Sea, and to them that goe in the fleetes, committing the punishing of them to whom it belongeth, for to excuse competencies of iurisdiction.

It hath already beene said how all the Gouvernement of this Orbe, depends of the supreme and Royall Councell of the *Indies*, that are neere the Person Royall. But as it is necessarie that the executions of those parts haue correspondence in these; and here also there be they that may prouide in effecting that is behoofefull for the matters there: it was necessarie to place in *Siuil*, where all the trafficke of the *Indies* doth come, a house Royall of contratacion of it, that medleth not but in the dispatching of those businesses, and dependants of them, without any person nor Iustice doe intermeddle in any thing belonging to the *Indian* affaires: and it is in substance, a Tribunall of great authoritie, in the which is a President, which now is *Don Bernardino Delgadillo* of *Auelaneda*, a Teller, a Treasurer, one Factor, three learned Iudges, one Solicitor, one Relator, one Sergeant, Scriueners, Porter, Taylor, and other Officers. In the Ilands of *Tenerife* and *Palma*, are placed two learned Iudges, called Officers Royall, or Iudges of the Registers, to cause Orders to be kept that are giuen for the lading and Registers of those Ilands, and Nauigation of that voyage. The house of the Contratacion hath her instruction and ordinances, how her iurisdiction is to be gohened and exercised; and the learned Iudges haue it also for their vse and exercise, keeping in the seeing of the plea, betweene parties, the order that is held in the Courts of *Valladolid*, and *Granada*: and because the particular care of the officers of this house, is the dispatch of the Fleetes and Armies, that they may depart in due times, they employ themselves in it with great diligence, and in receiuing them that come, and setting in safeguard the Gold, Siluer, Iewels, and other things that doe come, with a distinction of the waight and carraets, charging themselves with all, that there may be more account and reason, and for to make the prouisions of the Fleetes and Armies. There are so good orders giuen, that neither the Ministers doe exceed, nor the Subjects receiue wrong, for all passeth very conformable to the intencion of these Godly and Catholike Kings, by meanes of the great diligence of the supreme Councell of the *Indies*.

And because the businesses of the *Indies* haue increased so much, that the supreme Councell could not dispatch them with the breuitie conuenient to the good gouernment of that Orbe, and the benefit of the Suiters, with the aduice of the President and supreme Councell; the King *Don Philip* the third our Lord, in imitation of his Catholike and Godly Predecessors, for the greater good of his subiects, hath instituted a *Prinse Councell*, where all the businesses of spirituall and temporall warrants, fauours and rewards may bee conferred and dispatched: and besides this, there are two Halls instituted, where on dayes appointed they may intreat of matters of warre, with the President and three Counsellors of the *Indies*, and two or three of the Counsell of warre, and other dayes, of the matters of the goods, by the President and Counsellors of *Indies*, and two of the Counsell of the goods, Atturney, and Secretarie of the Counsell of the *Indies*, the President naming those that he shall thinke best for it.

And as these Catholike Kings doe alwayes looke to the benefit of the people of that Orbe, considering that the propagation of the holy Gospell in no part of it could goe more prosperously by any other hands then his, nor bee attended for his preservation, and to haue the Conquerours and Inhabiters of those parts more satisfied, seeing all were his Subiects, and borne in these Kingdomes, declared by their Royall warrants, dated the yeere 1520. in *Valladolid*, and in the yeere 1523. in *Pamplona*, that their Maiesties, nor any of their Heires, in no time shall alienate from the Crowne Royall of *Castile* and *Lion*, the Ilands and Prouinces of the *Indies*, Towne, or any part of them, and so they promised it and gaue their Royall word.

About vnquiet persons.

Matters of warre.

The house of contratacion of Siuil.

Instruction of the Councell of Camara, or of Houshold.

That the *Indies* shall not bee alienated.

The Presidents, Counsellors, Secretaries, and Attorneys, which unto this present day haue serued, and doe serue in the Supreme Councill of the Indies, from their first Discoverie.

PRESIDENTS.

Iohn Rodriguez of Fonseca, brother to the Lord of Coca and Alaejos, Archbishop of Rosano, and Bishop of Burgos, being Deane of Simil, governed that which appertained to the dispatching of the Fleets and Armies of the Indies, till the Catholike King Don Fernando V. called him, to the end that in his Court hee might take charge of the Indian affaires, and he did it till the Emperor came to reigne, which commanded that the Doctor Mercurino Gatinares his great Chancellor, should be Superintendent of all the Councils, and all the dispatches passed through his hands, and intermealed in all the Assemblies that were made.

Friar Garcia of Loaysa General of the Order of Saint Dominicke, the Emperours Confessor, Bishop of Osma, which was Archbishop of Simil, and Cardinall.

Don Garcia Maurique, Earle of Osorno, which being Assistant of Simil, did gouerne till the Cardinall came from Rome.

Don Lewis Hurtado of Mendoza, Marques of Mondejar, which after was President of the Royall and supreme Councill of Castile.

The Licenciado Don Francisco Tello of Sandoval, which hauing bene of the Councill of the Indies, went for President of the Royall Chancerie of Granada, and from thence came to gouerne in the Councill of Indies.

The Licenciado Don Iohn Sarmiento was also of the Councill of the Indies, and after went to gouerne in the Royal Chancerie of Granada, from whence he returned to be President of the Royall and supreme Councill of the Indies.

Lewis Quixada, Lord of Villagarcia, and of the Councill of Warre.

The Licenciado Iohn of Obando, of the supreme Councill of the holy Inquisition, did preside in the Councill of the Indies, and of the goods Royall.

The Licenciado Don Antonio de Padilla, of the Royal and supreme Councill of Castile, passed to be President of the Councill of the Orders, and after to the supreme Councill of the Indies.

The Licenciado Hernando of Vega and Fonseca, of the supreme Councill of the holy and generall Inquisition, passed to the Councill of the goods Royall, and from it to the Royall and supreme Councill of the Indies.

The Licenciado Don Pedro de Moya of Contreras, the first Inquisitor that went to Mexico for to seate the holy Office in that Citie. Hee was Archbishop of that Citie, and President of the supreme Councill of the Indies.

The Licenciado Paul of Laguna, of the Royall and supreme Councill of Castile, and of the holy and generall Inquisition, passed to gouerne

in the Councill of the goods Royall and Tribunals of it, and was after President of the supreme Councill of the Indies: and in his time began the Royall Councill of the House-hold.

COUNSELLORS.

Hernando of Vega, Lord of Grajal, which was chiefe Knight of Lion, and President of the Councill of Orders. Licenciado Lewis Zapata. Licenciado Moxica. Doctor S. James. Doctor Palacios Penbros. Liebana. Licenciante *Ierome* of *Vlloa*. Licenciante *Gamboa*. Licenciante *Lopez* of *Sarria*. Licenciante *Scipion Antolinez*. Licenciante *Negron*. Doctor *Valencuela*. Doctor *Marcus Caro*. Licenciante *Bennet Rodriguez* of *Valsodano*. Licenciante *Alonso Perez* of *Salazar*. Licenciante *Roscke* of *Vallaguierre Chumazero*.

10 The Gouvernours, and Vice-royes, which haue governed untill this time, the Kingdomes of New Spaine, and of Piru.

In New Spaine.

Don *Fernando Cortes* Marques of the *Valley*, Gouvernour, chiefe Iustice, and Capitaine generall.

The Licenciante *Lewis Pance*, of the House of the Duke of *Arcos*, Iudge of * Residencia, with facultie to take the government, and by his death the Licenciante *Marcus* of *Agnilar*, natural of the Citie of *Exija*, was subrogated his Deputie; and because of his death succeeded within two moneths; hee substituted his authorities in the Treasurer *Alonso* of *Estrada*, borne in Citie Royall: and the death of *Lewis Pance* being knowne in *Castile*, it was provided that *Marcus* of *Agnilar* should gouerne, and in defect of him, *Alonso* of *Estrada*, till the first Court came, with order that *Nunno* of *Guzman*, Knight of *Guadalajara*, Gouvernour of *Pannco*, a President did come: and because it was conuenient to take away those Iudges, others were sent in their places, and for President in the government vniuersall of *New Spaine*, Don *Sebastian Ramirez* of *Fuenteal*, Bishop of *Saint Dominicke*, and of the *Conception*, late President of the Court of *Saint Dominicke*, a man of great learning; and that after many dignities died in *Castile* Bishop of *Cuenca*, and then the charge of Capitaine generall was given anew to the Marques *Don Fernando Cortes*, that he might gouerne the matters of warre, with the aduise of *Don Sebastian Ramirez*.

The first that had title of Vice-roy and Capitaine generall of *New Spaine*, was *Don Antonie* of *Mendoza*, brother of the Marques of *Mendoza*.

Don *Lewis* of *Velasco*, a Gentleman of the House of the high Constable of *Castile*.

Don *Gaston* of *Peralta*, Marques of *Falces*.

50 Don *Martine Enriquez* of *Almansa*, brother of the Marques of *Alcannizes*, the Kings Steward.

Don *Laurence Xuares* of *Mendoza*, Earle of *Corunya*, which deceased being provided for *Piru*, and by his death *Don Peter Moya* of *Contreras*, Archbishop of *Mexico*, gouerned in the meane while.

Don *Aluaro Manrique* of *Zuniga*, Marques of *Villamamague*, brother of the Duke of *Bojar*.

60 Don *Lewis* of *Velasco*, sonne to the abouetaid Don *Lewis* of *Velasco*, which passed to gouerne

the Kingdomes of *Piru*, where at this present hee is.

Don *Gaspard* of *Zuniga* and *Fonseca*, Earle of *Monterrey*, which gouerneth at this day.

In the Kingdomes of Piru.

Don *Franciscus Picarro*, Marques of the *Charcas*, Gouvernour, chiefe Iustice, and Capitaine generall.

The Licenciante *Vaca* of *Castro*, of the habit of *Saint James*, of the supreme Councell of *Castile*, carried Title of Gouvernour generall.

Blasco Nunnez Vela, a Gentleman of *Anila*, was the first that carried the Title of Vice-roy and Capitaine generall of the Kingdomes of *Piru*.

The Licenciante *James de la Gasca*, of the Councell of the holy and generall Inquisition, carried the Title of President of the new Court that was sent to the Citie of *The Kings*, and of Gouvernour generall, with facultie to giue the government of Armes to whom hee thought best. He died Bishop of *Siguenga*, and his Funerall and Trophees are seene in *Magdalene Church* in *Valladolid*, and in his absence the government remayned to the Court of the Citie of *The Kings*.

The second that carried Title of Vice-roy and Capitaine generall, was *Don Antonie* of *Mendoza*, that gouerned the Kingdomes of *New Spaine*.

Don *Andrew Hurtado* of *Mendoza*, Marques of *Canyete*.

Don *James* of *Zuniga* and *Velasco*, Earle of *Niema*.

The Licenciante *Lope Garcia* of *Castro*, of the Royall and supreme Councell of the *Indies*, carried title of President and Gouvernour general.

Don *Franciscus* of *Toledo*, brother to the Earle of *Oropesa*, Steward to the King.

Don *Martin Enriquez*, from the charge of *New Spaine*, passed to gouerne the Kingdomes of *Piru*.

Don *Garcia* of *Mendoza*, Marques of *Canyete*.

Don *Lewis* of *Velasco*, from the charge of *New Spaine*, passed to the Kingdomes of *Piru*, where now he is, and at the instant of the impression of this Worke, is provided for Vice-roy and Capitaine generall of those Kingdomes, Don *Iohn Pacheco*, Duke of *Escalona*.

* Or of the examination of a Iudge or Iustice, or other Officer after their time is expired, to see if any will complaine of any wrong done to him in that time, and to pay the damage so sustained by his default.

CHAP. II.

Observations gathered out of the First, Second, Third, and Fourth bookes of
 IOSEPHVS ACOSTA a learned Iesuite, touching the naturall hi-
 storie of the Heauens, Ayre, Water, and Earth at the west Indies.
 Also of their Beasts, Fishes, Fowles, Plants, and other
 remarkable rarities of Nature.

§. I.

Of the fashion and forme of Heauen, at the new-found World, and
 of the Ayre and Windes.

Lib. I. cap. 5.

Height taken
 by the Sunne.

Via lactea.

Shewing the
 reason why the
 Sunne without
 the Tropicks,
 causeth great
 quantitie
 of waters when
 it is farthest
 off; and con-
 trariwise, with
 in them it breed-
 eth most,
 when it is nee-
 rest. l. 2. chap. 7.

Any in Europe demand, of what forme and fashion Heauen is in the Southerne parts, for that there is no certaintie found in ancient Books, who although they grant there is a Heauen on this other part of the World, yet come they not to any knowledge of the forme thereof, although in truth they make mention of a goodly great Starre seene in those parts; which they call *Canopus*. Those which of late dayes haue sayled into these parts, haue accustomed to write strange things of this Heauen; that it is very bright, hauing many goodly Starres: and in effect, things which come farre, are commonly described with encrease. But it seemes contrarie vnto me, holding it for certaine, that in our Region of the North, there is a greater number and bigger starres; finding no starres in these parts, which exceede the *Fisher* or the *Chariot* in bignesse. It is true, that the *Crosse* in these parts is very faire and pleasing to behold: we call the *Crosse*, foure notable and apparant starres, which make the forme of a crosse, set equally and with proportion. The ignorant suppose this crosse to be the Southerne Pole, for that they see the Navigators take their height thereby, as wee are accustomed to doe by the North starre. But they are deceived, and the reason, why Saylers doe it in this sort, is for that in the South parts there is no fixed starre that markes the Pole, as the North starre doth to our Pole. And therefore they take their height by the starre at the foote of the *Crosse*, distant from the true and fixed Pole Antarticke thirtie degrees, as the North starre is distant from the Pole Articke three degrees or little more. And so it is more difficult to take the height in those parts, for that the said starre at the foote of the *Crosse* must be right, the which chanceeth but in one houre of the night; which is in diuers seasons of the yeere in diuers houres, and oftentimes it appeareth not in the whole night, so as it is very difficult to take the height. And therefore the most expert Pilots regard not the *Crosse*, taking the height of the Sunne by the Astrolabe, by which they know in what height they are: wherein commonly the *Portugals* are more expert, as a Nation that hath more discourse in the Arte of Nauigation then any other. There are also other starres in these Southerne parts, which in some sort resemble those of the North. That which they call the *Milken way*, is larger and more resplendent in the South parts, appearing therein those admirable blacke spots, whereof we haue made mention.

Considering with my selfe oftentimes, what should cause the Equinoctiall to bee so moist, as I haue said; to refute the opinion of the Ancients, I finde no other reason, but the great force of the Sunne in those parts, whereby it drawes vnto it a great abundance of vapours from out of the Ocean, which in those parts is very great and spacious: and hauing drawne vnto it this great abundance of vapours, doth suddenly dissolue them into raine, and it is approued by many tried experiences, that the raine and great stormes from Heauen proceed from the violent heate of the Sunne: first (as we haue said before) it raines in those Countries, when as the Sunne casts his beames directly vpon the earth, at which time he hath most force: but when the Sunne retires, the heate is moderate, and then there falls no raine: whereby wee may conclude, that the force and heate of the Sunne is the cause of raine in those Countries. Moreouer we obserue, both in *Pern*, new *Spaine*, and in all the burning Zone, that the raine doth vsually fall in the afternoone, when as the Sunne beames are in their greatest force, being strange to see it raine in the morning. And therefore Trauellers foreseeing it, begin their iourneys early, that they may end and rest before noone, for they hold that commonly it raines after noone. Such as haue frequented and trauelled those Countries, can sufficiently speake thereof. And there are, that (hauing made some abode there) say, that the greatest abundance of raine is, when the Moone is at the full; but to say the truth, I could neuer make sufficient prooffe thereof, although I haue obserued it. Moreouer, the dayes, the yeere, and the moneths, shew the truth hereof, that the violent heate of the Sunne causeth the raine in the burning Zone: experience teacheth vs the like in artificiall things, as in a Limbecke, wherein they draw waters from herbs and flowers; for the vehemency

mency of the fire forceth and driueth vp an abundance of vapours, which being pressed, and finding no issue, are conuerted into liquor and water. The like wee see in gold and siluer, which we refine with quick-siluer, the fire being small and slow, we draw out almost nothing of the quick-siluer, but if it be quick and violent, it doth greatly euaporate the quick-siluer, which encountering the head aboue, doth presently turne into liquor, and begins to drop downe: Euen so the violent heate of the Sunne produceth these two effects, when it findes matter disposed, that is, to draw vp the vapours on high, and to dissolue them presently, and turne them into raine, when there is any obstacle to consume them. And although these things seeme contrarie, that one Sunne within the burning Zone, being neere, should cause raine, and without the Zone as farre off should breed the like effect; so it is, that all well considered, there is no contrarietie. A thousand effects in naturall causes proceed of contrarie things by diuers meanes: we drie linnen by the fire, and in the aire, and yet the one heats and the other cooles; Pastures are dried and hardened by the Sunne and with the Frost; moderate exercise prouokes sleepe, being too violent, it hindereth: if you lay no wood on the fire, it dyeth; if you lay on too much, it likewise quencth: for the onely proportion entertaines and makes it to continue. To well discerne a thing, it must not be too neere the eye, nor too farre off, but in a reasonable distance proportionable; being too farre off from any thing we lose the sight, and too neere likewise we cannot see it. If the Sunne beams be weake, they draw vp no fogge from the Riuer, if they be violent, hauing drawne vp the vapours, they presently dissolue and consume them; but if the heat be moderate, it drawes vp and preserves it: for this reason the vapours rise not commonly in the night, nor at noone, but in the morning, when as the Sunne begins to enter into his force. There are a thousand examples of naturall causes vpon this subiect, which wee see doe often grow from contrarie things: where-by we must not wonder, if the Sunne being neere, engenders raine, and being farre off, works the like effect: but being of a moderate and proportionable distance, causeth none at all. Yet there remains one doubt, why the neernesse of the Sunne causeth the raine vnder the burning Zone, and without when it is farthest off. In my opinion the reason is, that in Winter without the Tropicks, the Sunne hath not force sufficient to consume the vapours which rise from the Land and Sea; for these vapours grow in great abundance in the cold Region of the aire, where they are congealed and thickned by the extremitie of the cold; and after being pressed, they dissolue and turne into water. Therefore in Winter when the Sunne is farthest off, the dayes short, and the nights long, his heat hath small force: but when the Sunne approacheth, which is in the Summer time, his force is such as it drawes vp the vapours, and suddenly consumes and disperseth them; for the heat and the length of the dayes grow through the neernesse of the Sunne. But within the Tropicks vnder the burning Zone, the farre distance of the Sunne workes the same effects that the neernesse doth without the Tropicks; by reason whereof, it raines no more vnder the burning Zone when the Sunne is farre off, then without the Tropicks when it is neere, for that in this approaching and retiring, the Sunne remaines alwayes in one distance whence proceedes this effect of cleernesse. But when the Sunne is in the period of his force in the burning Zone, and that he cast his beames directly vpon the Inhabitants heads, there is neither cleernesse nor drynesse, as it seemes there should be, but rather great and strange showers: for that by this violent heat, he drawes vp suddenly a great abundance of vapours from the Earth and Ocean, which are so thicke, as the winde, not able easily to disperse them, they melt into water, which breedeth the cold raine in so great abundance: for the excessiue heat may soone draw vp many vapours, the which are not so soone dissolued: and being gathered together through their great abundance, they melt and dissolue into water. The which wee may easily discerne by this familiar example: roast a piece of Porke, Mutton, or Veale, if the fire be violent, and the meate neere, wee see the fat melts suddenly and drops away, the reason is, that the violent heat drawes forth the humour and fat from the meat, and being in great abundance cannot dissolue it, and so it distills more away: But when the fire is moderate, and the meat in an equall distance, wee see that it roasts handsomly, and the fat drops not too suddenly, for that the moderate heat drawes out the moistnesse which it consumes suddenly. And therefore Cookes make a moderate fire, and lay not their meate too neere nor too farre off, lest it melt away. The like may bee seene in another experience in candles of tallow or waxe, if the wike bee great, it melts the tallow or the waxe, for that the heat cannot consume the moistnesse which riseth, but if the flame bee proportionable, the wax melts nor drops not, for that the flame doth waste it by little and little as it riseth.

But this is not to hinder the exceptions which Nature hath giuen to this Rule, making some Regions of the burning Zone extremely drie. The which is reported of *Ethiopia*, and wee haue seene it in a great part of *Pern*, where all that Land or Coast, which they call *Playnes*, wants raine, yea, land waters, except some Vallies where Riuer fall from the Mountaines; the rest is a sandie and barren soile, where you shall hardly finde any Springs, but some deepe Wells. But with the helpe of God, we will shew the reason why it rayneth not in these Playnes (the which many demand;) for now I onely pretend to shew, that there are many exceptions to naturall Rules, whereby it may happen, that in some part of the burning Zone it raines not when the

Gggg

Exceptions to
generall rules.

Sunne

Sunne is neereſt, but being fartheſt off, although vnto this day I haue neither ſeene nor heard of it: but if it be ſo, we muſt attribute it to the particular qualitie of the Earth: and alſo, if ſometimes the contrarie doth chance, we muſt haue regard that in naturall things there happens many contrarieties and lets, whereby they change and diſſolue one another. For example, it may be the Sunne will cauſe raine, and that the windes will hinder it; or elſe cauſe more abundance, then hath beene vſually.

The Authors
experience.

When I paſſed to the *Indies*, I will tell what chanced vnto mee: hauing read what Poets and Philoſophers write of the burning Zone, I perſwaded my ſelfe, that coming to the Equinoctiall, I ſhould not indure the violent heate, but it fell out otherwiſe; for when I paſſed, which was when the Sunne was there for Zenith, being entred into *Aries*, in the moneth of March, I felt ſo great cold, as I was forced to goe into the Sunne to warme me; what could I elſe doe then, but laugh at *Ariſtoteles* Meteors and his philoſophie, ſeing that in that place, and at that ſeaſon, when as all ſhould be ſcorched with heat, according to his rules, I, and all my companions were a cold. In truth there is no Region in the world more pleaſant and temperate then vnder the Equinoctiall, although it be not in all parts of an equall temperature, but haue great diuerſities. The burning Zone in ſome parts is very temperate, as in *Quito*, and on the playnes of *Peru*; in ſome parts very cold, as at *Potozi*, and in ſome very hot, as in *Ethiopia*, *Breſil*, and the *Molucques*. This diuerſitie being knowne and certaine vnto vs, wee muſt of force ſeek out another cauſe of cold and heat then the Sunne beames, ſeing that in one ſeaſon of the yeere, and in places of one height and diſtance from the Pole and Equinoctiall we finde ſo great diuerſitie, that ſome are in-
10
20

Various and
diuerſified
temper of the
Torrid Zone.

Causes of tem-
peratenesse
vnder the Line
and within the
Tropicks.

Conſidering this matter generally, I finde two generall cauſes, which maketh this Region temperate: the one is that before mentioned, for that this Region is very moiſt and ſubiect to raine, and there is no doubt but the raine doth reſreſh it, for that the water is by nature cold; and although by the force of the fire it be made hot, yet doth it temper this heat proceeding onely from the Sunne beames. The which wee ſee by experience in the inner *Arabia*, the which is burnt with the Sunne, hauing no ſhowres to temper the violence thereof. The cloudes and miſts are the cauſe that the Sunne offends not ſo much, and the ſhowres that fall from them, reſreſh both the Aire and the Earth, and moiſten likewise how hot ſo euer it be. They drinke raine water, and it quencheth the thirſt, as our men haue well tried, hauing no other to drinke. So as reason and experience doth teach vs, that raine of it ſelfe doth temper the heat; and hauing by this meanes ſhewed, that the burning Zone is much ſubiect vnto raine, it appeares that there is matter in it, to temper the violence of the heat. To this I will adde another reaſon, which deſerues to be knowne, not onely for this matter, but for many others; for although the Sunne be very hot and burning vnder the Equinoctiall, yet is it not long, ſo as the heat of the day being there ſhorter and of leſſe continuance, it cauſeth not ſo violent a heate; the which it behooues to ſpecifie more particularly. Such as are practiſed in the knowledge of the Spheare teach very well, that the more the Zodiacke is oblique and traueſing our Hemisphere, the more vnequall are the dayes and nights; and contrariwiſe, where the Spheare is ſtraight, and the ſignes mount directly, there the dayes and nights are equall. And therefore in all that Region which is betweene the two Tropicks, there is leſſe inequality then without them, and the more wee approach the Line the leſſe inequality we finde, the which wee haue tried in thoſe parts. Thoſe of *Quito*, for that they are vnder the Line, haue not throughout the whole yeere the dayes and nights more ſhort at one ſeaſon then at another, but are continually equall. Thoſe of *Lima* being diſtant almoſt twelue degrees, finde ſome difference betwixt the dayes and the nights, but very little; for that in December and Ianuarie the dayes increaſe an houre or little leſſe. Thoſe of *Potozi* finde much more difference both in Winter and in Summer, being almoſt vnder the Tropicke. But thoſe that liue without the Tropicks finde the dayes in Winter ſhorter and in Summer longer: the more remote they are from the Equinoctiall and come neere the Pole, as wee ſee in *Germanie* and in *England*, the dayes are longer in Summer then in *Italie* and in *Spaine*. It is a thing which the Spheare doth teach, and experience doth plainly ſhew vs. Wee muſt adde another Propoſition, which is likewise true and very conſiderable for all the effects of Nature to vnderſtand the perſeuerance and continuation of the efficient cauſe to worke and moue. This preſuppoſed, if any one demand of me, why vnder the Equinoctiall Line the heat is not ſo violent in Summer, as in ſome other Regions (as in *Andelouſia* in the moneths of Iuly and Auguſt) I will anſwere, that in *Andelouſia* the dayes are longer and the nights ſhorter; and as the day being hot, inflames and cauſeth heat; ſo the nights being cold and moiſt, giue a reſreſhing. According to the which, at *Peru*, there is no ſuch great heat, for that the dayes in Summer are not long, nor the nights ſhort; ſo as the heat of the day is much tempered by the freſhneſſe of the night.

That there bee
other reaſons
beſides the former
mentioned, which
ſhew, that the
burning Zone
is temperate,
eſpecially alongſt the Ocean. Chap. II.

Being a thing concluded, that the two fore-named properties are common and vniuerſall to all the Region of the burning Zone: and yet in the ſame there are found ſome places very hot, and other exceeding cold: Alſo, that the temperature is not there equall in all places, but vnder one climate, one part is hot, another cold, and the third temperate, all at one ſeaſon; wee are
40
50
60
forced

forced to seeke out other reasons, whence this great diuersitie should proceede in the burning Zone. Discourfing therefore vpon this question, I doe finde three apparant and certaine causes, and a fourth more obscure and darke. The apparant and certaine causes bee: The first, is the Ocean: the second, the situation of the Land: and the third, the nature and propertie of many and sundrie windes. Besides these three which I hold for manifest, I beleue there is a fourth hidden and lesse apparant, which is the propertie of the same Land inhabited, and the particular influence of the Heauens. Among the speciall causes and reasons, I haue first placed the Sea, for without doubt, the neernesse thereof doth helpe to temper and coole the heat: for although the Water be salt, yet is it alwayes water, whose nature is cold.

10 But if wee shall yet search more particularly, wee shall not finde in all this Land an equall temperature of heate, although it bee in equall distance from the Sea, and in the same degree, seeing that in some parts there is great heate, and in some very little. Doubtlesse, the cause thereof is, that the one is lower, and the other higher; which causeth that the one is hot, and the other cold. It is most certaine, that the tops of the Mountaines are colder then in the bottom of the Vallies, the which procedes; not onely for that the Sunne beames haue greater repercussions vpon lower places, although it be a great reason; yet there is another, which is, that the Region of the aire is colder when it is farthest from the ground. The cause why the middle Region of the aire is more cold, hath beene shewed before: for that the Region of the aire next to the fierie exhalation, the which (according to Aristotle) is vpon the Spheare of the aire, repells and thrusts backe all the cold, the which retires it selfe into the middle Region of the aire, by *Antiparistasis*, as the Philosophers speake. Now, if any one should question with me in this manner; If it be so that the aire is hot and moist, as Aristotle holds, and as we commonly say; whence then procedes the cold which is congealed in the middle Region of the aire, seeing it cannot come from the fierie Spheare? For if it come from the Water, or the Earth, by

Arist. Me.

20 To answer truly what I thinke, I will confesse, that this Argument and Obiection is so difficult, as I am almost readie to follow the opinion of such as reprove the qualities, agreements and disagreements which Aristotle giues vnto the Elements, saying, they are but imaginations, who for this occasion hold the aire to bee cold by nature. And to this end they vse many arguments and reasons, whereof we will propound one very familiar and well knowne, leauing the rest apart. In the Canicular dayes we are accustomed to beat the aire with a fan, and wee finde that it doth refresh vs; so as these Authors affirme, that heate is no priuate propertie of any other Element, but of fire onely, which is dispersed and mingled with all things (as the great De-

Dionys. c. 15. de cal. hietat.

30 *nis* doth teach vs.) But whether it be so, or otherwise (for I will not contradict Aristotle, but in that which is most certaine) in the end they agree all, that the middle Region of the aire is colder then the lowest next to the Earth, as experience doth shew vs; seeing that in this middle Region are congealed, Snow, Haile, Frosts, and other signes of extreme cold. The middle Region then which they call the burning Zone, hauing on the one side the Sea, and on the other the Mountaines, we must hold them for sufficient causes to temper and coole the heate.

40 The temperature of this Region ought chiefly to be attributed to the propertie of the winde that blowes in that Country, the which is pleasant and fresh. The prouidence of the great God Creator of all things hath beene such, as he hath ordayned fresh and coole windes in that Region where the Sunne makes his course (which seemes should be burnt vp) that by their coolenesse the excessiue heate of the Sunne might be qualified. Wee see in one climate, some Regions and Cities hotter then others, onely for that they feele lesse winde to refresh them. The like is in other Countries where no winde blowes, the which are all on fire like vnto a furnace. If we shall neerly looke into the consideration of the winde, whereof we haue spoken, we may resolute many doubts which some obiekt, and which seeme strange and wonderfull: wherefore the Sunne casting his beames vpon the burning Zone, and particularly at *Perna*, and that more violently then in *Spaine* in the Canicular dayes, yet they defend the heat with a light couering, so as with

50 a slender couering of mats or straw, they are better preserved from the heate, then in *Spaine* vnder a roofof wood, or a vault of stone. Moreover, why are not the nights in Summer at *Perna* as hot and troublesome as in *Spaine*? Wherefore on the highest tops of Mountaines, euen amongst the heapes of snowe, you shall sometimes feele great and insupportable heat? Wherefore in all the Prouince of *Colao*, when yee come into the shade, how little soeuer, you feele cold: But the comming into the Sunne beames, you presently finde the heate excessiue. Euery morning the winde from the Sea doth cease, and the Sunne begins to cast his beames; and for this reason they feele the greatest heat in the morning, vntill the returne of the same windes, which otherwise they call the tyde or winde of the Sea, which makes them first to feele cold. Wee haue tried all this, whilest wee were at the Ilands of *Barlonante*, where in the mornings wee did sweat for heat, and at noone we felt a fresh aire; for that then, a North Easterly winde which is fresh and coole, doth commonly blow.

That the cold windes bee the principal cause to make the burning Zone temperate. Chap. 13. It is noted by traouellers that there is a hot winde sometimes neere to *Balsara* and *Ormus* which swalloweth mens breath and suddenly kills them. *Libschoten* obserues at *Goa* the wind to blow twelue houres from the Sea, and other twelue constantly from the land.

60 Considering with my selfe, the pleasing temperature of many Countries at the *Indies*, where they know not what Winter is, which by his cold doth freeze them, nor Summer which doth trouble

trouble them with heat, but that with a Mat they preserve themselves from the injuries of all weather, and where they scarce have any neede to change their garments throughout the yeere. I say, that often considering of this, I find that if men at this day would vanquish their passions, and free themselves from the snares of covetousnesse, leaving many fruitlesse and pernicious designs, without doubt they might live at the *Indies* very pleasant and happily: for that which other Poets sing of the *Elisean* fields & of the famous *Tempe*, or that which *Plato* reports or feignes of his *Atlantike* Iland; men should finde in these Lands, if with a generous spirit they would chosse rather to command their silver and their desires, then to remayne to it slaves as they are.

Of the windes,
their differences,
properties,
and causes in
generall lib. 3.
cap. 2.

* We have abbreviated and to prevent tediousnesse cut off a great part of *Acosius* observations in the two former bookes, as having handled the same in our *Pilgrimage* 18. where we have shewed whence men and beasts might come thither, and that the opinion of the worlds uninhabitednesse betwixt the Tropicks is false: for the daily raine when the Sunne is neere, the long nights & therein great dewes, the breezes and constant course of the windes, the great Lakes & Rivers, height of Hills, &c. make those parts not onely habitable, but more temperate then others and fitter for mans life: there being more heat at, and on this side the Tropicks then under the Line. We here doe but call out choise things for better understanding of the naturall historie of those parts; for other things referring the Reader to the Author himselfe. Occasionally our notes shall elucidate those things also, which are in the Text omitted. * *Vulcans*, as *Atina*, *Hecia*, &c. sulphurous earth whence fire issueth. Generall windes, Monsoons, Windes receive their qualities from the places by which they passe.

Having discoursed in the two former Bookes of that which concerns the Heavens, and the habitation of the *Indies* in generall, it behooves vs now to treat of the three elements, Aire, Water, and Land, and their compounds, which be metals, plants and beasts; for, as for the fire, I see no speciall matter at the *Indies* which is not in other Regions; vnlesse some will say, that the manner to strike fire in rubbing two stones one against another, as some *Indians* doe, or to boile any thing in gourds, casting a burning stone into it, & other such like things, are remarkable, whereof I have written what might bee spoken. But of those which are in the *Vulcans* and Mouthes of fire at the *Indies*, worthy doubtlesse to be obserued, I will speake in their order, treating of the diuersitie of grounds, whereas they finde these fires or *Vulcans*. Therefore to begin with the windes, I say, that with good reason, *Salomon* in the great iudgement which God had giuen him, esteemes much the knowledge of the windes; and their properties being very admirable; for that some are moist, others drie; some vnhollsome, others sound; some hot, others cold; some calme and pleasant, others rough and tempestuous; some barren, and others fertile, with infinite other differences. There are some windes which blow in certaine Regions, and are, as it were, Lords thereof, not admitting any entrie or communication of their contraries. In some parts they blow in that sort, as sometimes they are Conquerors, sometimes conquered; often there are diuers and contrarie windes, which doe runne together at one instant, diuiding the way betwixt them, sometimes one blowing aboue of one sort, and another below of another sort, sometimes they incounter violently one with another, which puts them at Sea in great danger: there are some windes which helpe to the generation of Creatures, and others that hinder and are opposite. There is a certaine winde, of such a qualitie, as when it blowes in some Countrey, it causeth it to raine Fleas, and in so great abundance, as they trouble and darken the aire, and couer all the Sea-shore: and in other places it raine Frogs. These diuersities and others which are sufficiently knowne, are commonly attributed to the place by the which these windes passe. For they say, that from these places they take their qualities to be cold, hot, drie, or moist, sickly or sound, and so of the rest, the which is partly true, and cannot be denyed; for that in a small distance you shall see in one winde many diuersities. For example, the *Solanus* or Easterne winde is commonly hot and troublesome in *Spaine*; and in *Marrie* it is the coolest and healthfullest that is, for that it passeth by the Orchards; and that large champaigne which wee see very fresh. In *Carthage* which is not farre from thence, the same winde is troublesome and vnhollsome. The Meridionall (which they of the Ocean call South, and those of the Mediterranean Sea, *Mero giorno*) commonly is raynie and boysterous, and in the same Citie whereof I speake, it is whole- some and pleasant. *Plinie* reports that in *Africke* it raine with a Northerne winde, and that the Southerne winde is cleere. He then that shall well consider what I haue spoken of these windes, he may conceiue, that in a small distance of Land or Sea, one winde hath many and diuers qualities, yea sometimes quite contrarie; whereby wee may inferre, that hee draweth his propertie from the place where it passeth, the which is in such sort true (although we may not say infallibly) as it is the onely and principall cause of the diuersitie of the windes. It is a thing we easily find, that in a Riuer contayning fiftie leagues in circuit (I put it thus for an example) that the winde which blowes of the one part, is hot and moist; and that which blowes on the other, is cold and drie. Notwithstanding this diuersitie is not found in places by which it passeth, the which makes me rather to say, that the windes bring these qualities with them, whereby they giue vnto them the names of these qualities. For example, we attribute to the Northerne winde, otherwise called *Cierco*, the propertie to be cold and drie, and to dissolve mists; to the Southerne winde his contrarie, called *Leuesche*, we attribute the contrarie qualitie, which is moist and hot, and ingenders mists. But it is needfull to seeke further, to know the true and originall cause of these so strange differences which we see in the windes. I cannot conceiue any other, but that the same efficient cause which bringeth forth and maketh the winds to grow, doth withall giue them this originall qualitie: for in truth, the matter whereon the winds are made, which is no other thing (according to *Aristotle*) but the exhalation of the interior Elements, may well cause in effect a great part of this diuersitie, being more grosse, more subtil, more drie, and more moist. But yet this is no pertinent reason, seeing that we see in one Region, where the vapours and exhalations are of one sort and qualitie, that there rise windes and effects quite contrarie. We must therefore

referre the cause to the higher and celestially Efficient, which must be the Sunne, and to the motion and influence of the Heavens, the which by their contrarie motions, giue and cause diuers influences. But the beginnings of these motions and influences are so obscure and hidden from men, and on the other part, so mightie and of so great force, as the holy Prophet *David* in his propheticall Spirit, and the Prophet *Jeremie* admiring the greatnesse of the Lord, speake thus, *Qui profert ventos de thesauris suis*. Hee that drawes the windes out of his Treasures. In truth these principles and beginnings are rich and hidden treasures: for the Author of all things holds them in his hand, and in his power; and when it pleaseth him, sendeth them forth for the good or chastisement of men, and sends forth such windes as he pleaseth: not as that *Eolus* whom the Poets doe foolishly feigne to haue charge of the windes, keeping them in a Caeue like vnto wilde beasts. We see not the beginning of these windes, neither doe we know how long they shall continue, or whither they shall goe. But wee see and know well the diuerse effects and operations they haue, euen as the supreme Truth, the Author of all things hath taught vs, saying, *Spiritus ubi vult spirat, & vocem eius audis, & nescis unde venit, aut quò vadit*.

*Psalmè 134.
Jeremie 10.*

It is true, that the Northerne winde is not vsually cold and cleere there as here. In some parts of *Peru*, as at *Lima*, and on the Playnes, they finde the Northerne windes troublesome and vnwholsome, and all along the Coast which runnes aboute fiae hundred leagues, they hold the Southerne windes for healthfull and coole, and (which is more) most cleere and pleasant; yea it neuer raines, contrarie to that wee see in *Europe*, and of this side the Line. Yet that which chan-
 20 ceth vpon the coast of *Peru* is no generall rule, but rather an exception, and a wonder of Nature, neuer to raine vpon that coast, and euer to haue one winde, without giuing place to his contrarie, whereof we will hereafter speake our minde. It is no generall rule there, that the Northerne winde is neither hot nor raynie there, as the South winde blows there, as wee see in all the *Sierre* or mountaine of *Peru*, raines when as the South winde blowes there, as wee see in all the *Sierre* or mountaine of *Peru*, in *Chile*, and in the Countrie of *Congo*, which is on the other side of the Line, and farre aduanced into the Sea. And in *Potozi* likewise, the winde which they call *Tomahani* (which is our North) if my memorie faile me not, is extremely cold, drie, and vnpleasant, as it is here with vs. Yet doth not the Northerne winde disperse the cloudes vsually there, as it doth here: but contrariwise, if I be not deceiued, it doth often cause raine. There is no doubt, but the windes doe borrow this great diuersitie of contrarie effects, from the places by which they passe, and the neere Regions where they are bred, as wee see by daily experience in a thousand places. But speaking in generall of the qualitie of the windes, we must rather looke to the coasts or parts of the World from whence they proceede, then to obserue, whether they be on this side or beyond the Line, as it seemes the Philosopher held opinion. These capitall windes, which be the East and West, haue no such vniuersall qualities, nor so common in this Continent, nor in the other, as the two former. The *Solanus* or Easterne winde, is commonly here troublesome and vnwholsome, and the Westerne or *Zephirus*, is more milde and healthfull. At the *Indies*, and in all the burning Zone, the Easterne winde which they call *Brise*, is contrariwise very healthfull and pleasant. Of the West, I cannot speake any thing certaine or generall, for that it blowes not at all, or very seldom
 30 in the burning Zone, for in all the nauigation betwixt the two Tropicks, the Easterne winde is ordinarie. And for that it is one of the admirable workes of Nature, it shall bee good to vnderstand the cause and the beginning thereof.

*Here hath
shewed the
height of the
Hills to bee the
cause of the
windes con-
stancy and
raines rarities*

The wayes at Sea are not as at Land, to returne the same way they passe. It is all one way (saith the Philosopher) from *Athens* to *Thebes*, and from *Thebes* to *Athens*; but it is not so at Sea, for wee goe one way and returne by another. The first which discovered the East and West *Indies*, laboured much with great difficultie to finde out their course, vntill that Experience (the Mistresse of these secrets) had taught them, that to saile through the Ocean, is not like the passage in *Italie*, through the Mediterranean Sea, where in their returne, they obserue the same Ports and Capes they had sight of in their passage, attending still the benefit of the winde, which chan-
 50 geth instantly, and when that failes, they haue recourie to their Oares; and so the Gallies goe and come daily, coasting along the shoare. In some parts of the Ocean, they may not looke for any other winde then that which blowes, for that commonly it continues long. To conclude, that which is good to goe by, is not fit to returne with: for in the Sea beyond the Tropicke, and within the burning Zone, the Easterly windes raine continually, not suffering their contraries. In the which Region there are two strange things, the one is, that in that Zone (being the greatest of the fiae, into the which the World is diuided) the Easterly windes (which they call *Brises*) doe reigne, not suffering the Westerne or Southerne (which they call lower winds) to haue their course at any season of the yeere: The other wonder is, that these Easterly windes neuer cease to blow, and most commonly in places neere to the Line (where it seemes that Calmes should be more frequent, being a part of the World, most subiect to the heat of the Sunne, but it is contrarie, for you shall hardly finde any Calmes there, and the winde is cold and continues longer, which hath beene found true in all the Nauigations of the *Indies*. This is the reason, why the voyage they make from *Spaine* to the West *Indies* is shorter, more easie, and more assured, then the returne to *Spaine*.

*Eastern winde
raineth be-
twixt the Tro-
picks.
That the burn-
ing Zone, the
Brises, or Ea-
sterly windes,
doe continual-
ly blow, and
without the
Zone the We-
sterne, and that
the Easterly
are ordinarie
alwayes there.
Chap. 4.
Iuan de Gages
in Decade 1.
lib. 4. cap. 6.
They goe one
way to the In-
dies and returne
another, why?*

The Fleetes parting from *Sinil*, haue more difficultie to passe the *Canaries*, for that the gulfe of *Tegues* or of *Mares*, is variable, being beaten with diuers windes, but hauing passed the *Canaries*, they saile with a Westerne winde vntill they come to the burning Zone, where presently they finde an Easterly winde, and so they saile on with full windes, so as they haue scant any need to touch their sailes in the whole voyage: for this reason they called this great gulfe, the gulfe of *Dames*, for the calmnesse and pleasantnesse thereof. Then following their course, they come to the Ilands of *Guadalupe*, *Dominique*, *Desired*, *Marigualante*, and the rest, which in that place, be as it were, the Suburbs of the *Indies*. There the Fleetes separate and diuide themselves, whereof some (which goe to new *Spaine*) take to the right hand towards *Hispaniola*; and hauing discovered Cape Saint *Anthony*, they passe vnto Saint *Iohn Delua*, alwayes vsing the same Easterly windes. Those for the mayne Land, take the left hand, discovering the high mountaine of *Tayrone*, then hauing touched at *Carthagene*, they passe vnto *Nombre de Dios*, from whence they goe by Land to *Panama*, and from thence, by the South Sea to *Peru*. But when the fleetes returne to *Spaine*, they make their voyage in this sort: The fleete of *Peru* discovers Cape Saint *Anthony*, then they enter into the *Hauana*, which is a goodly Port in the Iland of *Cuba*. The fleet of new *Spaine* doth likewise touch at the *Hauana*, being parted from *Vera Cruz*, or from the Iland of Saint *Iohn Delua*, the which is not without difficultie, for that commonly Easterly windes blow there, which is a contrarie winde to goe to the *Hauana*. These fleetes being ioyned together for *Spaine*, they seeke their height without the Tropicks, where presently they finde Westerly windes, which serue them vntill they come in view of the *Acores*, or *Terceres*, and from thence to *Sinil*. So as their voyage in going, is of a small height, not aboue twentie degrees from the Line, which is within the Tropicks. But the returne is without the Tropicks, in eight and twentie or thirtie degrees of height at the least, for that within the Tropicks, the Easterne windes continually blow, the which are fittest to goe from *Spaine* to the West *Indies*, for that their course is from East to West; and without the Tropicks (which is in three and twentie degrees of height) they finde Westerly windes, the which are the more certaine and ordinarie, the farther you are from the Line, and more fit to returne from the *Indies*; for that they are windes blowing from the South and West, which serue to runne into the East and North.

Sayling 2700. leagues without sight of Land in two moneths. See *Candisbes* voyage.

The like discourse is of the Navigation made into the South Sea, going from new *Spaine* or *Peru*, to the *Philippines* or *China*, and returning from the *Philippines* or *China* to new *Spaine*, the which is easie, for that they saile alwayes from East to West, neere the Line, where they finde the Easterly windes to blow in their Poopes. In the yeere 1584. there went a ship from *Calloa* in *Lima* to the *Philippines*, which sayled two thousand and seuen hundred leagues without sight of Land, and the first it discovered, was the Iland of *Lusson*, where they tooke Port, hauing performed their voyage in two moneths, without want of winde or any torment, and their course was almost continually vnder the Line; for that from *Lima* (which is twelue degrees to the South) he came to *Manilla*, which is as much to the North. The like good fortune had *Aluaro de Mandana*, when as he went to discover the Ilands of *Solomon*, for that he had alwayes a full gale, vntill he came within view of these Ilands, the which must bee distant from that place of *Peru*, from whence hee parted, about a thousand leagues; hauing runne their course alwayes in one height to the South. The returne is like vnto the voyage from the *Indies* vnto *Spaine*: for those which returne from the *Philippines* or *China* to *Mexico*, to the end they may recouer the western windes, they mount a great height, vntill they come right against the Ilands of *Iapon*, and discovering the *Caliphornes*, they returne by the coast of new *Spaine* to the Port of *Acapulco*, from whence they parted. So as it is proued likewise by this Navigation, that they saile easily from East to West, within the Tropicks, for that their Easterly windes doe raine: but returning from West to East, they must seeke the Westerly windes without the Tropicks, in the height of seuen and twentie degrees. The *Portugals* proue the like in their Navigations to the East *Indies*, although it be in a contrarie course.

Cause of the Brises.

Motion of the *Primum Mobile* carrieth the inferiour aire with it.

Let vs now speake of that which toucheth the Question propounded, what should be the reason why vnder the burning Zone we saile easily from East to West, and not contrarie: wherein we must presuppose two certaine grounds. The one is, that the motion of the first Moouer, which they call *Diurnall*, not onely drawes and mooues with him the celestiall Spheares, which are inferiour vnto him, as wee see daily in the Sunne, the Moone, and the Starres; but also the Elements doe participate of this motion, insomuch as they are not hindered. The Earth is not mooued, by reason of her heauinesse, which makes it immouable, being farre from this first motor. The Element of water mooues not likewise with this *Diurnall* motion, for that it is vnited to the Earth and make one spheare, so as the Earth keeps it from all circular motion. But the other two Elements of Fire and Aire, are more subtil and neerer the heauenly Regions, so as they participate of their motion, and are driuen about circularly, as the same celestiall bodies. As for the Fire, without doubt it hath his spheare (as *Aristotle* and other Philosophers haue held) but for the Aire (which is no point of our subiect) it is most certaine that it mooues with a motion *Diurnall*, which is from East to West, which wee see plainly in Comets that mooue from the East vnto the West, mounting, descending, and finally turning in the hemisphære in the

same

same sort as the Starres moue in the firmament; for otherwise these Comets being in the region and sphere of the ayre, whereas they ingender, appeares consum'd. It should be impossible for them to moue circularly, as they doe, if the element of the aire doth not moue with the same motion that the first motor doth. For these elements being of a burning substance, by reason they should be fixt, without mouing circularly, if the sphere where they are did not moue; if it be not as we saie, that some Angell or intellectuall Spirit doth walke with the Comet, guiding it circularly. In the yeare 1577. appeared that wonderfull Comet (in forme like vnto a feather) from the horizon almost to the middest of heauen, and continued from the first of Nouember, vntill the eight of December: I say from the first of Nouember, for although in *Spaine* it was noated but the ninth of Nouember (according to the testimonie of Writers of that time) yet at *Peru*, where I was then, I remember well, we did see it, and obserue it eight dayes before, and all the time after. Touching the cause of this diuersitie, some may delate vpon it particularly: I will onely shew, that during those fortie dayes which it continued, wee all obserued (both such as were in *Spaine*, and we that liued then at the *Indies*) that it moued daily with an vniuersall motion, from East to West, as the Moone and other Planets, whereby it appeares that the sphere of the aire, being its Region, the element it selfe must of necessitie moue after the same sort. We noted also, that besides this vniuersall motion, it had another particular, by which it moued with the planets from West to East, for euery night it turned more Eastward, like vnto the Moone, Sunne, and Planets of *Venus*. We did also obserue a third particular motion, whereby it moued from the Zodiacke towards the North; for after some nights it was found neerer vnto the Septentrionall signes. And it may be this was the reason why the great Comet was sooner seene by those that were Southerly, as at *Peru*, and later discovered by them of *Europe*: for by this third motion (as I haue said) it approached neerer the Northerne Regions. Yet euery one may well obserue the differences of this motion, so as we may well perceiue, that many and sundry celestiaall bodies, giue their impressiions to the sphere of the ayre. In like sort it is most certaine, that the ayre moues with the circular motion of the heauen, from East to West, which is the first ground before mentioned. The second is no lesse certaine, which is, that the motion of the ayre in those parts that are vnder the Line, or neere vnto it, is very swift and light, the more it approacheth to the Equinoctiall; but the farther off it is from the Line, approaching neere the Poles, the more slow and heauie this motion is. The reason hereof is manifest, for that the mouing of the celestiaall bodies, being the efficient cause of the mouing of the ayre, it must of necessitie be more quicke and light, where the celestiaall bodies haue their swiftest motion.

The Comet
1577. seene
eight dayes
sooner in *Peru*
then in *Spaine*.

Alonso Sanchez was of opinion that this motion of the ayre was not a winde, but the ayre moued by the Sunne. This is learnedly spoken, yet can wee not deny it to be a winde, seeing there are vapours and exhalations of the Sea; and that we sometimes see the *Brise*, or Easterly windes stronger, sometimes more weake, and placed in that sort, as sometimes they can hardly carry all their sayles. We must then know (and it is true) that the ayre moued, draweth vnto it the vapours it findes, for that the force is great, and findes no resistance, by reason whereof the Easterne and Westerne windes are continual, and in a manner alwayes alike, in those parts which are neere the Line, and almost vnder all the burning Zone, which is the course the Sun followes betwixt the two circles of *Cancer* and *Capricorne*.

The Brise (or
motion of the
aire with the
heauens) is a
winde.

Who so would neerely looke into what hath bin spoken, may likewise vnderstand, that going from the West to the East, in altitude beyond the Tropikes, we shall finde Westerly windes, for that the motion of the Equinoctiall being so swift, it is a cause that the ayre moueth vnder it according to this motion, which is from the East to West, drawing after it the vapours and exhalations that rise of either side the Equinoctiall or burning Zone, in countring the course and motion of the Zone, are forced by the repercussion to returne almost to the contrary, whence grow the South-west windes so ordinary in those parts. Euen as we see in the course of waters, the which (if they be incountred by others of more force) returne in a manner backe: So it seemes to be like in vapours and exhalations, whereby it growes that the windes doe turne and separate themselves from one part to another. These Westerly windes doe commonly raine in a meane altitude, which is from twenty and seuen to thirty and seuen degrees, though they be not so certaine nor so regular as the *Brises* that are in a lesse altitude. The reason is, for that the South-west winds are no causes of this proper and equall motion of the heauen, as the *Brises* are, being neere to the Line. But (as I haue said) they are more ordinary, and often more furious and tempestuous. But passing into a greater altitude, as of fortie degrees, there is as small assurance of windes at Sea as at Land; for sometimes the East or North winde blowes, and sometimes the South, or West: whereby it happeneth their nauigations are more vncertaine, and more dangerous.

Why without
the Zone, in a
greater alti-
tude, we finde
alwayes We-
sterly windes.
Chap. 7.

That which we haue spoken of windes, which blow ordinarily within and without the Zone, must be vnderstood of the maine Sea, and in the great gulphes; for at land it is otherwise, where we finde all sorts of windes, by reason of the inequality which is betwixt the Mountaines and the vallies; the great number of Riuers and Lakes, and the diuers scituations of Countries, whence the grosse and thick vapours arise, which are moued from the one part or the other, according

Chap. 8.
Cause of the
variety of
windes.

Simile.

Note.

according to the diuersitie of their beginnings, which cause these diuers windes the motion of the ayre, caused by the heauen, hauing not power enough to draw and moue them with it. And this varietie of windes is not onely found at land, but also vpon the Sea coast, which is vnder the burning Zone, for that there be forraine or land windes which come from the land, and many which blow from the Sea; the which windes from the Sea, are commonly more wholesome and more pleasant then those of the land, which are contrariwise troublesome and vnwholesome, although it be the difference of the coast that causeth this diuersitie: commonly the land windes blow from mid-night to the Sunne rising, and the Sea windes vntill Sunne setting. The reason perhaps may be, that the earth, as a grosse substance, fumes more when as the Sunne shines not vpon it, euen as greene wood, or scarfe dry, smoakes most when the flame is quenched. But the Sea, which is compounded of more subtile parts, engenders no fumes, but when it is hot, euen as straw or hare, being moist and in small quantitie, breeds smoake when it is burnt, and when the flame failes, the fume suddenly ceaseth. Whatsoeuer it be, it is certaine that the Land winde blowes by night, and that of the Sea by day. So that euen as there are often contrary, violent, and tempestuous windes vpon the Sea coast, so doe we see very great calmes. Some men of great experience report, that hauing sailed many great passages at Sea vnder the Line, yet did they neuer see any calmes, but that they alwayes make way little or much, the ayre being moued by the celestially motion, which is sufficient to guide a Shippe, blowing in poepe, as it doth. I haue already said, that a Shippe of *Lima* going to *Manilla*, sailed two thousand seuen hundred leagues, alwayes vnder the Line, or not aboue twelue degrees from it, and that in the moneths of February and March, when as the Sunne is there for Zenith, and in all this space they found no calmes, but alwayes a fresh gale, so as in two moneths they performed this great voyage. But in the burning Zone and without it, you shall vsually see great calmes vpon the coasts, where the vapours come from the Ilands, or maine land. And therefore stormes and tempests, and the sudden motions of the ayre, are more certaine and ordinary vpon the coasts, whereas the vapours come from the Land, then in full Sea, I meane vnder the burning Zone, for without it and at Sea, there are both calmes and whirlwindes. Notwithstanding, sometimes betwixt the two Tropickes, yea, vnder the Line, you shall haue great raine and sudden showers, yea farre into the Sea; for the working whereof, the vapours and exhalations of the Sea, are sufficient, which mouing sometimes hastily in the ayre, cause thunder and whirlwindes, but this is more ordinary neere to the Land and vpon the Land. When I sailed from *Pern* to new *Spaine*, I obserued, that all the time we were vpon the coast of *Pern*, our voyage was (as it was ordinary) very calme and easie, by reason of the Southerne winde that blowes, hauing alwayes a fore winde, returning from *Spaine* and new *Spaine*. As we passed the gulph, lanching farther into the Sea, almost vnder the Line, wee found the season coole, quiet, and pleasant, with a full winde, but comming neere to *Nicaragua*, and to all that coast, wee had contrary windes, with great store of raine and fogges. All this Nauigation was vnder the burning Zone: for from twelue degrees to the South, which is *Lima*, we sailed to the seuenteenth, which is *Gan-tulco*, a port of new *Spaine*: and I beleue, that such as haue obserued their nauigations, made vnder the burning Zone, shall finde what I haue said, which may suffice for the windes which raigne at Sea, vnder the burning Zone.

Of some marvellous effects of the windes, which are in some parts of the Indies.

Sea sickness whence.

Agitation and Sea ayre.

It were a very difficult matter, to report particularly the admirable effects which some windes cause in diuers regions of the world, and to giue a reason thereof. There are windes, which naturally trouble the water of the Sea, and makes it greene and blacke, others cleere as Christall, some comfort and make glad, others trouble and breede heatinesse. Such as nourish Silke-wormes, haue great care to shut their windowes, when as the South-west windes doe blow, and to open them to the contrary: hauing found by certaine experience, that their wormes diminish and dye with the one, and fatten and become better with the other: and who so will neereley obserue it, shall finde in himselfe, that the diuersities of windes, cause notable impressions and changes in the body, principally in sicke parts and ill disposed, when they are most tender and weake. The holy Scripture calleth one a burning winde, another, a winde full of dewe and sweetnesse. And it is no wonder if we see such notable effects of the winde, in Plants, Beasts, and Men, seeing that we see it visibly in Iron, which is the hardest of all mettals. I haue seene Grates of Iron in some parts of the Indies, so rusted and consumed, that pressing it betwixt your fingers, it dissolued into powder, as if it had beene hay or parched straw, the which proceeds onely from the winde which doth corrupt it, hauing no meanes to withstand it. But leauing apart many other great and notable effects, I will onely make mention of two. The one, although it causeth pangs greater then death it selfe, yet doth it not breede any further inconuenience. The other takes away life without feeling of it. The sickness of the Sea, wherewith such are troubled as first begin to goe to Sea, is a matter very ordinary; and yet if the nature thereof were vnknowne to men, we should take it for the pangs of death, seeing how it afflicts and torments while it doth last, by the casting of the stomacke, paine of the head, and other troublesome accidents. But in truth this sickness so common and ordinary happens vnto men by the change of the ayre and Sea. For although it be true that the motion of the Ship helps much,

in that it moues more or lesse: and likewise the infections and ill fauours of things in the Ship: yet the proper and naturall cause, is the ayre and the vapours of the Sea, the which doth so weaken and trouble the body and the stomacke, which are not accustomed thereunto, that they are wonderfully moued and changed: for the ayre is the Element, by which we liue and breath, drawing it into our entrailles, the which we bathe therewithall. And therefore there is nothing that so suddenly, and with so great force doth alter vs, as the change of the ayre we breathe, as we see in those which dye of the plague. It is approued by many experiences, that the ayre of the Sea, is the chiefe cause of this strange indisposition; the one is, that when there blowes from the Sea a strong breath, we see them at the Land as it were Sea-sicke, as I my selfe haue often found. Another is, the farther wee goe into the Sea, and retyre from Land, the more wee are touched and dazeled with this sickness. Another is, that coasting along any Island, and after lanching into the maine, we shall there finde the ayre more strong. Yet will I not deny, but the motion and agitation may cause this sickness, seeing that we see some are taken therewith passing Riueres in Barkes: others in like sort going in Coaches and Carriages, according to the diuers complexions of the Stomacke: as contrariwise, there are some how boisterous and troublesome soeuer the Sea be; doe neuer feele it. Wherefore it is a matter certaine, and tried, that the ayre of the Sea, doth commonly cause this effect in such as newly goe to Sea. I thought good to speake this, to shew a strange effect, which happens in some parts of the *Indies*, where the ayre and the winde that rains makes men dazele, not lesse, but more then at Sea. Some hold it for a fable, others say it is an addition: for my part I will speake what I haue tried.

There is in *Peru*, a high mountaine which they call *Pariacaca*, and hauing heard speake of the alteration it bred, I went as well prepared as I could, according to the instructions which was giuen me, by such as they call *Vaguianos*, or expert men: but notwithstanding all my prouision, when I came to mount the *degrees*, as they called them, which is the top of this mountaine, I was suddenly surprized with so mortall and so strange a pang, that I was ready to fall from the top to the ground: and although we were many in company, yet euery one made haste (without any tarrying for his companion,) to free himselfe speedily from this ill passage. Being then alone with one *Indian*, whom I intreated to helpe to stay me, I was surprized with such pangs of straining and casting, as I thought to cast vp my heart too; for hauing cast vp meate, flegme, and coler, both yellow and Greene; in the end I cast vp blood, with the straining of my stomacke. To conclude, if this had continued, I should undoubtedly haue dyed; but this lasted not aboue three or foure houres, that wee were come into a more conuenient and naturall temperature, where all our companions (being foureteene or fifteene) were much wearied. Some in the passage demanded confession, thinking verily to dye: others left the Ladders and went to the ground, being daerome with casting, and going to the stools: and it was told me, that some haue lost their liues there with this accident. I beheld one that did beate himselfe against the earth, crying out for the rage and griefe which this passage of *Pariacaca* had caused. But commonly it doth no important harme, onely this, paine and troublesome distaste while it endures: and not onely the passage of *Pariacaca* hath this propertie, but also all this ridge of the Mountaine, which runnes aboue five hundred leagues long, and in what place soeuer you passe, you shall finde strange intemperatures, yet more in some parts then in other, and rather to those which mount from the Sea, then from the Plaines. Besides *Pariacaca*, I haue passed it by *Lucanas* and *Soras*: in another place, by *Colleguas*, and by *Cananas*. Finally, by foure different places, going and coming, and alwayes in this passage I haue felt this alteration, although in no place so strongly, as at the first in *Pariacaca*, which hath beene tried by all such as haue passed it. And no doubt but the winde is the cause of this intemperature and strange alteration, or the ayre that raines there. For the best remedy (and all they finde) is to stoppe their noses, their eares, and their mouthes, as much as may be, and to couer themselves with cloathes, especially the stomacke, for that the ayre is subtile and piercing, going into the entrailles, and not onely men feele this alteration, but also beasts that sometimes stay there, so as there is no spurre can make them goe forward. For my part I hold this place to be one of the highest parts of land in the world; for we mount a wonderfull space. And in my opinion, the Mountaine *Nenade* of *Spaine*, the *Pirenees*, and the *Alpes* of *Italie*, are as ordinary houles, in regard of his Towers. I therefore perswade my selfe, that the element of the ayre is there so subtile and delicate, as it is not proportionable with the breadth of man, which requires a more grosse and temperate ayre, and I beleue it is the cause that doth so much alter the stomacke, and trouble all the disposition. The passages of the mountaines *Nenade*, and other of *Europe*, which I haue seene, although the ayre be cold there, and doth force men to weare more cloathes, yet this colde doth not take away the appetite from meate, but contrariwise it prouokes; neither doth it cause any casting of the stomacke, but onely some paine in the feete and hands. Finally, their operation is outward. But that of the *Indies*, whereof I speake (without molesting of foote or hand, or any outward part) troubles all the entrailles within: and that which is more admirable, when the Sunne is hot, which maketh me imagine, that the griefe wee feele comes from the qualitie of the ayre which wee breathe: Therefore that is most subtile and delicate, whose cold is not so sensible, as piercing. All this ridge

Strange passage on at *Pariacaca* by the ayre there.

Height of *Pariacaca*.

Aire is so subtile for mens bodies. So we see Horses to beate the water with their feete to make it more grosse and thereby more agreeable to their bodies.

gelan Straits.

ridge of mountaines is, for the most part, defart, without any Villages or habitations for men, so as you shall scarce finde any small Cortages to lodge such as doe passe by night: there are no Beasts, good or bad, but some *Vicinos*, which are their Countrie Muttons, and haue a strange and wonderfull property, as I shall shew in his place. The Grasse is often burnt, and all blacke with the ayre, and this Defart runs fve and twenty or thirty leagues ouerthwart, and in length aboue fve hundred leagues.

There are other Defarts or places inhabited, which at *Peru* they call *Punas* (speaking of the second point we promised) where the qualitie of the ayre cutteth off mans life without feeling. In former time the *Spaniards* went from *Peru*, to the Realme of *Chille* by this Mountaine, but at this day they doe passe commonly by Sea, and sometimes alongst the side of it. And though that way be laborious and troublesome, yet is there not so great danger as by the Mountaine, where there are Plaines, on the which many men haue perished and dyed, and sometimes haue scaped by great hap, whereof some haue remained lame. There runs a small breath, which is not very strong nor violent, but proceeds in such sort, that men fall downe dead, in a manner without feeling, or at the least, they loose their feete and hands: the which may seeme fabulous, yet is it most true. I haue knowne and frequented long the Generall *Ierome Costilla*, the auncient peopler of *Cusco*, who had lost three or foure toes, which fell off in passing the Defart of *Chille*, being perished with this ayre, and when he came to looke on them, they were dead, and fell off without any paine, euen as a rotten Apple falleth from the tree. This Captaine reported, that of a good armie which he had conducted by that place, in the former yeares, since the discouery of this Kingdome by *Almagro*, a great part of the men remained dead there, whose bodies he found lying in the Defart, without any stinke or corruption; adding thereunto one thing very strange, that they found a yong Boye alieue, and being examined how hee had liued in that place, hee said, that he lay hidden in a litle Caue, whence hee came to cut the flesh of a dead Horse with a litle Knife, and thus had he nourished himselfe a long time, with I know not how many companions that liued in that sort, but now they were all dead, one dying this day, & another to morrow, saying that he desired nothing more then to dye there with the rest, seeing that hee found not in himselfe any disposition to goe to any other place, nor to take any taste in any thing. I haue vnderstood the like of others, and particularly of one that was of our company, who being then a secular man, had passed by these Defarts: and it is a strange thing, the quality of this cold ayre, which kills, and also preserves the dead bodies without corruption. I haue also vnderstood it of a reuerend religious man, of the Order of Saint *Dominike*, and Prelate thereof, who had seene it passing by the Defarts: and which is strange, he reported, that traouelling that way by night, was forced to defend himselfe against that deadly winde, which blowes there (hauing no other meanes) but to gather together a great number of those dead bodies that lay there, and made thereof, as it were, a rampire and a bolster for his head: in this manner did hee sleepe, the dead bodies giuing him life. Without doubt this is a kinde of colde so piercing, that it quencheth the vital heate, cutting off his influence; and being so exceeding colde, yet doth not corrupt nor giue any putrifaction to the dead bodies, for that putrifaction groweth from heate and moistnesse. As for the other kinde of ayre which thunders vnder the earth, and causeth earthquakes, more at the *Indies*, then in any other Regions, I will speake thereof in treating the qualities of the Land at the *Indies*. We will content our selues now with what we haue spoken of the winde and ayre, and passe to that which is to be spoken of the water.

§. II.

Of the Ocean that inuirones the Indies, and of the North and South Seas, their ebbing, flowing, Fishes, fishing, Lakes, Rivers, and Springs.

No Mediterra-
nean Sea of
great note in
America.

AMong all waters the Ocean is the principall, by which the *Indies* haue beene discouered, and are inuironed therewith; for either they be Ilands of the Ocean Sea, or maine Land, the which wheresoeuer it ends, is bounded with this Ocean. To this day they haue not discouered at the *Indies* any Mediterranean Sea, as in *Europe*, *Asia*, and *Africa*, into the which there enters some arme of this great Sea, and makes distinct Seas, taking their names from the Prouinces they wash: and almost all the Mediterranean Seas continue and ioine together, and with the Ocean it selfe, by the straight of *Gibraltar*, which the Ancients called the Pillers of *Hercules*, although the *Red Sea* being separated from the Mediterranean Seas, enters alone into the *Indian Ocean*; and the *Caspian Sea* ioynes not with any other: so that at the *Indies* we finde not any other Sea then this Ocean, which they diuide into two, the one they call the North Sea, and the other the South; for that the *Indies* which were first discouered by the Ocean, and reacheth vnto *Spaine*, lies all to the North, and by that Land thereafter discouered a Sea on the other side, the which they called the South Sea, for that they decline vntill they haue passed the Line: and hauing lost the North, or Pole-articke, they called it South.

For

For this cause they haue called all that Ocean the South Sea, which lyeth on the other side of the East Indies, although a great part of it be seated to the North, as all the coast of new Spain, *Nicaragua, Guatimala* and *Panama*. They say, that he that first discovered this Sea, was called *Blascomunes* of *Bilbo*, the which he did by that part which we now call *Maine Land*, where it growes narrow, and the two Seas approach so neere the one to the other, that there is but seven leagues of distance: for although they make the way eightene from *Nombredios* to *Panama*, yet is it with turning to seek the commoditie of the way, but drawing a direct line, the one Sea shall not be found more distant from the other. Some haue discoursed and propounded to cut through this passage of seven leagues, and to ioyne one Sea to the other, to make the passage from *Peru* more commodious and easie, for that these eightene leagues of Land betwixt *Nombredios* and *Panama*, is more painefull and chargeable then 2300 by Sea, whereupon some would say, it were a meanes to drowne the Land, one Sea being lower then another. As in times past we finde it written, that for the same consideration, they gaue ouer the enterprize to winne the red Sea into Nile, in the time of King *Sesostris*, and since, in the Empire of the *Othomans*. But for my part, I hold such discourses and propositions for vaine, although this inconvenience should not happen, the which I will not hold for assured. I beleene there is no humaine power able to beate and breake downe those strong and impenetrable Mountaines, which God hath placed betwixt the two Seas, and hath made them most hard Rockes, to withstand the furie of two Seas. And although it were possible to men, yet in my opinion they should feare punishment from heauen, in seeking to correct the workes, which the Creator by his great prouidence hath ordained and disposed in the framing of this vniuersall world.

Leauing this discourse of opening the Land, and ioyning both Seas together, there is yet another leffe rash, but very difficult and dangerous to search out. Whether these two great gulfes doe ioyne in any other part of the world, which was the enterprize of *Fernando Magellan* a *Portugall* Gentleman, whose great courage and constancie in the research of this subiect, and happy successe in the finding thereof, gaue the name of eternall memory to this straight, which iustly they call by the name of the discoverer *Magellan*, of which straight we will intreate a little, as of one of the greatest wonders of the world. Some haue beleued, that this Straight which *Magellan* had discovered in the South Sea, was none, or that it was straightned, as *Don Alonso de Arile* writes in his *Auracano*: and at this day there are some that say, there is no such Straight, but that they are Ilands betwixt the Sea and Land, for that the maine Land ends there, at the end whereof are all Ilands, beyond the which the one Sea ioynes fully with the other, or to speake better, it is all one Sea. But in truth it is most certaine, there is a straight and a long and stretched out Land on either side, although it hath not yet bene knowne how farre it stretcheth of the one side of the straight towards the South. After *Magellan*, a Shippe of the Bishop of *Plaisance* passed the straight, *Don Guiteres Caruaial* (whose Maile they say is yet at *Lima*, at the entrie of the Pallace) they went afterwards coasting along the South, to discover the straight, by the commandement of *Don Garcia of Mendoza*, then Governour of *Chille*, according to that which Captaine *Ladrillero* found it and passed it. I haue read the discourse and report he made, where he saith, that he did not hazard himselfe to land in the straight, but hauing discovered the North Sea, he returned backe, for the roughnesse of the time, winter being now come, which caused the waues comming from the North, to grow great and swelling, and the Sea continually foming with rage. In our time, *Francis Drake* an *Englishman*, passed this straight. After him, Captaine *Sarmiento* passed it on the South side. And lastly, in the yeere 1587. other *Englishmen* passed it, by the instruction of *Drake*, which at this time run along all the coast of *Peru*.

Euen as *Magellan* found out this straight vpon the South, so some haue pretended to discover another straight, which they say is in the North, and suppose it to be in *Florida*, whose coast runnes in such sort, as they know no end thereof. *Peter Melendez* the *Adelantado*, a man very expert at Sea, affirmeth for certaine, that there is a straight, and that the King had commanded him to discover it, where in he shewed a great desire: he propounded his reasons to proue his opinion, saying, that they haue seene some remainders of Ships in the North Sea, like vnto those the which the *Chinois* vse, which had bene impossible, if there were no passage from one Sea vnto another. Moreouer, hee reported, that in a certaine great Bay in *Florida* (the which runs 300. leagues within the Land) they see Whales in some season of the yeere, which come from the other Sea.

One of the most admirable secrets of Nature is the ebbing and flowing of the Sea, not onely for this strange property of rising and falling, but much more for the difference there is thereof in diuers Seas, yea in diuers coasts of one and the same Sea. There are some Seas that haue no daily flowing nor ebbing, as we see in the inner Mediterranean, which is the *Thyrene* Sea, and yet it flowes and ebbes every day in the vpper Mediterranean Sea, which is that of *Venice*, and iustly giueth cause of admiration, that these two Seas being Mediterranean, and that of *Venice* being no greater then the other, yet hath it his ebbing and flowing as the Ocean, and that other Sea of *Italie* none at all. There are some Mediterranean Seas, that apparantly rise and fall every moneth;

Louins.

Experience in *Drakes* and *Mayes* voyage haue found them no straights but broken Ilands to the South, contrary to our Author here.

See of this Sir *Francis Drake's* Voyage, to. 1. l. 2. I haue omitted *Sarmientos* voyage, &c. The supposed straight in *Florida*.

Of the ebbing and flowing of the Indian Ocean, Chap. 14. The Philosophers in searching the cause of ebbing and flowing haue easily erred, following the *Greekes* and *Latines* which knew not the Ocean, and could not therefore know the cause.

moneth, and others that neither rise in the day, nor in the moneth. There are other Seas, as the *Spanish Ocean*, that haue their flux and reflux euery day; and besides that, they haue it monethly, which commeth twice, that is to say, at the change, and at the full of euery Moone, which they call *Spring-tides*. To say that any Sea hath this daily ebbing and flowing, and not monethly, I know not any. It is strange, the difference we finde of this subiect at the *Indies*, for there are some places whereas the Sea doth daily rise and fall two leagues, as at *Panama*, and at a high water it riseth much more. There are other places where it doth rise and fall so little, that hardly can you finde the difference. It is ordinary in the Ocean Sea to haue a daily flowing and ebbing, and that was twice in a naturall day, and euer it falls three quarters of an houre sooner one day then another, according to the course of the Moone: so as the tide falls not alwaies in one houre of the day. Some would say, that this flux and reflux proceeded from the locall motion of the water of the Sea; so as the water that riseth on the one side, falls on the other that is opposite vnto it: so that it is full Sea on the one side when it is a low water on the opposite, as we see in a Kettle full of water, when we moue it, when it leanes to the one side the water increaseth, and on the other it diminisheth. Others affirme, that the Sea riseth in all parts at one time, and decreaseth at one instant: as the boyling of a Pot, comming out of the centre it extendeth it selfe on all parts, and when it ceaeth, it falls likewise on all parts.

This second opinion is true, and in my iudgement, certaine and tried, not so much for the reasons which the Philosophers giue in their Metecors, as for the certaint experience wee may make. For to satisfie my selfe vpon this point and question, I demanded particularly of the said * Pilot, how he found the tides in the straight, and if the tides of the South Sea did fall when as those of the North did rise. And contrariwise (this question being true) why the increase of the Sea in one place, is the decrease thereof in another, as the first opinion holdeth. He answered that it was not so, but they might see plainly, that the tides of the North and South Seas rise at one instant, so as the waues of one Sea incountried with the other, and at one instant likewise they began to retire, euery one into his Sea, saying, that the rising and falling was daily seene, and that the incountr of the tides (as I haue said) was at threescore and tenne leagues to the North Sea, and thirtie to the South. Whereby we may plainly gather, that the ebbing and flowing of the Ocean is no pure locall motion, but rather an alteration: whereby all waters really rise and inerease at one instant, and in others, they diminish, as the boyling of a Pot, whereof I haue spoken. It were impossible to comprehend this point by experience, if it were not in the Straight, where all the Ocean, both on th'one side, and on th'other ioynes together: for none but Angels can see it, and iudge of the opposite parts: for that man hath not so long a sight, nor so nimble and swift footing as were needefull, to transport his eyes from one part to another, in so short a time, as a tide will giue him respice, which are onely six houres.

There are in the *Indian Ocean*, an infinite number of fishes, the Kindes and properties whereof the Creator onely can declare. There are many such as we haue in the Sea of *Europe*, as Shads, and Aloes which come from the Sea into the Riuer; Dorads, Pilchards, and many other. There are others, the like I doe not thinke to haue seene in these parts, as those which they doe call *Cabrillas*, which doe somewhat resemble the Trowt, and in new *Spaine* they call them *Bobos*, they mount from the Sea into the Riuer. I haue not seene any *Besugues* there, nor Trowts, although some say there are in *Chille*. There are *Tonins* in some parts vpon the coast of *Pernu*, but they are rare, and some are of opinion, that at a certaine time they doe cast their spawne in the Straight of *Magellan*, as they doe in *Spaine* at the Straight of *Gibraltar*, and for this reason they finde more vpon the coast of *Chille*, although those I haue seene there, are not like to them in *Spaine*. At the lands (which they call *Barlonente*) which are *Cuba*, *Saint Dominicke*, *Port rique*, and *Iamaique*, they finde a fish which they call *Manati*, a strange kinde of fish, if we may call it fish, a creature which ingenders her yong ones aliue, and hath teates, and doth nourish them with milke, feeding of grasse in the fields, but in effect it liues continually in the water, and therefore they eate it as fish; yet when I did eate of it at *Saint Dominique* on a friday, I had some scruple, not for that which is spoken, but for that in colour and taste it was like vnto morsels of Veale, so is it Greene, and like vnto a Cowe on the hinder parts. I did wonder at the incredible rauening of the *Tiburons*, or sharkes, when as I did see drawne from one (that was taken in the Port) out of his gullet, a Butchers great Knife, a great Iron hooke, and a piece of a Cowes head with one whole horne, neither doe I know if both were there, or no. I did see in a creeke made with that Sea, a quarter of a horse for pleasure hanging vpon a stake, whither presently came a company of these *Tiburons*, at the smell thereof: and for the more pleasure, this Horse flesh was hung in the ayre, I know not how many hand breadth from the water, this company of fish flocked about it, leaping vp, and with a strange nimblenesse cut off both flesh and bone off the Horse legge, as if it had bene the stalke of a lettuce; their teeth being as sharpe as a rasour. There are certaine small fishes they call *Rambos*, which cleaue to these *Tiburons*, neither can they drie them away, and they are fed with that which falles from the

Sharking
sharkes,

Tiburons. There are other small fishes, which they call flying fishes, the which are found within the tropickes, and in no other place, as I thinke: they are pursued by the *Ducades*; and to escape them they leape out of the Sea, and goe a good way in the ayre, and for this reason they are called *flying Fishes*: they haue wings as it were of linnen cloath, or of parchment, which doe support them some space in the ayre. There did one flye or leape into the Ship wherein I went, the which I did see, and obserue the fashion of his wings.

In the *Indian* Histories there is often mention made of *Lezards* or *Caymans* (as they call them) and they are the very same which *Plinie* and the Auncients call *Crocodiles*, they finde them on the Sea side, and in hot Riuer, for in cold Riuer there are none to be found. And therefore they finde none vpon all the coasts of *Peru* vnto *Payra*, but forward they are commonly seene in the Riuer. It is a most fierce and cruell beast, although it be slow and heauie. Hee goes hunting and seekes his prey on the Land, and what he takes aliue, he drownes it in the water, yet doth he not eate it, but out of the water, for that his throate is of such a fashion, as if there entred any water, he should easily be drowned. It is a wonderfull thing to see a combat betwixt a *Caymant* and a *Tigre*, whereof there are most cruell at the *Indies*. A religious man of our company told me that he had seene these beasts fight most cruellly one against the other; vpon the Sea shoare the *Caymant* with his taile gaue great blowes vnto the *Tigre*, struing with his great force to carry him into the water: and the *Tigre* with his pawes resisted the *Caymant*, drawing him to Land. In the end the *Tigre* vanquished, and opened the *Lezard*, it seemes by the belly, the which is most tender and penetrable, for in euery other part he is so hard, that no Lance, and scarce a harquebuzer can pierce it. The victory which an *Indian* had of a *Caymant* was yet more rare: the *Caymant* had carried away his yong childe, and sodainely plunged into the Sea, the *Indian* moued with choller, cast himselfe after him, with a knife in his hand, and as they are excellent swimmers and diuers, and the *Caymant* swimmeth alwayes on the toppe of the water, hee hurt him in the belly, and in such fort, that the *Caymant* feeling himselfe wounded, went to the shoare, leauing the little infant dead.

But the combat which the *Indians* haue with *Whales* is yet more admirable, wherein appeares the power and greatnesse of the Creator, to giue so base a Nation (as be the *Indians*) the industrie and courage to incounter the most fierce and deformed beast in the world, and not onely to fight with him, but also to vanquish him, and not to triumph ouer him. Considering this, I haue often remembred that place of the *Psalmes*, speaking of the *Whale*, *Draco iste quem formasti ad illudendum eum*: What greater mockerie can there be, then to see an *Indian* leade a *Whale* as bigge as a Mountaine, vanquished with a cord? The manner the *Indians* of *Florida* vse (as some expert men haue told me) to take these *Whales* (whereof there is great store) is, they put themselves into a Canoe, which is like a barke of a tree, and in swimming approach neere the *Whales* side, then with great dexteritie they leape to his necke, and there they ride as on horse-back expecting his time, then he thrusts a sharpe and strong stake (which he carries with him) into the *Whales* nostrill, for so they call the hole or vent by which they breathe, presently he beates it in with another stake as forcibly as he can; in the meane space the *Whale* doth furiously beate the Sea, and raiseth Mountaines of water, running into the deepe with great violence, and presently riseth againe, not knowing what to doe for paine: the *Indian* still sits firme, and to giue him full payment for this trouble, hee beates another stake into the other vent or nostrill, so as he stopperh him quite, and takes away his breathing, then he betakes him to his Canoe, which he holds tied with a cord to the *Whales* side, and goes to Land, hauing first tied his cord to the *Whale*, the which he lets run with the *Whale*, who leapes from place to place, whilest he finds water enough: being troubled with paine, in the end he comes neere the Land, and remains on ground by the hugenesse of his body, vnable any more to moue; then a great number of *Indians* come vnto the Conquerour, to gather his spoiles, they kill him, and cut his flesh in peeces, the which is bad enough: this doe they dry and beate into powder, vsing it for meate, it doth last them long: wherein is fulfilled, that which is spoken in another *Psalme* of the *Whale*, *Dedisti eum escampopulis Ethiopum*. *Peter Mendez* the *Adelantado* did often speake of this kinde of fishing. Whereof *Monardes* makes mention in his Booke.

There is another fishing which the *Indians* doe commonly vse in the Sea, the which, although it be lesse, yet is it worthy the report. They make as it were faggots of bul-rushes or dry sedges well bound together, which they call *Balsas*: hauing carried them vpon their shoulders to the Sea, they cast them in, and presently leape vpon them: being so set, they lanch out into the deepe, rowing vp and downe with small reedes of either tide: they goe a league or two into the Sea to fish, carrying with them their cords and nets vpon these faggots, and beare themselves thereon. They cast out their nets, and doe there remaine fishing the greatest part of the day and night, vntill they haue filled vp their measure, with the which they returne well satisfied. Truly it was delightfull to see them fish at *Callao* of *Lima*, for that they were many in number, and euery one set on horse-backe, cutting the waues of the Sea, which in their place of fishing are great and furious, resembling the *Tritons* or *Neptunes*, which they paint vpon the water, and being come to Land, they draw their barke out of the water vpon their backes, the which they

presently

They haue rough heads whereby they cleaue and sticke fast to the Sharke, which thus are forced to carry them with their swift motion, of whose offall also they liue. *Crocodiles.* * Yet so as euery and anon hee dips in the water his tongue being so short, that otherwise he could not swallow it. *Tigre kills a Crocodile.*

Indians exploit on a Crocodile

Whale killed by the Sauages

presently vndoe, and lay abroad on the shoare to drie. There were other *Indians* of the Vallies of *Yca*, which were accustomed to goe to fish in leather, or skins of Sea-wolues, blowne vp with winde, and from time to time they did blow them like bals of winde, lest they should sinke. In the vale of *Caneto*, which in old time they called *Guaroo*, there were a great number of *Indian* fishers; but because they resisted the *Inga*, when he came to conquer that Land, hee made shew of peace with them, and therefore to feast him, they appointed a solemne fishing of many thousand *Indians*, which went to Sea in their vessels of reeds: at whose returne, the *Inga* (who had laid many Souldiers in ambush) made a cruell butcherie of them, so as afterward this Land remained vnpeopled, although it be abundant and fertile. I did see another manner of fishing, whereunto *Don Francis* of *Toledo* the Viceroy did leade me, yet was it not in the Sea, but in a River which they call great in the Prouince of *Charcas*, where the *Indians Chiriquanas* plunged into the water, and swimming with an admirable swiftnesse, followed the fish, where with darts and hookes (which they vse to carry in their right hand, onely swimming with the left) they wound the fish, and so hurt they brought them forth, seeming in this more like vnto fishes then men of the Land. But now that we haue left the Sea, let vs come to other kinde of waters that remaine to be spoken of.

Of Lakes and
Pooles that be
at the Indies.
Chap. 16.

Thicke water.

Fishes and
fishing.

Originall of
Lakes.

Greatest riuers
flow from
Lakes.

Hot Lake, and
many wonders
thereof.

Lakes of Mex-
ico salt and
fresh.

In place of the Mediterranean Sea, which is in the old world, the Creator hath furnished this new with many Lakes, whereof there are some so great, as they may be properly called Seas, seeing the Scripture calleth that of *Palestina* so, which is not so great as some of these. The most famous is that of *Titicaca*, which is at *Peru*, in the Prouince of *Callao*, the which as I haue said in the former booke, containes neere fourescore leagues in compasse, into the which there runs ten or twelue great Rivers. A while since, they began to saile in it with Barkes and Ships, wherein they proceeded so ill, that the first Ship was split with a tempest that did rise in the Lake. The water is not altogether sower nor salt, as that of the Sea, but it is so thicke, as it cannot be drunke. There are two kinde of fishes breede in this Lake in great abundance, the one they call *Suches*, which is great and saurous, but phlegmaticke and vnwholesome: and the other *Bogos*, which is more healthfull, although it be lesse and fuller of bones: there are great numbers of wilde-ducks and Wogens. When as the *Indians* will feast it, or shew delight to any one that passeth along the two bankes, which they call *Chucuyto* and *Omasugo*, they assemble a great number of *Canoes*, making a circle and inuironing the fowle, vntill they take with their hands what they please: and they call this manner of fishing *Chaco*. On the one and the other banke of this Lake, are the best habitations of *Peru*. From the issue thereof there growes a lesser Lake, although it be great, which they call *Paria*, vpon the bankes whereof, there are great numbers of cattell, especially Swine, which grow exceeding fat with the grasse vpon those bankes. There are many other Lakes in the high Mountaines, whence proceede Brookes and Rivers, which after become great floods. Vpon the way from *Arequippa* to *Callao*, there are two Lakes, vpon the Mountaines of the one and other side the way, from the one flowes a brooke, which growes to a flood, and falls into the South Sea; from the other, they say the famous Riuer of *Aporima* takes her beginning; from the which some hold that the renowned Riuer of *Amazons*, otherwise called *Maragnon* proceedes, with so great an assembly and abundance of waters, which ioyned in these Mountaines. It is a question may be often asked, why there is so many Lakes in the tops of these Mountaines, into the which no riuer enters, but contrariwise, many great streames issue forth, and yet doe we scarce see these Lakes to diminish any thing at any season of the year. To imagine that these Lakes grow by the Snow that melts, or raine from heauen, that doth not wholly satisfie me: for there are many that haue not this abundance of Snow, nor raine, and yet wee see no decrease in them, which makes me to beleue they are Springs which rise there naturally, although it be not against reason, to thinke that the Snow and raine helpe somewhat in some seasons. These Lakes are so common in the highest tops of the Mountaines, that you shall hardly finde any famous riuer that takes not his beginning from one of them. Their water is very cleere and breedes little store of fish, and that little is very small, by reason of the cold which is there continually.

● Notwithstanding, some of these Lakes be very hot, which is another wonder. At the end of the Vallie of *Tarapaya* neere to *Potozi*, there is a Lake in forme round, which seemes to haue beene made by compasse, whose water is extreemely hot, and yet the Land is very cold: they are accustomed to bathe themselves neere the banke, for else they cannot endure the heate being farther in. In the midst of this Lake, there is a boiling of aboue twentie foote square, which is the very Spring, and yet (notwithstanding the greatnesse of this Spring) it is neuer seene to increase in any sort: it seemes that it exhals of it selfe, or that it hath some hidden and vnknowne issue, neither doe they see it decrease; which is another wonder, although they haue drawne from it a great streame, to make certaine engines grinde for mettall, considering the great quantitie of water that issueth forth, by reason whereof, it should decrease.

But leauing *Peru*, and passing to new *Spaine*, the Lakes there, are no lesse to be obserued; especially that most famous of *Mexico*, where we finde two sorts of waters, one salt Lake like to that of the Sea, and the other cleere and sweete, by reason of the Rivers that enter into it.

In the midst of this Lake, is a rocke very delightfull and pleasant, where there are bathes of hot water that issue forth, the which they greatly esteeme for their health. There are Gardens in the midst of this Lake, framed and fleeting vpon the water, where you may see plots full of a thousand sorts of hearbes and flowers, & they are in such sort as a man cannot well conceiue them without sight. The Citie of *Mexico* is seated in the same Lake, although the *Spaniards* haue filled vp the place of the scituation with earth, leauing onely some currents of water, great and small, which enter into the Citie, to carrie such things as they haue neede of, as wood, hearbs, stone, fruites of the Countrey, and all other things. When *Cortez* conquered *Mexico*, hee caused *Brigandins* to be made, yet afterwards he thought it more safe not to vse them: therefore they vie *Canoes*, whereof there is great store. There is great store of fish in this Lake, yet haue I not seene any of price: notwithstanding, they say the reuenue of this Lake, is worth three hundred thousand Duckets a yeere. There are many other Lakes, not farre from this, whence they bring much fish to *Mexico*. The Prouince of *Azechouacan* is so called, for that it aboundeth greatly with fish. There are goodly and great Lakes, in the which there is much fish, and this Prouince is coole and healthfull. There are many other Lakes, whereof it is not possible to make mention, nor to know them in particular, onely wee may note by that which hath bene discouered in the former Booke, that vnder the burning Zone there is greater abundance of Lakes, then in any other part of the world.

Rich Lakes

Of many and diuers Springs and Fountains Chap. 17.

Hot Spring turning into Stone.

Fountain of Pitch.

Cold and hot Springs together.

Salt Spring which yeeldes Salt without boiling.

Pocke Springs

Smoak Springs

Inke, &c.

Of Rivers. Chap. 18. Maragnon or Amazons.

There is at the *Indies* as in other parts of the world, great diuersitie of Springs, Fountains, and Rivers, and some haue strange properties. In *Guancaulica* of *Peru* (where the Mines of Quick-silver be,) there is a Fontaine that casts forth hot water, and in running, the water turnes to rocke, of which rocke or stone, they build in a manner all the houses of the Village. This stone is soft, and easie to cut, for they cut it as easily with Iron as if it were wood; it is light and lasting. If men or beasts drinke thereof, they dye, for that it congeales in the very entrailles, and turnes into stone, and for that cause some Horses haue died. As this water turnes into stone, the which flowes, stoppes the passage to the rest; so as of necessity it changeth the course, and for this reason it runnes in diuers places, as the rocke increaseth. At the point of Cape Saint *Helaine*, there is a Spring or Fontaine of Pitch, which at *Peru*, they call *Coppey*. This should be like to that which the Scripture speakes of the sauage Valley, where they did finde pits of Pitch. The Marriners vse these Fountains of Pitch or *Coppey*, to pitch their ropes and tackling, for that it serues them as Pitch and Tarre in *Spaine*. When I sailed into new *Spaine* by the coast of *Peru*, the Pilot shewed me an Island, which they call the *Ile of Wolnes*, where there is another Fontaine or Pit of *Coppey* or Pitch, with the which they anoint their tackling. There are other Fountains and Springs of *Goultranrozen*, which the Pilot (an excellent man in his charge) told me he had seene, and that sometimes sailing that waies, being so farre into the Sea, as he had lost the sight of Land, yet did he know by the smell of the *Coppey*, where he was, as well as if he had knowne the Land, such is the saueur that issues continually from that Fontaine.

At the Bathes, which they call the Bathes of *Ingua*, there is a course of water, which comes forth all hot and boiling; and ioyning vnto it, there is another whose water is as cold as Ice. The *Ingua* was accustomed to temper the one with the other; and it is a wonderfull thing to see Springs of so contrarie qualities, so neere one to the other. There are an infinite number of other hot Springs, specially in the Prouince of *Charcas*, in the water whereof, you cannot indure to hold your hand the space of an *Aue Maria*, as I haue seene tried by wager. In a Farme neere to *Cusco*, springs a Fontaine of Salt, which as it runnes turnes into Salt, very white and exceeding good, the which (if it were in another Countrey) were no small riches, yet they make very small account thereof, for the store they haue there. The waters which runne in *Guayaquel*, which is in *Peru*, almost vnder the Equinoctiall Line, are held to be healthfull for the *French* disease, and other such like, so as they come from many places farre off to be cured. And they say the cause thereof is, for that in that Countrey there is great abundance of rootes, which they call *Salepareille*, the vertue and operation whereof is so knowne, that it communicates her propertie to the waters wherein it is put to cure this disease. *Bilcanota* is a Mountaine the which (according to common opinion) is in the highest part of *Peru*, the top whereof is all couered with Snow, and in some places is blacke like coale. There issueth forth of it, two Springs in contrary places, which presently grow to be very great brooks, and so by little and little become great flouds, the one goes to *Calloa*, into the great Lake *Titicaca*; the other goes to the Lands, and is that which they call *Tucay*, which ioyning with another runnes into the North Sea, with a violent and furious course. This Spring, when it comes out of the rocke *Bilcanota*, as I haue said, is of the colour of lie, hauing an ashie colour, and casts a fume as a thing burnt, the which runs far in this sort, vntil the multitude of waters that run into it, quench this smoak and fire which it drawes from the Spring. In new *Spain* I haue seene a Spring as it were Ink, somewhat blew, in *Peru* another, of color red like blood, where vpon they call it the red River.

Amongst all Rivers, not onely at the *Indies*, but generally through the world, the River *Maragnon*, or of *Amazons*, is the chiefe, whereof we haue spoken in the former Booke. The *Spaniards*,

Water-fall.

niards haue often failed it, pretending to discouer the Lands, which by report are very rich, especially those they call *Dorado* and *Payiti*, *Jean de Saluies*, the *Adelantade*, made a memorable entrie, though of small effect. There is a passage which they call *Pongo*, one of the most dangerous in all the world; for the Riuer being there straightned, and forced betwixt two high steepe Rocks: the water fals directly downe with so great a violence, that comming steepe downe, it causeth such a boyling, as it seemeth impossible to passe it without drowning: yet the courage of men durst attempt to passe it, for the desire of this renowned *Dorado*: they slip downe from the top to the bottome, thrust on with the violence and currant of the floud, holding themselves fast in their Canoes or barks: and although in falling they were turned topsie turvie, and both they and their Canoes plunged into the deepe, yet by their care and industrie they recouered themselves againe; and in this sort the whole armie escaped, except some few that were drowned. And that which is more admirable, they carried themselves so cunningly, that they neither lost their Powder nor Munition. In their returne (hauing suffered many troubles and dangers) they were forced, in the end, to passe backe that same way mounting by one of those high Rocks, sticking their Ponyards in the Rocks,

Golden thirst.

Captaine *Peter d'Orfua* made another entrie by the same Riuer, who being dead in the same Voyage, and the Souldiers mutinied; other Captaines followed the enterprise, by an arme that comes into the North Sea. A religious man of our company told vs, that being then a secular man, he was present in a manner at all that enterprise, and that the tides did flow almost a hundred leagues vp the Riuer, and whereas it enters into the Sea (the which is vnder the Line, or very neere) it hath seuentie leagues breadth at the mouth of it, a matter incredible; and which exceeds the breadth of the Mediterranean Sea, though there be some others, who in their descriptions giue it but twenty five or thirty leagues breadth at the mouth.

Riuer of Plata, increasing as Nilus.

Next to this Riuer that of *Plata*, or of Siluer holds the second place, which is otherwise called *Paraguay*, which runs from the Mountains of *Pern*, into the Sea, in thirty five degrees of altitude to the South: it riseth (as they say) like to the Riuer of *Nile*, but much more without comparison, and makes the fields it ouerflows like vnto a Sea, for the space of three moneths, and after returneth againe to his course, in the which Shippes doe saile many leagues against the streame. There are many other Riuers that are not of that greatnesse, and yet are equall: yea they surpasse the greatest of *Europe*, as that of *Magdalaine*, neere to Saint *Marthe*, called the great Riuer, and that of *Aluarado* in new *Spaine*, and an infinite number of others. Of the South side, on the Mountaines of *Pern*, the Riuers are not vially so great, for that their current is not long, and that many waters cannot ioine together, but they are very swift, descending from the Mountaines, and haue sodaine fals, by reason whereof they are very dangerous, and many men haue perished there. They increase and overflow most in the time of heate. I haue gone ouer twenty and seuen Riuers vpon that coast, yet did I neuer passe any one by a foord.

How they passe their Riuers.

The *Indians* vse a thousand deuises to passe their Riuers. In some places they haue a long cord that runnes from one side to th'other, and thereon hangs a basket, into the which he puts him selfe that meanes to passe; and then they draw it from the banke with another cord, so as he passeth in this basket. In other places the *Indian* passeth, as it were on Horse-backe, vpon a bottle of straw, and behinde him he that desireth to passe; and so rowing with a peece of a boord, carries him ouer. In other places they make a floate of gourds or pompions, vpon which they set men with their stufte to carry ouer, and the *Indians* hauing cords fastned to them, goe swimming before, and draw this floate of pompions after them, as Horses doe a Coach: others goe behinde thrusting it forward. Hauing passed, they take their barke of pompions vpon their backe, and returne swimming: this they doe in the Riuer of *Saint* at *Pern*. We passed that of *Aluarado* in new *Spain* vpon a table, which the *Indians* carried vpon their shoulders, and when they lost their footing, they swamme. These deuises, with a thousand other wherewith they vse to passe their Riuers, breede a terrour in the beholders, helping themselves with such weake and vsure meanes; and yet they are very confident. They doe vse no other bridges but of haire or of straw. There are now vpon some Riuers bridges of Stone, built by the diligence of some *Gouernours*, but many fewer then were needefull in such a Countrie, where so many men are drowned by default thereof, and the which yeeldes so much Siluer, as not onely *Spaine*, but also other strange Countreies make sumptuous buildings therewith. The *Indians* doe draw from these flouds that runne from the Mountaines to the Vallies and Plaines, many and great Brookes to water their Land, which they vially doe with such industrie, as there are no better in *Murcia*, nor at *Mil-lan* it selfe, the which is also the greatest and onely wealt of the Plaines of *Pern*, and of many other parts of the *Indies*.

Haire and Straw Bridges.

§. III.

Of the qualitie of the Land at the Indies in generall. Properties of Peru,
and of new Spaine, and other parts : Of Vulcanes
and Earthquakes.

WE may know the qualitie of the Land at the *Indies*, for the greatest part (seeing it is the last of the three Elements, whereof we haue propounded to treat in this Booke) by the discourse we haue made in the former Booke of the burning Zone, seeing that the greatest part of the *Indies* doth lye vnder it. But to make it knowne the more particularly, I haue obserued three kindes of Lands, as I haue passed through those Regions: whereof there is one very low, another very high, and the third which holds the middle of these two extreames. The lower is that which lyeth by the Sea coasts, whereof there is in all parts of the *Indies*, and it is commonly very hot and moist, so as it is not so healthfull; and at this day we see it lesse peopled, although in former times it hath bene greatly inhabited with *Indians*, as it appeareth by the histories of new *Spaine* and *Peru*, and where they kept and liued, for that the soile was naturall vnto them being bred there. They liued of fishing at Sea, and of seeds, drawing brooks from the Riuers, which they vsed for want of raine, for that it raines little there, and in some places not at all. This low Countrie hath many places vnhabitable, as well by reason of the Sands which are dangerous (for there are whole Mountaines of these Sands) as also for the Marishes which grow by reason of the waters that fall from the Mountaines, which finding no issue in these flat and low Lands, drowne them, and make them vnprofitable.

And in truth the greatest part of all the *Indian* Sea coast is of this sort, chiefly vpon the South Sea: the habitation of which coasts is at this present so wasted and contemned, that of thirty parts of the people that inhabited it, there wants twenty nine; and it is likely the rest of the *Indians* will in short time decay. Many, according to the varietie of their opinions, attribute this to diuers causes: some to the great labour which hath bene imposed vpon these *Indians*; others, vnto the change and varietie of meates and drinks they vse, since their commerce with the *Spaniards*: others, to their great excesse and drinking, and to other vices they haue: for my part, I hold this disorder to be the greatest cause of their decay, whereof it is not now time to discourse any more. In this low Countrie (which I say generally is vnhealthfull, and vnfit for mans habitation) there is exception in some places which are temperate and fertile, as the greatest part of the Plaines of *Peru*, where there are coole vallies and very fertile. The greatest part of the habitation of the coast entertains all the traffike of *Spain* by Sea: whereon all the estate of the *Indies* dependeth. Vpon this coast there are some Towns well peopled, as *Lima* and *Truxillo* in *Peru*, *Panama* and *Carthagena* vpon the maine Land, and in the Ilands *Saint Dominique*, *Port Ricco*, and *Hauana*, with many other Towns which are lesse then these, as the *True Crosse* in new *Spain*, *Tca*, *Arigua* and others in *Peru*: the Ports are commonly inhabited, although but slenderly. The second sort of Land is contrary, very high, and by consequent, cold and dry, as all the Mountaines are commonly. This Land is neither fertile nor pleasant, but very healthfull, which makes it to be peopled and inhabited. There are Pastures and great store of Cattle, the which, for the most part, entertaines life, and by their Cattell, they supply the want they haue of Corne and Graine, by trucking and exchange. But that which makes these Lands more inhabited and peopled, is the riches of the Mines that are found there, for that all obeys to Gold and Siluer. By reason of the Mines there are some dwellings of *Spaniards* and *Indians*, which are increased and multiplied, as *Potozi* and *Gancanelicqua* in *Peru*, and *Cacatecas* in new *Spaine*. There are also through all these Mountaines great dwellings of the *Indians*, which to this day are maintained; yea some will say they increase, but that the labour of the Mines doth consume many, and some generall diseases haue destroyed a great part, as the *Cocoliste* in new *Spaine*: yet they finde no great diminution. In this extremitie of high ground they finde two commodities, as I haue said, of Pastures and Mines, which doe well counteruaile the two other that are in the lower grounds alongst the Sea coast, that is, the commerce of the Sea, and the abundance of Wine which groweth not but in the hot Lands. Betwixt these two extreames there is ground of a meane height, the which, although it be in some parts higher or lower one then other, yet doth it not approach neither to the heate of the Sea coast, nor the intemperature of the Mountaines. In this sort of soyle there groweth many kindes of Graine, as Wheate, Barley, and Mays, which growes not at all in the high Countries, but well in the lower; there is likewise store of Pasture, Cattell, Fruits, and greene Forrests. This part is the best habitation of the three, for health and recreation; and therefore it is best peopled of any part of the *Indies*, the which I haue curiously obserued in many Voyages that I haue vndertaken, and haue alwayes found it true, that the Prouince best peopled at the *Indies* be in this scituation. Let vs looke neerely into new *Spaine* (the which without doubt is the best Prouince the Sunne doth circle) by what part soeuer you doe enter, you mount vp; and when you haue mounted a good height, you begin to descend.

descend, yet very little : and that Land is alwayes much higher then that along the Sea coast.

All the Land about *Mexico* is of this nature and situation; and that which is about the *Vulcan*, which is the best soile of the *Indies*, as also in *Peru*, *Arequipa*, *Guamangua* and *Cusco*, although more in one then in the other. But in the end, all is high ground, although they descend into deepe Vallies, and clime vp to high Mountaines: the like is spoken of *Quitto*, *Saint Foy*, and of the best of the *New Kingdome*. To conclude, I doe beleene that the wisdome and prouidence of the Creator would haue it so, that the greatest part of this Countrie of the *Indies* should be hillie, that it might be of a better temperature: for being low, it had bene very hot vnder the burning Zone, especially being farre from the Sea. Also all the Land I haue seene at the *Indies*, is neere to the Mountaines on the one side or the other, and sometimes of all parts: So as I haue oftentimes said there, that I would gladly see any place, from whence the horizon did fashion it selfe and end by the heauen, and a Countrie stretched out and euen, as we see in *Spaine* in a thousand champaigne fields; yet doe I not remember that I haue euer seene such sights at the *Indies*, were it in the Ilands, or vpon the maine Land, although I haue trauelled aboue seven hundred leagues in length. But as I haue said, the neerenesse of the Mountaines is very commodious in this region, to temper the heate of the Sunne. To conclude, the best inhabited parts of the *Indies* are as I haue said: and generally, all that Countrie abounds in Grasse, Pastures, and Forrests, contrary vnto that which *Aristotle* and the ancients did hold. Soas when we go out of *Europe* to the *Indies* we wonder to see the Land so pleasant, Greene and fresh. Yet this rule hath some exceptions, and chiefly in the Land of *Peru*, which is of a strange nature amongst all others, whereof we will now proceede to speake.

The *Indies* mountainous, and thereby temperate.

Of the properties of the land of *Peru*. Chap. 20

One winde onely.

The Plaines, the hills, and the *Andes*. See sup. in *Herera*.

Raine almost euer, and almost neuer.

Diuers Beasts.

We meane by *Peru*, not that great part of the world which they call *America*, seeing that therein is contained *Bresil*, the Kingdome of *Chille*, and that of *Grenade*, and yet none of these Kingdomes is *Peru*, but onely that part which lies to the South, beginning at the Kingdome of *Quitto*, which is vnder the Line, and runs in length to the Realme of *Chille*, the which is without the Tropickes, which were six hundred leagues in length, and in breadth it contains no more then the Mountaines, which is fiftie common leagues, although in some places, as at *Chachapayas*, it be broader. This part of the world which wee call *Peru*, is very remarkable; and contains in it strange properties, which serueth as an exception to the generall rule of the *Indies*. The first is, that vpon all the coast it blowes continually with one onely winde, which is South and South-west, contrary to that which doth usually blow vnder the burning Zone. The second is, that this winde being by nature the most violent, tempestuous, and vnhealthfull of all others, yet in this Region it is marvellous pleasing, healthfull, and agreeable: so as we may attribute the habitation of that part thereunto, without the which it would be troublesome and inhabitable, by reason of the heate, if it were not refreshed with the winde. The third propertie is, that it neuer raines, thunders, snowes, nor hailes in all this coast, which is a matter worthy of admiration. Fourthly, that a little distance from the coast it raines & snowes terribly. Fiftly, that there are two ridges of Mountaines which runne the one as the other, and in one altitude, notwithstanding on the one there are great Forrests, and it raines the greatest part of the yeare, being very hot; and the other is all naked and bare, and very cold: so as winter and summer are diuided on those two Mountaines, and raine and cleerenesse it selfe. For the better vnderstanding hereof, we must consider that *Peru* is diuided as it were into three parts, long and narrow, which they call *Lanos*, *Sierres*, and *Andes*; the *Lanos* runs alongst the Sea coast; the *Sierres* be all hills, with some vallies; and the *Andes* be steepe and craggie Mountaines. The *Lanos* or Sea coast, haue some ten leagues in breadth, in some parts lesse, and in some parts a little more. The *Sierra* contains some twenty leagues in breadth: and the *Andes* as much, sometimes more, sometimes lesse. They run in length from North to South, and in breadth from East to West. It is a strange thing, that in so small a distance as fiftie leagues, equally distant from the Line and Pole, there should be so great a contrarietie, as to raine almost continually in one place, and neuer in the other. It neuer raines vpon the coast or *Lanos*, although there falls sometimes a small dew, which they call *Guarna*, and in *Castill Molina*, the which sometimes thickens, and falls in certaine drops of water, yet is it not troublesome, nor such as they neede any couering. Their couerings are of mats with a little earth vpon them which is sufficient. Vpon the *Andes* it raines in a manner continually, although it be sometimes more cleere then other. In the *Sierra* which lies betwixt both the extreames, it raineth in the same season as it doth in *Spaine*, which is from September vnto Aprill, but in the other season, the time is more cleere, which is when the Sunne is farthest off, and the contrary when it is neere. That which they call *Andes*, and *Sierra*, are two ridges of most high Mountaines, which runne aboue a thousand leagues, the one in view of the other, and almost equally. There are an infinite number of *Vicagues*, which breede in the *Sierres*, and are properly like vnto wilde Goates, very nimble and swift. There are also of those beasts which they call *Guanacos* and *Pacos*, which are sheepe, which we may well tearme the Asses of that Countrie; whereof we shall speake in their place. And vpon the *Andes* they finde Apes, very gentle and delightfull, and Parrots in great numbers.

numbers. There also they finde the herbe or tree which they call *Coca*, that is so greatly esteemed by the *Indians*, and the trafficke they make of it, is worth much mony.

That which they call *Sierre*, causeth Vallies, where as it opens, which are the best dwellings of *Peru*, as is the Valley of *Xauxa* of *Andaguaylas*, and *Tucay*. In these Vallies there growes Wheat, Mays, and other sorts of fruits, but lesse in one then in the other. Beyond the Citie of *Cusco* (the ancient Court of the Lords of those Realmes) the two ridges of Mountaines separate themselves one from the other, and in the midst leaue a Playne and large Champaigne, which they call the Prouince of *Callao*, where there are many Riueres and great store of fertile Pastures: there is also that great Lake of *Titicaca*. And although it bee a full soile, and in the same height and intemperature; that the *Sierre*; hauing no more Trees nor Forrests, yet the want they haue of bread is counteruailed with the rootes they sow, the which they call *Papas*, and they grow in the earth. This roote is the *Indians* foode; for drying it and making it cleane, they make that which they call *Chugno*, which is the bread and nourishment of those Prouinces. There are other rootes and small herbes which they eate. It is a healthfull soile, best peopled, and the richest of all the *Indies*, for the abundance of Cattell they feede, as well of those that are in *Europe*, as Sheepe, Neat, and Goates, as of those of the Country, which they call *Guanacos* and *Pacos*, and there are store of Partridges. Next to the Prouince of *Callao*, is that of *Charcas*, where there are hot Vallies very fertile, and very high Rocks, the which are very rich in mynes, so as in no part of the World shall you finde better nor fairer.

Their bread:

20 For that it is rare and extraordinarie to see a Country where it neuer raines nor thunders; men desire naturally to know the cause of this strangenesse. The reason which some giue that haue neerly looked into it, is, that vpon that Coast there rise no vapours, sufficient to engender raine for want of matter; but onely that there bee small and light vapours, which cannot breede any other then mists and deawes, as wee see in *Europe*, oftentimes vapours doe rise in the morning, which are not turned into raine, but into mists onely: the which growes from the substance, which is not grosse and sufficient enough to turne to raine. They say, the reason why that which happens but some times in *Europe*, falls out continually vpon the Coast of *Peru*, is, for that this Region is very drie, and yeelds no grosse vapours. The driness is knowne by the great abundance of Sands, hauing neither Wells nor Fountaines, but of fifteene Stades 30 deepe (which is the height of a man or more) and that is neere vnto Riueres, the water whereof, piercing into the Land, giues them meanes to make Wells. So as it hath beene found by experience, that the course of Riueres being turned, the Wells haue beene dried vp, vntill they returned to their ordinarie course: and they giue this reason for a materiall cause of this effect, but they haue another efficient, which is no lesse considerable, and that is the great height of the *Sierre*, which comming along the Coast, shadowes the *Lanos*; so as it suffers no winde to blow from the Land, but about the tops of these Mountaines. By meanes whereof, there reignes no winde, but that from the Sea, which finding no opposite, doth not presse nor straine forth the vapours which rise to engender raine; so as the shadow of the Mountaines keepes the vapours from thickning, and conuerts them all into mists. There are some experiences agree 40 with this discourse; for that it raines vpon some small Hills along the Coast, which are least shadowed, as the Rocks of *Atico* and *Arequipa*. It hath rained in some yeeres when as the Northerne or Easterly windes haue blowne: yea, all the time they haue continued, as it happened in seuentie eight, vpon the *Lanos* of *Trugillo*, where it rained abundantly, the which they had not seene in many ages before. Moreouer, it raines vpon the same Coast in places, where as the Easterly or Northerne windes be ordinarie, as in *Guayaquil*, and in places where as the Land riseth much, and turnes from the shadow of the Mountaines, as in those that are beyond *Ariqua*. Some discourse in this manner, but let every one thinke as he please. It is most certaine, that comming from the Mountaines to the Vallies, they doe vsually see as it were two Heauens, one cleere and bright aboue, and the other obscure, and as it were a gray vaile spread 50 vnderneath, which couers all the Coast: and although it raine not, yet this mist is wonderfull profitable to bring forth grasse, and to raise vp and nourish the seed: for although they haue plenty of water, which they draw from the Pooles and Lakes, yet this moisture from Heauen hath such a vertue, that ceasing to fall vpon the Earth, it breeds a great discommoditie and defect of graine and seedes. And that which is more worthy of admiration, the drie and barren Sands are by this deaw so beautified with grasse and flowers, as it is a pleasing and agreeable sight, and very profitable for the feeding of Cattell, as we see in the Mountaine called *Sandie*, neere to the Citie of *Kings*.

The reason why it raines on the *Lanos*, along the Sea coast. Chap. 21.

Of the reason why it raines on the *Lanos*, along the Sea coast. Chap. 21.

Of the properties of new Spaine, of the Islands, and of other Lands. Chap. 22. Peru wine.

New Spaine passeth all other Prouinces in pastures, which breeds infinite troopes of Horse, Kine, Sheepe, and other Cattell. It abounds in fruit and all kinde of graine. To conclude, it is a 60 Country the best furnished and most accomplished at the *Indies*. Yet *Peru* doth surpass it in one thing, which is Wine, for that there growes store and good; and they daily multiply and increase, the which doth grow in very hot Vallies, where there are waterings. And although there be Vines in new Spaine, yet the grape comes not to his maturitie, fit to make Wine. The reason is, for that it raines there in Iuly and August, when as the grape ripens: and therefore it comes

not to his perfection. And if any one through curiositie would take the paines to make wine, it should be like to that of *Genna* and *Lombardie*, which is very small and sharpe, hauing a taste like vnto Verjuice. The Ilands which they call *Barlouente*, which bee *Hispaniola*, *Cuba*, *Port Ricco*, and others thereabouts, are beautified with many greene pastures, and abound in Cattell, as Near, and Swine, which are become wilde. The wealth of these Ilands, bee their Sugar-workes and Hides. There is much *Cassia fistula* and Ginger. It is a thing incredible, to see the multitude of these merchandizes brought in one fleete, being in a manner impossible that all *Europe* should waste so much. They likewise bring wood of an excellent qualitie and colour, as *Ebone*, and others, which serue for buildings and Ioyners. There is much of that wood which they call *Lignum sanctum* or *Guage*, fit to cure the pox. All these Ilands and others thereabouts, which are many, haue a goodly and pleasant aspect, for that throughout the yeere, they are beautified with grasse and greene trees, so as they cannot discern when it is Autumne or Summer, by reason of continuall moisture ioyned to the heat of the burning Zone. And although this Land bee of a great circuit, yet are there few dwellings, for that of it selfe it engenders great *Arcabutos*, as they call them, which be Groues or very thicke Coppises: and on the Playnes there are many marishes and bogs. They giue yet another notable reason, why they are so smallly peopled, for that there haue remayned few naturall *Indians*, through the inconsideratnesse and disorder of the first Conquerors that peopled it: and therefore, for the most part, they vse *Negros*, but they cost deare, being very fit to till the Land. There growes neither bread nor wine in these Ilands, for that the too great fertilitie and the vice of the soile, suffers them not to seede, but casts all forth in grasse, very vnequally. There are no Oliue trees, at the least, they beare no Oliues, but many greene leaues pleasant to the view, which beare no fruit. The bread they vse is of *Cacane*, whereof we shall hereafter speake. There is gold in the Riuer of these Ilands, which some draw forth, but in small quantitie. I was little lesse then a yeere in these Ilands, and as it hath beene told me of the mayne Land of the *Indies*, where I haue not beene, as in *Florida*, *Nicaragua*, *Guatimala*, and others, it is in a manner of this temper, as I haue described: yet haue I not set downe every particular of Nature in these Prouinces of the firme Land, hauing no perfect knowledge thereof. The Country which doth most resemble *Spaine* and the Regions of *Europe*, in all the West *Indies*, is the Realme of *Chille*, which is without the generall rule of these other Prouinces, being seated without the burning Zone, and the Tropicke of *Capricorne*. This Land of it selfe is coole and fertile, and brings forth all kindes of fruits that bee in *Spaine*; it yeelds great abundance of bread and wine, and abounds in Pastures and Cattell. The aire is wholsome and cleere, temperate betwixt heat and cold, Winter and Summer are very distinct, and there they finde great store of very fine gold. Yet this Land is poore and smallly peopled, by reason of their continuall warre with the *Auricanos*, and their Associates, being a rough people and friends to libertie.

There are great coniectures, that in the temperate Zone at the *Antartike* Pole, there are great and fertile Lands: but to this day they are not discovered, neither doe they know any other Land in this Zone, but that of *Chille*, and some part of that Land which runnes from *Ethiopia* to the Cape of *Good Hope*, as hath beene said in the first Booke; neither is it knowne if there bee any habitations in the other two Zones of the Poles, and whether the Land continues and stretcheth to that which is towards the *Antartike* or South Pole. Neither doe we know the Land that lyes beyond the Straight of *Magellan*, for that the greatest height yet discovered, is in fiftie sixe degrees, as hath beene formerly said; and toward the Arctike or Northerne Pole, it is not known how farre the Land extends, which runnes beyond the Cape of *Mendozin* and the *Caliphornes*, nor the bounds and end of *Florida*, neither yet how farre it extends to the West. Of late they haue discovered a new Land, which they call *New Mexico*, where they say is much people that speake the *Mexican* tongue. The *Philippines* and the following Ilands, as some report that know it by experience, ranne about nine hundred leagues. But to intreat of *China*, *Cochinchina*, *Siam*, and other Regions which are of the East *Indies*, were contrarie to my purpose, which is onely to discourse of the West: nay, they are ignorant of the greatest part of *America*, which lyes betwixt *Peru* and *Bresil*, although the bounds be knowne of all sides, wherein there is diuersitie of opinions; some say it is a drowned Land, full of Lakes and waterie places; others affirme there are great and flourishing Kingdomes, imagining there be the *Paysiti*, the *Dorado*, and the *Casars*, where they say are wonderfull things. I haue heard one of our companie say, a man worthy of credit, that he had seene great dwellings there, and the wayes as much beaten as those betwixt *Salamanca* and *Villadillia*, the which he did see, when as *Peter d'Orsua*, and after, those that succeeded him, made their entrie and discoverie by the great Riuer of *Amazons*, who beleueing that the *Dorado* which they sought, was farther off, cared not to inhabit there, and after went both without the *Dorado*, which they could not finde, and this great Prouince which they left. To speake the truth, the habitations of *America* are to this day vnkowne, except the extremities, which are *Peru*, *Bresil*, and that part where the Land begins to straighten, which is the Riuer of *Siluer*, then *Tucuman*, which makes the round to *Chille* and *Charcas*. Of late we haue vnderstood by Letters from some of ours which goe to *Saint Croix* in the *Sierre*, that they goe discover-
couering

couering of great Prouinces and dwellings, betwixt *Bresil* and *Peru*. Time will reueile them, for as at this day the care and courage of men is great, to compasse the World from one part to another; so we may beleue, that as they haue discovered that which is now knowne, they may likewise lay open that which remaines, to the end the Gospell may bee preached to the whole World, seeing the two Crownes of *Portugal* and *Castile* haue met by the East and West, ioyning their discoveries together, which in truth is a matter to be obserued, that the one is come to *China* and *Japan* by the East, and the other to the *Philippines*, which are neighbours, and almost ioyning vnto *China*, by the West: for from the Ilands of *Lusson*, which is the chiefe of the *Philippines*, in the which is the Citie of *Manille*, vnto *Macao*, which is in the Ile of *Canton*, are but foure score or a hundred leagues, and yet we finde it strange, that notwithstanding this small distance from the one to the other, yet according to their account, there is a dayes difference betwixt them; so as it is Sunday at *Macao*, when as it is but Saturday at *Manille*, and so of the rest. Those of *Macao* and of *China* haue one day aduanced before the *Philippines*. It happened to father *Alonse Sanchez*, of whom mention is made before, that parting from the *Philippines*, hee arriued at *Macao* the second day of May, according to their computation, and going to say the Masse of Saint *Athanasius*, he found they did celebrate the feast of the Inuention of the holy Crosse, for that they did then reckon the third of May. The like happened vnto him in another voyage beyond it.

Some haue found this alteration and diuersitie strange, supposing that the fault proceedes from the one or the other, the which is not so: but it is a true and well obserued computation, for according to the difference of wayes where they haue beene, we must necessarily say, that when they meet, there must be difference of a day; the reason is, for that sayling from West to East, they alwayes gaine of the day, finding the Sunne rising sooner: and contrariwise, those that saile from East to West, doe alwayes lose of the day, for that the Sunne riseth later vnto them; and as they approach neerer the East or the West, they haue the day longer or shorter. In *Peru*, which is Westward in respect of *Spaine*, they are aboue fixe houres behinde; so as when it is noone in *Spaine*, it is morning at *Peru*; and when it is morning here, it is mid-night there. I haue made certaine prooffe thereof, by the computation of Eclipses of the Sunne and Moone. Now that the *Portugals* haue made their navigations from West to East, and the *Castillians* from East to West, when they came to ioyne and meet at the *Philippines* and *Macao*, the one haue gayned twelue houres, and the other hath lost as much; so as at one instant, and in one time, they finde the difference of foure and twentie houres, which is a whole day.

Although we finde vents of fire in other places, as Mount *Aena* and *Vesunio*, which now they call Mount *Soma*, yet is that notable which is found at the *Indies*. Ordinarily these *Volcans* be Rocks or Pikes of most high Mountaines, which raise themselues aboue the tops of all other Mountaines; vpon their tops they haue a Playne, and in the midst thereof a pit or great mouth, which descends euen vnto the foote thereof; a thing very terrible to behold. Out of these mouthes there issues smoake, and sometimes fire: some cast little smoake, and haue in a manner no force of *Volcans*, as that of *Arequipa*, which is of an vnmeasurable height, and almost all sand. It cannot be mounted vp in lesse then two dayes, yet they haue not found any shew of fire, but onely the reliques of some sacrifices which the *Indians* made while they were *Gentiles*, and sometimes it doth cause a little smoake. The *Volcan* of *Mexico* which is neere to the Village of *Angels*, is likewise of an admirable height, whereas they mount thirtie leagues in turning: from this *Volcan* issueth not continually, but sometimes, almost euery day, a great exhalation or whirlewinde of smoake, which ascends directly vp like the shot of a Crosse-bow, and growes after like to a great plume of feathers, vntill it ceaseth quite, and is presently conuerted into an obscure and darke cloude. Most commonly it riseth in the morning after the Sunne rising, and at night when it setteth, although I haue seene it breake out at other times. Sometimes it doth cast forth great store of ashes after this smoake. They haue not yet scene any fire come from it; yet they feare it will issue forth and burne all the Land round about, which is the best of all the Kingdomes: And they hold it for certaine, that there is some correspondencie betwixt this *Volcan* and the *Sierre* of *Tlaxcala*, which is neere vnto it, that causeth the great thunders and lightnings they doe commonly heare and see in those parts.

Some *Spaniards* haue mounted vp to this *Volcan*, and giuen notice of the myne of sulphur to make powlder thereof. *Cortez* reports the care he had to discover what was in this *Volcan*. The *Volcans* of *Guatimala* are more renowned, as well for their greatnesse and height: which those that saile in the South Sea discover as farre off, as for the violence and terrour of the fire it casts. The three and twentieth day of December, in the yeere 1586. almost all the Citie of *Guatimala* fell with an Earthquake, and some people slaine. This *Volcan* had then fixe moneths together, day and night cast out from the top, and vomited as it were, a flood of fire, the substance falling vpon the sides of the *Volcan*, was turned into ashes like vnto burnt earth (a thing passing mans iudgement, to conceiue how it could cast so much matter from its centre during fixe moneths, being accustomed to cast smoake alone, and that sometimes with small flashes.) This was written vnto me being at *Mexico*, by a Secretarie of the Audience of *Guatimala*, a man worthy of credit,

quakes. Cap. 26.

Great earth-
quakes.

credit, and at that time it had not ceased to cast out fire. This yeere past, being in *Quito* in the Citie of *Kings*, the *Volcan* which is neere thereunto, cast such abundance of ashes, that in many leagues compassed thereabout it darkened the light of the day: and there fell such store in *Quito*, as they were not able to goe in the streets. There haue bene other *Volcans* seene which cast neither smoake, flame, nor yet ashes, but in the bottome they are seene to burne with a quicke fire without dying: such a one was that which in our time a couetous and greedie Priest seeing, perswaded himselfe that they were heapes of gold he did see burning, imagining it could be no other matter or substance, which had burnt so many yeeres, and not consumed. And in this conceit he made certaine kettles with chaines, and an instrument, to gather and draw vp the gold out of this Pit or *Volcan*: but the fire scorned him, for no sooner did his Iron chaine and Caldron approach neere the fire, but suddenly they were broken in pieces. Yet some told me, that this man was still obstinate, seeking other inuentions for to draw out this gold as he imagined.

Some haue held opinion, that these *Volcans* consume the inner substance they haue of Nature; and for this reason they beleue, that naturally they shall end, when as they haue consumed the fuell (as a man may say) that is within them. According to which opinion wee see at this day, some Mountaines and Rocks, from whence they draw a burnt stone which is light, but very hard, and is excellent to build with, as that which is carried to *Mexico*. And in effect there are some shewes of that which hath bene spoken, that these Mountaines or Rocks had sometimes a naturall fire, which hath died after the matter was consumed; and so these stones haue remained burnt and pierced with the fire as wee see. For my part, I will not contradict it, that in those places there hath not bene fire sometimes, or *Volcans*. But there is some difficultie to beleue it should be so in all *Volcans*, considering the matter they cast out is almost infinite; and that being gathered together, it could not bee containd in the same concauitie from whence it goes. Moreouer, there are some *Volcans*, that in hundreds, yea thousands of yeeres are alwayes of one fashion, casting out continually smoake, fire, and ashes. *Plinie* the historiographer of naturall things (as the other *Plinie* his nephew reports) searching out the secret how this should passe: and approaching too neere the exhalation of fire of one of these *Volcans*, died; and thinking by his diligence to find an end thereof, had an end of his life. For my part, vpon this consideration I thinke, that as there are places in the earth, whose vertue is to draw vaporious matter, and to conuert it into water, which bee the Fountaines that alwayes runne, and haue alwayes matter to make them runne, for that they draw vnto them the substance of water. In like sort there are places that haue the propertie to draw vnto them hot exhalations, and to conuert them into fire and smoake which by their force and violence cast out other thicke matter which dissolues into ashes, into pumice stone, or such like substance: and for a sufficient argument to proue it to be so in these *Volcans*, they sometimes cast smoake, and not alwayes, and sometimes fire, and not alwayes, which is according to that it can draw vnto it, and digest, as the Fountaines which in Winter abound, and in Summer decrease; yea some are quite dried vp, according to the force and vigour they haue, and the matter that is presented: euen so it is of these *Volcans*, which cast fire more or lesse at certaine seasons. Others say, that it is Hell fire, which issueth there, to seme as a warning, thereby to consider what is in the other life: but if Hell (as Diuines hold) bee in the centre of the Earth, the which containes in diameter aboue two thousand leagues, we cannot iudge that this fire is from the centre; for that Hell fire (as Saint *Basil* and others teach) is very different from this which wee see, for that it is without light, and burneth without comparison much more then ours.

Some haue held, that from these *Volcans* which are at the *Indies*, the Earthquakes proceede, being very common there: but for that they ordinarily chance in places farre from those *Volcans*, it cannot be the totall cause. It is true they haue a certaine simpaty one with another, for that the hot exhalations which engender in the inner concauities of the Earth, seme to be the materiall substance of fire in the *Volcans*, whereby there kindleth another more grosse matter, and makes these shewes of flame and smoake that come forth. And these exhalations (finding no easie issue in the Earth) moue it, to issue forth with great violence, whereby wee heare that horrible noise vnder the Earth, and likewise the shaking of the Earth, being stirred with this burning exhalation; Euen as Gun-powder in mynes, hauing fire put to it breaks Rocks and Walls: and as the Chesnut laid into the fire, leapes and breakes with a noise, when as it casts forth the aire (which is containd within the huske) by the force of the fire: Euen so these Earthquakes doe most commonly happen in places neere the water or Sea. As wee see in *Europe*, and at the *Indies*, that Townes and Cities farthest from the Sea and waters are least afflicted therewith; and contrariwise, those that are seated vpon Ports of the Sea, vpon Riuer, the Sea coast, and places neere vnto them, feelee most this calamitie. There hath happened in *Peru* (the which is wonderfull, and worthy to be noted) Earthquakes which haue runne from *Chille* vnto *Quito*, and that is aboue a hundred leagues, I say the greatest that euer I heard speake of, for lesser be more common there. Vpon the coast of *Chille* (I remember not well in what yeere) there was so terrible an Earthquake, as it ouer-turned whole Mountaines, and thereby stopped the course of Riuer which it conuerted into Lakes, it beat downe Townes, and slue a great number of people.

causing

causing the Sea to leaue her place some leagues, so as the ships remayned on drie ground, farre from the ordinarie Roade, with many other heauie and horrible things. And as I well remember, they say this trouble and motion, caused by the Earthquake, ranne three hundred leagues alongst the Coast. Soone after, which was in the yeere eightie two, happened that earthquake of *Arequipa*, which in a manner ouer-threw the whole Citie. Since in the yeere eightie sixe, the ninth of Iuly, fell another earthquake in the Citie of *Kings*, the which as the Vice-roy did write, had runne one hundred threescore and ten leagues alongst the Coast, and ouerthwart in the *Sierre* fiftie leagues. The mercy of the Lord was great in this Earthquake, to forewarne the people by a great noyse which they heard a little before the Earthquake, who taught by former experiences, presently put themselves in safetie, leauing their Houses, Streets, and Gardens, to goe into the fields; so as although it ruined a great part of the Citie, and of the chiefest buildings, yet there died not aboue fiftene or twentie persons of all the Inhabitants. It caused the like trouble and motion at Sea, as it had done at *Chille*, which happened presently after the Earthquake, so as they might see the Sea furiously to flie out of her bounds, and to runne neere two leagues into the Land, rising aboue fourteene fathom: it couered all that Playne, so as the Ditches and pieces of wood that were there, swam in the water. There was yet another earthquake in the Realme and Citie of *Quitto*; and it seemes all these notable Earthquakes vpon that Coast, haue succeeded one another by order, as in truth it is subiect to these inconueniences. And therefore although vpon the coast of *Pern*, there be no torments from Heauen, as thunder and lightning, yet are they not without feare vpon the Land: and so every one hath before his eyes, the Heralds of diuine Iustice, to mooue him to feare God. For as the Scripture saith, *Fecit hec ut timeatur*. Returning then to our purpose, I say the Sea coast is most subiect to these earthquakes, the reason is, in my iudgement, for that the water doth stop the conduits and passages of the earth, by which the hot exhalations should passe, which are engendered there. And also the humidity thickning the superficies of the earth, doth cause the fumes and hot exhalations to goe close together and encounter violently in the bowels of the earth, which doe afterwards breake forth.

Noyse before the earthquake.

Why the Sea coast is subiect to earthquakes.

Some haue obserued, that such Earthquakes haue vsually hapned, when as a raynie season falls after some drie yeeres. Whereupon they say, that the Earthquakes are most rare, where are most Wells, the which is approued by experience. Those of the Citie of *Mexico* hold opinion, that the Lake whereon it is seated, is the cause of the Earthquakes that happen there, although they be not very violent: and it is most certaine, that the Townes and Prouinces, farre within the Land, and farthest from the Sea, receiue sometimes great losses by these Earthquakes, as the Citie of *Chachapoyas* at the *Indies*, and in *Italie* that of *Ferrara*, although vpon this subiect. It seemes this latter, being neere to a Riuer, and not farre from the *Adriaticke* Sea, should rather be numbred among the Sea-townes. In the yeere of our Lord 1581. in *Cugiano*, a Citie of *Pern*, otherwise called *The Peace*, there happened a strange accident touching this subiect. A Village called *Angoango* (where many *Indians* dwelt that were Sorcerers and Idolaters) fell suddenly to ruine, so as a great part thereof was rayled vp and carried away, and many of the *Indians* smothered, and that which seemes incredible (yet testified by men of credit) the earth that was ruined and so beaten downe, did runne and slide vpon the Land for the space of a league and a halfe, as it had bene water or waxe molten, so as it stopt and filled vp a Lake, and remayned so spread ouer the whole Countrey.

Earthquake at Ferrara terrible.

At Angoango.

§. IIII.

Of Metals in the Indies and especially of the Gold and Siluer, and Quick-siluer.

Metals are (as Plants) hidden and buried in the bowels of the Earth, which haue some conformitie in themselves, in the forme and manner of their production; for that we see and discouer euen in them, branches, and as it were a bodie, from whence they grow and proceede, which are the greater veines and the lesse, so as they haue a knitting in themselves: and it seemes properly that these Minerals grow like vnto Plants, not that they haue any inward vegetatiue life, being onely proper to Plants: but they are engendered in the bowels of the earth, by the vertue and force of the Sunne and other Planets; and in long continuance of time, they increas and multiply after the manner of Plants. And euen as metals bee plants hidden in the earth, so wee may say, that plants bee liuing Creatures fixed in one place, whose life is maintayned by the nourishment which Nature furnissheth from their first beginning. But liuing Creatures surpass Plants, in that they haue a more perfect being; and therefore haue neede of a more perfect foode and nourishment; for the search whereof, Nature hath giuen them a moouing and feeling to discouer and discern it. So as the rough and barren earth is as a substance and nutriment for metals; and that which is fertile and better seasoned a nourishment for

Metals grow as plants.

Animals.

for Plants. The same plants serue as a nourishment for liuing creatures, and the plants and liuing creatures together as a nourishment for men, the inferiour nature alwayes seruing for the maintenance and sustentation of the superiour, and the lesse perfect yeelding vnto the more perfect; whereby wee may see how much it wants, that gold and siluer and other things which men so much esteeme by their couetousnesse, should bee the happinesse of man, whereunto hee should tend, seeing they bee so many degrees in qualitie inferior to man, who hath bene created and made onely to be a subiect to serue the vniuersall Creator of all things, as his proper end and perfect rest; and to which man, all other things in this world, were not propounded or left, but to gaine this last end.

The diuersitie of metals, which the Creator hath shut vp in the closetts and concauities of the earth, is such, and so great, that man drawes profit and commoditie from euery one of them. Some serue for curing of diseases, others for armes and for defence against the enemies, some are for ornament and beautifying of our persons and houses, and others are fit to make vessels and Iron-workes, with diuers fashions of instruments, which the industrie of man hath found out and put in practice. But about all the uses of metals, which be simple and naturall, the communication and commerce of men hath found out one, which is the use of money, the which (as the Philosopher saith) is the measure of all things. And although naturally, and of it selfe, it bee but one onely thing, yet in value and estimation we may say, that *it is all things*. Money is vnto vs as it were, meate, clothing, house, horse, and generally whatsoever man hath need of. By this meanes all obeyes to money, and as the Wiseman saith, to finde an inuention that one thing should be all. Men guided or thrust forward by a naturall instinct, choose the thing most durable and most maniable, which is metall, and amongst metals, gaue them the preheminance in this inuention of money, which of their nature were most durable and incorruptible, which is siluer and gold. A Wiseman said, that what a father doth to marry his daughter well, is to giue her a great portion in marriage; the like hath God done for this Land so rough and labourfome, giuing it great riches in mynes, that by this meanes it might be the more sought after. At the west *Indies* then there are great store of mynes of all sorts of metals, as Copper, Iron, Lead, Tinne, Quick-siluer, Siluer, and Gold: and amongst all the Regions and Parts of the *Indies*, the Realmes of *Peru* abound most in these metals, especially with Gold, Siluer, Quick-siluer, or Mercurie, whereof they haue found great store, and daily discouer new mynes. And without doubt, according to the qualitie of the earth, those which are to discouer, are without comparison, farre more in number then those which are yet discovered: yea, it seemes that all the Land is sowed with these metals, more then any other in the world that is yet known vnto vs, or that ancient Writers haue made mention of.

Of the qualitie and nature of the earth where the metals are found, and that all these metals are not imployed at the *Indies*, and how the *Indians* vsed them. 1.4. Chap. 3. Plin. lib. 5. de Genes. mund. Euseb. lib. 8. de prepar. euang. cap. 9.

No money of gold, but of fruits, &c.

Plin. lib. 33. c. 3.

The reason why there is so great abundance of metals at the *Indies* (especially at the west of *Peru*, as I haue said) is the will of the Creator, who hath imparted his gifts as it pleased him. But coming to a naturall and philosophicall reason, it is very true, which *Philon* a wise man writes, saying, that gold, siluer, and metals, grow naturally in land that is most barren and vnfruitfull. And wee see, that in Lands of good temperature, the which are fertile with grasse and fruits, there are seldome found any mynes; for that Nature is contented to giue them vigour to bring forth fruits more necessarie for the preservation and maintenance of the life of beasts and men. And contrariwise to lands that are very rough, drie, and barren (as in the highest Mountaines and inaccessible Rocks of a rough temper) they finde mynes of siluer, of quick-siluer, and of gold, and all those riches (which are come into *Spaine* since the West *Indies* were discovered) haue bene drawne out of such places which are rough and full, bare and fruitlesse: yet the taste of this money, makes these places pleasing and agreeable, yea, well inhabited with numbers of people. And although there be, as I haue said, many mynes of all kindes of metals as at the *Indies*, yet they vse none but those of gold and siluer, and as much quick-siluer as is necessarie to refine their gold and siluer. They carry Iron thither from *Spaine* and *China*. As for Copper, the *Indians* haue drawne of it, and vsed it for their armes, the which were not vsually of Iron, but of Copper. Since the *Spaniards* possessed the *Indies*, they haue drawne very little, neither doe they take the paines to seeke out these mynes, although there bee many busying themselves in the search of richer and more precious metals, wherein they spend their time and labour. They vse no other metals, as Copper, and Iron, but onely that which is sent them from *Spaine*, or that which remaines of the refining of gold and siluer. Wee finde not that the *Indians* in former times vsed gold, siluer, or any other metall for money, and for the price of things, but onely for ornament, as hath bene said, whereof there was great quantitie in their Temples, Palaces, and Tombes, with a thousand kindes of vessels of gold and siluer, which they had. They vsed no gold nor siluer to trafficke or buy withall, but did change and trucke one thing for another, as *Homer* and *Plinie* report of the Ancients. They had some other things of greater esteeme, which went currant amongst them for price, and in stead of coine: and vnto this day this custome continues amongst the *Indians*, as in the Prouinces of *Mexico*, in stead of money they vse *Cacao*, (which is a small fruit) and therewith buy what they will. In *Peru* they vse *Coca*, to the same end (the which is a leafe the *Indians* esteeme much) as in *Paraguay*, they haue stamps of Iron for coine,

coine, and cotton wouen in Saint Croix, of the *Sierre*. Finally, the manner of the *Indians* traf-
ficke, and their buying and selling, was to exchange, and giue things for things: and although
there were great Marts and famous Faires, yet had they no neede of money, nor of Brokers,
for that every one had learned what he was to giue in exchange for euery kinde of merchandise.
Since the *Spaniards* entred, the *Indians* haue vsed gold and siluer to buy withall: and in the be-
ginning there was no coine, but siluer by weight was their price and money, as they report of
the ancient *Romans*. Since, for a greater benefir, they haue forged coine in *Mexico* and *Peru*, yet

Plin. lib. 33. c. 42.

10 such money as they call bullion, nor other kindes of alloy, which they vse in *Italie*, and in other
Prouinces of *Europe*; Although in some Ilands of the *Indies*, as Saint *Dominique*, and *Port Ricco*,
they vse coine of lether, which is square, the which are currant onely in those Ilands, hauing
little siluer or gold. I say little, although there be much, for that no man digges it and refines it.
But for that the riches of the *Indies*, and their manner to labour in the mynes, consists of gold, sil-
uer, and quick-siluer, I will speake something of these three metals, leauing the rest for this time.

Coin of lea-
ther.

Gold amongst other metals hath beene alwayes held the most excellent; and with reason,
being the most durable and incorruptible of all others; for fire which consumes and diminisheth
the rest, amends it, and brings it to perfection. Gold which hath often passed through the fire,
keepe his colour, and is most fine and pure; which properly is called (as *Plinie* saith) *Obriso*,

Of gold which
they digge and
refine at the
Indies. Chap. 4.

20 whereof the Scripture makes so often mention and vie, which consumeth all other metals (as
the same *Plinie* saith) doth not any thing waste gold, nor yet hurt it, neither is it eaten, nor grow-
eth old. And although his substance and body bee firme and solid; yet doth it yeeld and bow
wonderfully; the Beaters and Drawers of gold know well the force it hath to bee drawne out
without breaking. All which things well considered, with other excellent properties, will giue
men of iudgement to vnderstand, wherefore the holy Scripture doth compare Charitie to gold.

Plin. lib. 33. c. 32.

Apoc. 3. & 21.
Cant. 3.
Psal. 67.
3. Reg. 6.

To conclude, there is little neede to relate the excellencies thereof to make it more desirable. For
the greatest excellencie it hath, is to be knowne (as it is) amongst men, for the supreme power
and greatnesse of the World. Comming therefore to our subiect; at the *Indies* there is great a-
bundance of this metall, and it is well knowne by approued Histories, that the *Inguas* of *Peru* did
30 not content themselues with great and small vessels of gold, as Pots, Cups, Goblets, and Fla-
gons; yea with Kowles or great Vessels, but they had Chaires also, and Litters of masse gold;
and in their Temples they had set vp mayne Images of pure gold, whereof they finde some yet at
Mexico, but not such store as when the first Conquerors came into the one and the other King-
dome, who found great treasure, and without doubt there was much more hidden in the earth
by the *Indians*. It would seeme ridiculous to report that they haue made their horse shooes of
siluer for want of Iron; and that they haue paid three hundred crownes for a bottle of wine, and
other strange things; and yet in truth this hath come to passe, yea and greater matters. They
draw gold in those parts after three sorts: or at the least; I haue seene all three vsed. For ei-
ther they finde gold in graines, in powder, or in stone.

See before in
I. dos Santos,
and in *Heueria*.

40 The most famous gold is that of *Caranana* in *Peru*, and of *Valdivia* in *Chille*, for that it riseth
with his alloy and perfection, which is twentie three Carrats and a halfe, and sometimes more.
They make account likewise of the gold of *Veragua* to bee very fine. They bring much gold to
Mexico from the *Philippines*, and *China*, but commonly it is weake and of base alloy. Gold is
commonly found mixt with Siluer or with Copper; but that which is mixed with siluer is
commonly of fewer Carrats then that which is mixed with copper. If there be a fift part of sil-
uer, *Plinie* saith, it is then properly called *Electrum*, which hath the propertie to shine more at
the light of the fire, then fine gold or fine siluer. That which is incorporate with copper, is com-
monly of a higher value. They refine powdred gold in basons, washing it in many waters, vn-
till the Sand falls from it, and the gold as most heauie remayneth in the bottome. They refine it
50 likewise with quick-siluer and strong water, for that the allum whereof they make this water
hath the vertue to separate gold from drosse, or from other metals. After it is purified and mol-
ten, they make Bricks or small Barres to carry it vnto *Spaine*; for being in powder, they cannot
transport it from the *Indies*, for they can neither custome it, marke it, nor take say, vntill it bee
molten. In the fleet where I came, which was in the yeere 1585, the declaration of the firme
Land was of twelue Cassons or Chetts of gold, euery Casson at the least weighed foure *Arobes*,
that is a hundred weight; and a thousand fiftie and sixe Mares from new *Spaine*, which was for
the King onely, besides that which came for Merchants and priuate men being registred; and
much that came vnregistred. This may suffice touching the gold of the *Indies*, and now wee will
speake of Siluer.

Plin. lib. 3. cap. 42.

60 Now we will shew how they discouer the mynes of Siluer, their veines, rootes, and begin-
nings whereof *Ioh* speakes. And first I will say, that the reason why they giue siluer the second
place among all other metals, is, for that it approacheth neerer to gold then any other, being more
durable and lesse indamaged by the fire, and more mallable then any other: yea it passeth gold in
brightnesse, beautie, and sound, the which is cleere, and agreeable, for the colour is more confor-
mable

Of the Siluer
at the *Indies*.
Chap. 5.

mable and resembling the light, and the sound more piercing, more lively, and more delicate. The mynes of siluer are commonly found in Mountaines and high Rocks very desart, although they haue sometimes beene found in Playnes and Champaines. There are two different kindes, the one they call *stragling*, the other *fixed* and settled. The *stragling*, are pieces of metall found in certaine places, the which drawne away, there is no more found. But the *fixed* veines, are those which haue a continuance in depth and length, like to great branches and armes of Trees; and when they finde any one of them, they commonly finde many in the same place. The manner to purge and refine siluer which the *Indians* haue vsed, was by melting, in dissoluing this masse of metall by fire, which casts the earthly drosse apart, and by his force separates Siluer from Lead, Tin from Copper, and other metals mixt. To this end they did build small Furnaces in places where as the winde did commonly blow, and with Wood and Cole made their refining, the which Furnaces in *Peru* they call *Guayras*. Since the *Spaniards* entred, besides this manner of refining which they vse to this day, they likewise refine siluer with quick-siluer, and draw more by this meanes then in refining it by fire. For there is some kind of siluer metall found which can by no meanes be purged and refined by fire, but onely with quick-siluer. But this kinde of metall is commonly poore and weake, the which vsually they finde in greatest abundance. They call that poore which yeelds least siluer, and great quantitie of other metall, and that rich which yeelds most siluer. It is strange to see, not onely the difference betwixt the refining of metall by fire, and without it by quick-siluer, but also that some of these metals, which are refined by the fire, cannot well be molten with any artificiall winde, as with bellowes; but when it is kindled and blowne with the naturall aire, or naturall winde. The metall of the mynes of *Porco* is easily refined with bellowes, and that of the mynes of *Potozi* cannot bee molten with bellowes, but onely by the breath of their *Guayras*, which are small Furnaces vpon the sides of the Mountaines, built expressly where the winde lies, within the which they melt this metall; and though it be hard to yeeld a reason for this difference, yet is it most certaine and approued by long experience: so as the greedie desire of this metall so much valued amongst men, hath made them seek out a thousand gentle inuentions and deuices, whereof we will hereafter make mention. The chiefe places of the *Indies* from whence they draw siluer, are new *Spaine* and *Peru*, but the mynes of *Peru* farre surpass the rest; and amongst all others of the World, those of *Potozi*.

Of the Mountaine or Hill of *Potozi*, and the discouery thereof, Chap. 6.

The Mountaine or Hill of *Potozi* so famous, is situate in the Prouince of *Charcas*, in the Kingdome of *Peru*, distant from the Equinoctiall towards the South, or Pole Antartike, one and twentie degrees and two thirds: so as it falls vnder the Tropicke, bordering vpon the burning Zone, and yet this Region is extremely cold, yea, more then old *Castile* in the Kingdome of *Spaine*, and more then *Flanders* it selfe, although by reason it should be hot or temperate, in regard of the height and eleuation of the Pole where it is seated. The reason of this so cold a temperature, is the height of the Mountaine, whereas cold and intemperate winds continually blow, especially that which they call *Thomahani*, which is boistrous and most cold. It raines most commonly in Iune, Iuly, and August. The ground and soile of this Mountaine is drie, cold, and very vnpleasant, yea altogether barren, which neither engenders nor brings forth any fruit, grasse, nor graine; it is naturally vnhabitable, for the intemperature of the Heauen, and the barrennesse of the Earth. But the force of siluer, which drawes vnto it the desire of all things, hath peopled this Mountaine more then any other place in all these Kingdomes, making it so fruitfull of all kindes of meates, as there wants nothing that can be desired, yea, in great abundance; and although there be nothing but what is brought by carriage, yet euery place abounds so with Fruit, Conserues, exquisite Wines, Silkes, and all other delicacies, as it is not inferiour to any other part. This Mountaine is of colour darke red, and is in forme pleasing at the first sight, resembling perfectly the fashion of a Pavilion, or of a Sugar-loafe. It exceeds all other Hills and Mountaines about it in height. The way whereby they ascend, is very rough and vneuen, and yet they goe vpon horse-back. It is round at the top, and at the foot it hath a league in circuit. It contains from the top to the bottom 1680. common yards, the which reduced to the measure of *Spanish* leagues, makes a quarter of a league. At the foot of this Mountaine there is another small Hill that riseth out of it, in the which there hath beene sometimes mynes of metall dispersed, which were found as it were in purses, and not in fixed or continued veines; yet were they very rich, though few in number. This small Rock was called by the *Indians*, *Guayna Potozi*, which is yong *Potozi*; at the foot wherof begins the dwellings of the *Spaniards* and *Indians*, which are come to the riches and worke of *Potozi*, which dwelling may containe some two leagues in circuit, and the greatest traffick and comerce of all *Peru* is in this place. The mynes of this Mountaine were not digged nor discovered in the time of their *Inguas*, which were the Lords of *Peru*, before the *Spaniards* entred, although they had digged and opened the mynes of *Porco*, neer to *Potozi*, distant only six leagues.

An *Indian* called *Gualpa*, of the Nation of *Chumbivilca*, which is a Prouince of *Cusco*, going one day to hunt for Venison, passing towards the West whither the beast was fled, hee began to runne vp against the Rocke, which at that time was couered and planted with certaine Trees they call *Quinna*, and with thicke bushes, and as he strived to get vp a way which was somewhat rough and vneacie, hee was forced to lay hold vpon a branch, which issued from a veine of a siluer

- silver myne (which since they haue called *Rich*) which hee pulled vp, perceiuing in the hole or roote thereof, metall, the which he knew to be very good, by the experience hee had of the mynes of *Porco*: and after finding vpon the ground certaine pieces of metall, which lay broken and dispersed neere to this veine, being scarce well able to iudge thereof, for that the colour was spoyled and changed by the Sunne and raine; he carried it to *Porco* to trie by the *Gnayras* (which is the triall of metall by fire) and hauing thereby found the great riches and his happy fortune, he secretly digged and drew metall out of this veine, not imparting it to any man, untill that an *Indian* called *Guanca*, of the Valley of *Xaura*, which is vpon the borders of the Cite of *Kings*, who remayning at *Porco* neere vnto *Gualpa* of *Chumbibilca*, perceiued one day that hee made a refining, and that his Wedges and Bricks were greater then such as were usually made in those places: and also increasing in his experience of apparell, hauing till then liued but basely. For this reason, and for that the metall his Neighbour refined was different from that of *Porco*, hee thought to discover this secret, and wrought so, that although the other kept it as secret as hee could, yet through importunitie hee was forced to carry him vnto the Rocke of *Potozi*, hauing enioyed this rich treasure full two moneths. And then *Gualpa* the *Indian* willed *Guanca* for his part to take a veine, which he had discovered neere to the rich veine, which at this day is called the veine of *Diego Centeno*, that was not lesse rich, but more hard to digge and to draw forth; and so by agreement they diuided betweene them the richest Rocke in the world. It chanced after, the *Indian Guanca* finding some difficultie to digge and draw forth his metall, being most hard, and the other *Gualpa* refusing to impart any of his myne vnto him, they fell at debate; so as *Guanca* of *Xaura* grieved therewith, and with some other discontents, discovered this secret vnto his Master called *Villaroel* a *Spaniard*, who then remayned at *Porco*. This *Villaroel* desirous to vnderstand the truth, went to *Potozi*, and finding the riches his *Nacoma* or seruant had discovered vnto him, caused the *Indian Guanca* to be inrolled, vnder-taking with him the said veine, which was called *Centeno*, they call it *Vndertaking*, that is as much as to note and marke the myne, and so much ground in circuit for him, which the Law graunts vnto those that discover any myne, or vnto those that digge them: by meanes whereof, hauing discovered them to the Iustice, they remayned Lords of the myne, to digge and draw forth the silver, as being their owne, paying onely their duties vnto the King, which is a fift part. So as the first discoverie and inregistring of the mynes of *Potozi*, was the one and twentieth of Aprill, in the yeere of our Lord 1545. in the Territorie of *Porco*, by the said *Villaroel* a *Spaniard*, and *Guanca* an *Indian*. Presently after they discovered another veine, which they called the *Veine of Tinne*, the which is very rich, although it be rough and very painfull to worke in, the metall being as hard as flint. Since the thirtie day of August in the same yeere 1545. the veine called *Mendiet*, was inrolled, and these are the foure principall veines of *Potozi*. They say of the rich veine, the first that was discovered, that the metall lay aboue the ground the height of a Lance, like vnto Rocks, rayning the superficies of the Earth, like vnto a crest of three hundred foot long, and thirteene foot broad, and that this remayned bare and vncouered by the deluge, this veine hauing resisted the violence and force of the water, as the hardest part. The metall was so rich as it was halfe silver, and this veine continued in his bountie fiftie or threescore *Stades* (which is the height of a man) and then it fayled. Presently after that the discoverie of *Potozi* was knowne in *Peru*; many *Spaniards*, and the most part of the *Bourgeois* of the *Silver Cite*, which is eightene leagues from *Potozi*, came thither to take mynes: yea, there came many *Indians* from diuers Prouinces, especially the *Guayzadores* of *Porco*, so as within a short space it was the best peopled habitation of all the Kingdomes. When as the Licencieate *Pollo* gouerned that Prouince, the which was many yeeres after the discoverie of this Mountaine, they did euery Saturday enter a hundred and fiftie and two hundred thousand pieces, whereof the Kings fift amounted to thirtie and fortie thousand pieces; and for euery yeere a million and a halfe, or little lesse. So as according to that computation they did draw euery day from this myne thirtie thousand pieces, whereof there came to the King for his fift, fixe thousand pieces a day.
- There is yet another thing to bee spoken of, to shew the riches of *Potozi*, that the account which hath bene made, was onely of silver that was marked and custumed. And it is well knowne in *Peru*, that they haue long vsed silver in these Realmes, which they call *Current*, which was neither marked nor custumed. And they hold it for certaine which know these mynes, that in these dayes, the greatest part of silver drawne at *Potozi*, was not custumed, and this had course amongst the *Indians*, and much amongst the *Spaniards*, as I haue seene continued to my time; so as it may appeare, the third part of the riches of *Potozi*, yea the one halfe came not to light, neither was it custumed. There is yet a more notable consideration, in that which *Plinie* saith, they had digged a fiftene hundred pases in the myne of *Bebello*; and that continually they found water, which is the greatest hinderance they haue to draw forth their metall. But in this of *Potozi*, although they haue digged two hundred *stades* or heights of a man in depth; yet did they neuer finde any water, which is the greatest happinesse of this Mountaine. But the mynes of *Porco*, whose metall is good and very rich, are at this day left for the discom-

Every piece is worth thirtene Rials and a fourth part.

Plin. lib. 33. c. 6.

moditie of water, which they haue found in their worke; for they are two insupportable labours in searching of the metall; first, to digge and breake the Rocks, and then to draw out the water all together. The first of them, that is, to cut through the Rocks, is paine enough; yea very hard and excessive. Finally, at this day the King receiues for his fift yearly, from the mynes of *Potozi*, a million of siluer, besides the wealth that growes by quick-siluer, and other Royall prerogatives, which is a great treasure. Some men of iudgement hauing cast vp the accounts, say, that what hath beene brought into the custome House of *Potozi*, vnto the yeere of our Lord 1585. amounteth vnto a hundred thousand millions of pieces of Essay, whereof euery piece is worth thirteene Rials and a fourth part, not reckoning the siluer which hath beene carried away without custome, or that hath beene entred in other Royall custome houses, or the siluer that hath beene wrought in the Countrey, which is not entred, the which is innumerable, although the first Registers of Entries are not so exactly kept as at this day; for that in the beginning and first discoueries, they made their receipt by *Romans*, so great was their abundance.

Huge summes
of siluer.

But by the instructions and remembrances of *Don Francisco de Toledo* the Vice-roy, in the yeere of our Saniour Christ 1574. they finde seuentie and sixe millions to that yeere: and from that yeere to eightie five inclusive, it appeares by the Royall Registers, there were thirtie five millions more entred. They sent this accompt to the Vice-roy from *Potozi*, in the yeere I haue mentioned, being then in *Peru*; and since the wealth that hath come from *Peru* by ship, hath amounted to much more. In that fleet where I came in the yeere 1587. there were eleuen millions transported in the two fleetes of *Peru* and *Mexico*, whereof two thirds were in that of *Peru*, and almost the one halfe for the King.

Spain.

This Rocke of *Potozi*, containes as I haue said, foure principall veines; that is, the *Rich* veine, that of *Centeno*, that of *Tinne*, and that of *Mendieta*. All these veines are of the East part of the Mountaine, as looking to the Sunne rising, for on the West part there is not any. The foresaid veines runne from North to South, which is from Pole to Pole. In the largest place they haue sixe foot, and in the narrowest a span breadth. There are others of diuers fashions that runne out of the said veines; like as out of the great armes of Trees, there commonly sprout forth lesse. Euery veine hath diuers mynes which are parts and portions of the same, distinct and diuided betwixt diuers Masters, by whose names they are commonly called. The great myne containes fourscore yards, neither may it be more by the Law, and the least containes foure. All these mynes are at this day very deepe. In the *Rich* myne they reckon seuentie eight mynes, which are eightie yards deepe, or a hundred stades or height of a man, and in some places two hundred. In the veine of *Centeno* are foure and twentie mynes, whereof some are seuentie or eightie stades deepe, and so of the other veines of this Mountaine. For a remedie to this great profunditie, they haue inuented mynes, which they call *Soccabones*, which are caues or vents made at the foote of the Mountaine, the which goe crossing till they incounter with the veines: for we must vnderstand, that although the veines runne North to South, as hath beene said, yet is it in declining from the top to the foote of the Mountaine, which may be as they beleue by coniecture, aboue twelue hundred stades. And by this account, although the mynes extend in such a profunditie, yet there remains sixe times as much space vnto the bottom or roote, the which they say, are most rich and abundant, as the body and spring of all veines. Although vnto this day we haue seene the contrarie by experience, for the higher the veine is to the superficies of the earth, the more rich they finde it: and the deeper it goes, the poorer it is, and of the baser aloy. They then inuented the *Soccabons*, by which they enter to worke in the mynes very easily, with lesse charge, paine, and danger. They haue eight foot in breadth, and a stade in height, the which they shut with doores. By them they drawe forth their metall very easily, paying to the proprietarie of the *Soccabon*, the fift part of all the metall they draw forth. There are nine already made, and others are begun. They were nine and twentie yeeres in making of one *Soccabon*, as they call it, of the venome that flowes from the rich veine. It was begun in the yeere 1550. the eleuenth yeere of the discouerie, and was ended in the yeere 1585. the eleuenth of August. This *Soccabon* crossed the rich veine thirtie stades from the roote or spring, and from thence where it met to the mouth of the myne, were a hundred thirtie five stades. So as they must descend all this depth to labour in the myne. This *Soccabon* containes from his mouth vnto the veine of *Crusero* as they call it, two hundred and fiftie yards, in which worke were spent nine and twentie yeeres, whereby wee may see what great paines men take to draw siluer out of the bowels of the earth. They labour in these mynes in continuall darknesse and obscuritie, without knowledge of day or night. And forasmuch as those places are neuer visited with the Sunne, there is not only continuall darknesse, but also an extreme cold, with so grosse an aire contrarie to the disposition of man, so as, such as newly enter, are sicke as they at Sea. The which happened to me in one of these mynes, where I felt a paine at the heart, and beating of the stomacke. Those that labour therein, vse candles to light them, diuiding their worke in such sort, as they that worke in the day, rest by the night, and so they change. The metall is commonly hard, and therefore they breake it with hammers, splitting and hewing it by force, as if they were flints. After they carry vp this metall

ning.

vpon

upon their shoulders, by Ladders of three branches, made of Neats leather twisted like pieces of wood, which are crossed with staves of wood; so as by euery one of these Ladders they mount and descend together. They are ten stades long a piece: and at the end of one begins another of the same length, euery Ladder beginning and ending at plat-formes of wood, where there are seates to rest them, like vnto galleries, for that there are many of these Ladders to mount by one at the end of another. A man carries ordinarily the weight of two *Arrobes* of metall vpon his shoulders, tied together in a cloth in manner of a skip, and so mount they three and three. He that goes before carries a candle tied to his thumbe: for (as it is said) they haue no light from Heauen, and so goe they vp the Ladder holding it with both their hands, to mount so great a height, which commonly is aboue a hundred and fiftie stades: a fearfull thing, and which breeds an amazement to thinke vpon it, so great is the desire of Siluer, that for the gaine thereof, men endure any paines. And truly, it is not without reason, that *Plinie* treating of this subiect, exclaimes and sayes thus, *Wee enter euen into the bowels of the Earth, and goe hunting after riches, euen to the place of the damned.* And after in the same Booke hee saith: *Those that seeke for metals, performe workes more then Giants, making holes and caues in the depth of the Earth, piercing Mountaynes so deepe by the light of Candles, whereas the day and the night are alike, and in many moneths they see no day. So as often the walls of their mynes fall, smothering many of them that labour therein.* And afterwards hee addes, *They pierce the hard Rocks with hammers of Iron waighing one hundred and fiftie pounds, and draw out the metall vpon their shoulders, labouring day and night, one deliuering his charge to another, and all in darknesse, onely the last sees the light: with Wedges and Hammers they breake the Flints, how hard and strong soener, for the hunger of gold is yet more sharpe and strong.*

Euery *Arrobe* is 25. pound.

Plin. in proem. lib. 33. cap. 6.

How they refine the metall of siluer. Chap. 9.

The veins as I haue said, where they finde siluer, runne betwixt two Rocks, which they call *The Chase*, whereof the one is commonly as hard as flint, and the other soft and easie to breake. This metall is not alwayes equall, and of the same bountie, for you shall find in one and the same veine, one sort of metall very rich, which they call *Cacilla*, or *Tacana*, from which they draw much siluer; and another is poore, from whence they draw little. The most rich metall of this Mountaine, is of the colour of Amber, and the next is that which inclines to blacke. There is other somewhat red, and other of the colour of ashes: finally, of diuers and sundrie colours, which seeme to such as know them not, to bee stones of no value. But the myners doe presently know his qualitie and perfection, by certaine signes and small vsines they finde in them. They carry all this metall they draw out of these mynes, vpon *Indian* sheepe, which serue them as Asses to carry it to the Mills; the richest metall is refined by melting in those small Furnaces, which they call *Guayras*, for that is most leadie; by reason whereof, it is most subiect to melt, and for the better melting thereof, the *Indians* cast in a matter, they call *Soroche*, which is a metall full of Lead. The metall being in these Furnaces, the filth and earthie drosse, through the force of the fire, remaines in the bottome, and the Siluer and Lead melt; so as the Siluer swimmes vpon the Lead, vntill it bee purified; then after they refine the siluer many times, after this manner of melting. They haue vsually drawne out of one Quintall of metall, thirtie, fortie, and fiftie pieces of siluer, and yet I haue seene some most excellent that haue beene shewne me, where they haue drawne in the melting two hundred, yea two hundred and fiftie pieces of siluer of a Quintall of metall; a rare wealth, and almost incredible, if we had not seene the triall thereof by fire, but such metals are very rare. The poorest metall is that which yeelds two, three, foue, or sixe pieces, or little more. This metall hath commonly little Lead, but is drie, and therefore they cannot refine it with fire. And for this reason in *Potozi*, there was great store of these poore metals, whereof they made no great account, but were reiected like straw, and as the skum of the good metall, vntill they found meanes to refine it by quick-siluer, whereby the skum they called *Oquinache* was of great profit, for the quick-siluer by a strange and wonderfull propertie, purifies the siluer, and is apt for these metals which are drie and poore, wherein they consume lesse quick-siluer, and is apt for these metals which are drie and poore, wherein they consume lesse quick-siluer. At this

uer then in the richer: for the richer they are, the more need of quick-siluer they haue. At this day the most vsuall manner of refining in *Potozi*, is by quick-siluer, as also in the mynes of *Cacatacas*, and others of new *Spaine*. There were in old time vpon the sides and tops of *Potozi*, aboue fixe thousand *Guayras*, which are small Furnaces where they melt their metall, the which were placed like lights (a pleasant sight to behold by night) casting a light as farre off like a flame of fire. But at this day there are not aboue two thousand, for that (as I haue said) they vse little melting, but refine it by quick-siluer, the which is the greatest profit. And for that the properties of quick-siluer are admirable; and that this manner of refining of siluer is remarkable, I will discourse of Quick-siluer, of the Mynes and Worke, and what is requisite for that subiect.

Quick-siluer, so called by the *Latines*, for that it runnes and slides suddenly from place to place;

amongst all other metals hath great and wonderfull vertues. The first is, although it bee a true metall, yet is it not hard, neither hath it any certaine forme nor substance like to other metals, but is liquid, not like vnto gold and siluer molten, but of his owne proper nature; and although it be a liquor, yet is it more heauie then any other metall: and therefore all others swim aboue and sinke not to the bottome, being more light. I haue seene two pounds of Iron put into a

Chap. 11.

barrell of quick-silver, the which did swimme about like vnto Wood or Corke vpon the Water. *Plinie* giues an exception hereunto, saying, That gold alone doth sinke and not swimme about it. I haue not seene the experience; but it may bee this growes, by reason that quick-silver by nature doth inuiron gold, and couers it, which is one of the most important proper-
ties it hath; for it ioynes with gold in a strange manner, it seekes it where it lyes, and inui-
rons it in such sort, as it doth distinguish and separate it from any other body or metall where-
with it is mixt: for this reason such take gold as will preferue themselves from the dangers and
discommodities of quick-silver. They haue vsed a remedie to those (in whose eares they had
put quick-silver, to cause them to die secretly) to put little plates of gold into their eares (for
that Gold hath the vertue to draw out Mercurie) and after they drew out these plates all white
with the quick-silver, it did stick vnto them. Being one day at *Madrid*, I went to see the
exquisite workes which *Iacomo de Treco* (a rare worke-man of *Millan*) made for Saint Lau-
rence the Royall, it was my hap to be there one day, when as they gilded certaine pieces of a
countertable of brasle, which is done with quick-silver; and for that the fume of Mercurie is
mortall, he told me that the worke-men preferued themselves from this venome, by swallow-
ing a double Duckat of gold rolled vp; the which being in the stomacke, drawes vnto it all
the quick-silver that enters in fume by the Eares, Eyes, Nostrils, and Mouth, and by this
meanes freed themselves from the danger of quick-silver, which the gold gathered in the sto-
macke, and after cast out by the excrements: a thing truly worthy of admiration. After the
quick-silver hath purified and purged gold from all other metals and mixtures, hee is likewise
separated from the gold his friend by the heate of the fire, the which purifies it from all quick-
silver. *Plinie* sayes, that by a certaine arte and inuention they did separate gold from quick-
silver. It seemes to me the Ancients had no knowledge to refine silver by quick-silver, which
at this day is the greatest vse, and chiefe profit of quick-silver; for that he sayes plainly, that
quick-silver ioynes with no other metall but with gold; and when hee makes mention of refi-
ning of silver, hee speakes onely but of the manner of melting; whereby wee may inferre that
the Ancients had no knowledge of this secret. In truth, though there be a league and sympathy
betwixt gold and quick-silver, yet where as the Mercurie findes no gold, it ioynes with sil-
uer, though not in the like manner as with gold; but in the end, it doth cleanse and purge it
from Earth, Copper, and Lead, amongst the which the silver growes, without any neede
of fire to melt it: yet must they vse fire to separate it from the silver, as I will shew hereafter.
Quick-silver holds no account of other metals, but of Gold and Silver; but contrariwise, it
doth corrupt them, force and consume them, and flyeth from them as much as may bee. The
which is likewise admirable, and for this cause they put it in earthen vessels, or in beasts skins.
For if it bee put in vessels of Copper, of Iron, or other metall, it presently pierceth and cor-
rupts them. And therefore *Plinie* calleth it the poyson of all things, for that it consumes and
spoiles all. Wee finde quick-silver in the graues of dead men, which after it hath consumed the
bodies, comes forth pure and whole. There hath beene likewise found in the bones and mar-
row of Men and Beasts, who hauing receiued it in fume by the mouth and nostrils, congeales
within them and pierceth euen vnto the bones. Therefore it is a dangerous thing to frequent so
perillous and mortall a creature. It hath another propertie, which is, to runne and make a hun-
dred thousand small drops, whereof not one is lost, bee they neuer so little, but they returne
euery way to their liquor. It is almost incorruptible, hauing nothing in a manner that may
consume it. And therefore *Plinie* calls it the eternall sweat. It hath yet another propertie, that
although it doth separate Gold from Copper, and all other metals, yet they that will gild Cop-
per, Brasle, or Silver, vse quick-silver as the meanes of this vnion; for with the helpe thereof
they gild metals. Amongst all the wonders of this strange liquor that seemes to mee most wor-
thy obseruation, that although it bee the weightiest thing in the world, yet is it conuerted in-
to the lightest of the world, which is smoake, and suddenly the same smoake which is so light
a thing, turnes againe into so heauie a substance, as is the proper liquor of quick-silver, where-
in comming into a cold Region, suddenly it thickens and is conuerted into quick-silver, and if you
set him once againe to the fire, he doth likewise returne into smoake, to be resolu'd againe in-
to quick-silver. Quick-silver is found in a kinde of stone, which doth likewise yeeld Vermillion, which the
Ancients called *Minium*, and at this day they call the Images of crySTALL *Miniaes*, which are
painted with quick-silver. The Ancients made great account of this *Minium* or Vermillion,
holding it for a sacred colour, as *Plinie* reports, saying, That the Romans were accustomed to
paint the face of *Iupiter*, and the bodies of those that triumphed in *Ethiopia*: yea, their Idols and
their Gouvernours likewise had their faces coloured with this *Minium*. And this Vermillion was
so esteemed at *Rome* (which they brought onely from *Spaine*, where they had many pits and
mynes of quick-silver, which continue there to this day) that the Romans suffered it not to be re-
fined in *Spaine*, lest they should steale some of it, but they carried it to *Rome*, sealed vp in a masse as
they drew it out of the myne, and after refined it. They did yearly bring from *Spaine*, especially
from

from *Andalusie*, about ten thousand pound weight, which the *Romans* valued as an infinite treasure. I have reported all this out of that Author, to the end that those which doe see what passeth at this day in *Peru*, may haue the content to know what chanced in former ages, among the mightiest Lords of the world. I speake for the *Inguas* Kings of *Peru*, and for the naturall *Indians* thereof, which haue laboured and digged long in these Mines of Quick-silver, not knowing what Quick-silver was, seeking onely for *Cinabrium* or Vermillion, which they call *Limpi*, the which they esteeme much, for that same effect that *Plinie* reports of the *Romans* and *Ethiopians*, that is, to paint the face and bodies of themselves and their Idols: the like hath bene much practised by the *Indians*, especially when they went to the warres, and vse it at this day in their feasts and dancing, which they call flubbering, supposing that their faces and visages so flubbered, did much terrifie, and at this day they hold it for an ornament and beautifying: for this cause there were strange workes of Mines in the Mountaines of *Guancauilca*, which are in *Peru*, neere to the Citie of *Guamangua*, out of the which they drew this Mettall: it is of such a manner, that if at this day they enter by the caues or *Socobones*, which the *Indians* made in those dayes, they loofe themselves, finding no passage out: but they regarded not Quick-silver, which naturally is in the same substance or mettall of Vermillion, neither had they knowledge of any such matter.

The *Indians* were not alone for so long a time without the knowledge of this treasure, but likewise the *Spaniards*, who vntill the yeare 1566. and 1567. (at such time as the licentiate *Castro* gouerned in *Peru*) discovered not the Mines of Quick-silver, which happened in this manner. A man of iudgement called *Henrique Guarces*, a *Portugall* borne, hauing a piece of this coloured Mettall, as I haue said, which the *Indians* call *Limpi*, with which they paint their faces, as he beheld it well, found it to be the same which they call Vermillion in *Castile*: and for that hee knew well that Vermillion was drawne out of the same mettall that Quick-silver was, he conjectured these Mines to be of Quick-silver, went to the place whence they drew this Mettall, to make triall thereof. The which he found true, and in this sort the Mines of *Palcas* in the territorie of *Guamangua*, being discovered, great numbers of men went thither to draw out Quick-silver, and so to carry it to *Mexico*, where they refine Silver by the meanes of Quick-silver, wherewith many are enriched. This Countrie of Mines which they call *Guancauilca*, was then peopled with *Spaniards* and *Indians* that came thither, and come still to worke in these Mines of Quick-silver, which are in great numbers, and very plentifull: but of all these Mines, that which they call *Amador de Cabrera*, or of Saints, is goodly and notable. It is a Rocke of most hard Stone, interlaced all with Quick-silver, and of that greatnesse, that it extends aboue fourescore *Vares* or yards in length, and fortie in breadth: in which Mine they haue many pits, and ditches, of threescore and tegne stades deepe, so as three hundred men may well worke together; such is the capacitie thereof. This Mine was discovered by an *Indian* of *Amador* of *Cabrera*, called *Nanincopa* of the Village of *Acoria*, the which *Amador* of *Cabrera* caused to be registred in his name. He was in suite against the Procurer fiscall, but the vsufruite was adiudged to him by sentence as the discoverer. Since he sold his interest to another, for two hundred and fiftie thousand Ducates; and afterwards thinking he had bin deceived in the sale, he commenced an action against the buyer, being worth, as they say, aboue five hundred thousand Ducates; yea, some hold it to be worth a Million of Gold: a rare thing to see a Mine of that wealth.

When as *Don Francisco* of *Toledo* gouerned in *Peru*, there was one which had bin in *Mexico*, and obserued how they refined Silver with Mercury, called *Pero Fernandes de Valesco*, who offred to refine Silver at *Potozi*, with Mercury: and hauing made triall thereof in the yeare 1571. performed it with credit; then began they to refine Silver at *Potozi* with Quick-silver, which they transported from *Guancauilca*, which was a goodly helpe for the Mines; for by the meanes of Quick-silver they drew an infinite quantitie of mettall from these Mines, whereof they made no accompt, the which they called *Scrappings*. For as it hath bene said, the Quick-silver purifies the Silver, although it be drie, poore, and of base alloy, which cannot be done by melting in the fire. The Catholike King drawes from it Quick-silver mines, without any charge or hazard, almost foure hundred thousand pieces of a Mine, the which are foureteene rials a peece, or little lesse, besides the rights that rise in *Potozi*, where it is imployed, the which is a great riches. They doe yearly, one with another, draw from these Mines of *Guancauilca*, eight thousand quintals of Quick-silver, yea and more.

Let vs now speake how they draw out Quick-silver, and how they refine Silver therewith. They take the stone or mettall where they finde the Quick-silver, the which they put into the fire in pots of earth well luted, being well beaten, so as this mettall or stone comming to melt by the heate of the fire, the Quick-silver separates it selfe, and goes forth in exhalation, and sometimes even with the smoake of the fire, vntill it incounters some body where it staies and congeales, and if it passe vp higher, without meeting of any hard substance, it mounts vp vntill it be cold, and then congealed, it fells downe againe. When the melting is finished, they vnstop the pots and draw forth the mettall, sometimes staying vntill it be very cold, for if there remained

remained any fume or vapour, which should encounter them that should vnstop the pots, they were in danger of death, or to be benumbed of their limbes, or at the least to loose their teeth. And for that they spend an infinitie quantitie of wood, in the melting of these mettals, a Miller called *Rodrigo de Torres* found out a profitable inuention, which was, to gather certaine straw which growes throughout all those Mountaines of *Peru*, the which they call *Ycho*, it is like vnto a hard reede wherewith they make their fire. It is a strange thing to see the force which this straw hath to melt and dissolue these mettals, the which falls out, as *Plinie* saies, that there is gold which melts more easily with the flame of straw, then with hot burning coales. They put the Quick-silver thus molten into skinnes, for that it keepe best in leather, and in this sort they lay it into the Kings store-house, foom whence they carrie it by Sea to *Ariqua*, and so to *Potozi* by Land vpon their sheepe. There is yeerely spent in *Potozi* for the refining of Mettals, about six or seuen thousand quintals of Quick-silver, besides that they draw from the Plates (which is the earth or drosse of the first washings of these Mettals, which are made in caldrons.) The which plates they burne in their furnaces, to draw out the Quick-silver which remains in them: and there are aboue fiftie of these Furnaces in the Citie of *Potozi*, and in *Tarpaya*. The quantitie of mettals which they refine, (as some men of experience haue made the account) doth amount yeerely to aboue three hundred thousand quintals; from the earth and drosse whereof being molt and refined, they may draw yeerely aboue two thousand quintals of Quick-silver. We must vnderstand there are diuers sorts of mettals, for some yeelde much Silver, and waste little Quick-silver: others consume much Quick-silver, and yeelde little Silver: and there are others which consume much Quick-silver, and yeeldes much Silver; and others that consume little Quick-silver, and also yeelde little Silver: and as men encounter in these mettals, so they grow rich or poore in their trafficke. Although commonly the rich metall yeeldes much Silver, and consumes much Quick-silver; and likewise that which is poore, yeeldes little Silver, and consumes as little Mercurie. They first beate and grinde the metall very small, with hammers and other instruments, which beate this Stone like vnto tanne Mills, and being well beaten, they searce it in a copper searce, making the poulder as small and fine, as if it were horse haire: these searces being well fitted, doe sift thirtie quintals in a day and a night; then they put the poulder of the metall into the vessels vpon furnaces, whereas they anoint it and mortifie it with brine, putting to euery fiftie quintals of poulder, fve quintals of Salt. And this they doe for that the Salt seperates the earth and filth, to the end the Quick-silver may the more easily draw the Silver vnto it. After they put Quick-silver into a peece of Holland and presse it out vpon the metall, which goes forth like a dewe, alwaies turning and stirring the metall, to the end it may be well incorporate.

Before the inuention of these furnaces of fire, they did often mingle their metall with Quick-silver, in great troughes, letting it settle some daies, and did then mixe it, and stir it againe, vntill they thought all the Quick-silver were well incorporate with the Silver, the which continued twentie daies and more, and at the least nine daies. Since they discovered (as the desire to get is diligent,) that to shorten the time fire did much helpe: to incorporate Silver the sooner with Quick-silver, they inuented these furnaces, whereon they set vessels to put in their metall, with Salt and Quick-silver, and vnderneath they put fire by little and little, in furnaces made for the nonce vnderneath; so as in fve or six daies the Quick-silver is incorporate with the Silver. And when they finde that the Mercurie hath done his part, and assembled all the Silver, leauing nothing behinde, but is well imbroed as a Spunge doth water, diuiding it from the Earth, Lead, and Copper, with the which it is engendered. Then after they seperate it likewise from the Quick-silver, the which they doe in this sort; they put the Metall in Caldrons, and vessels full of water, where with certaine wheeles they turne the metall round about, as if they should make Mustard, and so the earth and drosse goes from the Metall with the water that runnes away: The Silver and Quick-silver as most ponderous remaining in the bottome; the Metall which remains, is like vnto Sand; then they take it out and wash it againe in great platters of wood, or keelers full of water, still drawing the earth from it, vntill they leaue the Silver and Quick-silver well clenfed. There slippes away also some small portion of Silver and Quick-silver with the earth and drosse, which they call *washing*; the which they after wash againe and draw out the remainder. When the Silver and Quick-silver are clenfed and begin to shine, and that there remains no earth, they put all the Metall into a cloth, which they straine out very forcibly, so as all the Quick-silver passeth out, being not incorporate with the Silver, and the rest remains as a loafe of Silver, like to a marke of Almonds pressed to draw oyle. And being thus pressed, the remainder contains but the sixt part in Silver, and fve in Mercurie. So as if there remains a marke of threescore pounds, ten are of Silver, and fiftie of Mercurie. Of these markes they make pinnes (as they call them) like pine apples, or sugar loaves, hollow within, the which they commonly make of a hundred pound weight; then to separte the Silver from the Quick-silver, they put it into a violent fire, which they couer with an earthen vessell, like to the mold of a Sugar-loafe, or vnto a capuchon or hood, the which they couer with coales, and set fire vnto it; whereby the Quick-silver exhals in smoake, the which striking against the capuchon of earth,

earth, it thickens and distils, like vnto the smoake of a pot couered; and by a pipe like vnto a limbecke, they receiue the Quick-siluer which distils, the Silver remaining without changing the forme, but in weight it is diminished fve parts of that it was, and is spongius, the which is worthy the obseruation. Of two of these loaves they make one barre of Silver, in weight sixtie fve or sixtie six markes: and in this sort they carrie it to the touch, custome, and marke. Silver drawne with Mercurie, is so fine, that it neuer abates of two thousand three hundred and fourescore of alloy, and it is so excellent, that the worke-men are enforced to alay it, putting some mixture to it, as they doe likewise in their Mints, whereas their monie is stamped. Silver indures all these martyrdomes (if we may so call it) to be refined, the which if we consider well, it is a body framed where they grinde, sift, kneade, lay the leuen, and bake the Silver: besides all this, they wash it and wash it againe; they bake it and bake it againe, induring the pestels, fires, troughes, furnaces, caldrons, presses: and finally, by the water and fire. I speake this, for that seeing this art in *Potozi*, I did consider what the Scripture speakes of the iust, *Colabit eos & purgabit quasi argentum*: And that which they speake in another part, *Sicut argentum purgatum terra, purgatum septuplum*. So as to purifie Silver, to refine and cleanse it from the earth and stone where it engenders, they purge and purifie it seuen times: for in effect it passeth their hands seuen times, yea oftner, vntill it remaines pure and fine; so is it in the word of God, where the soules must be purified, that shall inioy the heavenly perfection.

To conclude this subiect of Silver and of Mettals, there remaines yet two things to speake of, the one is of their Engins and Mills, the other of their essay or triall: I haue said before, how they grinde their Mettall: for the receiuing of the Quick-siluer, which is done with diuers instruments and Engins, some with Horses like vnto hand-mills, others like Water-mills; of which two sorts there are great numbers. But for that the water they doe vse commonly, is but of raine, whereof they haue not sufficient but three months in the yeare, December, January, and February: for this reason they haue made Lakes and standing Pooles, which containe in circuite about a thousand and six hundred rods, and in depth three stades; there are seuen with their sluices: so as when they haue neede of any water, they raise vp a sluice, from whence runnes a little streame of water, the which they stop vpon holy dayes. And when the Lakes and Pooles doe fill, and that the yeare abounds with raine, their grinding doth then continue six or seuen moneths; so as euen for Silver sake men desire a good yeare of raine in *Potozi*, as they doe in other places for bread. There are some other Engins in *Tarapaya*, which is a valley three or foure leagues distant from *Potozi*, whereas there runnes a River as in other parts. The difference of these Engins is, that some goe with six pestels, some with twelue, and others with fouretee. They grinde and beate the Mettall in Morters, labouring day and night; and from thence they carry it to be sifted, vpon the bankes of the brooke of *Potozi*. There are fortie eight Water-mills, of eight, ten, and twelue pestels, and foure on the other side, which they call *Tanacognugno*; in the Citie of *Tarapaya*, there are two and twentie Engins all vpon the water; besides there are thirtie goe with Horses in *Potozi* and many others in diuers parts, so great the desire of man is to get Silver, which is tried by deputies appointed by the King.

To giue the alloy to euerie peece, they carrie the bars of Silver vnto the Assay Master, who giue to euerie one his number, for that they carrie many at once, hee cuts a small peece of euerie one, the which he weighs iustly, and puts them into a *Cruset*, which is a small vessell made of burnt bones beaten; after he placeth euerie crusbile in his order in the furnace, giuing them a violent fire, then the Mettall melteth, and that which is lead, goes into smoake, and the copper and tinne dissolues, the Silver remaining most fine, of the colour of fire. It is a strange thing, that being thus refined, although it be liquid and molten, yet it neuer spils, were the mouth of the crusbile turned downewards; but it remaineth fixed, without the losse of a droppe. The Assay Master knoweth by the colour and other signes, when it is refined, then doth he draw the crusbiles from the fire, and weighes euerie peece curiously, obseruing what euerie one wants of his weight; for that which is of high alloy, wastes but little, and that which is baser, diminisheth much; and according to the waste, he sees what alloy he beares, according to the which he markes euerie bar punctually. Their ballance and weights are so delicate, and their graines so small, as they cannot take them vp with the hand, but with a small paire of pincers: and this triall they make by candle-light, that no ayre might moue the ballance. For of this little the price of the whole barre dependeth. In trueth it is a very delicate thing, and requires a great dexteritie.

Fine Silver for worke, must be alloyed.

Of Emeralds, Pearles, Indian Bread, Trees, Fruites, Flowers naturall, and carried thither from Spaine.

Plin. lib. 37. ca. 3.

I shall not be from the purpose, to speake something of Emeralds, both for that it is a precious thing, as Gold and Silver, as also that they take their beginning from Mines and Mettals, as *Plinie* reports. The Emerald hath bin in old time in great esteeme, as the same Author writes, giuing it the third place amongst all Iewels and precious stones, that is, next to the Diamond and Pearle. At this day they doe not so much esteeme the Emerald, nor the Pearle, for the great abundance brought of these two sorts from the *Indies*; onely the Diamond holds the principalltie, the which cannot be taken from it. Next, the Rubies come in price and other Stones, which they hold more precious then the Emerald. Men are so desirous of singularities and rare things, that what they see to be common, they doe not esteeme.

How Emeralds grow.

They report of a *Spaniard*, who being in *Italie* when the *Indies* were first discovered, shewed an Emerald to a Lapidary, who asking him the value thereof, after he had well viewed it, being of an excellent lustre and forme, he prized it at a hundred Duckets: he then shewed him another greater then it, which he valued at three hundred Duckats. The *Spaniard* drunke with this discourse, carried him to his lodging, shewing him a Casket full. The *Italian* seeing so great a number of Emeralds, said vnto him, Sir, these are well worth a crowne a peece. The Kings of *Mexico* did much esteeme them; some did vse to pierce their nostrils, and hang therein an excellent Emerald: they hung them on the visages of their Idols. The greatest store is found in the new Kingdome of *Grenado*, and *Pern*, neere vnto *Manta* and *Port Vieil*. There is towards that place a soile which they call, *the Land of Emeralds*, for the knowledge that they haue of abundance to be there: and yet vnto this day they haue not conquered that Land. The Emeralds grow in stones like vnto Christall; I haue seene them in the same stone, fashioned like a veine, and they seeme by little and little to thicken and refine. I haue seene some that were halfe white, and halfe Greene; others all white, and some Greene and very perfit. I haue seene some of the bignesse of a Nut, and there haue bin some greater found: but I haue not knowne that in our time they haue found any of the forme and bignesse of the plat or Iewell they haue at *Genes*, the which they esteeme (and with reason) to be a Iewell of great price, and no relique; yet without comparison, the Emerald which *Theophrastus* speakes of, which the King of *Babylon* presented to the King of *Egypt*, surpasseth that of *Genes*; it was foure cubits long, and three broad, and they say, that in *Iupiters* Temple, there was a needle or pyramide, made of foure Emeralds stones of fortie cubits long, and in some places foure broad, and in others two: and that in his time there was in *Tirus* in *Hercules* Temple, a Pillar of an Emerald. It may be (as *Plinie* saith) it was of some Greene stone, somewhat like the Emerald, and they called it a false Emerald. As some will say, that in the Cathedral Church of *Cordoue* there are certaine Pillars of Emeralds which remaine since it was a Mesquite for the Kings *Miramamolins Moores*, which reigned there. In the fleete, the yeare one thousand five hundred eightie and seuen, in the which I came from the *Indies*, they brought two chests of Emeralds, euery one weighing at the least foure *Arches*, whereby we may see the abundance they haue.

Admirable Emerald.

Now that we intreate of the great riches that comes from the *Indies*, it were no reason to forget the Pearle, which the Ancients called *Marguerites*, and at the first were in so great estimation, as none but royall persons were suffered to weare them: but at this day there is such abundance as the *Negres* themselves doe weare chaines thereof; they grow in shels or Oysters, in eating whereof I haue found Pearles in the midst of them. These Oysters within are of the colour of heauen, very liuely. In some places they make Spooones, the which they call *Mother of Pearle*. The Pearles doe differ much in forme, in bignesse, figure, colour and polishing; so likewise in their price they differ much. Some they call *Aue Marias*, being like the small grains of beades: others are *Pater nosters*, being bigger. Seldome shall you finde two of one greatnesse, forme, and colour. For this reason the *Romans* (as *Plinie* writeth) called them *Unions*. When as they doe finde two that are alike in all points, they raise the price much, especially for eare-rings. I haue seene some paires valued at thousands of Ducats, although they were not like to *Cleopatras* two Pearles, whereof *Plinie* reports, either of them being worth a hundred thousand Ducates, with the which this foolish Queene wonne a wager she had made against *Marc Antony*, to spend in one Supper aboue an hundred thousand Ducates, so at the last course shee dissolved one of these Pearles in strong Vinegar, and dranke it vp. They say the other Pearle was cut in two, and placed in the *Pantheon* at *Rome*, at th'eares of the Image of *Venus*.

Of Pearles. Chap. 15.

They fish for Pearles in diuers parts of the *Indies*, the greatest abundance is in the South Seas, neere vnto *Panama*, where the *Ilands of Pearles* be, as they call them. But at this day they finde greatest store, and the best, in the North Seas, the which is neere to the Riuer of *Hache*. I

Cleopatras vanity.

Cleopatras vanity.

Pearle fishings.

Pearle fishings.

did see them make their fishing, the which is done with great charge and labour of the poore slaues, which diue six, nine, yea twelue fadomes into the Sea, to seeke for Oysters, the which commonly are fastened to the rockes and grauell in the Sea: they pull them vp, and bring them about the water to their canoes, where they open them, drawing forth the treasure they haue within them. The water of the Sea in this part is very cold, but yet the labour and toile is greatest in holding of their breath, sometimes a quarter, yea halfe an houre together, being vnder the water at their fishing. And to the end these poore slaues may the better continue and hold their breaths, they feede them with drie meates, and that in small quantitie, so as couetousnesse makes them abstaine and fast thus against their wils. They imploy their Pearles to diuers works, and they pierce them to make chaines whereof there is great store in euery place. In the yeare of our Lord 1581. I did see the note of what came from the *Indies* for the King: there were eighteene Maces of Pearle, besides three caskets, and for particulars, there were twelue hundred threescore and foure Marks, and besides them, seuen caskets not pierced, which heretofore we would haue esteemed and held for a lye.

Long winded flaties.

Of the Indian Bread, and of Mays. Chap. 16.

We call it also Virginia wheate.

How it groweth.

I haue had it ripen reasonably in my Garden in Essex.

Malt & strong drinke made of it.

Chica good against the Stone.

The

They haue (as we haue here) a proper name, whereby they note and signifie bread, which at *Pern*, they call *Tanta*, and in other places by another name. But the qualitie and substance of the bread the *Indians* vse, differs much from ours: for we finde not they had any kinde of Wheat or Barley, nor any other kinde of graine which they vse in *Europe* to make Bread withall: instead whereof they vsed other kindes of graines and rootes, amongst the which *Mays* holds the first place, and with reason, in *Castile* they call it *Indian Wheat*, and in *Italie* they call it *Turkey* graine. And euen as Wheate is the most common graine for the vse of man, in the regions of the old world, which are *Europe*, *Asia*, and *Africa*: So in the new found world, the most common graine is *Mays*, the which is found almost in all the Kingdomes of the *West Indies*, as at *Pern*, new *Spaine*, in the new Kingdome of *Granado*, in *Gautimalla*, in *Chille*, and vpon the maine Land. I doe not finde that in old time, in the Ilands of *Barlonte*, as *Cuba*, *Saint Dominique*, *Iamaique*, and *Saint Iean*, that they vsed *Mays*: at this day they vse much *Yuca* and *Cacani*, whereof we will presently intreate. I doe not thinke that this *Mays* is any thing inferiour to our Wheate, in strength nor substance, but it is more hot and grosse, and engenders more bloud, whereupon they that haue not bene accustomed thereunto, if they eate too much, they swell and become scabbed. It growes vpon Canes or Reedes; euerie one beares one or two branches, to the which the graine is fastened, and although the graine be bigge, yet finde they great store thereof, so as in some clusters I haue told seuen hundred graines. They must plant it with the hand one by one, and not verie thicke; it desires a hot and a moist ground, and growes in great abundance in many places of the *Indies*. It is not strange in those Countries to gather three hundred *Fanegues*, or measures for one sowing. There is difference of *Mays* as there is of Wheate, one is great and very nourishing, another small and drie, which they call *Moroche*; the greene leaues and capes of *Mays*, is a good foode for their Males and Horses, and it serues them for straw when it is dried; the graine is of more nourishment for Horses then Barley; and therefore in those Countries, they vse to water their Horses before they eate, for if they should drinke after, they would swell as when they eate Wheate. *Mays* is the *Indians* bread, the which they commonly eate boiled in the graine hot, and they call it *More*, as the *Chinois* and *Iaponois* eate their Rice sodden with the hot water: sometimes they eate it baked. There is some *Mays* round and bigge, as that of *Lucanas*, which the *Spaniards* eate roasted as a delicate meat, and hath a better taste then *Buarbenjes*, or roasted peason. There is another kinde of eating it more pleasant, which is, to grinde the *Mays*, and to make small cakes of the flower, the which they put in the fire, and then bring them hot to the Table. In some places they call them *Arepas*. They make also round bowles of this paste, and so trimme them that they continue long, eating it as a daintie dish.

They haue inuented at the *Indies* (for friandise and pleasure) a certaine kinde of paste, they doe make of this flower mixt with Sugar, which they call Biscuits and mellinders. This *Mays* serues the *Indians*, not onely for bread, but also for wine: for they doe make their drinke thereof, wherewith they are sooner drunke then with wine of Grapes. They make this wine of *Mays* in diuers sorts and manners, calling it in *Pern*, *Acua*, and by the most common name of the *Indies*, *Chicha*. And the strongest is made like vnto Beere, steeping the graine vntill it breake. After they boile it in such sort, that it growes so strong, as a little ouerthrowes a man. In *Pern* they call this *Sora*, it is defended by the Law, for the great inconueniences that grow thereby, making men drunke. But this Law is ill obserued, for that they vse it still; yea they spend whole daies and nights in drinking carowfes.

There is another manner of making this *Acua* or *Chicha*, which is to champe the *Mays*, and make a leuen thereof, and then boile it: yea the *Indians* hold opinion, that to make good leuen, it must be champed by old withered women, which makes a man sicke to heare, and yet they doe drinke it. The clenliest manner, the most wholesome, and that which least harmeth, is to roast the *Mays*, which the most ciuill *Indians* doe vse, and some *Spaniards*, yea for physicke: For in effect they finde it a very wholesome drinke for the reines, so as you shall hardly finde any one at the *Indies* complaine of paine in the backe, for that they doe drinke of this *Chicha*.

The Spaniards and Indians eat this *Mays* boyled and roasted for daintinesse, when it is tender in the grape like milke, they put it into the pot, and make sauces that are good to eat. The buds of *Mays* are very fat, and serue instead of Butter and oyle: so as this *Mays* at the *Indies* serues both for men and beasts, for bread, wine, and oyle.

Of *Tucas*, *Caçani*, *Papas*, *Chunos* and *Riz*. Chap. 17.

In some parts of the *Indies* they vse a kinde of Bread they call *Caçani*, which is made of a certaine roote they call *Tuca*. This *Tuca* is a great and grosse roote, which they cut in small morsels, they grate or scrape it, and then put it in a presse to straine, making a thinne and broad cake thereof, almost like vnto a *Moore*s Target or Buckler; then doe they drie it: and this is the Bread they eat. It hath no taste, but is healthfull and of good nourishment. For this reason we said, being at Saint *Dominicke*, that it was the proper foode for great eaters, for that they might eat much, without any feare of surfetting. They must of necessitie water this *Caçani* before they eat it; it is sharpe, and easely watered with water or broath, wherein it is very good, for that it swells much, and so they make *Capirotades*, but it is hardly steeped in Milke, Hony of Canes, or in Wine, for that these liquors cannot pierce it, as it doth Bread made of Wheate. Of this *Caçani* there is one kinde more delicate then any other, which is that they make of the flower called *Xauxau*, which they doe much esteeme in those parts. For my part, I esteeme more a morsell of Bread, how hard and blacke soeuer. It is a strange thing that the iuyce or water that commeth from this roote when they straine it, which makes the *Caçani*, is a deadly poison, and kills any that drinckes thereof: but the substance that remaineth, is a very wholesome Bread and nourishment, as we haue said.

Iuyce of *Caçani* poison.

Wheat, why it groweth not in those parts.

There is another kinde of *Tuca*, which they call *Sweet*, and hath not this poison in the iuyce: this is eaten in the roote boyled or roasted, and is good meate. *Caçani* will keepe long, and therefore they carrie it to Sea instead of Biscuit. The place where they vse most of this Bread, is at the Ilands of *Barlonte*, which are Saint *Dominicke*, *Cuba*, *Port Ricco*, *Jamaique*, and some others thereabouts; for that the soile of these Ilands will neither beare Wheate, nor *Mays*: for when as they sowe Wheate, it comes vp well, and is presently greene, but so vnequally, as they cannot gather it; for of the seede sown, at one instant some is spindled, some is in the eare, and some doth but bud, one is great and another little, one is in the grasse and another in the graine: and although they haue carried labourers thither, to see if there were any tillage or Art to be vsed, yet could they finde no remedy for the qualitie of the earth. They carry Meale from new *Spain* or the *Canaries*, which is so moist, that hardly can they make any profitable Bread, or of good taste. The Wafer-cakes wherewith they say Masse, did bend like to wet paper, by reason of the extreame humiditie and heate which are ioynly in that Countrey. There is another extreame contrarie to this, which hinders the growing of *Mays* or Wheate in some parts of the *Indies*, as on the height of the *Sierre* of *Pern*, and the Provinces which they call of *Colao*, which is the greatest part of this Realme, where the climate is so cold and dry, as it will not suffer any of these seedes to grow: instead thereof the *Indians* vse another kinde of roote, which they call *Papas*: these rootes are like to ground Nuts, they are small rootes, which cast out many leaues. They gather this *Papas*, and dry it well in the Sunne, then beating it, they make that which they call *Chuno*, which keepes many daies, and serues for bread. In this Realme there is great trafficke of *Chuno*, the which they carry to the Mines of *Potozi*: they likewise eat of these *Papas* boyled or roasted: there is one sweete of these kinds, which growes in hot places, whereof they doe make certaine sauces and minced meate, which they call *Locro*. To conclude, these rootes are the bread of that Land; so as when the yeare is good, they reioyce much, for that oftentimes they freeze in the earth, so great is the cold of that Region: they carrie *Mays* from the Valley or Sea-coast, and the Spaniards which are daintie, carrie likewise from the same places Wheate-meale, whereof they doe make good Bread, because that the Land is drie.

Papas and *Chuno*.

Of diuers roots which grow at the *Indies*. Chap. 18.

Besides *Papas*, which is the principall, there is *Ocas*, *Tanococas*, *Camotes*, *Vatas*, *Xiquimas*, *Tuca*, *Cochucha*, *Cani*, *Totoro*, *Mani*, and an infinite number of other kinds, as the *Patattres*, which they eat as a delicate and toothsome meate. They haue likewise carried fruites to the *Indies* from these parts, the which prosper better there, then the *Indian* Plants doe, brought into *Europe*. There are other rootes that serue them for dainties, as the *Cochucha*: it is a small sweete roote, which some prouide for more delight. There are other rootes fit to coole, as the *Piquima*, which is the qualitie very cold and moist, and in Summer it refresheth and quencketh the thirst; but the *Papas* and *Ocas*, be the chiefe for nourishment and substance. The *Indians* esteeme Garlike aboue all the rootes of *Europe*, and hold it for a fruite of great force.

Of diuers sorts of green hearbs and Pulses, and of those they call *Concombres*, *Pines*, or *Pine Apples*, small fruites of *Chille*, and of *Prunes*. Chap. 19.

Seeing we haue begunne with the lesser Plants, I might in few words, touch that which concernes Flowers and Pot-herbes, and that which the Latines call *Arbusta*, without any mention of Trees. There are some kinds of these shrubbes at the *Indies*, which are of verie good taste. The first Spaniards named many things at the *Indies* with such Spanish names, as they did most resemble, as *Pines*, *Concombres*, and *Prunes*, although they be very different fruites to those which are so called in *Spain*. The *Pines*, or *Pine-apples*, are of the same fashion and forme outwardly to those of *Castile*, but within they wholly differ, for that they haue neither Apples, nor

nor scales, but are all one flesh, which may be eaten when the skin is off. It is a fruit that hath an excellent smell, and is very pleasant and delightfull in taste, it is full of iuyce, and of a sweete and sharpe taste, they eate it being cut in morsels, and steeped a while in water and salt. They grow one by one like a cane or stalke, which riseth amongst many leaues, like to the Lillie, but somewhat bigger. The Apple is on the top of euerie cane, it growes in hot and moist grounds, and the best are those of the Ilands of *Barlovente*. I haue seene in new *Spaine*, conserues of these Pines, which was very good. Those which they call *Concombres*, are no trees, but shrubbes, continuing but one yeare. They giue it this name, for that some of this fruit, and the most part, is in length, and roundnesse like to the *Concombres* of *Spaine*: but for the rest they differ much, for they are not greene, but violet, yellow, or white, neither are they thornie or rough, but polished and euen, hauing a verie different taste, and farre better then that of *Spaine*, for they haue a sharpe sweete taste, very pleasant when it is ripe, yet is it not so sharpe as the Pine. They are very coole, full of liquor and of easie digestion, and in time of heate fit to refresh. They take away the rinde which is white, and all that remaines is meate. They grow in a temperate soile, and require watering. And although for the resemblance they call them *Concombres*, yet are there many of them round, and others of a different fashon: so as they haue not the figure of *Concombres*. I doe not remember to haue seene this kinde of fruit in new *Spaine*, nor at the Ilands, but vpon the *Lanos* of *Peru*. That which they call the little fruit of *Chille*, is of the same sort, verie pleasant to eate, and comes neere the taste of Cherries, but in all other things it differs much; for that it is no tree, but an hearbe, which growes little and spreads vpon the earth, casting forth this little fruit, the which in colour and graines, resembles almost the Mulberie, when it is white and not ripe, yet is it more rough and bigger then the Mulberie. They say this little fruit is naturally found in the fields of *Chille*, where I haue seene of them. They set it vpon Plants and branches, and it growes like any other shrub. Those which they call *Prunes*, are verily the fruits of trees, and haue more resemblance then the rest to our Plumbs. But to returne to Pot-hearts, I finde not that the *Indians* had any Gardens of diuers Hearbes and Plants, but did onely till the Land in some parts for pulses, which they vse, as those which they call *Frisolles* and *Palares*, which serue them as our Lentils, Beanes, or Tares: neither haue I knowne that these Pulses, or any other kinde that be in *Europe*, were there before the *Spaniards* entred, who carried Plants and Pulses from *Spaine* thither, where they now grow and increase wonderfully, and in some places exceed greatly the fertilitie of these parts. As if we speak of Mellons which grow in the Vallie of *Yuca*, in *Peru*, whose roote becomes a stalk that continues many yeares carrying Mellons yeerely, and they trimme it like vnto a tree; a thing which I doe not know to be in any part of *Spaine*. But that is more monstrous of the *Calibasses* or *Indian* Pompions, and the greatnesse they haue as they grow, especially those which are proper to the Countrey, which they call *Capallos*, the which they eate most commonly in Lent, boiled and trimmed with some other sawce. There are a thousand kindes of *Calibasses*, some are so deformed in their bignesse, that of the rinde cut in the midst and cleaned, they make as it were baskets to put in all their meate for their dinner. Of the lesser they make Vessels to eate and drinke in, and doe trimme them handsomely for manie vses.

Pulses, Melons and Pompions carried out of *Europe* and thriving better there.

These calibasses seeme th *Guinny* Gourds carried from the *African* coast thither.

Of *Axi* or *Indian* Pepper, Chap. 20.

Ginger.

They haue not found at the West *Indies* anie kinde of Spices, proper or peculiar to them, as Pepper, Cloues, Cinamon, Nutmegs or Ginger, although one of our companie, who had travelled much, and in diuers parts, told vs, that in the Desarts of the Iland of *Iamaique* he had found trees where Pepper grew. But they are not yet assured thereof, neither is there anie trade of these spices at the *Indies*. The Ginger was carried from the *Indies* to *Hispaniola*, and it hath multiplied so, as at this day they know not what to doe with the great abundance they haue. In the flecte the, yeare 1587. they brought 22053. quintals of Ginger to *Senille*: but the natural spice that God hath giuen to the West *Indies*, is that we in *Castill* call *Indian* Pepper, and at the *Indies*, *Axi*, as a generall word taken from the first Land of the Ilands, which they conquered. In the language of *Cusco*, it is called *Vchu*, and in that of *Mexico*, *Chilt*. This plant in well knowne, and therefore I will speake a little, onely we must vnderstand, that in old time it was much esteemed amongst the *Indians*: that they carried into places where it grew not, as a Marchandise of consequence. It growes not vpon cold grounds, as on the *Sierre* of *Peru*, but in hot Vallies, where it is often watered. There is of this *Axi* of diuers colours, some is greene, some red, some yellow, and some of a burning colour, which they call *Caribe*, the which is extreame-ly sharpe and biting; there is another sort not so sharpe, but is so sweete, as they may eate it alone as any other fruit. There is some of it verie small and pleasing in the mouth, almost like to the smell of Muske, and is verie good. That which is sharpe and biting in this *Axi*, be the veines and the grain onely; the rest is not: for that they eate it greene & dry, whole and beaten, in the pot, and in sawces, being the chiefe sawce, & all the spice they haue at the *Indies*. When this *Axi* is taken moderately, it helps and comforts the stomack for digestion: but if they take too much, it hath bad effects, for of it selfe it is verie hot, fuming, & pierceth greatly, so as the vse thereof is preiudiciall to the health of yong folkes, chiefly to the soule, for that it prouokes to lust. They

Kkkk

yle

vse Salt to temper this *Axi*, hauing great force to correct it, and so they moderate one with the other by the contrarietie that is in them. They vse also *Tomates*, which are cold and very wholesome. It is a kinde of graine great and full of iuyce, the which giues a good taste to sawce, and they are good to eate. They haue generally throughout the *Indies* of this *Indian Pepper*, at the Islands, new *Spaine*, *Peru*, and all the rest that is discovered. And as Mays is the generall graine for Bread, so *Axi* is the most common spice for sawces.

Of the Plane
tree, Chap. 21.

The thing wherein was most resemblance, in my opinion, betwixt the *Planes* at the *Indies*, and those which the Ancients did celebrate, is the greatnesse of the leaues; for that these haue them very great and coole. But in truth there is no more comparifon nor resemblance of the one with the other, then there is (as the Prouerbe saith) betwixt an Egge and a Chesnut. For first, the ancient plane carries no fruite, at the least, they made no account thereof, but the chiefeft reason why they esteemed it, was, for the shadow, for that there was no more Sunne vnder a Plane than vnder a rooffe. And contrariwise, the reason why they should regard it, at the *Indies*, yea make great accompt thereof, is by reason of this fruite, which is very good; for they haue little shade. Moreouer, the ancient Plane had the body so bigge, and the boughs so spread, that *Plinie* reporteth of one *Licinias* a *Romane* Captaine, who with eightene of his companions dined at ease in th' hollow of one of these *Planes*; and of the Emperour *Caligula*, who with eleuen of his ghefts feasted vpon the top of another Plane, where he made them a sumptuous banquet. The *Indian* *Planes* haue neither so great nor hollow bodies, not so broad boughs.

Plin. lib. 2. cap. 1.

Plin. lib. 11. ca. 16.

The leaues of the *Indian* Plane, are of a wonderfull bignesse, and are, in a manner, sufficient to couer a man from the foote to the head. It is a Plant that makes a stocke within the earth, out of the which springs many and sundry siens and sprigges, diuided, and not ioyned together. These sprigges grow bigge, every one making a small tree apart, and in growing they cast forth these leaues, which are of a fine, Greene, smooth, and great as I haue said. When it is growne to the height of a stade and a halfe, or two, it puts forth one onely bough of fruite, whereon sometimes there are great numbers of this fruite, and sometimes lesse. I haue told vpon some of these boughs three hundred, whereof euery one was a spanne long more or lesse, and two or three fingers bigge; yet is there much difference herein, betwixt some and others, they take away the rinde, and all the rest is a firme kernell and tender, good to eate, and nourishing. This fruite inclines more to cold then heate. They are accustomed to gather the boughs or clusters, as I haue said, being Greene, and put them into vessels, where they ripen, being well couered, especially when there is a certaine hearbe mingled with it, which serues for this effect. If they suffer them to ripen on the tree, they haue a better taste, and a very good smell, like to *Camosses* or sweete Apples. They last almost all the yeare, for that there are alwaies yong ones that grow out of this stocke; so as when one ends, another beginnes to yeelde his fruite, the one is halfe ripe, and the other begins to bud anew, so as one succedes another, and the fruite continues the whole yeare. In gathering the cluster, they cut the sprigge or stalke, for that it beares but one, and neuer but once: but as I haue said, the stalke remaines, and casts forth new siens or stalkes, vntill it growes old and dies. This Plane continues many yeares, and requires much moisture, and a very hot ground. They put ashes at the foote of it, for the better entertaining thereof; and they make small groues and very thicke: the leafe is as broad as a sheete of Paper, or little lesse, and foure times as long.

Of Cacao and
Coca. Chap. 22.

Cacao money.

Coca.

Although the *Planes* be the most profitable, yet that *Cacao* is most esteemed at *Mexico*, and the *Coca* in *Peru*, in which two trees they haue great superstition. The *Cacao* is a fruite little lesse then Almonds, yet more fat, the which being roasted hath no ill taste. It is so much esteemed amongst the *Indians* (yea and among the *Spaniards*) that it is one of the richest and the greatest traffickes of new *Spaine*: for being a drie fruite, and that keepe long without corruption, they carrie whole Ships laden from the Prouince of *Guatimala*. The last yeare an *English* Pirat did burne in the Port of *Guatulco* in new *Spaine*, aboue a hundred thousand charges of *Cacao*. They vse it instead of money, for with five *Cacaos* they buy one thing, with thirtie another, and with a hundred another, without any contradiction; and they vse to giue it to the poore that beg for almes. The chiefe vse of this *Cacao*, is in a drinke which they call *Chocholate*, whereof they make great accompt in that Country, foolishly, and without reason; for it is loathsome to such as are not acquainted with it, hauing a skum or froth that is very vnpleasant to taste, if they be not very well conceited thereof. Yet it is a drinke very much esteemed among the *Indians*, wherewith they feast Noble men as they passe through their Countie. The tree whereon this fruite growes, is of reasonable bignesse, and well fashioned, it is so tender, that to keepe it from the burning of the Sunne, they plant neere vnto it, a great tree, which serues onely to shadow it, and they call it the mother of *Cacao*. There are places where they are like to the Vines and Oliue trees of *Spaine*. The Prouince where there is greatest abundance for the trafficke of Marchandise, is *Guatimala*. There growes none in *Peru*, but *Coca*, wherein they hold another great superstition, which seemes to be fabulous. It is a kinde of Marchandise, by the which all their Markets and Faires are made with great expedition. This *Coca* whereof they make such account, is a small Greene leafe, which groweth vpon small trees about a sadome high, and in hot and moist grounds;

euery

every foure moneths it casts forth this leafe, which they call *Tresmitas* or *Tremoy*; it requires great care in planting, being very tender, and much more to keepe it, when it is gathered. They lay it in order in long and narrow baskets, and so lade their sheepe of the Country, which goe in troopes, with one, two, or three thousand baskets of this marchandise.

They bring it commonly from the *Andes* and vallies, where there is an extreame heate, and where it raines continually the most part of the yeare: wherein the *Indians* endure much labour and paine to entertaine it, and often many die; for that they goe from the *Sierre* and cold places to till and gather them in the *Andes*. Their vse is to carry it in their mouthes, chewing it, and sucking out the iuice, but they swallow it not. They lay it giues them great courage, and is very pleasing vnto them. They willingly employ their money therein, and vse it as money.

Of Maguey This
nal, Cochenille,
Anir, and Cot-
ton. Chap. 23.

Maguey.

Manifold com-
modities of the
Maguey.

Maguey is a tree of wonders, whereof the *Notaries* or *Chapetons* (as the *Indians* call them) are wont to write miracles, in that it yeeldeth Water, Wine, Oyle, Vinegar, Honie, Sirrope, Thred, Needles, and a thousand other things. It is a tree which the *Indians* esteeme much in new *Spaine*, and haue commonly in their dwellings some one of them for the maintenance of life; it growes in the fields, and hath great and large leaues, at the end whereof is a strong and sharpe point, which serues to fasten little pins, or to sew as a needle: and they draw out of this leafe as it were a kinde of thred which they vse. They cut the body which is bigge, when it is tender, wherein is a great hollownesse, by which the substance mounts from the roote, and is a liquor which they drinke like water, being sweete and fresh. This liquor being sodden, turnes like Wine, which growes to Vinegar, suffering it to soure, and boiling it more, it becomes as honie, and boiling it halfe, it serues as sirrope: which is healthfull enough, and of good taste; in my iudgement it is better then the sirrope of Raisons. Thus do they boile this liquor, and vse it in diuers sorts, whereof they draw a good quantitie, for that in some season they draw daily some pots of this liquor. There are also of these trees in *Peru*, but they are not so profitable as in new *Spaine*. The wood of this tree is hollow and soft, and serues to keepe fire, like to the match of a harquebuz, and preserues it long: I haue seene the *Indians* vse it to that end.

The *Tunall* is another famous tree in new *Spaine*: if wee may call a tree a heape of leaues gathered together one vpon another, it is the strangest fashioned tree of all other: for first there growes one leafe out of the ground, then another vpon it, and so one vpon one, till it commeth to his perfection; but as the leaues grow vp, and on the side, those vnderneath doe become great, and loose in a manner the forme of leaues, making a body and branches, which are sharpe, pricking, and deformed, so as in some places they doe call it a *7 bistle*. There are Thistles or wilde *Tunalls*, the which doe carrie no fruite, or else it is very pricking without any profit. There are likewise planted *Tunalls* which yeelde fruite much esteemed amongst the *Indians*, the which they call *Tunas*, and they are much greater then Plumbes, and long. They open the shell which is fat, and within it is meate and small graines, like to those of figges, which be very sweete; they haue a good taste, especially the white, which haue a pleasing smell, but the red are not vsually so good. There is another sort of *Tunalls*, which they esteeme much more, although it yeeldes no fruit, yet it beares another commoditie and profit, which is of the graine, for that certaine small wormes breede in the leaues of this tree, when it is well husbanded, and are thereunto fastned, couered with a certaine small fine web, which doth compasse them in daintily; and this is that *Indian Cochenille*, so famous, and wherewith they die in graine. They let it drie, and being dried, carrie it into *Spaine*, which is a great and rich marchandise. The robe of this *Cochenille* or graine is worth many ducats. In the fleete, the yeare 1587. they did bring fve thousand six hundred seuentie seuen robes, which amounted to two hundred fourescore three thousand seuen hundred and fiftie peeces, and commonly there comes euery yeare as great a wealth.

Tunall tree.

I thinke hee
meaneth Anill
or Indico: of
which see To. 1.
14. in Fitches
Iournall.
Cotten.

These *Tunalls* grow in temperate grounds inclining to cold. In *Peru* there growes none to this day. I haue seene some Plants in *Spaine*, but they deserue not estimation. I will speake something likewise of the *Anir*, although it comes not from a tree, but from an hearbe, for that it serueth for the dying of cloth, and is a marchandise which agrees with the graine; it groweth in great abundance in new *Spaine*, from whence there came in the fleete I mentioned 5263. arbes, or thereabouts, which amounted to so many peeces. *Cotten* likewise growes vpon small shrubs, and great trees like to little apples, which doe open and yeelde forth this webbe, which being gathered, they spinne to make stufes: and the yeare that I spake of, there came 64000. robes.

These Plants we haue spoken of, are the most profitable of the *Indies*, and the most necessarie for the life of man: yet there are many other that are good to eate, among the which the *Mameys* are esteemed, being in fashion like to great Peaches, and bigger; they haue one or two stones within them, and their meate is somewhat hard. There are some sweete, and others somewhat sowre, and haue the rinde hard. They make conserues of the meate of this fruite, which is like to Marmelade. The vse of this fruite is reasonable good, but the conserues they make thereof, are better. They grow in Ilands. I haue not seene any in *Peru*. It is a great tree, well fashioned, and a reasonable faire leafe. The *Guanayanos* be other trees which commonly

Of Mameys,
Guanayanos, and
Paltos. Chap. 24.

carrie an ill fruite, full of fowre kernels, and are like to little Apples. It is a tree little esteemed vpon the firme Land and at the Ilands, for they say it smells like to the *Panaifes*. The taste and fauour of this fruite is verie grosse, and the substance vpholesome. In Saint *Dominique* and other Ilands, there are whole Mountaines full of these *Guayanos*, and they say, there was no such kindes of trees before the *Spaniards* came there, but that they brought them they know not from whence. This tree hath multiplied infinitely, for that there is no Beast that will eate the kernels or the graine, so as being thus scattered on the earth, being hot and moist, it multiplies in this sort. In *Peru*, the *Guayanos* differs from others, for that the fruite is not red, but white, neither hath it any ill smell, but is of a very good taste; and of what sort of *Guayanos* soeuer it be, the fruite is as good as the best of *Spaine*, especially of those which they call *Guayanos de Matos*, 10 and of other little white *Guayulles*. It is a fruite reasonably holesome, and agrees with the stomach, being of a strong digestion, and cold. The *Paltas* commonly are hore and delicate. The *Palta* is a great tree, and carries a faire leafe, which hath a fruit like to great Peares: within it hath a great stone, and all the rest is soft meate, so as when they are full ripe, they are as it were Butter, and haue a delicate taste. In *Peru* the *Paltas* are great, and haue a verie hard skale, which may be taken off whole. This fruite is most vsuall in *Mexico*, hauing a thinne skinne, which may be pilled like an Apple: they hold it for a very holesome meate, and as I haue said, it declines a little from heate. These *Mamayas*, *Guayanos*, and *Paltas*, be the *Indians* Peaches, Apples, and Peares; and yet would I rather choole them of *Europe*.

The Marmalad is that which they call *Capotes*, or *Chicoapotes*, which haue a sweete taste, and neere vnto the colour of Marmalade. Some *Crollos* (for so they called the *Spaniards* borne at the *Indies*) say that this fruite passeth all the fruites of *Spaine* in excellencie: yet am I not of that opinion. Those *Chicoapotes* or *Capotes*, wherein there is little difference: grow in the hottest parts of new *Spaine*, neither haue I knowledge of any such fruite in the firme Land of *Peru*. As for the *Blanckemanger*, it is that *Annona* or *Guananana*, which growes in the firme Land, which is fashioned like vnto a Peare, a little sharpe and opened, within it is white, tender and soft like Butter, sweete and of a pleasing taste: It is no white meate, though they call it *Blanckemanger*.

There are some grosse Fruitres, as those which they call *Lucumes* (of which fruite they speake in a Prouerbe, that it is a counterfet price.) The *Guanos*, *Pacayes*, *Hubos*, and the Nuts which they call *Imprisoned*: which fruites seeme so many, to be the same kinde of Nuts we haue in *Spaine*. I doe not thinke it good to passe away vnder silence the *Cocos* or *Indian Palmes*, by reason of a verie notable propertie it hath. I call them *Palmes*, not properly, or that it beares Dates, but that they are trees like to other *Palmes*. They are high and strong, and the higher they grow, the broader they stretch out their branches. These *Cocos* yeeld a fruite which they likewise call *Cocos*, whereof they commonly make vessels to drinke in, and some they say haue a vertue against poison, and to cure the paine in the side. The nutte and meate being dried, is good to eate, and comes neere in take to greene Chestnuts. When the *Coco* is tender vpon the tree, the substance within it, is as it were Milke, which they drinke for daintinesse, and to refresh them in time of heate. I haue seene of these trees in Saint *Jean de Port Rico*, and other parts of the *Indies*, and they report a wonderfull thing, that euery moneth or Moone, this tree casts forth a new branch of this *Cocos*; so as it yeeldes fruite twelue times in the yeare, as it is written in the *Apocalips*; and in truth this seemes like vnto it, for that all the branches are of different ages, some beginning, others being ripe, and some halfe ripe. These *Cocos* are commonly of the forme and bignesse of a small Melon. There is of another kinde, which they call *Coquillos*, the which is a better fruite, whereof there be some in *Chille*. They are somewhat lesse then Nuts, but more round. There is another kinde of *Cocos*, which haue not the kernell so oylie, but within they haue a great number of small fruits like Almonds, like vnto the graines of a Pomgranat.

These Almonds are thrice as bigge as those of *Castillo*, and resemble them in taste, though they be more sharpe, and likewise moist and oylie. It is a good meate, they vse it also in feasting, for lacke of Almonds to make Marchpanes, and such other things. They call them *Almonds of the Andes*, for that these *Cocos* grow abundantly vpon the *Andes* of *Peru*; they are so strong and hard, as to open them, they must beate them with a great stone, when they fall from the tree. If they chance to hit any one on the head, he hath no more neede of any Surgeon. It is an incredible thing, that within the hollow of these *Cocos*, which are no bigger than the rest, or little more, there are such a multitude of these Almonds. But as touching Almonds and other fruits, all trees must yeelde to the Almonds of *Chachapoyas*, which I cannot otherwise call. It is the most pleasing, delicate and wholesome fruite of all that I haue seene at the *Indies*.

The *Indians* are great louers of flowers, and in new *Spaine* more then in any other part of the world, and therefore they are accustomed to make many kindes of *Nosegays*, which there they call *Suchillos*, with such prettie varietie and art, as nothing can be more pleasing. They haue a custom amongst them, that the chiefeest man offer their *Suchillos* or *nosegays* in honour to Noblemen, and to their ghests; and they presented vs with such abundance as wee passed through that Countrey, as wee knew not what to doe with them; and at this day they vse the

the principall flowers of *Castile*, to that end, for that they grow better there than here, as Gilli-flowers, Roses, Iasmins, Violets, Orange flowers, and other sorts which they haue transported out of *Spain*. The Rose tree groweth too fast in some places, so as they beare no Roses. It chanced one day that a Rose tree was burned, and the liens which sprowted out, presently bare abundance of Roses, and thereby they learned to prune them, and to cut off the superfluous branches, so as at this day they yeelde reasonable store of Roses. But besides these kindes of flowers, which haue beene transported from hence, there are many others, whose names I doe not know, whereof some are red, blew, yellow, violet and white, with a thousand different colours, which the *Indians* did vse to carry on their heads, as feathers for ornament. True it is, that may of these flowers are onely pleasing to the sight, hauing no good sauour, either they are grosse, or else they haue none at all; and yet there be some of an excellent sent. As those which grow vpon a tree tearmed by them *Floripondio* or *carry flower*, which beares no fruite, but onely these flowers, which are greater than the Lillie, and are like to little Bels, all white, which haue within them small threds, as we see in the Lillie: it leaues not all the yeare to beare these flowers, whose smell is wonderfull sweete and agreeable, especially in the coole of the morning. The Viceroy *Don Francisco de Toledo* sent of these trees vnto King *Phillip*, as a thing worthy to be planted in royall Gardens. In new *Spain* the *Indians* esteeme much of a flower, which they call *Valosuchil*, which signifieth *flower of the heart*, for that it beares the forme of a heart, and is not much lesse. The flower of *Granadille* is held for an admirable thing, and they say, it hath in it the markes of the Passion, and that therein they note the nailes, the pillar, the whips, and crowne of thornes, and the wounds, wherein they are not altogether without reason, and yet to find out and obserue these things, it requires some pietie to cause belcefe: but it is very exquisite and faire to the eye, although it haue no smell, &c.

Accidents produce most arts.

The balme which comes from the West *Indies*, is not of the same kinde of right Balme which they bring from *Alexandria* or *Cairo*, and in old time was in *Iudea*, which *Iudea* (as *Plinie* writeth) did of all the world possesse this greatnesse, vntill the Emperour *Vespasian* brought it to *Rome* and into *Italie*. At the *Indies* I haue seene the Tree from whence they draw the Balme, which is as big as a Pomgranat tree, and something neere the fashion: and if my memorie failes me not, it hath nothing common with the Vine, although that *Strabo* writes, that the ancient tree of Balme, was of the bignesse of a Pomgranat tree. But in their accidents & operations, their liquors are alike, as likewise they be in their admirable smells, & in the cure and healing of wounds in colour and substance, seeing they report of other Balmes that there is some white, vermillion, Greene and blacke, the which is likewise seene in that of the *Indies*. And as they drew forth the ancient in cutting and making incisions in the barke, to cause the liquor to distill out, so doe they with that at the *Indies*, although it distills in greater abundance. And as in the ancient there is one kinde which is pure, the which they call *Opobalsamum*, which be the verie teares that distill, so as there is another sort which is not so exquisite, the which they draw from the barke and leaues strained and boiled on the fire, the which they call *Xilobalsamum*. The like is also in the *Indian* Balmes, there is one pure that distills from the tree, and others that the *Indians* draw out by straining and boiling the leaues and wood. The Apostolike Sea hath giuen libertie to giue Creame of Balme at the *Indies*, and that they should vse it in Confirmation and other ceremonies which they vse.

Of Balme.

Plin. lib. 12. c. 15. Chap. 28.

Strab. lib. 16. Geograph.

Next to Balme, Amber holds the second place: it is another liquor which is likewise sweet and medicinall, but more thicke, and turnes into a paste of a hot complexion, and a good perfume. This Amber comes from new *Spain*, which hath that aduantage aboue other Prouinces in Gummes, Liquors, and iuyce of Trees, whereby they haue such abundance of matter, for perfume and physicke, as is the *Anise*, whereof there comes great store, *Copal* or *Suckicopal*, which is another kinde, *Storax* and *Incense*, which haue excellent operations, and haue a very good smell fit for fumigations. Likewise the *Tacamahaca* and *Caranna*, which are also very medicinall. They bring likewise from this Prouince oile of *Assicke*, which the Physicians and Painters vse much, the one for plaisters, the other to vernish their pictures. They bring also for the Physicians *Cassia fistula*, the which growes plentifully in Saint *Dominique*. It is a great Tree, which carries these Canes as his fruit. They brought in the fleet wherein I came from Saint *Dominique* fortie eight Quintals of *Cassia fistula*. *Salcepareille* is not lesse knowne, for a thousand remedies wherein it is vsed. There came in the same fleet fiftie Quintals from the same Iland. There is much of this *Salcepareille* at *Peru*, and most excellent in the Prouince of *Guayaquil*, which is vnder the Line. Many goe to be cured into this Prouince, and it is the opinion of some, that the pure water onely which they drinke, giues them health, for that it passeth by rootes as I haue said, from whence it drawes this vertue, so as there needes no great couering of garments to make a man sweat in that Countrey. The wood of *Guayac*, which they call *Lignum sanctum*, or *Indian wood*, growes abundantly in the same Ilands, and is as heauie as Iron, so as it presently sinks in the water: hereof they brought in the same fleet three hundred and fiftie Quintals, and they might haue brought twentie, yea, a hundred thousand of this wood, if there were vse for it. There came in the same fleet, and from the same Iland, one hundred and thirtie Quintals of *Bresil wood*, the which is

Cas. Fistula. Salcepareille.

Lignum vitæ.

Auncient Physicians.

fiery red, so well knowne, and much vsed in dying and other things. There are at the *Indies* infinite numbers of other aromaticall Woods, Gummes, Oiles, and Drugs, so as it is not possible to name them all, neither doth it now much import. I say onely, that in the time of the Kings *Inguas* of *Cusco*, and the *Mexicane* Kings, there were many great personages expert in curing of diseases with simples, and did goodly cures, hauing the knowledge of the many vertues and properties of Herbs, Rootes, Woods, and Plants, which grow there, and whereof the Ancients of *Europe* haue had no knowledge. There are a thousand of these simples fit to purge, &c.

Strange trauil.

Woods are so many and great, that it hath beene needfull (passing through some parts of the *Indies*, especially where they newly entred) to make their way, in cutting downe Trees, and pulling vp Bushes, so that (as some religious men haue written that haue tried it) they could not sometimes haue passed about a league in a day. One of our brothers (a man worthy of credit) reported vnto vs, that being strayed in the Mountaines, not knowing which way hee should passe, he fell among such thicke Bushes, that hee was forced to goe vpon them, without setting foot to the ground, by the space of fifteen whole dayes: and to see the Sunne, or to marke some way in this thicke Forest full of wood, hee was forced to climbe to the top of the highest Trees to discouer. He that shall reade the discourse of his trauell, how often he was lost, and the wayes hee passed, with the strange aduentures that happened vnto him, the which I haue written briefly, being so worthy the knowledge, and hauing my selfe travelled a little ouer the Mountaines at the *Indies*, were it but the eightene leagues betwixt *Nombre de Dios* and *Panama*, may well iudge what great Forests there are. So as hauing no winter in those parts, to nip them with cold, and the humiditie of the Heauens and Earth being so great, as the Mountaines bring forth infinite Forests, and the Playnes which they call *Sauanas*, great plentie of grasse: there is no want of Pasture for feeding, of Timber for building, nor of Wood for fuell. It is impossible to set downe the differences and formes of so many wilde Trees, for that the names of the greatest part are vnkowne.

Great Tree.

Plin. lib. 12. c. 1.

Of Plants and fruites which haue bin carried out of Spain to the Indies. Chap. 31.

Cedars in old time so much esteemed, are there very common, both for buildings and ships, and they are of diuers sorts, some white, and some red, very odoriferant. There are great store of Bay trees, very pleasant to behold vpon the *Andes* of *Peru*, vpon the Mountaines, in the Ilands of *Nicaragua*, and in new *Spaine*. There are also infinite numbers of Palmes and Ceiuas, whereof the *Indians* make their Canoes, which are Boates made of one peece. They bring into *Spaine* from the *Hauana*, excellent timber. In the Iland of *Cuba*, there are infinite numbers of like trees, as *Ebene*, *Caouana*, *Grenadille*, Cedars, and other kindes which I doe not know. There are great Pine trees in new *Spaine*, though they be not so strong as those in *Spaine*: they beare no pignous or kernels, but emptie apples. The Oakes as they call them of *Guayaquil*, is an excellent wood and sweet, when they cut it; yea there are Canes or most high Reeds, of whose boughs or small reedes they doe make Bottles and Pitchers to carry water, and doe likewise vse them in their buildings. There is likewise the wood of *Mausle* or Firre, whereof they make masts for their ships, and they hold them as strong as Iron. *Molle* is a tree of many vertues, which casteth forth small boughes, whereof the *Indians* make wine. In *Mexico* they call it the tree of *Peru*, for that it came from thence: but it growes also in new *Spaine*, and better then those in *Peru*. There are a thousand other Trees, which were a superfluous labour to intreat of, whereof some are of an exceeding greatnesse, I will speake onely of one which is in *Tlaco Chanoya*, three leagues from *Guayaca* in new *Spaine*: this tree being measured within, being hollow, was found to haue nine fadome, and without, neere to the roote, sixteene, and somewhat higher, twelue. This tree was strooke with lightning from the toppe to the bottome, through the heart, the which caused this hollownesse: they say that before the thunder fell vpon it, it was able to shadow a thousand men, and therefore they did assemble there for their dances and superstitions: yet to this day there doth remaine some boughes and verdure, but not much. They know not what kinde of tree it is, but they say it is a kinde of Cedar. Such as shall finde this strange, let them reade what *Plinie* reporteth of the Plaine of *Lidia*, the hollow whereof contained fourescore foot and one, and seemed rather a Cabbin or a House, then the hollow of a tree, his boughes like a whole wood, the shadow whereof couered a great part of the field. By that which is written of this Tree, we haue no great cause to wonder at the Weaver, who had his dwelling and Loom in the hollow of a Chesnut tree: and of another Chesnut tree, if it were not the very same, into the hollow whereof there entered eightene men on Horsebacke, and passed out without disturbing one another. The *Indians* did commonly vse their Idolatries in these Trees, so strange and deformed, euen as did the auncient *Gentiles*, as some Writers of our time doe report.

The *Indians* haue receiued more profit, and haue bin better recompenced in Plants that haue bin brought from *Spaine*, then in any other Merchandise, for that those few which are carried from the *Indies* into *Spaine*, grow little there, and multiply not, and contrariwise the great number that haue beene carried from *Spaine* to the *Indies*, prosper well and multiply greatly: I know not whether I shall attribute it to the bountie of the Plants that goe from hence, or to the goodnesse of the soyle that is there. Finally, there is at the *Indies* any good thing that *Spaine* brings forth: in some places it is better, in some worse, as Wheate, Barley, Hearbes, and all kinds

kinds of Pulses, also Lettuce, Coleworts, Radishes, Onions, Garlike, Parsley, Turneps, Parseneps, *Becengenes*, or Apples of Ioue, Siccorie, Beetes, Spinage, Pease, Beanes, Fetches: and finally, whatsoeuer groweth here of any profit, so as all that haue voyaged thither, haue beene curious to carry Seedes of all sorts, and all haue growne, although diuersly, some more, some lesse. As for those trees that haue most abundantly fructified, be Orange-trees, Limons, Citrons, and other of that sort. In some parts there are at this day, as it were whole Woods and Forrests of Orange trees: the which seeming strange vnto me, I asked who had planted the fields with so many Orange trees: they made me answer, that it did come by chance, for that Oranges being fallen to the ground, and rotten, their seedes did spring, and of those which the water had carried away into diuers parts, these Woods grew so thicke: which seemed to mee a very good reason. I haue said that this fruite hath generally increased most at the *Indies*, for that I haue not beene in any place but I finde Orange trees, for that all their soile is hot and moist, which this tree most desires. There growes not any vpon the *Sierre* or Mountaine, but they carrie them from the vallies or Sea coast. The conserue of Oranges which they doe make at the Ilands, is the best I haue seene any where: Peaches, Preses, and Apricockes haue greatly multiplied, especially in new *Spaine*. At *Pern* there growes few of these kindes of fruites, except Peaches, and much lesse in the Ilands. There growes Apples and Peares, yet but scarcely: there are but few Plumbs, but abundance of Figges, chiefly in *Pern*. They finde Quinces in all the Countrey of the *Indies*, and in new *Spaine*, in such abundance, as they gaue vs fittie choice ones for halfe a riall. There is great store of Pomegranats, but they are all sweete, for the sharpe are not there esteemed. There are very good Melons in some parts of *Pern*. Cherries both wilde and tame haue not prospered well at the *Indies*, the which I doe not impute to want of temperature, for that there is of all sorts, but to carelesnesse, or that they haue not well obserued the temperature. To conclude, I doe not finde that in those parts there wants any daintie fruite. As for grosse fruites, they haue no *Beillottes* nor Chestnuts, neither doe I finde that any haue growne there to this day. Almonds grow there, but rarely. They carry from *Spaine*, for such as are daintie mouthed, both Almonds, Nuts, and Filberds: but I haue not knowne they had any Medlers or Seruices, which imports little.

Natures husbandrie.

There growes no Wine nor Grapes in the Ilands, nor firme Land, but in new *Spaine*, there are some Vines which beare Grapes, and yet make no Wine. The cause is, for that the Grapes ripens not well, by reason of the raine that falls in the Moneths of Iuly and August, which hinders their ripening, so as they serue onely to eat. They carry Wine out of *Spaine*, and from the *Canaries*, to all parts of the *Indies*, except *Pern* and the Realme of *Chille*. There are some places where the Vines are not watered, neither from heauen nor earth, and yet they increase in great abundance, as in the Valley of *Yca*, and in the ditches that they call *Villacuzi*, in which places they finde ditches, or the earth sunke downe amongst the dead Sands, which are thorough out the yeare of a wonderfull coolenesse, and yet it raines not there at any time, neither is there any manner of meanes to water it artificially: the reason is, because the soile is spongiouse, and sucks vp the water of the riuers that fall from the Mountaine, which moisten these Sands, or else it is the moistnesse of the Sea, as others suppose, which passing ouer this Sand, is the cause why it is not barren nor vnprofitable, as the Philosopher teaches. The Vines haue so increased there, as for this cause onely the tithes of the Churches are multiplied fve or six times double within these twentie yeares. And it is strange, that in the Citie of *Cusco* you shall finde ripe Grapes all the yeare long: the reason is (as they say) for that those Vallies bring forth fruites in diuers moneths of the yeare, either for that they cut their Vines in diuers seasons, or that this variety proceeds from the qualitie of the soile: but whatsoeuer it be, it is most certaine, there are some Vallies which carrie fruite all the yeare. If any one wonder at this, it may be he will wonder much more at that which I shall say, and perchance not beleue it. There are Trees in *Pern*, whereof the one part yeeldes fruite one fixe moneths of the yeare, and the other halfe part yeeldes fruite the other fixe moneths. In *Malla* which is thirteene leagues from the Citie of *Kings*, there is a Figge-tree, whereof the one halfe which is towards the South, is greene, and yeeldeth his fruite one season of the yeare, that is, when it is summer vpon the *Sierre*, and the other moitie towards the *Lanos* or Sea coast, is greene, and yeeldes his fruite in the other contrarie season, when it is summer vpon the *Lanos*, which groweth from the diuers temperature, and the ayre which commeth from the one part, and the other. The reuenue of Wine there is not small, but it goeth not out of the Countrey. But the Silke that is made in new *Spaine* is transported into other Countries, as to *Pern*. There were no Mulberrie trees in the *Indies*, but such as were brought from *Spaine*, and they grow well, especially in the Prouince which they call *Mistecqua*, where there are Silke-wormes, and they put to worke the Silke they gather, whereof they make verie good Taffataes: yet to this day they haue made neither Damaske, Sattin, nor Veluet. The Sugar yet is a greater reuenue, for they not onely spend it at the *Indies*, but also they carrie much into *Spaine*, for the Canes grow exceeding well in manie parts of the *Indies*. They haue built their engines in the Ilands, in *Mexico*, in *Pern*, and in other parts, which yeeldeth them a very great reuenue.

Of Grapes, Vines, Oliues, Mulberries, and Canes of Sugar. Chap. 32.

Grapes all the yeere.

Strange fruites flying.

of the same kind.

It

Oliues but
no Oile.

It was told me, that the engine for Sugar in *Nasca*, was worth yearly aboute thirtie thousand pieces of reuenue. That of *Chicama* ioyning to *Truxillo*, was likewise of great reuenue, and those of new *Spaine* are of no lesse; and it is a strange thing to see what store they consume at the *Indies*. They brought from the Iland of *Saint Dominique*, in the fleet wherein I came, eight hundred ninetie eight chests of Sugar, which being (as I did see) shipped at *Port Ricco* (euery chest (in my opinion) weighed eight Arobes, euery Arobe weighing five and twentie pounds, which are two hundred weight of Sugar) is the chiefe reuenue of these Ilands, so much are men giuen to the desire of sweet things. There are likewise Oliues and Oliue trees at the *Indies*, I say in *Mexico* and in *Pern*, yet hath there not bene to this day any Mill for Oile, for that they eate all their Oliues, and dresse them well: they finde the charge is greater to make Oile then the profit, and therefore they carry all the Oile they doe spend from *Spaine*. And here we will end with plants, and will passe to such beasts as be at the *Indies*.

wooll, and
of Kine, Cap. 33.

Finde there are three kindes of beasts at the *Indies*, whereof some haue bene carried from *Spaine*; others are of the same kinde we haue in *Europe*, and yet not carried by the *Spaniards*; and others are proper to the *Indies*, whereof there are none in *Spaine*.

European
beasts.

Store of sheep.

Of the first kinde are Sheepe, Kine, Goats, Swine, Horses, Asses, Dogs, Cats, and other such beasts, for there are of all these kindes at the *Indies*. The smaller Cattell haue greatly multiplied, and if they could make profit of their woolls by sending them into *Europe*, it were one of the greatest riches the *Indies* had, for there the flocks of sheepe haue great pastures, where as their feeding failes not. In *Pern* there is such store of pastures and feedings, as no man hath any proper to himselfe, but euery man feedes his troups where he pleaseth. For this reason there is commonly great store of flesh, and very good cheape, and all other things that come from sheepe, as Milke, and Cheese. For a time they lost their woolls, vntill that some began to husband it, and to make cloth and couerings, which hath bene a great helpe for the poorer sort of the Countrey, for that the cloth of *Castile* is very deare there. There are many Clothiers in *Pern*, but more in new *Spaine*, yet the cloth that comes from *Spaine* is farre better, whether the wooll bee more fine, or the workmen more expert. In former times there were men that did possesse threescore and ten, yea a hundred thousand sheepe, and at this day they haue not many lesse. If this were in *Europe*, it were a very great substance, but in that Countrey it is but a meane wealth. In many parts of the *Indies*, and I thinke in the greatest part, small Cattell doe not increase and profit well, by reason that the grasse is high, and the soile so vicious, that they cannot feede so well as great Cattell.

Store of Kine.

And therefore there is an infinite number of Kine, whereof there are two kindes. Some are tame and goe in troups, as in the land of *Charca*, and other Prouinces of *Pern*, as also in all new *Spaine*: from these tame Kine they draw such profit as they doe in *Spaine*, that is, the Flesh, Butter, Calues, and Oxen to till the ground. The other kinde is wilde, which liue in the Mountains and Forests, and therefore they tame them not, neither haue they any master to whom they are proper, both for the roughnesse and thickenesse of the Forest, as also for the great multitude there is, and he that first kills them is the master, as of any wilde beast. These wilde Kine haue so multiplied in *Saint Dominique*, and thereabouts, that they troupe together in the fields and woods by thousands, hauing no master to whom they appertaine. They hunt these beasts onely for their hides, they goe to the field on horse-backe with their weapons to hough them, coursing the Kine: and when they haue stricken any and stayed them, they are their owne, they slay them and carry the hides home, leauing the flesh, which euery one neglects for the abundance there is, so as some haue testified in this Iland, that in some places the aire hath bene corrupted with the abundance of these stinking carcases. The hides they bring into *Spaine*, is one of the best reuenues of the Ilands, and of new *Spaine*. In the fleet the yeere 1587. there came from *Saint Dominique* 35444. hides, and from new *Spaine* 64350. which they value at 96532. pieces, so as when they discharge one of these fleets, it is admirable to behold the Riuer of *Senile*, and in the Arcenall (where they vnlade) so many hides, and so much merchandize. There are also great numbers of Goats, whose chiefe profit is their tallow, besides their Kid-milke and other commodities, for that both rich and poore vse this tallow for lights. For as there is a great quantitie, so doe they make very good account of it; yea, more then of oile, but all the tallow they vse is onely of the Males. They vse their skins for shooes, yet I hold them not so good, as those which are carried from *Castile*.

Wilde herds.

Killed only for
the hides.

Almost 100000
hides transported
at once. How
rich might
Virginia become, if I

Horses.

Horses haue multiplied there, and are very excellent in many places; yea in many parts there are Races found as good as the best in *Spaine*, as well for passing of a Carrier, and for pompe, as also for trauell: and therefore they vse Horses most commonly, although there bee no want of

Moyles,

Moyles, whereof there are many, especially where they make their carriages by land. There is no great numbers of Asses, hauing no great vse for them, neither for trauell nor seruice. There are some few Camels; I haue seene some in *Peru*, that were brought from the *Canaries*, and haue multiplyed there a little. In *Saint Dominique*, Dogs haue so multiplyed in number and bignesse, as at this day it is the scourge and affliction of that Iland: for they eate the Sheepe, and goe in troupes through the fields. Such that kill them are rewarded like to them that kill Wolves in *Spaine*. At the first there were no Dogs at the *Indies* but some beasts like vnto little Dogs, the which the *Indians* call *Alco*, and therefore they call all Dogs that goe from *Spaine*, by the same name, by reason of the resemblance that is betwixt them. The *Indians* doe so loue these little Dogs, that they will spare their meat to feed them, so as when they trauell in the Country, they carry them with them vpon their shoulders, or in their bosoms, and when they are sicke, they keepe them with them, without any vse, but onely for companie.

Asses.
Camels.
Dogs multi-
plied to noy-
somnesse.

Indian Dogs.

It is certaine that they haue carried from *Spaine* all these beasts whereof I haue spoken, of which kindes there were none at the *Indies*, when they were first discovered about a hundred yeeres since; for besides that it may be well approued by witnesses at this day liuing; It is also a sufficient argument to see that the *Indians* in their tongue, haue no proper wordes to signifie these beasts, but they vse the same *Spanish* names, although they be corrupted: for being ignorant of the thing, they tooke the word common to those places from whence they came. I haue found this a good rule, to discerne what things the *Indians* had before the *Spaniards* came there, and what they had not: for they gaue names to those they had and knew before, and haue giuen new names to these that are newly come vnto them, which commonly are the same *Spanish* names, although they pronounce them after their manner, as for a Horse, Wine, and Wheat. They found of some sorts of beasts that are in *Europe*, and were not carried thither by the *Spaniards*. There are Lions, Tigres, Beares, Boares, Foxes, and other fierce and wilde beasts, whereof we haue treated in the first Booke, so as it was not likely they should passe to the *Indies* by Sea, being impossible to swim the Ocean: and it were a folly to imagine that men had imbarcked them with them. It followes therefore that this world ioynes with the new in some part: by which these beasts might passe, and so by little and little multiplyed this world. The Lions which I haue seene, are not red, neither haue they such haire as they vually paint them with. They are grey, and not so furious as they seeme in pictures. The *Indians* assemble in troupes to hunt the Lion, and make as it were a circle, which they doe call *Chaco*, wherewith they inuiron them, and after they kill them with stones, stauers, and other weapons. These Lions vse to climbe trees, where being mounted, the *Indians* kill them with Lances and Crosse-bowes, but more easily with Harquebuzes. The Tigres are more fierce and cruell, and are more dangerous to meet, because they breake forth and assaile men in treason: They are spotted, as the Historiographers describe them. I haue heard some report that these Tigres were very fierce against the *Indians*, yet would they not aduenture at all vpon the *Spaniards*, or very little; and that they would choose an *Indian* in the midst of many *Spaniards*, and carry him away.

Tigres.

The Beares which in *Cusco* they call *Otoioncos*, be of the same kinde that ours are, and keepe in the ground. There are few swarmes of Bees, for that their hony-combs are found in Trees, or vnder the ground, and not in Hiuies as in *Castile*. The hony-combs which I haue seene in the Prouince of *Charcas*, which they call *Chiguanas*, are of a grey colour, hauing little iuyce, and are more like vnto sweet straw, then to hony-combs. They say the Bees are little, like vnto Flies; and that they swarme vnder the earth. The hony is sharpe and blacke, yet in some places there is better, and the combs better fashioned, as in the Prouince of *Tucuman* in *Chille*, and in *Carthage*. I haue not seene nor heard speake of wilde Boares, but of Foxes and other wilde beasts that eate their Cattell and Fowle, there are more then their Shepherds would willingly haue. Besides these beasts that are furious and hurtfull, there are others that are profitable, and haue not bene transported by the *Spaniards*, as Stags and Deere, whereof there is great abundance in all the Forests. But the greatest part is a kinde of Deere without hornes, at the least, I haue neuer seene nor heard speake of other, and all are without hornes like vnto *Corcos*. It seemes not hard to beleue, but is almost certaine, that all these beasts for their lightnesse, and being naturally wilde, haue passed from one World to another, by some parts where they ioyne, seeing that in the great Ilands farte from the mayne land I haue not heard that there are any, though I haue made diligent inquirie.

strange

We may more easily beleue the same of birds, and that there are of the same kindes that wee haue, as Partridges, Turtles, Pidgeons, Stock-doues, Quails, and many sorts of Falcons, which they send from new *Spaine* and *Peru*, to the Noblemen of *Spaine*, for they make great account of them. There are also *Hérons* and *Eagles* of diuers kindes; and there is no doubt but these birds and such like, haue sooner passed thither then Lions, Tigres, and Stags. There are likewise at the *Indies* great numbers of *Parrots*, especially vpon the *Andes* of *Peru*, and in the Ilands of *Port Ricco*, and *Saint Dominique*, where they flie by flocks, as Pidgeons doe here. To conclude, birds with their wings may goe where they will; and truly, many kindes might well passe the Gulfe, seeing it is certaine, as *Plinie* affirmeth, that there are many that passe the Sea, and goe into

strange Regions, although I haue not read that any Fowle hath passed by flight so great a Gulfe, as is the *Indian Ocean*, yet hold I it not altogether impossible, seeing the common opinion of Mariners, that you shall finde them two hundred leagues and more from the Land. And as *Aristotle* doth teach, that birds endure the water easily, hauing little respiration, as wee see in Sea fowle, which diue and remayne long vnder the water. Euen so wee may say, that the Fowle which be at this present vpon the mayne land, and in the Ilands at the *Indies*, might passe the Sea, resting themselves in some small Ilands, or vpon some land which they discovered by a naturall instinct (as *Plinie* reporteth of some) or peraduenture falling into the water, when they were wearie of flying, and after began their flight anew when they had a little rested. As for the Fowles which wee see in the Ilands, where there are no beasts, I beleue certainly that they passed by one of the foresaid meanes. But for other birds which we finde vpon the mayne land, especially those whose flight is short, it is more credible that they came thither as the beasts did, which are of the same kindes that we haue in *Europe*. For at the *Indies* there are great birds, very heauie, as *Estridges*, whereof there are many in *Peru*, which doe vse sometimes to terrifie the *Indian* sheepe as they doe goe with their burthens.

But leauing these birds that gouerne themselves without the care of man, but onely for hauking, let vs now speake of tame Fowle. I wondred at *Hennes*, seeing there were some at the *Indies* before the *Spaniards* came there, the which is well approued, for they haue a proper name of the Countrey, and they call a Hen *Gualpa*, and the Egge *Ponto*, and they vse the same prouerbe we doe, to call a Coward, a Hen. Those that were at the discouerie of the Ilands of *Solomon*, doe report that they haue seene *Hennes* there like vnto ours: wee may conceiue that the Hen being so tame a Fowle, and so profitable, men might carry them with them when they passed from one place to another, as we see at this day the *Indians* in their trauell carry their Hen with them, or chicken vpon the burthen they haue on their shoulders: and likewise they carry them easily in their Cages of reedes or wood. Finally, there be at the *Indies* many kindes of beasts and birds, such as wee haue in *Europe*, as I haue specified, and other sorts which I leaue to others to discourse of.

It were a matter more difficult, to shew, and proue, what beginning many and sundrie sorts of beasts had, which are found at the *Indies*, of whose kindes we haue none in this Continent. For if the Creator hath made them there, we may not then alleadge nor flie to *Noahs Arke*, neither was it then necessarie to saue all sorts of birds and beasts, if others were to bee created anew. Moreouer, we could not affirme, that the creation of the World was made and finished in fixe dayes, if there were yet other new kindes to make, and specially perfite beasts, and no lesse excellent then those that are knowne vnto vs: If we say then that all these kindes of Creatures were preserued in the Arke by *Noah*, it followes, that those beasts, of whose kindes wee finde not any but at the *Indies*, haue passed thither from this Continent, as wee haue said of other beasts that are knowne vnto vs. This supposed, I demand how it is possible that none of their kinde should remayne here? and how they are found there, being as it were Trauellers and Strangers? Truly it is a question that hath long held me in suspence.

I say for example, if the sheepe of *Peru*, and those which they call *Pacos* and *Guanacos*, are not found in any other Regions of the world, who hath carried them thither? or how came they there, seeing there is no thew nor remaynder of them in al this world? If they haue not passed from some other Region, how were they formed and brought forth there? It may bee God hath made a new creation of beasts! That which I speak of these *Pacos* and *Guanacos* may be said of a thousand different kindes of birds and beasts of the Forest, which haue neuer bene known, neither in shape nor name, and whereof there is no mention made, neither among the *Latines*, nor *Greekes*, nor any other Nations of the world. Wee must then say, that though all beasts came out of the Arke, yet by a naturall instinct, and the prouidence of Heauen, diuers kinds dispersed themselves into diuers Regions, where they found themselves so well, as they would not part: or if they departed, they did not preserue themselves, but in proceesse of time perished wholly, as we doe see it chance in many things. For if wee shall looke precisely into it, we shall finde that it is not proper and peculiar alone to the *Indies*, but generall to many other Nations and Prouinces of *Asia*, *Europe*, and *Affrike*, where they say there are certaine kindes of Creatures, that are not found in other

How it should be possible, that at the *Indies* there should be any sorts of beasts, whereof the like are no where else. Chap. 36.

The same prouidence which brought all

beasts and fowles from all their natie diuersified residencies thorow all the world to the Arke (which no naturall instinct in such antipathies and at once, could doe) and kept them safe in the Arke, did also dispose them to their designed abodes after. For I hold it vncristian with *Mercator* to say, *America* was not drowned with the Flood. And the same scruple might bee made for beasts, &c. in other parts; the remper of the Arke, or of the place where the Arke rested, not agreeing naturally to the Zebra, Elephant, Riuer-horse, Crocodile, and many other hotter creatures of *Africa*; nor to the other peculiar creatures of many other Regions. In things about nature (as is both the historie and myserie of the Arke) we must see necessarily to a supernaturall cause. For except wee would imagine the most part of the Sea to haue bene lands or Ilands from beyond the cold *Magellan* to the coldest *Purges plus vltra*, that is from 57. South latitude, to about 81. of North latitude, all the Sea is known, and voyages many in this work deliuerd which excludes al possibilitie of such passages of beasts especially such as cannot endure cold, as our Author imagineth. For men in boats, that might happen accidentally, which voluntarily hath bene attempted by Ours, a little boat comming home from *Bermuda* to *England*; and the Dutch open boats from *Nova Zembla* to *Norway*; further and longer distances then is needfull from Iland to Iland for crossing from *Europe* to some parts of *America*; that I mention not the *Carthaginian* and *Owen Gwyneds* voyages, and other casuall tempests, &c. in which by fishing, fishermen might liue long at Sea with their wines, and be carried by a higher cowering ouer-ruling prouidence to people this new World, which (it is likely) at diuers times and by diuers meanes receiued her inhabitants; God which made all men of one blood, allotting to all Adams sonnes their portions and the seuerall bounds of their habitation. Act. 17. 26.

other Regions, at the least if they be any where else, they are knowne to be carried from thence. Seeing then these Creatures came out of the Arke, as for example, the Elephant which wee finde onely in the East Indies, and from thence haue beene imparted to other Regions, wee may say as much of these Creatures of Peru; and of others of the Indies; which are not found in any other part of the World.

We may likewise consider well vpon this subiect, whether these beasts differ in kinde; and essentially from all others, or if this difference be accidentall, which might grow by diuers accidents, as wee see in the linages of men, some are white, others blacke, some Giants, others Dwarfs: and in Apes, some haue no taile, others haue: and in Sheepe, some are bare, others haue fleeces; some great and strong with a long necke, as those of Peru; others weake and little, hauing a short necke, as those of Castile. But to speake directly, who so would by this Discourse, shewing onely these accidentall differences, preserve the propagation of beasts at the Indies; and reduce them to those of Europe, hee shall vndertake a charge hee will hardly discharge with his honour. For if wee shall iudge the kindes of beasts by their properties, those of the Indies are so diuers, as it is to call an Egge a Chelmut; to seeke to reduce them to the knowne kindes of Europe.

Of Fowles that are proper to the Indies, and Venison.

20 There are many kindes of notable Fowles at the Indies, either of the same sort that ours be, or of different. They bring certaine birds from China, that haue no feete, and all their bodies are almost feathers. They sit not vpon the ground, but hang vpon boughs, by strings or feathers which they haue, and so rest themselues like Flies or ayrie things. In Peru there are birds which they call *Tomineios*, so small, that often-times I haue doubted seeing them flie, whether they were Bees or Butter-flies; but in truth they are birds. Contrariwise, those which they call *Condores*, be of an exceeding greatnesse, and of such a force, that not only they will open a sheep and eate it, but also a whole calfe. Those which they call *Auras*, and others *Paullazes* (which in my opinion are of the kinde of *Rauens*) are of a strange lightnesse, and haue a very quicke sight, being very fit to clense Cities, for that they leaue no Carrion nor dead thing. They passe the night on Trees or vpon Rocks, and in the morning they come to the Cities and Townes, sitting on the tops of the highest buildings, where they attend their prey. Their yong haue white feathers, as they report of *Rauens*, and so change into blacke.

See Iobson
Tom. 1. l. 9. of
such in Guinees
Tomineios.

Condores,
Rauens.

30 The *Guacamayas* be birds bigger then Parrets, and resemble them something; they are esteemed for the varietie of their feathers, which be very faire and pleasing. In new Spaine there are abundance of birds with excellent feathers, so as there bee not any found in Europe that comes neere them, as wee may see by the Images of feathers they bring from thence, the which are (with great reason) much valued and esteemed, giuing cause of admiration, that with the feathers of birds, they should make so excellent a worke, and so perfectly equall, as they seeme properly to be the true colours of a Painter, and haue so liuely and pleasing a regard, as the Painter cannot exceede it with his pencill and colours. Some Indians which are good and expert workmen in this Art, will represent perfectly in feathers, whatsoever they see drawne with the pencill, so as the Painters of Spaine, haue in this point, no aduantage ouer them. Don Philip the Prince of Spaine his Schoole-master, did giue vnto him three figures or portraictures made of feathers, as it were to put in a *Breniarie*. His Highnesse did shew them to King Philip his father, the which his Maiestie beholding attentiuely, said, that he had neuer scene in so small a worke, a thing of so great excellency and perfection. One day as they presented to Pope Sixtus Quintus, another square bigger then it, wherein was the figure of Saint Francis, and that they had told him it was made of feathers by the Indians, he desired to make triall thereof, touching the table with his fingers, to see if it were of feathers; for that it seemed strange, to see them so properly fitted, that the eye could not iudge nor discerne whether they were naturall colours of feathers, or artificiall done with the pencill. It is a goodly thing to see the lustre which a greene, an orange tawnie like gold, and other fine colours doe cast, and beholding them another way they seeme dead colours. They make the best and goodliest figures of feathers in the Prouince of *Me-chonacan*, and in the village of *Pascaro*. The manner is with small delicate Pinfors they pull the feathers from the dead fowles, and with a fine paste they cunningly ioyne them together. They take the small and delicate feathers of those birds, which in Peru they call *Tomineyos*, or others like vnto them, which haue the most perfect colours in their feathers. The Indians (besides these Images) did vse feathers in many other most excellent workes, especially for the ornament of Kings and Noblemen, their Temples and Idols.

Feather pictures.

60 There are also other great birds, which haue excellent and fine feathers, whereof they make plumes of sundrie colours, especially when they goe to warre, enriching them with gold and silver very artificially, which was a matter of great price. They haue the same birds still, but they are not so curious, neither doe they make so many gentill deuices as they were wont. There are other birds at the Indies, contrarie to these of so rich feathers, the which (besides that they are

all.

ill-favoured) serve to no other use but for dung, and yet perchance they are of no lesse profit. I have considered this; wondering at the providence of the Creator, who hath so appointed, that all Creatures should serve Man. In some Ilands or *Phares*, which are ioyning to the coast of *Peru*, we see the tops of the Mountaines all white, and to sight, you would take it for Snow, or for The like is in the East Indies. some white Land, but they are heapes of dung of Sea fowle which goe continually thither: and there is so great abundance, as it riseth many Elles, yea, many Lances in height, which seemes but a fable. They goe with boates to these Ilands, onely for the dung, for there is no other profit in them. And this dung is so commodious and profitable, as it makes the earth yeeld great abundance of fruit. They call this dung *Guano*, whereof the Valley hath taken the name, which they call *Limaguana*, in the valleys of *Peru*, where they use this dung, and it is the most fertile of all that Country. The Quinces, Pomegranets, and other fruits there, exceed all other in bountie and greatnesse; and they say, the reason is, for that the water where with they water it, passeth by a Land compassed with this dung.

Of beasts for the Chases. Chap. 38.

Of Micos or Indian Monkeys. Chap. 39.

Besides the Beasts of Chase, whereof wee have spoken, There are beasts called *Sainos*, made like small Hogs, which have this singular to themselves, to haue their Nauill vpon the ridge of their backs: these goe by troupes through the Woods, they are cruell and nothing fearfull, but contrariwise they assaile, and haue their tallents sharpe as Rasors, wherewith they make dangerous wounds and incisions, if such as hunt them put not themselves in safetie. Such as hunt them (for the more safer killing of them) climbe vp into Trees, whither the *Sainos* or Hogs come presently in troupes, biting the Tree when they cannot hurt the man, and then with their Lances they kill what they will. They are very good to eate, but they must of necessitie cut off the round piece where the Nauill growes vpon the backe; for otherwise, within a day they corrupt. There is another kinde of little beast like to sucking Pigges, and they call them *Guadatinaias*. I am in doubt whether there were any Swine at the *Indies*, before the Spaniards came thither, like to these in *Spaine*, for that in the discouerie of the Ilands of *Soloman*, it is said, they found * Hennes and Swine of *Spaine*. But howsoever it be, it is most certaine, that this Cattell hath greatly multiplied at the *Indies*. They eate the flesh fresh, and hold it to bee as wholesome and as good, as if it were of Mutton; as in *Carthagene* in some parts, they are become wilde and cruell, the which they hunt like wilde Boares, as wee see in *Saint Dominique*, and other Ilands where the beasts liue in the Forests. In some places they feede them with the graine of Mays, and they grow wonderfully fat, to haue the grease, which they use for want of Oile; in some places they make Gamons, as in *Tolluca* of new *Spaine*, and in *Paria* at *Peru*. Returning then to such beasts as are peculiar there, euen as the *Sainos* are like vnto Swine, though somewhat lesse; euen so the *Dantes* resemble small Kine, but more vnto Mules, hauing no hornes. The Hides of these beasts are much esteemed for jerkins and other couerings, they are so hard as they resist any blow whatsoever. And as the *Dantes* be defended by the hardnesse of their Hides, so those which they call *Armadillos* are by the multitude of their scales, which open and shut as they please like to a Curasse. There bee little beasts which goe through the Woods, called *Armadillos*, by reason of the defence they haue hiding themselves within their scales, and opening when they list: I haue eaten of them, and doe not hold it for a meate of any great worth; but the flesh of the *Yguanas* is a better meate, but more horrible to the eye: for they are like to the very *Lizardes* of *Spaine*, although they bee of a doubtfull kinde, for that they goe to the Water, and comming to Land they climbe the Trees vpon the bankes; and as they cast themselves from the Trees into the water, the Boates watch vnderneath to receiue them. The *Chinchilles* is an other kinde of small beasts, like Squirrels, they haue a wonderfull smoothe and soft skin, which they weare as a healthfull thing to comfort the stomacke, and those parts that haue neede of a moderate heate; they make Couerings and Rugs of the haire of these *Chinchilles*, which are found on the *Sierre* of *Peru*, where there is likewise a small beast very common, which they call *Cuyes*, and which the *Indians* hold for a very good meate, and they are accustomed often to offer these *Cuyes* in their sacrifices. They are like small Conies, and haue their borrowes in the ground, and in some places they haue vndermined all the Land: some are grey, some white, and some speckled. There are other small Animals which they call *Viscachas*, and are like to Hares, although they bee bigger, they hunt them and eate the flesh. Of common Hares there are great store in some parts. There are also Conies in the Realme of *Quitto*, but the good are come from *Spaine*. There is another strange beast, the which for his great heauinesse, and slownesse in moouing, they call *Perico-ligero*, or the little light Dogge, hee hath three nailes to euery hand, and mooues both hand and feete, as it were by compasse and very heauily: it is in face like to a Monkey, and hath a shrill crie; it climeth Trees, and eates Ants.

Throughout all the Mountaines, either of these Ilands of the firme Land, or of the *Andes*, there are infinite numbers of *Micos* or Monkeys, which are a kinde of Apes, but very different, in that they haue a taile, yea a very long one. And amongst them there are some kindes which are thrice, yea foure times bigger then the ordinarie; some are all blacke, some bay, some grey, and some spotted. Their agilitie and manner of doing is admirable, for that they

seeme

seeme to haue reason and discourse to goe vpon Trees, wherein they seeme to imitate Birds. Going from *Nombre de Dios* to *Panama*, I did see in *Capira*, one of these Monkeys leape from one Tree to another, which was on the other side of a Riuer, making me much to wonder. They leape where they list, winding their tailes about a branch to shake it: and when they will leape further then they can at once, they vse a prettie deuice, tying themselves by the tailes one of another, and by this meanes make as it were a chaine of many: then doe they lanch themselves forth, and the first holpen by the force of the rest, takes hold where he list, and so hangs to a bough, and helps all the rest, till they be gotten vp. It were long to report the fooleries, tricks, trauerses, and pleasant sports they make when they are taught, which seeme not to come from brut beasts, but from a manlike vnderstanding. I saw one in *Carthagene* in the *Gouernours* house, so taught, as the things he did seemed incredible: they sent him to the *Tauerne* for wine, putting the pot in one hand, and the money in the other; and they could not possibly get the money out of his hand, before he had his pot full of wine. If any children met him in the street, and threw any stones at him, hee would set his pot downe on the one side, and cast stones against the children till hee had assured his way, then would hee returne to carry home his pot. And which is more, although he were a good Bibber of wine (as I haue oftentimes seene him drinke, when his Master hath giuen it him) yet would hee neuer touch it vntill leaue was giuen him. They told me moreouer, that if he saw any women painted, he would fall vpon them, pull off their attire, and would seeke to bite them.

- 20 Amongst the most remarkable things at the *Indies* of *Pern*, be the *Vicugnes*, and sheepe of the Countrey; as they call them, which are tractable beasts and of great profit; the *Vicugnes* are wilde, and the Sheepe are tame. Some thinke that the *Vicugnes* are those which *Aristotle*, *Plinie*, and other Authors call *Capreas*, which are wilde Goats, and in truth they haue some resemblance, for the lightnesse they haue in the Woods and Mountaines, but yet they are no Goates, for the *Vicugnes* haue no hornes, as those haue, whereof *Aristotle* makes mention; neither are they the Goates of the East *Indies*, from whom they draw the *Bezar* stone; for if they be of that kinde, it were a diuerse one, as in the race of Dogs, the Mastife is diuerse from the Grey-hound. The *Vicugnes* of *Pern* are not those beasts which carry the *Bezar* stone, in the Prouince of new *Spaine*, which there they call *Bezars*, for that they are a kinde of Stags and Venison; yet doe I not know in any part of the World there bee any of these beasts, but in *Pern*, and in *Chille*, which are Countries ioyning one to another. These *Vicugnes* are greater then Goates, and lesse then Calues. Their haire is of the colour of dried Roses, somewhat cleerer; they haue no hornes like Stags and Goates. They feede vpon the highest tops of the Mountaines, which they call *Puñas*. The Snow nor Frost doth not offend them, but contrariwise they seeme to delight in it. They goe in troupes, and runne most lightly; when they meete with any Trauellers or Beasts, they flie away, seeming very fearefull, and in flying they driue their yong ones before them. They doe not finde that they multiply much: and therefore the Kings *Inguas* did defend the hunting of *Vicugnes*; if it were not for their feasts, or by their commandement. Some complaine, that since the *Spaniards* entred there, they haue giuen too much libertie to hunt the *Vicugnes*, and by this meanes they are much diminished.
- 40 The manner the *Indians* vse in their hunting, they assemble many men together, to the number of a thousand or two thousand, yea more, and inuironing a great circuit of wood, they hunt their game vntill they haue compassed it in on all parts, and by this meanes they commonly take three or foure hundred, and so choosing what they list, they let goe the rest, especially the Females for breede. They are accustomed to theere these beasts, and of their fleece to make Couerings and Rugges of great value, for that this wooll is like to white silke, which lasts long: and as the colour is naturall and not dyed, so is it perpetuall. The stufes that are made of this wooll, are very fresh and good in Summer, and they hold them profitable for the inflammation of the reines, and other parts, tempering the excessiue heate. This wooll hath the like vertue when it is made in Quilts, and therefore some vse it to that end, for the triall they haue made thereof. They say moreouer, that this wooll or couerings made thereof, is physycall for other indispositions, as for the gowt: yet doe I not know that they haue made any certaine triall thereof. The flesh of these *Vicugnes* is not good, although the *Indians* eate it, and drie it. For the effects of physicke, I will say what I haue seene vpon the *Sierre* of *Pern*, comming one night into a *Tambo* or *Inne*, being much afflicted with paine in mine eyes, thinking they would fall out (the which doth commonly happen in those parts) for that they passe through places couered with snow, which is the cause of this accident. Being troubled with this paine, and out of patience, there came an *Indian* woman which said to me, *Father, lay this to thine eyes, and thou shalt bee cured*. It was a piece of the flesh of *Vicugnes* newly killed and all bloudie. I vsed this medicine, and presently the paine ceased, and soone after went quite away.
- 60 Besides these *Chacos* which is the most common manner of hunting at the *Indies*, they haue vsed another more priuate to take them, which is, that comming neere, they doe cast certaine lines with plummetts of lead, which intangle their legges, so as they cannot runne, and by this meanes they take the *Vicugne*. The chiefe reason why this beast is esteemed, is, by reason of

the *Bezars* stone they finde in them, whereof wee will intreate hereafter. There is another kinde of beasts, which they call *Tarugues*, which likewise are wilde, and more nimble then the *Vicugnes*. They are greater of body, and more hot. They haue soft eares and hanging: they goe not in troupes as the *Vicugnes*. I haue not seene them but alone, and most commonly in high places. They also draw *Bezars* stones from these *Tarugues*, which are greater, and haue more operation and vertue.

Of *Pacos*, *Guanacos*, and *Indian Muttons*.
Chap. 41.

Two kinds.

There is nothing at *Peru* of greater riches and profit then the Cattell of the Country, which our men call *Indian Sheepe*, and the *Indians* in their generall language call them *Lama*. For all things well considered, it is a beast of the greatest profit and least charge of any that I know: from them they draw meate and clothing, as from the sheepe of *Spain*. Moreover, they haue the benefit to carry all things they haue need of, vsing them to beare their burthens: and they haue no need either of shooes or saddles, nor yet of oates, but he serueth his Master for nought, feeding on the grasse he findes in the fields; so as God hath furnished them of Sheepe and Mares, and all in one beast. And as it is a poore Nation, so would hee in this point free them from charge, for that there is much pasture vpon the *Sierre*: and this kinde of Cattell hath no need of any other charge. There are two kinds of these Sheepe or *Lamas*, the one they call *Pacos*, or sheepe bearing wooll, and the others are bare, and haue little wooll, so are they better for burthen; they are bigger then great Sheepe, and lesse then Calues, they haue a very long necke, like to a Camel, whereof they haue good need: for being high of stature, they haue need of a long necke, else should they be deformed. They are of diuers colours, some all white, others all blacke, some grey 20 and some spotted, which they call *Meromoro*. The *Indians* had great superstitions in choosing the beasts for sacrifices, of what colour they should bee, according to the diuersitie of Seasons and Sacrifices. Their flesh is good, although it be hard, but that of their Lambs is the better, and the most delicate that can be eaten: yet they eate not many, for that the chiefe fruit and profit they yeeld, is their wooll, to make clothes, and their seruice to carry burdens. The *Indians* make stufes of this wooll wherewith they clothe themselves: the one is grosse and common, which they call *Hanaca*, and the other fine and delicate, which they call *Cumbi*, they faire lustre, like halfe silke: and that which is most rare, is their manner of weauing their workes, being both sides alike, so as you shall not finde any end in a whole piece. The *Inga* 30 King of *Peru* had many chiefe workmen, to make this worke of *Cumbi*: and the which, for the most part, were resident in the Prouince of *Capachica*, ioyning to the great Lake of *Titicaca*. They die this wooll into diuers fine colours, with sundrie kinds of herbs, whereof they make many sorts of workes both course and fine. All the *Indians*, both men and women, worke in the *Sierre*, and haue their Loomes in their houses, hauing no need to buy any stufes for their necessarie vses. Of the flesh of these sheepe they make *Cuschargui*, or dried flesh, the which will last very long, whereof they make great account. They are accustomed to driue troupes of these sheepe with burthens, and to goe in bands, three hundred, five hundred, yea a thousand in a companie, with Wine, Mays, Coca, Chuno, Quick-siluer, and all other kinds of merchandise, and of Siluer, which is the best of all. They carry barres of Siluer from *Potosi* to *Ariqua*, which 40 is three score and ten leagues. I haue often wondered to see these troupes of sheepe laden with a thousand or two thousand barres of Siluer, and much more, which is about three hundred thousand ducats, without any other guard or resort then some *Indians*, which serue onely to guide these sheepe, and to lade and vnlade them, or at the most, some few *Spaniards*: and they sleepe all night in the midst of the fields, without other guard: and yet in so long a way and so weake a guard, they neuer finde want or losse of any thing in so great a treasure of Siluer, so safe is the way in *Peru*. The burthen which one of these sheepe doth commonly carry, is of foure or sixe 50 Arrobes: when their voyage is long they goe not about two, three, or foure leagues at the most on a day. Those that guide those troupes, haue their ordinarie lodgings, where they are assured to haue water and pasture, and there they vnlade and set vp their Tents, making fire, and dressing their meates, which is not painfull, although it be a flegmatike and slow manner of trauell. When there is but one dayes journey, one of these sheepe will beare eight Arrobes in weight, or more, and beares this burthen eight or ten leagues in a day, as the poore Souldiers were wont to doe, when they marched through *Peru*. This kinde of Cattell delights most in a cold aire, and for this cause they liue vpon the *Sierre*, and die in the *Lanos*, by reason of the heate. Sometimes these sheepe are all couered with Ice and frost, and yet they continue sound and well. The bare sheepe are pleasant to behold, for they will stay vpon the way, rayling vp their necks, and will looke vpon any one very wistly, and so they remaine a long time, without mouing or any shew of feare, which giueth occasion of laughter, seeing them thus to stand. And yet sometimes they doe grow amazed sodainly, and runne away with their burthens, enen to the highest Rocks, so as not being able to come vnto them, they are constrained to kill them with an Harquebuz, lest they should lose their barres of Siluer, which they sometimes carry. The *Pacos* 60 will grow reastie vnder their burthens, lying down, and will endure to be cut in a thousand pieces before they will rise when this humor takes them: whereof the prouerb growes in *Peru*, to say that one

Sixe Arrobes is
a hundred and
fiftie pounds
weight.

is reastie, to signifie, he is oblitinate; for that when any of these beasts is moodie, it is with excessive: the remedie they haue is, to stay and sit downe by the *Paco*, making much on him, vntill the fit be past, and that he rise: and sometimes they are forced to stay two or three houres. They haue a disease like to scabs, which they call *Carache*, whereof they commonly die. The Ancients had a remedie, to burie them quicke that had the *Carache*, lest they should infect the rest, being a very contagious disease, and goes from one to another. An *Indian* that hath one or two of these sheepe, is not reputed poore, for one of them is worth fixe or seuen pieces of assay, and more, according to the time and places.

The *Bezaars* stone is found in all these beasts before mentioned, which are proper to *Peru*. Of the *Bezaars* stone. Chap. 42:
10 whereof some Authors of our time haue written whole bookes, which they may reade that desire to haue a more particular knowledge. For the present subiect it shall be sufficient to say, that this stone which they call *Bezaar*, is found in the stomacke and belly of this beast, sometimes one alone, sometimes two, three, and foure. They are very different in forme, greatnesse and colour, for that some are small like Filberds, and lesse; others like Walnuts; some like Pidgeons egges, and others as bigge as a Hens egge: and I haue seene some as bigge as an Orange; in forme some are round, others in fashion like to Lentils, and many other formes. For their colour, some are blacke, some white, some grey, darke greene, and others, as if they had beene gilded. It is no certaine rule to iudge the best and most fine by the colour or forme. All these stones are made and fashioned of diuers films and skins one vpon another. In the Prouince of *Xaura* and
20 other Prouinces of *Peru*, they finde these stones in diuers kindes of beasts, both wilde and tame, as in the *Guanacos*, *Pacos*, *Vicugnes*, and *Tarugues*, some adde an other kinde, which they say are wilde Goates, which the *Indians* call *Cypis*. These other kindes of beasts are very well known in *Peru*, whereof we haue already discoursed. The *Guanacos* or Countrie sheepe, or *Pacos*, haue commonly the lesser stones, and blacke, neither are they so much approued for the vse of physicke. They draw the greatest *Bezaar* stones from the *Vicugnes*, and they are grey, or white, or of a darke greene, which are held for the better. They esteeme those of the *Tarugues* for the most excellent, whereof there are some reasonable bigge: they are commonly white, inclining to grey; and they haue the filmes commonly bigger and thicker then the rest.

They finde the *Bezaar* stone equally both in Male and Female. All beasts that ingender it;
30 chaw the cuid, and commonly feede vpon the Snow and Rocks. The *Indians* report and teach by tradition from their Fathers and Ancients, that in the Prouince of *Xaura*, and in other Prouinces of *Peru*, there are many herbs and venemous beasts, which poison the water and the pastures where they eate and drinke, and where they breathe: amidst which venemous herbs there is one very well knowne of the *Vicugne*, by a naturall instinct, and of other beasts that ingender the *Bezaar* stone, which eate this herbe, and by meanes thereof they preserue themselves from the poisoned waters and pastures: and they say, that of this herbe the stone is compounded in the stomacke, whence it drawes all the vertue against poison, and other wonderfull effects. This is the opinion and tradition of the *Indians*, discovered by men of great experience in the Kingdome of *Peru*, which agrees with reason, and with that which *Plinie* reports of the
40 Mountaines Goats, which are nourished and fed vpon poison without suffering any harme. The *Indians* being demanded, why the Sheepe, Kine, Goats, and Calues, such as are in *Castile*, haue not the *Bezaar* stone, seeing that they feede on the same Rocks: their answer is, That they beleue not, that those beasts of *Castile* eate of that herbe, or that they haue found the *Bezaar* stone in Stags and fallow Deere. This seemes to agree with our knowledge, for that in new *Spaine* they finde the *Bezaar* stone, although there be no *Vicugnes*, *Pacos*, *Tarugues*, nor *Guanacos*, but onely Stags, in some of which they finde these stones.

One thing is worthy admiration, that they grow and are fashioned vpon very strange things, as vpon the tagge of a Point, vpon a Pin, or a piece of Wood, which they finde in the centre of this stone, and yet doe they not hold it false, for that the beast might swallow it, and the stone thicken vpon it, and growes one vpon another, and so it increaseth. I did
50 see in *Peru*, two stones fashioned vpon *Pignons* of *Castile*, which made vs to wonder much, for that in all *Peru*, wee had not seene any Pines or *Pignons* of *Castile*, if they were not brought from *Spaine*, which seemes to mee very extraordinarie. This little may suffice touching the *Bezaars* stone. They bring other physcally stones from the *Indies*, as the stone of *Hyada*, or of *Rate*, the blood stone, the stones of Milke, and of the Sea. Those which they call *Cornerinas*, for the Heart, whereof there is no neede to speake, hauing nothing common with the subiect of beasts, whereof wee haue intreated: which giues vs to vnderstand how the great Master and Author of all, hath imparted his benefits and wonderfull secrets, to all parts of the World; for the which he is to be glorified for euer.

60
Reader, I haue here added this worke, for the better and more particular knowledge of the Naturall Historie of the West Indies. This Authour Gonzalo Ferdinando de Ouiedo did first write a Summarie to Charles the fifth (out of which the most part of this is taken) An. 1525. and after that

writ his Generall Historie, enlarging what he had written before this Summarie; and in the dividing it into three Parts: the first of which containyng principally the Spanishe acts and Naturall observations in the Ilands, in twentie Bookes, wee have in Ramulios third Tome of Voyages: the second (in which hee writ of the Continent of New Spaine, and the third of Peru and the Southerne America, with above foure hundred pictures of the Plants, Beasts, and other Creatures of those parts, were neuer published; so the great losse of naturall knowledge of those parts. As for the Spanishe acts we have them sufficiently written by others. But Acosta and Quiedo have best deserved of the studious of Nature, that is, of the knowledge of God in his workes. In which respect I have added many things omitted by Master Edden, and Master Willes in the former publication, both examining this, and translating the rest from Ramulios Italian edition.

CHAP. III.

Extracts of GONZALO FERDINANDO DE OVIEDO his Summarie and Generall Historie of the Indies.

Of the mynes of gold, and the manner of working in them.

His particular of the mynes of Gold, is a thing greatly to be noted, and I may much better speake hereof then any other man, forasmuch as there are now twelue yeeres past since I serued in the place of the Surueyor of the melting shops, pertayning to the gold mynes of the firme Land, and was the Gouvernor of the mynes of the Catholike King Don Ferdinando, after whole departure from this life, I serued long in the same roome in the Name of your Maiestie. The myne or veine which ought to be followed, ought to be in a place which may stand to saue much of the charges of the Labourers, and for the administration of other necessarie things, that the charges may be recompensed with gaynes. The greatest part of the wrought gold which the Indians haue, is base, and holdeth somewhat of Copper: of this they make Bracelets and Chaines, and in the same they close their Jewels which their Women are accustomed to weare, and esteemed more then all the riches of the World. The manner how gold is gathered, is this, either of such as is found in *Zauana*, that is to say, in the Plaines and Riuer of the Champaine country being without Trees, whether the Earth be with grasse or without, or of such as is sometimes found on the Land without the Riuer in places where Trees grow, so that to come by the same, it shall be requisite to cut downe many and great Trees. But after which soeuer of these two manners it be found, either in the Riuer or Breaches of waters, or else in the earth, I will shew how it is found in both these places, and how it is separate and purged. Therefore when the myne or veine is discovered, this chanceth by searching and prouing in such places as by certaine signes and tokens doe appeare to skilfull men apt for the generation of gold, and to hold gold: and when they haue found it, they follow the myne, and labour it, whether it be in the Riuer, or in the Playne, as I haue said. And if it be found on the Playne, first they make the place very cleane where they intend to digge, then they digge eight or ten foot in length, and as much in breadth: but they goe no deeper then a span or two, or more, as shall seeme best to the Master of the myne, digging equally, then they wash all the earth which they haue taken out of the said space, and if herein they finde any gold they follow it, and if not, they digge a span deeper, and wash the earth as they did before: and if then also they finde nothing, they continue in digging and washing the earth as before, vntill they come to the hard rocke or stone: and if in fine they finde no gold there, they follow no further to seeke gold in that place, but goe to another part. And it is to be vnderstood, that when they haue found the myne, they follow it in digging, in the same measure in leuell and depth, vntill they haue made an end of all the myne which that place containeth, if it appeare to be rich. This myne ought to consist of certaine feet or pases in length or breadth, according to certaine orders determined, and within that compasse of earth, it is not lawfull for any other to digge for gold: And where as endeth the myne of him that first found the gold, immediatly it is lawfull for any other man that will, with a staffe to assigne himselfe a place by the side of the same, inclosing it with stakes or pales as his owne. These mynes of *Zauana* (that is, such as are found in the Playnes) ought euer to bee sought neere to some Riuer or Brooke, or Spring of water, or Dike, or standing Poole, to the end that the gold may be washed, for the which purpose they vse the labour of certaine Indians, as they doe other in digging of the myne. And when they haue digged out the myne, they fill certaine Traves with that earth, which other Indians haue the charge immediatly to receiue at their hands, and to carry those Traves of earth to the water, where it may be washed: Yet doe not they that bring it wash it, but deliuer it to other, putting it out of their owne Traves into theirs, which they haue readie in their hands to receiue it. These Washers for the most part are the Indian women, because this worke is of lesse paine and trauell then any other. These women when they wash, are accustomed to sit by the water side, with their legges in the water euen vp to the knees, or lesse, as the place

Gold of Indians base.

Manner of mynes and searching for gold.

Gold in mynes.

Spanishe customes for vsage of mynes.

Water a good neighbour.

Women gold-washers.

place serueth their purpoe: and thus holding the Traves with earth in their hands by the handles thereof, and putting the same into the water, they moue them round about, after the manner of sifting, with a certaine aptnesse, in such sort that there enteth no more water into the Traves then serueth their turne, and with the selfe same apt mouing of their Traves in the water, they euer auoid the foule water with the earth out of the one side of the Vessell, and receiue in cleane water on the other side thereof, so that by this means by little and little, the water washeth the earth as the lighter substance of the Traves, and the Gold as the heauier matter resteth in the bottome of the same, being round and hollow in the midst like vnto a Barbars Basen. And when all the earth is auoided, and the Gold gathered together in the bottome of the

40 Tray, they put it a part, and returne to take more earth, which they wash continually as before. Furthermore it is to be noted, that for euery two *Indians* that wash, it is requisite that two other serue them to bring earth from the Mine, and other two to breake the same small, and fill their Traves therewith. Also beside these Labourers it is necessarie that there be other people in the place where they worke and rest in the night: these are such as make their bread, and provide for victuals, and other necessities. So that to conclude, there are in all, five persons ordinarily assigned to euery Tray of washers.

Other Labourers.

Five to a tray.

There is another manner of working the Mines, in Rivers or Brookes of running waters: and this is, that in auoyding the water of his course, after that the beds of the Rivers are dry and vterly emptied, they find Gold among the breaches, cliffs, and rifts of stones, and among all that is in the bottome of the Channell, and where naturally the River runneth of greatest force: So that it chanceth sometime, that when the bed of the River is good and rich, they find in it great quantitie of Gold. And therefore your Maiestie ought to vnderstand for a generall rule, as it appeareth in fact, that all Gold is ingendred in the tops and highest places of the Mountaines, and in continuance of time is by little and little brought downe to the Vales and Plaines by showres of raine, and the falls of Springs, Rivers, and Brookes, hauing their originall in the Mountaines, and descending from the same, notwithstanding it is oftentimes found in the Plaines farre from the Mountaines. But when it chanceth to be found in great quantity, it is for the most part among the Mountaines, and in the Rivers, or their branches, more then in any other part of the Plaines: and in these two manners it is commonly found most abundantly. And for the better prooue

Gold in Rivers or poulder.

Gold engendred on hill tops.

30 that Gold is ingendred on high, and is brought downe into the low places, I haue one great token thereof, which causeth me to beleue it for certaine, and this is, to consider that coles neuer putrifie nor corrupt vnder the ground, if they be made of strong wood. Whereby it chanceth, that digging the earth by the foulds or indented places of the Mountaines, or on the sides, and breaking a Mine in the earth, where it had bene broken before, and hauing now digged one or two or three Poles in measure, the Miners found certaine coles of wood vnder the same leuell where they found Gold, and this I say in the earth which was taken for a Virgin, that is to say, such as had not before bene opened for any Mine: the which coles could not naturally bee ingendred there, or enter in by any meanes, but when the superficiall part of the earth was equall with the leuell where the coles were found, it is like that the coles were left there by some occasion of fire, and that they fastened there in time, and that afterward in long continuance of time,

His reason.

40 they were by little and little couered with the earth, which the often showres of raine washed from the Mountaines, so that by the course of yeeres the earth ouergrew the coles vnto the said leuell and measure, which had before time bene the superficiall part of the earth, where the coles and Gold were found together: whereby it may appeare that the Gold was no more ingendred there then were the coles, but brought thither from the Mountaynes by the falls of waters as we haue said, forasmuch as the Mountaines are the Matrices and bowels of all rich Metals. Further and besides this, I say that in how much more the Gold is gone farre from the naturall place of his generation to the place where it is found, it is so much the more purified and fined, and of a better caract, and the neerer that it is found to his proper Mine or veine where it is ingendred, it is so much the baser, fouler, and more crude, and of a baser alay and caract, and doth waste so much the more in melting, and remaineth more bricke.

Some may thinke that coles, shels & other ludibrious nature, naturally grow there.

50 Sometimes there are found graines of Gold of great quantitie, and of great weight about the earth, and sometimes also vnder the earth: And the greatest of all other that was found to this day in the *Indies*, was that which was lost in the Sea about the Iland *Beata*, which weighed three thousand and two hundred of *Castellans* of Gold, which are in value foure thousand and hundred thirtie and eight Ducats of Gold, which weigh one *Arroba* and seuen pound, or thirtie and two pound, after twelue ounces to the pound, which make threescore and foure Markes of Gold. And I saw in the yeere 1535. in the hands of *Michel Passamonte* Treasurer to your Maiestie, two graines, of the which one weighed seuen pounds, which are fourteene Markes, and are in value about three score and five Ducats of Gold euery Marke: the other was of ten Marks, which are five pounds of like value, and of very good Gold of two and twentie caracts, and better: There are also found many other great graines, although not equall vnto these in bignesse. And forasmuch as I haue spoken of Gold, I haue thought good to declare somewhat how the *Indians* can very excellently gild such Vessels of Copper and base Gold as they make: for they can

Gold in graines. One huge piece of gold.

A Marke is a pound of 8. ounces *summa*, 16. pound weight eight ounces, after 12. ounces to the pound. *Indian gilding*

giue them so faire and flourishing a colour, that all the masse which they gilt, appeareth as though it were Gold of two and twentie caracts, and better. This colour they giue with a certaine hearbe, as though it were wrought by the art of any Gold-smith of *Spaine* or *Italie*, and would of them be esteemed as a thing of great riches and a secret manner of gilding. For the desire that our men haue to Gold, they nothing esteeme the Copper, although there might great commoditie and profit be had thereby, and also by other Metals, which they nothing regard, except Silver, which is found abundantly in that part of the firme Land which is called *New Spaine*.

Of the manner of fishing for Pearles.

The *Indians* exercise this kind of fishing for the most part in the Coasts of the North in *Cubagua* and *Cumana*, and many of them which dwell in the Houses of certaine particular Lords in the Ilands of *San Dominico* and *Sancti Iohannis*, resort to the Iland of *Cubagua*, for this purpose. Their custome is to goe five, sixe, or seuen, or more in one of their Canoes or Barkes, early in the morning to some place in the Sea thereabout, where it appeareth vnto them that there should be great plentie of those shell fishes (which some call Muscles, and some Oysters) wherein Pearles are ingendred, and there they plunge themselves vnder the water, euen vnto the bottome, sauing one that remayneth in the Canoe or Boat, which hee keepeth still in one place as neere as he can, looking for their returne out of the water: And when one of them hath bene a good while vnder the water, he riseth vp, and commeth swimming to the Boat, entring into the same, and leauing there all the Oysters which he hath taken and brought with him (for in these are the Pearles found) and when he hath there rested himselfe a while, and eaten part of the Oysters, he returneth againe to the water, where hee remayneth as long as hee can endure, and then riseth againe, and swimmeth to the Boat with his prey, where hee resteth him as before, and thus continueth course by course, as doe all the other in like manner, being all most expert Swimmers and Diuers: and when the night draweth neere, they returne to the Iland to their houses, and present all the Oysters to the Master or Steward of the house of their Lord, who hath the charge of the said *Indians*, and when he hath giuen them somewhat to eate, he layeth vp the Oysters in safe custodie, vntill he haue a great quantitie thereof, then he causeth the same Fishermen to open them, and they find in euery of them Pearles, other great or small, two, or three, or foure, and sometimes five or sixe, and many small graines, according to the liberalitie of nature. They saue the Pearles both small and great which they haue found, and either eate the Oysters if they will, or cast them away, hauing so great a quantitie thereof, that they in manner abhorre them. These Oysters are of hard flesh, and not so pleasant in eating as are ours of *Spaine*. This Iland of *Cubagua*, where this manner of fishing is exercised, is in the North Coast, and is no bigger then the Iland of *Zeland*. Oftentimes the Sea increaseth greatly, and much more then the Fishers for Pearles would, because whereas the place is very deepe, a man cannot naturally rest at the bottome, by reason of the abundance of aerie substance which is in him, as I haue oftentimes proued. For although he may by violence and force descend to the bottome, yet are his feet lifted vp againe, so that hee can continue no time there: and therefore where the Sea is very deepe, these *Indian* Fishers vse to tie two great stones about them with a coard, on each side one, by the weight whereof they descend to the bottome, and remayne there vntill them listeth to rise againe, at which time they vnloose the stones, and rise vp at their pleasure. But this their aptnesse and agilitie in swimming, is not the thing that causeth men most to maruell: but rather to consider how many of them can stand in the bottome of the water for the space of one whole houre, and some more or lesse, according as one is more apt hereunto then another. An other thing there is which seemeth to me very strange: and this is, that whereas I haue oftentimes demanded of some of these Lords of the *Indians*, if the place where they are accustomed to fish for Pearles, being but little and narrow, will not in short time be utterly without Oysters, if they consume them so fast: They all answered mee, that although they be consumed in one part, yet if they goe a fishing in an other part, or an other Coast of the Iland, or at another contrary wind, and continue fishing there also vntill the Oysters bee likewise consumed, and then returne againe to the first place, or any other place where they fished before, and emptied the same in like manner, they find them againe as full of Oysters as though they had neuer bene fished. Whereby we may iudge, that these Oysters either remoue from one place to another, as doe other fishes, or else that they are ingendred and increase in certaine ordinarie places. This Iland of *Cumana* and *Cubagua*, where they fish for these Pearles, is in the twelfth degree of the part of the said Coast which inclineth toward the North. Likewise Pearles are found and gathered in the South Sea, called *Mare del Sur*, and the Pearles of this Sea are very bigge, yet not so bigge as they of the Iland of Pearles, called *de las Perlas*, or *Margarita*, which the *Indians* call *Terarequi*, lying in the Gulfe of Saint *Michael*, where greater Pearles are found, and of greater price, then in any other Coast of the North Sea, in *Cumana*, or any other part. I speake this as a true testimonie of sight, hauing bene long in that South Sea, and making curious inquisition to be certainly informed of all that pertayneth to the fishing of Pearles. From this Iland of *Terarequi*, there was brought a Pearle of the fashion of a Pearle, weighing thirtie and one Caracts,

Huge Pearle.

Caracts, which *Petrus Arias* had among a thousand and so many pounds weight of other Pearles, which he had when Captaine *Gaspar Morales* (before *Petrus Arias*) passed to the said Iland in the yeare 1515. which Pearle was of great price. From the said Iland also, came a great and very round Pearle, which I brought out of the Sea, this was as bigge as a small pellet of a Stone-bow, and of the weight of twentie and sixe Caracts: I bought it in the Citie of *Panama*, in the Sea of *Sur*, and paid for it sixe hundred and fiftie times the weight thereof of good Gold, and had it three yeeres in my custodie, and after my returne into *Spaine*, sold it to the Earle of *Nan-sao* Marquesse of *Zenete*, great Chamberlaine to your Maiestie, who gaue it to the Marquesse his Wife, the Ladie *Mentia* of *Mendoza*. I thinke verily that this Pearle was the greatest, fairest, and roundest that hath bene seene in those parts. For your Maiestie ought to vnderstand, that in the Coast of the Sea of *Sur*, there are found a hundred great Pearles round after the fashion of a Peare, to one that is perfectly round and great.

By the computation of Venice, foure graines make a Caract.

Peare-pearles

*Of the familiaritie which certayne of the Indians haue with the Deuill,
and how they receiue answere of him of things to come,
and other Superstitions.*

VHen the *Indians* beginne their battaile, or goe to any combate, or attempt any other great mater, they haue certaine elect men, whom they reuerently esteeme, and call them *Tequinas*, which in their tongue is as much to say as Masters: notwithstanding that they call euery man, that is cunning in any Science, by the same name, as Fishers, Fowlers, Hunters, or makers of Nets. These *Tequinas* therefore, they call the Masters of their Answeres, because they speake with *Tuyra*, that is, the *Deuill*, and bring them answere what he saith, either as touching such things as they haue to doe, or shall chance to them the day following, or many dayes to come. For the *Deuill*, being so ancient an Astronomer, knoweth the times of things, and seeth how they are naturally directed and inclined, and maketh them beleue that they come so to passe by his ordinance, as though he were the Lord and moouer of all that is and shall be, and that he giueth the day light, and raine, causeth tempest, and ruleth the stations of times, giuing life, or taking away life, at his pleasure: By reason whereof, the *Indians* being deceiued of him, and seeing also such effects to come certainly to passe as he hath told them before, beleue him in all other things, and honour him in many places with Sacrifices of the bloud and liues of men, and odoriferous Spices: And when God disposeth the contrary to that which the *Deuill* hath spoken in Oracle, whereby he is prooued a Lye, hee causeth the *Tequinas* to perswade the people that he hath changed his mind and sentence for some of their sins, or deuileth some such lye as liketh him best, being a skilfull Master in such subtil and craftie deuices, to deceiue the simple and ignorant people, which hath small defence against so mightie and craftie an Aduersarie. And as they call the *Deuill Tuyra*, so doe they in many places call the Christians by the same name, thinking that they greatly honour them thereby, as indeed it is a name very fit and agreeable to many of them, hauing laid apart all honestie and vertue, liuing more like Dragons then men, among these simple people.

Deuils Imposture.

Before the Inhabitants of the Iland of *Hispaniola* had receiued the Christian Faith, there was among them a Sect of men, which liued solitarily in the Desarts and Woods, and led their life in Silence and Abstinence, more streightly then euer did the Philosophers of *Pythagoras* Sect, abstaining in like manner from the eating of all things that liue by bloud, contented onely with such Fruites, Herbes, and Rootes, as the Deserts and Woods ministred vnto them to eate: The Professors of this Sect were called *Piaces*. They gaue themselves to the knowledge of naturall things, and vsed certaine secret Magicall Operations and Superstitions, whereby they had familiaritie with Spirits, which they allured into their owne bodies, at such times as they would take vpon them to tell of things to come, which they did in manner as followeth. When any of the Kings had occasion to call any of them out of the Desarts for this purpose, their custome was to send them a portion of their fine Bread of *Cazabi* or *Maiz*, and with humble request and suite to desire them to tell them of such things as they would demand. After the request granted, and the place and day appointed, the *Piaces* commeth with two of his Disciples wayting on him, whereof the one bringeth with him a Vessel of a secret Water, and the other a little Siluer Bell. When hee commeth to the place, hee sitteth downe on a round seate made for him of purpose, where hauing his Disciples the one standing on the one hand, and the other on the other, euen in the presence of the King and certaine of his Nobles (for the common people are not admitted to these Mysteries) and turning his face toward the Desert, hee be- ginne his Inchantment, and calleth the Spirit with loude voyce by certaine names, which no man vnderstandeth but hee and his Disciples. After hee hath done thus a while, if the Spirit yet deferre his comming, hee drinketh of the said Water, and therewith waxeth hot and furious, and inuerteth and turneth his Inchantment, and letteth himselfe bloud with a thorne, maruellously turmoiling himselfe, as we read of the furious Sybils, not ceasing

Tempests.

untill the spirit be come: who at his coming entred into him, and oerthroweth him, as it were a Greyhound should ouerturne a Squerell, then for a space, he seemeth to lye as though he were in great paine, or in a rapte, wonderfully tormenting himselfe, during which agonie, the other Disciple shaketh the Siluer Bell continually. Thus when the agonie is past, and he lyeth quietly (yet without any sence or feeling) the King, or some other in his stead, demandeth of him what he desired to know: and the spirit answered him by the mouth of the rapte *Piaces*, with a direct and perfect answer to all points: In somuch that on a time certaine *Spaniards* being present at these mysteries with one of the Kings, and in the *Spanish* tongue demanding the *Piaces* of their Ships which they looked for out *Spaine*, the spirit answered in the *Indian* tongue, and told them what day and houre the Ships departed from *Spaine*, how many they were, and what they brought, without failing in any point. If he be also demanded of the eclipse of the Sunne or Moone (which they greatly feare and abhorre) he giueth a perfect answer, and the like of tempests, famine, plentie, warre or peace, and such other things. When all the demands are finished, his Disciples call him aloud, ringing the Siluer Bell at his eare, and blowing a certaine powder into his nostrils, whereby he is raised as it were from a dead sleepe, being yet somewhat heauy headed and faint a good while after. Thus being againe rewarded of the King with more bread, he departeth againe to the desarts with his Disciples. But since the Christian faith hath beene disperfed throughout the Iland, these diuellish practises haue ceased, and they of the members of the Diuell, are made the members of Christ by Baptisme, forsaking the Diuell and his works, with the vaine curiosity of desire of knowledge of things to come, whereof for the most part it is better to be ignorant, then with vexation to know that which cannot be auoided.

Furthermore, in manie places of the firme Land, when any of the Kings dye, all his household seruants, as well women as men, which haue continually serued him, kill themselves, beleeuing as they are taught by the Diuell *Tuyra*, that they that kill themselves when the King dyeth, goe with him to heauen, and serue him in the same place and office as they did before on the earth while he liued: and that all that refuse so to doe, when after they dye by their naturall death or otherwise, their soules to die with their bodies, and to be dissolued into ayre, and become nothing, as doe the soules of Hogges, Birds, Fishes, or other brute beasts: and that onely the other may enioy the priuiledge of immortalitie for euer, to serue the King in heauen. And of this false opinion cometh it, that they which lowe corne, or set rootes for the Kings bread, and gather the same, are accustomed to kill themselves, that they may enioy this priuiledge in heauen, and for the same purpose, cause a portion of the graine of *Maiz*, and a bundle of *Iucca* (whereof their bread is made) to be buried with them in their graues, that the same may serue them in heauen, if perhaps there should lacke seedes to sowe, and therefore they take this with them, to begin withall, untill *Tuyra* (who maketh them all these faire promises) provide them of greater quantitie. This haue I my selfe seene in the top of the Mountaines of *Gnaturo*, where hauing in prison the King of that Province (who rebelled from the obedience of your Maestie) and demanding of him to whom pertained those Sepultures or graues which I saw in his house: he answered, that they were of certaine *Indians* which slew themselves at the death of his Father. And because they are oftentimes accustomed to bury great quantities of wrought gold with them, I caused two graues to be opened, wherein was nothing found but a vessell full of the graine of *Maiz*, and a bundle of *Iucca*, as I haue said. And demanding the cause hereof, of the King and the other *Indians*: they answered, that they that were buried there, were the labourers of the ground, and men skilfull in sowing of seedes, and making of bread, and seruants to the Kings father, and to the end that their soules should not dye with their bodies, they slue themselves at the death of the King their Master, to liue with him in heauen, and to the intent that they might serue him there in the same office, they referred that *Maiz* and *Iucca*, to sowe it in heauen. Whereunto I answered them in this manner, Behold how your *Tuyra* deceiueth you, and how all that he teacheth you is false. You see how in so long a time since they are dead, they haue not yet taken away this *Maiz* and *Iucca*, which is now putrified and worth nothing, and not like to be sown in heauen. To this the King replied, saying, In that they haue not taken it away, nor sown it in heauen, the cause is, that they chanced to finde enough there, by reason whereof they had no neede of this. To this error many things were said, which seemed of little force to remoue him from his false opinion, and especially any such as at that age are occupied of the Diuell, whom they paint of the selfe same forme and colour, as he appeared vnto them in diuers shapes and formes. They make also Images of Gold, Copper, and Wood, to the same similitudes, in terrible shapes, and so variable, as the Painters are accustomed to paint them at the feete of Saint *Michael* the Archangell, or in any other place, where they paint them of most terrible portrature. Likewise when the diuell greatly intendeth to feare them, he threatneth to send them great tempests, which they call *Furacanas*, or *Haurachanas*, and are so vehement, that they oerthrow many houses, and great trees. And I haue seene in Mountaines, full of many and great trees, that for the space of three quarters of a league the Mountaine hath beene subuerted, and the tree oerthrowne, and plucked out of the earth with the rootes.

The gulfe of *Vraba*, is distant from the Equinoctiall line, from an hundred and twentie, to a hundred

hundred and thirty leagues, and three quarters of a league, after that accompt of seuenteen leagues and a halfe for euerie degree from Pole to Pole: & thus for a little more or lesse, goeth all the coast. By reason wherof, in the Citie of *Santa Maria, Antigua*, in *Dariena*, and in all that course of the foresaid gulfe of *Praba*, at all times of the yeere the daies and nights are in manner of equall length: and if there be any difference betweene them by reason of this small distance from the Equinoctiall, it is so little, that in foure and twentie houres, making a naturall day, it cannot be perceived but by the iudgement of speculative men, and such as vnderstand the sphere. From hence the North Starre is seene verie low.

Of diuers particular things, as Wormes, Serpents, Beasts, Foules, Trees, &c.

10 I Will first speake of certaine little and troublesome Beasts, which may seeme to be engendred of nature to molest and vexe men, to shew them and giue them to vnderstand, how small and vile a thing may offend & disquiet them, to the end that they may remember the principall end for the which they were created, that is, to know their maker. In manie parts of the firme Land, by the which as wel the Christians as the Indians do trauaile, there are such marishes & waters in the way, that they are faine to go without breeches among the hearbs & weeds, by reason wherof, certain small beasts or wormes (which they call *Garapates*) much like vnto Ticks, cleaue fast to their legs. These worms are as little as the poulder of beaten Salt, & cleaue so fast, that they can by no meanes be taken away, except the place be noynted with oyle: & after that the legs be noynted a while with oyle, or the other parts where these little Ticks are fastened, they scrape the place with a Knife, & so take them away. But the *Indians* which haue no oyle, smoake them, and burne them with fire, and abide great paines in taking them away by this means. Of other little Beasts which trouble men, and are engendred in their heads or other parts of their bodies, I say that the Christian men which trauaile into these parts, haue them but seldome times, and that not past one or two, and this also very seldome: For passing by the line of the Diameter where the compasse maketh difference of sailing by the winde called *Greco* (that is, North-east) and *Magistral* (that is, South-west) which is in the course of the Ilands of *Azori*, they saile but a little way following our voiage by the West, but that all the Lice which the Christians carrie with them, or are engendred in their heads, or other places of their bodies, die and vtterly consume by little and little, and are not engendred in *India*, except in the heads of little children in those parts, as well among the children of the *Christians* which are borne there, as also among the naturall *Indians*, who haue them commonly in their heads, and sometimes in other parts of their bodies, and especially they of the Prouince of *Cutua*, which is a region containing more then a hundred leagues in length, and embraseth the one and the other coast of the North Sea, and of the East. When these *Indians* are infected with this filthinesse, they dresse and cleanse one another: And they that exercise this, are for the most part women, who eate all that they take, and haue herein such dexterity by reason of their exercise, that our men cannot lightly attaine thereunto. There is also another thing greatly to be considered: and this is, how the *Christian* men, being there cleane from this filthinesse of *India*, as well in their heads as the rest of their bodies, yet when they returne to come againe into *Europe*, and begin to arriue in that place of the Ocean Sea where we said before that these Lice died and forsooke them, sodainely in their repassing by the same clime (as though these Lice had tarried for them in that place) they can by no meanes auoide them for the space of certaine daies, although they change their shirts two or three times in a day. These Lice are at the first as little as Nits, and grow by little and little, vntill they be of the bignesse that they are in *Spaine*. This haue I oftentimes proued, hauing now foure times passed the Ocean Sea by this voiage. Beside these wormes and vermin wherof we haue spoken, there is another little mischieuous worm, which we may number among the kindes of Fleas, this Pestilence the *Indians* call *Nigua*, and is much lesse then a Flea: it pearcheth the flesh of a man, and so lancheth or cutteth the same (while in the meane time it can neither be seene nor taken) that from some it hath cut off their hands, and from other their feete, vntill the remedy was found to annoint the place with Oyle and scrape it with a Rasor. In the firme Land in golden Castile or *Beragua*, there are many Vipers like vnto them of *Spaine*: they that are bitten of them, dye in short space, for few liue to the fourth day, except present remedy. Of these, some are of lesse kinde then other, and haue their taile somewhat round, and leape in the aire to assaile men; and for this cause, some call this kinde of Vipers *Tyro*: their biting is most venomous, and for the most part incurable. One of them chanced to bite an *Indian* Maide which serued me in my house, to whom I caused the Surgians to minister their ordinary cure, but they could doe her no good, nor yet get one drop of blood out of her, but onely a yellow water, so that she died the third day for lacke of remedie, as she like hath chanced to diuers others. This Maide was of the age of foureene yeares, and spake the *Spanish* tongue as if she had bene borne in *Castile*: she said that the Viper which bit her, on the foot, was two spans long, or little lesse: and that to bite her, she leapt in the aire for the space of more then six paces, as I haue heard the like of other credible persons.

Small Wormes troublesome.

Lice forsake them.

Lice finde them againe.

Nigua.

Vipers.

I haue

Adders.

I haue also seene in the firme Land a kinde of Adders, very small, and of seuen or eight foot long; these are so red, that in the night they appeare like burning coles, and in the day seeme as red as blood, these are also venomous, but not so much as the Vipers. There are other much lesse and shorter, and blacker: these come out of the Riuer, and wander sometimes farre on the Land, and are likewise venomous. There are also other Adders of a russet colour: these are somewhat bigger then the Viper, and are hurtfull and venomous. There are likewise another sort of many colours, and very long: of these I saw one in the yeare of Christ 1515. in the Iland of *Hispaniola*, neere vnto the Sea coasts, at the foote of the Mountaines called *Pedernales*. When this Adder was slain, I measured her, & found her to be more then twenty foot long, and somewhat more then a mans fist in bignesse: and although she had three or foure deadly wounds with a Sword, yet dyed she not, nor stunke the same day, in so much that her blood continued warme all that time. There are also in the Marishes and desarts of the firme Land many other kindes of Lysarts,

Dragons.

Dragons, and diuers other kindes of Serpents, whereof I intend not here to speak much, because I haue more particularly entreated of these things in my generall historie of the West Indies. There

Spiders huge.

are also Spiders of marueilous bignesse, and I haue seene some with bodie and legges bigger then a mans hand extended euery way, and I once saw one of such bignesse, that onely her body was as bigge as a Sparrow, and full of that Laune whereof they make their webbes: this was of a darke russet colour, with eyes greater then the eyes of a Sparrow, they are venomous, and of terrible shape to behold. There are also Scorpions, and diuers other such venomous wormes. Furthermore in the firme Land, there are many Toades, being verie noious and hurtfull by reason

Toades.

of their great multitude, they are not venomous, they are seene in great abundance in *Darcena*, where they are so big that when they die in the time of drought, the bones of some of them (and especially the ribs) are of such greatnesse, that they appeare to be the bones of Cats, or of some other beasts of the same bignesse. But as the waters diminish, & the moisture consumeth in the time of drought (as I haue said) they also consume therewith, vntill the yeare next following when the raine and moisture encrease, at which time they are seene againe. Neuerthelesse, at this present there is no such quantitie of them, as was wont to be, by reason that as the Land is better

Their renewing.

cultured by the Christians, as well by the felling of Woods and Shrubs, as also by the Pasture of Kine, Horses, and other beasts, so is it apparant that this poison diminisheth daily, whereby that region becommeth more holesome and pleasant. These Toades sing after three or foure sort, for some of them sing pleasantly, other like purs of *Spaine*, some also whistle, and other some make another manner of noise: they are likewise of diuers colours, as some greene, some russet or gray, and some almost blacke, but of all sorts they are great and filthie, and noious by reason of their great multitude, yet are they not venomous, as I haue said.

Singing.

There are also a strange kinde of Crabbes, which come forth of certaine holes of the earth, that they themselues make: the head and bodie of these make one round thing, much like to the hood of a Faulcon, hauing foure feete comming out of the one side, and as manie out of the other: they haue also two mouthes, like vnto a paire of small Pincers, the one bigger then the other, wherewith they bite, but doe no great hurt, because they are not venomous: their skin and bodie is smooth, and thinne, as is the skinne of a man, sauing that it is somewhat harder; their colour is russet, or white, or blew, and walke sidelong, they are verie good to be eaten, in so much that the Christians traouailing by the firme Land, haue bene greatly nourished by them, because they are found in manner euerie where: in shape and forme they are much like vnto the Crabbe which we paint for the signe Cancer, and like vnto those which are found in *Spaine* in *Andalusia* in the Riuer *Guadalchiber*, where it entreth into the Sea, and in the Sea coasts there about, sauing that these are of the water, and the other of the land: they are sometimes hurtfull, so that they that eat of them dye, but this chanceth onely when they haue eaten any venomous thing, or of the venomous apples wherewith the Caniball archers poison their arrowes, whereof I will speake hereafter, and for this cause the Christians take heede how they eat of these Crabbes, if they finde them neere vnto the said apple trees. Furthermore in these Indies, as well

Crabs or rather Tortoises.

in the firme land, as in the Ilands, there is found a kinde of Serpents, which they call *Tuanas*, which some call *Iuannas*, these are terrible and fearefull to sight, and yet not hurtfull, they are verie delicate to be eaten, and it is not yet knowne whether they be beasts of the land, or fishes, because they liue in the water, and wander in the woods, and on the land: they haue foure feet, and are commonly bigger then Connies, and in some places bigger then Otters, with tailes like Lysarts or Eutes: their skinne is spotted, and of the same kinde of smoothnesse or barenesse, although of diuers colours: vpon the ridge of their backes, they haue manie long prickles, their teeth are very sharpe, and especially their fangs or dogge teeth, their throates are long and large, reaching from their beards to their breasts, of the like skinne to the residue of their bodies: they are dumbe, and haue no voice, or make any noise, or crie, although they be kept tied to the foote of a chest, or any other thing, for the space of twentie or fye and twentie daies, without any thing to eat or drinke, except they giue them now and then a little of the bread of *Cazabi*, or some such other thing: they haue foure feete, and their fore-feete as long as a mans finger, with clawes like the clawes of a bird, but weaker, and such as cannot grasple or take hold of any thing:

Serpents called Iuanni.

There are also a strange kinde of Crabbes, which come forth of certaine holes of the earth, that they themselues make: the head and bodie of these make one round thing, much like to the hood of a Faulcon, hauing foure feete comming out of the one side, and as manie out of the other: they haue also two mouthes, like vnto a paire of small Pincers, the one bigger then the other, wherewith they bite, but doe no great hurt, because they are not venomous: their skin and bodie is smooth, and thinne, as is the skinne of a man, sauing that it is somewhat harder; their colour is russet, or white, or blew, and walke sidelong, they are verie good to be eaten, in so much that the Christians traouailing by the firme Land, haue bene greatly nourished by them, because they are found in manner euerie where: in shape and forme they are much like vnto the Crabbe which we paint for the signe Cancer, and like vnto those which are found in *Spaine* in *Andalusia* in the Riuer *Guadalchiber*, where it entreth into the Sea, and in the Sea coasts there about, sauing that these are of the water, and the other of the land: they are sometimes hurtfull, so that they that eat of them dye, but this chanceth onely when they haue eaten any venomous thing, or of the venomous apples wherewith the Caniball archers poison their arrowes, whereof I will speake hereafter, and for this cause the Christians take heede how they eat of these Crabbes, if they finde them neere vnto the said apple trees. Furthermore in these Indies, as well in the firme land, as in the Ilands, there is found a kinde of Serpents, which they call *Tuanas*, which some call *Iuannas*, these are terrible and fearefull to sight, and yet not hurtfull, they are verie delicate to be eaten, and it is not yet knowne whether they be beasts of the land, or fishes, because they liue in the water, and wander in the woods, and on the land: they haue foure feet, and are commonly bigger then Connies, and in some places bigger then Otters, with tailes like Lysarts or Eutes: their skinne is spotted, and of the same kinde of smoothnesse or barenesse, although of diuers colours: vpon the ridge of their backes, they haue manie long prickles, their teeth are very sharpe, and especially their fangs or dogge teeth, their throates are long and large, reaching from their beards to their breasts, of the like skinne to the residue of their bodies: they are dumbe, and haue no voice, or make any noise, or crie, although they be kept tied to the foote of a chest, or any other thing, for the space of twentie or fye and twentie daies, without any thing to eat or drinke, except they giue them now and then a little of the bread of *Cazabi*, or some such other thing: they haue foure feete, and their fore-feete as long as a mans finger, with clawes like the clawes of a bird, but weaker, and such as cannot grasple or take hold of any thing:

thing: they are much better to be eaten then to behold, for few that see them, will haue desire to eate of them, by reason of their horrible shape, except such as haue beene accustomed to the beasts of these regions, which are more horrible and fearefull, as this is not, but onely in appearance: their flesh is of much better taste then the flesh of Connies, and more holesome, for it hurteth none but onely such as haue had the French poxe, in so much, that if they haue beene touched of that infirmitie, although they haue beene whole of long time, neuerthelesse they feeble hurt, and complaine of the eating of these *Inannas*, as hath beene oftentimes proued by experience.

Note:

- There are found in the firme land certaine birds, so little, that the whole bodie of one of them is no bigger then the top of the biggest finger of a mans hand, and yet is the bare body without the feathers not halfe so bigge: This Bird, beside her littlenesse, is of such velositie and swiftnesse in flying, that who so seeth her flying in the aire, cannot see her flap or beate her wings after any other sort then doe the Dorres, or humble Bees, or Beetels: so that there is no man that seeth her flye, that would thinke her to be any other then a Dore: they make their nests according to the proportion of their bignesse, and I haue seene that one of these Birds with her nest put in a paire of gold weights altogether, hath waide no more then 2. *Tomini*, which are in poise 24 graines, with the feathers, without the which she should haue waied somewhat lesse. And doubtlesse, when I consider the finenesse of the clawes and feete of these Birds, I know not whereunto I may better liken them, then to the little birds which the lymners of bookes are accustomed to paint on the margent of Church Bookes, and other Bookes of Diuine Seruice. Their Feathers are of manie faire colours, as golden, yellow, and greene, beside other variable colours: their beake is verie long for the proportion of their bodies, and as fine and subtile as a sowing needle: they are verie hardy, so that when they see a man clime the tree where they haue their nests, they flye at his face, and strike him in the eyes, coming, going, and returning with such swiftnesse, that no man would lightly beleue it, that hath not seene it: and certainly these birds are so little, that I durst not haue made mention hereof, if it were not that diuers others which haue seene them as well as I, can beare witnesse of my saying: they make their nests of flocks and cotten, whereof there is great plentie in these regions, and serueth well for their purpose. But as touching the Birds, Foules, and Beasts of these *Indies*, because they are innumerable, both little and great, I intend not to speake much here, because I haue spoken more largely hereof in my generall Historie of the *Indies*. There is another kinde of Beasts seene in the firme Land, which seemeth very strange and marueilous to the Christian men to behold, and much differing from all other Beasts which haue beene seene in other parts of the world: these Beasts are called *Bardati*, and are foure footed, hauing their taile and all the rest of their bodies couered onely with a skin like the coperture of a barbed horse, or the checkered skin of a Lizard or Crocodile, of colour betweene white and russet, inclining somewhat more to white. This Beast is of forme and shape much like to a barbed horse, with his barbes and flankets in all points, and from vnder that which is the barbe and coperture, the taile commeth forth, and the feete in their place, the necke also and the eares in their parts, and in fine all things in like sort as in a barbed courser: they are of the bignesse of one of these common Dogges, they are not hurtfull, they are filthy, and haue their habitation in certaine hillockes of the earth, where digging with their feete, they make their dens verie deepe, and the holes thereof, in like manner as doe Connies: they are very excellent to be eaten, and are taken with nets, and some also killed with Cross-bowes: they are likewise taken oftentimes when the Husbandmen burne the stubble in sowing time, or to renew the herbage for Kine and other Beasts. I haue oftentimes eaten of their flesh, which seemeth to me of better taste then Kiddes flesh, and holesome to be eaten. And if these Beasts had euer beene seene in these parts of the world, where the first barbed Horses had their originall, no man would iudge but that the forme and fashion of the coperture of Horses furnished for the warres, was first deuised by the sight of these Beasts.

Small Birds,
Tomincios.Bardati or Armadillos; a
kinde of Mole

- There is also in the firme Land another beast, called *Orso Formigaro*, that is, the *Ante-beare*. This beast in haire and colour, is much like to the Beare of *Spaine*, and in manner of the same making, saue that he hath a much longer snout, and is of euill sight: they are oftentimes taken only with staues, without any other weapon, and are not hurtfull, they are also taken with Dogges, because they are not naturally armed, although they bite somewhat, they are found for the most part about and neere to the hillockes where are great abundance of Antes. For in these Regions is ingendred a certaine kind of Antes, very little and blacke, in the Fields and Plaines whereas grow no Trees, where by the instinct of Nature these Antes separate themselves to ingender farre from the Woods for feare of these Beares, the which because they are fearefull, vile, and vnarmed (as I haue said) they keepe euer in places full of Trees, vntill very famine and necessitie, or the great desire that they haue to feede on these Antes, cause them to come out of the Woods to hunt for them: these Antes make a hillocke of earth to the height of a man, or somewhat more or lesse, and as bigge as a great Chest, and sometimes as bigge as a But or a Hoghead, and as hard as a stone, so that they seeme as though they were stones, set vp to limit the ends and confines of certaine Lands. Within these hillockes, made of most hard earth,

Beares.

Antes

Great wonders
in least crea-
tures.

A strange beast
which seemeth
a kind of Ca-
melion.

are innumerable and infinite little Ants, the which may be gathered by bushels when the hillock is broken: the which when it is sometimes moisted by raine, and then dried againe by the heat of the Sunne, it breaketh, and hath certaine small rifts, as little and subtil as the edge of a Knife, and it seemeth that Nature hath giuen sense to these Antes to find such a matter of earth, where- with they may make the said hillocke of such hardnesse, that it may seeme a strong pavement made of lime and stone: and whereas I haue prooued and caused some of them to be broken, I haue found them of such hardnesse, as if I had not seene, I could not haue beleued, insomuch that they could scarcely be broken with Pikes of Iron, so strong Fortresses doe these little beasts make for their safegard against their aduersarie the Beare, who is chiefly nourished by them, and giuen them as an enemy, according to the common Prouerbe which saith, *Non e alcuna persona si libera, a chumanchi il suo Bargello*, that is, There is no man so free, that hath not his Persecutor or priue Enemy. And here when I consider the marvellous prouidence which Nature hath giuen to these little bodies, I call to remembrance the wittie Sentence of *Plinie*, where speaking of such little beasts, he saith thus, *Why doe we maruell at the Towre-bearing shoulders of Elephants, and not rather where Nature hath placed so many senses and such industry in such little bodies? Where is Hearing, Smelling, Seeing, and Feeling, yea, where are the Veines and Arteries (without which no beast can liue or moue) in these so little bodies, wherof some are so small that their whole bodies can scarcely bee seene of our eyes: What shall we then say of the parts of the same? Yet euen among these there are many of such sagacitie and industry, as the like is not seene in beasts of greater quantitie, nor yet in man, &c.*

But to returne to the Historie. This Enemy which nature hath giuen to these little Beasts, useth this manner to assaile them: When he resorteth to the Hillocke where the Antes ly hid as in their fortresse, he putteth his tongue to one of the rifts, whereof we haue spoken, beeing as subtil as the edge of a Sword, and therewith continuall licking, maketh the place moist, the foame and froth of his mouth being of such propertie, that by continuall licking the place, it enlargeth the rift in such sort by little and little, that at the length he easily putteth in his tongue, which he hath very long and thinne, and much disproportionate to his bodie, and when he hath thus made free passage for his tongue in the hillocke, to put it easily in and out at his pleasure, then he thrusteth it into the hole as farre as he can reach, and so letteth it rest a good space, vntill a great quantitie of the Antes (whose nature reioyceth in heat and moisture) haue laden his tongue, and as many as he can containe in the hollownesse thereof, at which time hee suddenly draweth it into his mouth, and eateth them, and returneth againe to the same practice immediately, vntill hee haue eaten as many as him listeth, or as long as hee can reach any with his tongue. The flesh of this Beast, is filthy and vsauourie, but by reason of the extreame shifts and necessitie that the Christian men were put to at their first comming into these parts, they were inforced to prooue all things, and so fell to the eating of these Beasts: but when they had found more delicate meates, they fell into hatred with this. These Antes haue the appearance of the place of their entrance into the hillocke, vnder the ground, and this at so little a hole, that it could hardly bee found, if certaine of them were not seene to passe in and out: but by this way the Beares could haue no such power to hurt them as about at the said rifts, as I

There is anoother strange beast, which by a name of contrary effect, the Spaniards call *Cagnuolo leggiero*, that is, *The Light Dogge*, whereas it is one of the slowest beasts in the World, and so heauie and dull in moouing, that it can scarcely goe fiftie paces in a whole day: these beasts are in the firme Land, and are very strange to behold for the disproportion that they haue to all other beasts: they are about two spans in length when they are growne to their full bignesse, but when they are very young, they are somewhat more grosse then long: they haue foure subtil feet, and in euery of them foure clawes like vnto Birds, and ioyned together, yet are neither their clawes or their feet able to susteine their bodies from the ground, by reason whereof, and by the heauinesse of their bodies, they draw their bellies on the ground: their neckes are high and straight, and all equall like the pestle of a Morter, which is altogether equall euen vnto the top, without making any proportion or similitude of a head, or any difference except in the noddle, and in the tops of their neckes: they haue very round faces much like vnto Owles, and haue a marke of their owne haire after the manner of a Circle, which maketh their faces seeme somewhat more long then large: they haue small eyes and round, & nostrils like vnto Monkeyes: they haue little mouthes, and moue their neckes from one side to another, as though they were astonished: their chiefe desire and delight is to cleaue and sticke fast vnto Trees, or some other thing whereby they may climbe aloft, and therefore for the most part, these beasts are found vpon Trees, whereunto cleauing fast, they mount vp by little and little, staying themselues by their long clawes: the colour of their haire is betweene russet and white, and of the proper colour of the haire of a Wesell: they haue no tayles, and their voice is much differing from other beasts, for they sing onely in the night, and that continually from time to time, singing euer fixe notes one higher then another, so falling with the same, that the first note is the highest, and the other in a baser tune, as if a man should say, *La, sol, fa, mi, re, ut*, so this beast saith, *Ha, ha, ha, ha, ha, ha*. And

And doubtesse, it seemeth to me, that as I haue said in the Chapter of the beast called *Bardati*, that those beaſts might be the originall and document to imbarbe Horſes: euen ſo, the firſt in-
 uention of Muſicke might ſeeme by the hearing of this beaſt, to haue the firſt principles of that
 Science, rather then by any other thing in the World. But now to returne to the Hitories. I ſay
 that in a ſhort ſpace after this Beaſt hath ſung, and hath pauſed a while, ſhee returneth againe to
 the ſelfe ſame Song, and doth this onely in the night, and not in the day: By reaſon whereof,
 and alſo becauſe of her euill light, I thinke her to be a night Beaſt, and the friend of darkneſſe.
 Sometimes the Chriſtian men find theſe Beaſts, and bring them home to their houſes, where alſo
 they creepe all about with their naturall ſlowneſſe, inſomuch that neither for threatning or
 10 pricking they will moue any faſter then their naturall and accuſtomed pace. And if they finde
 any Trees, they creepe thither immediately, and mount to the top of the higheſt branch thereof,
 where they remayne continually for the ſpace of eight, or ten, or twentie dayes, without ea-
 ting of any thing, as farre as any man can iudge. And whereas I my ſelfe haue kept them in my
 houſe, I could neuer perceiue other but that they liue onely of Aire: and of the ſame opinion, are
 in manner all men of thoſe Regions, becauſe they haue neuer ſeene them eate any thing, but euer
 turne their heads and mouthes toward that part where the wind bloweth moſt, whereby may
 be conſidered that they take moſt pleaſure in the Ayre. They bite not, nor yet can bite, hauing
 very little mouthes: they are not venomous or noyous any way, but altogether brutiſh, and vt-
 terly vnprofitable, and without commoditie yet knowne to men, ſauing onely to moue their
 20 minds to contemplate the infinite power of God, who delighteth in the varietie of creatures,
 whereby appeareth the power of his incomprehenſible wiſdome and maieltie, ſo farre to exceed
 the capacitie of mans vnderſtanding.

In theſe Regions there are likewiſe found certaine Fowles or Birds, which the *Indians* call
Alcatraz: theſe are much bigger then Geefe, the greateſt part of their feathers are of ruſſet co-
 lour, and in ſome parts yellow, their bills or beakes are of two ſpannes in length, and very large
 neere to the head, and growing ſmall toward the point, they haue great and large throates, and
 are much like to a Fowle which I ſaw in *Flanders*, in *Bruffels* in your Maieſties Palace, which the
Flemmings call *Haina*: And I remember that when your Maieſtie dined one day in your great
 Hall, there was brought to your Maieſties preſence a Caldron of water with certaine fiſhes a-
 30 liue, which the ſaid fowle did eat vp whole, and I thinke verily that that fowle was a fowle of the
 Sea, becauſe ſhe had feet like fowles of the water, as haue alſo theſe *Alcatrazs*, which are likewiſe
 fowles of the Sea, and of ſuch greatneſſe, that I haue ſeene a whole coate of a man put into the
 throats of one of them in *Panama*, in the yeere 1521. And forasmuch as in that Coaſt of *Pa-*
ma, there paſſeth and flyeth a great multitude of theſe *Alcatrazs*, being a thing very notable, I
 will declare the manner hereof, as not onely I, but alſo diuers other now preſent in your Maie-
 ſties Court haue oftentimes ſeene. Your Maieſtie ſhall therefore vnderſtand, that in this place
 (as I haue ſaid before) the Sea of *Sar* riſeth and falleth two leagues and more from fixe houres to
 fixe houre: ſo that when it increaſeth, the water of the Sea arriueth ſo neere to the houſes of
 40 *Panama*, as doth our Sea (called *Mare Mediterraneum*) in *Barzalona*, or in *Naples*: and when
 the ſaid increaſing of the Sea commeth, there commeth alſo therewith ſuch a multitude of ſmall
 fiſhes called *Sardines*, that it is ſo maruellous a thing to behold, that no man would beleue it that
 hath not ſeene it. Inſomuch that the *Cacique* (that is) the King of that Land, at ſuch time as I
 dwelt there, was bound daily, as he was commanded by your Maieſties Gouvernour, to bring or-
 dinarily three Canoaſ or Barkes full of the ſaid *Sardines*, and to vnlade the ſame in the Markeſ
 place, which were afterward by the Ruler of the Citie diuided among the Chriſtian men, with-
 out any coſt or charge to any of them: Inſomuch that if the people had bene a much greater
 multitude then they were, and as many as are at this preſent in *Toledo*, or more, and had none o-
 ther thing to liue by, they might haue bene ſufficiently ſuſtained by theſe *Sardines*, beſide the
 ouerplus which ſhould haue remayned. But to returne to the fowles, whereof wee haue ſpo-
 50 ken. As the Sea commeth, and the *Sardines* with the ſame, euen ſo likewiſe come the ſaid
Alcatrazs therewith, and flye continually ouer it in ſuch a multitude, that they appeare to
 couer the vpper part or floore of the water, and thus continue in mounting and falling from the
 ayre to the water, and from the water to the ayre, during all the time of their fiſhing: and af-
 ſoone as they haue taken any of theſe *Sardines*, they flye about the waters, and eate them in-
 continently, and ſuddenly returne againe to the water for more, continuing thus courſe by courſe
 without ceaſing: in like manner when the Sea falleth, they follow their fiſhing as I haue ſaid.
 There goeth alſo in the company of theſe fowles another kind of fowles, called *Coda inforcata*,
 (that is) the *forked tayle*, whereof I haue made mention before, and aſſoone as the *Alcatraz* moun-
 teth from the water with her prey of the *Sardines*, ſuddenly this *Coda inforcata* giueth her ſo
 60 many ſtrokes, and ſo perſecutech her, that ſhee cauſeth her to let fall the *Sardines* which ſhee
 hath in her mouth: the which aſſoone as they are fallen, and before they yet touch the water,
 the *Coda inforcata* catcheth them euen in the fall, in ſuch ſort, that it is a great pleaſure to behold
 the combat betweene them all the day long. The number of theſe *Alcatrazs* is ſuch, that the
 Chriſtian men are accuſtomed to ſend to certaine Ilands and Rockes which are neere about *Pa-*
nama,

Fowles and
Birds.
Alcatraz.*Panama*.*Pilchards*.

nama, with their Boates or Barkes to take these *Alcatrazzi*, while they are yet young, and cannot flie, and kill as many of them with staues as they will, vntill they haue therewith laden their Barkes or Canoas: these young ones are so fat and wellfed, that they cannot bee eaten, and are taken for none other intent, but onely to make Grease for Candles to burne in the night, for the which purpose it serueth very well, and giueth a cleere light, and burneth easily. After this manner, and for this purpose, innumerable of them are killed: and yet it seemeth that the number of them that fish for *Sardines* doe daily increase. There are other fowles called *Passere sempie*, that is, simple Sparowes: these are somewhat lesse then Seamewes, and haue their feet like vnto great Malards, and stand in the water sometimes, and when the ships saile fiftie or a hundred leagues about the Ilands, these fowles beholding the ships comming toward them, breake their flight, and fall downe vpon the Saile yards, Masts, and Cables thereof, and are so simple and foolish, that they tarrie vntill they may easily bee taken with mens hands, and were therefore called of the Mariners simple Sparowes: they are blacke, and vpon their blacke, haue their head and shoulders of feathers of a darke russet colour: they are not good to bee eaten, although the Mariners haue sometimes bene enforced to eate them. There is another kind of Birds in the firme Land, which the *Christians* call *Picuti*, because they haue very great beakes, in respect of the littleness of their bodies, for their beakes are very heauie, and weigh more then their whole bodies beside: these Birds are no bigger then Quails, but haue a much greater bushment of feathers insomuch that their feathers are more then their bodies: their feathers are very faire, and of many variable colours; their beakes are a quarter of a yard in length or more, and bending downe toward the Earth, and three fingers broad neere vnto the head: their tongues are very quills, wherewith they make a great hissing: they make holes in Trees with their beakes, in the which they make their Nests. And surely these Birds are maruellous to behold, for the great difference which they haue from all other Birds that I haue seene, aswell for their tongues (which are quills as I haue said) as also for the strangeness of their sight and disproportion of their great beakes, in respect of the rest of their bodies. There are no Birds found that provide better for the safeguard of their young in the time of their breeding, to be without danger of wilde Cats, that they enter not into their Nests to destroy their Egges or young, and this aswell by the strange manner of building their Nests, as also by their owne defence: and therefore when they perceiue that the Cats approach toward them, they enter into their Nests, and holding their beakes toward the entrance of the same, stand at their defence, and so vex the Cats, that they cause them to leaue their enterprize.

There are also other Birds or Sparowes, which the *Christians* by contrary effect call *Matti*, that is *Fooles*: Whereas neuertheless there is no Bird that sheweth more wit and craft in defending her young from perill. These Birds are little, and in snanner blacke, and somewhat bigger then our Thrushes: they haue certaine white feathers in their neckes, and the like sagacitie or sharpnesse of sense as haue the Birds or Pyes called *Gazzuole*: they seldome times light vpon the earth: they make their Nests in Trees separated from other, because the Monkeyes are accustomed to leape from Tree to Tree, not descending to the ground for feare of other beasts, except when they are enforced by thirst to come downe to drinke, at such times as they are sure not to be molested, and for this cause doe not these Birds make their Nests but in Trees farre diuided from other, they make them of a Cubit in length, or more, after the manner of bagges or little sackes, large at the bottome, and growing narrower and narrower toward the mouth, whereby they are fastened, hauing the hole whereat they enter into the sacke, of such bignesse as may onely suffice to receiue them. And to the end that the Monkeyes may not deuoure their young, if they chance to mount vpon the Trees where they haue their Nests, they vse another craft, which is, to make their Nests in thicke branches of Trees, and to defend the same with sharpe and strong thornes, implicate and set in such order, that no man is able to make the like, so that the Monkeyes can by no meanes put their legges into the hole of the Nest to take out the young Birds, aswell for the sharpnesse of the thornes, as also for the depth of the Nests, in the bottome whereof, the young Birds rest without danger of their enemy: for some of their Nests being three or foure spans in length, the leg of the Monkey cannot reach to the bottome thereof. They vse also another policie, which is, to make many of their Nests in one Tree, the which they doe for one of these two causes: that is, that either of their owne naturall disposition they are accustomed to goe in great multitudes, and reioyce in the company of their owne generation, as doe the Birds which we call Stares, or else to the intent that if it should so chance that the Monkeyes should climbe the Trees where they make their Nests, they might bee a greater company to resist and molest the Monkeyes, at whose approach they make a fearefull and terrible cry, whereby the Monkeyes are put to flight. Furthermore, in the firme Land, and in the Ilands, there are certaine Birds called *Piche*, or *Gazzuole*, somewhat like vnto those which we call Wood-wals, or Wood-peckes, being lesse then ours of *Spaine*: these are altogether blacke, and goe hopping and leaping, their beakes are also blacke, and of the same fashion as are the Poppingiayes beakes, they haue long tayles, and are somewhat bigger then Stares.

There

*Passere sempie.**Picuti*, Birds with bills heavier then bodies.

Foolish Sparowes, wisely prouident.

Gazzuole.

There are other Birds called *Pintadelli*, which are like vnto certaine Greene Birds, which the *Pintadelli*.
Irlians call *Fringuelli*, and are of seven colours: these Birds for feare of the Monkeyes, are euer
wont to make their Nests ouer the bankes of Rivers, or the Sea, where the branches of Trees so
reach ouer the water, that with a little weight they may bow downe to the water: their Nests
are made so neere the tops of the branches, that when the Monkeyes come thereon, the branches
bend toward the water, and the Monkeyes turne backe againe for feare of falling: For although
no beast in the World be more malicious then this, yet whereas the most part of beasts are natu-
rally inclined to swimme, this Monkey hath no manner of aptnesse thereunto, and is therefore
soone drowned or strangled in the water, and by a priuie sense of Nature feareth the danger
which he cannot escape. These Birds make their Nests in such sort, that although they bee wet
and filled with water, yet doe they so suddenly rise vp againe, that the young Birds are not there-
by hurt or drowned. There are also many Nightingales, and other Birds which sing maruellous-
ly with great melodie and difference in singing: these Birds are of maruellous diuers colours the
one from the other, some are altogether yellow, and some other of so excellent, delectable, and
high a colour, as it were a Rubie; other are also of diuers and variable colours, some of few co-
lours, and other some all of one colour, being all so faire and beautifull, that in brightnesse and
shining they excell all that are in *Spain*, or *Italie*, or other Prouinces of *Europe*. Many of these
are taken with Nets, lime-twigs, and Springes of diuers sorts. Diuers other sorts of great fowles
like vnto Eagles, and such other as line of prey, are found in the firme Land, of such diuersitie,
that it is in manner impossible to describe them all particularly: and forasmuch as I haue more
largely intreated hereof in my generall Historie of the *Indies*, I thinke it not requisite heere to
make any further mention of the same.

Of Trees, Fruits, and Plants.

There is both in the firme Land and the Ilands a certaine Tree called *Coco*, being a kind of
Date Trees, and hauing their leaues of the selfesame greatnesse, as haue the Date Trees
which beare Dates, but differ much in their growing, for the leaues of this *Coco* grow out of the
trunkes of the Tree, as doe the fingers out of the hand, wreathing themselues one within ano-
ther, and so spreading abroad: these Trees are high, and are found in great plentie in the Coast of
the Sea of *Sur*, in the Prouince of *Cacique Chiman*. These Date Trees bring forth a Fruit after
this sort: being altogether vnite as it groweth on the Tree, it is of greater circumference then
the head of a man, and from the superficial part to the middest, which is the fruit, it is inuolued
and couered with many Webs much like vnto those Hirds of Towe which they vse in *Andalusia*.
Of this Towe or Web, the *East Indians* make a certaine kind of Cloth, of three or foure sorts,
and Cordes for the Sayles of Ships: but in these *Indies* of your Maiestie, they passe not for these
Coards, or this Cloth that may be made of the Fruit of *Coco*, by reason of the great plentie that
they haue of the Bombage or Cotton of Gossampine Trees. The Fruit which is in the middest of
the said Tow, is (as I haue said) as bigge as a mans fist, and sometimes twice as bigge, and more:
It in forme like vnto a Walnut, or some other round thing, somewhat more long then large, and
very hard, the rinde or barke hereof, is as thicke as the circle of Letters of a Riall of Plate, and
within, there cleaueth fast to the rinde of the Nut a carnositie or substance of coornell, of the
thicknesse of halfe a finger, or of the least finger of the hand, and is very white, like vnto a faire
Almond, and of better taste and more pleasant. When this Fruit is chewed, there remayne cer-
taine crummes, as doe the like of Almonds: Yet if it be swallowed downe, it is not vnpleasant.
For although that after the iuyce or moysture be gone downe the throat before the said crummes
be swallowed, the rest which is eaten, seeme somewhat sharpe or sowre, yet doth it not so great-
ly offend the taste, as to be cast away. While this *Cocos* is yet fresh and newly taken from the
Tree, they vse not to eate of the said carnositie and Fruit, but first beating it very much, and then
strayning it, they draw a Milke thereof, much better and sweeter then is the Milke of Beasts,
and of much substance, the which the Christian men of those Regions put in the Tartes or
Cakes which they make of the grain of *Maiz* whereof they make their Bread, or in other Bread
as we put Bread in Pottage: so that by reason of the said Milke of *Cocos*, the Tartes are more ex-
cellent to be eaten without offence to the stomacke: they are so pleasant to the taste, and leaue it
as well satisfied as though it had beene delighted with many delicate Dishes. But to proceed
further, your Maiestie shall vnderstand, that in the place of the stone or coornell, there is in the
middest of the said carnositie a void place, which neuerthelesse is full of a most cleere and excel-
lent water, in such quantitie as may fill a great Egge shell, or more, or lesse, according to the big-
nesse of the *Cocos*, the which water surely, is the most substantiall, excellent and precious to bee
drunke, that may be found in the World: insomuch that in the moment when it passeth the pa-
late of the mouth, and beginneth to goe downe the throate, it seemeth that from the sole of the
foot, to the crowne of the head, there is no part of the bodie but that feeleth great comfort
thereby: as it is doubtlesse one of the most excellent things that may bee tasted vpon the earth,
and such as I am not able by writing or tongue to expresse. And to proceed yet further, I say that

I haue seene
one of these
Fruits opened,
the which
when it was
whole, if it
were shaken
the water was

Great Trees.

Great Canoas

A marvellous
Tree.

when the meate of this fruit is taken from the Vessell thereof, the vessell remaineth as faire and neate as though it were polished, and is without of colour inclining toward black, and thineth or glistereth very faire, and is within of no lesse delicatenesse. Such as haue accustomed to drinke in these Vessels, and haue beene troubled with the Disease called the fretting of the guts, say that they haue by experience found it a marvellous remedie against that Disease, and that it breaketh the stone, and prouoketh vrine. This fruit was called *Coca*, for this cause, that when it is taken from the place where it cleaueth fast to the Tree, there are seene two holes, and about them two other naturall holes, which altogether doe represent the gesture and figure of the Cattes called *Mammons*, that is, Monkeyes, when they cry, which cry the *Indians* call *Coca*, but in very deed, this Tree is a kind of Date Tree, and hath the same effect to heale fretting of the guts, that *Plinie* describeth all kinde of Date trees to haue. There are furthermore in the firme Land, Trees of such bignesse that I dare not speake thereof, but in place where I haue so many witnesses which haue seene the same as well as I. I say therefore, that a league from *Dariena* or the Citie of *Santa Maria Antiqua*, there passeth a Riuer very large and deepe, which is called *Cuti*, ouer the which the *Indians* laid a great Tree, so trauerfing the same, that it was in the stead of a bridge, the which I my selfe with diuers other that are at this present in your Maiesties Court, haue oftentimes passed ouer. And forasmuch as the said Tree had lyen long there, and by the great weight thereof was so shrunked downeward, and partly couered with water, that none could passe ouer it, but were wet to the knee, I being then in the yeere 1522. the officiall or Iustice in that Citie at your Maiesties appointment, caused another great Tree to be laid in that place, which in like manner trauerfed the Riuer, and reached more then fiftie foote ouer the further side: This Tree was exceeding great, and rested about the water more then two Cubits, in the fall, it cast downe all such other Trees as were within the reach thereof, and discovered certaine bynes, which were so laden with blacke Grapes of pleasant taste, that they satisfied more then fiftie persons which ate their fill thereof. This Tree, in the thickest part thereof, was more then sixteene spannes thicke, and was neuertheless but little in respect of many other trees which are found in this Prouince. For the *Indians* of the Coast and Prouince of *Cartagenia*, make Barkes or Boates thereof (which they call *Canoas*) of such bignesse, beeing all one whole Tree, that some containe a hundred men, some a hundred and thirtie, and some more, hauing neuertheless such void space within the same, that there is left sufficient roome to passe to and fro throughout all the *Canoas*. Some of these are so large, beside the length, that they containe more then tenne or twelue spannes in breadth, and saile with two sailes, as with the Master saile and the trincket, which they make of very good Cotton. The greatest Trees that I haue seene in these parts, or in any other Regions, was in the Prouince of *Guaturo*, the King whereof rebelling from the obedience of your Maiestie, was pursued by me, and taken Prisoner: at which time I with my company, passed ouer a very high Mountaine, full of great Trees, in the top whereof, we found one Tree, which had three roots, or rather diuisions of the roote about the Earth, in forme of a Triangle, or Treuet, so that betweene euery foot of this Triangle or three feet, there was a space of twentie foot betweene euery foot, and this of such height about the Earth, that a laden Cart of those wherewith they are accustomed to bring home Corne in time of Haruest in the Kingdome of *Toledo* in *Spaine*, might easily haue passed through euery of those partitions or windoores which were betweene the three feet of the said Tree. From the Earth vpward to the trunk of the Tree, the open places of the diuisions betweene these three feet, were of such height from the ground, that a Footman with a lauelin was not able to reach the place where the said feet ioyned together in the trunk or bodie of the Tree, which grew of great height in one piece, and one whole bodie, or euer it spread in branches, which it did not before it exceeded in height the Towre of *Saint Romane* in the Citie of *Toledo*: from which height and vpward, it spread very great and strong branches. Among certaine *Spaniards* which climbed this Tree, I my selfe was one, and when I was ascended to the place where it begunne to spread the branches, it was a marvellous thing to behold a great Countrey of such Trees toward the Prouince of *Abayme*. This Tree was easie to climbe, by reason of certaine *Besuchi*, (whereof I haue spoken before) which grew wreathed about the Tree, in such sort that they seemed to make a scaling Ladder. Euery of the foresaid three feet which bore the bodie of the Tree, was twentie spannes in thicknesse, and where they ioyned altogether about the Trunke or bodie of the Tree, the principall Trunke was more then fortie and fve spannes in circuite. I named the Mountaine where these Trees grow, the Mountaine of *three footed Trees*. And this which I haue now declared, was seene of all the company that was there with mee when (as I haue said before) I took King *Guaturo* Prisoner in the yeere 1522. Many things more might here be spoken as touching this matter, as also how there are many other excellent Trees found of diuers sorts and difference, as sweet Cedar Trees, blacke Date Trees, and many other, of the which some are so heauie that they cannot float about the water, but sinke immediately to the bottome, and other againe as light as a Corke. As touching all which things I haue written more largely in my generall Historie of the *Indies*.

And for as much as at this present I haue entred to entreate of Trees, before I passe any further

ther to other things, I will declare the manner how the *Indians* kindle fire, onely with Wood and without fire, the manner whereof is this. They take a peece of wood, of two spannes in length, as biggeas the least finger of a mans hand, or as an arrow well pullished, and of a strong kinde of wood which they keepe onely for this purpose: and where they intend to kindle any fire, they take two other peeces of wood, of the driest and lightest that they can finde, and binde them fast together one with another, as close as two fingers ioyned: in the midst or between these, they put the point of the first little staffe made of hard and strong wood, which they hold in their hands by the top thereof, and turne or rubbe it round about continually in one place betweene the two peeces of wood which lye bound together vpon the earth, which by that vn-

10 cessant rubbing and chafing, are in short space kindled, and take fire. I haue also thought good here to speake somewhat of such things as come to my remembrance of certaine Trees which are found in this Land, and sometime also the like haue bene seene in *Spaine*. These are certaine putrified trunks, which haue lien so long rotting on the earth, that they are very white, and shine in the night like burning firebrands, and when the *Spaniards* finde any of this wood, and intend priuily in the night to make warre and invade any Prouince, when case so requireth that it shall be necessarie to goe in the night, in such places where they know not the way, the formost Christian man which guideth the way, associate with an *Indian* to direct him therein, taketh a little starre of the said wood, which he putteth in his cap, hanging behinde on his shoulders, by the light whereof he that followeth next to him, directeth his journey, who also

20 in like manner beareth another starre behinde him, by the shining whereof the third followeth the same way, and in like manner doe all the rest, so that by this meanes none are lost or straggle out of the way. And for as much as this light is not seene very farre, it is the better policie for the *Christians*, because they are not thereby disclosed before they invade their enemies. Furthermore, as touching the natures of Trees, one particular thing seemeth worthy to be noted, whereof *Plinie* maketh mention in his naturall Historie, where he saith that there are certaine Trees which continue euer greene, and neuer loose their leaues, as the Bay-tree, the Cedar, the Orange-tree, and the Oliue-tree, with such other, of the which in altogether he nameth not past five or six. To this purpose, I say, that in the Islands of these *Indies*, and also in the firme land, it is a thing of much difficultie to finde two Trees that lose or cast their leaues at any time: for although

30 I haue diligently searched to know the truth hereof, yet haue I not seene any that lose their leaues, either of them which we haue brought out of *Spain* into these regions, as Orange-trees, Limons, Cedars, Palmes, or Date-trees, and Pomegranate-trees, or of any other in these regions, except onely *Cassia*, which loseth his leaues, and hath a greater thing appropriate to it selfe onely: which is, that whereas all other Trees and Plants of *India* spread their rootes no deeper in the earth then the depth of a mans height, or somewhat more, not descending any further into the ground, by reason of the great heate which is found beneath that depth, yet doth *Cassia* pearle further into the ground, vntill it finde water: which by the Philosophers opinion should be the cause of a thinne and watery radicall moisture to such things as draw their nourishment thereof, as fat and vntuous grounds with temperate heate, yelde a fast and firme

40 moisture to such things as grow in them, which is the cause that such Trees lose not their leaues, as the said thinne and waterish moisture is cause of the contrarie, as appeareth by the said effect which is seene onely in *Cassia*, and none other Tree or Plant in all these partes.

Kindling of fire without fire.

Putrified wood shining in the night.

Plinie

Almost all *Indian* trees continue euer greene.

Cassia

Earth hot lower then a fadome. A secret thing. Radicall moisture.

Of Reedes or Canes.

IN the firme land there are many sorts of Reedes, so that in many places they make their houses thereof, couering them with the tops of the same, and making their wals of them in like manner, as I haue said before: and among these kindes of Reedes, there is one so great, that the Canes thereof are as bigge as a mans legge in the knee, and three spans in length from ioynt to

50 ioynt, or more, in so much that euery of them is of capacitie to containe a little bucket of water. In this kinde, there are found some greater, and some lesse, of the which some they vse to make quiers for arrowes. There is found another kinde, which surely is marueilous, being little bigger then a luelin, the Canes whereof are longer then two spannes: these Reedes grow one farre from another, as sometimes twenty or thirty paces, and sometimes also two or three leagues: they grow in manner in all Prouinces in the *Indies*, and grow neere to very high Trees, whereunto they leane, and creepe vp to the top of their branches, which they imbrace, and descend againe downe to the earth. Their Canes are full of most cleare water, without any manner of taste or sauour, either of the Canes, or of any other thing, and such as if it were taken out of the freshest Spring in the world, nor yet is it knowne that euer it hurt any that

60 drunke thereof. For it hath oftentimes so chanced, that as the *Christian* men haue traualled in these regions in desolate waies, where for lacke of water they haue bene in great danger to dye with thirst, they haue escaped that perill by reason that they found the said Reedes, of the water of whose Canes they haue drunke a great quantity, without any hurt thereof ensuing. Therefore when they finde these in any place, they make water vessels of the Canes thereof, and carry

Reed-springs or fountains of water

as many of them full of water as may suffice for one dayes iourney : and sometime they carrie so many, that they take for euery man two or three quarts of water, which may serue them for many daies, because it doth not corrupt, but remaineth still fresh and good.

Platani, or
Plantans.

There are also certaine Plants, which the Christians call *Platani*. They are as high as trees, and become as bigge in the trunke as the knee of a man, or more. From the foote to the top, they beare certaine long and large leaues, being more then three spans in largenesse, and about ten or twelue in length : the which when they are broken of the winde, the stalke remaineth whole in the midst. In the midst of this Plant, in the highest part thereof, there groweth a cluster with fortie or fiftie Plantans about it, euery of them being a span and a halfe in length, and as bigge as a mans arme in the small, or more, or lesse, according to the goodnesse of the soile where they grow : they haue a rinde not very thicke, and easie to be broken, being within altogether full of a substance like vnto the marie of the bone of an Oxe, as it appeareth when the rinde or barke is taken from the same. This cluster ought to be taken from the Plant, when any one of the Plantans begin to appeare yellow, at which time they take it, and hang it in their houses, where all the cluster waxeth ripe, with all his Plantans. This cluster is a very good fruite, and when it is opened, and the rinde taken off, there are found within it many good drie Figges, which being roasted, or stewed in an Ouen, in a close pot, or some fush other thing, are of pleasant taste, much like to the conserue of Honny : they putrifienot on the Sea so soone as some other fruites doe, but continue fifteene daies and more, if they be gathered somewhat greene : they seeme more delicate on the Sea then on the Land, not for that they any thing encrease in goodnes on the Sea, but because that wheras on the Sea other things are lacking, whereof is plentie on the Land, those meates seeme of best taste, which satisfie present necessitie. This trunke or sprig which bringeth forth the said cluster, is a whole yeare in growing and bringing forth fruite, in which time it hath put forth round about in ten or twelue sprigges, as bigge as the first or principal, and multiplieth no lesse then the principall in bringing forth of clusters, with fruits likewise at their time, and also in bringing forth other and many sprigges, as is said before. From the which sprigges or trunks, as soone as the cluster of the fruite is taken away, the Plant beginneth to drie and wither, which then they take out of the ground, because it doth none other then occupie it in vaine, and without profit. They are so many, and doe so marueilously encrease and multiplie, that it is a thing in manner incredible. They are exceeding moist, in so much that when they are plucked vp from the place where they grow, there issueth forth a great quantity of water, as well out of the Plant, as out of the place where it grew, in such sort, that all the moisture of the earth farre about, might seeme to be gathered together about the trunke or blocke of the said Plant, with the fruites whereof, the Antes are so farre in loue, that they are seene in great multitudes in the branches of the Plants : so that for the multitude thereof, it sometime so chanceth, that men are enforced to take away the Plants from their possion : these fruites are found at all times of the yeere. There is also another kinde of wilde Plants that groweth in the fieldes, which I haue not seene but in the Iland of *Hispaniola*, although they be found in other Ilands of the *Indies* : these they call *Tunas*. They grow of a Thistle full of thornes, and bring forth a fruite much like vnto great Figges, which haue a crowne like Medlers, and are within of a high colour, with graines and the rinde like vnto a Figge : they are of good taste, and grow abundantly in the fields in many places : They worke a strange effect in such as eate them, for if a man eate two, or three, or more, they cause his vrine to be of the very colour of blood, which thing chanced once to my selfe. For on a time as I made water, and saw the colour of my Vrine, I entred into a great suspicion of my life, being so astonished for feare, that I thought the same had chanted to me vpon some other cause, in so much that surely my imagination might haue done me hurt, but that they which were with me did comfort me immediately, declaring the cause thereof, as they knew by experience, being auncient inhabitants in those regions. There groweth also another Plant, which the people of the Countrie call *Bihaos* : this putteth forth certaine straight branches, and very broade leaues, which the *Indians* vse for diuers purposes : for in some places they couer their houses with the leaues thereof, couched and laid after the manner of thatch, whereunto it serueth very well : Sometimes also when it raineth, they cast these ouer their heads, to defend them from the water. They make also certaine chests, which they call *Hanas*, weaued after a strange sort, and intermixt with the leaues of this *Bihaos*. These Chests are wrought in such sort, that although it raine vpon them, or they chance to fall into the water, yet are not such things wet as are within them : they are made of the branches of the said *Bihaos*, with the leaues weaued together therewith. In these they keepe salt, and other subtile things. They vse them also for another purpose, which is this : that finding them in the fields at such time as they haue scarsenesse of victuals, they digge vp the rootes of these Plants while they are yet yong, or eate the Plant it selfe, in that part where it is most tender, which is from a foote vnder the ground, where it is as tender and white as a Reede or Bulrush. And for as much as we are now come to the end of this narration, it commeth to my remembrance to make mention of

of another thing, which is not farre from my purpose: and this is, how the *Indians* doe staine or dye cloath of bombage cotton, or any other thing which they intend to dye, of diuers colours, as Blacke, Tawny, Greene, Blew, Yellow, and Red, which they doe with the Barkes, or Rindes, and Leaues of certaine Trees, which they know by experience to be good for this practise: and by this art they make colours in such perfection and excellency, that no better can be deuised. But this seemeth a strange thing, that they doe all this in one selfe same Vessell: so that when they haue caused the said Rindes and Leaues to boile together, they make in the same Vessell without any change (as I haue said) as many colours as them listeth. Which thing I suppose to come to passe, by the disposition of the colour which they haue first giuen to the thing that they intend to dye or colour, whether it be Thred, Web, or Cloth, or any thing that they intend to colour.

*Of venemous Apples, wherewith they poyson
their Arrowes.*

THE Apples wherewith the *Indian Canibals* inuenome their arrowes, grow on certaine Trees couered with many Branches and Leaues, being very greene, and growing thicke. They are laden with abundance of these euill fruites, and haue their Leaues like the Leaues of a Peare-tree, but that they are lesse and rounder: the fruit is much like the muscadell Peares of the Iland of *Sicilie* or *Naples* in forme and bignesse, and are in some parts stained with red spots, and of very sweet sauour: these trees for the most part, grow euer by the Sea Coasts, and neere vnto the water, and are so faire and of pleasant sauour, that there is no man that seeth them, but will desire to eate thereof, insomuch that if it may bee spoken of any fruit yet growing on the earth, I would say that this was the vnhappy fruit whereof our first parents * *Adam* and *Eue* tasted, whereby they both lost their felicitie, and procured death to them and their posteritie. Of these fruits, and of the great Ants whose byting causeth swelling (whereof I haue spoken elsewhere) and of the *Eutes*, or *Lysarts*, and *Vipers*, and such other venomous things, the *Canibals* which are the chiefe Archers among the *Indians*, are accustomed to poyson their Arrowes, wherewith they kill all that they wound: These venomes they mingle together, and make thereof a blacke Masse or composition, which appeareth like vnto very blacke Pitch. Of this poyson caused a great quantitie to bee burnt, in *Santa Maria Antiqua*, in a place two leagues and more within the Land, with a great multitude of their inuenomed Arrowes and other munition, with also the house wherein they were reserued: This was in the yeere 1514. at such time as the Armie arriued there with Captaine *Pedarias de Villa*, at the commaundement of the Catholike King *Don Fernando*. But to returne to the Historie. These Apples (as I haue sayde) grow neere vnto the Sea: the Christians which serue your Maiestie in these patties, suppose that there is no remedie so profitable for such as are wounded with these Arrowes, as is the water of the Sea, if the wound bee much waied therewith, by which meanes some haue escaped, although but few: yet to say the truth, albeit the water of the Sea, haue a certaine cautlike qualitie against poyson, it is not sufficient remedie in this case, nor yet to this day haue the Christians perceived that of fiftie that haue bene wounded, three haue recouered. But that your Maiestie may the better consider the force of the venome of these trees, you shall further vnderstand, that if a man doe but repose himselfe to sleepe a little while vnder the shadow of the same, he hath his head and eyes so swolne when he riseth, that the eye lids are ioyned with the cheekes, and if it chance one drop or more of the dew of the said tree to fall into the eye, it vtterly destroyeth the sight. The pestilent nature of this tree is such, that it cannot be declared in few words. Of these, there groweth great plentie in the gulfe of *Vraba*, toward the North coast, on the West and East side. The wood of these trees when it burneth, maketh so great a stinke, that no man is able to abide it, by reason it causeth so great a paine in the head.

Among other trees which are in these *Indies*, as well in the Ilands, as in the firme land, there is another kind which they call *Xagua*, whereof there is great plentie: they are very high, and streight, and faire to behold. Of these they vse to make Pikes, and Iagelins of diuers lengths and bignesse: they are of a faire colour, betweene russet and white: this tree bringeth forth a greac fruit as big as *Papauer* or *Poppie*, and much like thereunto, it is very good to be eaten when it is ripe. Out of this they get a very cleare water, wherewith they wash their legs, and sometimes all their bodies, when they feele their flesh weary, faint, or loose: the which water, beside that it hath a binding qualitie, it hath also this properties, that whatsoever it toucheth, it staineth it blacke by little and little, vntill it be as blacke as let, which colour cannot bee taken away in lesse space then tenne or twelue dayes: And if the nayle bee but touched therewith, it is so stained, that it can by no meanes be taken away, vntill it either fall of, or grow out, and be clipped away by little and little, as I my selfe haue oftentimes seene by experience.

Blacke staines.

There

Hohi.
Some thinke
these to be mi-
robalants.

There is another kinde of Trees which they call *Hohi*: these are very great and faire, and cause wholesome aire where they grow, and a pleasant shadow, and are found in great abundance: their fruit is very good, and of good taste and sauour, and much like vnto certaine Damsons or Prunes being little and yellow, but their stone is very great, by reason whereof they haue but little meate: their Barke or Rinde boyled in water, maketh a wholesome Bathe for the legges, because it bindeth and stayeth the loosenesse of the flesh, so sensibly that it is a maruell to consider. It is surely a wholesome and excellent Bathe against such faintnesse, and is the best Tree that may be found in those parts to sleepe vnder: For it causeth no heauinesse of the head, as doe diuers other Trees, which thing I speake, because the Christians are much accustomed in those Regions to lie in the fields. It is therefore a common practice among them, that wheresoeuer they finde these Trees, there they spreade their Mattresses and Beds wherein they sleepe. 10

Date trees.

The Inhabi-
tants of the
Sea of Sur.

There are also a kinde of high Date trees, and full of thornes: the wood of these is most excellent, being very blacke and thining, and so heauie that no part thereof can swim about the water, but sinketh immediatly to the bottom. Of this wood they make their Arrowes and Darts, also Iauelins, Speares, and Pikes: and I say Pikes, because that in the coasts of the Sea of Sur, beyond *Esquegua* and *Uracha*, the *Indians* vse great and long Pikes, made of the wood of these Date trees. Of the same likewise they make Clubs, and Swords, and diuers other weapons: Also vessels and household stuffe of diuers sorts, very faire and commodious. Furthermore, of this wood the Christians vse to make diuers muscalle instruments, as Claricymbals, Lutes, Gitterns, and such other, the which beside their faire shining colour like vnto jeat, are also of a good sound, and very durable, by reason of the hardnesse of the wood. 20

An herbe that
beareth
cordes.

Cabua and *He-
nequen.*

A strange
thing.

Leaues.

Thistle trees.

A leafe of great
vertue.

After that I haue said thus much of Trees and Plants, I haue thought good also to speake somewhat of Herbs. You shall therefore vnderstand, that in these *Indies* there is an herbe much like vnto a yellow Lilly, about whose leaues there grow and creepe certaine Cordes or Laces, as the like is partly seene in the herbe which we call *Laced sanory*, but these of the *Indies* are much bigger, and longer, and so strong that they tie their hanging beds thereby, which they call *Hamacas*, whereof we haue spoken elsewhere: these Cordes they call *Cabua*, and *Henequen*, which are all one thing, sauing that *Henequen* is lesse and of a finer substance, as it were Line, and the other is grosser, like the wike or twist of Hempe, and is imperfect in comparison to the other: they are of colour betweene white and yellow, like vnto abarne, and some also white. With *Henequen*, which is the most subtil and fine threed, the *Indians* saw in sunder Fetters, Chaines, or barres of Iron, in this manner: They mooue the threed of *Henequen* vpon the Iron which they intend to saw or cut, drawing the one hand after the other as doe they that saw, putting euer now and then a portion of fine Sand vpon the threed, or on the place or part of the Iron, where they continue rubbing the said threed, so that if the threed be worne, they take another, and continue in their worke as before, vntill they haue cut in sunder the Iron, although it bee neuer so bigge, and cut it as if it were a tender thing, and easie to be sawen. 30

And forasmuch as the leaues of Trees may be counted among Herbs, I will here speake somewhat of the qualitie of the leaues of certaine Trees which are found in the Iland of *Hispaniola*. These trees are so full of thornes, that there is no tree or plant that seemeth more wilde and deformed: so that I cannot well determine whether they bee Trees or Plants: they haue certaine branches full of large and deformed leaues, which branches were first leaues like vnto the other. As the branches made of these leaues grow forth in length, there cometh other leaues of them: so that in fine it is a difficult thing to describe the forme of these trees, except the same should be done by a Painter, whereby the Eye might conceiue that whereip the Tongue faileth in this behalfe. The leaues of this tree are of such vertue, that being well beaten and spred vpon a cloth, after the manner of a plaister, and so laid to a legge or arme that is broken in many pieces, it healeth it in fifteene dayes, and maketh it as whole as though it had neuer bene broken: During the time of this operation, it cleaueth so fast to the flesh, that it cannot without much difficultie be taken away, but as soone as it hath healed the sore, and wrought his operation, it looseth it selfe from the place where it was laid, as I my selfe, and diuers other which haue proued it, know by experience. 50

Of Fishes, and of the manner of fishing.

IN the Sea coasts of the firme Land, there are diuers and sundrie kindes of fishes, much differing in shape and forme. And although it be impossible to speake of all, yet will I make mention of some. And first to begin at *Sardines*, you shall vnderstand that there is found a kinde of fishes very large and with red tailes, being a very delicate fish. The best kindes of other fishes are these, *Moxarre*, *Diabace*, *Brettes*, *Dabaos*, *Thornbacks*, and *Salmons*: All these, and diuers other which I doe not now remember, are taken in great quantitie in Riuer. There are likewise taken very good *Crenishes*. There are also found in the Sea, certaine other fishes, as *Solos*, *Mackerels*, *Turbuts*, *Palamite*, *Lizze*, *Polpi*, *Chieppe*, *Xaibas*, *Locusts*, *Oysters*, exceeding great *Tortoises*, and *Tiburoni* of maruellous bignesse: also *Manates*, and *Murene*, and many other fishes, which 60

Tiburoni.
Manatis.

which haue no names in our language, and these of such diuersitie and quantitie, as cannot bee expressed without large writing and long time. But to let passe to intreate particularly of the multitude of fishes, I intend to speake chiefly, and somewhat largely, of three sorts of most notable fishes: whereof the first is, the great *Tortoises*, the second is called *Tiburon*, and the third *Manate*. And to begin at the first, I say that in the Iland of *Cuba*, are found great *Tortoises* (which are certaine shell fishes) of such bignesse that ten or fifteene men are scarcely able to lift one of them out of the water, as I haue bene informed of credible persons dwelling in the same Iland. But of that which I my selfe haue seene, I can testifie, that in the firme Land, in the village of *Aela*, there are of this sort some taken and killed of such bignesse, that fixe men with much difficultie could scarcely draw them out of the water, and commonly the least sort of them are as much as two men may carry at a burden: that which I saw lifted vp by fixe men, had her shell a yard and a quarter in length, and in breadth more then five yards. The manner of taking them, is this: It sometimes chanceth that in their great nets (which they call shoote nets) there are found certaine *Tortoises* of the common sort, in great quantities, and when they come out of the Sea, and bring forth their egges, and goe together by companies from the Sea, to feede on the Land, the *Christians* or *Indians* follow their steps which they finde in the Sand, and soone ouertake them, because they are very heauie and slow in going, although they make all the haste they can to returne to the Sea, as soone as they espy any body. When they that pursue them haue ouertaken them, they put a stake or staffe vnder their legs, and ouerturne them on their backs as they are yet running, so that they can goe no further, nor yet rise againe or turne, and thus they suffer them to lye still while they follow after the rest, which they ouerturne in like manner: and by this meanes take very many, at such times as they come forth of the Sea, as I haue said: This fish is very excellent and wholesome to be eaten, and of good taste.

The second of the three fishes whereof I haue spoken, is the *Tiburon*: this is a very great fish, and very quick and swift in the water, and a cruell Deuourer: these are oftentimes taken, as well when the ships are vnder saile in the Ocean, as also when they lye at anker, or at any other time, and especially the least kinde of these fishes. When the ships are vnder saile, the biggest sort are taken after this manner. When the *Tiburon* seeth the ship sayling, hee followeth it swimming behind, the which things the Mariners seeing, cast forth all the filth of the ship into the Sea for the fish to eate, who neuertheless followeth them with equall paze, although they make neuer such haste with full winde and sailes, and walloweth on euery side and about the ship, and thus followeth it sometime for the space of a hundred and fiftie leagues, and more, and when the Mariners are disposed to take them, they cast downe by the sterne of the ship a hooke of Iron, as bigge as the biggest finger of a mans hand, of three spans in length, and crooked like a fish-hooke, with beards according to the bignesse thereof, and fastned to an Iron chaine of five or fixe linkes neere vnto the end, and from thence tyed with a great rope, fastning also on the hooke for a bait, a piece of some fish, or hogs flesh, or some other flesh, or the bowels and intrals of another *Tiburon* which they haue taken before, which may easily be done, for I haue seene nine taken in one day, and if they would haue taken more, they might also. Thus when the *Tiburon* hath pleasantly followed the ship a long voyage, at the length he swalloweth the bait with the hooke, and aswell by his struing to flee or escape, as also by the swift passage of the ship, the hooke ouerthwarteth and catcheth hold of his chaps: the which fish when it is taken, it is of such huge bignesse, that twelue or fifteene men are scarcely able to draw it out of the water, and lift it into the ship, where one of the Mariners giueth it many knocks on the head with a club or beetle, vntill he haue slaine it: they are sometimes found of ten or twelue foote long, and of five, fixe, or seuen spans in breadth, where they are broadest: they haue very great and wide mouthes, to the proportion of the rest of their bodies, and haue two rowes of teeth, the one somewhat separate from the other, of cruell shape, and standing very thicke. When they haue slaine this fish, they cut the body thereof in small pieces, and put it to drie, hanging it three or foure dayes at the Cordes of the saile clothes to drie in the winde, and then eate it: It is doubtlesse a good fish, and of great commoditie to serue the ships for victualls for many dayes: the least of these fishes are most wholesome and tender, it hath a skin much like to the skin of a *Sole* whereunto the said *Tiburon* is like in shape: Which I say, because *Plinie* hath made mention of none of these three fishes, among the number of them whereof he writeth in his Naturall historie. These *Tiburons* come forth of the Sea, and enter into the Riuers, where they are no lesse perillous then great *Lizards* or *Crocodiles*, whereof I haue spoken largely before: For they deuoure Men, Kine, and Horses, euen as doe the *Crocodiles*: they are very dangerous in certaine washing places or Pooles by the Riuers sides, and where they haue deuoured at other times. Diuers other fishes both great and small, of sundrie sorts and kindes, are accustomed to follow the ships going vnder saile, of the which I will speake somewhat when I haue written of *Manate*, which is the third of the three whereof I haue promised to entreat. *Manate* therefore, is a fish of the Sea, of the biggest sort, and much greater then the *Tiburon* in length and breadth, and is very brutish and vile, so that it appeareth in forme like vnto one of those great vessels made of Goats skins, wherein they vse to carry new wine in *Medina de Campo*, or in *Arenalo*: the head of this beast is like the head of an Oxe,

Oxe, with also like eyes, and hath in the place of armes, two great stumps wherewith he swimmeth: It is a very gentle and tame beast, and commeth oftentimes out of the water to the next shoare, where if he finde any herbes or grasse, he feedeth thereof. Our men are accustomed to kill many of these, and diuers other good fishes, with their Crosse-bowes, pursuing them in Barkes or Canoas, because they swim in manner aboue the water: the which thing when they see, they draw them with a hooke tyed at a small corde, but somewhat strong: As the fish fleeth away, the Archer letteth goe, and prolongeth the corde by little and little, vntill he haue let it goe many fathoms: at the end of the corde, there is tyed a corke, or a piece of light wood, and when the fish is gone a little way, and hath coloured the water with his bloud, and feeleth himselfe to faint and draw toward the end of his life, he resorteth to the shoare, and the Archer followeth, gathering vpon his corde, whereof while there yet remaine fixe or eight fathoms, or somewhat more or lesse, he draweth it toward the Land, and draweth the fish therewith by little and little, as the waues of the Sea helpe him to doe it the more easily: then, with the helpe of the rest of his companie, he listeth this great beast out of the Water to the Land, being of such bignesse, that to conuey it from thence to the Citie, it shall be requisite to haue a Cart with a good yoke of Oxen, and sometimes more, according as these fishes are of bignesse, some being much greater then other some in the same kinde, as is seene of other beasts: Sometimes they lift these fishes into the Canoas, or Barke, without drawing them to the Land as before, for as soone as they are slaine, they flote aboue the water: And I beleue verily that this fish is one of the best in the world to the taste, and the likest vnto flesh, especially so like vnto beefe, that who so hath not seene it whole, can iudge it to be none other when hee seeth it in pieces then very Beefe or Veale, and is certainly so like vnto flesh, that all the men in the world may herein be deceived: the taste likewise, is like vnto the taste of very good Veale, and lasteth long, if it be powdred: so that in fine, the Beefe of these parts, is by no meanes like vnto this. This *Manate* hath a certaine stone, or rather bone in his head within the braine, which is of qualitie greatly appropriate against the dis-ease of the stone, if it be burnt and ground into small powder, and taken fasting in the morning when the paine is felt, in such quantitie as may lye vpon a peny, with a draught of good white wine: For being thus taken three or foure mornings, it acquieth the grieve, as diuers haue told me which haue proued it true, and I my selfe by testimonie of sight, doe witnesse that I haue seen this stone sought of diuers for this effect.

The fish *Manate*.
A remedie against the stone.

There are also diuers other fishes as bigge as this *Manate*, among the which there is one called *Vibulla*. This fish beareth in the top of his head a sword, being on euery side full of many sharp teeth: this sword is naturally very hard and strong, of foure or fve spans in length, and of proportion according to the same bignesse: and for this cause is this fish called *Spada*, that is, the *Sword fish*. Of this kinde some are found as little as *Sardines*, and other so great, that two yokes of Oxen are scarcely able to draw them on a Cart. But whereas before I haue promised to speake of other fishes, which are taken in these Seas while the ships are vnder saile, I will not forget to speake of the *Tunny*, which is a great and good fish, and is oftentimes taken and kild with Trout speares, and hookes, cast in the water, when they play and swim about the ships. In like manner also are taken many *Turbuts*, which are very good fishes as are lightly in all the Sea. And here is to be noted, that in the great Ocean Sea, there is a strange thing to be considered, which all that haue bene in the *Indies* affirme to be true: And this is, that like as on the Land there are some Prouinces fertile and fruitfull, and some barren, euen so doth the like chance in the Sea: So that at some windes the ships saile fiftie, or a hundred, or two hundred leagues and more, without taking or seeing of one fish: and againe, in the selfe same Ocean in some places, all the water is seen tremble by the moouing of the fishes, where they are taken abundantly. It commeth further to my remembrance to speake somewhat of the flying of fishes, which is doubtlesse a strange thing to behold, and is after this manner. When the ships saile by the great Ocean, following their viage, there riseth sometimes on the one side or on the other, many companies of certaine little fishes, of the which the biggest is no greater then a *Sardine*, and so diminish lesse and lesse from that quantitie, that some of them are very little: these are called *Volatori*, that is, *flying fishes*: they rise by great companies and flocks, in such multitudes that it is an astonishment to behold them: Sometimes they rise but little from the water, and (as it chanceth) continue one flight for the space of an hundred paces, and sometimes more, or lesse, before they fall againe into the Sea, sometimes also they fall into the ships. And I remember, that on an euening when all the companie in the ship were on their knees, singing *Salve Regina*, in the highest part of the Castle of the poepe, and sailed with a full winde, there passed by vs a flocke of these flying fishes, and came so neere vs, that many of them fell into the ship, among the which, two or three fell hard by mee, which I tooke aliue in my hand, so that I might well perceiue that they were as bigge as *Sardines*, and of the same quantitie, hauing two wings or quils growing out of their finnes, like vnto those wherewith all fishes swim in Riuer: these wings are as long as the fishes themselves. As long as their wings are moist, they beare them vp in the aire, but as soone as they are drie, they can continue their flight no further then as I haue said before, but fall immediatly into the Sea, and so rise againe, and flie as before from place to place. In the yeere 1515, when I came first to enforme your

your Maiestie of the state of the things in *India*, and was the yeere following in *Flanders* in the time of your most fortunate successe in these your Kingdomes of *Arragon* and *Castile*, whereas at that voyage I sayled about the Iland *Bermuda*, otherwise called *Garza*, being the furthest of all the Ilands that are found at this day in the world, and arriuing there at the depth of eight yards of water, and distant from the Land as farre as the thot of a piece of Ordinance, I determined to send some of the ship to Land, as well to make search of such things as were there, as also to leaue in the Iland certaine Hogs for increase. But the time not seruing my purpose by reason of contrarie winde, I could bring my ship no neerer the Iland, being twelue leagues in length, and sixe in breadth, and about thirtie in circuit, lying in the three and thirtieth degree of the North side.

The Iland of
Bermuda

- 10 While I remayned here, I saw a strife and combat betweene these flying fishes, and the fishes named *Gilt heads*, and the fowles called *Sea-mewes*, and *Cormorants*, which surely seemed vnto me a thing of as great pleasure and solace as could be deuised, while the *Gilt heads* swam on the brim of the water, and sometimes lifted their shoulders about the same, to raise the flying fishes out of the water to driue them to flight, and follow them swimming to the place where they fall, to take and eate them suddenly. Againe on the other side, the *Sea-mewes* and *Cormorants*, take many of these flying fishes, so that by this meanes they are neither safe in the Aire, nor in the Water. In the selfe same perill and danger doe men liue in this mortall life, wherein is no certaine securitie, neither in high estate, nor in lowe. Which thing surely ought to put vs in remembrance of that blessed and safe resting place which God hath prepared for such as loue him, who shall acquiet and finish the trauailes of this troublesome world, wherein are so many dangers, and bring them to that eternall life where they shall finde eternall securitie and rest.

for the Crowe

Of the increase and decrease (that is) rising and falling of our Ocean Sea, and South Sea, called the Sea of Sur.

- I Will now speake of certaine things which are seene in the Prouince, or at the least in the Citie of *Golden Castile*, otherwise called *Beragua*, and in the coasts of the North Sea, and of the South Sea, called the Sea of *Sur*, not omitting to note one singular and maruellous thing which I haue considered of the Ocean Sea, whereof hitherto no Cosmographer, Pilot, or Mariner, or any other, haue satisfied me. I say therefore, as it is well knowne to your Maiestie, and all such as haue knowledge of the Ocean Sea, that this great Ocean catcheth from it selfe the Sea *Mediterraneum* by the mouth of the Strait of *Gibraltar*, in the which the water, from the end and furthest part of that Sea, euen vnto the mouth of the said Strait, either in the East toward the coast commonly called *Leuante*, or in any other part of the said Sea *Mediterraneum*, the Sea doth not so fall nor increase, as reason would iudge for so great a Sea, but increaseth very little, and a small space: Neuerthelesse, without the mouth of the Strait in the mayne Ocean, it increaseth and falleth very much, and a great space of ground, from sixe houres to sixe houres, as in all the coasts of *Spaine*, *Britaine*, *Flanders*, *Germanie*, and *England*. The selfe same Ocean Sea in the firme Land newly found, in the coasts of the same lying toward the North, doth neither rise nor fall, nor likewise in the Ilands of *Hispaniola* and *Cuba*, and all the other Ilands of the same lying toward the North, for the space of three thousand leagues, but onely in like manner as doth the Sea *Mediterraneum* in *Italie*, which is in manner nothing, in respect to that increase and decrease which the said Ocean hath in the coasts of *Spaine* and *Flanders*. But this is yet a greater thing, that also the selfe same Ocean in the coasts of the said firme Land lying toward the South, in the Citie of *Panama*, and also in the coast of that Land which lyeth toward the East and West from that Citie, as in the Iland of *Pearles* or *Margarita*, which the *Indians* call *Tarrarequi*, and also in *Taboga* and *Oroque*, and in all other Ilands of the South Sea of *Sur*, the water riseth and falleth so much, that when it falleth, it goeth in manner out of sight, which thing I my selfe haue seene oftentimes. And here your Maiestie may note another thing, that from the North Sea to the South Sea, being of such difference the one from the other in rising and falling, yet is the Land that diuideth them not past eightene or twentie leagues in breadth from Coast to Coast: So that both the said Seas, being all one Ocean, this strange effect is a thing worthy greatly to bee considered of all such as haue inclination and desire to know the secret workes of Nature, where in the infinite power and wisdom of God is seene to be such, as may allure all good Natures to reuerence and loue so diuine a Maiestie.

he may see the Water of the North Sea of the Prouince of *Beragua*: and againe looking the con-
trarie way, may on the other side (towards the South) see the Sea of *Sur*, and the Prouin-
ces which confine with it, as doe the Territories of the two Lords or Kings of the said Prouin-
ces of *Verraca* and *Esquegua*. Some measure this way in this part, to bee from Sea to Sea eigh-
teene leagues, which I suppose to bee rather twentie, not for that it is any more by measure,
but because it is rough and difficult, as I haue said, and as I haue found it by experience, ha-
uing now twise passed that way by foote, counting from the Port and Village of *Nombre de
Dios*, vnto the Dominion of the Cacique of *Iuanaga*, otherwise called *Capira*, eight leagues,
and from thence to the Riuer of *Chagre*, other eight leagues. So that at this Riuer, being six-
teene leagues from the said Port, endeth the roughnesse of the way: then from hence to the
maruellous Bridge are two leagues, and beyond that, other two, vnto the Port of *Panama*:
So that all together, in my iudgement, make twentie leagues. It is a marvellous facilitie to bring
Spices by this way which I will now declare. From *Panama* to the Riuer of *Chagre*, are foure
leagues of good and faire way, by the which Carts may passe at pleasure, by reason that the
Mountaines are but few and little, and that the greatest part of these foure leagues is a plaine
ground void of Trees: and when the Carts are come to the said Riuer, the Spices may be carried
in Barkes and Pinases. For this Riuer entrieth into the North Sea five or sixe leagues lower then
the Port of *Nomen Dei*, and emptieth it selfe in the Sea neere vnto an Iland called *Bastimento*,
where is a very good and safe Port. Your Maestie may now therefore consider, how great a
thing, and what commoditie it may be to conuey Spices this way, forasmuch as the Riuer of
Chagre, hauing his originall onely two leagues from the South Sea, continueth his course, and
emptieth it selfe into the other North Sea. This Riuer runneth fast, and is very great, and so
commodious for this purpose as may bee thought or desired: the marvellous Bridge made by the
worke of Nature, being two leagues beyond the said Riuer, and other two leagues on this side
the Port of *Panama*, so lying in the mid way betweene them both, as framed naturally in
such sort, that none which passe by this voyage doth see any such Bridge, or thinke that there
is any such building in that place, vntill they be in the top thereof, in the way toward *Pana-
ma*: But alsoone as they are on the Bridge, looking toward the right hand, they see a little Ri-
uer vnder them, which hath his Channell distant from the feete of them that walke ouer it,
the space of two speares length or more. The water of this Riuer is very shallow, not passing the
depth of a mans legge to the knee, and is in breadth betweene thirtie and fortie paces, and fal-
leth into the Riuer of *Chagre*. Toward the right hand, standing on this Bridge, there is no-
thing seene but great Trees. The largenesse of the Bridge containeth fifteene paces, and the
length thereof about threescore or fourscore paces: The Arch is so made of most hard stone, that
no man can behold it without admiration, being made by the High and Omnipotent Creator
of all things.

How things that are of one kinde, differ in ferme and qualitie, according to the
nature of the place where they are engendred or grow, and of
the beasts called Tigres.

IN the firme Land are found many terrible beasts, which some thinke to be Tigres. Which
thing neuertheless I dare not affirme, considering what Authors doe write of the lightnesse
and agilitie of the Tigre, whereas this beast, being otherwise in shape very like vnto a Tigre,
is notwithstanding very slow. Yet true it is, that according to the maruailes of the World, and
differences which naturall things haue in diuers Regions vnder Heauen, and diuers constellati-
ons of the same, vnder the which they are created, wee see that some such Plants and Herbes
as are hurtfull in one Countrey, are harmelesse and wholesome in other Regions. And Birds
which in one Prouince are of good taste, are in other so vnfauourie that they may not bee eaten.
Men likewise which in some Countreies are blacke, are in other places white: and yet are both
these and they, men. Euen so may it be, that Tigres are light in some Region, as they write,
and may neuertheless be slow and heauie in these *Indies* of your Maestie, whereof wee speake.
The Sheepe of *Arabie* draw their tiales long and bigge on the ground, and the Bulls of *Egypte*
haue their haire growing toward their heads: yet are those Sheepe, and these Bulls. Men in
some Countreies are hardie and of good courage, and in other naturally fearfull and bruitish. All
these things, and many more, which may be said to this purpose, are easie to bee prooued, and
worthy to bee beleued, of such as haue read of the like in Authors, or trauelled the World,
whereby their owne sight may teach them the experience of these things whereof I speake. It
is also manifest that *Lucca*, whereof they make their bread in the Iland of *Hispaniola*, is deadly
poison if it be eaten Greene with the iuyce: and yet hath it no such propertie in the firme Land,
where I haue eaten it many times, and found it to be a good fruit. The Bats of *Spaine*, although
they bite, yet are they not venomous: but in the firme Land, many die that are bitten of them.
And in this forme may so many things be said, that time shall not suffice to write, whereas my
intent is onely to prooue that this beast may be a Tigre, or of the kinde of Tigres, although it
be

bee not of such lightnesse and swiftnesse, as are they whereof *Plinie* and other authors speake, describing it to bee one of the swiftest beasts of the Land, and that the Riuer of *Tygris* for the swift course thereof was called by that name. The first *Spaniards*, which saw this Tyger in the firme land, did so name it. Of the kind of these, was that which *Don Diego Columbo*, the Admiral sent your Maiesty out of New *Spaine* to *Toledo*. Their heads are like to the heads of Lions, or Lionesses, but greater: the rest of all their bodies, and their legs, are full of black spots one neere vnto another, & diuided with a circumference, or fringe of red colour, shewing (as it were) a faire work and correspondent picture, about their croopes or hinder parts, they haue these spots biggest and lesse & lesse toward their bellies, legs, & heads. I haue seen some of three spans in height, and more then five in length. They are beasts of great force, with strong legs, and well armed with nayles and fanges, which we call Dog-teeth: they are so fierce, that in my iudgement, no reall Lyon of the biggest sort is so strong or fierce. Of these, there are many found in the firme Land, which deuoure many of the *Indians*, and doe much hurt otherwise: but since the comming of the *Christians*, many haue bene killed with Crosse-bowes after this manner. Assoone as the Archer hath knowledge of the haunt of any of these Tygers, hee goeth searching their trace, with his Crosse-bow, and with a little Hound or Begle, & not with a grey-hound; because this Beast would soon kill any Dogge that would venter on him: When the Hound hath found the Tigre, he runneth about him baying continually, and approacheth so neere him, snapping and grinning, with so quicke flying and returning, that he hereby so molesteth this fierce Beast, that hee driueth him to take the next Tree, at the foot whereof he remayneth still baying, and the Tigre grinning and shewing his teeth, while in the meane time the Archer commeth neere, and twelue or fourteene paces off, striketh him with the querrell of his Crosse-brow in the brest, and flyeth incontinent, leaving the Tigre in his trauell for life and death, byting the Tree and eating earth for fiercenesse: then within the space of two or three houres, or the day following, the Archer returneth thither, and with his Dogge findeth the place where hee lyeth dead. The *Indians* (and especially they of the firme Land in the Prouince which the Catholike King *Don Ferdinando* commanded to bee called *Golden Castle*) call this Beast *Ochi*. This thing is strange that chanced of late: that whereas the Tigre whereof we haue made mention before, would haue killed his keeper that then kept him in a Cage, was in few daies after made so tame, that he led her eyed only with a small coard, and plaid with her so familiarly, that I marvelled greatly to see it, yet not without certaine beliefe that this friendship will not last long, without danger of life to the Keeper, forasmuch as surely these Beasts are not meet to be among men, for their fiercenesse and cruell nature that cannot be tamed.

Plinie.
The Tigre.

The hunting of Tigres.

A Tigre made tame.

Of the manners and customes of the Indians of the Firme Land, and of their women.

The manners and customes of these *Indians*, are diuers in diuers Prouinces. Some of them take as many Wiues as them list, and other liue with one Wife, whom they forsake not without consent of both parties, which chanceth especially when they haue no children. The Nobilitie aswel men as women, repute it infamous to ioyne with any of base Parentage or Strangers, except *Christians*, whom they count Noblemen, by reason of their valiantnesse, although they put a difference betwene the common sort and the other to whom they shew obedience, counting it for a great matter and an honorable thing, if they bee beloued of any of them: inso-much that if they know any *Christian* man carnally, they keepe their faith to him, so that hee be not long absent farre from them, for their intent is not to be Widdowes, or to liue chaste like religious women. Many of them haue this custome, that when they perceiue that they are with childe, they take an Hearbe wherewith they destroy that is conceived: for they say that only well aged women should beare children, and that they will not forbear their pleasures, and deform their bodies with bearing of children, whereby their Teates become loose and hanging, which thing they greatly dispraise. When they are deliuered of their children, they goe to the Riuer and wash them, which done, their bloud and purgation ceaseth immediately. And when after this they haue a few dayes abstained from the company of men, they become so streight, as they say which haue had carnal familiaritie with them, that such as vse them, cannot without much difficultie satisfie their appetite: They also which neuer had children, are euer as Virgins. In some parts they weare certaine little Aprons round about them before and behind, as low as to their knees and hammes, wherewith they couer their priuy parts, and are naked all their bodie beside. The principall men beare their Priuities in a hollow Pipe of Gold, but the common sort haue them inclosed in the shells of certaine great Welkes, and are beside vtterly naked: For they thinke it no more shame to haue their Cods seene, then any other part of their bodies: and in many Prouinces both the men and women goe vtterly naked, without any such couerture at all. In the Prouince of *Cuenca* they call a man *Chuy*, and a woman *Ira*, which name is not greatly disagreeable to many both of their women and of ours.

lers. The principall *Cacique*, hath twelue of his most strong *Indians* appointed to beare him, when he remoueth to any place, or goeth abroad for his pleasure. Two of them carrie him sitting vpon a long peece of wood, which is naturally as light as they can finde, the other ten follow next vnto him as footemen: they keepe continually a trotting pace with him on their shoulders. When the two that carrie him are wearie, other two come in their places, without any disturbance or stay. And thus if the way be plaine, they carry him in this manner for the space of fifteene or twenty leagues in one day. The *Indians* that are assigned to this office, are for the most part slaues, or *Naboriti*, that is, such as are bound to continuall seruice.

I haue also noted that when the *Indians* perceiue themselves to be troubled with too much bloud, they let themselves bloud in the calfe of their legges, and brawnes of their armes: this doe they with a very sharpe stone, and sometimes with the small tooth of a Viper, or with a sharpe reede or thorne. All the *Indians* are commonly without Beards, in so much that it is in a manner a maruell to see any of them either men or women to haue any downe or haire on their faces, or other parts of their bodies: Albeit I saw the *Cacique* of the Prouince of *Cata-rapa*, who had haire on his face and other parts of his body, as had also his wife in such places as women are accustomed to haue. This *Cacique* had a great part of his body painted with a blacke colour, which neuer fadeth, and is much like vnto that wherewith the *Moors* paint themselves in *Barbarie* in token of Nobilitie. But the *Moors* are painted specially on their visage and throate, and certaine other parts. Likewise the principall *Indians* vse these paintings on their armes and breasts, but not on their visages, because among them the slaues are so marked. When the *Indians* of certaine Prouinces goe to the battaile (especially the *Caniball* Archers) they carrie certaine shels of great welkes of the Sea, which they blow, and make therewith great sound, much like the noise of Hornes: they carrie also certaine Timbrels, which they vse in the stead of Drummes: also very faire Plumes of Feathers, and certaine armour of gold, especially great and round peeces on their breasts, and splints on their armes. Likewise other peeces, which they put on their heads and other parts of their bodies: For they esteeme nothing so much as to appeare gallant in the warres, and to goe in most comely order that they can deuise, glistering with precious Stones, Jewels, Gold, and Feathers. Of the least of these welkes or perewinkles, they make certaine little Beades, of diuers sorts and colours: they make also little Bracelets, which they mingle with gaudes of Gold, these they roule about their armes from the elbow to the wrest of the hand. The like also doe they on their legges from the knees to the soles of their feete, in token of Nobilitie, especially their Noble Women in diuers Prouinces are accustomed to weare such Jewels, and haue their neckes in manner laden therewith: these Beades and Jewels, and such other trinkets, they call *Caquiras*. Beside these also, they weare certaine Rings of Gold at their eares and nostrils, which they bore full of holes on both sides, so that the Rings hang vpon their lippes. Some of these *Indians* are poulde and rounded; albeit commonly both the Men and Women take it for a decent thing to weare long haire, which the women weare to the middest of their shoulders, and cut it equally, especially about their browes: this doe they with certaine hard Stones, which they keepe for the same purpose. The principall Women, when their teates fall, or become loose, beare them vp with barres of Gold, of the length of a Spanne and a halfe, well wrought, and of such bignesse that some of them weigh more then two hundred Castellans or Ducades of Gold: these barres haue holes at both the ends, whereat they tye two small cords made of Cotton at euery end of the barres: one of these cords goeth ouer the shoulder, and the other vnder the arme holes, where they tye both together, so that by this meanes the barre beareth vp their teates. Some of these chiefe Women goe to the battaile with their Husbands, or when they themselves are regents in any Prouinces, in the which they haue all things at commandement, and execute the office of generall Captaines, and cause themselves to be carried on mens backs, in like manner as doe the *Caciques*, of whom I haue spoken before.

These *Indians* of the firme Land are much of the same stature and colour as are they of the Ilands: they are for the most part of the colour of an Oliue: if there be any other difference, it is more in bignesse then otherwise, and especially they that are called *Coronati*, are stronger and bigger then any other that I haue seene in these parts, except those of the Iland of Giants, which are on the South side of the Iland of *Hispaniola*, neere vnto the coasts of the firme Land, and likewise certain other which they call *Incatos*, which are on the North side. All which chiefly, although they be no Giants, yet are they doubtlesse the biggest of the *Indians* that are known to this day, and commonly bigger then the *Flemings*; and especially many of them, as well women as men, are of very high stature, and are all archers both men and women. These *Coronati* inhabit thirtie leagues in length by these coasts, from the point of *Canoa* to the great riuer which they call *Guadalchiber*, neere vnto *Santa Maria de gratia*. As I trauesed by those coasts, I filled a butt of fresh water of that riuer, six leagues in the Sea from the mouth thereof where it falleth into the Sea. They are called *Coronati* (that is *Crowned*) because their haire is cut round by their eares, and poulde lower a great compasse about the Crowne, much like the Friers of Saint *Augustines* Order. And because I haue spoken of their manner of wearing their

their haire, here commeth to my remembrance a thing which I haue oftentimes noted in these *Indians*: and this is, that they haue the bones of the sculls of their heads foure times thicker, and much stronger then ours, so that in coming to handstroakes with them, it shall be requisite not to strike them on the heads with swords, for so haue many swords beene broken on their heads, with little hurt done.

The sculls of
Indians heads.

Of the chiefe Islands, Hispaniola and Cuba.

The *Indians* which at this present inhabit the Island of *Hispaniola*, are but few in number, and the *Christians* not so many as they ought to be, for as much as many of them that were in this Island, are gone to other Islands, and to the firme Land. For being for the most part yong men vnmarried, and desirous daily to see new things, wherein mans nature delighteth, they were not willing to continue long in one place, especially seeing daily other new Lands discovered, where they thought they might sooner fill their Purles, by being present at the first spoile: Wherein neuerthelesse their hope deceived many of them, and especially such as had houses and habitations in this Island: For I certainly beleene, confirming my selfe herein with the iudgement of many other, that if any one Prince had no more seignories then onely this Island, it should in short time be such, as not to giue place either to *Sicilie* or *England*, whereas euen at this present there is nothing wherefore it would malice their prosperity, not being inferior to them in any felicity, that in manner the heauens can grant to any Land: being furthermore such as may enrich many Princes and Kingdomes, by reason of many rich Gold Mines that are in it, of the best Gold that is found to this day in the world, and in greatest quantitie. In this Island, nature of her selfe bringeth forth such abundance of Cotton, that if it were wrought and maintained, there should be more and better then in any part of the world. There is so great plentie of excellent *Cassia*, that a great quantitie is brought from thence into *Spaine*, from whence it is carried to diuers parts of the world, &c.

Men are desirous of new things.

Bullets for Guns wrought by nature.

In this Island furthermore are many Sheepe, and a great number of Hogges, of the which (as also of the Kine) many are become wilde, and likewise many Dogges and Cats, of those which were brought out of *Spaine*: These (and especially the Dogs) doe much hurt among the Cattell, by reason of the negligence of the *Heard-men*. There are also many Horses, Mares, and Mules, and such other Beasts as serue the vse of men in *Spaine*, and are much greater then they of the first broode brought thither out of *Spaine*.

Saint *Domingo* was built by line and rule: the Houses of Stone very faire. There is also a Cathedrall Church builded of late, where as well the Bishopp according to his dignity, as also the Canons are well endowed. This Church is well builded of Stone and Lime, and of good workmanship. There are furthermore three Monasteries, bearing the name of *S. Dominicke*, *S. Francis*, and *S. Marie of Mercedes*, the which are al well builded, although not so curiously as they of *Spain*. There is also a very good Hospital for the aid & succor of poore people, which was found by *Michael Passamont*, treasurer to your Maiestie. The people of this Island are commonly of somewhat lesse stature then are the *Spaniards*, & of a shining or cleare brown color: they haue Wines of their own, and abstaine from their Daughters, Sisters & Mothers: they haue large foreheads, long black haire, and no beards or haire in any other parts of their bodies, as well Men as Women, except very few, as perhaps scarcely one among a thousand. They goe as naked as they were borne, except that on the parts which may not with honestie be seene, they weare a certaine leafe as broad as a mans hand, which neuerthelesse is not kept close with such diligence, but that sometimes a man may see that they thinke sufficiently hid. In this Island are certaine Glowwormes, that shine in the night as doe ours, but are much bigger, and giue a greater light: In so much that when the men of the Island goe any iournies in the night, they beare some of these wormes made fast about their feete and head, in such sort that he that should see them a farre, and ignorant of the thing, would be greatly astonished thereat. By the light of these also, the women worke in their houses in the night. These wormes they call *Cicnas*. Their light lasteth for the space of three dayes, and diminisheth as they begin to drie vp. There is also a kinde of Crowes, whose breath stinketh in the morning, and is sweete in the afternoone: the excrement which they auoide, is a liuing worme.

In *Cuba*, is a certaine kinde of Partridges, being very litle, with their feathers much of the colour of Turtle Dones, but are of much better taste to be eaten: they are taken in great number, and being brought wilde into the houses, they become as tame within the space of three or foure dayes as though they had beene hatched there: they become exceeding fat in short space, and are doubtlesse the most delicate and pleasant meate that euer I haue eaten. But to let passe many other things that might be here said, and to speake of two marueilous things which are in this Island of *Cuba*: whereof the one is, that a Valley containing two or three leagues in length betweene two Mountaines, is full of a kinde of very hard Stones, of such perfect roundnesse, and like vnto Pellets of Gunnes, that no art can make better or more exactly polished. Of these, some are as small as Pellets for Handgunnes, and

other species, bigger and bigger from that quantitie, that they may serve for all sorts of Artillerie, although they be of big nesse to see one or two or more Quintales of powder, every Quintale containing one hundred weight, or of what other quantitie they be. These Rocks are found throughout all the Valley within the earth, as in a Mine, which they digge, and take out such as they neede of all sorts. The other marvellous thing of this land is this: That farre from the Sea, there issueth out of a Mountaine a certaine liquor, much like the Clay of Babylon, called *Bitumen*, or like unto Pitch, in great quantitie, and such as is very commodious for the calking of Shippes: this falleth continually from the Rocke, and runneth into Sea, in such abundance that it is seene floating about the water on every side of the Sea thereabout, as it is driven from place to place by the winde, or course of the water.

Quintus Curtius writeth in his Historie, that great Alexander came to the Citie of *Memi*, where is a great Caue or Denne, in the which is a Spring or Fountaine that continually avoide a great quantitie of *Bitumen*, in such sort, that it is an easie thing to beleue that the stones of the walls of Babylon might be laid therewith, according as the said Author writeth. I have seene this Mine of *Bitumen*, not onely in the land of *Cuba*, but also such another in new *Spaine*, in the Province of *Parace*.

Thus farre I have given you from Master Eden his Edition, wherein because many things necessary to the naturall History of the Indies are in the Authors Summarie, and in his 20. Books of a larger Historie, I have added hither such things as I thought fittest.

The *Mina* are like great Rats, and the *Corien* like Conies, of which the people in *Hispaniola* eat, as also of the *Xnani*, *Chemi* and *Mohni* are little creatures also in that land: which and their little mute Dogges were all the foure footed Beasts they had, save that of Rats there is some question. The *Indians* of *Jamaica* and *Cuba* use to catch fish with the fish *Roverso*, as Huntmen use Falconers use Hounds or Hawkes in their game. The *Indians* take it sometimes in their Nets, of which I have eaten: and when they will bring vp one of them they feede it in the Sea and carrie it tied to their Canoe by a strong line, which when they see a fish fit for pray, they loosen and use words to excite courage and valour in this fish, which presently flies like an arrow at that fish and fastens thereon, and the *Indian* lets the line runne out at length (being oiled, of many fathomes, and having a peece of wood at the end to buoy it,) till the fish be wearied: this little fish (little above a spanne long, vnstightly to looke on) still holding fast, till the *Indian* gathering in his cord, prepares to shoue to take the greater fish, with much commendation and words of encouragement to this chase-fish, perswading him to let goe his hold, which otherwise should sooner by violence breake in peeces this Huntman, then force him to vnsasten. Thus will he fasten on the belly of a Tortoise, so great that two *Indians* and sometimes sixe haue enough to doe to carrie the same to their houses. This fish *Roverso* hath scales staire fashioned, or like the rooffe of a mans mouth, and on them certain prickles very sharpe and strong, whereby he fastens himselfe to what fish him pleaseth: and these prickly scales he hath on the most part of his body.

They haue likewise a cunning wilde-goose-chase, in a great Lake casting in certaine great emptie Pompons in the season when Geese resort thither, wherewith they being accustomed grow out of feate and will sit on them, to bee carried: Being thus acquainted, the *Indian* puts one of these emptie Pompons on his head, and with much dexteritie of swimming enters amongst the Geese, and when one hath made him his Porter, no part of his body being seene, he swimmes from the rest, and then with his hand pulls her in, and hangs her thus strangled at his girdle, and begins a fresh game.

When their *Caciques* are dead they lay them on a peece of wood or stone, and make a fire about the same which may not burne them, but by degrees draw forth all the moysture in sweat, leaving onely the skin and bones, and then in a place separate repose the same with the Ancestors which before had bene so dealt with; this being their best Booke of Heraldrie to recount the Names and severall Descents in that Pedegree. If any die in battell, or so that they cannot recover his body, they compose Songs which the Children learne touching him, and the manner of his death, to supply that memoriall. These Songs they call *Arctos*. As for Letters they were so ignorant, that seeing the intercourse of *Spaniards* by Letters, they thought that Letters could speake, and were very cautelous in their carriage of them, lest the Letters might accuse them of ill demeanor by the way. When they will disport themselves, the Men and Women meet and take each other by the hand, and one goeth before which is called *Tequina* or their Master, with certaine paces measured to his singing in a low voice what commeth in his minde, and after him all the multitude answereth in a higher voice with like measures proportioned to the tune, and so continue they three or foure houres, with *Chicha* or Mayz-wine among; sometimes also changing the *Tequina* and taking another with a new tune and song. Their Houses are commonly round like a Tent, and sometimes with a double water passage (which they call *Bubio*) of good Timber, thatched with Straw or long Grasse, the Walls of Reed pitched into the ground. In the Province of *Abrayne* in *Golden Castile* and thereabouts, there are many Villages of *Indians* which dwell on the tops of Trees in Houses or Roomes there made, to which they ascend

by certaine staires of *Besuco*, which growes about * Trees; and is vsed to binde their Walls and Timbers in their houses before mentioned. Beneath, the ground is fenny and covered with water not so high as a man: and where it is deeper, they vse Canoes, and therewith passe to drie Land to sow their Mays and *Iucca*, *Bartatas* and *Aies*. In those houses they are secured from wild Beasts, Enemies and Fire. They are not Archers, and vse Clubs. In the Gulfe of *Vraba* where *Rio Grande* enters the Sea, are many *Palme* trees in the midst of the River growing neere together, on the tops whereof are houses made as the former and much bigger, in which many Inhabitants dwell together, and haue their beds tyed to the lower parts of the said *Palme* trees. These beds they call *Hamacas*, being couerlets of Cotten of good threed and well wouen, of two or three braces long, but narrower, with cordes at the ends. The cordes are of Cotton, or of *Henequen* or *Cabuya*, this the courser threed, that the finer and able to cut Iron; made of the leafe of a certaine herbe. These *Indians* fight also with Clubs, and did much harme to Captaine *Vasco Nunes di Balboa* his men, which returned with losse not able to ouer-come them. I haue also obserued that these *Indians* haue the bones of their skulls foure times as thicke as those of the *Christians*, so that to strike them with a Sword must be warily done, the Swords being thereby often broken.

* *Besuco* seemes to be as bind-weed or luie, but stronger and more pliant.

Besides the *Tigre* and other beasts before mentioned, in the firme Land are the *Beori* (the *Christians* call them *Dants*, not that they are such, but for some resemblance, as is also said of the *Tigre*) of the bignesse of a meane Mule, without hornes, ash-coloured: they know not to dresse and tanne their hides. They take them with Dogs, but if they take water, they are fierce and cruell. The *Gatto Cerniero* is as bigge as the *Tigre* and very fierce, more dreadfull to the *Christians*, the swiftest beast yet found in those parts. The *Lions* are a little lesse then those of *Barbarie* and not so full of courage, but fearfull and fugitiue, and hurt none but such as assault them. The *Leopards* are like those of *Barbarie*, and are swift and fierce, but neither these nor the *Lions* haue yet done *Christians* any harme, nor do they eate the *Indians* as the *Tigres* doe. The *Foxes* are like those of *Spaine*, but in colour blacker then blacke veluet, and somewhat lesse then of *Spaine*. The *Red Deere* are as those of *Spaine*, but not so swift. Their *Fallow Deere* are like those of *Spaine*, but both *Red* and *Fallow* exceed the *Spanish* in taste. Their *Conies* or *Hares* are somewhat like ours, but liker *Hares* then *Conies*, yet lesse then the *Conies* of *Spaine*. The *Martens* are like to those of *Spaine* in bignesse, biting and otherwise: some of them are kept tame and are as full of sport and lesse filthy then the *Monkeys*. The *Monkeys* are of innumerable sorts and shapes: some of them so suttile as they imitate the actions of men, as breaking of *Pine-apples* and *Almonds* with stones: some will throw stones at passengers, or breake boughs to fall on them as they passe by to breake their heads, and retort the arrowes shot at them, and doe other things incredible. Some are as little or lesser then a mans hand, and some as great as a meane Mastiffe. The *Indian Dogs* are little and barke not, some hayrie and some bare, but wagge the taile and leape on those which feede them, and are not so tame as ours. The *Churchia* is as bigge as a small *Conie*, tawnie, sharpe-snowted, dog-toothed, long-tayled and eared like a *Rat*. They doe great harme to their *Hennes*, killing sometimes twentie or more at once to sucke their blood: And if they then haue young, shee carrieth them with her in a bagge of skin vnder her belly, running alongst the same like a Satchell, which shee opens and shuts at pleasure to let them in and out: and if any come with light when the Damme and young are at their Hen-bloud dainties, shee receiues them into this bagge, and runneth away with them: and if shee finde the way stopped, shee climbeth vp about the Hen-roost, and is sometimes taken alieue or dead in this manner, as I haue seene. Her Teats are within her bagge. It is a stinking creature.

The beasts of those parts. *Dants*.

Gatto Cerniero.

Churchia.

Fowles.

Parrots.

Night-sparrowes.

Bats.

Peacocks and *Turkeys*.

Sea-crowes.

Wilde Hennes.

Of Fowles, they haue *Eagles*, *Hawkes*, *Buzzards*, *Rauens*, &c. as in *Spaine*. Other differing sorts they haue so many that they need rather a Painter then Relator to describe them. Of *Parrots* I carried ten or twelue sorts at once to King *Ferdinand*. They flie by couples, a Male and Female together: and doe much harme to their Corne grounds. There are *Night-sparrowes* which flie by night onely, and strike at the *Bats*, holding a pleasant pursute after them. They are bigger and swifter then *Swallowes*, hauing a row of white feathers ouerthwart the wing. The *Bats* draw much bloud by their bitings; and if they bite one man amongst an hundred persons, the same *Bat* will in the nights following still single the same person. They stanch the bloud with hot ashes, or water as hot as may be endured, and so I haue bene cured. There are *Peacocks*, some yellow, some blacke, with tailed like those of *Spaine*: they are better meat: some are wilde, and some tame, which are brought home young. Other *Peacocks* they haue, of which the Hens are ill shaped, the Males haue not so great a taile as ours: their necke also is bare of feathers, but covered with a skin which they change after their phantasie into diuers colours. They haue a horne as it were on their front, and haire on the breast (the last seeme *Turkeys*.)

The *Sea-Crowes* are so many which on the coast of *Panama* follow the *Pilchards* or *Sardines* (as is before said of the *Alcatrazis*) that lighting or houering on the Sea, they seeme to couer the same with a blacke carpet of cloth or veluet, going and coming with the Sea. There are *Wilde Hens* as great as *Peacocks*, blacke, the head part of the necke gray skins, and not feathered: they eate Carrion and are of vnflauourie taste to be eaten; smell like muske whiles they are alieue,

alieve, but that sent dyeth with them : neither are they good for any thing, except their quills to feather arrowes. They are desirous to liue about places inhabited to feede on Carrion. The *Partriches* are gray, as sauourie as those of *Spaine*, and as great as the *Spanish* Hens: they haue their brawnes or flesh double, one ouer the other. Their egges are as bigge as Hens egges, but rounder, and coloured like a fine *Turkesse* stone. The *Indians* making a sound like theirs, draw them to theirs nets. There are also a lesse kinde. The *Pheasants* are not in feathers like those of *Spaine*, nor so goodly, but very sauourie meate like the great *Partriches*, but are not so great; they are gray, haue long legs and tailes, make a loud whittling noise, and are easily shot.

Flies are not there so many as in these parts of *Europe*. Their *Wasps* are greater and sting more dangerously. Their *Bees* are almost as small as flies, and sting not. They haue great *Hives* and *Combes* which hold foure times as much *Honie* as ours: their *Honie* is white. *Ants* are great, many, and doe much damage to the *Trees*, *Sugars*, and other provisions. There are of many sorts, some little and black (of which and the *Ant-beare* is spoken before) some called *Conixen* halfe *Ant*, halfe *Worme*, very hurtfull; they carry earth on their heads, and therewith on trees, walls, or where they please build their nests, three or foure spans large, and are as hurtfull to houses as *Moths* to clothes. There are others greater of diuers sorts, some as bigge as *Bees* with vs, so poysonfull that herewith the *Indians* infect their arrowes so remediless, that not foure of an hundred which are wounded escape: and if this *Ant* bite a *Man* he presently falls into a grievous feauer, and the place swelleth much. There are others red, yellow, and some winged. Of *Hornets* or *Horse-flies* (*Tasani*) are many sorts, tedious to expresse. There are also *Scorpions* in the firme Land. An. 1519. and two yeeres after the *Ants* destroyed in *Hispaniola* their *Cannastola*, *Oranges*, and fruit *Trees*, neither in their houses could they keepe victuals for their multitudes, destroying all like the *African* *Grasse-hoppers*, in so much that *Saint Domingo* was nigh dispeopled by them.

They laugh in *India* to heare the disease called *French* by the *Italians*, and *Neapolitan* by the *French*, which may indeed be called *Indian*, where the best remedie *Lignum Sanctum*, and *Guaiacan* grow; God so in iudgement remembring mercy, that where our sinnes produce a punishment, he also sends a remedie. I had acquaintance with diuers which went in the first and second voyages of *Columbus*: of which was *Peter Margarite* Commendator in the second voyage, of most respect with the King and Queene, who complained of those paines. Soone after, in the yeere 1496. began the disease to arrest some Courtiers; but in those beginnings, it was onely amongst bader persons of small authoritie: and it was thought that they got it with hauing to doe with common women. But afterwards it extended to principall Persons, and the Physicians could not tell what to thinke of it, so that many dyed. When after this *Gonzalo Fernandez de Cordona* was sent with a great Armie by the Catholike Kings, in behalfe of *Ferdinand* the second King of *Naples*, against *Charles* the *French* King, some diseased persons went with that Armie, and by dealing with the women, and by conuersing, spread the disease to the *Italians* and *French-men*, which thence got the names aforesaid, but indeed came from *Hispaniola*: where it is ordinarie, and the remedie also. Our Author l. 17. c. 4. and *Ramusio* in his Preface to his third Tome say, That the *Souldiers* of *Pamfilo de Nauaz* hauing the small pockes infected the *Indians*, which neuer before had heard of that disease: in so much that of 1600000. soules in that Iland there are so few left, as by and by you shall heare. The *Niguas* also, creatures lesse then *Fleas*, which eate in the flesh very dangerously, are rife in that Iland. The people of that Iland when first they were diuided amongst the *Spanish* Planters, were deemed a Million or more (some say 1600000. of which and of their posteritie in the yeere 1535. were not aboue five hundred left, little and great, the rest which then were there being *Slaues* brought thither from other parts. The couetousnesse of the *Myne-workers*, neglect of Diet, change of *Gouernours* growing worse and worse, caused them to poyson, kill, and hang themselves, besides those which were consumed by infectious or pestilentiall pockes* and other diseases: Their owne vices, also *Sodomitie*, *Idolatrie*, &c. prouoked diuine Iustice against them. No provision could hinder their consumption. The King sent Religious men of diuers Orders, but this I know that the *Dominicans* and *Franciscans* contradicted each other, and what one approued the other disallowed, although after the other had left that opinion, the Contradictors would embrace it, still agreeing in disagreeing: which caused much danger not onely to new *Conuerts*, but also to old *Christians*: whiles one Order would not absolue them except they franchised the *Indians*, and the other absolued them neuertheless. Much disputation hath bene about the *Indians* seruice amongst the *Thomists*, *Canonists*, and famous *Lawyers* and *Diuines*, but their differences haue done little good to the *Indians* or the plantation; and in a short time both this Iland and the three adioyning, *Saint Iohn*, *Jamaica*, and *Cuba*, remayned desolate, being by the *Friars* meanes (which I thinke, meant well) dispersed thorow the Iland, to lessen their labours, which the *Gentlemen* imposed on them. I am of opinion that if a *Christian* Prince had this Iland of *Hispaniola* onely, hee might make it as good as either *England* or *Sicily*: such is the store of *Gold*, the prosperous successe of things carried from *Spaine*, the *Beeues* (which I knew first carried thither from *Spaine*) being already so multiplied that they kill them for the *Hides*, leauing the flesh in the fields of five hundred at once: and

CHAP. 3. Strange Huracans, Spout, Monster, Hawk. Great hurts by least vermin. 997

and Roderigo di Bastidas Bishop of *Venezuela* hath therein 16000. Bees, and the Treasurer *Pasamonte* as many; others 8000. or more, likewise in other Beasts, Seeds, Oranges, Limons, Figs, Pomegranets, &c.

Of their *Zemes*, Idols, Sepulchres, and other things concerning their Religion, the Reader may see enough in the ninth Booke and fourteenth Chapter of my Pilgrimage; and of the Spanish first voyages thither in the beginning of this worke, which *Ouiedo* handleth in his former Bookes.

Their *Huracans* (so they call tempests of winde and raine together) are very excessive. An. 1508. on the third of August, all the thatched houses in Saint *Domingo* were throwne to the ground, and some also of stone; all the houses also in the Towne *Bona Ventura*, which might thence be named *Mala Ventura*: in the Haven were sunke twentie Ships and Caruels, a North-wind first and after a South-wind playing their furious prizes; one carrying out the Vessels in despite of all provisions to Sea, and the other as terribly forcing them againe to the Haven (if the losse of ships and men may permit that name) yea on Land many men were carried in the streets and fields diuers bow-shots before they could stay themselves. Hell seemed to haue bene opened, and the Devils to haue carried things to and fro. Yet in Iuly following was a worse, which now are allayed and not so violent since the Blessed Sacrament hath bene placed in Churches. I haue seene the space of a Crosse-bow shot or two, all the ground couered with Trees plucked vp by the Windes from the Rootes, and ours haue sometime by dangers of the way bene forced to climbe from tree to tree ouer such a passage, with rents and perills enough.

The Cocks in *Spaine* crow at mid-night and towards day: but herein the shutting in of the evening, or two houres within night, and two houres before day, and not at all at mid-night: some crow in the first watch and not else all night. Their Cats also vse their lusts all the yeere and without walling noise, which in *Spaine*, *France*, *Sicily*, and other places in *Europe* and *Africke* which I haue seene goe on Catter-walling onely about Februarie. In the Ile of *Nauaza* Westward from *Hispaniola* in the way thence to *Iamaica*, the Rocks are seene vnder the water: and amongst them a fathome and five foote vnder the salt water there ariseth a spring of good fresh water vpon the Sea, spowting vp bigger then a mans arme, higher then the salt water that it may easily be taken in. I haue not seene it, but *Stephen Rocca* a person of credit testifieth this of his owne sight and taste. But I haue seene in the Iland *Dominica* at the Riuer *Acquata*, twentie paces wide, and not deeper then the arme pits, there is a hot spring, that if one take vp the Sands they seeme like embers in his fist, and so is the water a span deepe about the Sands, which on the top is fresh and like other water.

Ouiedos 8. 9. 10. and 11. Bookes are of Plants and Trees in those parts. The 12. of Creatures before mentioned: the 13. of Fishes, in which he telleth that An. 1529. going from the Gulfe of *Orotigua* to *Panama* two hundred leagues Eastward, neere the mouth of the Gulfe, wee saw a Fish or great Water-monster, which at times lifted it selfe right vp above the Water so farre that the head and both the armes might bee seene, which seemed higher then our Carauell and all her Masts. Thus did shee rise and fall diuers times beating the water strongly, not casting any water out of the mouth. A younger or lesse of the same kinde did likewise, swimme a little distant from the greater. Some iudged it to bee a Whale with her young one, which others denyed, saying, a Whale had no armes. To my iudgement each arme might be five and twentie foote long, and as bigge as a Butt or Pipe: the head fourteene or fifteene foote high and much more in breadth; and the rest of the body larger. That of her which appeared about water, was about five times the height of a meane man, which make five and twentie paces. *Lorenzo Martino* Canon of the Church of *Golden Castile*, *Sancio di Tudela*, &c. were with me: and we were all afraid when shee came neere our small Caruall. Shee seemed to disport her selfe at a tempest approaching, which suddenly arose much to our purpose, from the West, and brought vs in few dayes to *Panama*.

In *Hispaniola* and the neighbouring Ilands is a strange bird of prey, as bigge as a great *Gania* and much like it: shee preyeth on the Land on birds, &c. and on fish in the Water, shee is footed like water-fowles and goeth like a Goose, but hath talons like Hawkes, and fasteneth therewith on the fishes which shee eates (so taken) either in the Water or on the Rocks, or as shee flyeth in the Aire holding it betweene her feete. The Christians call them *Affors di acqua*.

What scath the Ants did in *Hispaniola*, is before mentioned, in the yeere 1519. and the next following, and the Citie of Saint *Domingo*, was almost dishabited by this great Armie of little creatures, as in *Spaine* a Citie was dispeopled by Conies, and which lately happened to the Ile *Porto Santo*; in *Theffalia* (which almost fell out to the English Colonie in *Bermuda*) to another Citie by Rats, to the *Atariota* by Frogges, to the *Aduntmes* by Fleas, to *Amicle* in *Italie* by Serpents, and to another part thereof by Sparrowes; to diuers places of *Africa* often by Locusts: so can the Great God arme the least creatures to the destruction of proud vainglorious men. And this miserie so perplexed the *Spaniards*, that they sought as strange a remedie as was the disease, which

Ouiedos fife Booke is of their religions &c.

which was to chuse some Saint for their Patron against the Antes. *Alexander Giralde*, the Bi-
shop hauing sung a solemne and Pontificall Masse, after the Consecration and Eleuation of the
Sacrament, and deuout Prayers made by him and the people, opened a Booke in which was a
Catalogue of the Saints, by lot to chuse some he or she Saint, whom God should please to ap-
point their Aduocate against that Calamitie. And the Lot fell vpon Saint *Saturnine* whose Feast
is on the nine and twentieth of Nouember: after which the Ant-damage became more tolera-
ble and by little and little diminished, by Gods mercie and intercession of that Saint: I note it
the rather, because the Bishop and that Saint were both *Romanes*, and as that Martyr had made
mute the Idols in *Toledo*, (as is written in the Historie of his Martyrdome) so now was Idolatry
(and I pray what was this?) destroyed in *Hispaniola*? Hee might haue said exchanged! a piti-
full case that when God hath sent his owne Sonne made of a woman, made vnder the Law, &c. Who
hath dyed for our (yea, that Martyrs) sinnes, risen for our Iustification, ascended on high to giue gifts
to men; and is there, and therefore, set downe at Gods right hand to make intercession for vs sinners, to
take possession for vs mortals, to accomplish, as our Amen, all the promises of this life, and that which
is to come, whether against Ants or Deuils; and in him it hath pleased the Father that all fulnesse
should dwell; yea (beyond and it pleased) in him dwelleth the fulnesse of the Godhead bodily, and we are
compleate in him, and he is all in all, yesterday, to day, the same for ever; which hath loued vs, and gi-
uen himselfe for vs, which is loue, which hath invited vs, Come to me all ye that labour, which hath
incited vs by all attractiues: that after all this, men, Christian men should goe cast Lots for an
Intercessor, and neglecting Christ, dreame of *Romane* carnall phancies, or runne mad with *Romish*
superstitious phrenies; wherein if the bodie be deliuered, as happened to the *lusting Israelites*,
with their *Quaile-store*, the burthen is made double to the soule, when God heareth in his anger.
Such Cisternes doe they digge which forsake the Fountaine of liuing waters, euen broken Cisternes
which can hold no waters: the best of Saints like the wise Virgins, hauing no more Oile then will suf-
fice their owne Lampes, and that also receiued out of anothers fulnesse, of whose fulnesse wee all haue
receiued grace for grace; said a principall Saint.

There are Caterpillers, which shine in the night fiftie or a hundred paces off, only from that
part of the bodie whence the legges issue: others only haue their head shining. I haue seene
some a spanne long very fearefull, but for any thing I haue heard, harmelesse. Flies are lesse, but
more hurtfull then in *Spaine*: but these in kindes and colours are so diuersified that it is impossi-
ble to write them: and so may be said of other small creatures in those parts.

In his sixteenth Booke he declareth the Conquest of the Ile *Borichen*, or Saint *John* and the
quarrels betwixt the *Spauiards*, the learning of some breeding such dissentions, that not with-
out cause (saith our Author) in Golden *Castile* and in other parts, the King forbad Law-learned
men and Proctors should passe thither, as men infectious by sowing strife where they ought not.
In this Ile, the people and other things are as before is said of *Hispaniola*; there are more Birds
in Saint *John*, rich Mineralls of Gold, certaine Battes which the people eate; and *Lig-
num Sanctum* groweth there, more excellent then the *Guaiacan* for the *French Disease*
and others.

In his seuenteenth Booke he writeth of *Cuba*. The people and other things are much like to
Hispaniola. In their Mariages, all the guests of the Bridegroomes ranke (as *Caciques*, if hee bee
a *Cacique* or Principall, or Plebeians as he is) lye with the Spouse before he himselfe may doe it:
after which she with her fist bent comes crying with a loud voyce, *Manicato, Manicato*, that is
forced and full of force, as glorying in her shame. They are in vices like thole of *Hispaniola*, and
will be no better *Christians* then other *Indians*, whatsoever *Peter Martyr* writeth from *Encises*
Relations. For I haue seene more *Indians* then they both, and by experience of those Nations
know, that none or very few of them are *Christians* of their owne will and accord: and when
any are baptized being of age, he doth it more for some by-purpose then for zeale of the faith:
for there remaines to him nothing but the name, which also soone after he forgets. Perhaps there
are some faithfull, but I beleue they are very rare.

The Creatures and Plants of *Spaine* prosper well there, as doe the naturall which are the same
which are in *Hispaniola*. The people were exhausted when they first went into *New Spaine*,
and with the second Armie of *Grigialna*, and with the third of *Cortese*, and with the fourth of
Pamphilo di Narbaez, all by order of Lieutenant *Velasco*: whereby *Cuba* was in manner dispeo-
pled, and by the former causes mentioned of *Hispaniola*, and by the contagion of the small
Pockes which was vniuersall in all these Ilands: So that the Great God hath in manner wholly
extinguished them for their (not without others) sinnes. They haue much Gold and Brasie:
vse to fish much with the *Rouer* so before mentioned, as also that Wild-goose chase. There are
innumerable Cranes, such as are in *Spaine*; the Boyes take infinite Egges and young ones. There
are Turtles greater then in *Spaine*. Euery yeare there passe from the end of *Cuba* infinite numbers
of diuers sorts of Birds, which come from the North of the firme Land, and crosse ouer the *A-
lacrain* Ilands and *Cuba*, and flye ouer the Gulfe Southwards. I haue seene them passe ouer *Da-
rien* and *Nombre de dios* and *Panama* in diuers yeeres, in the *Firme Land*; so many that they co-
uer

uer the Skie : and this passage or march continueth a moneth or more about the moneth of March. I thinke they flie round about the World ; for they neuer are seene to returne toward the West or North : and we see them not every yeere one after another ; from morning to night the aire is couered, and some flie so high that they cannot bee seene, others lower yet higher then the Mountaines tops. They come from the North-west and North to the Southwards, and then turne South-west, occupying in length more then the eye can discerne, and a great space in breadth. The lowest are Eaglets and Eagles, and all seeme Birds of prey of many kinds and plumes : The higher cannot bee discerned in their plumes, but in manner of flying and quantitie appeare of diuers sorts.

- 30 There haue beene Serpents killed in *Cuba*, as bigge as a mans thigh, and five and twentie, or thirtie foot long and more. They are tame, and the *Indians* eat them, and find sometimes in their bellies fixe or seuen creatures bigger then Conies, which they swallow whole.

I am loth to lead you with this Author along with *Grigialua*, in his long Expedition from hence to *Lucatan* and other parts. Neere to *Porto de Termini*, he found two Trees seeming set by hand, standing alone, and fittene paces off diuers Idols of Chalke. They saw two Images made of the wood *Copei*, in manner of *Sodomiticall* villenie ioyned together; and another of Chalke with his circumcised member betwixt his hands.

L. 17. c. 18.

Abominable deuotions.

- 40 *Jamaica* was in people, vices, creatures and other things like the former : they were the Inuentors of the reuerse-fishing and Goose-catching with Gourds or Pömpions afore said, which sometimes they practised also with leaues and Greene boughes on their heads, and vsed that Garland, as is before said of the Pömpions. Of *Cubagua* the Pearle Iland and of the Pearle-fishing is spoken before. In *Cubagua* is a bituminous Fountayne, hauing otherwise no water to drinke, nor Hearbes, nor Trees but a few of *Guaiacan*, nor any living creatures, though at first comming of the Christians there were a few Conies. At the East point is the Fountayne running into the Sea with an Oily substance floating on it, profitable for Medicine there called *Devils Dung*. They that lue there, fetch their water seuen leagues off from *Cumana*, on the firme Land, and wood from *Margarita*. The Kings fifth of the Pearle-fishing hath yeelded 15000. Duckets yearly : a thing not knowne that so many Pearles haue beene taken from so small a space, the Iland of *Cubagua* not compassing about three leagues. In the Gulfe of *Orotigna*, and the Ilands

L. 18. c. 2.

L. 19. c. 2. Pitch Fountaine.

- 50 therein in the Prouince of *Nicaragua* on the South Sea, are many shel-fishes of a long forme, some a Cubit long, some lesse, created, growing broader and broader to the end when they are opened: they haue a fishie substance within them, and shine within as the Pearle-oysters doe, halfe their length, thence by degrees loosing that shining toward the broader end. The Pearles within them are not so fine as the other. The *Indians* vie the shels to digge their loose ground, fastning the shell to a handle of wood, binding it fast and making a kind of Spade thereof.

C. 9.

Two shel-fishes which yeeld Pearles.

- In the yeare 1517. An *Englishman* vnder colour of Discouery came with a great ship towards *Brasil* on the Firme Land, and thence trauesed to *Hispaniola*, and came neere the Hauen of *Saint Domingo*, and sent his Boat full of people on shoare, and desired Trade. But the Capitaine of the Fort shot from the Castle at the Boate, because shee came directly to the Port; and thereupon they returned to their ship. The *English* seeing this entertainment, tooke their course towards the Iland of *Saint Iohn*, and entred the Port of *Saint German*, and there demanded victuals and prouisions for their ship, complaining of the wrong done them at *Saint Domingo*, comming thither for Trade, to buy with their Mony, and to barter Commodities. There they got some victuals for which they paid in wrought pieces of Pewter and other things: and so returned towards *Europe*, where it is likely they came not; for there was neuer any more heard of them.

English voyage to the West Indies, A. 1517.

L. 19. c. 13.

* He calls him a Pirate, but sheweth no reason of that name. Pewter.

- The next yeare a *French* Pirat guided by a *Spanish* Pilot, came to trade in the Iland of Pearles and a *Portugall* Carauell which he had taken on the Coast of *Brasil*, and would haue landed his Boats full of men, but was resisted, and a Battel betwixt both parts followed, in which thirteene

L. 20.

- 60 *Frenchmen* were slaine, and two of ours. Three or foure *Nauarrois* and *Biskainers* fled from them and said the *French* were Theeues and came to take the Iland: whereupon they went with all their strength, and tooke her Boat, and the ship fled out of sight, &c.

L. 20. c. 3.

- Oniedos* twentieth Booke is of shipwrackes and disaduentures which haue happened to the *Spaniards* in those parts. One which happened 1514. is admirable, the ship sinking and five and twentie persons escaping in the Boat, fast forbidding prouision of Card, Compasse or victuall, to save their liues. Thus liued they twelue dayes at Sea; neither had they any thing to eat or drinke, only a young man had saved two pounds of Bisket, which being diuided amongst them, he which had most had not about an ounce and halfe. Vrine, or the Sea was their drinke. In this case they made Vowes to our Ladie of *Antica in Sinill*: and on the twelfth day

- 60 hauing made a Saile of their shirts, they came to *Siluer-port* in *Hispaniola*. Their Pilot *Anto Caluo* told me the Storie. The same yeare in the Fleet of *Pedarias de Anilla* a *Portugall* youth, being scuffed at, and flouted by the *Spaniards*, leaped into the Sea in a fresh gale, and not without the wonder of all men was taken vp by another ship alieue, whom after I saw vaunting of this folly, and saying that no *Castilian* dur it haue done it; which I easily beleuee, as hauing more wit then this

Foole. Yet will I imitate a little this foolish Portugall, and leape out of *Quiedos Spanish ship* (for who will not feare such dreadfull shipwrackes as this Booke, the last which hath come to our hands, is full of?) and swim ashore, or seeke other passage with *Acosta*, in a new or rather an old Voyage for Discoverie of the *Mexican Antiquities*.

CHAP. IIII.

Mexican Antiquities gathered out of the Writings of IOSEPHVS ACOSTA a learned Iesuite.

2.7.
Eccles. 1.

Very Historie well written is profitable to the Reader: For as the Wiseman saith, That which hath beene, is, and that which shall bee, is that which hath beene: *Humane things haue much resemblance in themselves, and some grow wise by that which happeneth to others.* There is no Nation, how barbarous soeuer, that haue not something in them, good, and worthy of commendation; nor Common-weale so well ordered, that hath not something blame-worthy, and to bee controlled. If therefore there were no other fruit in the Historie and Narration of the Deeds and Gestes of the Indians, but this common vtilitie, to be a Relation or Historie of things, the which in the effect of truth haue happened, it deserueth to bee received as a profitable thing, neither ought it to bee reiected, for that it concerns the Indians. As wee see that those Authors that treat of naturall things, write not onely of generous Beasts, notable and rare Plants, and of Precious Stones, but also of wilde Beasts, common Hearbes, and base and vulgar Stones, for that there is alwayes in them some properties worthy obseruation. If therefore there were nothing else in this Discourse, but that it is a Historie, and no fables nor fictions, it were no unworthy Subject to be written, or read. There is yet another more particular reason, which is, that we ought herein to esteeme that which is worthy of memorie, both for that it is a Nation little esteemed, and also a Subject different from that of our Europe, as these Nations bee, wherein wee should take most pleasure and content, to vnderstand the ground of their beginning, their manner of life, with their happie and unhappie Adventures. And this subject is not onely pleasant and agreeable, but also profitable, especially to such as haue the charge to rule and gouerne them; for the knowledge of their Acts inuities vs to giue credit, and doth partly teach how they ought to be intreated: yea, it takes away much of that common and foolish contempt wherein they of Europe hold them, supposing that those Nations haue no feeling of reason. For in truth wee cannot cleere this error better, than by the true report of the Acts and deeds of this people. I will therefore as briefly as I can, intreat of the beginning, proceedings and notable deeds of the Mexicanes, whereby wee may know the time and the disposition that the high God would choafe, to send vnto these Nations the Light of the Gospell of Iesus Christ his only Sonne our Lord, whom I beseech to second our small labour, that it may bee to the glorie of his Diuine greatnesse, and some profit to these people, to whom he hath imparted the Law of his holy Gospell.

§. I

Of the ancient Inhabitants of New Spaine, and of the sixe Linages of the Nauatlacas. Of the Mexican Exodus, and Adventures by the way: the foundation of Mexico, their first King and Tribute.

L. 7. c. 2.

Chichimecas.
Their savage
course of life.

The ancient and first Inhabitants of those Prouinces, which wee call New Spaine, were men very barbarous and sauage, which liued onely by hunting, for this reason they were called *Chichimecas*. They did neither sow nor till the ground, neither liued they together; for all their exercise was to hunt, wherein they were very expert. They liued in the roughest parts of the Mountaynes beast-like, without any policie, and they went all naked. They hunted wilde Beasts, Hares, Conies, Weezels, Mowles, wild Cats, and Birds, yea vncleane beasts, as Snakes, Lizards, Locusts and Wormes, whercon they fed, with some hearbs and roots. They slept in the Mountaynes, in caues and in bushes, and the wiues likewise went a hunting with their husbands, leauing their young children in a little panier of Reeds, tyed to the boughes of a Tree, which desired not to sucke vntill they were returned from hunting. They had no Superiours, nor did acknowledge or worship any gods, neither had any manner of Ceremonies or Religion.

There is yet to this day in New Spaine of this kind of people, which liue by their Bowes and Arrowes, the which are very hurtfull, for that they gather together in troopes to doe mischief.

chiefe, and to rob: neither can the Spaniards by force or cunning reduce them to any policie or obedience: for having no Townes nor places of residence, to fight with them, were properly to hunt after savage beasts, which scatter and hide themselves in the most rough and covered places of the Mountaynes. Such is their manner of living euen to this day, in many Prouinces of the Indies. Those in New Spaine, which they call *Ottomies*, were of this sort; being commonly poore Indians, inhabiting a rough and barren Land, and yet they are in good numbers, and liue together with some order, and such as doe know them, find them no lesse apt and capeable of matters of Christian Religion, then others which are held to be more rich and better gouerned. Comming therefore to our subiect, the *Chichimecas* and *Ottomies* which were the first Inhabitants of New Spaine, for that they did neither till nor sowe the Land, left the best and most fertile of the Countrey vnpeopled, which Nations that came from farre did possesse, whom they called *Nauatalcas*, for that it was a more ciuill and politicke Nation; this word signifies a people that speaks well, in respect of other barbarous Nations without reason. These second peoplers *Nauatalcas*, came from other farre Countreyes, which lye toward the North, where now they haue discovered a Kingdome they call *New Mexico*.

There are two Prouinces in this Countrey, the one called *Aztlan*, which is to say a place of Herons: the other *Tuculhuacan*, which signifies a Land of such, whose Grandfathers were diuine. The Inhabitants of these Prouinces haue their houses, their Lands tilled, Gods, Customes, and Ceremonies, with like order and gouernment to the *Nauatalcas*, and are diuided into seven Tribes or Nations: and for that they haue a custome in this Prouince, that euery one of these Linages hath his place and priuate Territorie, the *Nauatalcas* paint their beginning and first Territorie in figure of a Caue, and say that they came forth of seven Caues to come and people the Land of Mexico, whereof they make mention in their Historie, where they paint seven Caues and men coming forth of them. By the supputation of their Bookes, it is aboute eight hundred yeeres since these *Nauatalcas* came forth of their Countrey, reducing which to our accompt, was about the yeere of our Lord 720. When they left their Countrey to come to Mexico, they stayed fourescore yeeres vpon the way; and the cause of this their long stay in their Voyage, was, that their Gods (which without doubt were Devils, and spake visibly vnto them) had perswaded them to seeke new Lands that had certaine signes. And therefore they came discovering the whole Land, to search for these tokens which their Idols had giuen them; and in places where they found any good dwellings, they peopled it, and laboured the Land, and as they discovered better Countreyes, they left those which they had first peopled; leauing still some, especially the aged, sicke folkes, and the wearie, yea, they did plant and build there, whereof wee see the remainders at this day. In the way where they passed, they spent fourescore yeeres in this manner of leisurely trauell, the which they might haue done in a moneth. By this meanes they entered the Land of Mexico, in the yeere 902. after our computation.

These seven Linages I haue spoken of, came not forth altogether: the first were the *Suchimilcos*, which signifie a Nation of the seeds of flowres. Those peopled the bankes of the great Lake of Mexico towards the South, and did build a Citie of their name, and many Villages. Long time after came they of the second Linage called *Chalcas*, which signifies people of mounthes, who also built a Citie of their name, diuiding their limits and Territories with the *Suchimilcos*. The third were the *Tepanecas*, which signifies people of the bridge: they did inhabite vpon the banke of the Lake towards the West, and they increased so, as they called the chiefe and Metropolitane of their Prouince, *Axcapuzcalco*, which is to say, an Ants Nest, and they continued long time mightie. After them came those that peopled *Tescuco*, which be those of *Culhua*, which is to say, a crooked people: for that in their Countrey there was a Mountaine much bending. And in this sort this Lake was enuironed with these foure Nations, these inhabiting on the East, and the *Tepanecas* on the North. These of *Tescuco*, were held for great Courtiers, for their tongue and pronounciation is very sweet and pleasant. Then arriued the *Tlallucans*, which signifies men of the Sierre or Mountaine. Those were the most rude and grosse of all the rest, who finding all the Plaines about the Lake possessed euen vnto the Sierre, they passed to the other side of the Mountaine, where they found a very fertile, spacious and warme Countrey, where they built many great Villages, calling the Metropolitane of their Prouince *Quahunachua*, which is as much to say, as a place that sounds the voice of an Eagle, which our common people call by corruption, *Quernanaca*, and at this day they call this Prouince, the *Marquisate*. Those of the sixt Generation, which are the *Tlascaltecas*, which is to say, Men of bread, passed the Mountaine towards the East, crossing all the Sierre, or Mountaine of *Menade*, where that famous *Vulcan* is betwixt Mexico and the Citie of *Angels*, where they did find a good Countrey, making many buildings. They built many Townes and Cities, whereof the Metropolitane was called by their name *Tlascala*. This is the Nation which fauoured the Spaniards at their entrie, by whose helpe they did winne this Countrey, and therefore to this day they pay no Tribute, but enioy a generall exemption. When all these Nations peopled these Countreyes, the *Chichimecas* being the ancient Inhabitants, made no resistance, but fled, and as people amazed, they hid themselves in the most obscure of the Rockes. But those that inhabited on the other side of the Moun-

Giants,

Mountaine where the *Tlascaltecan*s had planted themselves, did not suffer them in quiet, as the rest of the *Chichimecan*s had done, but they put themselves in defence to preserve their Country, and being Giants as the Histories report, they fought to expell the last Commers, but they were vanquish't by the policy of the *Tlascaltecan*s, who counterfeiting a peace with them, invited them to a great banquet, and when they were busiest in their drunkenesse, there were some laid in ambush, who secretly stole away their weapons, which were great Clubs, Targets, Swords of wood, and other such armes. Then did they suddenly set vpon them, and the *Chichimecan*s seeking to defend themselves, they did want their armes, so as they fled to the Mountaines and Forests adioyning, where they pulled downe Trees, as if they had beene stalkes of Lettuces. But in the end, the *Tlascaltecan*s being armed, and marching in order, they defeated all the Giants, not leaving one alive. We must not hold this of the Giants to be strange, or a fable; for at this day we finde dead mens bones of an incredible bignesse.

Note of Giants.

When I was in *Mexico*, in the yeere 1586. they found one of those Giants buried in one of our Farmes, which we call *Iesus du Mont*, of whom they brought a tooth to bee seene, which (without augmenting) was as bigge as the fist of a man, and according to this, all the rest was proportionable, which I saw and admired at his deformed greatnesse. The *Tlascaltecan*s by this victorie remayned peaceable, and so did the rest of the Linages. These sixe Linages did alwayes entertaine amitie together, marrying their children one with another, and diuiding their limits quietly: then they studied with an emulation to encrease and beautifie their Commonweale.

Beginnings of ciuilitie.

The barbarous *Chichimecan*s, seeing what passed, began to vse some gouernment, and to apparell themselves, being ashamed of what had passed: for till then they had no shame. And hauing abandoned feare by their communication with these other people, they began to learne many things of them, building small Cottages, hauing some policy and gouernment. They did also chooe Lords, whom they did acknowledge for their Superiors, by meanes whereof they did in a manner quite abandon this brutish life, yet did they alwayes continue in the Mountaines diuided from the rest.

Of the Mexican departure, of their journey and peopling the Province of Mechoacan. Ch. 4.

Three hundred and two yeeres after the former two Linages had left their Country, to inhabit New Spaine, the Country being now well peopled, and reduced to some forme of gouernment, Those of the seventh Caue or Line arriued, which is the *Mexicane* Nation, the which like vnto the rest, left the Province of *Aztlan*, and *Teuculhuacan*, a politike, courtlike, and warlike Nation. They did worship the Idoll *Kuzliputzli*, the Deuill that was in this Idoll spake, and gouerned this Nation easily. This Idoll commanded them to leaue their Country, promising to make them Princes and Lords ouer all the Provinces which the other sixe Nations did possesse, that he would giue them a Land abounding with gold, siluer, precious stones, feathers, and rich mantels: whereupon they went forth, carrying their Idoll with them in a Coffe of Reedes, supported by foure of their principall Priests, with whom he did talke and reueale vnto them in secret, the successe of their way and voyage, aduising them of what should happen. He likewise gaue them Lawes, and taught them the customes, ceremonies, and sacrifices they should obserue. They did not aduance nor mooue without commandement from this Idoll. He gaue them notice when to march, and when to stay in any place, wherein they wholly obeyed him. The first thing they did wherefoeuer they came, was to build a House or Tabernacle for their false god, which they set alwayes in the midst of their Campe, and there placed the Arke vpon an Altar, in the same manner as they haue vsed in the holy Christian Church. This done, they sowed their land for bread and pulles, which they vsed: and they were so addicted to the obedience of their god, that if he commanded them to gather, they gathered, but if he commanded them to raise their Campe, all was left there for the nourishment of the aged, sicke, and wearie, which they left purposely from place to place, that they might people it, pretending by this meanes, that all the Land should remaine inhabited by their Nation.

Deuills emulation of that worke of God in bringing Israel out of Egypt, and passing thorow the desert to Canaan. Tabernacle. Arke.

We may well iudge what this *Kuzliputzli* was, for that there was neuer seene nor heard speake of customes more superstitious, nor sacrifices more cruell and inhumane, then those which he taught them. To conclude, they were inuited by the enimie of mankind. The Chiefe and Capitaine whom they followed, was called *Mexi*, whence came the name of *Mexico*, and of the *Mexican* Nation. This people marching thus at leisure, as the other sixe Nations had done, peopling and tilling the Land in diuers parts, whereof there is yet some shewes and ruines: and after they had endured many trauels and dangers, in the end they came to the Province of *Mechoacan*, which is as much to say, as a land of fish, for there is great abundance in goodly great Lakes, where contenting themselves with the situation and temperature of the ground, they resolved to stay there. Yet hauing consulted with their Idoll vpon this point, and finding him unwilling, they demanded license to leaue some of their men to people so good a Land, the which he granted, teaching them the meanes how to doe it, which was, that when the Men and Women should be entred into a goodly Lake called *Pascuaro*, to bathe themselves, those which remayned on Land, should steale away all their clothes, and then secretly raise their Campe, and depart without any bruit, the which was effected, and the rest which dreamt not of this deceit (for the pleasure they tooke in bathing) comming forth and finding themselves spoyled of their

garments,

garments, and thus mocked and left by their Companions, they remayned discontented and vexed therewith: so as to make shew of the hatred they had conceiued against them, they say that they changed their manner of life and their language: At the least it is most certaine, that the *Mechouacans* haue beene alwayes enemies to the *Mexicans*, and therefore they came to congratulate the *Marquesse De Valle*, after his victorie obtayned when he had conquered *Mexico*.

the

- From *Mechouacan* to *Mexico*, are about fiftie leagues, and vpon the way is *Malinalco*, where it happened, that complaying to their Idoll of a woman that was a notable witch, which came in their company carrying the name of their sister to their god, for that with her wicked artes shee did them much harme, pretending by certaine meanes to bee worshipped of them as their goddess: the Idoll spake in a dreame to one of those old men that carried the Arke, commanding him to comfort the people, making them new and great promises, and that they should leaue this his sister with her family, being cruell and bad, rayling their Campe at mid-night in great silence, leauing no shew what way they passed. So they did, and the Witch remayning alone with her family in this sort, peopled a Towne which they call *Malinalco*, the Inhabitants whereof are held for great Sorcerers, being issued from such a mother. The *Mexicans* for that they were greatly diminished by these diuisions, and by the number of sicke and wearied persons, which they had left behinde, meant to repayre themselves, and to stay in a place called *Tula*, which signifies a place of Reedes. There their Idoll commanded them to stop a great Riuer, that it might couer a great Playne, and by the meanes he taught them, they did inuiron a little Hill called *Copatepec*, making a great Lake, the which they did plant round about with Willowes, Elmes, Sapines, and other Trees. There began to breede much fish, and many birds came thither: so as it became a very pleasant place. The situation of this place, seeming pleasant vnto them, and being wearied with trauell, many talked of peopling there, and to passe no farther: wherewith the Deuill was much displeased, threatning the Priests with death, commanding them to returne the Riuer to her course, saying, that hee would that night chastise those which had beene disobedient as they had deserued. And as to doe ill is proper to the Deuill, and that the diuine Iustice doth often suffer such to be deliuered into the hands of such a Tormentor, that choose him for their god; It chanced that about mid-night they heard a great noyse in one part of the Campe, and in the morning going thither, they found those dead that had talked of staying there. The manner of their death, was, that their stomacks were opened, and their hearts pulled out. And by that meanes, this good god taught these poore miserable Creatures, the kindes of sacrifices that pleased him, which was, in opening the stomacke, to pull out the heart, as they haue since practised in their horrible sacrifices. Seeing this punishment, and that the Playne was dried, the Lake being emptied, they asked counsell of their god what to doe, who commanded them to passe on, the which they did by little and little, vntill they came to *Chapultepec*, a league from *Mexico*, famous for the pleasantnesse thereof. They did fortifie themselves in these Mountaines, fearing the Nations which inhabited that Country, the which were opposite vnto them, especially for that one named *Copil*, sonne to this Sorceresse, left in *Malinalco*, had blamed and spoken ill of the *Mexicans*: for this *Copil* by the commandement of his mother, awhile after followed the *Mexicans* course, labouring to incense the *Tapanecas*, and other neighbours against them, euen vnto the *Chalcas*: so as they came with a strong Armie to destroy the *Mexicans*. *Copil* in the meane space stood vpon a little Hill in the midst of a Lake, called *Acopilco*, attending the destruction of his Enemies, and they by the aduice of their Idoll, went against him, tooke him suddenly, and slue him, carrying his heart to their god, who commanded them to cast it into the Lake, sayning that thereof did grow a plant called *Tunal*, where since *Mexico* was built. They came to fight with the *Chalcas*, and other Nations, hauing chosen for their Captaine, a valiant man, called *Uitzilonilti*, who in an encounter, was taken and slaine by the Enemies. But for all this, they were not discouraged, but fought valiantly; and in despite of their Enemies they brake the squadrons, and carrying their Aged, their Women, and young Children in the midst of their battaile, they passed on to *Atlacayanaya*, a Towne of the *Culhuans*, whom they found solemnising of a Feast, in which place they fortified. The *Chalcas*, nor the other Nations did not follow them, but grieved to be defeated by so small a number of men; they being in so great multitudes tetyred to their Townes.
- The *Mexicans*, by the aduice of their Idoll, sent their Messengers to the Lord of *Culhuacan*, to demand a place to dwell in; who after hee had imparted it to his people, granted them the place of *Ticaapan*, which signifies *white waters*, to the end they should all perish there, being full of Vipers, Snakes, and other venemous beasts, which bred in a Hill neere adioyning. But being perswaded and taught by their Deuill, they accepted willingly what was offered, and by their deuillish arte, tamed these beasts, so as they did them no harme; yea, they vsed them as meate, eating them with delight and appetite. The which the Lord of *Culhuacan* seeing, and that they had tilled and sowed the Land, he resolved to receiue them into the Citie, and to contract amitie with them. But the god whom the *Mexicans* did worship (as he is accustomed to do no good, but ill) said vnto his Priests, that this was not the place where hee would haue them stay, and that they must go forth making warres. Therefore they must seeke forth a Woman, and name her

the *Goddeſſe of Diſcord*. Whereupon they reſolved to ſend to the King of *Calhuacan*, to demand his daughter to be Queene of the *Mexicans*, and mother to their god, who receiued this ambassage willingly, ſending his daughter preſently gorgeouſly attired and well accompanied. The ſame night ſhee arrived, by order of the murtherer whom they worſhipped, they killed her cruelly; and hauing ſlayed her artificially as they could doe, they did clothe a young man with her ſkin, and thereupon her apparell, placing him neere their Idoll, dedicating him for a *Goddeſſe and the mother of their god*, and euer after did worſhip it, making an Idoll which they called *Toccy*, which is to ſay, *our grand mother*. Not content with this crueltie, they did maliciously inuite the King of *Calhuacan*, the father of the young Maid, to come and worſhip his daughter, who was now conſecrated a goddeſſe, who comming with great Preſents, and well accompanied with his people, he was led into a very darke Chappell where their Idoll was, that he might offer ſacrifice to his daughter that was in that place. But it chanced that the Incenſe that was vpon the harth, according to their cuſtome, kindled in ſuch fort, as he might diſcerne his daughters haire, and hauing by this meanes diſcouered the crueltie and deceit, he went forth crying aloud, and with all his men he fell vpon the *Mexicans*, forcing them to retyre to the Lake, ſo as they were almoſt drowned. The *Mexicans* defended themſelues, caſting certaine little darts, which they vſed in the warres, wherewith they much galled their enemies. But in the end they got Land, and leauing that place, they coaſted along the Lake, very weary and wet; the Women and little Children crying and making great exclamations againſt them and their god that had brought them into this diſtreſſe. They were inforced to paſſe a Riuer that could not bee waded thorow, and therefore they aduiſed to make ſmall Boates of their Targets and of Reedes, wherein they paſſed. Then afterwards, hauing left *Calhuacan*, they arrived at *Ixtacalco*, and finally to the place where the Hermitage of Saint *Anthony* now is, at the entrie of *Mexico*, and to that quarter which they now call *Saint Paul*. During which time their Idoll did comfort them in their trauels, and encouraged them, promiſing great matters.

The time being now come, that the Father of Iyes ſhould accompliſh his promiſe made to his people, who could no longer ſuffer ſo many turnings, trauels, and dangers, it happened that ſome old Priests or Sorcerers, being entred into a place full of water-lillies, they met with a very faire and cleere current of water, which ſeemed to be ſiluer, and looking about, they found the Trees, Meadowes, Fiſh, and all that they beſeld to be very white: wondering hereat, they remembered a prophesie of their god, whereby he had giuen them that for a token of their place of reſt, and to make them Lords of other Nations. Then weeping for ioy, they returned to the people with theſe good newes. The night following, *Vitzliputzli* appeared in a dreame to an ancient Priest, ſaying, that they ſhould ſeek out a *Tunal* in the Lake, which grew out of a ſtone (which as hee told them, was the ſame place where by his commandement they had caſt the heart of *Copil*, ſonne to the Sorceresse their enemy) and vpon this *Tunal* they ſhould ſee a goodly Eagle, which fed on certaine ſmall birds. When they ſhould ſee this, they ſhould beleue it was the place where their Citie ſhould be built, the which ſhould ſurmout all others, and be famous throughout the World. Morning being come, the old man aſſembled the whole people, from the greateſt to the leaſt, making a long ſpeech vnto them, how much they were bound vnto their god, and of the reuelation, which (although vnworthy) he had receiued that night, concluding that all muſt ſeek out that happy place which was promiſed them; which bred ſuch deuotion and ioy in them all, that preſently they vndertooke the enterpriſe, and diuiding themſelues into Bands, they began to ſearch, following the ſignes of the reuelation of the deſired place. Amidſt the thickeſt of theſe water-lillies in the Lake, they met with the ſame courſe of water they had ſeene the day before, but much differing, being not white, but red, like blood; the which diuided it ſelfe into two ſtreames, whereof the one was of a very obſcure azure, the which bred admiration in them, noting ſome great myſterie, as they ſaid. After much ſearch here and there, the *Tunal* appeared growing on a ſtone, whereon was a Royall Eagle, with the wings diſplayed towards the Sunne, receiuing his heat. About this Eagle were many rich feathers, white, red, yellow, blue, and Greene, of the ſame ſort as they make their Images, which Eagle held in his tallants a goodly bird. Thoſe which ſaw it and knew it to bee the place foretold by the Oracle, fell on their knees, doing great worſhip to the Eagle, which bowed the head looking on euery ſide. Then was there great cries, demonſtrations, and thanks vnto the Creator, and to their great god *Vitzliputzli*, who was their father, and had alwayes told them truth. For this reaſon they called the Citie which they founded there, *Tenoxtiltan*, which ſignifies *Tunal on a ſtone*, and to this day they carry in their Armes, an Eagle vpon a *Tunal*, with a bird in his tallant, and ſtanding with the other vpon the *Tunal*. The day following, by common conſent they made an Hermitage adioyning to the *Tunal* of the Eagle, that the Arke of their god might reſt there, till they might haue meanes to build him a ſumptuous Temple; and ſo they made this Hermitage of Flagges and Turfes couered with ſtraw. Then hauing conſulted with their god, they reſolved to buy of their Neighbours, Stone, Timber, Lime, in exchange of Fiſh, Frogs, and young Kids, and for Ducks, Water-hens, Courlieus, and diuers other kindes of Sea fowles. All which things they did fiſh and hunt for in this Lake, whereof there is great abundance. They went with

with these things to the Markets of the Townes and Cities of the *Tapanecans*, and of them of *Tescuco* their neighbours, and with policy they gathered together by little and little, what was necessarie for the building of their Citie: so as they built a better Chappell for their Idoll of lime Stone Chap- and stone, and laboured to fill vp a great part of the Lake with rubbish. This done, the Idoll pell. spake one night to one of his Priests, in these termes; *Say vnto the Mexicans, that the Noble- Oracle: men diuide themselves euery one with their Kinsfolks and Friends, and that they diuide themselves into foure principall quarters, about the house which you haue built for my rest, and let euery quarter build in his quarter at his pleasure.* The which was put in execution: and those be the foure principall quarters of *Mexico*, which are called at this day *Saint Iean*, *Saint Mary the round*, *Saint Paul*, and *Saint Sebastian*. After this, the *Mexicans* being thus diuided into these foure quarters, their 10 god commanded them to diuide amongst them the gods he should name to them, and that they should giue notice to euery quarter, principall of the other foure partcull quarters, where their gods should bee worshipped. So as vnder euery one of these foure principall quarters, there were many lesse comprehended, according to the number of the Idols which their god commanded them to worship, which they called *Calpulteco*, which is as much to say, as *God of the quarters*. In this manner the Citie of *Mexico Tenoxtiltan* was founded, and grew great.

God of the quarters.

Of the sedition of those of *Tlatelulco*, and of the first Kings the *Mexicans* did choosce chap. 8.

This diuision being made as afore said, some old Men and Ancients held opinion, that in the diuision, they had not respected them as they deserued: for this cause, they and their 20 Kinsfolke did mutinie, and went to seeke another residence: and as they went through the Lake, they found a small piece of Ground or Terrasse, which they call *Tlateloli*, where they inhabited, calling it *Tlatelulco*, which signifies *Place of a Terrasse*. This was the third diuision of the *Mexicans*, since they left their Country. That of *Mecbouacan* being the first, and that of *Malinalco* the second. Those which separated themselves and went to *Tlatelulco*, were famous men, but of bad disposition: and therefore they practised against the *Mexicans* their neighbours, all the ill neighbourhood they could. They had alwayes quarrels against them, and to this day continues their hatred and old leagues. They of *Tenoxtiltan*, seeing them of *Tlatelulco* thus opposite vnto them, and that they multiplied, feared that in time they might surmount them: hereupon they assembled in counsell, where they thought it good to choosce a 30 King, whom they should obey, and strike terrour into their Enemies, that by this meanes they should bee more vnited and stronger among themselves, and their Enemies not presume too much against them. Being thus resolved to choosce a King, they tooke another aduice very profitable and assured, to choosce none among themselves, for the auoyding of dissentions, and to gayne (by their new King) some other neighbour Nations, by whom they were inuiro- ned, being destitute of all succours. All well considered, both to pacifie the King of *Culhuacan*, whom they had greatly offended, hauing slaine and slayed the daughter of his predecessor, and done him so great a scorne, as also to haue a King of the *Mexican* blood, of which genera- tion there were many in *Culhuacan*, which continued there since the time they liued in peace amongst them; they resolved to choosce for their King, a young man called *Acamapixtli*, 40 sonne to a great *Mexican* Prince, and of a Lady, daughter to the King of *Culhuacan*. Pre- sently they sent Ambassadors with a great Present to demand this man, who deliuered their Ambassage in these termes; Great Lord, wee your Vassals and Seruants, placed and shut up in the Weedes and Reedes of the Lake, alone, and abandoned of all the Nations of the World, led one- ly and guided by our god to the place where wee are, which falls in the iurisdiction of your limits of *Ascapulalco*, and of *Tescuco*: Although you haue suffered vs to liue and remayne there, yet will wee not, neither is it reason to liue without a Head and Lord to command, correct, and gouerne vs, instructing vs in the course of our life, and defending vs from our Enemies: Therefore wee come to you, knowing that in your Court and House, there are Children of our generation, linckt and allied with 50 yours, issued from our entrailles, and yours, of our blood and yours, among the which wee haue knowledge of a Grand-child of yours and ours, called *Acamapixtli*. Wee beseech you therefore, to giue him vs for Lord, wee will esteeme him as hee deserues, seeing hee is of the Linage of the Lords of *Mexico*, and the Kings of *Culhuacan*.

Acamapixtli first King of the *Mexicans*

The King hauing consulted vpon this point, and finding it nothing inconuenient to bee al- lied to the *Mexicans*, who were valiant men, made them answer, That they should take his grand-child in good time, adding thereunto, that if he had beene a woman, hee would not haue giuen her, noting the foule fact before spoken of, ending his discourse with these wordes, Let my grand-child goe to serue your god, and be his Lieutenant, to rule and gouerne his Creatures, by whom we liue, who is the Lord of Night, Day, and Windes: Let him goe and be Lord of the Water and Land, and possesse the Mexican Nation, take him in good time, and vse him as my sonne and grand- 60 child. The *Mexicans* gaue him thanks, all ioyntly desiring him to marry him with his owne hand, so as hee gaue him to wife, one of the noblest Ladies amongst them. They conducted the new King and Queene with all honor possible, and made him a solemne reception, going all in generall forth to see the King, whom they led into Palaces which were then but meane, and hauing seated them in Royall Thrones, presently one of the Ancients and an Orator

much esteemed amongst them, did rise vp, speaking in this manner, *My sonne, our Lord and King, thou art welcome to this poore House and Citie, amongst these weeds and mud, where thy poore fathers, Grand-fathers, and Kinsfolks, endure what it pleaseth the Lord of things created. Remember Lord thou comdest hither to be the defence and support of the Mexican Nation, and to be the resemblance of our god Vitzliputzli, wherenpon the charge and government is given thee. Thou knowest we are not in our Country, seeing the Land we possesse at this day is anothers, neither know we what shall become of vs to morrow, or another day: Consider therefore that thou comest not to rest or recreate thy selfe, but rather to indure a new charge under so heavy a burden: wherein thou must continually labour, being slane to this multitude, which is fallen to thy lot, and to all this neighbour people, whom thou must strue to gratifie, and give them contentment, seeing thou knowest we liue upon their Lands, and within their limits.* And ending, he repeated these wordes; *Thou art welcome, Thou and the Queene our Mistris, to this your Realme.* This was the speech of the old man, which with other Orations (which the Mexican Histories doe celebrate) the Children did vse to learne by heart, and so they were kept by Tradition, some of them deserue well to bee reported in their proper termes. The King answering, thanked them, and offered them his care and diligence in their defence and aide in all he could. After they gaue him the Oath, and after their manner set the Royall Crowne vpon his head, the which is like to the Crowne of the Dukes of Venice: the name of *Acamapixtli* their first King, signifies a handfull of Reedes, and therefore they carry in their Armouries a hand holding many arrowes of Reedes.

The *Mexicans* hapned so well in the election of their new King, that in short time they grew to haue some forme of a Commonweale, and to bee famous among strangers; whereupon their neighbours moued with feare, practised to subdue them, especially the *Tapanecans*, who had *Azcapuzalco* for their Metropolitane Citie, to whom the *Mexicans* payed tribute, as strangers dwelling in their Land. For the King of *Azcapuzalco* fearing their power which increased, sought to oppresse the *Mexicans*, and hauing consulted with his subiects, he sent to tell King *Acamapixtli*, that the ordinarie tribute they payed was too little, and that from thenceforth they should bring Firre trees, Sapines, and Willows for the building of the Citie; and moreouer, they should make him a Garden in the water, planted with diuers kindes of Herbes and Pulses, which they should bring vnto him yeerly by water, dressed in this manner, without fayling; which if they did not, he declared them his enemies, and would roote them out. The *Mexicans* were much troubled at this commandement, holding it impossible: and that this demand was to no other end, but to seeke occasion to ruine them. But their god *Vitzliputzli* comforted them, appearing that night to an old man, commanding him to say to the King his sonne in his name, that he should make no difficultie to accept of this tribute, he would helpe them and make the meanes easie, which after happened: for the time of tribute being come, the *Mexicans* carried the Trees that were required, and moreouer, a Garden made and floating in the water, and in it much *Mays* (which is their Corne) already grayned and in the eare: there was also Indian Pepper, Beetes, Tomates, which is a great sappy and sauourie graine, French Pease, Figs, Gourds, and many other things, all ripe, and in their season. Such as haue not seene the Gardens in the Lake of Mexico, in the middest of the water, will not beleue it, but will say it is an inchantment of the Deuill whom they worship: But in truth it is a matter to bee done, and there hath bene often seene of these Gardens floating in the water; for they cast earth vpon Reeds and Grasse, in such sort as it neuer wastes in the water; they sow and plant this ground, so as the graine growes and ripens very well, and then they remoue it from place to place. But it is true, that to make this great Garden easie, and to haue the fruits grow well, is a thing that makes men iudge there was the worke of *Vitzliputzli*, whom otherwise they call *Patillas*, specially hauing neuer made nor seene the like. The King of *Azcapuzalco* wondred much when he saw that accomplished which he held impossible, saying vnto his subiects, that this people had a great god that made all easie vnto them, and he said vnto the *Mexicans*, that seeing their god gaue them all things perfect, he would the yeere following, at the time of tribute, they should bring in their Garden a wilde Ducke, and a Heron, sitting on their egges, in such sort, that they should hatch their young ones as they should arriue, without fayling of a minute, vpon paine of his indignation. The *Mexicans* were much troubled and heauie with this proud and strict command: but their god, as he was accustomed, comforted them in the night, by one of his Priests, saying, that he would take all that charge vpon him, willing them not to feare, but beleue that the day would come, when as the *Azcapuzalcos* should pay with their liues this desire of new Tributes. The time being come, as the *Mexicans* carried all that was demanded of their Gardens, among the Reedes and Weedes of the Garden, they found a Ducke and a Heron hatching their egges, and at the same instant when they arriued at *Azcapuzalco* their young ones disclosed. Whereat the King of *Azcapuzalco* wondring beyond measure, hee said againe to his people, that these were more then humane things, and that the *Mexicans* began as if they would make themselues Lords ouer all those Prouinces. Yet did hee not diminish the order of this tribute, and the *Mexicans* finding not themselues mightie enough, endured this subiection and slauerie the space of fiftie yeeres. In this time the King *Acamapixtli* died, hauing beautified the Citie of Mexico with many goodly buildings, streets, Conduits of water,

water, and great abundance of munition. He reigned in peace and rest fortie yeeres, hauing beene alwayes zealous for the good and increase of the Commonweale.

As he drew neere his end, he did one memorable thing, that hauing lawfull children to whom he might leaue the succession of the Realme, yet would he not doe it, but contrariwise hee spake freely to the Common-weale, that as they had made a free Election of him, so they should choose him that should seeme fittest for their good Government, aduising them therein to haue a care to the good of the Common-weale, and seeming grieued that he left them not freed from Tribute and subiection, he dyed, hauing recommended his wife and children vnto them, he left all his people sorrowfull for his death.

§. II.

Of the second King VITZILOVITLI; and of his Successours and their Acts untill the Reigne of MOTEZUMA their last King.

He Obsequies of the dead King performed, the Ancients, the chiefe of the Realme, and some part of the people assembled together, to choose a King, where the Ancients propounded the necessitie wherein they were, and that it was needfull to choose for chiefe of their Citie, a man that had pittie of age, of Widdowes, and Orphans, and to be a Father of the Common-weale: for in very deed they should be the feathers of his wings, the eye-browes of his eyes, and the beard of his face, that it was necessary hee were valiant, being needfull shortly to vse their forces, as their God had prophesied. Their resolution in the end was to choose a sonne of the Predecessor, vling the like good office in accepting his sonne for Successor, as hee had done to the Common-weale, relying thereon.

This young man was called *Vitzilovitli*, which signifieth a rich feather. They set the Royall Crowne vpon his head, and anointed him, as they haue beene accustomed to do to all their Kings, with an Ointment they call *Diuine*, being the same vnction wherewith they did anoint their Idoll. Presently an Orator made an eloquent speech, exhorting him to arme himselfe with courage, and free them from the trauels, slauerie and miserie they suffered, being oppressed by the *Azcapuzalcos*: which done, all did him homage. This King was not married, and his Counsell held opinion, that it was good to marry him with the Daughter of the King of *Azcapuzalco*, to haue him a friend by this alliance, and to obtaine some diminution of their heauie burthen of Tributes imposed vpon them, and yet they feared lest he should disdaine to giue them his Daughter, by reason they were his Vassals: yet the King of *Azcapuzalco* yeelded thertunto, hauing humbly required him, who with courteous words gaue them his Daughter, called *Ayanchiguall*, whom they led with great pompe and ioy to Mexico, and performed the Ceremonie and Solemnitie of

Marriage, which was to tie a corner of the mans Cloake to a part of the womans Veile, in signe of the band of Martiage. This Queene brought forth a sonne, of whose name they demanded aduice of the King of *Azcapuzalco*, and casting Lots as they had accustomed (being greatly giuen to Southsayings, especially vpon the names of their children) hee would haue his Grand-childe called *Chimalpopoca*, which signifies *A Target casting smoke*. The Queene his Daughter seeing the contentment the King of *Azcupuzalco* had of his Grand-childe, tooke occasion to intreate him to relieue the *Mexicans*, of the heauie burthen of their Tributes, seeing hee had now a Grand-childe *Mexican*, the which the King willingly yeelded vnto, by the aduice of his Counsell, granting (for the Tribute which they paid) to bring yeerely a couple of Duckes and some fish, in signe of subiection, and that they dwelt in his Land. The *Mexicans* by this meanes remained much eased and content, but it lasted little. For the Queene their Protectrix died soone after:

and the yeere following likewise *Vitzilovitli* the King of Mexico died, leauing his sonne *Chimalpopoca* tenne yeeres old; he reigned thirteene yeeres, and died thirtie yeeres old, or little more. He was held for a good King, and carefull in the seruice of his Gods, whose Images hee held Kings to be; and that the honour done to their God, was done to the King who was his Image. For this cause the Kings haue been so affectionate to the seruice of their Gods. This King was carefull to winne the loue of his neighbours, and to trafficke with them, whereby hee augmented his Citie, exercising his men in Warrelke actions in the Lake, disposing them to that which he pretended, as you shall see presently.

The *Mexicans* for successor to their deceased King did choose his sonne *Chimalpopoca*, by common consent, although he were a child of ten yeeres old, being of opinion that it was alwayes necessary to keepe the fauour of the King of *Azcapuzalco*, making his Grand-childe King. They then set him in his Throne, giuing him the Ensignes of warre, with a Bow and Arrows in one hand, and a Sword with Rasors (which they commonly vse) in the right, signifying thereby

Vitzilovitli elected King.

Marriage Ceremonie. Lots and Southsaying.

Kings death

Of *Chimalpopoca* the third King, and his cruell death, &c. the occasion of warre which the *Mexicans* made, Chap. II.

(as they doe say) that they pretended by Armes to set themselves at libertie. The *Mexicans* had great want of water, that of the Lake being very thicke and muddie, and therefore ill to drinke, so as they caused their infant King to desire of his Grand-father the King of *Azcapuzalco*, the water of the Mountaine of *Chapultepec*, which is from *Mexico* a league, as is said before, which they easily obtained, and by their industrie made an Aquaduct of faggots, weeds and flagges, by the which they brought water to their Citie. But because the Citie was built within the Lake, and the Aquaduct did crosse it, it did breake forth in many places, so as they could not enioy the water, as they desired, and had great scarcitie: whereupon, whether they did expressly seeke it, to quarrell with the *Tapanecans*, or that they were moued vpon small occasion, in the end they sent a resolute Ambassage to the King *Azcapuzalco*, saying, they could not vse the water which he had graciously granted them, and therefore they required him to prouide them wood, lime, and stone, and to send his Workmen, that by their meanes they might make a Pipe of stone and lime that should not breake. This message nothing pleased the King, and much lesse his subiects, seeming to be too presumptuous a message, and purposely insolent, for Vassals to their Lord. The chiefe of the Counsell disdainning thereat, said *It was too bold, that not content with permission to line in anothers Land, and to haue water giuen them, but they would haue them goe to serue them: what a matter was that? And whereon presumed this fugitive Nation, shut up in the mud? They would let them know, how fit they were to worke, and to abate their pride, in taking from them their Land and their lines.*

Quarrell with
the Tapanecans.

In these tearmes and choller they left the King, whom they did somewhat suspect, by reason of his Grand-tilde, and consulted againe anew, what they were to doe, where they resolved to make a generall Proclamation, that no *Tapanecan* should haue any commerce or traffique with any *Mexican*, that they should not goe to their Citie, nor receiue any into theirs, vpon paine of death. Whereby we may vnderstand that the King did not absolutely command ouer his people, and that hee gouerned more like a Consull, or a Duke, then a King; although since with their power, the command of Kings increased, growing absolute Tyrants, as you shall see in the last Kings.

The King of
Azcapuzalco

The King of *Azcapuzalco* seeing the resolution of his subiects, which was to kill the *Mexicans*, intreated them first to steale away the young King his Grand-tilde, and afterwards doe what they pleased to the *Mexicans*. All in a manner yeelded hereto, to giue the King contentment, and for pittie they had of the childe; but two of the chiefe were much opposite, inferring, that it was bad counsell, for that *Chimalpopoca*, although hee were of their blood, yet was it but by the Mothers side, and that the Fathers was to be preferred, and therefore they concluded that the first they must kill was *Chimalpopoca* King of *Mexico*, protesting so to doe. The King of *Azcapuzalco* was so troubled with this contradiction, and the resolution they had taken, that soone after for very griefe he fell sicke, and dyed. By whose death the *Tapanecans* finishing their consultation, committed a notable Treason: for one night the young King of *Mexico* sleeping without guard, or feare of any thing, they of *Azcapuzalco* entred his Palace, and slue him suddenly, returning vnseene. The morning being come, when the Nobles went to salute the King, as they were accustomed, they found him slaine with great and cruell wounds; then they cryed out and filled all their Citie with teares, and transported with choller, they presently

King murdered.

fell to Armes, with an intent to reuenge their Kings death. As they ranne vp and downe full of furie and disorder, one of their chiefe Knights stept forth, labouring to appease them, with a graue admonition: *Whither goe yee (said he) O yee Mexicans? quiet your selues, consider that things done without consideration are not well guided, nor come to good end: suppress your griefe, considering that although your King be dead, the Noble blood of the Mexicans is not extinct in him. Wee haue children of our Kings deceased, by whose conduct, succeeding to the Realme, you shall the better execute what you pretend, having a Leader to guide your enterprise, goe not blindly, surcease, and choose a King first, to guide and encourage you against your enemies. In the meane time dissemble discreetly, performing the Funerals of your deceased King, whose bodie you see heere present, for hereafter you shall find better means to take reuenge.* By this meanes the *Mexicans* passed no farther, but stayed to make the Obsequies of their King, whereunto they imited the Lords of *Tescuco*, and *Culhuacan*, reporting vnto them this foule and cruell fact, which the *Tapanecans* had committed, mouing them to haue pittie on them, and incensing them against their enemies, concluding that their resolution was to die, or to bee reuenged of so great an indignitie, intreating them not to fauour so vnjust a fact of their enemies; and that for their part, they desired not their aide of Armes or men, but onely to be lookers on of what should passe, and that for their maintenance, they would not stop nor hinder the commerce, as the *Tapanecans* had done. At these speeches they of *Tescuco* and *Culhuacan* made them great shewes of good will, and that they were well satisfied, offering them their Cities, and all the Commerce they desired, that they desired, that they might prouide victuall and Munition at their pleasure, both by land and water. After this, the *Mexicans* intreated them to stay with them, and assist at the election of their King, the which they like wise granted, to giue them contentment.

The King

The King

The

The Electors being assembled, an old man that was held for a great Orator, rose vp, who (as the Histories report) spake in this manner, *The light of your eyes, O Mexicans, is darkened, but not of your hearts: for although you haue lost him that was the light and guide of the Mexican Common-weale, yet that of the heart remaines: to consider, that although they haue slaine one man, yet there are others that may supply with advantage, the want we haue of him: the Mexican Nobilitie is not extinguished thereby, nor the blond Royall decayed. Turne your eyes and looke about you, you shall see the Nobilitie of Mexico set in order, not one or two, but many and excellent Princes, Sons to Acamapixtli, our true and lawfull King and Lord. Here you may choose at your pleasure, saying, I will this man, and not that. If you haue lost a Father, heere you may find both Father and Mother: make account O*
 10 *Mexicans, that the Sunne is eclipsed and darkened for a time, and will returne suddenly. If Mexico hath bene darkened by the death of your King, the Sunne will soone shew, in choosing another King. Look to whom, and upon whom you shall cast your eyes, and towards whom your heart is inclined, and this is he whom your God Vitzliputzli hath chosen. And continuing awhile this discourse, he ended to the satisfaction of all men. In the end, by the consent of this Counsell, Ixcalt was chosen King, which signifies a Snake of Rasors, who was Sonne to the first King Acamapixtli, by a slave of his: and although he were not legitimate, yet they made choice of him, for that hee exceeded the rest in behauiour, valour, and magnanimitie of courage. All seemed very well satisfied, and about all, these of Tescuco, for their King was married to a sister of Ixcalts. After the King had bene crowned and set in his Royall Seat, another Orator stept vp, discoursing how the*
 20 *King was bound to his Common-weale, and of the courage he ought to shew in trauell, speaking thus, Behold this day we depend on thee, it may be thou wilt let fall the burthen that lies upon thy Souldiers, and suffer the old man and woman, the Orphelin and the widow to perish. Take pittie of the Infants that goe creeping in the Ayre, who must perish if our enemies surmount vs: unfold then, and stretch forth thy Gloake, my Lord, to beare these Infants upon thy shoulders, which bee the poore and the common people, who liue assured vnder the shadow of thy wings, and of thy bounty. Uttering many other words vpon this subiect, the which, (as I haue said) they learne by heart, for the exercise of their children, and after did teach them as a Lesson to those that began to learne the facultie of Orators.*

In the meane time, the Tapanecans were resolute to destroy the Mexicans, and to this end
 30 they had made great preparations. And therefore the new King tooke counsell for the proclaiming of Warre, and to fight with those that had so much wronged them. But the common people, seeing their Aduersaries to exceed them farre in numbers and munition for the warre, they came amazed to their King, pressing him not to vndertake so dangerous a warre, which would destroy their poore Citie and Nation: whereupon being demanded what aduice were fittest to take, they made answer, that the King of Azcapuzalco was very pittifull, that they should demand peace, and offer to serue him, drawing them forth those Martires, and that hee should giue them houses and lands among his subjects, that by this meanes they might depend all vpon one Lord. And for the obtaining hereof, they should carrie their God in his Litter for an Intercessor. The cries of the people were of such force (hauing some Nobles that approoued
 40 their opinion) as presently they called for the Priests, preparing the Litter and their God, to performe the Voyage. As this was preparing, and euery one yeelded to this treatie of peace, and to subject themselves to the Tapanecans, a gallant young man, and of good sort, stept out among the people, who with a resolute countenance spake thus vnto them, *What meanes this O yee Mexicans, are yee mad? How hath so great cowardise crept in among vs? Shall wee goe and yeeld our selues thus to the Azcapuzalcans? Then turning to the King he said, How now my Lord, will you endure this? Speake to the people, that they may suffer vs to find out some meanes for our honour and defence, and not yeeld our selues so simply and shamefully into the hands of our enemies. This young man was called Tlacaellec, Nephew to the King, he was the most valiant Captaine and greatest Counsellor that euer the Mexicans had, as you shall see hereafter. Ixcalt encouraged by that his*
 50 *Nephew had so wisely spoken, retained the people, saying they should first suffer him to try another better meanes. Then turning towards his Nobilitie, he said vnto them, You are all beeing my Kinsmen, and the best of Mexico, he that hath the courage to carrie a message to the Tapanecans, let him rise up. They looked one vpon another, but no man stirred nor offered himselfe to the word. Then this young man Tlacaellec rising, offered himselfe to goe, saying, that seeing hee must die, it did import little whether it were to day or to morrow: for what reason should hee so carefully preserve himselfe? he was therefore readie, let him command what he pleased. And although all held this for a rash attempt, yet the King resolved to send him, that he might thereon vnderstand the will and disposition of the King of Azcapuzalco and of his people: holding it better to haue his Nephewes death, then to hazard the honour of his Common-weale. Tlacaellec being readie, tooke his way, and being come to the Guards, who had commandement to*
 60 *kill any Mexican that came towards them, by cunning or otherwise: hee perswaded them to suffer him to passe to the King, who wondred to see him, and hearing his Ambassage, which was to demand peace of him vnder honest conditions, answered, that he would impart it to his subjects, willing him to returne the next day for his answer. Then Tlacaellec demanded a*

passport, yet could he not obtaine any, but that he should vse his best skill : with this he returned to *Mexico*, giuing his words to the guards to returne. And although the King of *Azcapuzalco* desired peace, being of a milde disposition, yet his Subiects did so incense him, as his answer was open warre. The which being heard by the Messenger, he did all his King commanded him, declaring by this ceremony, to giue armes, and anointing the King with the vnction of the dead, that in his Kings behalfe he did defie him. Hauing ended all, the King of *Azcapuzalco* suffering himselfe to be anointed and crowned with Feathers, giuing goodly armes in recompence to the Messenger, wishing him not to returne by the Pallace gate, whereas many attended to cut him in peeces, but to goe out secretly by a little false Posterne that was open in one of the Courts of the Pallace. This yong man did so, and turning by secret waies, got away in safetie in sight of the Guards, and there defied them, saying, Tapanecans and Azcapuzalcans, you doe your office ill, vnderstand you shall all dye, and not one Tapanecan shall remaine aliu. In the meane time the Guards fell vpon him, where he behaued himselfe so valiantly, that he slew some of them : and seeing many more of them come running, he retired himselfe gallantly to the Citie, where he brought newes, that warre was proclaimed with the Tapanecans, and that he had defied their King.

The defie being knowne to the Commons of *Mexico*, they came to the King, according to their accustomed cowardise, demanding leaue to depart the Citie, holding their ruine certaine. The King did comfort and encourage them, promising to giue them libertie if they vanquished their enemies, willing them not to feare. The people replied. *And if we be vanquished, what shall wee doe? If wee be overcome,* (answered the King) *we will be bound presently to yeelde our selues into your hands to suffer death, eat our flesh in your dishes and bereuenged of vs. It shall be so then* (say they) *if you loose the victorie, and if you obtaine the victorie, we doe presently offer our selues to be your Tributaries, to labour in your houses, to sowe your ground, to carrie your armes and baggage when you goe to the warres for ever, wee and our descendants after vs.* These accords made betwixt the People, and the Nobilitie (which they did after fully performe, either willingly or by constraint, as they had promised) the King named for his Captaine Generall *Tlacaellec*: the whole Campe was put in order, and into squadrons, giuing the places of Captaines to the most valiant of his kinsfolkes and friends : then did he make them a goodly speech, whereby he did greatly encourage them, being now well prepared, charging all men to obey the commandement of the Generall whom he had appointed : he diuided his men into two parts, commanding the most valiant and hardie, to giue the first charge with him, and that all the rest should remaine in order, they were discouered by them of *Azcapuzalco*, who presently came furiously forth the Citie, carrying great riches of Gold, Siluer, and Armes of great value, as those which had the Empire of all that Countrie. *Izcoalt* gaue the signall to battaile, with a little Drumme he carried on his shoulders, and presently they raised a generall shoute, crying, *Mexico, Mexico*, they charged the Tapanecans, and although they were farre more in number, yet did they defeat them, and force them to retire into their Citie, then aduanced they which remained behinde, crying *Tlacaellec, Victorie, Victorie*, all sodainly entred the Citie, where (by the Kings commandement) they pardoned not any man, no not old men, women, nor children, for they slew them all, and spoiled the Citie being very rich. And not content herewith, they followed them that fled, and were retired into the craggie rockes of the *Sierres* or neere Mountaines, striking and making a great slaughter of them. The Tapanecans being retired to a Mountaine cast downe their Armes, demanding their liues, and offering to serue the Mexicans, to giue them Lands and Gardens, Stone, Lime and Timber, and to hold them alwayes for their Lords. Vpon this condition *Tlacaellec* retired his men and ceased the battaile, granting them their liues vpon the former conditions, which they did solemnely sweare. Then they returned to *Azcapuzalco*, and so with their rich and victorious spoiles to the Citie of *Mexico*. The day following the King assembled the Nobilitie and the People, to whom hee laid open the accord the Commons had made, demanding of them, if they were content to persist therein : the Commons made answer, that they had promised, and they had well deserued it, and therefore they were content to serue them perpetually. Whereupon they tooke an oath, which since they haue kept without contradiction.

This done, *Izcoalt* returned to *Azcapuzalco* (by the aduise of his Counsell) he diuided all the Lands and Goods of the conquered among the conquerours, the chiefe part fell to the King, then to *Tlacaellec*, and after to the rest of the Nobles, as they best deserued in the Battaile. They also gaue Land to some Plebeians, hauing behaued them selues valiantly ; to others they distributed the Pillage, making small account of them as of cowards. They appointed Lands in common for the quarters of *Mexico*, to every one his part, for the Service and Sacrifices of their Gods. This was the order which afterwards they alwayes kept, in the diuision of the Lands and spoiles of those they had vanquished and subdued. By this meanes they of *Azcapuzalco* remained so poore, as they had no Lands left them to labour, and (which was worse) they tooke their King from them, and all power to choose any other then him of *Mexico*.

Although

Although the chiefe Citie of the *Tapaneques*, was that of *Azcapuzalco*, yet had they others with their priuate Lords, as *Tucuba* and *Cuyoacan*. These seeing the storme passed, would gladly that they of *Azcapuzalco* had renewed the warre against the *Mexicans*, and seeing them danted, as a Nation wholly broken and defeated, they of *Cuyoacan* resolved to make warre by themselves; to the which they laboured to draw the other neighbour Nations, who would not stirre nor quarrell with the *Mexicans*. In the meane time the hatred and malice increasing, they of *Cuyoacan* began to ill intreate the women that went to their Markets, mocking at them, and doing the like to the men ouer whom they had power: for which cause the King of *Mexico* defended, that none of his should goe to *Cuyoacan*, and that they should receiue none of them into *Mexico*; the which made them of *Cuyoacan* resolve wholly to warre: but first they would prouoke them by some shamefull scorne, which was, that hauing invited them to one of their solemne Feasts, after they had made them a goodly Banquet, and feasted them with a great daunce after their manner, they sent them for their fruite, womens apparell, forcing them to put it on, and so to returne home like women to their Citie, reproaching them, that they were cowards and effeminate, and that they durst not take armes being sufficiently prouoked. Those of *Mexico* say, that for reuenge they did vnto them a foule scorne, laying at the gates of their Citie of *Cuyoacan* certaine things which smoaked, by meanes whereof many women were deliuered before their time, and many fell sicke. In the end, all came to open war, and there was a battaile fought, wherein they imploied all their forces, in the which *Tlacaellec*, by his courage and policie in warre, obtained the victorie. For hauing left King *Izcoalt* in fight with them of *Cuyoacan*, he put himselfe in ambush with some of the most valiant Souldiers, and so turning about, charged them behinde, and forced them to retire into their Citie. But seeing their intent was to flie into a Temple which was very strong, he with three other valiant Souldiers, pursued them eagarly, and got before them, seising on the Temple and firing it, so as he forced them to flie to the fields, where he made a great slaughter of the vanquished, pursuing them two leagues into the Countrey, vnto a little hill, where the vanquished casting away their weapons, and their armes a crosse, yeelded to the *Mexicans*, and with many teares craued pardon of their ouerweening folly, in vsing them like women, offering to be their slaues: so as in the end the *Mexicans* did pardon them. Of this victory the *Mexicans* did carry away very rich spoiles of Garments, Armes, Gold, Silver, Jewels, and rich feathers, with a great number of Captiues. In this Battaille there were three of the principals of *Culbmacan* that came to aide the *Mexicans*, to win honour, the which were remarkeable aboue all. And since being knowne to *Tlacaellec*, and hauing made prooffe of their fidelity, he gaue them *Mexican* deuises, and had them alwayes by his side, where they fought in all places very valiantly. It was apparant that the whole victory was due to the Generall, and to these three; for among so many captiues taken, two third parts were wonne by these foure, which was easily knowne by a policie they vsed: for taking a Captiue, they presently cut off a little of his haire, and gaue it to others, so as it appeared that those which had their haire cut, amounted to that number, whereby they wonne great reputation and fame of valiant men. They were honoured as Conquerours, giuing them good portions of the spoiles and Lands, as the *Mexicans* haue alwaies vsed to doe, which gaue occasion to those that did fight, to become famous, and to win reputation by Armes.

The Nation of the *Tapaneques* being subdued, the *Mexicans* had occasion to doe the like to the *Suchimilcos*, who (as it hath beene said) were the first of the seuen Caues or linages that peopled this Land. The *Mexicans* sought not the occasion, although they might presume as Conquerours to extend their limits, but the *Suchimilcos* did moue them, to their owne ruine, as it happens to men of small iudgement that haue no foresight, who not preuenting the mischiefe they imagined, fall into it. The *Suchimilcos* held opinion, that the *Mexicans*, by reason of their victories past, should attempt to subdue them, and consulted hereon among themselves. Some among them thought it good to acknowledge them for superiours, and to applaud their good fortune, but the contrary was allowed, and they went out to giue them battaile: which *Izcoalt* the King of *Mexico* vnderstanding, he sent his Generall *Tlacaellec* against them, with his armie: the battaile was fought in the same field that diuides their limits, which two Armies were equall in men and armes, but very diuers in their order and manner of fighting; for that the *Suchimilcos* charged all together on a heape confusedly, and *Tlacaellec* diuided his men into squadrons with a goodly order, so as he presently brake his enemies, forcing them to retire into their Citie, into the which they entred, following them to the Temple whither they fled, which they fired, and forcing them to flye to the Mountaines: in the end they brought them to this point, that they yeelded with their arme acrosse. The Generall *Tlacaellec* returning in great triumph, the Priests went forth to receiue him, with their musicke of Flutes, and giuing incense. The chiefe Captaines vsed other Ceremonies and shewes of ioy, as they had beene accustomed to doe, and the King with all the troupe went to the Temple to giue thanks to their false god.

The day following, the King *Izcoalt* went vnto the Citie of *Suchimilco*, causing himselfe to

Temple filled.

be sworne King of the *Suchimilcos*: and for their comfort he promised to doe them good. In to-
ken whereof he commanded them to make a great Cawley stretching from *Mexico* to *Suchi-*
milco, which is foure leagnes, to the end there might be more commerce and trafficke among
them. Which the *Suchimilcos* performed, and in short time the *Mexican* government seemed
so good vnto them, as they held themselves happy to haue changed their King and Common-
weale. Some neighbours pricked forward by enuie, or feare, to their ruines, were not yet made
wise by others miseries.

Cuitlanaca, *Cuitlanaca* was a Citie within the Lake: which though the name and dwelling be changed,
continueth yet. They were actiue to swim in the Lake, and therefore they thought they might
much indomage and annoy the *Mexicans* by water, which the King vnderstanding, he resol-
ued to send his Armie presently to fight against them. But *Tlacaellec* little esteeming this warre,
holding it dishonorable to lead an Armie against them, made offer to conquer them with the
children onely: which he performed in this manner: he went vnto the Temple and drew out of
the Couent such children as he thought fittest for the action, from tenne to eightene yeares of
age, who knew how to guide their Boates, or Canoes, teaching them certaine pollicies. The
order they held in this warre, was, that he went to *Cuitlanaca* with his children, where by
his pollicie he pressed the enemy in such sort, that he made them to flye; and as he followed
them, the Lord of *Cuitlanaca* met him and yeilded vnto him, himselfe, his Citie, and his peo-
ple, and by this meanes he stayed the pursuite. The children returned with much spoyle, and
many Captiues for their Sacrifices, being solemnely receiued with a great Procession, Musicke
and Perfumes, and they went to worship their gods, in taking of the earth which they did
eate, and drawing blood from the forepart of their legs with the Priests Lancets, with other su-
perstitions which they were accustomed to vse in the like solemnities. The children were much
honored and encouraged, and the King imbraced and kissed them, and his kinsmen and allies
accompanied them. The bruite of this victory ranne throughout all the Countrie, how that
Tlacaellec had subdued the Citie of *Cuitlanaca* with children: the news and consideration where-
of opened the eyes of those of *Tescuco*, a chiefe and very cunning Nation for their manner of
life: So as the King of *Tescuco* was first of opinion, that they should subiect themselves to the
King of *Mexico*, and inuite him thereunto with his Citie. Therefore by the aduise of his Coun-
sell, they sent Ambassadors good Orators with honorable presents, to offer themselves vnto
the *Mexicans*, as their Subiects, desiring peace and amity, which was graciously accepted;
but by the aduise of *Tlacaellec* he vsed a Ceremony for the effecting thereof, which was, that
those of *Tescuco* should come forth armed against the *Mexicans*, where they should fight, and
presently yeelde, which was an act and ceremony of warre, without any effusion of blood on
either side. Thus the King of *Mexico* became soueraigne Lord of *Tescuco*, but he tooke not
their King from them, but made him of his Priuie Counsell; so as they haue alwaies maintai-
ned themselves in this manner vntill the time of *Moteczuma* the second, during whose raig-
ne the *Spaniards* entred. Hauing subdued the Land and Citie of *Tescuco*, *Mexico* remained Lady
and Mistris of all the Lands and Cities about the Lake, where it is built. *Izcoatl* hauing
enjoyed this prosperitie, and raigned twelue yeares, dyed, leauing the Realme which had
beene giuen him, much augmented by the valour and counsell of his Nephew *Tlacaellec*.

Forasmuch as the election of the new King, belonged to foure chiefe Electors, and to the
King of *Tescuco*, and the King of *Tacuba*, by especiall priuiledge: *Tlacaellec* assembled these
six personages, as he that had the soueraigne authority, and hauing propounded the matter vn-
to them, they made choise of *Moteczuma*, the first of that name, Nephew to the same *Tlacaellec*.

His election was very pleasing vnto them all, by reason whereof, they made most solemn feasts,
and more statelie then the former. Presently after his election they conducted him to the Tem-
ple with a great traine, where before the diuine harth (as they call it) where there is continuall
fire, they set him in his royall throane, putting vpon him his royall ornaments. Being there, the
King drew blood from his eares and legs with a Griffons talons, which was the Sacrifice where-
in the diuell delighted to be honoured. The Priests, Ancients, and Captaines, made their Ora-
tions, all congratuling his election. They were accustomed in their elections to make great
Feasts and Dances, where they wasted many lights. In this Kings time the custome was brought
in, that the King should goe in person to make warre in some Prouince, and bring Captiues to
solemnize the feast of his Coronation, and for the solemn Sacrifices of that day. For this cause
King *Moteczuma* went into the Prouince of *Chalco*, who had declared themselves his enemies:
from whence (hauing fought valiantly) he brought a great number of Captiues, whereof he did
make a notable Sacrifice the day of his Coronation, although at that time he did not subdue all
the Prouince of *Chalco*, being a verie warlike Nation. Manie came to this Coronation from di-
uers Prouinces, as well neere as farre off, to see the feast, at the which all commers were verie
bountifullie entertained and clad, especially the poore, to whom they gaue new garments. For
this cause they brought that day into the Citie, the Kings tributes, with a goodly order, which
consisted in Stuffles to make Garments of all sorts, in *Cacao*, Gold, Silver, rich Feathers, great bur-
thens of Cotton, Cucumbers, sundrie sorts of Pulses, many kindes of Sea fish, and of the fresh
water,

warer, great store of Fruits, and Venison without number, not reckoning an infinite number of Presents, which other Kings and Lords sent to the new King. All this Tribute marched in order according to the Prouinces, and before them the Stewards and receiuers, with diuers markes and Ensignes, in very goodly order: so as it was one of the goodliest things of the feast, to see the entrie of the Tribute. The King being crowned, he imploied himselfe in the conquest of many Prouinces, and for that he was both valiant and vertuous, he still increased more and more, vntill in all his affaires the counsell and industrie of his Generall *Tlacaellec*, whom he did alwaies loue and esteeme very much, as he had good reason. The warre wherein he was most troubled and of greatest difficultie, was that of the Prouince of *Chalco*, wherein there happened great matters, whereof one was very remarkeable; which was, that they of *Chalco*, had taken a brother of *Moteczumaes* in the warres, whom they resolved to choose for their King, asking him verie curteously, if he would accept of this charge. He answered (after much importunitie, still persisting therein) that if they ment plainely to choose him for their King, they should plant in the Market-place, a Tree or very high stake, on the top whereof, they should make a little scaffold, and meanes to mount vnto it. The *Chalcos* supposing it had beene some ceremonie to make himselfe more apparant, presently effected it: then assembling all his *Mexicans* about the stake, he went to the top with a garland of flowers in his hand, speaking to his men in this manner, *O valiant Mexicans, these men will choose me for their King, but the gods will not permit, that to be a King I should commit any treason against my Countrey, but contrariwise, I will that you learne by me, that it behooueth vs rather, to indure death, then to aide our enemies.* Saying these words, he cast himselfe downe, and was broken in a thousand peeces, at which spectacle, the *Chalcos* had so great horror and despite, that presently they fell vpon the *Mexicans* and slew them all with their Lances, as men whom they held too proud and inexorable, saying, they had diuellish hearts. It chanced the night following, they heard two Owles making a mournfull cry, which they did interpret as an vnfortunate signe, and a presage of their neere destruction, as it succeeded: for King *Moteczuma* went against them in person with all his power, where he vanquished them, and ruined all their kingdome: and passing beyond the Mountaine *Menade*, he conquered still euen vnto the North Sea. Then returning towards the South Sea, he subdued many Prouinces; so as he became a mighty King: all by the helpe and counsell of *Tlacaellec*, who in a maine conquered all the *Mexican* Nation. Yet he held an opinion (the which was confirmed) that it was not behoouefull to conquer the Prouince of *Tlascalla*, that the *Mexicans* might haue a frontier enemy, to keepe the youth of *Mexico* in exercise and allarme: and that they might haue numbers of Captiues to Sacrifice to their Idols, wherein they did waste (as hath beene said) infinite numbers of men, which should be taken by force in the wars. The honor must be giuen to *Moteczuma*, or to speak truly, to *Tlacaellec* his Generall, for the good order and pollicy setled in the Realme of *Mexico*, as also for the Counsels and goodly enterprises, which they did execute: and likewise for the number of Iudges and Magistrates, being as well ordered there, as in any Common-weale; yea, were it in the most flourishing of *Europe*. This King did also greatly increase the Kings house, giuing it great authoritie, and appointing many and sundry Officers, which serued him with great pompe and ceremony. He was no lesse remarkable touching the deuotion and seruice of his Idols, increasing the number of his Ministers, and instituting new ceremonies, whereunto he carried a great respect.

He built that great Temple dedicated to their god *Tzilizipatzli*, whereof is spoken in the other Booke. He did Sacrifice at the dedication of this Temple, a great number of men, taken in sundry victories: finally, inioying his Empire in great prosperitie, he fell sick, and died, hauing reigned twentie eight yeares, vnlike to his successor *Ticocic*, who did not resemble him, neither in valour, nor in good fortune.

The foure Deputies assembled in counsell, with the Lords of *Tescuco* and *Tacuba*, where *Tlacaellec* was President in the election, where by all their voices *Tlacaellec* was chosen, as deserting this charge better then any other. Yet he refused it, perswading them by pertinent reasons, that they should choose another, saying, that it was better, and more expedient to haue another King, and he to be his instrument and assistant, as he had beene till then, and not to lay the whole burthen vpon him, for that he held himselfe no lesse bound for the Common-weale, then if he were King: seeming to him, though he were not King, yet in a manner, that he commanded Kings, suffering him to carry certaine markes, as a *Tiara* or ornament for the head, which belonged onely to themselves: as in a Comedie he deserves most commendation, that represents the personage that imports most. In recompence of his modesty, and for the respect which the *Mexican* Electors bare him, they demanded of *Tlacaellec* (that seeing he would not reigne) whom hee thought most fit: Wherevpon he gaue his voyce to a Sonne of the deceased King, who was then very young, called *Ticocic*: but they replied, that his shoulders were very weake to beare so heauie a burthen. *Tlacaellec* answered, that his was there to. helpe him to beare the burthen, as he had done to the deceased: by meanes whereof, they tooke their resolution, and *Ticocic* was chosen, to whom were done all the accustomed ceremonies.

Horrible courage.

Nostrils pierced.

King poisoned

Of the death of Tlacacllec, & the deeds of Axayaca the seventh King of the Mexicans. Chap. 18.

Tiquantepec razed. Guatimco.

Royall combat.

They pierced his nostrils, and for an ornament put an Emerald therein: and for this reason, in the *Mexican Bookes*, this King is noted by his nostrils pierced. Hee differed much from his Father and Predecessor, being noted for a coward, and not valiant. He went to make warre for his Coronation, in a Prouince that had rebelled, where hee lost more of his owne men then hee tooke captiues; yet he returned saying, that he brought the number of captiues required for the Sacrifice of his Coronation, and so hee was crowned with great solemnitie. But the *Mexicans* discontented to haue a King so little disposed to warre, practised to hasten his death by poison. For this cause he continued not aboue foure yeeres in the Kingdome. But this losse was well repaired by a Brother of the deceased, who was also sonne to great *Moteczuma*, called *Axayaca*, who was likewise chosen by the aduice of *Tlacacllec*, wherein hee happened better then before.

Now was *Tlacacllec* very old, who by reason of his age, was carried in a chaire vpon mens shoulders, to assist in counsell when businesse required. In the end he fell sicke, when as the King (who was not yet crowned) did visit him often, shedding many teares, seeming to loose in him his Father, and the Father of his Countrey. *Tlacacllec* did most affectionately recommend his children vnto him, especially the eldest, who had shewed himselfe valiant in the former warres. The King promised to haue regard vnto him, and the more to comfort the old man, in his presence hee gaue him the charge and ensignes of Captaine Generall, with all the preheminences of his Father; wherewith the old man remained so well satisfied, as with this content he ended his dayes.

The *Mexicans* made his Funerall as the Founder of that Empire, more sumptuous and stately, then they had done to any of their former Kings. And presently after *Axayaca* (to appease the sorrow which all the people of *Mexico* shewed for the death of their Captaine) resolved to make the voyage necessary for his Coronation. He therefore led his Armie with great expedition into the Prouince of *Tequantepec*, two hundred leagues from *Mexico*, where he gaue battell to a mighty Army, and an infinite number of men assembled together, as well out of that Prouince, as from their Neighbours, to oppose themselves against the *Mexicans*. The first of his Campe that aduanced himselfe, to the combate was the King himselfe, defying his enemies, from whom he made shew to flye when they charged him, vntill hee had drawne them into an Ambuscadoe, where many Souldiers lay hidden vnder straw, who suddenly issued forth, and they which fled, turned head: so as they of *Tiquantepec* remayned in the midst of them, whom they charged furiously, making a great slaughter of them: and following their victorie, they razed their Citie and Temple, punishing all their Neighbours rigorously. Then went they on farther, and without any stay, conquered to *Guatimco*, the which is a Port at this day well knowne in the South Sea. *Axayaca* returned to *Mexico* with great and rich spoiles, where he was honourably crowned, with sumptuous and stately preparation of Sacrifices, Tributes, and other things, whither many came to see his Coronation. The Kings of *Mexico* received the Crowne from the hands of the King of *Tescuco*, who had the preheminence. Hee made many other Enterprises, where he obtained great victories, being alwayes the first to leade the Armie, and to charge the enemy; by the which he purchased the name of a most valiant Captaine: and not content to subdue strangers, he also suppressed his Subjects which had rebelled, which neuer any of his Predecessors euer could doe, or durst attempt. Wee haue already shewed how some seditions of *Mexico* had diuided themselves from that Common weale, and built a Citie neere vnto them, which they called *Tlatelulco*, whereas now Saint Iaguer is.

These being reuolted, held a faction apart, and increased and multiplied much, refusing to acknowledge the Kings of *Mexico*, nor to yeeld them obedience. The King *Axayaca* sent to aduise them, not to liue diuided, but being of one blood, and one people, to joyne together, and acknowledge the King of *Mexico*; wherupon the Lord of *Tlatelulco* made an answer full of pride and disdain, defying the King of *Mexico*, to single combate with himselfe: and presently mustred his men, commanding some of them to hide themselves in the weeds of the Lake; and the better to deceiue the *Mexicans*, he commanded them to take the shapes of Ravens, Geese, and other Beasts, as Frogges, and such like, supposing by this meanes to surprize the *Mexicans* as they should passe by the wayes and cawties of the Lake. Hauing knowledge of this desie, and of his Aduersaries policie, he diuided his Armie, giuing a part to his Generall, the sonne of *Tlacacllec*, commanding him to charge this Ambuscadoe, in the Lake; and hee with the rest of his people, by an vnfrequented way, went and incamped before *Tlatelulco*. Presently he called him who had defied him, to performe his promise, and as the two Lords of *Mexico*, and *Tlatelulco* aduanced, they commanded their Subjects not to mooue, vntill they had seene who should bee fought long, in the end the Lord of *Tlatelulco* was forced to turne his backe, being vnable to indure the furious charge of the King of *Mexico*. Those of *Tlatelulco* seeing their Captaine flye, fainted, and fled likewise; but the *Mexicans* following them at the heeles, charged them furiously; yet the Lord of *Tlatelulco* escaped not the hands of *Axayaca*, for thinking to saue himselfe, hee fled to the top of the Temple, but *Axayaca* followed him so neere, as hee seized on him with great

great force, and threw him from the top to the bottome, and after set fire on the Temple, and the Citie.

10 While this passed at Tlatelulco, the Mexican Generall was very hote in the reuenge of those that pretended to defeat him by policie, and after hee had forced them to yeeld, and to cry for mercy, the Generall said he would not pardon them, vntill they had first performed the Offices of those figures they represented, and therefore hee would haue them cry like Frogges and Ravens, every one according to the figure which he had vnderaken, else they had no composition: which thing he did to mocke them with their owne policie. Feare and Necessitie bee perfect Teachers, so as they did sing and cry with all the differences of voices that were commanded them, to saue their liues, although they were much grieved at the sport their enemies made at them. They say that vnto this day, the Mexicans vse to jeast at the Tlatelulcans, which they beare impatiently, when they put them in minde of this singing and crying of beasts. King Azayaca tooke pleasure at this scorn and disgrace, and presently after they returned to Mexico with great joy. This King was esteemed for one of the best that had commanded in Mexico. Hee reigned eleuen yeeres.

Tlatelulco fired.

Among the foure Electors that had power to choose whom they pleased to be King, there was one endued with many perfections, named Autzol. This man was chosen by the rest, and this election was very pleasing to all the people: for besides that he was valiant, all held him courteous and affable to euery man, which is one of the chiefe qualities required in them that command, to purchase loue and respect. To celebrate the Feast of his Coronation, hee resolved to make a Voyage, and to punish the pride of those of Quaxulatlán, a very rich and plentifull Province, and at this day the chiefe of New Spaine. They had robbed his Officers and Stewards, that carried the Tributes to Mexico, and therewithall were rebelled. There was great difficultie to reduce this Nation to obedience, lying in such sort, as an arme of the Sea stoppeth the Mexicans passage: to passe the which Autzol (with a strange deuice and industry) caused an Island to be made in the water, of faggots, earth, and other matter; by means whereof, both hee and his men might passe to the enemy, where giuing them battell, he conquered them, and punished them at his pleasure. Then returned he vnto Mexico in triumph, and with great riches, to bee crowned King, according to their custome. Autzol extended the limits of his Kingdome farre, by many conquests, euen vnto Guatimalia, which is three hundred leagues from Mexico. Hee was no lesse liberall then valiant: for when as the Tributes arrived, which (as I haue said) came in great abundance, hee went forth of his Palace, gathering together all the people into one place, then commanded he to bring all the Tributes, which he diuided to those that had need. To the poore he gaue Stuffs to make them apparell, and meate, and whatsoever they had need of in great abundance, and things of value, as Gold, Silver, Iewels, and Feathers, were diuided amongst the Captaines, Souliuers, and Seruants of his House according to euery mans merit. This Autzol was likewise a great Politician, hee pulled downe the houses ill built, and built others very sumptuous.

Of the deeds of Autzol the eight King of Mexico. Chap. 19 The Picture story calls him Tifocicatzli. Quaxulatlán

40 It seemed vnto him that the Citie of Mexico had too little water, and that the Lake was very muddie, and therefore hee resolved to let in a great course of water, which they of Cuyoacan vied. For this cause hee called the chiefe man of the Citie vnto him, being a famous Sorcerer, hauing propounded his meaning vnto him: the Sorcerer wished him to bee well aduised what he did, being a matter of great difficultie, and that he vnderstood, if hee drew the Riuer out of her ordinary course, making it passe to Mexico, hee would drowne the Citie. The King supposed these excuses were but to frustrate the effect of his Designe, being therefore in choler, he dismissed him home, and a few dayes after he sent a Prouost to Cuyoacan, to take this Sorcerer: who hauing vnderstanding for what intent the Kings Officers came, he caused them to enter his house, and then he presented himselfe vnto them in the forme of a terrible Eagle, wherewith the Prouost and his companions being terrified, they returned without taking him. Autzol incensed herewith sent others, to whom he presented himselfe in forme of a furious Tigre, so as they durst not touch him. The third came, and they found him in the forme of a horrible Serpent, whereat they were much afraid. The King moued the more with these doings, sent to tell them of Cuyoacan, that if they brought not the Sorcerer bound vnto him, hee would raze their Citie. For feare whereof, or whether it were of his owne free will, or being forced by the people, he suffered himselfe to be led to the King, who presently caused him to bee strangled, and then then did he put his resolution in practice, forcing a channell whereby the water might passe to Mexico, whereby he brought a great current of water into the Lake, which they brought with great Ceremonies and Superstitions, hauing Priests casting Incense along the bankes, others sacrificed Quails, and with the blood of them sprinkled the channell bankes, others founding of Cornets, accompanied the water with their Musicke. One of the chiefe went attired in a habit like to their Goddesse of the water, and all saluted her, saying, that she was welcome. All which things are painted in the Annalls of Mexico: which Booke is now at Rome in the holy Library, or Vatican, where a Father of our Company, that was come from Mexico, did see it, and other Histories, the which he did expound to the Keeper of his Holinesse Library,

Famous Sorcerer, or Indian Prouost.

Mexican Annalls in the Vatican.

taking great delight to vnderstand this Booke, which before hee could neuer comprehend. Finally, the water was brought to Mexico, but it came in such abundance, that it had well neere drowned the Citie, as was foretold: and in effect it did ruine a great part thereof, but it was presently prevented by the industry of *Autzol*, who caused an issue to bee made to draw forth the water, by meanes whereof hee repayed the buildings that were fallen, with an exquisite worke, being before but poore Cottages. Thus he left the Citie inuironed with water, like another *Venice*, and very well built: he reigned eleuen yeeres, and ended with the last and greatest Successor of all the *Mexicans*.

Of the Election of great MOTEZUMA, the last King of Mexico: his pompe and manner of government, prodigious fore-warnings, of his ruine, and the Spanish Conquest.

When the *Spaniards* entered New *Spaine*, being in the yeere of our Lord 1519, *Motezuma* second of that name, was the last King of the *Mexicans*. I say the last, although they of *Mexico*, after his death, chose another King, yea, in the life of the same *Motezuma*, whom they declared an enemy to his Countrey, as wee shall see hereafter. But he that succeeded him, and he that fell into the hands of the *Marquess de Valle*, had but the names and titles of Kings, for that the Kingdome was in a manner all yeilded to the *Spaniards*: so as with reason we account *Motezuma* for the last King, and so hee came to the period of the *Mexicans* power and greatnesse, which is admirable beeing happened among *Barbarians*. For this cause, and for that this was the season, that God had chosen to reueale vnto them the knowledge of his Gospell, and the Kingdome of Iesus Christ, I will relate more at large the Acts of *Motezuma*, then of the rest.

Before he came to be King, hee was by disposition, very graue and stayed, and spake little, so as when he gaue his opinion in the priuy Counsell, whereas he assisted, his speeches and discourses made euery one to admire him, so as euery then he was feared and respected. Hee retired himselfe vsually into a Chappell, appointed for him in the Temple of *Ytzliputzli*, where they said their Idoll spake vnto him; and for this cause hee was held very religious and deuout. For these perfections then, being most noble and of great courage, his election was short and easie, as a man vpon whom all mens eyes were fixed, as worthy of such a charge. Having intelligence of this election, he hid himselfe in this Chappell of the Temple, whether it were by judgement (apprehending so heauy and hard a burthen) as to gouerne such a people, or rather, as I beleue, through hypocrisie, to shew that hee desired not Empery: In the end they found him, leading him to the place of Councell, whither they accompanied him with all possible joy: he marched with such a grauity, as they all said the name of *Motezuma* agreed very well with his nature, which is as much to say, as an angry Lord. The Electors did him great reverence, giuing him notice, that hee was chosen King: from thence hee was led before the hearth of their Gods, to giue Incense, where he offered Sacrifices in drawing blood from his eares, and the calves of his legs, according to their customs. They attyred him with the Royall ornaments, and pierced the gristle of his nostrils, hanging thereat a rich Emerald, a barbarous and troublous costume: but the desire of rule, made all paine light and easie. Being seated in his Throne, hee gaue audience to the Orations and Speeches that were made vnto him, which according vnto their custome were eloquent and artificiaall.

The first was pronounced by the King of *Tescuco*, which being preferred, for that it was lately deliuered, and very worthy to be heard, I will set it downe word by word, and thus hee said: The concordance and unitie of voyces vpon thy election, is a sufficient testimonie (most noble young man) of the happinesse the Realme shall receiue, as well deserving to be commanded by thee, as also for the generall applause which all doe shew by meanes thereof. Wherein they haue great reason, for the Empire of Mexico doth already so farre extend it selfe, that to gouerne a World, as it is, and to beare so heauie a burthen, it requires no lesse dexteritie and courage, then that which is resident in thy firme and valiant heart, nor of lesse wisdom and iudgement then thine. I see and know plainly, that the mightie God loneth this Citie, seeing hee hath giuen vnderstanding to chooseth what was fit. For who will not beleene that a Prince, who before his Reigne had pierced the nine Vaults of Heauen, should not likewise now obtaine those things that are earthly to relieue his people, aiding himselfe with his best iudgement, being thereunto bound by the dutie and charge of a King? Who will likewise beleene that the great courage which thou hast alwayes valiantly shewed in matters of importance, should now faile thee in matters of greatest need? Who will not perswade himselfe but the Mexican Empire is come to the height of their Soueraintie, seeing the Lord of things created hath imparted so great graces vnto thee, that with thy looke onely thou breedest admiration in them that behold thee? Reioyce then, O hap-

CHAP. 4. §. 3. Oration to Moteçuma. His domesticall, politicall, polemicall behaviour. 1019

happie Land, to whom the Creator hath given a Prince, as a firme Pillar to support thee, which shall bee thy Father and thy defence, by whom thou shalt be succoured at need, who will bee more then a brother to his subiects, for his pietie and clemencie. Thou hast a King, who in regard of his estate is not inclined to delights, or will lye stretched out upon his bed, occupied in pleasures and vices, but contrariwise in the midst of his sweet and pleasant sleep, he will suddenly wake, for the care he must haue ouer thee, and will not feele the taste of the most sauourie meats, hauing his spirits transported with the imagination of thy good. Tell me then (O happie Realme) if I haue not reason to say that thou oughtest reioyce, hauing found such a King: And thou noble young man, and our most mightie Lord, be confident, and of a good courage, that seeing the Lord of things created hath given thee this charge, hee will also giue thee force and courage to manage it: and thou mayest well hope, that hee which in times past hath vsed so great bountie towards thee, will not now deny thee his greater gifts, seeing he hath given thee so great a charge, which I wish thee to enioy many yeeres. King Moteçuma was very attentiu to this Discourse: which being ended, they say hee was so troubled, that endeououring thrice to answer him, hee could not speake, being overcome with teares, which joy and content doe vsually cause, in signe of great humility. In the end being come to himselfe, he spake briefly, I were too blind, good King of Tescuco, if I did not know, that what thou hast spoken vnto me, proceeded of meere fauour, it pleaseth you to shew me, seeing among so many noble and valiant men within this Realme, you haue made choice of the least sufficient: and in truth, I find my selfe so incapable of a charge of so great importance, that I know not what to doe, but to beseech the Creatour of all created things, that hee will fauour mee, and I intreate you all to pray vnto him forme. These words vttered, hee beganne againe to weepe.

He that in his election made such shew of humility and mildnesse, seeing himselfe King, began presently to discouer his aspiring thoughts. The first was, hee commanded that no plebeian should serue in his house, nor beare any Royal Office, as his Predecessors had vsed til then; blaming them that would be serued by men of base condition, commanding that all the noble and most famous men of his Realme should liue within his Palace, and exercise the Offices of his Court, and House. Whereunto an old man of great authoritie (who had sometimes bin his Schoolemaster) opposed himselfe, aduising him, to be careful what he did, and not to thrust himselfe into the danger of a great inconuenience, in separating himselfe from the vulgar and common people, so as they should not dare to looke him in the face, seeing themselves so reiected by him. He answered, that it was his resolution, and that he would not allow the Plebeians thus to goe mingled among the Nobles, as they had done, saying, that the seruice they did, was according to their condition, so as the Kings got no reputation, and thus he continued firme in his resolution. Hee presently commanded his Counsell to dismiss all the Plebeians from their charges and offices, as well those of his Household as of his Court, and to provide Knights, the which was done. After hee went in person to an enterprize necessary for his Coronation. At that time a Province lying farre off towards the North Ocean, was reuolted from the Crown, whither he led the flower of his people, well appointed. There he warred with such valour and dexteritie, that in the end hee subdued all the Province, and punished the Rebels seuerely, returning with a great number of Captiues for the Sacrifices, and many other spoyle. All the Cities made him solemne receptions at his returne, and the Lords thereof gaue him water to wash, performing the offices of seruants, a thing not vsed by any of his Predecessors. Such was the feare and respect they bare him. In Mexico, they made the Feasts of his Coronation with great preparations of Dances, Comedies, Banquets, Lightes, and other inuentions for many dayes. And there came so great a wealth of Tributes from all his Countreyes, that strangers vnknowne came to Mexico, and their very enemies resorted in great numbers disguised to see these Feasts, as those of Tlascalla, and Mechoanacan: the which Moteçuma hauing discovered, he commanded they should be lodged and gently intreated, and honoured as his owne person. He also made them goodly Galleries like vnto his owne, where they might see and behold the Feasts. So they entred by night to those Feasts, as the King himselfe, making their Sports and Maskes. And for that I haue made mention of these Provinces, it shall not be from the purpose to vnderstand, that the Inhabitants of Mechoanacan, Tlascalla, and Tapeaca, would neuer yeeld to the Mexicans, but did alwayes fight valiantly against them; yea, sometimes the Mechoanacans did vanquish the Mexicans, as also those of Tapeaca did. In which place, the Marquesse Don Ferrand Cortes, after that hee and the Spaniards were expelled Mexico, pretended to build their first Citie, the which hee called (as I well remember) Segura de la Frontiere: But this peopling continued little: for hauing afterwards reconquered Mexico, all the Spaniards went to inhabite there. To conclude, those of Tapeaca, Tlascalla, and Mechoanacan, haue bene alwayes enemies to the Mexicans; although Moteçuma said vnto Cortes, that hee did purposely forbear to subdue them; to haue occasion to exercise his men of warre, and to take numbers of captiues.

This King laboured to bee respected, yea, to be worshipped as a God. No Plebeian might looke him in the face; if he did, he was punished with death: he did neuer set his foot on the ground, but was alwayes carried on the shoulders of Noblemen; and if he lighted, they laid rich Tapistrie whereon hee did goe. When hee made any Voyage, hee and the Noblemen went as it were

in a Parke * compassed in for the nonce, and the rest of the people went without the Parke, enuironing it in on euery side; hee neuer put on a garment twice, nor did eate or drinke in one vessell or dish aboue once; all must be new, giuing to his attendants that which had once serued him: so as commonly they were rich and sumptuous. Hee was very carefull to haue his Lawes obserued. And when he returned victor from any warre, hee fained sometimes to goe and take his pleasure, then would hee disguise himselfe, to see if his people (supposing hee were absent) would omit any thing of the feast or reception: If there were any excelsse or defect, hee then did punish it rigorously. And also to discern how his Ministers did execute their Offices, hee often disguised himselfe, offering gifts and presents to the Iudges, prouoking them to doe iniustice. If they offended, they were presently punished with death, without remission or respect, were they Noblemen, or his Kinsmen; yea, his owne Brethren. Hee was little conuersant with his people, and seldome seene, retyring himselfe most commonly to care for the gouernment of his Realme. Besides that, he was a great Iusticier and very Noble, he was very valiant and happy, by meanes whereof, hee obtayned great victories, and came to this greatnesse, as is written in the *Spanish* Histories, whereon it seemes needlesse to write more. I will onely haue a care hereafter to write what the Books and Histories of the *Indies* make mention of; the which the *Spanish* Writers haue not obserued, hauing not sufficiently vnderstood the secrets of this Countrey, the which are things very worthy to be knowne, as we shall see hereafter.

It chanced that *Moteçuma* hauing reigned many yeeres in great prosperitie, and so puffed vp in his conceit, as he caused himselfe to be serued and feared, yea to be worshipped as a God, that the Almighty Lord began to chastise him, and also to admonish him, suffering euen the very Devils whom he worshipped, to tell him these heauy tydings of the ruine of his Kingdome, and to torment him by Visions, which had neuer bene seene; wherewith hee remayned so melancholy and troubled, as he was void of judgement.

Quetzacoalt.

The Idoll of those of *Cholola*, which they called *Quetzacoalt*, declared, that a strange people came to possesse his Kingdome. The King of *Tescuco* (who was a great Magitian, and had conference with the Deuill) came one day at an extraordinary houre to visit *Moteçuma*, assuring him that his Gods had told him, that there were great losses preparing for him, and for his whole Realme: many Witches and Sorcerers went and declared as much, amongst which there was one, did very particularly foretell him what should happen: and as hee was with him hee told him that the pulses of his feete and hands failed him. *Moteçuma* troubled with these newes, commanded all those Sorcerers to be apprehended: but they vanished presently in the Prison, wherewith he grew into such a rage, that he might not kill them, as hee put their wiues and children to death, destroying their Houses and Families. Seeing himselfe importuned and troubled with these aduertisements, hee sought to appease the anger of his Gods: and for that cause hee laboured to bring a huge stone, thereon to make great Sacrifices: For the effecting whereof hee sent a great number of people with Engins and Instruments to bring it: which they could by no meanes moue, although (being obitinate) they had broken many Instruments. But as they stroue still to raise it, they heard a voyce joyning to the stone, which said they laboured in vaine, and that they should not raise it, for that the Lord of things created would no more suffer those things to be done there. *Moteçuma* vnderstanding this, commanded the Sacrifice to be performed in that place, and they say the voyce spake againe: *Haue I not told you, that it is not the pleasure of the Lord of things created, that it should bee done? and that you may well know that it is so, I will suffer my selfe to bee transported a little, then after you shall not moue mee.* Which happened so indeed, for presently they carried it a small distance with great facilitie, then afterwards they could not moue it, till that after many Prayers, it suffered it selfe to bee transported to the entry of the Citie of *Mexico*, where suddenly it fell into the Lake, where seeking for it, they could not find it, but it was afterwards found in the same place from whence they had remooued it, wherewith they remayned amazed and confounded.

A Comet by
day.

At the same time there appeared in the Element a great flame of fire, very bright, in the forme of a Pyramide, which beganne to appeare at midnight, and went still mounting vntill the Sunne rising in the morning, where it stayed at the South, and then vanished away. It shewed it selfe in this sort the space of a whole yeere, and euer as it appeared the people cast forth great cries as they were accustomed, beleeuing it was a presage of great misfortune. It happened also that fire tooke the Temple, when as no body was within it, nor came vnto it, neyther did there fall any lightning or thunder: whereupon the Guards crying out, a number of people ranne with water, but nothing could helpe, so as it was all consumed; and they say the fire seemed to come forth of pieces of timber, which kindled more by the water that was cast vpon it. There was a Comet seene in the day time, running from the West to the East, casting an infinite number of sparkles, and they say the forme was like to a long tayle, hauing three heads.

The great Lake betwixt *Mexico* and *Tescuco*, without any winde, earthquake, or any other apparant signe, began sudainly to swell, and the waues grew in such sort, as all the buildings nere vnto it fell downe to the ground. They say at that time they heard many voices, as of a

Woman

woman in paine, which said sometimes, *O my children, the time of your destruction is come:* and other whiles it said, *O my children, whither shall I carry you that you perish not utterly?* There appeared likewise many Monsters with two heads, which being carried before the King, suddenly vanished. There were two that exceeded all other Monsters, being very strange; the one was, the Fishers of the Lake tooke a Bird as bigge as a Crane, and of the same colour, but of a strange and vnseene forme. They carried it to *Moteczuma*, who at that time was in the pallace of reares and mourning, which was all hanged with blacke; for as he had many Pallaces for his recreation, so had he also others for times of affliction, wherewith he was then heavily charged and tormented, by reason of the threatnings his gods had given him by these sorrowfull aduertisements. The Fishers came about noone setting this Bird before him, which had on the top of his head a thing bright and transparent, in forme of a Looking-glasse, wherein he did behold a warlike Nation comming from the East, armed, fighting, and killing. He called his Diuines and Astronomers (whereof there was a great number) who hauing seene these things, and not able to yeelde any reason of what was demanded of them, the Bird vanished away, so as it was neuer more seene: whereupon *Moteczuma* remained very heauy and sorrowfull. The other which happened, was a Laborer, who had the report of a very honest man; he came vnto him, telling him, that being the day before at his worke, a great Eagle flew towards him, and tooke him vp in his talents, without hurting him, carrying him into a certaine Caue, where it left him; The Eagle pronouncing these words, *Most mighty Lord, I haue brought him whom thou hast commanded me:* This Indian Laborer looked about on euery side, to whom he spake, but he saw no man. Then he heard a voyce which said vnto him, *Dooest thou not know this man, whom thou seest lying vpon the ground? and looking thereon, he perceiued a man to lye very heauy asleepe, with royall ensignes, flowers in his hand, and a staffe of perfumes burning, as they are accustomed to vse in that Country: whom the Labourer beholding, knew it was the great King Moteczuma, and answered presently: Great Lord, this resembles our King Moteczuma. The voyce said againe, Thou sayest true, behold what he is, and how hee lies asleepe, carelesse of the great miseries and afflictions prepared for him. It is now time that he pay the great number of offences he hath done to God, and that he receiue the punishment of his tyrannies, and great pride, and yet thou seest how carelesse he lyes, blinde in his owne miseries, and without any feeling. But to the end thou maiest the better see him, take the staffe of perfumes he holds burning in his hand, and put it to his face; thou shalt then finde him without feeling.* The poore laborer durst not approach neere him, nor doe as he was commanded, for the great feare they all had of this King. But the voyce said, *Haue no feare, for I am without comparison greater than this King, I can destroy him, and defend him, doe therefore what I command thee.* Whereupon the Laborer tooke the staffe of perfumes out of the Kings hand, and put it burning to his nose, but he moued not, nor shewed any feeling. This done, the voyce said vnto him, that seeing he had found the King so sleepe, he should goe awake him, and tell him what he had seene. Then the Eagle by the same commandement, tooke the man in his talents, and set him in the same place where he found him, and for accomplishment of that which he had spoken, he came to aduertise him. They say, that *Moteczuma* looking on his face, found that he was burnt, the which he had not felt till then, wherewith he continued exceeding heauie and troubled.

Of the Spani-
ards entrie in-
to Mexico.
Chap. x.

with rich presents, to congratulate his comming, saying, they knew well that their great Lord *Queztzalcoatl* was come, and that his seruant *Moteczuma* sent to visite him, for so he accounted himselfe. The Spaniards vnderstood this message by the meanes of *Marina*, an Indian woman whom they brought with them which vnderstood the Mexican tongue. *Fernande de Cortes* finding this a good occasion for his entry, commanded to decke his Chamber richly, and being set in great state and pompe, he caused the Ambassadors to enter, who omitted no shewes of humilitie, but to worship him as their god.

They deliuered their charge, saying, that his seruant *Moteczuma* sent to visit him, and that he held the Country in his name as his Lieutenant, that he knew well it was the *Topilein* which had beene promised them many yeares since, who should returne againe vnto them. And therefore they brought him such Garments as he was wont to weare, when he did conuerse amongst them, beseeching him to accept willingly of them, offering him many presents of great value. *Cortes* receiuing the presents, answered, that he was the same they spake of, wherewith they were greatly satisfied, seeing themselves to be courteously receiued and intreated by him. To conclude, the day after this Ambassage, all the Captaines and Commanders of the Fleete, came vnto the Admirall, where vnderstanding the matter, and that this Realme of *Moteczuma* was mighty and rich, it seemed fit to gaine the reputation of braue and valiant men among this people, and that by this meanes (although they were few) they should be feared and receiued into Mexico. To this end they discharged all their Artillery from their Shippes, which being a thing the Indians had neuer heard, they were amazed, as if heauen had fallen vpon them. Then the Spaniards beganne to desie them to fight with them: but the Indians not daring to hazard themselves, they did beate them and intreate them ill, shewing their Swords, Lances, Pertuisans, and other armes, wherewith they did terrifie them much. The poore Indians were by reason hereof so fearefull and amazed, as they changed their opinion, saying, that their Lord *Topilein* came not in this troupe, but they were some gods (their enemies) came to destroy them. When as the Ambassadors returned to Mexico, *Moteczuma* was in the house of audience; but before he would heare them, this miserable man commanded a great number of men to be sacrificed in his presence, and with their blood to sprinkle the Ambassadors (supposing by this ceremony) which they were accustomed to doe in solemne Ambassages) to receiue a good answer. But vnderstanding the report and information of the manner of their Ships, Men, and Armes, he stood perplexed and confounded: then taking counsell thereon, he found no better meanes, then to labor to stop the entry of these strangers, by Coniurations and Magicke Arts. They had accustomed often to vse this meanes, hauing great conference with the Deuill, by whose helpe they sometimes obtained strange effects. They therefore assembled together all the Sorcerers, Magicians, and Inchanters, who being perswaded by *Moteczuma*, they tooke it in charge to force this people to returne vnto their Country. For this consideration, they went to a certaine place which they thought fit for the inuocation of their Deuils, and practising their Arts (a thing worthy of consideration) They wrought all they could; but seeing nothing could preuaile against the Christians, they went to the King, telling him that they were more then men, for that nothing might hurt them, notwithstanding, all their Coniurations and Inchantments. Then *Moteczuma* aduised him of another policie, that faining to be very well contented with their comming, he commanded all his Countries to serue these celestiall gods that were come into his Land. The whole people was in great heauinesse and amazement, and often newes came that the Spaniards inquired for the King, of his manner of life, of his house and meanes. He was exceedingly vexed herewith: some of the people and other Negromanciers aduised him to hide himselfe, offering to place him whereas no creature should euer finde him. This seemed base vnto him, and therefore he resolved to attend them, although it were dying. In the end he left his Houses and royall Princes to lodge in others, leaving them for these gods as he said.

I pretend not to intreate of the acts and deedes of the Spaniards, who conquered New Spaine, nor the strange adventures which happened vnto them, nor of the courage and inuincible valour of their Captaine *Don Fernando Cortes*: for that there are many Histories and Relations thereof, as thole which *Fernando Cortes* himselfe did write to the Emperour *Charles* the fift, although they be in a plaine stile, and farre from arrogancy, the which doe giue a sufficient testimony of what did passe, wherein he was worthy of eternall memory, but onely to accomplish my intention: I am to relate what the Indians report of this action, the which hath not to this day beene written in our vulgar tongue. *Moteczuma* therefore, hauing notice of this Captains victories, that he aduanced for his conquest, that he was confederate and ioyned with them of *Tlascalla*, his capitall enemies, and that he had severely punished them of *Cholola* his friends, he studied how to deceiue him, or else to try him in sending a principall man vnto him, attyred with the like ornaments and royall ensignes, the which should take vpon him to be *Moteczuma*, which fiction being discovered to the Marquise by them of *Tlascalla* (who did accompany him) he sent him backe, after a milde and gentle reprehension, in seeking so to deceiue him: whereupon *Moteczuma* was so confounded, that for the feare thereof he returned to his first imaginations and

Of the Spani-
ards entrie in-
to Mexico.
Chap. x.

and practises, to force the *Christians* to retire, by the inuocation of Coniurers and Witches. And therefore he assembled a greater number then before, threatening them, that if they returned without effecting what he had giuen them in charge, not any one should escape, whereunto they all promised to obey. And for this cause, all the Deuils officers went to the way of *Chalco*, by the which the *Spaniards* should passe, when mounting to the top of a hill, *Tezcalipuca*, one of their principall gods, appeared vnto them, as comming from the *Spaniards* campe, in the habit of *Chalcas*, who had his paps bound about eight fold with a cord of reedes, he came like a man beside himselfe, out of his wits, and drunke with rage and furie. Being come to this troupe of Witches and Coniurers, he stayed, and spake to them in great choller, *Why come you hither? what doth Motecuma pretend to doe by your meanes? He had aduised himselfe too late: for it is now determined, that his Kingdome and honour shall be taken from him, with all that he possesseth, for punishment of the great tyrannies he hath committed against his Subiects, hauing gouerned not like a Lord, but like a traitour and tyrant.* The Inchanters and Coniurers hearing these words, knew it was their Idoll, and humbling themselves before him, they presently built him an Altar of Stone in the same place, couering it with flowers which they gathered thereabouts, but he contrariwise, making no account of these things, began againe to chide them, saying: *What come you hither to doe, O ye traitours? Returne presently and behold Mexico, that you may vnderstand what shall become thereof.* And they say, that returning towards *Mexico* to behold it, they did see it flaming on fire. Then the Deuill vanished away, and they not daring to passe any farther, gaue notice thereof to *Moteczuma*, whereat he remained long without speaking, looking heauily on the ground; then he said, *What shall we doe if god and our friends leave vs, and contrariwise, they helpe and fauour our enemies? I am now resolute, and we ought all to resolue in this point, that happen what may, wee must not flye nor hide our selues, or shew any signe of cowardise. I onely pittie the aged and infants, who haue neither seele nor hands to defend themselves.* Hauing spoken this, he held his peace, being transported into an extasie. In the end, the Marquesse approaching to *Mexico*, *Moteczuma* resolved to make of necessity a vertue, going three or foure leagues out of the Citie to receiue him with a great maiesty, carried vpon the shoulders of foure Noblemen, vnder a rich Canapy of Gold and Feathers. When they met, *Moteczuma* descended, and they saluted one another very courteously. *Don Fernando Cortes* said vnto him, that he should not care for any thing, and that he came not to take away his Realme, nor to diminish his authority. *Moteczuma* lodged *Cortes*, and his companions in his royall Pallace, the which was very stately, and he himselfe lodged in other priuate houses. This night the Souldiers for ioy discharged their Artillery, wherewith the *Indians* were much troubled, being vnaccustomed to heare such Musicke. The day following, *Cortes* caused *Moteczuma* and all the Nobles of his Court to assemble in a great Hall, where being set in a high Chaire, he said vnto the, that he was seruant to a great Prince, who had sent them into these Countries to doe good workes, and that hauing found them of *Tlascalla* to be his friends (who complained of wrongs and grieuances done vnto them daily by them of *Mexico*) he would vnderstand which of them was in the blame, and reconcile them, that hereafter they might no more afflict and warre one against another: and in the meane time, he and his brethren (which were the *Spaniards*) would remaine still there without hurting them: but contrariwise, they would helpe them all they could. He laboured to make them all vnderstand this discourse, vsing his Interpreters and truchmen. The which being vnderstood by the King and the other *Mexican* Lords, they were wonderfully well satisfied, and shewed great signes of loue to *Cortes* and his company. So it is, that by some occasions, many complaints, griefes, and ieaalousies grew on either side. The which *Cortes* finding, & that the *Indians* mindes began to be distracted from them, he thought it necessary to assure himselfe, in laying hand vpon King *Moteczuma*, who was seized on, and his legges fettered. Truly this act was strange vnto all men, and like vnto that other of his, to haue burnt his Shippes, and shut himselfe in the midst of his enemies, there to vanquish or to dye. The mischief was, that by reason of the v unexpected arriual of *Pamphilo Naruaes* at the true crosse, drawing the Country into mutiny, *Cortes* was forced to absent himselfe from *Mexico*, and to leaue poore *Moteczuma* in the hands of his companions, who wanted discretiō nor had not moderation like vnto him: so as they grew to that dissention, as there was no meanes to pacifie it.

When as *Cortes* was absent from *Mexico*, he that remayned his Lieutenant, resolved to punish the *Mexicans* seuerely, causing a great number of the Nobilitie to be slaine at a maske, which they made in the Palace, the which did so farre exceed, as all the people mutined, and in a furious rage, tooke Armes to be reuenged and to kill the *Spaniards*. They therefore besieged them in the Palace, pressing them so neere, that all the hurt the *Spaniards* could doe them with their Artillerie and Crosse-bowes, might not terrifie them, nor force them to retyre from their enterprise, where they continued many dayes, stopping their victuals, not suffering any one to enter or issue forth. They did fight with stones, and cast Darts after their manner, with a kind of Lances like vnto Arrowes, in the which there are foure or sixe very sharpe Rapiers, the which are such (as the Histories report) that in these warres, an *Indian* with one blow of these Rapiers, almost cut off the necke of a Horse, and as they did one day fight with this resolution and furie,

the *Spaniards* to make them cease, shewed forth *Motēcūma*, with an other of the chiefe Lords of *Mexico*, vpon the top of a plat-forme of the house, couered with the Targets of two Souldiers that were with them. The *Mexicans* seeing their Lord *Motēcūma*, stayed with great silence. Then *Motēcūma* caused the Lord to aduise them to pacifie themselves, and not to warre against the *Spaniards*, seeing that (he being a prisoner) it could little profit him. The which being vnderstood by a yong man, called *Quicuxtemoc*, whom they now resolved to make their King, hee spake with a loud voyce to *Motēcūma*, willing him to retyre like a Villaine, that seeing he had beene such a Coward, as to suffer himselfe to bee taken, they were no more bound to obey him, but rather should punish him as he deserued, calling him *Woman* for the more reproach, and then he began to draw his Bowe and to shoot at him, and the people began to cast stones at him, and to continue their combate. Many say that *Motēcūma* was then hurt with a stone, whereof hee dyed. The *Indians* of *Mexico* affirme the contrarie, and that hee dyed as I will shew hereafter. *Aluaro*, and the rest of the *Spaniards* seeing themselves thus pressed, gaue intelligence to Capitaine *Cortes*, of the great danger they were in: who hauing with an admirable dexteritie and valour, giuen order to *Naruaes* affaires, and assembled the greatest part of his men, hee returned with all speed to succour them of *Mexico*, where obseruing the time the *Indians* rest (for it was their custome in warre, to rest euery fourth day) Hee one day aduanced with great policy and courage, so as both he and his men entred the Palace, where as the *Spaniards* had fortified themselves: they then shewed great signes of ioy, in discharging their Artillerie. But as the *Mexicans* fury increased (being out of hope to defend themselves) *Cortes* resolved to passe away secretly in the night without bruit. Hauing therefore made Bridges to passe two great and dangerous passages, about mid-night they issued forth as secretly as they could, the greatest part of his people hauing passed the first bridge, they were discovered by an *Indian* woman before they could passe the second, who cryed out their enemies fled, at the which voyce all the people ranne together with a horrible furie: so as in passing the second bridge, they were so charged and pursued, as there remayned about three hundred men slaine and hurt in one place; where at this day there is a small Hermitage, which they vnproperly call of *Martyrs*. Many *Spaniards* (to preferue the gold and jewels which they had gotten) perished, and others staying to carry it away, were taken by the *Mexicans*, and cruelly sacrificed to their Idols. The *Mexicans* found King *Motēcūma* dead, and wounded as they say with Poniards, and they hold opinion that that night the *Spaniards* slue him with other Noblemen. The Marquesse in his Relation sent to the Emperour, writes the contrary, and that the *Mexicans* killed him that night with a sonne of *Motēcūma*, which he led with him amongst other Noblemen, saying, that all the treasure of gold, stones, and siluer, fell into the Lake and was neuer more seene. But how soeuer, *Motēcūma* dyed miserably, and payed his deserts to the iust iudgement of our Lord of Heauen for his pride and tyrannie: his body falling into the *Indians* power, they would make him no Obsequies of a King, no not of an ordinarie person, but cast it away in great disdain and rage. A seruant of his hauing pitie of this Kings miserie (who before had beene feared and worshipped as a God) made a fire thereof, and put the ashes in a contemptible place. Returning to the *Spaniards* that escaped, they were greatly tyred and turmoyled, the *Indians* following them two or three dayes very refo-
lutely, giuing them no time of rest, being so distressed for victuals, as a few graines of Mays were diuided amongst them for their meate. The Relations both of the *Spaniards* and *Indians* agree, that God deliuered them here miraculously, the Virgin *Mary* defending them on a little Hill, whereat this day three leagues from *Mexico*, there is a Church built in remembrance thereof, called our *Lady of succour*. They retyred to their ancient friends of *Tlascalla*, whence (by their aide, and the valour and policy of *Cortes*) they returned afterwards to make war against *Mexico*, by Water and Land, with an inuention of Brigantines, which they put into the Lake, where after many combats, and about threescore dangerous battailes, they conquered *Mexico*, on Saint *Hippolitus* day, the 13. of August, 1521. The last King of the *Mexicans* (hauing obstinately maintayned the warres) was in the end taken in a great Canoe, whereinto hee fled, who being brought with some other of the chiefe Noblemen before *Fernando Cortes*, this petie King with a strange resolution and courage, drawing his dagger, came neere to *Cortes*, and said vnto him, *Vntill this day I haue done my best indenuour for the defence of my people: now am I no farther bound, but to giue thee this dagger to kill me therewith.* *Cortes* answered, that he would not kill him, neither was it his intention to hurt them: but their obstinate folly was guiltie of all the miserie and afflictions they had suffered, neither were they ignorant how often he had required peace and amitie at their hands. Hee then commanded them to be intreated curteously. Many strange and admirable things chanced in this Conquest of *Mexico*: for I neither hold it for an vntruth, nor an addition, which many write, that God fauoured the *Spaniards* by many miracles. It is most certaine by the Relations of many, and by the Histories which are written, that in diuers battailes which the *Spaniards* had, as well in New *Spain*, as in *Peru*, the *Indians* their enemies did see a Horseman in the ayre, mounted on a white horse, with a Sword in his hand, fighting for the *Spaniards*, whence comes the great reuerence they beare at the *Indies* to the glorious Apollle Saint *Iames*. Otherwhiles they did see in some battailes, the Image of our *Lady*, from whom

whom the Christians haue receiued in those parts incomparable fauours and benefits, &c. And therefore we ought not to condemne all these things of the first Conquerors of the *Indies*, as some religious and learned men haue done, doubtlesse with a good zeale, but too much affected: For although for the most part they were couetous men, cruell, and very ignorant in the course that was to be obserued with the *Infidels*, who had neuer offended the *Christians*, yet can we not denie, but on their part there was much malice against God and our Men, which forced them to vse rigour and chastisement.

- Every one may vnderstand by the Relation and Discourse I haue written in these Bookes, as well at *Peru*, as in *New Spaine*, when as the *Christians* first set footing, that these Kingdomes and Monarchies were come to the height and period of their power. The *Inguas* of *Peru*, possessing from the Realme of *Chille* beyond *Quitto*, which are a thousand leagues, being most abundant in gold, siluer, sumptuous seruices, and other things: as also in *Mexico*, *Moteczuma* commanded from the North Ocean Sea, vnto the South, being feared and worshipped not as a man, but rather as a god. Then was it, that the most high Lord had determined that that stone of *Daniel*, which dissolued the Realmes and Kingdomes of the World, should also dissolue those of this new World. And as the Law of Christ came when as the *Roman* Monarchie was at her greatnesse: so did it happen at the *West Indies*, wherein wee see the iust prouidence of our Lord: For being then in the World, I meane in *Europe*, but one head and temporall Lord, as the holy Doctors doe note, whereby the Gospell might more easily bee imparted to so many People and Nations: Euen so hath it happened at the *Indies*, where hauing giuen the knowledge of Christ to the Monarchs of so many Kingdomes, it was a meanes that afterwards the knowledge of the Gospell was imparted to all the people: yea, there is herein a speciall thing to be obserued, that as the Lords of *Cusco* and *Mexico* conquered new Lands, so they brought in their owne language: for although there were (as at this day) great diuersitie of tongues, yet the Courtly speech of *Cusco*, did and doth at this day runne aboue a thousand leagues, and that of *Mexico* did not extend farre lesse, which hath not beene of small importance, but hath much profited in making the preaching easie, at such a time, when as the Preachers had not the gift of many tongues, as in old times. He that would know what a helpe it hath beene for the conuersion of this people in these two great Empires, and the great difficultie they haue found to reduce those *Indians* to Christ, which acknowledge no Soueraigne Lord, let him goe to *Florida*, *Bresil*, the *Andes*, and many other places, where they haue not preuayled so much by their preaching in fiftie yeeres, as they haue done in *Peru* and new *Spaine* in lesse then fise. If they will impute the cause to the riches of the Country: I will not altogether denie it. Yet were it impossible to haue so great wealth, and to be able to preserue it, if there had not beene a Monarchie. This is also a worke of God in this age, when as the Preachers of the Gospell are so cold and without zeale, and Merchants with the heat of couetousnesse and desire of command, search and discover new people whither we passe with our commodities; for as Saint *Augustine* saith, the prophesie of *Esay* is fulfilled, in that the Church of Christ is extended, not onely to the right hand, but also to the left: which is (as hee declareth) by humane and earthly meanes, which they seeke more commonly then Iesus Christ. It was also a great prouidence of our Lord, that when as the first *Spaniards* arriued there, they found aide from the *Indians* themselves, by reason of their partialities and great diuisions.

Si ego (might America say) digna sum hac contumelia maxime; At tu (Hispane) indignus qui faceres tamen.

What differed twice Wordes and Swords, twice Apostles and greedie Soldiers? The Prince of peace sent men not to kill, but to be killed, & came to bee a flaine Lamb, that the World might be saued; not to slay a World that himselfe might be a couetous worldly sauer and conqueror. Nimrod or Alexander had been fitter Preachers in this kinde then Peter and Pauls their examples (not of these) did Cortes and Pizarro follow: and the Christianitie of those parts more smells of the Sword then the Word, as the lesuit in bookes de procuranda Ind. sal. hath shewed, as is shewed sup. To. 1. l. 2. c. 1. in bayting the Popes Bull. August. lib. 2. de com. euang. c. 36. This was the greatest helpe of the Spanish conquest. Indian quarrels made that easie which their gold made desirable. Diuers Nations which the Spaniards could neuer conquer to this day.

This is well knowne in *Peru*, that the diuision betwixt the two brothers *Atahualpa* and *Guasca*, the great King *Guanacapa* their father being newly dead, gaue entrie to the Marquesse *Don Francis Pizarro*, and to the *Spaniards*, for that either of them desired his alliance being busied in warre one against the other. The like experience hath beene in new *Spaine*, that the aide of those of the Prouince of *Tlascalla*, by reason of their continuall hatred against the *Mexicans*, gaue the victorie and siegnorie of *Mexico*, to the Marquesse *Fernando Cortes* and his men, and without them it had beene impossible to haue wonne it, yea, to haue maintayned themselves within the Country.

They are much deceiued that so little esteeme the *Indians*, and iudge that (by the aduantage the *Spaniards* haue ouer them in their Persons, Horses, and Armes, both offensive and defensive) they might easily conquer any Land or Nation of the *Indies*.

Chille stands yet, or to say better, *Aranco* and *Tuecapel*, which are two Cities, where our *Spaniards* could not yet win one foot of ground, although they haue made warre there aboue fise and twentie yeeres, without sparing of any cost. For this barbarous Nation, hauing once lost the apprehension of horse and shot, and knowing that the *Spaniards* fall as well as other men, with the blow of a stone or of a dart, they hazard themselves desperately, entring the Pikes vpon any enterprise. How many yeeres haue they leuiued men in new *Spaine*, to send against the *Chychemquos*, which are a small number of naked *Indians*, armed only with bowes and arrowes? yet to this day they could not be vanquished, but contrariwise, from day to day they grow more desperate and resolute. But what shall we say of the *Chucos*, of the *Chiraguas*, of the *Piscocones*, and all the other people of the *Andes*? Hath not all the flower of *Peru* beene there, bringing with them so great prouision of Armes and Men as we haue seene? What did they? With what victories

Deuill insupportable.

victories returned they? Surely, they returned very happy in sauing of their liues, hauing lost their baggage and almost all their horses. Let no man thinke (speaking of the *Indians*) that they are men of nothing; but if they thinke so, let them goe and make triall. Wee must then attribute the glorie to whom it appertaynes, that is, principally to God, and to his admirable disposition: for if *Moteczuma* in *Mexico*, and the *Inga* in *Peru*, had beene resolute to resist the *Spaniards*, and to stop their entrie, *Cortes* and *Pizarre* had preuayled little in their landing, although they were excellent Captaines. It hath also beene a great helpe to induce the *Indians* to receiue the Law of Christ, the subiection they were in to their Kings and Lords, and also the seruitude and slauerie they were held in by the Deuils tyrannies and insupportable yoke. This was an excellent disposition of the diuine Wisedome, the which drawes profit from ill to a good end, and receiues his good from an others ill, which it hath not sowed. It is most certaine that no people of the West *Indies* haue beene more apt to receiue the Gospell, then those which were most subiect to their Lords, and which haue beene charged with the heauiest burthens, as well of Tributes and Seruices, as of Customes and bloudie Practises. All that which the *Mexican* Kings and those of *Peru* did possesse, is at this day most planted with Christian Religion, and where there is least difficultie in the Gouernment and Ecclesiasticall Discipline. The *Indians* were so wearied with the heauy and insupportable yoke of Satans lawes, his sacrifices and ceremonies, whereof wee haue formerly spoken, that they consulted among themselves, to seeke out a new Law, and an other God to serue. And therefore the Law of Christ seemed vnto them, and doth at this day seeme iust, sweet, cleane, good, and full of happinesse.

And that which is difficult in our Law, to beleue so high and soueraigne Mysteries, hath beene easie among them, for that the Deuill had made them comprehend things of greater difficultie, and the selfe-same things which hee had stolen from our Euangelicall Law, as their manner of Communion and Confession, their adoration of Three in One, and such other like, the which against the will of the Enemy, haue holpen for the easie receiuing of the Truth by those who before had embraced Lyes. God is wise and admirable in all his workes, vanquishing the Aduersarie euen with his owne weapon, hee takes him in his owne snare, and kills him with his owne sword. Finally, our God (who had created this People, and who seemed to haue thus long forgot them) when the houre was come, hee would haue the same Deuils, enemies to mankind, whom they falsly held for gods; should giue a testimonie against their will, of the true Law, the power of Christ, and the triumph of the Crosse, as it plainly appears by the presages, prophecies, signes, and prodigies, here before mentioned, with many others happened in diuers parts, and that the same ministers of Satan, Sorcerers, Magicians, and other *Indians* haue confessed it. And wee cannot denie it (being most euident and knowne to all the World) that the Deuill dareth not hisse, and that the Practises, Oracles, Answers, and visible Apparitions, which were so ordinarie throughout all this Infidelitie, haue ceased, whereas the Crosse of Christ hath beene planted, where there are Churches, and where the Name of Christ hath beene confessed. And if there be at this day any cursed minister of his, that doth participate thereof, it is in Caves, and on the tops of Mountaines, and in secret places, farre from the name and communion of Christians. The Soueraigne Lord be blessed for his great mercies, and for the glorie of his holy Name: And in truth, if they did gouerne this people temporally and spiritually, in such sort as the Law of Iesus Christ hath set it downe, with a milde yoke and light burthen, and that they would impose no more vpon them then they can well beare, as the Letters Patents of the good Emperour of happy memorie doe command, and that they would imploy halfe the care they haue to make profit of these poore mens sweats and labours, for the health of their soules, it were the most peaceable and happy Christian part of all the World, &c.

CHAP. V.

Of the ancient superstitions of the Mexicans and Indians of America,
gathered out of the fifth Booke of IOSEPHVS
ACOSTA.

They acknowledge one supreme Deitie.

First, although the darknesse of Infidelitie holdeth these Nations in blindnesse, yet in many things the light of Truth and Reason workes somewhat in them. And they commonly acknowledge a supreme Lord and Author of all things, which they of *Peru* called *Vnacocha*, and gaue him names of great excellence, as *Pachacamac*, or *Pachayachac*, which is, the Creator of Heauen and Earth: and *Usapu*, which is, admirable, and other like names. Him they did worship, as the chiefest of all, whom they did honor in beholding the Heauen. The like wee see amongst them of *Mexico*, and *China*, and all other Infidels. Which accordeth well with that which is said of Saint Paul, in the Acts of the Apostles, where he did see the Inscription of an Altar; *Ignoto Deo*.

to the unknowne God. Whereupon the Apostle tooke occasion to preach vnto them, saying; *Hee whom you worship without knowing, him doe I preach vnto you.* In like sort, those which at this day doe preach the Gospell to the *Indians*, finde no great difficultie to perswade them that there is a High God and Lord ouer all, and that this is the Christians God, and the true God. And yet it hath caused great admiration in mee, that although they had this knowledge, yet had they no proper Name for God; if wee shall seeke into the *Indian* tongue for a word to answer to this Name of God, as in Latin, *Deus*; in Greeke, *Theos*; in Hebrew, *El*; in Arabike, *Alla*; but we shall not finde any in the *Cuscan* or *Mexican* tongues. So as such as preach or write to the *Indians*, vnder our *Spanishe* name *Dios*, fitting it to the accent or pronounciation of the *Indian* tongues, the which differ much, whereby appears the small knowledge they had of God, seeing they cannot so much as name him; if it bee not by our very name: yet in truth they had some little knowledge, and therefore in *Peru* they made him a rich Temple, which they called *Pachacamac*, which was the principall Sanctuary of the Realme. And as it hath beene said, this word of *Pachacamac*, is as much to say, as the Creator, yet in this Temple they vsed their Idolatries, worshipping the Deuill and Figures. They likewise made Sacrifices and Offerings to *Viracocha*, which held the chief place amongst the worships which the Kings *Incas* made. Hereof they called the *Spaniards* *Viracocha*, for that they hold opinion they are the *sonnes of Heauen*, and diuine; euen as others did attribute a Deitie to *Paul* and *Barnabas*, calling the one *Iupiter*, and the other *Mercurie*; so would they offer sacrifices vnto them, as vnto gods; and as the *Barbarians* of *Mexico* (which is *Malte*) seeing that the *Viper* did not hurt the Apostle, they called him God.

Next to *Viracocha*, or their supreme God, that which most commonly they haue and doe adore amongst the Infidels, is the *Sunne*; and after, those things which are most remarkable in the celestiall or elementarie nature, as the *Moon*, *Starres*, *Sea*, and *Land*. The *Guncas*, or *Oratories*, which the *Incas* Lords of *Peru* had in greatest reuerence, next to *Viracocha* and the *Sunne*, was the *Thunder*, which they called by three diuers names, *Chuquilla*, *Catulla*, and *Intiillapa*, supposing it to be a man in heauen, with a Sling and a Mace, and that it is in his power to cause Raine, Haile, Thunder, and all the rest that appertaines to the Region of the Aire, where the Cloudes engender. It was a *Gunca* (for so they called their Oratories) generall to all the *Indians* of *Peru*, offering vnto him many sacrifices: and in *Cusco*, which is the Court and Metropolitan Citie, they did sacrifice children vnto him, as to the *Sunne*. They did worship these three, *Viracocha*, the *Sunne*, and *Thunder*, after another manner then all the rest, as *Pollo* writes, who had made triall thereof, they did put as it were a Gantlet or Gloue vpon their hands, when they did lift them vp to worship them. They did worship the *Earth*, which they called *Pachamama*, as the Ancients did the goddess *Tellus*: and the *Sea* likewise, which they call *Mamacocha*, as the Ancients worshipped *Thetis*, or *Neptune*. Moreover, they did worship the *Raine-bowe*, which were the Armes and Blazons of the *Incas*, with two Snakes stretched out on either side. Amongst the *Starres* they all did commonly worship that which they called *Colca*, and wee here call *Cabrille*. They did attribute diuers offices to diuers *Starres*, and those which had neede of their fauour did worship them, as the Shepherds did sacrifice to a *Starre*, which they called *Vrcuchillay*, which they hold to be a Sheepe of diuers colours, hauing the care to preserve their Cattell; and they imagine it is that which the Astronomers call *Lyra*. These Shepherds worship two other *Starres*, which walke neere vnto them, they call them *Catuchillay*, and *Vrcuchillay*; and they sayne them to be an *Ewe* and a *Lambe*. Others worshipped a *Starre* which they called *Machacnay*, to which they attribute the charge and power ouer Serpents, and Snakes, to keepe them from hurting of them. They ascribe power to another *Starre*, which they called *Chiguinchinchay* (which is as much as *Tigre*) ouer *Tigres*, *Beates*, and *Lions*, and they haue generally beleued, that of all the beasts of the earth, there is one alone in heauen like vnto them, the which hath care of their procreation and increase. And so they did obserue and worship diuers *Starres*, as those which they called *Chacana*, *Topatayca*, *Mamaman*, *Marco*, *Miquiquicay*, and many other. So as it seemed they approached somewhat neere the propositions of *Platoes Ideas*. The *Mexicans* almost in the same maner after the supreme God, worshipped the *Sunne*. And therefore they called *Hernando Cortez* (as he hath written in a Letter sent vnto the Emperour *Charles* the fifth) *Sonne of the Sunne*, for his care and courage to compasse the *Earth*. But they made their greatest adoration to an Idoll, called *Vitzliputzli*, the which in all this Region they called the most puissant, and Lord of all things: for this cause the *Mexicans* built him a Temple, the greatest, the fairest, the highest, and the most sumptuous of all other. The situation and beautie thereof, may well be conjectured by the ruines which yet remaine in the midst of the Citie of *Mexico*. But here the *Mexicans* Idolatrie hath beene more pernicious and hurtfull then that of the *Incas*, as wee shall see playner hereafter, for that the greatest part of their adoration and Idolatrie, was imployed to Idols, and not to naturall things, although they did attribute naturall effects to these Idols, as *Raine*, multiplication of Cattell, *Warre*, and *Generation*, euen as the *Greekes* and *Latines* haue forged Idols of *Phoebus*, *Mercurie*, *Iupiter*, *Minerva*, and of *Mars*. To conclude, who so shall neerly looke into it, shall finde this manner which the Deuill hath vsed to deceiue the *Indians*.

Of the first kinde of Idolatrie, vpon naturall and vniuersall things. Chap. 4. *Sunne* their second God: and then other heavenly Bodies in their order. Temples to the *Thunder* their third God. *Iupiters* fulmen. Humane sacrifices. *Earth*, *Sea*, *Raine-bow*, *Starres* worshipped.

to be the ſame wherewith he hath deceiued the *Greekes and Romans*, and other ancient *Gentiles*, giuing them to vnderſtand that theſe notable creatures, the *Sunne, Moone, Starres, and Elements*, had power and authority to doe good or harme to men. Their manner to pray to *Kracocha*, to the *Sunne*, the *Starres*, and the reſt of their Idols, was to open their hands, and to make a certaine ſound with their mouthes (like people that kiſſed) and to aſke that which every one deſired in offering his Sacrifices; yet was there great difference betwixt the words they vſed in ſpeaking to the great *Ticmiracocha*, to whom they did attribute the chiefe power and commandement over all things, and thoſe they vſed to others, the which every one did worſhippe priuately in his houſe, as Gods or particular Lords, ſaying, that they were their Interceſſors to this great *Ticmiracocha*. This manner of worſhip, opening the hands, and as it were, kiſſing, hath ſomething like to that which *Iob* had in horreur, as ſit for Idolaters, ſaying, *If I haue kiſſed my hands with my mouth, beholding the Sunne when it ſhines, or the Moone when it is light, the which is a great iniquitie, and to deny the moſt great God.*

The Deuill hath not bene contented to make theſe blinde Indians to worſhippe the *Sunne, Moone, Starres, Earth, and Sea*, and many other generall things in nature, but he hath paſſed on further, giuing them for God, and making them ſubiect to baſe and abieſt things, and for the moſt part, filthy and infamous: for they worſhipped *Riuers, Fountaines, the mouthes of Riuer, entries of Mountaines, Rockes or great Stones, Hills and the tops of Mountaines*, which they call *Apachitas*, and they hold them for matters of great deuotion. To conclude, they did worſhip all things in nature, which ſeemed to them remarkable and different from the reſt, as acknowledging ſome particular deities.

Theſe ſhewed me in *Caxamalca* of *Nasca* a little hill or great mount of Sand, which was the chiefe Idoll or *Guaca* of the Ancients. I demaunded of them what diuinity they found in it? They answered, that they did worſhip it for the wonder, being a very high mount of Sand, in the miſt of very thicke Mountaines of Stone. We had neede in the Citie of *Kings*, of great ſtore of great wood; for the melting of a Bell, and therefore they cut downe a great deformed Tree, which for the greatneſſe and antiquity thereof had bene a long time the Oratorie and *Guaca* of the Indians. And they beleued there was a certaine Diuinity in any thing that was extraordinary and ſtrange in his kinde, attributing the like vnto ſmall Stones and Mettals; yea vnto rootes and fruites of the earth, as the rootes they call *Papas*. There is a ſtrange kinde which they call *Lallubuas*, which they kiſſed and worſhipped. They did likewise worſhip Beares, Lyons, Tygres and Snakes, to thend they ſhould not hurt them: and ſuch as their gods be, ſuch are the things they offer vnto them in their worſhip. They haue vſed as they goe by the way, to caſt, in the croſſe wayes, on the hills, and toppes of Mountaines, which they call *Apachitas*, olde ſhoes, Feathers, and *Coca* chewed, being an herbe they vſe much. And when they haue nothing left, they caſt a Stone as an offering, that they might paſſe freely, and haue greater force, the which they ſay increaſeth by this meanes, as it is reported in a provinciall Counſell of *Perru*. And therefore they finde in the hie-waies great heapes of Stones offered, and ſuch other things. They vſed another offering no leſſe pleaſant and ridiculous, pulling the haire from the eyebrows to offer it to the *Sunne, Hills, Apachitas*, to the Windes, or to any other thing they feare. Such is the miſeries that many Indians haue liued in, and doe to this day, whom the Deuill doth abuſe like very Babes, with any fooliſh illuſion whatſoeuer.

They report of one of the Kings *Inguis*, a man of a ſubtile ſpirit, who (ſeeing that all his predeceſſours had worſhipped the *Sunne*) ſaid, that he did not take the *Sunne* to be God, neither could it be, for that God was a great Lord, who with great quiet and leaſure performed his workes, and that the *Stonne* doth neuer ceaſe his courſe, ſaying, that the thing which laboured ſo much could not ſeeme to be God.

They came to the height of Idolatry by the ſame meanes the Scripture maketh mention of: firſt they had a care to keepe the bodies of their Kings and Noblemen whole, from any ill ſcent or corruption about two hundred yeeres. In this ſort were their Kings *Inguis* in *Cusco*, every one in his Chappell and Oratory, ſo as the Marqueſſe of *Canette* being Viceroy, to root out Idolatry, cauſed three or foure of their Gods to be drawne out and carried to the Citie of *Kings*, which bred a great admiration, to ſee theſe bodies (dead ſo many yeeres before) remayne ſo faire and alſo whole. Every one of theſe Kings *Inguis* left all his Treaſure and Reuenues, to enter-tayne the place of worſhip where his body was laid, and there were many Miniſters with all his Family dedicated to his ſeruiſe: for no King Succeſſor did vſurpe the Treasures and Plate of his Predeceſſor, but he did gather all new for himſelfe, and his Palace. They were not content with this Idolatry to dead bodies, but alſo they made their figures and representations: and every King in his life time cauſed a figure to be made wherein he was repreſented, which they called *Guaogui*, which ſignifieth Brother, for that they ſhould doe to this Image, during his life and death, as much honour and reverence as to himſelfe. They carried this Image to the warres, and in proceſſion for raine or faire weather, making ſundry Feaſts and Sacrifices vnto them. There haue bene

beene many of these Idols in *Cusco*, and in that Territory, but now they say that this Superstition of worshipping of stones hath altogether ceased, or for the most part, after they had beene discovered by the diligence of the Licentiate *Pollo*, and the first was that of the *Inguas Rocha*, chiefe of the faction or race of *Hanam Cusco*. And we find that among other Nations they had in great estimation and reuerence the bodies of their Predecessors, and did likewise worship their Images.

THe Indians of *Pern* beleued commonly that the Soules liued after this life, and that the good were in glorie, and the bad in paine; so as there is little difficultie to perswade them to these Articles. But they are not yet come to the knowledge of that point, that the bodies should rise with the Soules. And therefore they did vse a wonderfull care, as it is said, to preserve the bodies which they honoured after death: to this end their Successors gaue them Garments, and made Sacrifices vnto them, especially the Kings *Inguas*, being accompanied at their Funerals, with a great number of seruants and women for his seruice in the other life: and therefore on the day of his decease, they did put to death the woman he had loued best, his Seruants and Officers, that they might serue him in the other life.

Of Superstitious they vfed to the dead.
Chap. 7.
Immortality of soules beleued but not resurrection of the bodies:
as at. 17.

When as the *Guanacapa* dyed (who was father to *Atagualpa*, at what time the *Spaniards* entered) they put to death aboue a thousand persons of all ages and conditions, for his seruice to accompany him in the other life, after many songs and drunkenesse they slew them; and these that were appointed to death, held themselves happy. They did sacrifice many things vnto them, especially *yong children*, and with the bloud they made a stroake on the dead mans face, from one eare to the other. This superstition and inhumanity, to kill both men and women, to accompany and serue the dead in the other life, hath beene followed by others, and is at this day vfed amongst some other barbarous Nations. And as *Pollo* writes, it hath beene in a manner generall throughout all the *Indies*. The reuerent *Beda* reports, that before the *Englishmen* were conuerted to the Gospell, they had the same custome, to kill men to accompany and serue the dead. It is written of a *Portugall*, who being captiue among the *Barbarians*, had beene hurt with a dart, so as he lost one eye, and as they would haue sacrificed him to accompany a Nobleman that was dead, he said vnto them, that those that were in the other life, would make small account of the dead, if they gaue him a blinde man for a companion; and that it were better to giue him an attendant that had both his eyes. This reason being found good by the *Barbarians*, they let him goe. Besides this superstition of sacrificing men to the dead, being vfed but to great Personages, there is another farre more generall and common in all the *Indies*, which is, to set meate and drinke vpon the graue of the dead, imagining they did feede thereon: the which hath likewise beene an error amongst the Auncients, as Saint *Austine* writes, and therefore they gaue them meate and drinke. At this day many *Indian* Infidels, do secretly draw their dead out of the Churchyard, and bury them on hills, or vpon passages of Mountaines, or else in their owne houses. They haue also vfed to put Gold and Siluer in their mouth, hands, and bosome, and to apparell them with new Garments durable, and well lined vnder the herse. They beleue that the soules of the dead wandred vp and downe and indure cold, thirst, hunger and trauel, and for this cause they make their anniuersaries, carrying them cloathes, meate and drinke.

1000. flaine to attend one dead man.

The fourth Superstition of the old English Portugall wiles.

Purgatory fancies as in Popish legends.

Hauing reported what many Nations of *Pern* haue done with their dead, it shall not be from the purpose, to make particular mention of the *Mexicans* in this point, whose mortuaries were much solemnised, and full of notable follies. It was the office of the Priests and religious of *Mexico* (who liued there with a strange obseruance, as shall be said hereafter) to interre the dead, and doe their obsequies. The places where they buried them, was in their Gardens, and in the Courts of their owne houses: others carried them to the places of sacrifices which were done in the Mountaines: others burnt them, and after buried the ashes in their Temples; and they buried them all, with whatsoeuer they had, of Apparell, Stones and Iewels. They did put the ashes of such as were burnt into pots, and with them, the Iewels, Stones, and Eare-rings of the dead, how rich and precious soeuer. They did sing the Funerall offices, like to anweres, and did often lift vp the dead bodies, doing many ceremonies. At these mortuaries they did eate and drinke; and if it were a person of quality, they gaue apparell to all such as came to the interment. When any one dyed, they laid him open in a chamber, vntill that all his kinsfolks and friends were come, who brought presents vnto the dead, and saluted him as if he were liuing. And if he were a King or Lord of some towne, they offered him slaues to be put to death with him, to the end they might serue him in the other world. They likewise put to death his Priest, or Chaplaine (for every Nobleman had a Priest which administered these ceremonies within his house) and then they killed him, that he might execute his office with the dead. They likewise killed his Cook, his Butler, his Dwarfes, and deformed men, by whom he was most serued: neither did they spare the very brothers, of the dead, who had most serued them: for it was a greatnesse amongst the Noblemen, to be serued by their brethren and the rest. Finally, they

Places of buriall.

The Death of a Nobleman.

Chaplen and other Officers killed.

put to death all of his traine, for the entertaining of his house in the other world: and lest poverty should oppresse them, they buried with them much wealth, as Gold, Siluer, Stones, Curtins of exquisite worke, Bracelets of Gold, and other rich peeces. And if they burned the dead, they vsed the like with all his Seruants, and ornaments they gaue him for the other world. Then tooke they all the ashes they buried with very great solemnity. The obsequies continued tenne dayes with songs of plaints and lamentations, and the Priests carried away the dead with so many ceremonies, and in so great number, as they could scarce accompt them. To the Captaines and Noblemen they gaue trophies and markes of honour, according to their enterprises and valor employed in the wars and governments; for this effect they had armes and particular blasons. They carried these markes or blasons to the place where he desired to be buried or burnt, marching before the body, and accompanying it, as it were in procession, where the Priests and officers of the Temple went with diuers furnitures and ornaments, some casting incense, others singing, and some sounding of mournfull Flutes and Drums, which did much increase the sorrow of his kinsfolkes and subiects. The Priest who did the office was decked with the markes of the Idoll which the Nobleman had represented; for all Noblemen did represent Idols, and carried the name of some one; and for this occasion they were esteemed and honoured. The order of *Knighthood* did commonly carry these foresaid markes. He that should be burnt, being brought to the place appointed, they inuironed him with wood of Pine trees, and all his baggage, then set they fire vnto it, increasing it still with goomie wood, vntill that all were conuerted into ashes, then came there forth a Priest attired like a Deuil, hauing mouthes vpon euery ioynt of him, and many eyes of glasse, holding a great staffe, with the which he did mingle all the ashes very boldly, and with so terrible a gesture, as he terrified all the assistants. Sometimes this Minister had other different habits, according to the quality of the dead.

The fourth & last kinde of Idolatry the Indians vsed, especially the Mexicans to Images and Idols. Chap. 4. Images the fourth kinde of Indian Idolatry.

There hath beene great curiosity at the *Indies* in making of Idols and Pictures of diuers formes and matters, which they worshipped for Gods, and in *Peru* they called them *Guacas*, being commonly of foule and deformed beasts, at the least, such as I haue seene, were so. I beleue verily that the Deuill, in whose honour they made these Idols, was pleased to cause himselfe to be worshipped in these deformities, and in truth it was found so, that the Deuill spake and answered many of these *Guacas* or Idols, and his Priests and Ministers came to these Oracles of the father of lies, and such as he is, such were his Counsels and Prophecies. In the Prouinces of *New Spaine*, *Mexico*, *Tescuco*, *Tlascalla*, *Cholula*, and in the neighbour Countries to this Realme, this kinde of Idolatry hath beene more practised than in any other Realme of the world. And it is a prodigious thing to heare the superstitions rehearsed that they haue vsed in that point, of the which it shall not be vnpleasant to speake something. The chiefest Idoll of *Mexico* was, as I haue said, *Vitziliputzli*. It was an image of wood like to a man, set vpon a stoole of the color of azure, in a brankard or litter, at euery corner was a piece of wood in forme of a Serpents head. The stoole signified that he was set in heauen: this Idoll had all the forehead Azure, and had a band of Azure vnder the nose from one eare to another: vpon his head he had a rich plume of Feathers, like to the beake of a small Bird, the which was couered on the top with Gold burnished very browne: he had in his left hand a white Target, with the figures of five pine Apples, made of white Feathers, set in a crosse: and from aboue issued forth a crest of gold, and at his sides he had foure darts, which (the *Mexicans* say) had beene sent from heauen to doe those acts and prowesses which shall be spoken of: In his right hand he had an Azured staffe, cut in fashion of a wauing snake. All these ornaments with the rest he had, carried this sence as the *Mexicans* doe shew the name of *Vitziliputzli* signifies the left hand of a shining Feather.

The Deuils Penitentiary.

I will speake hereafter of the proud Temple, the Sacrifices, Feasts and Ceremonies of this great Idoll, being very notable things. But at this present we will onely shew, that this Idoll thus richly apparelled and deckt, was set vpon an high Altar, in a small peece or boxe, well couered with linnen cloathes, Jewels, Feathers, and ornaments of Gold, with many rundles of Feathers, the fairest and most exquisite that could be found: he had alwaies a curtaine before him for the greater veneration. Ioyning to the chamber or chappell of this Idoll, there was a peece of lesse worke, and not so well beautified, where there was another Idoll they called *Tlaloc*. These two Idols were alwaies together, for that they held them as companions, and of equall power. There was another Idoll in *Mexico* much esteemed, which was the god of repentance, and of *Iubilies* and pardons for their sinnes. They called this Idoll *Tezcaltipuca*, he was made of a blacke shining stone like to *Iayel*, being attired with some Gentile deuises after their manner; it had earetings of gold and siluer, and through the nether lip a small canon of Christall, in length halfe a foote: in the which they sometimes put a greene feather, and sometimes an azured, which made it resemble sometimes an Emerald, and sometimes a Turquois: it had the haire broided and bound vp with a haire-lace of gold burnished, at the end whereof did hang an eare of gold, with two firebrands of smoake painted therein, which did signifie the prayers of the afflicted and sinners that he heard, when they recommended themselues vnto him. Betwixt the two eares hanged a number of small herons. He had a Jewell hanging at his necke, so great that it couered all his stomacke: vpon his armes bracelets of Gold, at his nauill a rich greene stone: and in his left hand a

Fanne

Fanne of precious Feathers, of Greene, Azure, and Yellow, which came forth of a Looking-glasse of Gold, shining and well burnished, and that signified, that within this Looking-glasse he saw whatsoever was done in the world. They called this Glasse or Chaston of gold *Irachey*, which signifies his Glasse for to looke in. In his right hand he held foure darts, which signified the chastisement he gaue to the wicked for their sinnes. And therefore they feared this Idoll most, least he should discover their faults and offences. At his feast they had pardon of their sinnes, which was made euery foure yeares, as shall be declared hereafter. They held this Idoll *Tescatlipuca* for the god of drought, of famine, barrenesse and pestilence: And therefore they painted him in another forme, being set in great maiesty vpon a stoole compassed in with a red Curtin, painted and wrought with the heads and bones of dead men. In the left hand it had a Target with five Pines, like vnto pine Apples of Cotton: and in the right a little dart with a threatening countenance, and the arme stretcht out, as if he would cast it; and from the Target came foure darts. It had the countenance of an angry man, and in choller, the body all painted blacke, and the head full of Quails feathers. They vfed great superstition to this Idoll, for the feare they had of it. In *Cholula* which is a Commonwealth of *Mexico*, they worshipt a famous Idoll which was the god of *Marchandise*, being to this day greatly giuen to trafficke. They called it *Quetzalcoalt*.

Their Nemesis.

They sat down to eate and drinke and rose vp to play.

Of a strange manner of Idolatry practised amongst the *Mexicans*. Ch. 16

- This Idoll was in a great place in a Temple very high; it had about it, Gold, Silver, Jewels, very rich Feathers, and habits of diuers colours. It had the forme of a man, but the visage of a little Bird, with a red bill; and aboue a combe full of warts, hauing rankes of teeth, and the tongue hanging out. It carried vpon the head, a pointed myter of painted paper, a sithe in the hand, and many toyes of gold on the legges; with a thousand other foolish inuentions, whereof all had their significations, and they worshipt it, for that he enriched whom he pleased, as *Memnon* and *Plutus*. In truth this name which the *Choluanos* gaue to their god, was very fit, although they vnderstood it not: they called it *Quetzalcoalt*, signifying colour of a rich Feather, for such is the deuill of couetousnesse. These barbarous people contented not themselves to haue gods onely, but they had goddesses also, as the Fables of Poets haue brought in, and the blinde gentility of the *Greekes* and *Romans* worshipt them. The chiefe goddesse they worshipt was called *Tozi*, which is to say, our Grandmother, who as the Histories of *Mexico* report, was daughter to the King of *Culhuacan*, who was the first they slayed by the commandement of *Vitzliputzli*, whom they sacrificed in this sort, being his sister; and then they began to slay men in their sacrifices, and to clothe the liuing with the skins of the sacrificed, hauing learned that their gods were pleased therewith: as also to pul the hearts out of them they sacrificed, which they learned of their god, who pulled out the hearts of such as he punished in *Tulla*, as shall be said in his place. One of these goddesses they worshipt had a son, who was a great hunter, whom they of *Tlascalla* afterwards tooke for a god, and those were enemies to the *Mexicans*, by whose aide the *Spaniards* won *Mexico*. The Prouince of *Tlascalla* is very fit for hunting, and the people are much giuen therunto. They therefore made a great feast vnto this Idoll, whom they painted of such a forme, as it is not now needfull to loose any time in the description thereof. The feast they made was pleasant, and in this sort: They sounded a Trumpet at the breake of day, at the sound whereof they all assembled with their Bowes, Arrows, Nets, and other instruments for hunting: then they went in procession with their Idoll, being followed by a great number of people to a high Mountaine, vpon the top whereof they had made a bower of leaues, and in the middest thereof an Altar richly deckt, where vpon they placed the Idoll. They marched with a great bruit of Trumpets, Cornets, Flutes & Drums, and being come vnto the place, they inuironed this Mountain on all sides, putting fire to it on all parts: by meanes whereof many beasts flew forth, as Stags, Conies, Hares, Foxes, and Woolues, which went to the top flying from the fire. These hunters followed after with great cries and noise of diuers instruments, hunting them to the top before the Idoll, whither fled such a number of beasts, in so great a presse, that they leaped one vpon another, vpon the people, and vpon the Altar, wherein they tooke great delight. Then tooke they a great number of these beasts, and sacrificed them before the Idoll, as Stagges and other great beasts, pulling out their hearts, as they vse in the sacrifice of men, and with the like ceremony: which done, they tooke all their prey vpon their shoulders, and retired with their Idoll in the same manner as they came, and entered the City laden with all these things, very ioyfull, with great store of musick, Trumpets, and Drums, vntill they came to the Temple, where they placed their Idoll with great reuerence and solemnity. They presently went to prepare their venison, wherewith they made a banquet to all the people; and after dinner they made their playes, representations, and dances before the Idoll. They had a great number of other Idols, of gods and goddesses; but the chiefe were of the *Mexican* Nation, and the neighbour people as is said.

AS we haue said that the Kings *Inguas* of *Pern* caused Images to be made to their likenesse, which they called their *Gnacos* or brothers, causing them for to be honored like themselves: euen so the *Mexicans* haue done of their gods, which was in this sort. They tooke a captiue, such as they thought good, & afore they did sacrifice vnto him their Idols; they gaue him the name of

the Idoll, to whom he should be sacrificed, and apparelled him with the same ornaments like their Idoll, saying, that he did represent the same Idoll. And during the time that this representation lasted, which was for a yeare in some Feasts, in others six moneths, and in others lesse: they reuerenced and worshipped him in the same manner, as the proper Idoll; and in the meane time he did eate, drinke, and was merry. When he went through the streetes, the people came forth to worship him, and euery one brought him an almes, with children and sicke folkes, that he might cure them, and blesse them, suffering him to doe all things at his pleasure, onely he was accompanied with ten or twelue men lest he should flye. And he (to the end he might be reuerenced as he passed) sometimes sounded vpon a small Flute, that the people might prepare to worship him. The feast being come, and he growne fat, they killed him, opened him, and eate 10 him, making a solemne sacrifice of him. It followes that we treat of their Religion, or rather Superstition; which they vse in their Sacrifices, Temples, Ceremonies, and the rest.

How the Deuill hath laboured to make himselfe equall vnto God, and to imitate him in his Sacrifices, Religion and Sacraments. Chap. II.

Of the Temples that were found at the Indies. Chap. 12.

Flu. lib. de tract. Iust. in apol. pro christ.

That which God by his wisdom hath decreed for his honour and seruice, and for the good and health of man, the Deuill strues to imitate and to peruert, to be honored, and to cause man to be damned: for as we see the great God hath Sacrifices, Priests, Sacraments, Religious Prophets, and Ministers, dedicated to his diuine Seruice and holy ceremonies: so the Deuill hath his Sacrifices, Priests, his kindes of Sacraments, his Ministers appointed, his secluded and fained holiness, with a thousand sorts of false Prophets.

Beginning then with their Temples, euen as the great God would haue a house dedicated, 20 where his holy name might be honoured, and that it should be particularly vowed to his seruice; euen so the Deuill, by his wicked practises, perswaded Infidels to build him proud Temples; and particular Oratories and Sanctuaries. In euery Prouince of *Peru*, there was one principall *Guaca*, or house of adoration; and besides it, there was one Generall throughout all the Kingdome of the *Inguas*; among the which there hath beene two famous and notable, the one which they called *Pachamama*, is foure leagues from *Lima*, where at this day they see the ruines of a most auncient and great building, out of the which *Francis Pizarro* and his people drew infinite treasure, of vessels and pots of Gold and Siluer, which they brought when they tooke the *Inga Atahualpa*. There are certaine memories and discourses which say, that in this Temple the Deuill did speake visibly, and gaue answers by his Oracle, and that sometimes 30 they did see a spotted Snake: and it was a thing very common and approued at the *Indies*, that the Deuill spake and answered in these false Sanctuaries deceiuing this miserable people. But where the Gospell is entred, and the Crosse of Christ planted, the father of lyes becomes mute, as *Plutarch* writes of his time, *Cur cessauerit Pibias fundere oracula*: and *Iustine Martyr* treats amply of the silence which Christ imposed to Devils, which spake by Idols, as it had beene before much prophesied of in the holy Scripture. The manner which the Infidell Ministers and Inchanters had to consult with their gods, was as the Deuill had taught them. It was commonly in the night, they entred backward to their Idoll, and so went bending their bodies and head, after an vgly manner, and so they consulted with him. The answer he made, was commonly like vnto a fearefull hissing, or to a gnashing which did terrifie them; and all that he did aduer- 40 tise or command them, was but the way to their perdition and ruine. There are few of these Oracles found now, through the mercy of God, and great power of Iesus Christ. There hath beene in *Peru* another Temple and Oratory, most esteemed, which was in the Citie of *Cusco*, where at this day is the Monastery of Saint *Dominicke*. We may see it hath beene a goodly and a stately worke, by the pavement and stones of the building, which remaine to this day. This Temple was like to the *Pantheon* of the *Romans*, for that it was the house and dwelling of all the gods; for the Kings *Inguas* did there behold the gods of all the Nations and Prouinces they had conquered, euery Idoll hauing his priuate place, whither they of that Prouince came to worship it with an exorbitant charge of things which they brought for his seruice. And thereby they supposed to keepe safely in obedience, those Prouinces which they had conquered, holding 50 their gods, as it were in hostage. In this same house was the *Pinchao*, which was an Idoll of the Sunne, of most fine Gold, wrought with great riches of Stones, the which was placed to the East, with so great Art, as the Sunne at his rising did cast his beames thereon: and as it was of most fine mettall, his beames did reflect with such a brightnesse, that it seemed another Sunne. The *Inguas* did worship this for their god, and the *Pachayacha*, which signifies the Creator of Heaven. They say, that at the spoile of this so rich a Temple, a Souldier had for his part this goodly plate of gold of the Sunne. And as play was then in request, he lost it all in one night at play, whence came the prouerbe they haue in *Peru* for great gamesters, saying, that they play the Sunne before it riseth.

Of the proud Temples at Mexico. Cha. 13.

The Superstitions of the *Mexicans*, haue without comparison beene greater then the rest, as well in their ceremonies, as in the greatnesse of their Temples, the which in old time the Spaniards called by this word *Cu*, which word might be taken from the Ilanders of Saint *Dominique*, or of *Cuba*, as many other words that are in vse, the which are neither from *Spaine*, nor

nor from any other language now vsuall among the *Indians*, as is *Mays*, *Chico*, *Vaquiano*, *Chapeion*, and other like. There was in *Mexico*, this *Cu*, the famous Temple of *Vitzliputzli*, it had a very great circuit, and within a faire Court. It was built of great stones, in fashion of Snakes tyed one to another, and the circuit was called *Coatepantli*, which is, a circuit of Snakes: vpon the top of euery Chamber and Oratorie where the Idols were, was a fine Pillar wrought with small stones, blacke as jeat, set in goodly order, the ground rayfed vp with white and red, which below gaue a great light. Vpon the top of the Pillar were battlements very artificially made, wrought like Snailles, supported by two *Indians* of stone, sitting, holding Candle-sticks in their hands, the which were like Croisants garnished and enriched at the ends, with yellow and greene feathers and long fringes of the same. Within the circuit of this Court, there were many Chambers of religious men, and others that were appointed for the seruice of the Priests and *Popes*, for so they call the soueraigne Priests which serue the Idoll. This Court is so great and spacious, as eight or ten thousand persons did dance easily in round, holding hands, the which was an vsuall custome in that Realme, although it seeme to many incredible.

*Mexican
Popes;*

There were foure Gates or Entries, at the East, West, North, and South; at euery one of these Gates began a faire Cawsey of two or three leagues long. There was in the midst of the Lake where the Citie of *Mexico* is built, foure large Cawseys in crosse, which did much beautifie it; vpon euery Portall or Entrie, was a God or Idoll, hauing the visage turned to the Cawsey, right against the Temple gate of *Vitzliputzli*. There were thirtie steps of thirtie fathome long, and they diuided from the circuit of the Court by a street that went betwixt them; vpon the top of these steps there was a walke of thirtie foot broad, all playstered with chalke, in the midst of which walke was a Pallisado artificially made of very high Trees, planted in order a fathome one from another. These Trees were very bigge, and all pierced with small holes from the foote to the top, and there were rods did run from one Tree to another, to the which were chayned or tyed many dead mens heads. Vpon euery rod were twentie Sculls, and these rankes of Sculls continue from the foot to the top of the Tree. This Pallisado was full of dead mens Sculls from one end to the other, the which was a wonderfull mournfull sight and full of horror. These were the heads of such as had beene sacrificed; for after they were dead, and had eaten the flesh, the head was deliuered to the Ministers of the Temple, which tyed them in this sort vntill they fell off by morsels; and then had they a care to set others in their places. Vpon the top of the Temple were two Stones or Chappels, and in them were the two Idols, which I haue spoken of, *Vitzliputzli*, and his companion *Tlaloc*. These Chappels were carued and grauen very artificially, and so high, that to ascend vp to it, there was a staire of stone of sixscore steps. Before these Chambers or Chappels, there was a Court of fortie foot square, in the midst whereof, was a high stone of fise hand breadth, pointed in fashion of a Pyramide, it was placed there for the sacrificing of men; for being laid on their backs, it made their bodies to bend, and so they did open them and pull out their hearts, as I shall shew hereafter. There were in the Citie of *Mexico*, eight or nine other Temples, the which were ioyned one to another within one great circuit, and had their priuate Stayres, their Courts, their Chambers, and their Dortoirs. The entries of some were to the East, some to the West, others to the South, and some to the North. All these Temples were curiously wrought, and compassed in with diuers sorts of Battlements and Pictures, with many figures of stones, being accompanied and fortified with great and large Spurres or Plat-formes. They were dedicated to diuers gods: but next to the Temple of *Vitzliputzli*, was that of *Tescalipuca*, which was the god of Penance and of Punishments, very high and well built.

There were four steps to ascend: on the top was a Flat or Table of sixscore foot broad, and ioyning vnto it was a Hall hanged with Tapistrie and Curtins of diuers colours and workes. The Doore thereof being low and large, was alwayes couered with a vaile, and none but the Priests might enter in. All this Temple was beautified with diuers Images and Pictures most curiously; for that these two Temples were as the *Cathedrall Churches*; and the rest in respect of them as *Parishes* and *Hermitages*: they were so spacious, and had so many Chambers, that there were in them places for the Ministerie, Colleges, Schooles, and Houses for Priests, whereof wee will intreat hereafter.

The Deuill counterfaising the vse of the Church of God, hath placed in the order of his Priests, some greater or superiors, and some lesse, the one as *Acolites*, the other as *Leuites*, and that which hath made me most to wonder, was, that the Deuill would vsurpe to himselfe the seruice of God; yea, and vse the same name: for the *Mexicans* in their ancient tongue called their high Priests *Papas*, as they should say *Soueraigne Bishops*, as it appeares now by their Histories. The Priests of *Vitzliputzli* succeeded by Linages of certaine quarters of the Citie, deputed for that purpose, and those of other Idols came by election, or being offered to the Temple in their infancie. The daily exercise of the Priests was to cast Incense on the Idols, which was done foure times in the space of a naturall day. The first at breakes of day, the second at noone, the third at Sunne setting, and the fourth at mid-night. At mid-night all the chiefe officers of the Temple did rise, and in stead of Bells, they sounded a long time vpon Trumpets, Cornets, and Flutes

Mattins.

very heauily, which being ended, he that did the office that weeke, stepped forth, attyred in a white Robe after the *Dalmatike* manner, with a Censor in his hand full of coales, which hee tooke from the harth burning continually before the Altar; in the other hand he had a Purse full of Incense, which he cast into the Censor, and as he entred the place where the Idoll was, he incensed it with great reuerence, then tooke he a cloth, with the which he wiped the Altar and the Curtins. This done, they went all into a Chappell, and there did a certaine kinde of rigorous and austere penance, beating themselves, and drawing of bloud, as I shall shew in the Treatise of Penance, which the Deuill hath taught to his Creatures; and hereof they neuer fayled at these Mattins at mid-night. None other but the Priests might entermeddle with their sacrifices, and euery one did imploy himselfe according to his dignitie and degree. They did likewise preach to the people at some feasts, as I will shew when wee treat thereof. They had Reuenues, and great Offerings were made vnto them. I will speake hereafter of their Vnction in consecrating their Priests. In *Peru* the Priests were entertayned of the Reuenues and Inheritance of their god, which they called *Chacaras*, which were many, and also very rich.

Of the Monasterie of Virgins which the Deuill hath inuented for his seruice. Chap. 15.

Vestall Virgins, or Nunnes of Peru.

There were in *Peru* many Monasteries of Virgins (for there are no other admitted) at the least one in euery Prouince. In these Monasteries there were two sorts of women, one ancient, which they called *Mamacomas*, for the instruction of the young; and the other was of young Maidens, placed there for a certaine time, and after they were drawne forth, either for their gods or for the *Ingua*. They called this House or Monasterie *Aclaguagi*, which is to say, the *House of the Chosen*. Euery Monasterie had his Vicar or Gouvernour called *Appopanaca*, who had libertie and power to choose whom he pleased, of what qualitie soeuer, being vnder eight yeeres of age, if they seemed to be of a good stature and constitution.

These Virgins thus shut vp into these Monasteries, were instructed by the *Momacommas*, in diuers things needfull for the life of man, and in the customes and ceremonies of their gods; and afterwards they tooke them from thence, being aboue fourteene, sending them to the Court with sure guards, whereof some were appointed to serue the *Gnacas* and Sanctuaries, keeping their Virginities for euer; some others were for the ordinarie sacrifices that were made of Maidens, and other extraordinarie sacrifices, they made for the health, death, or warres of the *Ingua*; and the rest serued for Wiues and Concubines to the *Ingua*, and vnto other his Kinsfolks and Captains, vnto whom hee gaue them, which was a great and honorable recompence: This distribution was vsed euery yeere. These Monasteries possessed Rents and Reuenues for the maintenance of these Virgins, which were in great numbers. It was not lawfull for any father to refuse his daughters when the *Appopanaca* required them for the seruice of these Monasteries. Yea, many fathers did willingly offer their daughters, supposing it was a great merit to be sacrificed for the *Ingua*. If any of these *Momacommas* or *Acllas* were found to haue trespassed against their honor, it was an ineuitable chastisement to burie them aliue, or to put them to death by some other kind of cruell torment.

The Deuill hath euen in *Mexico* had some kinde of religious women, although their possession was but for one yeere, and it was in this sort: Within this great circuit whereof wee haue spoken, which was in the principall Temple, there were two Houses like *Cloysters*, the one opposite to the other, one of Men, the other of Women: In that of women, they were Virgins onely, of twelue or thirteene yeeres of age, which they called the *Maidens of Penance*. They were as many as the men, and liued chastely and regularly, as Virgins dedicated to the seruice of their god. Their charge was, to sweep and make cleane the Temple, and euery morning to prepare meat for the Idoll and his Ministers, of the *Almas* the religious gathered. The foode they prepared for the Idoll were small loaves in the forme of hands and feet, as of March-pane: and with this bread they prepared certaine sawces which they cast daily before the Idoll, and his Priests did eate it, as those of *Baal*, that *Daniel* speaketh of. These Virgins had their haire cut, and then they let them grow for a certaine time: they rose at mid-night to the Idolls Mattins, which they daily celebrated, performing the same exercises the Religious did. They had their Abbesses who imployed them to make cloth of diuers fashions for the ornament of their Idolls and Temples. Their ordinarie habit was all white, without any worke or colour. They did their penance at mid-night, sacrificing and wounding themselves, and piercing the top of their eares, they laid the bloud which issued forth vpon their cheekes: and after (to wash off the bloud) they bathed themselves in a Poole which was within their Monasterie. They liued very honestly and discreetly; and if any were found to haue offended, although but lightly, presently they were put to death without remission, saying, she had polluted the House of their god. They held it for an augure and aduertisement, that some one of the Religious, Man, or Woman, had committed a fault, when they saw a Rat or a Mowse passe, or a Bat in the Chappell of their Idoll, or that they had gnawed any of the vales, for that they say, a Rat or a Bat would not aduenture to commit such an indignitie, if some offence had not gone before, and then they began to make search of the fact, and hauing discovered the Offendor or Offenders, of what qualitie soeuer, they presently put them to death.

None were receiued into this Monasterie, but the daughters of one of the sixe quarters, named for

for that purpose: and this profession continued, as I haue said, the space of one whole yeere: during the which time, their fathers, and they themselves had made a vow to serue the Idoll in this manner, and from thence they went to be married.

I doe not know that in *Pern* there is any proper houses for men, but for the Priests and Sorcerers; whereof there is an infinite number. But it seemeth, that in *Mexico* the Deuill hath set a due obseruation: for within the circuit of the great Temple there were two Monasteries, as before hath beene said, one of Virgins, whereof I haue spoken, the other of young men secluded of eighteen or twentie yeeres of age, which they called religious. They weare shaued crownes, as the Friars in these parts; their haire a little longer, which fell to the middest of their eare, except the hinder part of the head, which they let grow the breadth of foure fingers down to their shoulders and which they tyed vp in tresses. These young men that serued in the Temple of *Vnziputli* liued poore and chastly, and did the Office of Leuites, ministring to the Priests and chiefe of the Temple; their Incense, Lights, & garments; they swept and made cleane the holy places, bringing Wood for a continuall fire to the harth of their god, which was like a lampe that still burnt before the Altar of their Idoll. Besides these young men, there were other little boyes, as novices, that serued for manuell vses, as to deck the Temple with boughs, roses, & reeds, giue the Priests water to wash with, giue them their rasors to sacrifice, and goe with such as begged almes to carry it. All these had their superiors, who had the gouernment ouer them, they liued so honestly, as when they came in publike, where there were any women, they carried their heads very low, with their eyes to the ground, not daring to behold them: they had linnen garments, and it was lawfull for them to goe into the Citie foure or sixe together, to aske Almes in all quarters: and when they gaue them none, it was lawfull to goe into the Corne fields, and gather the eares of Corne, or clusters of Mays, which they most needed, the Master not daring to speake, nor hinder them. They had this libertie, because they liued poorely, and had no other reuenues, but Almes. There might not be aboue fiftie liue in penance, rising at midnight to sound the Cornets and Trumpets to awake the people. Every one watched the Idoll in his turne, lest the fire before the Altar should die: they gaue the Censor, with the which the Priest at midnight incensed the Idoll, and also in the morning, at noone, & at night. They were very subiect and obedient to their superiors, and passed not any one point that was commaunded them. And at midnight after the Priest had ended his censuring, they retired themselves into a secret place, apart, sacrificing, and drawing blood from the calves of their legs with sharpe bodkins: with this blood they rubbed their temples, and vnder their eares: and this sacrifice finished, they presently washed themselves in a little poole appointed to that end. These young men did not annoint their heads and bodies with any *Petum*, as the Priests did: their garments were of course white linnen cloth they doe make there. These exercises and strictnesse of penance continued a whole yeere, during which time they liued with great austeritie and solitarinesse.

It hath beene said that the Priests and religious of *Mexico*, rose at midnight, and hauing cast Incense before the Idoll, they retired themselves into a large place, where there were many Lights; and sitting downe, every one tooke a point of *Manguay*, which is like vnto an awle or sharpe bodkin, with the which, or with some other kindes of Launcets or Rasors, they pierced the calves of their legs neere to the bone, drawing forth much blood, with the which they anointed their temples, and dipt these bodkins or lancets in the rest of the blood, then set they them vp on the batelements of the Court, stickt in gloabes or bowles of straw, that all might see and know the penance they did for the people: they doe wash off the blood in a lake appointed for that purpose, which they call *Exapangue*, which is to say, water of blood.

There were in the Temple a great number of bodkins or lancets, for that they might not vse one twice. Moreover, these Priests and Religious men, vsed great Fastings, of five or ten dayes together, before any of their great Feasts, and they were vnto them as our foure Ember weekes: they were so strict in continence, that some of them (not to fall into any sensualitie) slit their members in the midst, and did a thousand things to make themselves vnable, lest they should offend their gods. They drunke no Wine, and slept little, for that the greatest part of their exercises were by night, committing great cruelties and martyring themselves for the Deuill, and all to bee reputed great fasters and penitents. They did vse to discipline themselves with cords full of knots, and not they onely, but the people also vsed this punishment and whipping, in the procession and feast they made to the Idoll *Texcalipuca*, the which (as I haue said before) is the god of penance; for then they all carried in their hands new cordes of the threed of *Manguay* a fadome long, with a knot at the end, and wherewith they whipped themselves, giuing great lashes ouer their shoulders. The Priests did fast five dayes before this Feast, eating but once a day, and they liued apart from their wiues, not going out of the Temple during those five dayes, they did whip themselves rigorously in the manner aforesaid.

In *Pern* to solemnize the feast of the *Ysa*, which was great, all the people fasted two dayes, during the which, they did not accompanie with their Wiues, neither did they eate any meate with Salt or Garlecke, nor drinke *Chica*. They did much vse this kinde of fasting for some sins, and did penance, whipping themselves with sharpe stinging Nettles, and often they strooke themselves

Of the Monasteries of religious men, that the Deuill hath inuented for superstition. Chap. 16. of the Indian shauens Friars, & their show of sanctitie, with pouerty, chastity, &c.

Of Penance, & the strictnesse the Indians haue vsed at the Deuils perfwasion. Ch. 17.

themselves over the shoulders with certayne stones. This blind Nation, by the perswasion of the Deuill, did transport themselves into craggie Mountaynes, where sometimes they sacrificed themselves, casting themselves downe from some high Rocke.

Of the Sacrifices the Indians made to the Deuill, & whereof Chap. 18.

Sacrifices of things insensible.

Sacrifices of beasts.

Sacrifices of Birds.

Blacke sheepe.

Extispicia.

Blacke Dogs.

Fasting till stars appeared.

Shell-offerings.

Wee may draw all the Sacrifices the Infidels vse into three kindes, one of insensible things; another of beasts, and the third of men. They did vse in *Pern* to sacrifice *Coca*, which is an hearbe they esteeme much, of *Mays*, which is their Wheate, of coloured feathers, and of *Chaquira*, which otherwise they call *Molla*, of shels or Oysters, and sometime Gold and Silver, being in figures of little beasts. Also of the fine stufte of *Cumbi*, of carued and sweet wood, and most commonly Tallow burnt. They made these Offerings or Sacrifices for a prosperous winde, and faire weather, or for their health, and to be deliuered from some dangers and mishaps. Of the second kind, their ordinary Sacrifice was of *Cuyes*, which are small beasts like Rabbits, the which the *Indians* eate commonly. And in matters of importance, or when they were rich men, they did offer *Pacos*, or *Indian* sheepe, bare, or with Wooll, obseruing curiously the numbers, colours, and times. The manner of killing their Sacrifices, great or small, which the *Indians* did vse according to their ancient Ceremonies, is the same the *Moors* vse at this day, the which they call *Alqubla*, hanging the beast by the right fore-legge, turning his eyes towards the Sunne, speaking certayne words, according to the qualitie of the Sacrifice they sue: for if it were of colour, their words were directed to *Chuquilla*, and to the Thunder, that they might want no water: if it were white and smoothe, they did offer it to the Sunne with certaine words: if it had a fleece, they did likewise offer it him with some others, that he might shine vpon them, and fauour their generation: If it were a *Guanaco*, which is gray, they directed their sacrifice to *Viracocha*. In *Cusco* they did every yeere kill and sacrifice with this Ceremony, a shorne sheepe to the Sunne, and did burne it, clad in a red Waste-coate, and when they did burne it, they cast certayne small baskets of *Coca* into the fire, which they call *Vilcaronca*; for which Sacrifice, they haue both men and beasts appointed which serue to no other vse. They did likewise sacrifice small Birds, although it were not so vsuall in *Pern* as in *Mexico*, where the sacrificing of Quails was very ordinary. Those of *Pern* did sacrifice the Birds of *Puna*, (for so they call the Desert when they should goe to the Warres, for to weaken the forces of their aduerlaries *Guacas*.) They called these Sacrifices *Cuzconicca*, or *Contenicca*, or *Huallanicca*, or *Sophanicca*, and they did it in this manner: they tooke many kinds of small Birds of the Desert, and gathered a great deale of a thorny wood, which they call *Tanli*, the which beeing kindled, they gathered together these small Birds. This assembly they called *Quico*, then did they cast them into the fire, about the which the Officers of the Sacrifice went with certayne round stones carued, whereon were painted many Snakes, Lions, Toades, and Tygres, vttering this word *V-lachum*, which signifies, *Let the victorie be giuen vnto us*, with other words, whereby they sayd the forces of their enemies *Guacas* were confounded. And they drew forth certayne blacke sheepe, which had beene kept close some dayes without meate, the which they called *Prona*, and in killing them they spake these words; As the hearts of these beasts bee weakened, so let our enemies be weakned. And if they found in these sheepe that a certayne piece of flesh behind the hear were not consumed by fasting and close keeping, they then held it for an ill Augure. They brought certayne blacke Dogges, which they call *Apparas*, and sue them, casting them into a Playne, with certayne Ceremonies, causing some kinde of men to eate this flesh, the which Sacrifices they did, lest the *Ingua* should bee hurt by poyson; and for this cause they fasted from morning vntill the starres were vp, and then they did glut and defile themselves like to the *Moors*. This Sacrifice was most fit for them to withstand their enemies Gods: and although at this day a great part of these customes haue ceased, the warres being ended, yet remaines there some Relikes, by reason of the priuate or generall quarrels of the *Indians*, or the *Caciques*, or in their Cities. They did likewise offer and sacrifice shels of the Sea, which they call *Molla*, and they offered them to the Fountaynes and Springs, saying, that these shels were daughters of the Sea, the mother of all waters. They gaue vnto these shels sundry names, according to the colour, and also they vse them to diuers ends. They vsed them in a manner in all kinde of Sacrifices, and yet to this day they put *beaten shels* in their *Chica*, for a superstition. Finally, they thought it conuenient to offer Sacrifices of euery thing they did sow or raise vp. There were *Indians* appointed to doe these Sacrifices to the Fountayne, Springs, and Riuers which passed through the Townes, or by the their *Charcas*, which are their Farmes, which they did after Seed time, that they might not cease running, but alwayes water their grounds. The Sorcerers did conjure, to know what time the Sacrifices should be made, which beeing ended, they did gather of the contribution of the people, what should be sacrificed, and deliuered them to such as had the charge of these Sacrifices. They made them in the beginning of Winter, at such time as the Fountaynes, Springs, and Riuers, did increase by the moistures of the weather, which they did attribute to their Sacrifices. They did not sacrifice to the Fountaynes and Springs of the Desarts. To this day continues the respect they had to Fountaynes, Springs, Pooles, Brookes, or Riuers, which passe by their Cities or *Charcas*, euen vnto the Fountaynes and Riuers of the Desarts. They haue a speciall regard and reuerence to the meeting of two Riuers, and there they

they wash themselves for their health, annoynting themselves first with the flower of *Mays*, or some other things, adding thereunto diuers Ceremonies, the which they doe likewise in their Bathes.

THe most pittifull disaster of this poore people, is their slavery vnto the Deuill, sacrificing men vnto him, which are the Images of God. In many Nations they had vsed to kill (to accompany the dead, as hath beene declared) such persons as had beene agreeable vnto him, and whom they imagined might best serue him in the other World. Besides this, they vsed in *Peru*, to sacrifice young children of foure or fixe yeeres olde vnto ten: and the greatest part of these Sacrifices were for the affaires that did import the *Inguia*, as in sickness for his health: and when he went to the warres for victory, or when they gaue the wreath to their new *Inguia*, which is the mark of a King, as here the *Scepter* and the *Crowne* be. In this Solemnitie they sacrificed the number of two hundred children, from foure to ten yeeres of age, which was a cruell and inhumane spectacle. The manner of the Sacrifice was to drowne them and bury them with certayne representations and ceremonies: sometimes they cut off their heads annoynting themselves with the bloud from one eare to another.

Of the Sacrifices they made of men. *Chap. 19.*

Two hundred children sacrificed.

They did likewise sacrifice Virgins, some of them that were brought to the *Inguia* from the Monasteries, as hath beene said. In this case there was a very great and generall abuse: If any *Indian* qualified, or of the common sort, were sicke, and that the Diuine told him confidently that he should dye, they did then sacrifice his owne sonne to the Sunne, or to *Vrachoça*, desiring them to be satisfied with him, and that they would not deprive the father of life. This crueltie is like to that the holy Scripture speaks of, which the King of *Moab* vsed in sacrificing his first-born Sonne vpon the wall, in the sight of all *Israel*, to whom this act seemed so mournfull, as they would not presse him any further, but returned to their houses.

Parricide.

ALthough they of *Peru* haue surpassed the *Mexicans* in the slaughter and Sacrifice of their Children (for I haue not read nor vnderstood that the *Mexicans* vsed any such Sacrifices) yet they of *Mexico* haue exceeded them, yea all the Nations of the World, in the great number of men which they had sacrificed, and in the horrible manner thereof. And to the end wee may see the great misery wherein the Deuill holds this blind Nation, I will relate particularly the custome and inhumane manner which they haue obserued: First the men they did sacrifice were taken in the warres, neyther did they vse these solempne Sacrifices but of Captiues: so as it seemes therein they haue followed the custome of the Ancients. For as some Authors say, they called the Sacrifice *Uictima*, for this reason, because it was of a conquered thing: they also called it *Hestia quasi ab hoste*, for that it was an Offering made of their enemies, although they haue applied this word to all kinds of Sacrifices. In truth the *Mexicans* did not sacrifice any to their Idols, but Captiues, and the ordinary warres they made, was onely to haue Captiues for their Sacrifices: and therefore when they did fight, they laboured to take their enemies aliue, and not to kill them, to enjoy their Sacrifices. And this was the reason which *Moteczuma* gaue to the

Of the horrible Sacrifices of men which the *Mexicans* vsed. *Chap. 20.*

Captiues only sacrificed. *Uictima & Hestia.*

Manner of humane (inhumane) sacrificing.

Bloudie Rites.

Marquisse du Val, when he asked of him, why being so mightie, and hauing conquered so many Kingdomes, he had not subdued the Prouince of *Tlascalla*, which was so neere? *Moteczuma* answered him, that for two reasons he had not conquered that Prouince, although it had bin easie, if he would haue vndertaken it: the one was for the exercise of the youth of *Mexico*, lest they should fall into idleness and delight: the other and the chiefe cause why hee had reserued this Prouince, was, to haue Captiues for the Sacrifices of their Gods. The manner they vsed in these Sacrifices, was, they assembled within the Palisadoe of dead mens Sculles (as hath beene said) such as should be sacrificed, vsing a certayne Ceremony at the foot of the Palisadoe, placing a great guard about them. Presently there stept forth a Priest, attyred with a short Surplice full of tassels beneath, who came from the top of the Temple with an Idoll made of Paste of Wheate and *Mays* mingled with Honey, which had the eyes made of the graines of greene glasse, and the teeth of the graines of *Mays*; he descended the steps of the Temple with all the speed he could, and mounted on a great stone planted vpon a high Terrasse in the midst of the Court. This stone was called *Quauxicalli*, which is to say, the stone of Eagle, whereon he mounted by a little Ladder, which was in the fore-part of the Terrasse, and descended by another staire on the other side, still imbracing his Idoll. Then did he mount to the place where those were that should be sacrificed, shewing this Idoll to euery one in particular, laying vnto them, *this is your God*. And hauing ended his shew, he descended by the other side of the staires, and all such as should dye, went in procession vnto the place where they should bee sacrificed, where they found the Ministers ready for that Office. The ordinary manner of sacrificing was, to open the stomake of him that was sacrificed, and hauing pulled out his heart halfe aliue, they tumbled the man downe the staires of the Temple, which were all imbrowed and defiled with bloud: And to make it the more plaine, fixe Sacrificers being appointed to this dignitie, came into the place of Sacrifice, foure to hold the hands and feet of him that should be sacrificed, the fift to hold his head, and the sixt to open his stomake, and to pull out the heart of the sacrificed. They called them *Chachala*.

obalmna, which in our Tongue is as much, as the *Ministers of holy things*. It was a high dignitie, and much esteemed amongst them, wherein they did inherit and succeed as in a Fee-simple. The Minister who had the Office to kill, which was the sixt amongst them, was esteemed and honoured as the *Souereigne Priest and Bishop*, whose name was different, according to the difference of times and Solemnities. Their habits were likewise diuers when they came forth to the Sacrifice, according to the diuersitie of times. The name of their chiefe dignitie was *Papa* and *Topilzin*, their Habite and Robe was a red Curtayne after the *Dalmatike* fashion, with tassels below, a Crowne of rich Feathers, greene, white, and yellow vpon his head, and at his eares like pendants of Gold, wherein were set greene stones, and vnder the lip vpon the middest of the beard he had a Peece like vnto a small Canon of an azured stone. These Sacrificers came with their faces and hands coloured with a shining blacke. The other fise had their haire much curled, and tyed vp with Laces of Leather, bound about the middest of the head: vpon their forehead they carried small Roundlets of Paper painted with diuers colours, and they were attyred in a *Dalmatike* Robe of white, wrought with blacke. With this attyre they represented the very figure of the Deuill, so as it did strike feare and terrour into all the people, to see them come forth with so horrible a representation. The Souereigne Priest carried a great Knife in his hand, of a large and sharpe flint: another Priest carried a collar of wood wrought in forme of a Snake: All six put themselves in order, ioyning to this Pyramidall stone, wherof I haue spoken, being directly against the doore of the Chappell of their Idoll. This stone was so pointed, as the man which was to be sacrificed, being laid thereon, vpon his backe, did bend in such sort, as letting the Knife but fall vpon his stomach it opened very easily in the middest. When the Sacrificers were thus in order, they drew forth such as had bene taken in warre, which were to bee sacrificed at that Feast, and being accompanied with a guard of men all naked, they caused them to mount vp these large staires in ranke, to the place where the Ministers were prepared: and as euery one of them came in their order, the six Sacrificers tooke the Prisoner, one by one foote, another by the other, and one by one hand, another by the other, casting on his backe vpon this pointed stone, where the fift of these Ministers put the collar of wood about his necke, and the High Priest opened his stomach with the Knife, with a strange dexteritie and nimblenesse, pulling out his heart with his hands, the which hee shewed smoking vnto the Sunne, to whom hee did offer this heate and fume of the heart, and presently he turned towards the Idoll and did cast the heart at his face, then did they call away the body of the sacrificed, tumbling it downe the staires of the Temple, the stone being set so neere the staires, as there were not two foote space betwixt the stone and the first step, so as with one spurne with their foote, they cast the bodie from the top to the bottome. In this sort one after one they did sacrifice all those that were appointed. Being thus slaine, and their bodies cast downe, their Masters, or such as had taken them, went to take them vp, and carried them away: then hauing diuided them amongst them, they did eate them, celebrating their Feast and Solemnitie. There were euer fortie or fiftie at the least thus sacrificed, for that they had men very expert in taking them. The neighbour Nations did the like, imitating the *Mexicans* in the Customes and Ceremonies of the Seruice of their Gods.

Of other kinds
of Sacrifices
of men which
the *Mexicans*
vsed. Chap. xx.
Flaying Sacri-
fices.

Challenge-sa-
crifices.

Idols-Idol-sa-
crifice.

There was another kind of Sacrifice which they made in diuers feasts, which they call *Racaxipe Velitzli*, which is as much as the *flaying of men*. They call it so, for that in some Feasts they tooke one or more slaues, as they pleased, and after they had slayed him, they with that skinne apparelled a man appointed to that end. This man went dancing and leaping thorow all the houses and Market places of the Citie, euery one being forced to offer something vnto him: and if any one fayled, he would strike him ouer the face with a corner of the skin, defiling him with the congealed blood. This inuention continued vntill the skinne did stinke: during which time, such as went, gathered together much almes, which they employed in necessary things for the Seruice of their Gods. In many of these Feasts they made a Challenge, betwixt him that did sacrifice, and him that should bee sacrificed thus: they tyed the slaue by one foote to a Wheele of stone, giuing him a Sword and Target in his hands to defend himselfe: then presently stept forth hee that sacrificed him; armed with another Sword and Target: if hee that should bee sacrificed defends himselfe valiantly against the other, and resisted him, hee then remayned freed from the Sacrifice, winning the name of a famous Captayne, and so was reputed: but if hee were vanquished, they then sacrificed him on the stone whereunto hee was tyed. It was another kinde of Sacrifice, when as they appointed any slaue to bee the representation of the Idoll, saying that it was his Picture: They euery yeere gaue one slaue to the Priests, that they might neuer want the liuely Image of their Idoll. At his first entry into the Office, after he had bene well washed, they attyred him with all the ornaments of the Idoll, giuing him the same name. Hee was that whole yeere reuerenced and honoured as the Idoll itselfe, and had alwayes with him twelue men for his Guard, lest hee should flye, with which Guard they suffered him to goe freely and where he would: and if by chance he fled, the chiefe of the Guard was put in his place to represent the Idoll, and after to bee sacrificed. This *Indian* had

had the most honourable lodging in all the Temple, where hee did eate and drinke, and whither all the chiefe Ministers came to serue and honour him, carrying him meate after the manner of great Personages. When hee went through the streets of the Citie, hee was well accompanied with Noblemen, hee carried a liitle Flute in his hand, which sometimes hee sounded, to giue them knowledge when he passed: then presently the women came forth with their liitle children in their armes, which they presented vnto him, saluting him as God. All the rest of the people did the like: at night they put him in a strong Prison or Cage, lest he should flye; and when the Feast came, they sacrificed him, as hath beene said.

By these and many other meanes hath the Deuill abused and entertayned these poore wretches, and such was the multitude of those that had beene sacrificed by this infernall crueltie, as it seemes a matter incredible, for they affirme there were some dayes fve thousand or more, and that there were aboue twentie thousand sacrificed in diuers places. The Deuill to entertaine this murther of men, vsed a pleasant and strange inuention, which was, when it pleased the Priests of Satan they went to their Kings, telling them how their Gods dyed for hunger, and that they should remember them. Presently they prepared themselves, and aduertised one another, that their Gods required meate, and therefore they should command their people to bee readie to goe to the Warres; and thus the people assembled, and the companies appointed went to field, where they mustred their forces; and all their quarrell and fight was to take one another for sacrifice, struing on either side to take what Captiues they could, so as in these battels they laboured more to take, then to kill, for that all their intention was to take men aliue, to giue them to their Idols to eate, for after that manner brought they their Sacrifice vnto their Gods. And wee must vnderstand, that neuer King was crowned vntill he had subdued some Prouince, from the which he brought a great number of Captiues for the Sacrifices of their Gods, so as it was an infinite thing to see what blood was spilt in the honour of the Deuill.

Incredible numbers sacrificed.

Spaniards sacrificed.

A man speakes after his heart is out.

Galen lib. 2. de Hip. & Platon. placit. cap. 4.

In

Many of these Barbarians were now wearied and tyred with such an excessiue crueltie, in shedding so much blood, and with so tedious a Tribute, to bee alwayes troubled to get Captiues, for the feeding of their Gods, seeming vnto them a matter insupportable; yet left they not to follow and execute their rigorous Lawes, for the great awe the Ministers of these Idols kept them in, and the cunning wherewith they abused this poore people. But inwardly they desired to be freed from so heauie a yoke. And it was a great prouidence of God; that the first which gaue them knowledge of the Law of Christ, found them in this disposition: for without doubt it seemed to them a good Law, and a good God, to bee serued in this sort. Heereupon a graue religious man in *New Spaine* told me, that when he was in that Countrey he had demanded of an ancient *Indian*, a man of qualitie, for what reason the *Indians* had so soone receiued the Law of Iesus Christ, and left their owne, without making any other prooffe, tryall, or dispute thereon, for it seemed they had changed their Religion, without any sufficient reason to mooue them. The *Indian* answered him, *Beleeue not Father, that we haue embraced the Law of Christ so rashly as they say: for I will tell you, that we were already wearie and discontented with such things as the Idols commanded vs, and were determined to leaue it, and to take another Law. But when as wee found that the Religion that you preached had no cruelties in it, and that it was fit for vs, and both iust and good, we vnderstood and beleeued that it was the true Law, and so we receiued it willingly.* Which answer of this *Indian* agrees well with that we reade in the first Discourse, that *Fernand Cortes* sent to the Emperour *Charles* the fift, wherein hee reports, that after he had conquered the Citie of *Mexico*, being in *Cuyoacan*, there came Ambassadors to him from the Prouince and Common-wealth of *Mechoacan* requiring him to send them his Law, and that hee would teach them to vnderstand it, because they intended to leaue their owne, which seemed not good vnto them, which *Cortez* granted, and at this day they are the best *Indians*, and the truest Christians that are in *New Spaine*. The *Spaniards* that saw these cruell Sacrifices, resolved with all their power to abolish so detestable and cursed a butchering of men, and the rather, for that in one night before their eyes they saw threescore or threescore and tenne *Spaniards* sacrificed, which had beene taken in a battaile giuen at the Conquest of *Mexico*: and another time they found written with a Coale in a Chamber in *Tezcosco* these wordes; *Heere such a miserable man was Prisoner with his Companions whom they of Tezcosco did sacrifice.*

There happened a very strange thing vpon this subiect, and yet true, beeing reported by men worthy of credit, which was, that the *Spaniards* beholding these Sacrifices, hauing opened and drawne out the heart of the lustie young man, and cast him from the top of the stayres (as their custome was) when hee came at the bottome, hee said to the *Spaniards* in his Language, *Knight, they haue slaine mee*, the which did greatly mooue our men to horrqur and pitie. It is no incredible thing, that hauing his heart pulled out, hee might speake, seeing that *Galen* reports that it hath often chanced in the Sacrifice of beasts, after the heart hath beene drawne out, and cast vpon the Altar, the beasts haue breathed, yea, they did bray and cry out aloud, and sometimes did runne.

How the Deuill hath laboured to imitate and counterfeit the Sacraments of the holy Church. Chap. 25. Indian Communion.

In what manner the Deuill hath laboured in Mexico to counterfeit the feast of the holy Sacrament vsed in the Popish Church. Chap. 24.

In the first moneth, which in *Peru* they called *Rayme*, and answereth to our *December*, they made a most solemne feast, called *Capacrayme*, wherein they made many sacrifices and ceremonies, which continued many dayes: during the which, no stranger was suffered to bee at the Court which was in *Cusco*. These dayes being past, they then gaue libertie to strangers to enter, that they might be partakers of the feasts and sacrifices, ministering to them in this manner. The *Mamacomas* of the Sunne, which were a kinde of Nunnes of the Sunne, made little loaves of the flower of Mays, dyed and mingled with the blood of white Sheepe, which they did sacrifice that day; then presently they commanded that all strangers should enter, who set themselves in order, and the Priests which were of a certaine Linage, descending from *Linquiyupangui*, gaue to every one a morsell of these small loaves, saying vnto them, that they gaue these pieces, to the end they should be vnited and confederate with the *Ingua*, and that they aduised them not to speake nor thinke any ill against the *Ingua*, but alwayes to beare him good affection, for that this piece should bee a witnesse of their intentions and will, and if they did not as they ought, hee would discover them and bee against them. They carried these small loaves, in great Platters of gold and silver appointed for that vse, and all did receiue and eate these pieces, thanking the Sunne infinitely for so great a fauour which hee had done them, speaking wordes and making signes of great contentment and deuotion: protesting that during their liues, they would neither doe nor thinke any thing against the Sunne nor the *Ingua*: and with this condition they receiued this foode of the Sunne, the which should remaine in their bodies for a witnesse of their fidelitie which they obserued to the Sunne and to the *Ingua* their King. This manner of deuillish communicating they likewise vsed in the tenth moneth, called *Coyarayme*, which was *September*; in the solemne feast which they called *Cytua*, doing the like ceremonies. And besides this Communion (if it be lawfull to vse this word in so deuillish a matter) which they imparted to all strangers that came, they did likewise send of these loaves to all their *Gnacas*, Sanctuaries, or Idols of the whole Realme, and at one instant they found people of all sides, which came expressly to receiue them, to whom they said (in deliuering them) that the Sunne had sent them that, in signe that hee would haue them all to worship and honor him, and likewise did send them in honor of the *Caciques*. Some perhaps will hold this for a fable and a fiction: yet is it most true, that since the *Ingua Yupangi* (the which is hee that hath made most Lawes, Customes, and Ceremonies, as *Numa* did in *Rome*) this manner of Communion hath continued, vntill that the Gospell of our Lord Iesus Christ thrust out all these superstitions, giuing them the right foode of life, which vnites their soules to God: who so would satisfie himselfe more amply, let him reade the Relation which the Licenciado *Pollo* did write.

It is a thing more worthy admiration, to heare speake of the Feast and solemnitie of the Communion which the Deuill himselfe, the Prince of Pride, ordained in *Mexico*, the which (although it be somewhat long) yet shall it not be from the purpose to relate, as it is written by men of credite. The *Mexicanes* in the moneth of May, made their principall Feast to their god *Vitziliputzli*, and two dayes before this Feast, the Virgins whereof I haue spoken (the which were shut vp and seclused in the same Temple, and were as it were *Religious women*) did mingle a quantitie of the seede of Beetes with roasted Mays, and then they did mould it with honey, making an Idoll of that paste, in bignesse like to that of wood, putting in stead of eyes, graines of Greene glasse, of blue, or white; and for teeth, graines of Mays, set forth with all the ornament and furniture that I haue said. This being finished, all the Noblemen came and brought it an exquisite and rich garment, like vnto that of the Idoll, wherewith they did attyre it. Being thus clad and deckt, they did set it in an azured Chaire, and in a Litter to carry it on their shoulders. The morning of this feast being come, an houre before day, all the Maidens came forth attyred in white, with new ornaments, the which that day were called the sisters of their god *Vitziliputzli*, they came crowned with Garlands of Mays roasted and parched, being like vnto Azahar or the flower of Orange, and about their necks they had great chaines of the same, which went bauldrickwise vnder their left arme. Their cheekes were dyed with Vermillion, their armes from the elbow to the wrist, were couered with red Parrots feathers. And thus attyred, they tooke the Idoll on their shoulders, carrying it into the Court, where all the young men were, attyred in garments of an artificiall red, crowned after the same manner, like vnto the women. When as the Maidens came forth with the Idoll, the young men drew neere with much reuerence, taking the Litter wherein the Idoll was, vpon their shoulders, carrying it to the foote of the staires of the Temple, where all the people did humble themselves, laying earth vpon their heads, which was an ordinarie ceremonie which they did obserue at the chiefe feast of their gods. This ceremonie being ended, all the people went in Procession with all the diligence and speede they could, going to a Mountayne which was a league from the Citie of *Mexico*, called *Chapultepec*, and there they made sacrifices. Presently they went from thence with like diligence, to goe to a place neere vnto it, which they called *Atlachayanaya*, where they made their second station: and from thence they went to another Burgh or Village a league beyond *Cuyacan*, from whence they parted, returning to the Citie of *Mexico*, not making any other station. They went in this sort about foure leagues in three or foure houres, calling this Procession *Xpayna Vitziliputzli*.

liputzli. Being come to the foot of the staires, they set downe the Brancard or Litter with the Idoll, tying great Cordes to the armes of the Brancard, then with great obseruance and reuerence, they did draw vp the Litter with the Idoll in it to the top of the Temple, some drawing aboue, and others helping below, in the meane time there was a great noyse of Flutes, Trumpets, Cornets, and Drummes. They did mount it in this manner, for that the staires of the Temple were very steepe and narrow, so as they could not carry vp the Litter vpon their shoulders, while they mounted vp the Idoll, all the people stood in the Court with much reuerence and feare. Being mounted to the top, and that they had placed it in a little Lodge of Roses, which they held readie, presently came the young men, which strewed many flowers of sundrie kindes, 10 wherewith they filled the Temple both within and without. This done, all the Virgins came out of their Couent, bringing pieces of paste compounded of Beetes, and roasted Mays, which was of the same paste whereof their Idoll was made and compounded, and they were of the fashion of great bones. They deliuered them to the young men, who carried them vp and laid them vp, and laid them at the Idols feete, wherewith they filled the whole place, that it could receiue no more. They called these morsels of paste, the flesh and bones of *Vitzliputzli*. Having laid abroad these bones, presently came all the Ancients of the Temple, Priests, Levites, and all the rest of the Ministers, according to their Dignities and Antiquities, for herein there was a strict order amongst them, one after another, with their vailles of diuers 20 colours and workes, euery one according to his Dignitie and Office, hauing Garlands vpon their heads, and Chaines of flowers about their necks: after them came their gods and goddesses whom they worshipt, of diuers figures, attyred in the same linerie; then putting themselves in order about those morsels and pieces of paste, they vsed certaine ceremonies with singing and dancing. By meanes whereof they were blessed and consecrated for the flesh and bones of this Idoll.

This ceremonie and blessing (whereby they were taken for the flesh and bones of the Idoll) being ended, they honored those pieces in the same sort as their god. Then came forth the Sacrificers, who began the sacrifice of men, in the manner as hath bene spoken, and that day they did sacrifice a greater number then at any other time, for that it was the most solemn feast they obserued. The sacrifices being ended, all the young Men and Maides came out of the Temple 30 attyred as before, and being placed in order and ranke one directly against another, they danced by Drummes the which sounded in praise of the Feast, and of the Idoll which they did celebrate. To which song all the most ancient and greatest noble-men did answere, dancing about them, making a great circle as their vse is, the young Men and Maides remayning alwayes in the midst. All the Citie came to this goodly spectacle, and there was a commandement very strictly obserued throughout all the Land, that the day of the feast of the Idoll *Vitzliputzli*, they should eate no other meate, but this paste with hony, whereof the Idoll was made. And this should be eaten at the point of day, and they should drinke no water nor any other thing till after noone: they held it for an ill signe, yea for sacrilege, to doe the contrarie: but after the ceremonies ended, it was lawfull for them to eate any thing. During the time of this ceremonie, 40 they hid the water from their little children, admonishing all such as had the vse of reason, not to drinke any water; which if they did, the anger of God would come vpon them, and they should die, which they did obserue very carefully and strictly. The ceremonies, dancing, and sacrifice ended, they went to vnclothe themselves, and the Priests and Superiors of the Temple tooke the Idoll of paste, which they spoyled of all the ornaments it had, and made many pieces, as well of the Idoll it selfe as of the Tronchons which were consecrated, and then they gaue them to the Communion, beginning with the greater, and continuing vnto the rest, both Men, Women, and little Children; who receiued it with such teares, feare, and reuerence, as it was an admirable thing, saying, *that they did eate the flesh and bones of God*, wherewith they were grieved. Such as had any sicke folkes demanded thereof for them, and carried it with great reuerence and veneration.

50 All such as did communicate, were bound to giue the tenth of this feede, whereof the Idoll was made. The solemnitie of the Idoll being ended, an old man of great authoritie stept vp into a high place, and with a loud voice preached their Law and Ceremonies.

The father of Iyes would likewise counterfait the (*Romish*) Sacrament of Confession, and in this Idolatries seeke to be honored with ceremonies very like to the manner of Christians. In *Peru* they held opinion, that all diseases and aduersities came for the sinnes which they had committed: for remedie whereof they vsed sacrifices: moreouer, they confessed themselves verbally, almost in all Prouinces, and had Confessors appointed by their Superiors to that end, there 60 were some sinnes reserved for the Superiors. They receiued penance, yea sometimes very sharply, especially when the Offendor was a poore man, and had nothing to giue his Confessor. This office of Confessor was likewise exercised by Women. The manner of these Confessors Sorcerers whom they call *Tchuri* or *Tchuri*, hath bene most generall in the Prouinces of *Collasno*. They hold opinion, that it is a haynous sinne to conceale any thing in confession. The *Tchuri* or Confessors

The Deuill liking that vnchristian, Antichristian prodigious opinion of transubstantiation, and the consequents, eleuation, adoration, reservation, *corpus christi* made solemnities and idolatrous processions, with rites beyond any former paganisme, in disgrace of the true Sacrament, falsely calling this their Idoll an vnbloudy sacrifice, which hath cost so many thousands their blood in fire and otherwise (the Papists at once disputing of Christs natural body and despising and renting his mysticall body) hath found nothing fitter to transport into the Indies, nothing more contrarie to sense, reason, religion, humanity, or wherein more to triumph ouer mankind in all these, then this brutish opinion and bloudie solemnitie, here described. Communicating. Idol. sermon. Of Confessors and Confession which the Indians vsed. Chap. 5. Reserved cases in Papall penance.

Sinnes of omission.

Wicked effect of deuillish diuinations.

Penances.

Iapon confession.

Of the abominable Vnction which the Mexican Priests and other Nations vsed, and of their witchcrafts. Chap. 26.

Confessors discovered by lots, or by the view of some beast Hides, if any thing were concealed, and punished them with many blowes with a stone vpon the shoulders, vntill they had reuealed all, then after they gaue him penance, and did sacrifice. They doe likewise vse this confession, when their children, wiues, husbands, or their *Caciques* be sicke, or in any great exploit. And when their *Ingua* was sicke, all the Prouinces confessed themselves, chiefly those of the Prouince of *Collao*. The Confessors were bound to hold their Confessions secret, but in certaine cases limited. The sinnes that they chiefly confessed, was first to kill one another out of warre, then to steale, to take another mans wife, to giue poyson or sorcerie to doe any harme: and they held it to be a grievous sinne, to be forgetfull in the reuerence of their *Gnacas*, or Oratories, not to obserue the Feasts, or to speake ill of the *Ingua*, and to disobey him. They accused not themselves of any secret acts and sinnes. But according to the report of some Priests, after the Christians came into that Country, they accused themselves of their thoughts. The *Ingua* confessed himselfe to no man, but onely to the *Sunne*, that hee might tell them to *Virachoca*, and that hee might forgiue them. After the *Ingua* had bene confessed, he made a certaine bath to cleanse himselfe in a running Riuer, saying these wordes: *I haue told my sinnes to the Sunne, receiue them, O thou Riuer, and carry them to the Sea, where they may neuer appeare more.* Others that confessed, vsed likewise these baths, with certaine ceremonies very like to those the *Moors* vse at this day, which they call *Gnadoy*, and the *Indians* call them *Opacuna*. When it chanced that any mans children dyed, hee was held for a great sinner, saying, that it was for his sinnes that the sonne dyed before the father. And therefore those to whom this had chanced, after they were confessed, were bathed in this bath called *Opacuna*, as is said before. Then some deformed *Indian*, crooke-backed, and counterfaint by nature, came to whip them with certaine Nettles. If the Sorcerers or Inchanters by their lots and diuinations, affirmed that any sicke body should die, the sicke man makes no difficultie to kill his owne sonne, though he had no other, hoping by that meanes to escape death, saying, *that in his place he offered his sonne in sacrifice.* And this crueltie hath bene practised in some places, euen since the Christians came into that Country. In truth it is strange, that this custome of confessing their secret sinnes, hath continued so long amongst them, and to doe so strict penances, as, *to fast, to giue apparell, gold and siluer, to remaine in the Mountaynes, and to receiue many stripes vpon the shoulders.* Our men say, that in the Prouince of *Chiquito*, euen at this day they meet with this plague of Confessors or *Tchuris*, where as many sicke persons repaire vnto them: but now, by the grace of God, this people begins to see clearly the effect and great benefit of our Confession, whereunto they come with great deuotion.

I will report the manner of a strange confession the Deuill hath inuented at *Iapon*, as appeares by a Letter that came from thence, which saith thus: There are in *Ocaca* very great and high and steepe Rocks, which haue pricks or points on them, about two hundred fathom high. Amongst these Rocks there is one of these pikes or points so terribly high, that when the *Xamabusis* (which be *Pilgrimes*) doe but looke vp vnto it, they tremble, and their haire stares, so fearfull and horrible is the place. Vpon the top of this point there is a great rod of Iron of three fathom long, placed there by a strange deuce, at the end of this rod is a ballance tyed, whereof the scales are so bigge, as a man may sit in one of them: and the *Goguis* (which be Deuils in humane shape) command these *Pilgrimes* to enter therein one after another, not leauing one of them: then with an engine or instrument which mooueth, by meanes of a wheele, they make this rod of Iron whereon the ballance is hanged, to hang in the aire, one of these *Xamabusis* being set in one of the scales of the ballance. And as that wherein the man is set hath no counterpoise on the other side, it presently hangeth downe, and the other riseth vntill it meets with and toucheth the rod: then the *Goguis* telleth them from the Rocke, that they must confesse themselves of all the sinnes they haue committed, to their remembrance, and that with a loud voyce, to the end that all the rest may heare him. Then presently hee beginneth to confesse, whilest some of the standers by doe laugh at the sinnes they doe heare; and others sigh, and at euery sinne they confesse, the other scale of the ballance falls a little, vntill that hauing told all his sinnes, it remaines equall with the other, wherein the sorrowfull penitent sits: then the *Goguis* turnes the wheele, and drawes the rod and ballance vnto him, and the *Pilgrime* comes forth; then enters another, vntill all haue passed. A *Iaponois* reported this after he was christned, saying, that hee had bene in this pilgrimage, and entred the ballance seuen times, where he had confessed himselfe publikely. Hee said moreover, that if any one did conceale any sinne, the emptie scale yeelded not: and if hee grew obstinate after instance made to confesse himselfe, refusing to open all his sinnes, the *Goguis* cast him downe from the top, where in an instant he is broken into a thousand pieces. Yet this Christian, who was called *Iohn*, told vs, that commonly the feare and terror of this place is so great to all such as enter therein, and the danger they see with their eyes, to fall out of the ballance, and to be broken in pieces, that seldom there is any one but discovers all his sinnes. This place is called by another name *Sangenotocoro*, that is to say, *the place of Confession*.

The Priests of the Idols in *Mexico* were anointed in this sort; they anointed the body from the foote to the head, and all the haire likewise, which hung like tresses, or a Horse mane, for that they applied this Vnction wet and moist. Their haire grew so, as in time it hung

- hung downe to their hammes, so heauily, that it was troublesome for them to beare it, for they did neuer cut it, vntill they dyed, or that they were dispensed with for their great age, or being employed in gouernments or some honorable charge in the Commonwealth. They carried their haire in tresses, of sixe fingers breadth, which they dyed blacke with the fume of Sapine, of Firre trees, or Rosin; for in all Antiquitie it hath beene an offering they made vnto their Idols, and for this cause it was much esteemed and reuerenced. They were alwayes dyed with this tincture from the foot to the head, so as they were like vnto shining *Negroes*, and that was their ordinary Vnction: yet when as they went to sacrifice and giue Incense in the Mountaines, or on the tops thereof, or in any darke and obscure Caues, where their Idols were, they vsed an other kinde of vnction very different, doing certaine ceremonies to take away feare, and to giue them courage.
- 10 This vnction was made with diuers little venomous beasts, as Spiders, Scorpions, Palmers, Salamanders and Vipers, the which the Boyes in the Colledges tooke and gathered together, where-in they were so expert, as they were alwayes furnished when the Priests called for them. The chiefe care of these Boyes was, to hunt after these beasts; if they went any other way, and by chance met with any of these beasts, they stayed to take them, with as great paine, as if their liues depended thereon. By the reason whereof the *Indians* commonly feared not these venomous beasts, making no more account then if they were not so, hauing beene all bred in this exercise. To make an ointment of these beasts, they tooke them all together, and burnt them vpon the hARTH of the Temple, which was before the Altar, vntill they were consumed to ashes: then
- 20 did they put them in Morters with much Tobacco or *Petum* (being an herbe that Nation vseth much, to benum the flesh, that they may not feele their traueil) with the which they mingle the ashes, making them lose their force; they did likewise mingle with these ashes, Scorpions, Spiders, and Palmers alieue, mingling all together, then did they put to it a certaine seede being grownd, which they call *Ololechqui*, whereof the *Indians* make a drinke to see visions, for that the vertue of this herbe is to deprive man of sense. They did likewise grinde with these ashes blacke and hayrie wormes, whose haire onely is venomous, all which they mingled together with blacke, or the fume of Rosin, putting it in small pots, which they set before their god, saying it was his meat. And therefore they called it a *diuine meat*. By meanes of this ointment they became Witches, and did see and speake with the Deuill. The Priests being slubbered with
- 30 this ointment, lost all feare, putting on a Spirit of crueltie. By reason whereof they did very boldly kill men in their sacrifices, going all alone in the night to the Mountaines, and into obscure Caues, contemning all wilde beasts, and holding it for certaine and approued, that both Lions, Tigres, Serpents, and other furious beasts which breed in the Mountaines, and Forests, fled from them, by the vertue of this *Petum* of their god.
- And in truth, though this *Petum* had no power to make them flie, yet was the Deuils picture sufficient whereinto they were transformed. This *Petum* did also serue to cure the sicke, and for children: and therefore all called it the *diuine Physicke*: and so they came from all parts to the Superiors and Priests, as to their Sauours, that they might apply this diuine physicke, where-with they anointed those parts that were grieved. They said that they felt hereby a notable ease,
- 40 which might be, for that Tobacco and *Ololechqui* haue this propertie of themselves, to benum the flesh, being applyed in manner of an emplayster, which must bee by a stronger reason being mingled with poysons, and for that it did appease and benum the paine, they held it for an effect of health, and a diuine vertue. And therefore ran they to these Priests as to holy men, who kept the blinde and ignorant in this error, perswading them what they pleased, and making them runne after their inuentions and deuillish ceremonies, their authoritie being such, as their wordes were sufficient to induce beliefe as an article of their Faith. And thus made they a thousand superstitions among the vulgar people, in their manner of offering Incense, in cutting their haire, tying small flowers about their necks, and strings with small bones of Snakes, commanding them to bathe at a certaine time; and that they should watch all night at the hARTH, lest the fire should
- 50 die, that they should eate no other bread but that which had beene offered to their gods, that they should vpon any occasion repayre vnto their Witches, who with certaine graines told fortunes, and diuined, looking into Keelers and Pailles full of water. The Sorcerers and Ministers of the Deuill vsed much to besmeare themselves. There were an infinite number of these Witches, Diuiners, Enchanters, and other false prophets. There remaynes yet at this day of this infection, although they bee secret, not daring publicly to exercise their sacrileges, deuillish ceremonies and superstitions, but their abuses and wickednesse are discovered more at large and particularly in the confessions made by the Prelates of *Pern*.
- There is a kinde of Sorcerers amongst the *Indians* allowed by the Kings *Inguas*, which are as it were Sooth-sayers, they take vpon them what forme and figure they please, flying far through the aire in a short time, beholding all that was done. They talke with the Deuill, who answereth them in certaine stones or other things which they reuerence much. They serue as Conjurers, to tell what hath passed in the farthest parts, before any newes can come. As it hath chanced since the *Spaniards* arrived there, that in the distance of two or three hundred leagues, they haue knowne the Mutinies, Battailles, Rebellions, and Deaths, both of Tyrants, and of

bacco.

Diuinations.

Strange Sor-
cerers.

those of the Kings partie, and of priuate men, the which haue beene knowne the same day they chanced, or the day after, a thing impossible by the course of nature. To worke this diuination, they shut themselves into a house, and became drunke vntill they lost their senses, a day after they answered to that which was demanded. Some affirme they vse certaine Vnctions. The *Indians* say, that the old women doe commonly vse this office of witchcraft, and specially those of one Prouince, which they call *Coaillo*, and of another Towne called *Manchey*, and of the Prouince of *Guarochari*. They likewise shew what is become of things stolen and lost. There are of these kindes of Sorcerers in all parts, to whom commonly doe come the *Anaonas*, and *Cyna*, which serue the *Spaniards*, and when they haue lost any thing of their Masters, or when they desire to know the successe of things past or to come, as when they goe to the *Spaniards* Cities for their priuate affaires, or for the publike, they demand if their voyage shall bee prosperous, if they shall be sick, if they shall die, or retorne safe, if they shall obtaine that which they pretend: and the Witches or Conjurers answer, Yea, or No, hauing first spoken with the Deuill, in an obscure place: so as these *Anaonas* do well heare the sound of the voyce, but they see not to whom these Conjurers speake, neither doe they vnderstand what they say. They make a thousand ceremonies and sacrifices to this effect, with the which they mocke the Deuill and grow exceeding drunke, for the doing whereof, they particularly vse an herb called *Villea*, the ioyce whereof they mingle with their *Chica*, or take it in some other sort.

Of other Ceremonies and Customes of the *Indians*, which are like vnto ours. Chap. 27. Mexican Baptisme.

Marriage ceremonies.

300. Mexican Idols. Mangos mangled deuotions.

The *Indians* had an infinite number of other ceremonies and customes, which resembled to the ancient Law of *Moses*, and some to those which the *Moors* vse, and some approached neere to the Law of the Gospell, as their Bathes or *Opacuna*, as they call them: they did wash themselves in water, to cleanse them from their sinnes. The *Mexicans* had also amongst them a kinde of Baptisme, the which they did with ceremonie, cutting the eares and members of young children new borne, counterfainting in some sort the Circumcision of the *Jewes*. This ceremonie was done principally to the sonnes of Kings and Noblemen: presently vpon their birth the Priests did wash them, and did put a little Sword in the right hand, and in the left a Target. And to the Children of the vulgar sort, they put the markes of their offices, and to their Daughters instruments to spin, knit, and labour. This ceremonie continued foure dayes, being made before some Idoll. They contracted marriage after their manner, whereof the Licenciate *Pollo* hath written a whole Treatise, and I will speake somewhat thereon hereafter. In other things their customes and ceremonies haue some shew of reason. The *Mexicans* were married by the hands of their Priests in this sort. The Bridegroome and the Bride stood together before the Priest, who tooke them by the hands, asking them if they would marry; then hauing vnderstood their wills, he tooke a corner of the vaile wherewith the woman had her head couered, and a corner of the mans gowne the which he tyed together on a knot, and soled them thus tyed to the Bridegroomes house, where there was a harth kindled, and then he caused the wife to goe seuen times about the harth, and so the married couple sat downe together, and thus was the marriage contracted. The *Mexicans* were very jealous of the integritie of their wiues: so as if they found they were not as they ought to bee (the which they knew either by signes or dishonest wordes) they presently gaue notice thereof to their fathers and kinsfolks of their wiues, to their great shame and dishonor, for that they had not kept good guard ouer them. When they went to the house they made an Inuentorie of all the man and wife brought together, of prouisions for the house, of land, of jewels and ornaments, which Inuentories euery father kept, for if it chanced they made any diuorce (as it was common amongst them when they agree not) they diuided their goods according to the portion that euery one brought, euery one hauing libertie in such a case, to marry whom they pleased: and they gaue the Daughters to the Wife, and the Sonnes to the Husband. It was defended vpon paine of death, not to marry againe together, the which they obserued very strictly. And although it seeme that many of their ceremonies agree with ours, yet differ they much for the great abomination they mingle therewithall. It is common and generall to haue vsually one of these three things, either Crueltie, Filthinesse, or Slouth: for all their ceremonies were cruell and hurtfull, as to kill men and to spill blood; or filthy and beastly, as to eate and drinke to the name of their Idols, and also to pisse in the honour of them, carrying them vpon their shoulders, to anoint and besmeare themselves filthily, and to doe a thousand sorts of villanies, which were at the least, vaine, ridiculous, and idle, and more like the actions of children, then of men. Whereas the temporall power was greatest, there superstition hath most increased, as we see in the Realmes of *Mexico* and *Cusco*, where it is incredible to see the number of Idols they had: for within the Citie of *Mexico* there were aboue three hundred. *Mango Inqua Tupangui*, amongst the Kings of *Cusco*, was he that most augmented the seruice of their Idols, inuenting a thousand kindes of sacrifices, feasts, and ceremonies. The like did King *Iscoalt* in *Mexico*, who was the fourth King. There was also a great number of superstitions and sacrifices in other Nations of the *Indians*, as in the Prouince of *Guatimala*, at the Ilands in the new Kingdome, in the Prouince of *Chille*, and others that were like Commonwealths and Comminalties. But it was nothing in respect of *Mexico* and *Cusco*, where Satan was as in *Rome*, or in his *Ierusalem*.

The

The *Inguas* Lords of *Peru*, had two kindes of Feasts. Some were *ordinarie*, which fell out in certayne moneths of the yeere: and others *extraordinarie*, which were for certayne causes of importance, as when they did crowne a new King, when they beganne some warre of importance, when they had any great need of water or drought, or other-like things. For the ordinary Feasts, wee must vnderstand, that euery moneth of the yeere they made Feasts, and diuers Sacrifices, and although all of them had this alike, that they offered a hundred sheepe: yet in colour, and in forme they are very diuers. In the first moneth which they call *Rayme*, which is the moneth of December, they made their first Feast, which was the principall of all others, and for that cause they called it *Capacrayme*, which is to say, *A rich and principall Feast*. In this Feast they offered a great number of sheepe and Lambes in Sacrifice, and they burnt them with sweet wood, then they caused Gold and Silver to be brought vpon certayne sheepe, setting vpon them three Images of the *Sunne*, and three of the *Thunder, the Father, the Sonne, and the Brother*. In these Feasts they dedicated the *Inguas* children, putting *Guaras*, or Ensignes vpon them, and they pierced their eares: then some old man did whip them with slings, and annoynted their faces with bloud, all in signe that they should be true Knights to the *Inguas*. No stranger might remayne in *Cusco* during this moneth, and this Feast, but at the end thereof they entred, and they gave vnto them pieces of the paste of Mays with the bloud of the Sacrifice, which they did eate in signe of confederation with the *Inguas*, as hath beene said before. It is strange that the Deuill after his manner hath brought a *Trinitie* into Idolatry, for the three Images of the *Sunne* called *Apomti*, *Chiruntti*, and *Intiquaogui* which signifieth *Father and Lord Sunne, the Sonne Sunne*, and the *Brother Sunne*. In the like manner they named the three Images of *Chuquilla*, which is the God that rules in the Region of the *Ayre*, where it Thunders, Raines and Snowes. I remember, that being in *Cuzco*, an honourable Priest shewed me an information, which I had long in my hands, where it was prooued that there was a certayne *Guaca* or Oratory, whereas the *Indians* did worship an Idoll called *Tangatunga*, which they said was *one in three, and three in one*. Comming then to the Feast of the second moneth, which they called *Camey*, besides the Sacrifices which they made, they did cast the ashes into the River, following fve or sixe leagues after, praying it to carry them into the Sea, for that the *Virochobos* should there receiue this present. In the third, fourth and fift moneth, they offered a hundred blacke sheepe, speckled, and grey, with many other things, which I omit for being too tedious. The sixt moneth is called *Haimencuzqui Aymorey*, which answereth to May, in the which they sacrificed a hundred sheepe more, of all colours: in this Moone and moneth, which is when they bring May from the fields into the house, they made a Feast, which is yet very vsuall among the *Indians*, and they doe call it *Aymorey*. This Feast is made comming from the *Chacra* or Farme vnto the house, saying certayne Songs, and praying that the Mays may long continue, the which they call *Mamacora*. They take a certayne portion of the most fruitfull of the Mays that growes in their Farmes, the which they put in a certayne Granier which they doe call *Pirua*, with certayne Ceremonies, watching three nights: they put this Mays in the richest garments they haue, and being thus wrapped and dressed, they worship this *Pirua*, and hold it in great veneration, saying it is the Mother of the Mays of their Inheritances, and that by this meanes the Mays augments and is preserued. In this moneth they make a particular Sacrifice, and the Witches demand of this *Pirua*, if it hath strength sufficient to continue vntill the next yeere: and if it answers No, then they carry this Mays to the Farme to burne, whence they brought it, according to euery mans power; then make they another *Pirua*, with the same Ceremonies, saying, that they renew it, to the end the Seed of Mays may not perish, and if it answers that it hath force sufficient to last longer, they leaue it vntill the next yeere. This foolish vanitie continueth to this day, and it is very common amongst the *Indians* to haue these *Piruas*, and to make the Feast of *Aymorey*. The seuenth moneth answereth to Iune, and is called *Aucaycuzqui Intiraymi*, in it they made the Feast that is called *Intiraymi*, in the which they sacrificed a hundred sheepe called *Guanacos*, and said it was the Feast of the *Sonne*. In this moneth they made many Images of *Quinna* wood carued, all attired with rich garments, and they made their dancings which they doe call *Cayo*. At this Feast they cast flowers in the high wayes, and thither the *Indians* came painted, and their Noblemen had small plates of Gold vpon their beards, and all did sing; we must vnderstand that this Feast falleth almost at the same time, when as the Christians obserue the Solemnitie of the holy Sacrament, which doth resemble it in some sort, as in dancing, singing and representations. And for this cause there hath beene, and is yet among the *Indians* (which celebrated a Feast somewhat like to ours of the holy Sacrament) many Superstitions in celebrating this ancient Feast of *Intiraymi*. The eight moneth is called *Chabua Huarqui*, in the which they did burne a hundred sheep more, all grey, of the colour of *Uiscacha*, according to the former order, which moneth doth answer to our Iuly. The ninth moneth was called *Yapaghis*, in which they burnt an hundred sheepe more, of a Chestnut colour; and they doe likewise kill and burne a thousand *Cuyes*, to the end that neither the Frost, the Ayre, the water, nor the Sunne should hurt their Farmes: and this moneth doth answer vnto August. The tenth moneth was called *Coyarami*, in the which

their liues; and free them from the labours they endured therein. Theeues, Adulterers, and Murtherers, and all other offenders had great feare and heavinesse, whilst this Flute sounded; so as some could not dissemble nor hide their offences. By this meanes they all demanded no other thing of their God, but to haue their offences concealed, powring forth many teares, with great repentance and sorrow, offering great store of Incense to appease their Gods. The courageous and valiant men, and all the old Souldiers, that followed the art of Warre, hearing this Flute, demanded with great deuotion of God the Creator, of the Lord for whom we liue, of the Sun, and of other their Gods, that they would giue them victory against their enemies, & strength to take many Captiues, therewith to honour their Sacrifices. This Ceremony was done ten dayes before the Feast. During which ten dayes the Priest did sound this Flute, to the end that all might doe this worship in eating of earth, and demand of their Idoll what they pleased: they every day made their Prayers, with their eyes lift vp to Heauen, and with sighs and groanings, as men that were grieved for their finnes and offences. Although this contrition was onely for feare of the corporall punishment that was giuen them, and not for any feare of the eternall; for they certainly beleued there was no such seuerer punishment in the other life. And therefore they offered themselves voluntarily, to death, holding opinion that it is to all men an assured rest.

No feare but of temporall punishment.

The first day of the Feast of this Idoll *Tezcalipuca* beeing come, all they of the Citie assembled together in a Court, to celebrate likewise the Feast of the Kalender, whereof we haue already spoken, which was called *Toxcoaltli*, which signifies *A dry thing*: which Feast was not made to any other end, but to demand raine, in the same manner that wee solemnize the *Rogations*: and this Feast was alwayes in May, which is the time that they haue most need of raine in those Countreys. They beganne to celebrate it the ninth of May, ending the nineteenth. The last day of the Feast the Priests drew forth a Litter well furnished with Curtaynes and Pendants of diuers fashions. This Litter had so many armes to hold by as there were Ministers to carrie it. All which came forth besmeered with blacke and long haire, halfe in tresses with white strings, and attyred in the livery of the Idoll. Vpon this Litter they set the personage of the Idoll, appointed for this Feast, which they called the resemblance of their God *Tezcalipuca*, and taking it vpon their shoulders, they brought it openly to the foot of the staires: then came forth the young men and Maydens of the Temple, carrying a great coard wreathed of chaines of roasted Mays, with the which they enuironed the Litter, and putting a chaine of the same about the Idols necke, and a Garland vpon his head. They called the coard *Toxcoaltli*, signifying the drought and barrenesse of the time. The young men came wrapped in red Curtaines, with Garlands and chaines of roasted Mays. The Maydes were clothed in new Garments, wearing chaines about their neckes of roasted Mays, and vpon their heads Mytres made of rods covered with this Mays, they had their feet covered with feathers, and their armes and cheekes painted. They brought much of this roasted Mays, and the chiefe men put it vpon their heads, and about their neckes, taking flowres in their hands. The Idoll being placed in his Litter, they strewed round about a great quantitie of the boughes of Manguely, the leaues whereof are large and pricking.

This Litter being set vpon the religious mens shoulders, they carried it in Procession within the circuit of the Court, two Priests marching before with Censors, giuing often Incense to the Idoll; and euery time they gaue Incense, they lifted vp their armes as high as they could to the Idoll, and to the Sunne, saying, that they lifted vp their Prayers to Heauen, euen as the smoke ascended on high. Then all the people in the Court turned round to the place whither the Idoll went, euery one carrying in his hand new coards of the threed of the *Manguely*, a fadome long, with a knot at the end, and with them they whipped themselves vpon the shoulders; euen as they doe here vpon holy Thursday. All the wals of the Court and Battlements were full of boughes and flowres, so fresh and pleasant, as it did giue a great contentment. This Procession being ended, they brought the Idoll to his vsuall place of abode. Then came a great multitude of people with flowres, dressed in diuers sorts, wherewith they filled the Temple and all the Court, so as it seemed the ornament of an Oratory. All this was put in order by the Priests, the young men administering these things vnto them from without. The Chappell or Chamber where the Idoll remayned was all this day open without any Veile.

This done, euery one came and offered Curtines, and pendants of *Sandally*, precious Stones, Jewels, Incence, sweet wood, Grapes, or eares of Mays, Quales: and finally, all they were accustomed to offer in such solemnities. When as they offered Quales (which was the poore mans offering) they vsed this ceremonie, they deliuered them to the Priests, who taking them, pulled off their heads, and cast them at the foote of the Altar, where they lost their bloud, and so they did of all other things which were offered. Euery one did offer meate and fruite according to their power, the which was laid at the foote of the Altar, and the Ministers gathered them vp, and carried them to their Chambers. This solempne offering done, the people went to dinner, euery one to his village or house, leaving the feast suspended vntill after dinner. In the meane time, the yong Men and Maydens of the Temple, with their ornaments, were busied to serue the Idoll, with all that was appointed for him to eate: which meate was prepared by other

other women, who had made a vow that day to serue the Idoll. And therefore such as had made this vow, came by the point of day, offering themselves to the Deputies of the Temple, that they might command them what they would haue done, the which they did carefully performe. They did prepare such variety of meates, as it was admirable. This meate being ready, and the houre of dinner come, all these Virgins went out of the Temple in procession, euery one carrying a little basket of bread in her hand, and in the other, a dish of these meates; before them marched an old man, like to a steward, with a pleasant habit, he was cloathed in a white Surples downe to the calves of his legges, vpon a doublet without sleeues of red leather, like to a iacket, he carried wings instead of sleeues, from the which hung broad ribbands, at the which did hang a small Calibasse or pumpion, which was couered with flowers, by little holes that were made in it, and within it were many superstitious things. This old man thus attyred, marched very humbly and heauily before the preparation, with his head declining: and comming neere the foote of the staires, he made a great obeisance and reuerence. Then going on the one side, the Virgins drew neere with the meate, presenting it in order one after another, with great reuerence. This seruice presented, the old man returned as before, leading the Virgins into their conuent. This done, the yong men and ministers of the Temple, came forth and gathered vpon this meate, the which they carried to the Chambers of the chiefe Priests of the Temple, who had fasted five dayes, eating onely once a day, and they had also abstained from their wiues, not once going out of the Temple in these five dayes. During the which they did whip themselves rigorously with cords; they did eate of this diuine meate (for so they called it) what they could, was it lawfull for any other to eate thereof. All the people hauing dined, they assembled againe in the court to see the end of the feast, whither they brought a captiue, which by the space of a whole yeare, had represented the Idoll, being attired, decked, and honoured, as the Idoll ic selfe, and doing all reuerence vnto him, they deliuered him into the hands of the sacrificers, who at that instant presented themselves, taking him by the feete and hands. The Pope did open his stomacke, and pull out his heart, then did he lift vp his hand as high as he could, shewing it to the Sunne, and to the Idoll, as hath beene said. Hauing thus sacrificed him that represented the Idoll, they went into a holy place appointed for this purpose, whither came the yong Men and Virgins of the Temple, with their ornaments, the which being put in order, they danced and sung with Drummes and other instruments, on the which the chiefe Priests did play and sound. Then came all the Noblemen with ensignes and ornaments like to the yong men, who danced round about them. They did not vsually kill any other men that day, but him that was sacrificed, yet euery fourth yeare they had others with him, which was in the yeare of Iubile and full pardons. After Sunne set, euery one being satisfied with sounding, eating, and drinking, the Virgins went all to their conuent, they tooke great dishes of earth full of bread mixt with hony, couered with small panniers, wrought and fashioned with dead mens heads and bones, and they carried the collation to the Idoll, mounting vp to the Court, which was before the doore of the Oratorie: and hauing set them downe, they retired in the same order as they came, the steward going still before. Presently came forth all the yong men in order, with canes or reedes in their hands, who began to runne as fast as they could to the top of the staires of the Temple, who should come first to the dishes of the collation. The Elders or chiefe Priests obserued him that came first, second, third, and fourth, without regarding the rest. This collation was likewise all carried away by the yong men, as great Relicks. This done, the foure that arriued first were placed in the midst of the Ancients of the Temple, bringing them to their chambers with much honour, praising them, and giuing them ornaments; and from thence forth they were respected and reuerenced as men of marke. The taking of this collation being ended, and the feast celebrated with much ioy and noise, they dismissed all the yong men and maides which had serued the Idoll; by meanes whereof they went one after another, as they came forth. All the small children of the Colledges and Schooles, were at the gate of the court, with bottomes of rushes and hearbs in their hands, which they cast at them, mocking and laughing, as of them that came from the seruice of the Idoll: they had liberty then to dispose of themselves at their pleasure, and thus the Feast ended.

Of the Feast
of Marchants,
which those of
Cholustecas did
celebrate. Ch. 30

Although I haue spoken sufficiently of the seruice the *Mexicans* did vnto their gods; yet will I speake something of the feast they called *Quetzacoalt*, which was the god of riches, the which was solemnised in this manner. Fortie dayes before the Marchants bought a slaue well proportioned, without any fault or blemish, either of sicknesse or of hurt, which they did attire with the ornaments of the Idoll, that he might represent it forty dayes. Before his cloathing they did cleanse him, washing him twice in a lake, which they called the lake of the gods; and being purified, they attired him like the Idoll. During these forty dayes, he was much respected for his sake whom he represented. By night they did imprison him (as hath beene said) lest he should flye, and in the morning they tooke him out of prison, setting him vpon an eminent place, where they serued him, giuing him exquisite meates to eate. After he had eaten, they put a chaine of flowers about his necke, and many nosegaies in his hand. He had

had a well appointed guard, with much people to accompany him. When he went through the Citie, he went dancing and singing through all the streetes, that he might be knowne for the resemblance of their god, and when he beganne to sing, the women and little children came forth of their houses to salute him, and to offer vnto him as to their god. Two old men of the Ancients of the Temple, came vnto him nine dayes before the feast, and humbling themselves before him, they said with a low and submisſe voyce, *Sir, you must vnderstand that nine dayes hence the exercise of dancing and singing doth end, and thou must then dye*; and then he must answer, *In a good houre*. They call this ceremony, *Neyola Maxiltexli*, which is to say, the aduertisement: and when they did thus aduertise him, they tooke very carefull heede whether he were said, or if he danced as ioyfully as he was accustomed, the which if he did not as cheerefully as they desired, they made a foolish superstition in this manner. They presently tooke the sacrificing rasors, the which they washed and clenſed from the blood of men, which remained of the former sacrifices. Of this washing they made a drinke mingled with another liquor made of *Cacao*, giuing it him to drinke; they said that this would make him forget what had bene said vnto him, and would make him in a manner insensible, returning to his former dancing and mirth. They said moreouer, that he would offer himselfe cheerefully to death, being enchanted with this drinke. The cause why they sought to take from him this heauinesse, was, for that they held it for an ill augure, and a fore-telling of some great harme. The day of the Feast being come, after they had done him much honour, sung, and giuen him incense, the sacrificers tooke him about midnight and did sacrifice him, as hath bene said, offering his heart vnto the Moone, the which they did afterwards cast against the Idoll, letting the body fall to the bottome of the staires of the Temple, where such as had offered him tooke him vp, which were the Marchants, whose feast it was. Then hauing carried him into the chiefeſt mans house amongst them, the body was drest with diuers sawces, to celebrate (at the breake of day) the banquet and dinner of the feast, hauing first bid the Idoll good morrow, with a small dance, which they made whilst the day did breake, and that they prepared the sacrifice. Then did all the Marchants assemble at this banquet, especially those which made it a trafficke to buy and sell slaues, who were bound euery yeere to offer one, for the resemblance of their god. This Idoll was one of the most honored in all the Land: and therefore the Temple where he was, was of a great authoritie. There were threeſcore staires to ascend vp vnto it, and on the top was a Court of an indifferent largenesse, very finely drest and plastered, in the midst whereof, was a great round thing like vnto an Ouen, hauing the entrie low and narrow: so as they must stoope very low that should enter into it. This Temple had Chambers and Chappels as the rest, where there were conuents of Priests, yong Men, Maides, and Children, as hath bene said: and there was one Priest alone resident continually, the which they changed weekly: For although there were in euery one of these Temples, three or foure Cutates or Ancients, yet did euery one serue his weeke without parting. His charge that weeke (after he had instructed the children) was to strike vp a Drum euery day at the Sunne-setting, to the same end that we are accustomed to ring to Euenſong. This Drum was such as they might heare the house ſound thereof throughout all the parts of the Citie, then euery man shut vp his merchandise, and retired vnto his house, and there was so great a silence, as there seemed to be no liuing creature in the Towne. In the morning when as the day began to breake, they began to ſound the Drum, which was a signe of the day beginning, so as trauellers and strangers attended this signall to begin their iournies, for till that time it was not lawfull to goe out of the Citie.

There was in this Temple a Court of reasonable greatnesse, in the which they made great dances, and pastimes, with games or comedies the day of the Idols feast; for which purpose there was in the middest of this court a Theatre of thirty foote square very finely decked and trimmed, the which they decked with flowers that day, with all the art and inuention that might be, being inuironed round with Arches of diues flowers and feathers, and in some places there were tied many small Birds, Conies, and other tame beaſts. After dinner all the people assembled in this place, and the Players presented themselves, and plaied Comedies, some counterfeited the deafe, and the rheumatike, others the lame, some the blinde, and without hands, which came to seeke for cure of the Idoll, the deafe answered confusedly, the rheumaticke did cough, the lame halted, telling their miseries and griefes, wherewith they made the people to laugh; others come forth in the forme of little beaſts, some were attired like Snayles, others like Toades, and some like Lizards: then meeting together, they told their offices, and euery one retyring to his place, they ſounded on small flutes, which was pleasant to heare. They likewise counterfeited Butterflies and small Birds of diuers colours, and the children of the Temple represented these formes, then they went into a little Forrest planted there for the nonce, where the Priests of the Temple drew them forth with instruments of musicke. In the meane time they vsed many pleasant speeches, some in propounding, others in defending, wherewith the assistants were pleasantly intertained. This done, they made a Maske or Mummerie with all these personages, and so the Feast ended: the which were vsually done in their principall Feasts.

New Age.

How the Kings
Inguas accoun-
ted the yeares
and moneths.

Better compu-
tation of times
in *Peru*.

Will first shew in what sort the *Mexicans* counted and diuided their yeere, their moneths, their Kalender, their computations, their worlds and ages. They diuided the yeare into eightene moneths, to which they gaue twentie dayes, wherein the three hundred and threescore dayes are accomplished, not comprehending in any of these Moneths the five daies that remaine, and make the yeare perfect. But they did reckon them apart, and called them *the dayes of nothing*: during the which, the people did not any thing, neither went they to their Temples, but occupied themselves onely in visiting one another, and so spent the time: the sacrificers of the Temple did likewise cease their sacrifices. These five dayes being past, they began the computation of the yeare, whereof the first moneth and beginning was in March, when the leaues began to grow greene, although they tooke three dayes of the moneth of February; for the first day of their yeare was, as it were, the six and twentieth day of February, as appeareth by their Kalender, within the which ours is likewise comprehended and contained with a very ingenious Art, which was made by the ancient *Indians* that knew the first *Spaniards*. I haue seene this Kalender, and haue it yet in my custodie, which well deserueth the sight, to vnderstand the discourse and industrie the *Mexican Indians* had. Euerie one of these eightene moneths had his proper name, and his proper picture, the which was commonly taken of the principall Feast that was made in that moneth, or from the diuersitie of times, which the yeare caused in that moneth. They had in this Kalender certaine daies marked and distinguished for their feasts. And they accounted their weekes by thirteene dayes, marking the daies with a *Zero* or cipher, which they multiplied vnto thirteene, and then began to count, one, two, &c. They did likewise marke the yeares of these wheeles, with foure signes or figures, attributing to euerie yeare a peculiar signe, whereof one was of a House, another of a Conie, the third of a Reede, and the fourth of a Flint. They painted them in this sort, noting by those figures the yeare that did runne, saying of so many Houses, of so many Flints, of such a Wheele, happened such a thing. For we must vnderstand that their wheele, which was an age, contained foure weekes of yeares, euerie weeke containing thirteene yeares, which in all made fiftie two yeares. In the midst of this wheele they painted a Sun, from the which went foure beames or lines in crosse to the circumference of the wheele, and they made their course, euen as the circumference was diuided into foure equall parts, euerie one with his line, hauing a distinct colour from the rest, and the foure colours were, Greene, Blew, Red, and Yellow: euerie portion of these foure had thirteene separations which had all their signes or particular figures, of a House, a Conie, a Reede, or a Flint, noting by euerie signe a yeare, and vpon the head of this signe they painted what had happened that yeare. And therefore I did see in the Kalender mentioned the yeare when the *Spaniards* entered *Mexico*, marked by the picture of a man clad in red, after our manner, for such was the habit of the first *Spaniard*, whom *Fernando Cortes* sent, at the end of the two and fiftie yeares, which finished the wheele. They vſed a pleasant ceremonie, which was, the last night they did breake all their vessels and stuffe, and put out their fire, and all the lights, saying, that the world should end at the finishing of one of these wheeles, and it might be at that time: for (said they) seeing the world must then end, what neede is there to prouide meate to eate, and therefore they had no further neede of Vessels nor fire. Vpon this conceit they passed the night in great feare, saying, it might happen there would be no more day, and they watched verie carefully for the day; when they saw the day begin to breake, they presently beat many Drums, and sounded Cornets, Flutes, and other instruments of ioy and gladnesse, saying, that God did yet prolong the time with another age, which were fiftie two yeares. And then began another wheele. The first day and beginning of this age they tooke new fire, and bought new Vessels to dresse their meate, and all went to the high Priest for this new fire, hauing first made a solemne Sacrifice, and giuen thanks for the comming of the day, and prolongation of another age. This was their manner of accounting their yeares, moneths, weekes, and ages.

Although this supputation of times practised amongst the *Mexicans*, be ingenious enough and certaine, for men that had no learning; yet in my opinion they wanted discourse and consideration, hauing not grounded their computation according vnto the course of the Moone, nor distributed their months accordingly, wherein those of *Peru* haue farre surpassed them: for they diuided their yeare into as manie daies, perfectly accomplished as we doe here, and into twelue moneths or Moones, in the which they imploied and consumed the eleuen daies that remaind of the Moone, as *Polo* writes. To make the computation of their yeare sure and certaine, they vſed this industrie; vpon the Mountaines which are about the Citie of *Cusco* (where the

Kings

Kings *Inguas* held their Court, being the greatest sanctuarie of those Realms, and as we should say another *Rome*) there were twelue Pillars set in order, and in such distance the one from the other, as euerie moneth one of these Pillars did note the rising and setting of the Sunne. They called them *Succanga*, by meanes whereof they taught and shewed, the Feasts, and the seasons fit to sowe and reape, and to doe other things. They did certaine sacrifices to these Pillars of the Sunne. Euerie moneth had his proper name, and peculiar Feasts. They began the yeare by Ianuarie as we doe. But since, a King *Ingua* called *Pachacuto*, which signifies a reformer of the Temple, began their yeare by December, by reason (as I coniecture) that then the Sunne returneth from the last point of Capricorne, which is the tropike neereft vnto them. I know not whether the one or the other haue obserued any Bifexte, although some hold the contrarie. The weekes which the *Mexicans* did reckon, were not properly weekes, being not of seuen daies: the *Inguas* likewise made no mention thereof which is no wonder, seeing the count of the weeke is not grounded vpon the course of the Sunne, as that of the yeare, nor of the Moone, as that of the moneth; but among the *Hebrewes* it is grounded vpon the creation of the world, as *Moses* reporteth; and amongst the *Greekes* and *Latins* vpon the number of the seuen Planets, of whole names the daies of the weeke haue taken their denomination; yet was it much for those *Indians*, being men without bookes and learning, to haue a yeare, seasons, and feasts, so well appointed as I haue said.

12. Pillars of the Sunne.

Letters were inuented to signifie properly the words we doe pronounce, euen as words (according to the Philosopher) are the signes and demonstrations of mans thoughts and conceptions. And both the one and the other (I say the letters and words) were ordained to make things knowne. The voice of such as are present, and letters for the absent, and such as are to come. Signes and markes which are not properly to signifie words, but things, cannot be called, neither in truth are they letters, although they be written, for we cannot say that the picture of the Sunne is a writing of the Sunne, but onely a picture; and the like may be said of other signes and characters, which haue no resemblance to the thing, but serue onely for memorie: for he that inuented them, did not ordaine them to signifie words, but onely to noate the thing: neither doe they call those characters, letters, or writings, as indeede they are not, but rather ciphers, or remembrances, as those be which the Spherists or Astronomers doe vse, to signifie diuers signes or planets of *Mars, Venus, Iupiter, &c.*

That no Nation of the *Indies* hath beene found to haue had the vse of Letters. Chap. 4

Such characters are ciphers, and no letters: for what name soeuer *Mars* may haue in *Italian, France, or Spanish*, this character doth alwaies signifie it, the which is not found in letters: for although they signifie the thing, yet is it by meanes of words. So as they which know not the thing, vnderstand them not: as for example, the *Greekes* nor the *Hebrews*, cannot conceiue what this word *Sol* doth signifie, although they see it written; for that they vnderstand not the Latine word: so as writing and letters are onely practised by them, which signifie words therewith. For if they signifie things mediately, they are no more letters nor writings, but ciphers and pictures: whereby we may obserue two notable things. The one, that the memorie of Histories and Antiquities may be preserued by one of these three meanes, either by letters and writings, as hath beene vsed amongst the *Latines, Greekes, Hebrewes*, and manie other Nations; or by painting, as hath beene vsed almost throughout all the world, for it is said in the second *Niceene* Councell, *Painting is a Booke for fooles which cannot reade*: or by ciphers and characters, as the cipher signifies the number of a hundred, a thousand and others, without noting the word of a hundred, or a thousand. The other thing we may obserue thereby, is that which is propounded in this Chapter, which is, that no Nation of the *Indies* discovered in our time, hath had the vse of letters and writings, but of the other two sorts, Images, and figures. The which I obserue, not onely of the *Indies* of *Pern*, and *New Spaine*, but also of *Iappon*, and *China*.

Three wayes of remembrance to posterity; letters, as we haue; pictures, as the *Mexicans*; characters, as in *China*.

Such fooles did that wise counsell make the *Christi Church*, in decreeing Images not onely to be bookes for such as can not reade, but obiects of worship to learned and vnlearned;

It is difficult to vnderstand how the *Chinois* can write proper names in their tongue, especially of strangers, being things they haue neuer seene, and not able to inuent figures proper vnto them. I haue made triall thereof being in *Mexico* with the *Chinois*, willing them to write this proposition in their language, *Ioseph Acosta is come from Pern*, and such like: whereupon the *Chinise* was long pentiue, but in the end hee did write it, the which other *Chinois* did after reade, although they did vary a little in the pronuntiation of the proper name. For they vse this deuise to write a proper name: they seeke out some thing in their tongue, that hath resemblance to that name, and set downe the figure of this thing. And as it is difficult among so many proper names, to finde things to resemble them in the prolation, so is it very difficult and troublesome to write such names. Vpon this purpose, Father *Allonso Sanchez* told vs, that when hee was in *China*, being led into diuers Tribunall Seates, from *Manderin* to *Manderin*, they were long in putting his name in writing in their *Caphas*, yet in the end they did write it after their manner, and so ridiculously, that they scarce came neere to the name: and this is the fashion of Letters and Writings which the *Chinois* vse. That of the *Iapponois* approached very neere, although they affirme that the Noblemen of *Iappon* that came into *Europe*, did write all things

verie

very easily in their Language, were they of our proper names: yea, I haue had some of their Writing shewed me, whereby it seemes they should haue some kinde of Letters, although the greatest part of their Writings, bee by the Characters and figures, as hath beene said of the *Chinois*.

An *Indian* of *Peru* or *Mexico*, that hath learned to read & write, knowes more then the wisest *Mandarin* that is amongst them: for that the *Indian* with foure and twentie Letters which hee hath learned, will write all the words in the World: and a *Mandarin* with his hundred thousand Letters, will be troubled to write some proper name, as of *Martin*, or *Alonso*, and with greater reason he shall bee lesse able to write the names of things hee knowes not. So as the writing in *China*, is no other thing but a manner of painting or ciphering.

Of the fashion
of Letters and
writings which
the *Mexicans*
vsed. Chap. 7.

Bookes of
leaves of trees
beere folium &
liber, or codex,
from the rinde
in which the
Ancients writ.
Blind zeale.

WE find among the Nations of New *Spaine* a great knowledge and memorie of antiquitie; and therefore searching by what meanes the *Indians* had preserved their Histories, and so many particularities, I learned, that although they were not so subtil and curious as the *Chinois*, and those of *Iappon*, yet had they some kind of Letters and Bookes amongst them, whereby they preserved (after their manner) the deeds of their Predecessors. In the Prouince of *Yucatan*, where the Bishopricke is, which they call *de Honduras*, there were Bookes of the leaves of Trees, folded and squared, after their manner, in the which the wise *Indians* contained the distribution of their times, the knowledge of the Planets, of beasts and other naturall things, with their Antiquities, a thing full of great curiositie and diligence. It seemed to some Pendant that all this was an Inchantment and Magicke Arte, who did obstinately maintayne, that they ought to be burnt, so as they were committed to the fire. Which since not onely the *Indians* found to be ill done, but also the curious *Spaniards*, who desired to know the secrets of the Countrey. The like hath happened in other things: for our men thinking that all was but Superstition, haue lost many memorials of ancient and holy things, which might haue profited much. This proceedeth of a foolish and ignorant zeale, who not knowing, nor seeking to know what concerned the *Indians*, say preiudicately, that they are all but Witch-crafts, and that all the *Indians* are but Drunkards, incapable to know or learne any thing. For such as would be curiously informed of them, haue found many things worthy of consideration. One of our company of Iesuits, a man very wittie and well experienced, did assemble in the Prouince of *Mexico*, the Ancients of *Tescuco*, of *Talla*, and of *Mexico*, conferring at large with them, who shewed vnto him their Bookes, Histories and Kalenders, things very worthy the sight, because they had their figures and Hieroglyphicks, whereby they represented things in this manner: Such as had forme or figure, were represented by their proper Images, and such as had not any, were represented by Characters that signified them, and by this meanes they figured and writ what they would. And to obserue the time when any thing did happen, they had those painted Wheelles, for euery one of them containd an Age, which was two and fiftie yeeres, as hath beene said; and of the side of those Wheelles, they did paint with figures and Characters right against the yeere, the memorable things that happend therein. As they noted the yeere when as the *Spaniards* entred their Countrey, they painted a man with a Hat and a red Ierkin, vpon the signe of a Reed, which did rule then, and so of other accidents. But for that their Writings and Characters were not sufficient as our Letters and Writings be, they could not so plainly expresse the words, but onely the substance of their conceptions. And forasmuch as they were accustomed to rehearse Discourses and Dialogues by heart, compounded by their Oratours and ancient Rhetoricians, and many *Caphas* made by their Poets (which were impossible to learne by their Hieroglyphickes and Characters) the *Mexicans* were very curious to haue their Children learne those Dialogues and compositions by heart. For the which cause they had Schooles, and as it were, Colledges or Seminaries, where the Ancients taught Children these Orations, and many other things, which they preserved amongst them by tradition from one to another, as perfectly, as if they had beene written; especially the most famous Nations had a care to haue their children (which had any inclination to be Rhetoricians, and to practise the Office of Orators) to learne these Orations by heart: So as when the *Spaniards* came into their Countrey, and had taught them to reade and write our Letters, many of the *Indians* then wrote these Orations, as some graue men doe witness that had read them. Which I say, for that some which shall happily reade these long and eloquent Discourses in the *Mexican* History, will easily beleue they haue beene inuented by the *Spaniards*, and not really taken and reported from the *Indians*. But hauing knowne the certaine truth, they will giue credit (as reason is) to their Histories. They did also write these Discourses after their manner, by Characters and Images: and I haue seene for my better satisfaction, the *Pater noster*, *Anie Maria*, and *Symbol*, or generall Confession of our Faith, written in this manner by the *Indians*.

Confession by
picture.

And in truth whosoever shall see them, will wonder thereat. For, to signifie these words, I a Sinner doe confesse my selfe, they painted an *Indian* vpon his knees, at a religious mans feet, as one that confesseth himselfe: and for this, To God most mightie, they painted three faces with their Crownes, like to the *Trinitie*, and To the glorious *Virgin Marie*, they painted the face of

our Lady, and halfe the bodie of a little childe: and for Saint Peter and Saint Paul, heads with crownes, and a Key with a Sword: and whereas Images failed, they did set Characters, as *wherein I haue sinned, &c.* whereby we may conceiue the quicknesse of Spirit of these Indians, seeing this manner of writing of our Prayers and matters of Faith hath not bene taught them by the Spaniards, neither could they haue done it, if they had not had an excellent conception of that was taught them. And I haue seene in Peru, a confession of sinnes brought by an Indian, written in the same sort with Pictures and Characters, painting euery one of the tenne Commandements, after a certayne manner, where there were certayne markes like Ciphers, which were the sinnes hee had committed against the Commandements. I nothing doubt but if any of the most sufficient Spaniards were employed to make memorials of the like things by their Images and markes, they would not attayne vnto it in a whole yeere, no not in tenne.

Before the Spaniards came to the Indies, they of Peru had no kind of writing, either Letters, Characters, Ciphers, or Figures, like to those of China and Mexico: yet preserved they the memory of their Antiquities, and mayntaine an order in all their affaires, of Peace, Warre, and Policie, for that they were carefull obseruers of Traditions from one to another, and the young ones learned, and carefully kept, as a holy thing, what their Superiors had told them, and taught it with the like care to their Posteritie. Besides this diligence, they supplied the want of Letters and Writings, partly by painting, as those of Mexico, (although they of Peru were very grosse and blockish) and partly, and most commonly by Quippos. These Quippos are Memorials or Registers, made of Bowes, in the which there are diuers knots and colours, which doe signifie diuers things, and it is strange to see what they haue expressed and represented by this meanes: for their Quippos serue them instead of Bookes of Histories, of Lawes, Ceremonies, and accounts of their affaires. There were Officers appointed to keepe these Quippos, the which at this day they call Quipocamayos, the which were bound to giue an account of euery thing, as Notaries and Registers doe heere. Therefore they fully beleueed them in all things, for according to the varietie of businesse, as Warres, Policies, Tributes, Ceremonies and Lands, there were sundry Quippos or branches, in euery one of the which there were so many knots little and great, and strings tyed vnto them, some Red, some Greene, some Blue, some White; and finally, such diuersitie, that euen as wee deriue an infinite number of words from the foure and twentie Letters, applying them in diuers sorts, so doe they draw innumerable words from their knots, and diuersitie of colours. Which thing they doe in such a manner, that if at this day in Peru, any Commissary come at the end of two or three yeeres, to take information vpon the life of any Officer, the Indians come with their small reckoning, verified, saying, that in such a Village they giuen him so many Egges which he hath not payed for, in such a house a Henne, in another, twoburthens of grasse for his Horse, and that he hath payed but so much mony, and remaineth debtor so much. The prooffe being presently made with these numbers of knots and handfulls of cords, it remaines for a certaine testimonie and register. I did see a handfull of these strings, wherein an Indian woman carried written a generall confession of all her life, and thereby confessed her selfe, as well as I could haue done it in written Paper. I asked her what those strings meant that differed from the rest: she answered me, they were certaine circumstances which the sinne required to be fully confessed. Beside these Quippos of threed, they haue another, as it were a kind of writing with small stones, by meanes whereof, they learne punctually the words they desire to know by heart. It is a pleasant thing to see the old and the impotent (with a Wheele made of small stones) learne the *Pater noster*, with another the *Aue Maria*, with another the Creed; and to remember what stone signifies, which was conceived by the Holy Ghost, and which, Suffered vnder Pontius Pilate.

It is a pleasant thing to see them correct themselves when they doe erre; for all their correction consisteth onely in beholding of their small stones. One of these Wheelles were sufficient to make me forget all that I doe know by heart. There are a great number of these Wheelles in the Church-yards for this purpose. But it seemes a kind of Witch-craft, to see another kinde of Quippos, which they make of graines of Mays, for to cast vp a hard account, wherein a good Arithmetician would bee troubled with his Penne to make a diuision: to see how much euery one must contribute: they doe draw so many graines from one side, and adde so many to another, with a thousand other inuentions. These Indians will take their graines, and place five of one side, three of another, and eight of another, and will change one graine of one side, and three of another: So as they finish a certaine account, without erring in any point: and they sooner submit themselves to reason by these Quippos, what euery one ought to pay, then wee can doe with the Penne. Heereby wee may iudge if they haue any vnderstanding, or bee brutish: for my part, I thinke they passe vs in those things, whereunto they doe apply themselves.

Of Registers and the manner of reckoning which the Indians of Peru vfed. Chap. 8.

Quippos.

Writing with small stones.

Accounts by graines of Mays.

Of the order
the *Indians*
hold in their
Writings. *Ch. 9.*

Diuers man-
ners of wri-
ting.

IT shall be good to adde hereunto what we haue obserued, touching the *Indians* Writings: for their manner was not to write with a continued line, but from the top to the bottome, or in circle-wise. The *Latines* and *Greekes* doe write from the left hand vnto the right, which is the vulgar and common manner wee doe vse. The *Hebrewes* contrariwise beganne at the right to the left, and therefore their Bookes began where ours did end. The *Chinois* write neither like the *Greekes* nor like the *Hebrewes*, but from the top to the bottome, for as they bee no Letters but whole words, and that euery figure and Character signifieth a thing, they haue no neede to assemble the parts one with another, and therefore they may well write from the toppe to the bottome. Those of *Mexico*, for the same cause did not write in line, from one side to another, but contrary to the *Chinois*, beginning below, they mounted vpward. They vsed this manner of writing, in the account of their dayes, and other things which they obserued: Yet when they did write in their Wheelles or Signes, they began from the middest where the Sunne was figured, and so mounted by their yeeres vnto the round and circumference of the Wheele.

By words, Pictures, and these Memorials, the Kings were often aduertised of that which passed. For this cause there were men of great agilitie, which serued as Curriers, to goe and come, whom they did nourish in this exercise of Running from their youth, labouring to haue them well breathed, that they might runne to the top of a high Hill without wearinesse. And therefore in *Mexico* they gaue the Prize to three or foure that first mounted vp the stayres of the Temple, as hath beene said in the former Booke. And in *Cusco*, when they made their Solemne Feast of *Capacrayme*, the Nouices did runne who could fastest vp the Rocke of *Tnacauri*. And the exercise of running is generall; much vsed among the *Indians*. When as there chanced any matter of importance, they sent vnto the Lords of *Mexico*, the thing painted, whereof they would aduertise them, as they did when the first *Spanish* ships appeared to their sight, and when they tooke *Topanchan*. In *Peru* they were very curious of Footmen, and the *Inguas* had them in all parts of the Realme, as ordinary Posts called *Chasquis*, whereof shall bee spoken in his place.

Diuers formes
of gouern-
ment.

Many Nations of the *Indies* haue not indured any Kings, or absolute and souereigne Lords, but liue in Comminalties, creating and appointing Captaynes and Princes, for certayne occasions onely, to whom they obey during the time of their charge; then after they returne to their former estates. The greatest part of this New World (where there are no settled Kingdomes, nor established Common-weales, neither Princes nor succeeding Kings) they gouerne themselves in this manner, although there bee some Lords and principall men raised aboue the common sort. In this sort the whole Countrey of *Chille* is gouerned, where the *Anracanes*, those of *Tenacapell* and others, haue so many yeeres resisted the *Spaniards*. And in like sort all the new Kingdome of *Granado*, that of *Guatimalla*, the Ilands, all *Florida*, *Bresill*, *Luson*, and other Countreyes of great circuit: but that in some places they are yet more barbarous, scarcely acknowledging any head, but all command and gouerne in common, hauing no other thing, but will, violence, industry and disorder, so as hee that most may most commands.

Whether the
Mexican or *Pe-
ru* Kingdome
was greater.

They haue onely found two Kingdomes or settled Empires, that of the *Mexicans* in New *Spaine*, and of the *Inguas* in *Peru*. It is not easie to be said, which of the two was the mightiest Kingdome, for that *Moteczuma*, exceeded them of *Peru*, in Buildings, and in the greatnesse of his Court: but the *Inguas*, did likewise exceed the *Mexicans*, in treasure, riches, and greatnesse of Prouinces. In regard of Antiquitie, the Monarchie of the *Inguas*, hath the aduantage, although it be not much, and in my opinion, they haue beene equall in feats of Armes and Victories. It is most certaine, that these two Kingdomes haue much exceeded all the *Indian* Prouinces, discovered in this New World, as well in good order and gouernment, as in power and wealth, and much more in Superstition and Service of their Idols, hauing many things like one to another. But in one thing they differed much, for among the *Mexicans*, the succession of the Kingdome, was by election, as the Empire of the *Romanes*, and that of *Peru*, was hereditary, and they succeeded in bloud, as the Kingdomes of *France* and *Spaine*.

Of the govern-
ment of the
Kings and *In-
guas* of *Peru*.
Chap. 12.
Incestuous
Marriages.

THE *Inguas* which ruled in *Peru*, being dead, his lawfull Sonne succeeded him, and so they held him that was borne of his chiefe Wife, whom they called *Coya*. The which they haue alwayes obserued since the time of an *Inguas*, called *Tupangui*, who married his sister: for these Kings held it an honour to marrie their Sisters. And although they had other Wiues and Concubines, yet the succession of the Kingdome appertayned to the Sonne of *Coya*. It is true, that when the King had a legitimate Brother, he succeeded before the Sonne, and after him his Nephew, and Sonne to the first. The *Curacas*, and Noblemen, held the same order of succession in their goods and Offices. And after their manner they made excessive Ceremonies, and obsequies for the dead. Being dead, they presently held him for a God, making Sacrifices vnto him, Images, and such like. By this meanes, there was infinite Treasure in *Peru*: for euery one of the *Inguas*, had laboured to haue his Oratorie and Treasure surpasse that of his Predecessors. The marke or ensigne, whereby they tooke possession of the Realme, was a red roll of Woolle, more then fine filke, the which hung in the middest of his forehead: and none but the *Inguas* alone might weare

Diadem.

weare it, for that it was as a Crowne and Royall Diademe: yet they might lawfully weare a Roll hanging on the one side, neere vnto the eare, as some Noblemen did, but onely the *Inga* might carrie it in the middest of his forehead. At such time as they tooke this Roll or Wreath, they made solempne Feasts, and many Sacrifices, with a great quantitie of vessell of Gold, and Siluer, a great number of small formes or Images of sheepe, made of Gold and Siluer, great abundance of the stufes of *Cumby*, well wrought, both fine and coarser, many shels of the Sea of all sorts, many feathers, and a thousand sheepe, which must bee of diuers colours. Then the chiefe Priest tooke a young Childe in his hands, of the age of fixe or eight yeeres, pronouncing these words with the other Ministers speaking to the Image of *Viracocha*, Lord we offer this vnto thee, that thou mayest mayntayne vs in quiet, and helpe vs in our warres, mayntaine our Lord the *Inga* in his greatnesse and estate, that hee may alwayes increase, giuing him much knowledge to gouerne vs.

There were present at this Ceremonie and Oath, men of all parts of the Realme, and of all *Guacas* and Sanctuaries. And without doubt, the affection and reuerence which this people bare to their Kings *Ingas*, was very great, for it is neuer found that any one of his subjects committed Treason against him, for that they proceeded in their governments, not only with an absolute power, but also with good order and Iustice, suffering no man to bee oppressed: The *Inga* placed Gouvernours in diuers Prouinces, amongst the which, some were Superiours, and did acknowledge none but himselfe, others were of lesse command, and others more particular, with so goodly an order, and such grauitie, as no man durst be drunke, nor take an eare of Mays from his Neighbour. These *Ingas* held it for a Maxime, that it was necessary to keepe the *Indians* alwayes in action: and therefore we see it to this day, long cawties and workes of great labour, the which they say were made to exercise the *Indians*, lest they should remayne idle. When hee conquered any new Prouince, hee was accustomed presently to send the greatest part, and the chiete of that Countrey into other Prouinces, or else to his Court, and they call them at this day in *Pern*, *Mitimas*, and in their places he sent others of the Nation of *Cusco*, especially the *Orreiones*, which were as Knights of an ancient house. They punished faults rigorously. And therefore such as haue any vnderstanding hereof, hold opinion, that there can be no better gouernment for the *Indians*, nor more assured, then that of the *Ingas*.

Exact Iustice.

No idlenesse permitted.

Transmigration.

TO relate more particularly what I haue spoken befoze, you must vnderstand, that the distribution which the *Ingas* made of their vassals, was so exact and distinct, as hee might gouerne them all with great facilitie, although his Realme were a thousand leagues long: for hauing conquered a Prouince, he presently reduced the *Indians* into Townes and Comminalties, the which he diuided into bands, he appointed one to haue the charge ouer euery ten *Indians*, ouer euery hundred another, ouer euery thousand another, and ouer ten thousand another, whom they called *Humo*, the which was one of the greatest charges. Yet aboue all in euery Prouince, there was a Gouvernour of the house of the *Ingas*, whom all the rest obeyed, giuing vnto him euery yeere particular account of what had passed, that is, of such as were borne, of those that were dead and of their troupes and graine. The Gouvernours went euery yeere out of *Cusco*, where they remayned, and returned to the great Feast of *Rayme*, at the which, they brought the tribute of the whole Realme to the Court; neither might they enter but with this condition. All the Kingdome was diuided into foure parts, which they called *Tabuaninsuyo*, that is, *Chinchasuyo*, *Collasuyo*, *Andesuyo*, and *Condesuyo*, according to the foure wayes which went from *Cusco*, where the Court was resident, and where the generall assemblies of the Realme were made. These waies and Prouinces being answerable vnto them, were towards the foure quarters of the world, *Collasuyo* to the South, *Chinchasuyo* to the North, *Condesuyo* to the West, and *Andesuyo* to the East. In euery Towne and Village, there were two sorts of people, which were of *Hanansaya*, and *Vrinsaya*, which is as much to say, as those aboue, and those below. When they commanded any worke to be done, or to furnish any thing to the *Inga*, the Officers knew presently how much euery Prouince, Towne, and Family, ought to furnish: so as the diuision was not made by equall portions, but by Cottization, according to the qualities and wealth of the Countrey. So as for example, if they were to gather a hundred thousand *Fanegues* of Meys, they knew presently how much euery Prouince was to contribute, were it a tenth, a seuenth, or a fift part. The like was of Townes and Villages, *Allos*, or Linages. The *Quipocamayos*, which were the Officers and Intendants, kept the account of all with their strings and knottes, without fayling, setting downe what euery one had payed, euen to a Henne, or a burthen of wood, and in a moment they did see by diuers Registers what euery one ought to pay.

Of the distribution the *Ingas* made of their Vassals. Chap. 13. Gouvernours.Tribute yeerely paid at *Cusco*.

Fourefold prouinciall partition.

THE Edifices and Buildings which the *Ingas* made in Temples, Fortresses, wayes, Countrey houses, and such like, were many in number, and of an excessiue labour, as doth appeare at this day by their ruines and remaynders, both in *Cusco*, *Tyaguanaco*, *Tambo*, and other places, where there are stones of an vnmeasurable greatnesse: as men cannot conceiue how they were

Of the Edifices and manner of building of the *Ingas*. Chap. 14.

Near art in
ioyning huge
stones.

cur, brought and set in their places. There came great numbers of people from all Prouinces, to worke in these Buildings and Fortresses, which the *Inguia* caused to bee made in *Cusco*, or other parts of the Realme. As these Workes were strange, and to amaze the beholders, wherein they vsed no Morter nor Ciment, neither any Iron, or Steele, to cut, and set the stones in worke. They had no Engines or other Instruments to carrie them, and yet were they so artificially wrought, that in many places they could not see the ioyns: and many of these stones are so bigge, that it were an incredible thing, if one should not see them. At *Tiaguanaco*, I did measure a stone of thirtie eight foot long, of eightene broad, and sixe thicke. And in the wall of the Fortresse of *Cusco*, which is of *Moallen*, there are stones of a greater bignesse. And that which is most strange, these stones being not cut nor squared to ioyn, but contrariwise, very vnequall one with another in forme and greatnesse, yet did they ioyn them together without Ciment, after an incredible manner. All this was done by the force of men, who endured their labour with an inuincible patience. For to ioyn one stone with another, they were forced to handle and trie many of them often, being vneuen. The *Inguia* appointed euery yeere what numbers of people should labour in these stones and buildings; and the *Indians* made a diuision amongst them, as of other things, so as no man was oppressed. Although these Buildings were great, yet were they commonly ill appointed and vnfit, almost like to the Mosquitoes or Buildings of the Barbarians.

Arches.

Bridges.

Straw Bridge.

They could make no Arches in their Edifices, nor Morter or Ciment to build them withall: when they saw Arches of wood built vpon the Riuer of *Xaura*, the Bridge being finished, and the wood broken downe, they all began to runne away, supposing that the Bridge which was of stone should presently fall; but when they found it to stand firme, and that the *Spaniards* went on it, the *Cacique* said to his companions; *It is reason we should serue these men, who in truth seeme to be the children of the Sunne*. The Bridges they made were of Reedes pleited, which they tyed the bankes with great stakes, for that they could not make any Bridges of stone or wood. The Bridge which is at this day vpon the current of the great Lake *Chiquitto* in *Collao* is admirable; for the course of that water is so deepe, as they cannot settle any foundation, and so broad, that it is impossible to make an Arch to passe it: so as it was altogether impossible to make a Bridge either of wood or stone. But the wit and industry of the *Indians* inuented a meanes to make a firme and assured Bridge being only of straw, which seemeth fabulous, yet is it very true: For as we haue said before, they did binde together certaine bundles of Reeds, and Weedes, which doe grow in the Lake that they call *Torora*, and being a light matter that sinkes not in the water, they cast it vpon a great quantitie of Reeds, then hauing tyed those bundles of Weedes to either side of the Riuer, both men and beasts goe ouer it with ease: passing ouer this Bridge I haue wondred, that of so common and easie a thing, they had made a Bridge, better, and more assured then the Bridge of Boates from *Senille* to *Triane*. I haue measured the length of this Bridge, and as I remember, it was aboute three hundred foote; and they say that the depth of this Current is very great: and it seemes aboue, that the water hath no motion, yet they say, that at the bottome it hath a violent and very furious course. And this shall suffice for Buildings.

Of the *Inguia*
reuenues, and
the order of
Tributes they
imposed vpon
the *Indians*.
Chap. I.

The *Inguia* riches was incomparable, for although no King did inherit the riches and treasure of his Predecessor, yet had he at command, all the riches of his Realmes, as well Silver and Gold, as the stufte of *Cumbe*, and cattell, wherein they abounded, and their greatest riches of all, was their innumerable number of vassals, which were all imployed as it pleased the King. They brought out of euery Prouince what he had chosen for tribute. The *Chicas* sent him sweet and rich woods; the *Lucanas* sent Brancars to carry his Litter; The *Chumbilucas*, Dancers; and so the other Prouinces sent him what they had of abundance, besides their generall Tribute, whereunto euery one contributed. The *Indians* that were noted to that end, laboured in the Mines of Gold and Silver, which did abound in *Pern*, whom the *Inguia* entertained with all they needed for their expences: and whatsoever they drew of Gold and Silver, was for him. By this meanes there were so great treasures in this Kingdome, as it is the opinion of many, that what fell in the hands of the *Spaniards*, (although it were very much, as wee know) was not the tenth part of that which they hid and buried in the ground, the which they could neuer discover, notwithstanding all the search couetousnesse had taught them. But the greatest wealth of these barbarous people, was, that their vassals were all slaues, whose labour they vsed at their pleasure: and that which is admirable, they employed them in such sort, as it was no seruitude vnto them, but rather a pleasing life. But to vnderstand the order of Tributes which the *Indians* payed vnto their Lord, you must know, that when the *Inguia* conquered any Cities, he diuided all the Land into three parts, the first was, for Religion and Ceremonies, so as the *Pachayachaqni*, which is the *Creator*, and the *Sunne*, the *Chuquilla*, which is the *Thunder*, the *Pachamana*, and the dead, and other *Guacas* and Sanctuaries, had euery one their proper Lands, the fruits whereof were spoyled and consumed in Sacrifices, and in the nourishing of Ministers and Priests; for there were *Indians* appointed for euery *Guaca*, and Sanctuarie, and the

All slaues and
none.

Lands sacred.

the greatest part of this revenue was spent in *Cusco*, where was the *univiersall and generall sanctu-
arie*, and the rest in that Citie, where it was gathered: for that after the imitation of *Cusco*,
there were in every Citie, *Gnacas*, and Oratories of the same order, and with the same functi-
ons, which were served after the same manner and ceremonies to that of *Cusco*, which is an ad-
mirable thing, and they have found it by prooffe in about a hundred Townes, some of them
distant about two hundred leagues from *Cusco*.

Order in their
Religion.

That which they sowed or reapt vpon their Land, was put into houses, as Granaries or store-
houses, built for that effect, and this was a great part of the Tribute which the *Indians* paid. I
cannot say how much this part amounted vnto, for that it was greater in some parts then in o-
ther, and in some places it was in a manner all: and this part was the first they put to profit.

10 The second part of these Lands and inheritances was for the *Ingua*, wherewith he and his hous-
hold were entertained, with his kinsfolks, Noblemen, Garrisones and Souldiers. And there-
fore it was the greatest portion of these tributes, as it appeareth by the quantity of
Gold, Silver, and other Tributes, which were in houses appointed for that purpose, be-
ing longer and larger then those where they keepe the revenues of the *Gnacas*. They brought
this Tribute verie carefully to *Cusco*, or vnto such places where it was needefull for the Souldi-
ers, and when there was store, they kept it ten or twelve yeares, vntill a time of necessitie.

Royall de-
mesnes.

20 The *Indians* tilled and put to profit the *Inguas* Lands, next to those of the *Gnacas*; during which
time they lived and were nourished at the charges of the *Inguas*, of the Sunne, or of the *Gnacas*,
according to the Land they laboured. But the old men, women, and sicke folkes were reserued
and exempt from this Tribute, and although whatsoeuer they gathered vpon those Lands were
for the *Inguas*, the Sunne, or the *Gnacas*, yet the proprietie appertained vnto the *Indians* and their
successours. The third part of these Lands were given by the *Inguas* for the Comminaltie, and they
have not yet discovered, whither this portion were greater, or lesser, then that of the *Inguas* or
Gnacas. It is most certaine they had a care and regard, it might be sufficient for the nourish-
ment of the people. No particular man possessed any thing proper to himselfe of this third por-
tion, neither did the *Indians* euer possesse any, if it were not by speciall grace from the *Inguas*:
and yet might it not be engaged nor diuided amongst his heires. They euerie yeare diuided these
Lands of the comminaltie, inguing to every one, that which was needefull for the nourish-
ment of their persons and families. And as the familie increased or diminished, so did they en-
crease or decrease his portion, for there were measures appointed for euerie person. The *Indi-
ans* paid no tribute of that which was apportioned vnto them: For all their tribute was to till
and keepe in good order the Lands of the *Inguas*, and the *Gnacas*, and to lay the fruits thereof in
their store-houses. When the yeare was barren, they gaue of these fruits thus reserued to the
needie, for that there is alwaies superabundance. The *Inguas* did likewise make distribution
of the cattell as of the Lands, which was to number and diuide them; then to appoint the pa-
stures and limits, for the cattell belonging to the *Gnacas*, and to the *Inguas*, and to euerie Town:
and therefore one portion of their revenues was for religion, another for the *Inguas*, and the third
for the *Indians* themselves. The like order was obserued among the hunters, being forbidden to
take or kill any females. The troupes of the *Inguas* and *Gnacas*, were in great numbers and ve-
rie fruitfull; for this cause they called them *Kapaellama*, but those of the common and publike,
were few in number and of small value, and therefore they called them *Bacchallama*. The *Inguas*
tooke great care for the preservation of Cattell, for that it hath bene, and is yet, all the wealth
of the Countrey, and as it is said, they did neither sacrifice any females, nor kill them, neither did
they take them when they hunted. If the mangie or the scurvie which they call *Carache* take a
nie beast, they were presently commanded to burie it quicke, lest it should infect others. They
did sheare their cattell in their season, and distributed to euerie one to spinne and weaue Stuffs
for the service of his Family. They had *searchers* to examine if they did employ themselves in
these workes, and to punish the negligent. They made Stuffs of the wooll of the *Inguas* cattell,
for him and for his family, one sort very fine, which they called *Cumbi*, and another grosser,
which they likewise called *Abasca*. There was no certaine number of these Stuffs and gar-
ment, appointed, but what was deliuered to every one. The wooll that remained was put in
to the storehouses, whereof the *Spaniards* found them full, and with all other things necessary
for the life of man. There are few men of iudgement but doe admire at so excellent & well settled
a gouernment, seeing the *Indians* (being neither religious, nor Christians) maintained after their
manner, this perfection, nor to hold any thing proper, and to provide for all their necessities, en-
tertaining with such abundance matters of Religion, & that which concerned their King & Lord.

60 The *Indians* of *Peru* had one perfection, which was, to teach their children all arts and oc-
cupations necessary for the life of man; for that there were no particular Trades-men, as
amongst vs, Taylers, Shoemakers, Weauers, and the rest, but every one learned what was neede-
full for their persons and houses, and provided for themselves. All could weaue and make their
garments, and therefore the *Inguas* furnishing them with wooll, gaue them cloathes. Every man
could till the ground, and put it to profit, without hyring of any labourers. All built their own
houses

trades.

houses, and the women, which vnderstood most were not brought vp in delights, but serued their Husbands carefully. Other Arts and Trades which were not ordinary and common for the life of man, had their proper Companies and workemen, as *Goldsmiths, Painters, Potters, Watermen*, and *players of Instruments*. There were also *Weavers* and workemen for exquisite workes, which the Noblemen vsed: but the common people, as hath beene said, had in their houses all things necessary, hauing no neede to buy. This continues to this day, so as they haue no neede one of another for things necessary: touching his person and family, as shooes and garments, and for their houle, to sowe and reape, and to make Iron workes, and necessarie instruments. It is worthy obseruation, although the *Indians* be simple in their manner and habits, yet doe we see great diuersitie amongst the Prouinces, especially in the attire of their head, for in some places they carried a long peece of cloath, which went often about, in some places a large peece of cloath, which went but once about, in some parts as it were little morters or hats, in some others as it were high and round Bonets, and some like the bottome of sacks, with a thousand other differences. They had a straight and inuiolable law, that no man might change the fashion of the garments of his Prouince, although he went to liue in another. This the *Inguas* held to be of great importance for the order and good gouernment of his Realme, and they doe obserue it to this day, though not with so great a care as they were accustomed.

Of the Posts
and *Chasquis*
the *Indians* did
vse. Chap. 17.

There were many Posts and couriers which the *Inguas* maintained throughout his Realme, whom they called *Chasquis*, and they carried commandements to the Gouvernours, and returned their aduises and aduertisements to the Court. These *Chasquis* were placed at euery course, which was a league and a halfe one from another in two small houses, where were foure *Indians* of euery Country, and they were changed monthly. Hauing receiued the packet or message, they ranne with all their force vntill they had deliuered it to the other *Chasquis*, such as were so runne, being ready and watchfull. They ran fiftie leagnes in a day and night, although the greatest part of that Countrey be very rough. They serued also to carry such things as the *Inguas* desired to haue with speede. Therefore they had alwaies Sea-fish in *Cusco*, of two daies old or little more, although it were about a hundred leagues off. Since the *Spaniards* entred, they haue vsed of these *Chasquis*, in time of seditions, whereof there was great neede. *Don Martin* the Viceroy appointed ordinary Posts at euery foure leagues, to carry and recarry dispatches, which were very necessary in this Realme, though they run not so swiftly as the ancients did, neither are there so many, yet they are well paid, and serue as the ordinaries of *Spaine*, to whom they giue Letters which they carry foure or fise leagues.

Adultery.

Marriage so-
lemnitie.

Incest forbid-
den.

Even as such as had done any good seruice in warre, or in the gouernment of the Commonweale were honoured and recompensed with publike charges, with Lands giuen them in proper, with armes and titles of honour, and in marrying wiues of the *Inguas* linage: Euen so they gaue seuer punishments to such as were disobedient and offenders. They punished murder, theft, and adultery, with death, and such as committed incest with ascendants or descendants in direct line, were likewise punished with death. But they held it no adultery to haue many wiues or concubines, neither were the women subiect to the punishment of death, being found with any other, but onely she that was the true and lawfull wife, with whom they contracted marriage; for they had but one whom they did wedde and receiue with a particular solemnitie and ceremonie, which was in this manner: The Bridegroom went to the Brides house, and led her from thence with him, hauing first put an *Ottoy* vpon her foote. They call the shooe which they vse in those parts *Ottoy*, being open like the *Franciscan* Friars. If the Bride were a maide, her *Ottoy* was of Wooll, but if she were not, it was of Reedes. All his other wiues and concubines did honour and serue this as the lawfull wife, who alone after the decease of her husband carried a mourning weede of blacke, for the space of a yeare; neither did she marry vntill that time were past; and commonly she was younger then her husband. The *Inguas* himselfe with his owne hand gaue this woman to his Gouvernours and Captaines: and the Gouvernours or *Caciques*, assembled all the yong men and maides, in one place of the Citie, where they gaue to euery one his wife with the aforesaid ceremonie, in putting on the *Ottoy*, and in this manner they contracted their mariages. If this woman were found with any other then her husband, she was punished with death, and the adulterer likewise: and although the husband pardoned them, yet were they punished, although dispensed withall from death. They inflicted the like punishment on him that did commit incest with his Mother, Grandmother, Daughter, or Grandchilde: for it was not prohibited for them to marrie together, or to haue of their other kinsfolke for concubines; onely the first degree was defended, neither did they allow the brother to haue the company of his sister, wherein they of *Pernu* were very much deceiued, beleeuing that their *Inguas* and Noblemen might lawfully contract marriage with their sisters, yea by father and mother: for in truth it hath beene alwaies held vnlawfull among the *Indians*, and defended to contract in the first degree; which continued vntill the time of *Topa Inguas Tupangui* father to *Gwaynacapa*, and grandfather to *Atahualpa*, at such time as the *Spaniards* entred

entred Peru; for that *Topa Inga Yupangui*, was the first that brake this custome, marrying with *Mamaoello*, his sister by the fathers side, decreeing that the *Inguas* might marrie with their sisters by the fathers side, and no other.

This he did, and by that marriage he had *Guaynacapa*, and a daughter called *Coya Cussillimay*: finding himselfe at the point of death, he commanded his children by father and mother to marrie together, and gave permission to the Noblemen of his Countrey, to marrie with their sisters by the fathers side. And for that this marriage was vnlawfull, and against the law of nature, God would bring to an end this Kingdome of the *Inguas*, during the raigne of *Guascar Inga*, and *Atahualpa Inga*, which was the fruite that sprang from this marriage. Who so will more exactly vnderstand the manner of marriages among the *Indians* in Peru, let him reade the Treatise *Polo* hath written at the request of *Don Ieronimo Loaisa* Archbishop of Kings: which *Polo* made a very curious search, as he hath done of diuers other things at the *Indies*.

BY the commandement of *Don Phillip* the Catholike King, they haue made the most diligent and exact search that could be, of the beginning, customes, and priuiledges of the *Inguas*, the which was not so perfectly done as was desired: for that the *Indians* had no written Records: yet the haue recouered that which I shall write, by meanes of their *Quippos* and Registers. First there was not in Peru in old time, any King or Lord to whom all obeyed, but they were Comminalties, as at this day there is in the Realme of *Chille*, and in a manner, in all the Prouinces which the *Spaniards* haue conquered in those Westerne *Indies*, except the Realme of *Mexico*. You must therefore vnderstand, that they haue found three manner of Gouvernements at the *Indies*. The first and best, was a Monarchie, as that of the *Inguas*, and of *Moteczuma*, although for the most part they were tyrannous. The second was of Comminalties, where they were gouerned by the aduise and authority of many, which are as it were Counsellors. These in time of warre, made choise of a Captaine, to whom a whole Nation or Prouince did obey, and in time of peace, euery Towne or Comminalty did rule and gouerne themselves, hauing some chiefe men whom the vulgar did respect, and sometime (though not often) some of them assemble together about matters of importance, to consult what they should thinke necessary. The third kinde of Gouvernment, is altogether barbarous, composed of *Indians* without Law, without King, and without any certaine place of abode, but goe in troopes like sauage beasts. As farre as I can conceiue, the first Inhabitants of the *Indies*, were of this kinde, as at this day a great part of the *Bresilians*, *Chiraguas*, *Chunchos*, *Yscingos*, *Pilcocones*, and the greatest part of the *Floridians*, and all the *Chichimaquas* in new Spaine. Of this kinde the other sort of gouernment by Comminalties was framed, by the industry and wisdom of some amongst them, in which there is some more order, holding a more staied place, as at this day those of *Auracano*, and of *Tenacapell* in *Chille*, and in the new Kingdome of *Grenada*, the *Moscos*, and the *Ottomittes* in new Spaine: and in all these there is lesse fiercenesse and inciuilitie, & much more quiet then in the rest. Of this kinde, by the valor & knowledg of some excellent men, grew the other gouernment more mighty and potent, which did institute a Kingdome and Monarchy.

It appears by their Registers, that their Gouvernment hath continued aboue three hundred yeares, but not fully foure, although their Seignorie for a long time, was not aboue five or six leagues compasse about the Citie of *Cusco*: their originall and beginning was in the valley of *Cusco*: where by little and little they conquered the Lands which we call Peru, passing beyond *Quitto*, vnto the riuer of *Pasto* towards the North, stretching euen vnto *Chille*, towards the South, which is almost a thousand leagues in length. It extended in breadth vnto the South Sea towards the West, and vnto the great champains which are on the other side of the *Andes*, where at this day is to be seene the Castell which is called the *Pucara* of the *Inga*, the which is a fortreffe built for the defence of the frontire towards the East. The *Inguas* aduanced no farther on that side, for the abundance of water, Marshes, Lakes, and Riuers, which runne in those parts.

These *Inguas* passed all other Nations of *America*, in pollicie and gouernment, and much more in valour and armes, although the *Canaries* which were their mortall enemies, and fauoured the *Spaniards*, would neuer confesse it, nor yeelde them this aduantage: so as euen at this day, if they fall into any discourse or comparifons, and that they be a little chafed and incensed, they kill one another by thousands vpon this quarrell, which are the most valiant, as it hath happened in *Cusco*. The practise and meanes which the *Inguas* had to make themselves Lords of all this Countrey, was in faining that since the generall deluge (whereof all the *Indians* haue knowledge) the world had bene preserued, restored, and peopled by these *Inguas*, and that seuen of them came forth of the Caue of *Pacaricambo*, by reason whereof, all other men ought them tribute and vassalage, as their progenitors. Besides they said and affirmed, that they alone held the true religion, and knew how God should be serued and honoured: and for this cause they should instruct all men. It is a strange thing, the ground they giue to their customes and ceremonies. There were in *Cusco* aboue foure hundred Oratories, as in a holy land, and all places were filled with their misteries. As they continued in the conquests of Prouinces, so they brought in the like ceremonies and customes. In all this Realme the chiefe Idols they

400. Oratories in *Cusco*.

they did worship, were *Viracocha*, *Pachayachachic*, which signifies the Creator of the World, and after him, the *Sunne*. And therefore they said, that the *Sunne* receiued his vertue and being from the Creator, as the other Idols doe, and that they were intercessors to him.

Of the first
Inga, and his
Successors,
Chap. 20.

The first man which the *Indians* report to be the beginning and first of the *Ingas*, was *Mangocapa*, whom they imagine, after the deluge, to haue issued forth of the Caue of *Tambo*, which is from *Cusco* about five or six leagues. They say that hee gaue beginning to two principall Races or Families of the *Ingas*, the one was called *Hanancusco*, and the other *Urincusco*: of the first came the Lords which subdued and gouerned this Prouince, and the first whom they make the Head and Stemme of this Familie, was called *Ingaroca*, who founded a Familie or *Aillo*, as they call them, named *Vicaquirao*. This although he were no great Lord, was serued notwithstanding in vessell of gold and siluer. And dying, he appointed that all his treasure should be imployed for the seruice of his Body, and for the feeding of his Familie. His Successor did the like; and this grew to a generall custome, as I haue said, that no *Inga* might inherit the goods and house of his Predecessor, but did build a new Palace. In the time of this *Ingaroca*, the *Indians* had Images of gold; and to him succeeded *Yaguaruague*, a very old man: they say, hee was called by this name, which signifies *teares of blond*, for that being once vanquished and taken by his Enemies, for grieve and sorrow hee wept blond. Hee was buried in a Village called *Paullo*, which is vpon the way to *Omasugo*: he founded a Familie called *Aocmillipanaca*. To him succeeded his sonne *Viracocha Inga*, who was very rich, and made much vessell of gold and siluer: he founded the Linage or Familie of *Cocopanaca*. *Gonzales Pizarre* sought out his body, for the report of the great treasure buried with him, who after hee had cruelly tormented many *Indians*, in the end he found it in *Xaquixaquana*, whereas they said *Pizarre* was afterwards vanquished, taken, and executed by the President *Gusca*. *Gonzales Pizarre* caused the body of *Viracocha Inga* to be burnt; the *Indians* did afterwards take the ashes, the which they preserved in a small vessell, making great sacrifices thereunto, vntill *Pollo* did reforme it, and other Idolatries which they committed vpon the bodies of their other *Ingas*, the which hee suppressed with an admirable diligence and dexteritie, drawing these bodies out of their hands, being whole, and much imbalmed, whereby hee extinguished a great number of Idolatries which they committed. The *Indians* tooke it ill, that the *Inga* did intitle himselfe *Viracocha*, which is the name of their God: and he to excuse himselfe, gaue them to vnderstand, that the same *Viracocha* appeared to him in his dreame, commanding him to take this name. To him succeeded *Pachacuti Inga Tupangui*, who reigned seuentie yeeres, and conquered many Countries: The beginning of his conquests, was by meanes of his eldest brother, who hauing held the gouernment in his fathers time, and made warre by his consent, was ouerthrowne in a battaile against the *Changwas*, a Nation which inhabiteth the Valley of *Andaguaylas*, thirtie or fortie leagues from *Cusco*, vpon the way to *Lima*. This elder brother thus defeated, retyred himselfe with few men. The which *Inga Tupangui*, his younger brother seeing, deuised and gaue forth, that being one day alone and melancholy, *Viracocha* the Creator spake to him, complayning, that though hee were vniuersall Lord and Creator of all things, and that he had made the Heauen, the Sunne, the World, and Men, and that all was vnder his command, yet did they not yeeld him the obedience they ought, but contrariwise did equally honour and worship the Sunne, Thunder, Earth, and other things, which had no vertue but what he imparted vnto them: giuing him to vnderstand, that in heauen where hee was, they called him *Viracocha Pachayachachic*, which signifieth vniuersall Creator; and to the end the *Indians* might beleue it to be true, he doubted not although hee were alone, to raise men vnder this title, which should giue him victorie against the *Changwas*, although they were then victorious, and in great numbers; and make himselfe Lord of those Realmes, for that hee would send him men to his aide inuisibly, whereby he preuayled in such sort, that vnder this colour and conceit, he began to assemble a great number of people, whereof he made a mightie Armie, with the which he obtayned the victorie, making himselfe Lord of the whole Realme, taking the gouernment from his father and brother. Then afterwards he conquered and ouerthrew the *Changwas*, and from that time commanded that *Viracocha* should be held for vniuersall Lord, and that the Images of the Sunne and Thunder, should doe him reuerence and honor: And from that time they began to set the Image of *Viracocha* aboue that of the Sunne and Thunder, and the rest of the *Gnacas*. And although this *Inga Tupangui* had giuen Farmes, Lands, and Cattell to the Sunne, Thunder, and other *Gnacas*, yet did he not dedicate any thing to *Viracocha*, saying, that he had no neede, being vniuersall Lord and Creator of all things. Hee informed his Souldiers after this absolute victorie of the *Changwas*, that it was not they alone that had conquered them, but certaine bearded men, whom *Viracocha* had lent him, and that no man might see them but himselfe, which were since conuerted into stones; it was therefore necessarie to seeke them out, whom he would know well. By this meanes he gathered together a multitude of stones in the Mountaines, whereof he made choice, placing them for *Gnacas*, or Idols, they worshipped and sacrificed vnto; they called them *Pururancas*, and carried them to the warre with great deuotion, beleeuing for certaine, that they had gotten the victorie by their helpe. The imagination

and

and fiction of this *Ingua* was of such force, that by the meanes thereof hee obtayned goodly victories: He founded the Familie called *Tuacapanaca*, and made a great Image of gold, which hee called *Indijllapa*, which he placed in a Brancard of gold, very rich, and of great price, of the which gold the *Indians* tooke great store to carry to *Xaxamalca*, for the libertie and ranfome of *Atahualpa*, when the Marquesse *Francis Pizarre* held him prisoner. The Licenciado *Polo* found in his house in *Cusco*, his seruants and *Mamacomas*, which did seruice to his memorie, and found that the body had bene transported from *Patallacta* to *Totocache*, where the *Spaniards* haue since founded the Parish of Saint *Blaise*. This body was so whole and preserved with a certaine Rosin, that it seemed alieue, he had his eyes made of a fine cloth of gold, so artificially set, as they seemed very
10 naturall eyes, he had a blow with a stone on the head, which he had receiued in the warres, hee was all grey and hayrie, hauing lost no more haire then if he had dyed but the same day, although it were ieuentie and eight yeres since his decease. The foresaid *Polo* sent this body with some others of the *Ingas*, to the Citie of *Lima*, by the Vice-royes command which was the Marquesse of *Canette*, and the which was very necessarie to roote out the Idolatrie of *Cusco*. Many *Spaniards* haue seene this body with others in the Hospitall of Saint *Andrew*, which the Marquesse built, but they were much decayed. *Don Philip Caritopa*, who was grand-child or great grand-child to this *Ingua*, affirmed that the treasure hee left to his Familie was great, which should bee in the power of the *Tanacanas*, *Amaro*, *Toto*, and others. To this *Ingua* succeeded *Tupangua* *Tupangui*, to whom his sonne of the same name succeeded, who founded the Familie
20 called *Cupac Aillo*.

TO this latter *Ingua* succeeded *Guaynacapa*, which is to say, *A young man, rich and valiant*, and so was he in truth, more then any of his Predecessors, or Successors. He was very wise, planting good orders throughout his whole Realme, he was a bold and resolute man, valiant, and very happy in warre. He therefore obtayned great victories, and extended his Dominions much farther then all his Predecessors had done before him; he dyed in the Realme of *Quitto*, the which he had conquered, foure hundred leagues distant from his Court. The *Indians* opened him after his decease, leauing his heart and entrails in *Quitto*; the body was carried to *Cusco*, the which was placed in the renowned Temple of the *Sunne*. Wee see yet to this day many Caw-
30 seys, Buildings, Fortresses, and notable workes of this King: hee founded the Familie of *Teme Bamba*. This *Guaynacapa* was worshipped of his subiects for a god, being yet alieue, as the old men affirme, which was not done to any of his Predecessors. When hee dyed, they slue a thousand persons of his household, to serue him in the other life, all which dyed willingly for his seruice, insomuch that many of them offered themselves to death, besides such as were appointed: his riches and treasure was admirable. And forasmuch as the *Spaniards* entred soone after his death, the *Indians* laboured much to conceale all, although a great part thereof was carried to *Xaxamalca*, for the ranfome of *Atahualpa* his sonne. Some worthy of credit, affirme that he had aboute three hundred sonnes and grand-children in *Cusco*. His mother called *Mamaoella* was much esteemed amongst them. *Polo* sent her body with that of *Guaynacapa* very well imbal-
40 med to *Lima*, rooting out infinite Idolatries. To *Guaynacapa* succeeded in *Cusco* a sonne of his called *Tuocussigualpa*, who since was called *Guaspar Ingua*, his body was burned by the Captaines of *Atahualpa*, who was likewise sonne to *Guaynacapa*, and rebelled in *Quitto* against his brother, marching against him with a mightie Armie. It happened that *Quisquits* and *Chilicuchi*, Captaines to *Atahualpa*, tooke *Guaspar Ingua* in the Citie of *Cusco*, being receiued for Lord and King (for that he was the lawfull successor) which caused great sorrow throughout all his Kingdome, especially in his Court. And as alwayes in their necessities they had recourse to sacrifices, finding themselves vnable to set their Lord at libertie, aswell for the great power the Captaines had that tooke him, as also, for the great Armie that came with *Atahualpa*, they resolved (some say by the commandement of this *Ingua*) to make a great and solemne sacrifice to *Viracocha Pachayachachic*, which signifieth *uniuersall Creator*, desiring him, that since they could not deliuer their Lord, he would send men from Heauen to deliuer him from prison. And as they were in this great hope, vpon their sacrifice, newes came to them, that a certaine people come by Sea, was landed, and had taken *Atahualpa* prisoner. Hereupon they called the *Spaniards* *Viracochas*, beleeuing they were men sent from God, aswell for the small number they were to take *Atahualpa* in *Xaxamalca*, as also, for that it chanced after their sacrifice done to *Viracocha*, and there-
50 by they began to call the *Spaniards* *Viracochas*, as they doe at this day. And in truth, if we had giuen them good example, and such as we ought, the *Indians* had well applyed it, in saying they were men sent from God. It is a thing very well worthy of consideration, how the greatnesse and prouidence of God, disposed of the entrie of our men at *Pern*, which had bene impossible, were not the dissension of the two Brethren and their Partisans, and the great opinion they had of *Christians*, as of men sent from Heauen, bound (by the taking of the *Indians* Country) to labour to win soules vnto Almighty God.

Of the greatest and most famous *Ingua* called *Guaynacapa*, Ch. 22.

Guaynacapa worshipped for a god.

THe rest of this subiect is handled at large by the *Spanish* Writers in the Histories of the *In- dies*, and for that it is not my purpose, I will speake onely of the succession of the *Inguas*. *Atabualpa* being dead in *Xaxamalca*, and *Guascar* in *Cusco*, and *Francis Pizarre* with his people having seized on the Realme, *Mangocapa* sonne to *Guaynacapa* besieged them in *Cusco* very straightly: but in the end he abandoned the whole Country, and retyred himselfe to *Vilca Bam- ba*, where he kept himselfe in the Mountaines, by reason of the rough and difficult accesse, and there the Successors *Inguas* remayned, vntill *Amaro*, who was taken and executed in the market place of *Cusco*, to the *Indians* incredible grieve and sorrow, seeing iustice done vpon him pub- liquely whom they held for their Lord. After which time, they imprisoned others of the Linage of these *Inguas*. I haue knowne *Don Charles*, grand-child to *Guaynacapa*, and sonne to *Polo*, who was baptized, and alwayes fauoured the *Spaniards* against *Mangocapa* his brother, when the Marquess of *Canette* gouerned in this Country *Sarritopangua*, went from *Vilcabamba*, and came vpon assurance to the Citie of *Kings*, where there was giuen to him the Valley of *Tucay*, and other things, to whom succeeded a daughter of his. Behold the succession which is knowne at this day of that great and rich Familie of the *Inguas*, whose raigne continued aboue three hundred yeeres, wherein they reckon eleuen Successors, vntill it was wholly extinguished. In the other Linage of *Vrincusco*, which (as we haue said before) had his beginning likewise from the first *Mangocapa*, they reckon eight Successors in this sort: To *Mangocapa* succeeded *Cin- choraca*, to him *Capac Yupangui*, to him *Lluqui Yupangui*, to him *Maytaca* paest *Tarcogumam*, vnto whom succeeded his sonne, whom they name not, to this sonne succeeded *Don Jean Tambo*, *Maytapanaca*. This sufficeth for the originall and succession of the *Inguas*, that gouer- ned the Land of *Peru*, with that that I haue spoken of their Lawes, Government, and man- ner of Life.

Although you may see by the Historie written of the Kingdome, succession, and beginning of the *Mexicans*, their manner of Commonweale and Government, yet will I speake briefly what I shall thinke fit in generall to bee most obserued: whereof I will discourse more amply in the Historie. The first point whereby wee may iudge the *Mexican* government to bee very politike, is the order they had and kept inuolable in the election of their King: for since their first, called *Acamapach*, vnto their last, which was *Moteczuma*, the second of that name, there came none to the Crowne by right of succession, but by a lawfull Nomination and Election. This election in the beginning was by the voice of the Commons, although the chiefe men managed it. Since in the time of *Iscoalt* the fourth King, by the aduise and order of a wise and valiant man, called *Tlacael*, there were foure certaine Electors appointed, which (with two Lords or Kings subiect to the *Mexican*, the one of *Tescuco*, and the other of *Tucuba*) had power to make this election. They did commonly choose young men for their Kings, because they went alwayes to the warres, and this was in a manner the chiefe cause why they desired them so. They had a speciall regard that they should bee fit for the warres, and take delight and glorie therein. After the election they made two kindes of feasts, the one in taking possession of the Royall E- state, for the which they went to the Temple, making great ceremonies and sacrifices vpon the Harth, called *Divine*, where there was a continuall fire before the Altar of the Idoll, and after some Rhetoricians practised therein, made many Orations and Speeches. The other feast, and the most solemne, was at his Coronation, for the which hee must first ouercome in battell, and bring a certaine number of Captiues, which they must sacrifice to their gods; hee entred in triumph with great pompe, making him a solemne reception, aswell they of the Temple, who went all in procession, sounding on sundrie sorts of instruments, giuing Incense, and singing like secular men, as also the Courtiers, who came forth with their deuises to receiue the victorious King. The Crowne or royall Ensigne was before like a Myter, and behinde it was cut, so as it was not round, for the forepart was higher, and did rise like a point. The King of *Tescuco* had the priuilege to crown the King of *Mexico*. In the beginning when the *Mexicans* were but poore and weake, the Kings were very moderate in their expenses and in their Court, but as they in- creased in power, they increased likewise in pompe and state, vntill they came to the greatnesse of *Moteczuma*, who if he had had no other thing but his house of Beasts and Birds, it had bene a proud thing, the like whereof hath not bene seene: for there was in this house all sorts of fish, birds of *Xacamamas*, and beasts, as in an other *Noahs Arke*; for Sea fish, there were Pooles of salt- water; and for Riuer fish, Lakes of fresh-water; birds that doe prey were fed, and likewise wilde beasts in great abundance: there were very many *Indians* employed for the keeping of these beasts: and when he found an impossibilitie to nourish any sort of fish, fowle, or wilde beast, he caused the Image or likenesse to be made, richly cut in precious stones, siluer, or gold, in marble, or in stone: and for all sorts of entertainments, he had his seuerall Houses and Palaces, some of pleasure, others of sorrow and mourning, and others to treat of the affaires of the Realme. There was in this Palace many Chambers, according to the qualitie of the Noble men that serued him, with a strange order and distinction.

The

THe *Mexicans* have beene very curious, to diuide the degrees and dignities amongst the noble men and Lords, that they might distinguish them to whom they were to giue the greatest honor. The dignitie of these foure Electors was the greatest, and most honorable; next to the King, and they were chosen presently after the Kings election. They were commonly brothers, or very neere Kinsmen to the King, and were called *Tlacohecalcatl*, which signifies *Prince of darts*, the which they cast, being a kinde of armes they vse much. The next dignitie to this, were those they doe call *Tlacatecatl*, which is to say, *Circumcisers or Cutters of men*. The third dignitie were of those which they called *Eznabucatl*, which signifies, *A shedder of blood*. All the which Titles and Dignities were exercised by men of warre. There was another, a fourth intituled, 10 *Tlilancalqui*, which is as much to say, as, *Lord of the blacke house, or of darknesse*, by reason of certaine Inke wherewith the Priests anointed themselves, and did serue in their Idolatries. All these foure Dignities were of the great Counsell, without whose aduise the King might not doe any thing of importance: and the King being dead, they were to choose another in his place out of one of those foure Dignities. Besides these, there were other Counsels and Audiences, and some say there were as many as in *Spain*, and that there were diuers Seates and Iurisdictions, with their Counsellors and Iudges of the Court, and others that were vnder them, as *Corrigidors*, chiefe Iudges, Captaines of Iustice, Lieutenants, and others, which were yet inferior to these, with a very goodly order. All which depended on the foure first Princes that assisted the King. These foure onely had authoritie and power to condemne to death, and the rest sent them instructions 20 of the Sentences they had giuen. By meanes wherof they gaue the King to vnderstand what had passed in his Realme.

Of the Titles and Dignities the Indians vsed. Chap. 25. Foure Electors.

Men-cutters, Blood-shedders.

Lord of darknesse.

Other Officers. See the picture historie.

There was a good order and settled policie for the Reuenues of the Crowne, for there were Officers diuided throughout all the Prouinces, as Receiuers and Treasurers, which received the Tributes and Royall Reuenues. And they carried the Tribute to the Court, at the least euery moneth; which Tribute was of all things that doe grow or ingender on the Land, or in the water, aswell of Jewels and Apparell, as of Meat. They were very carefull for the well ordering of that which concerned their Religion, Superstition, and Idolatries: and for this occasion there were a great number of Ministers, to whom charge was giuen to teach the people the custome and ceremonies of their Law. Hereupon one day a christian Priest made his complaint that the 30 *Indians* were no good Christians, and did not profit in the Law of God; an old *Indian* answered him very well to the purpose, in these termes: *Let the Priest* (said he) *employ as much care and diligence to make the Indians Christians, as the Ministers of Idols did to teach them their ceremonies; for with halfe that care they will make vs the best Christians in the world, for that the Law of Iesus Christ is much better; but the Indians learne it not, for want of men to instruct them.* Wherein he spake the very truth, to our great shame and confusion.

Priests and Teachers of the Law.

THe *Mexicans* gaue the first place of honour to the profession of Armes, and therefore the Noble-men are their chiefe Souldiers, and others that were not noble, by their valour and reputation gotten in warres, came to Dignities and Honors, so as they were held for Noble-men. 40 They gaue goodly recompences to such as had done valiantly, who inioyed priuiledges that none else might haue, the which did much incourage them. Their Armes were of Rasors of sharpe cutting flints, which they set on either side of a staffe, which was so furious a weapon, as they affirmed that with one blow, they would cut off the necke of a Horse. They had strange and heauy Clubs, Lances, fashioned like Pikes, and other manner of Darts to cast, wherein they were very expert; but the greatest part of their combate was performed with stones. For defensiuie armes they had little Rondaches or Targats, and some kinde of Motions or Head-pieces inuironed with feathers. They were clad in the skinnies of Tigres, Lions, and other sauage beasts. They came presently to hands with the Enemie, and were greatly practised to runne and wrestle, for their chiefe manner of combate, was not so much to kill, as to take Captiues; the which they vsed in their sacrifices, as hath beene said. *Moteczuma* set Knight-hood in his highest splendor, ordain- 50 ing certaine militarie orders, as Commanders, with certaine markes and ensignes. The most honorable amongst the Knights, were those that carried the crowne of their haire tied with a little red Ribband, hauing a rich plume of feathers, from the which, did hang branches of feathers vpon their shoulders, and rolls of the same. They carried so many of these rolls, as they had done worthy deeds in warre. The King himselfe was of this order, as may be scene in *Chapultepec*, where *Moteczuma* and his sonnes were attyred with those kindes of feathers, cut in the Rocke, the which is worthy the sight. There was another order of Knight-hood, which they called the *Lions* and the *Tigres*, the which were commonly the most valiant and most noted in warre, they went alwayes with their Markes and Armories. There were other Knights, as the 60 *Grey Knights*, the which were not so much respected as the rest: they had their haire cut round about the eare. They went to the warre with markes like to the other Knights, yet they were not armed, but to the girdle, and the most honorable were armed all ouer. All Knights might carry gold and silver, and weare rich Cotton, vse painted and gilt vessell, and carry shooes after their manner; but the common people might vse none but earthen vessell, neither might they carry

carry chooes, nor attire themselves but in *Nequen*, the which is a grosse Ruffe. Euery order of these Knights had his lodging in the Pallace noted with their markes; the first was called the *Princes lodging*, the second of *Eagles*, the third of *Lyons and Tigers*, and the fourth of the *grey Knights*. The other common officers, were lodged vnderneath in meaner lodgings: if any one lodged out of his place, he suffered death.

Here is nothing that giues me more cause to admire, nor that I finde more worthy of commendations and memory, then the order and care the *Mexicans* had to nourish their youth: for they knew well, that all the good hope of a Common-weale, consisted in the nurture and institution of youth, whereof *Plato* treates amply in his bookes *De Legibus*: and for this reason they laboured and tooke paines to sequester their children from delights and liberties (which are the two plagues of this age) imploying them in honest and profitable exercises. For this cause there was in their Temples, a priuate house for children, as Schooles, or Colledges, which was separate from that of the yong men and maides of the Temple, whereof we haue discoursed at large. There were in these Schooles a great number of children, whom their fathers did willingly bring thither, and which had teachers and masters to instruct them in all commendable exercises, to be of good behauiour, to respect their superiours, to serue and obey them, giuing them to this end, certaine precepts and instructions. And to the end they might be pleasing to Noblemen, they taught them to sing and dance, and did practise them in the exercise of warre; some to shoote an Arrow, to cast a dart or a staffe burnr at the end, and to handle well a Target and a Sword. They suffered them not to sleepe much, to the end they might accustome themselves to labour in their youth, and not be men giuen to delights. Besides the ordinary number of these children, there were in the same Colledges, other children of Lords and Noblemen, the which were instructed more priuately. They brought them their meate and ordinary from their houses, and were recommended to ancients and old men to haue care ouer them, who continually did aduise them to be vertuous and to liue chastely; to be sober in their diet, to fast, and to march gravely, and with measure. They were accustomed to exercise them to trauell, and in laborious exercises: and when they see them instructed in all these things, they did carefully looke into their inclination: if they found any one addicted vnto warre, being of sufficient yeares, they sought all occasions to make triall of them, sending them to the warre, vnder colour to carrie victuals and munition to the Souldiers, to the end they might there see what passed, and the labour they suffered. And that they might abandon all feare, they were laden with heauie burdens, that shewing their courage therein, they might more easily be admitted into the company of Souldiers. By this meanes it happened, that many went laden to the Armie, and returned Captaines with markes of honour. Some of them were so desirous to be noted, as they were either taken, or slaine: and they held it lesse honourable to remaine a prisoner. And therefore they sought rather to be cut in peeces, then to fall captiues into their enemies hands. See how Noblemens children that were inclined to the warres were imployed. The others that had their inclination to matters of the Temple; and to speake after our manner, to be *Ecclesiasticall men*, hauing attained to sufficient yeares, they were drawne out of the colledge, and placed in the Temple, in the lodging appointed for religious men; and then they gaue them the order of *Ecclesiasticall men*. There had they *Prelates* and *Masters*, to teach them that which concerned their profession, where they should remaine being destined thereunto. These *Mexicans* tooke great care to bring vp their children: if at this day they would follow this order, in building of houses & colledges for the instruction of youth, without doubt Christianitie should flourish much amongst the *Indians*. Some godly persons haue begunne, and the King with his Counsell haue fauoured it: but for that it is a matter of no profit, they aduance little, and proceede coldly.

We haue not discovered any Nation at the *Indians*, that liue in comminalties, which haue not their recreations, in plaies, dances, and exercises of pleasure. At *Pern* I haue seene plaies in manner of combats, where the men of both sides were sometimes so chafed, that often their *Paella* (which was the name of this exercise) fell out dangerous. I haue also seene diuers sorts of dances, wherein they did counterfait and represent certaine trades and offices, as shepheards, labourers, fishers, and hunters, and commonly they made all those dances, with a very graue sound and pafe: there were other dances and masks, which they called *Guacones*, whose actions were pure representations of the deuill. There were also men that dance on the shoulders one of another, as they doe in *Portugall*, the which they call *Paellas*. The greatest pars of these dances, were superstitious, and kindes of Idolatries: for that they honoured their Idols and *Guacons* in that manner. For this reason the *Prelates* haue laboured to take from them these dances, all they could: but yet they suffer them, for that part of them are but sports of recreation: for alwayes they dance after their manner. In these dances, they vse sundry sorts of instruments, whereof, some are like Flutes, or little *Canons*, others like Drums, and others like Cornets: but commonly they sing all with the voyce, and first one or two sing the song, then all the rest answer them. Some of these songs were very wittily composed, containing Histories, and others were full of super-

10

20

30

40

50

60

superstitions, and some were meere follies. Our men that haue conuerſed among them, haue laboured to reduce matters of our holy faith to their tunes, the which hath proficed well: for that they employ whole dayes to rehearse and ſing them, for the great pleaſure and content they take in their tunes. They haue likewiſe put our compositions of Muſicke into their Languages as Octaues, Songs, and Rondels, the which they haue very aptly turned, and in truth it is a goodly and very neceſſary meanes to inſtruct the people. In *Peru*, they commonly call Dances *Tá-gui*, in other Prouinces, *Areittos*, and in *Mexico*, *Mittottes*. There hath not beene in any other place, any ſuch curioſitie of Playes and Dances, as in *New Spaine*, where at this day we ſee *Indians* ſo excellent Dancers, as it is admirable. Some dance vpon a Cord, ſome vpon a long and ſtreight ſtake, in a thouſand ſundry ſorts; others with the ſoles of their feet and their hammers, do handle, caſt vp and receiue againe a very heauy blocke, which ſeemes incredible but in ſeeing it. They doe make many other ſhewes of their great agilitie, in leaping, vaulting, and tumbling, ſometimes bearing a great and heauy burthen, ſometimes enduring blowes able to breake a barre of Iron. But the moſt viſuall exerciſe of recreation among the *Mexicans* is the ſolemne *Mittotte*, and that is a kind of dance they held ſo braue and ſo honourable, that the King himſelfe danced, but not ordinarily, as the King *Don Pedro* of *Arragon* with the Barber of *Valencia*. This Dance of *Mittotte*, was commonly made in the Courts or the Temple; and in thoſe of the Kings houſes, which were more ſpacious. They did place in the miſt of the Court two Inſtruments, one like to a Drumme, and the other like a Barrell made of one piece, and hollow within, which they ſet vpon the forme of a man, a beaſt, or vpon a Pillar.

Curious Dances.

Great agility.

Theſe two Inſtruments were ſo well accorded together, that they made a good harmony: and with theſe Inſtruments they made many kinds of Ayres and Songs. They did all ſing and dance to the ſound and meaſure of theſe Inſtruments, with ſo goodly an order and accord, both of their feet and voyces, as it was a pleaſant thing to behold. In theſe Dances they made two Circles or Wheelles, the one was in the middeſt nere to the Inſtruments, wherein the Ancients and Noblemen did ſing and dance with a ſoft and ſlow motion; and the other was of the reſt of the people round about them, but a good diſtance from the firſt, wherein they danced two and two more lightly, making diuers kinds of paces, with certayne leaps to the meaſure. All which together made a very great Circle. They attyred themſelues for theſe Dances with their moſt precious apparell and Iewels, euery one according to his abilitie, holding it for a very honourable thing: for this cauſe they learned theſe Dances from their infancie. And although the greateſt part of them were done in honour of their Idols, yet was it not ſo inſtituted, as hath beene ſaid, but only as a recreation and paſtime for the people. Therefore it is not conuenient to take them quite from the *Indians*, but they muſt take good heed they mingle not their ſuperſtitions amongſt them. I haue ſeene this *Mittotte*, in the Court of the Church of *Topetzotlan*, a Village ſeven leagues from *Mexico*: and in my opinion, it was a good thing to buſie the *Indians* vpon Feſtiuall dayes, ſeeing they haue need of ſome recreation: and becauſe it is publike, and without the preiudice of any other, there is leſſe inconuenience, then in others which may be done priuately by themſelues, if they tooke away theſe.

To the Reader.

Reader, I here preſent vnto thee the choiſeſt of my Iewels. My travelling fancie hath invited many Readers to my labours in ſtrange birth already. Quæ regio in terris noſtri non plena laboris? Iaponian and China rarities ſo remote from our world, are nere to our worke, and their characters communicated here to the Reader; not their arts alone. Thou haſt here alſo *Indoſtan*, *Arabike*, *Persian*, *Turkiſh*, add other Letters, and not onely the tranſcript from their languages. As for tranſlations and collections, thou haſt them here alſo out of the Hebrew, Auncient and Moderne Greeke, Abaſſine, Tartarian, Ruſſian, Polonian, Egyptian, and innumerable other Nations Chriſtian, Iewiſh, Mahometan, Echnike, Ciuill, Barbarian and Sauage, innumerable wayes diuerſified. Yet all theſe in letters, or characters. In hieroglyphicall myſticall pictures the ancient Egyptians and Ethiopians, haue by way of Emblemes obſcurely and darkly deliuered their obſcure myſteries, vncertaine, maxenly, pliant conceits to the world; ſome of which our Pilgrimage hath mentioned. But a Hiſtorie, yea a Politicke, Echnike, Eccleſiaſticke, Oeconomike Hiſtory, with juſt diſtinctions of times, places, acts and arts, we haue neither ſcene of theirs, nor of any other Nation, but of this, which our light and ſight apprehenſions terme not barbarous alone, but wilde and ſauage. Such an one we here preſent, a preſent thought fit for him whom the ſenders eſteemed the greateſt of Princes; and yet now preſented to thy hands before it could arrive in his preſence. For the Spaniſh Gouverneur hauing with ſome difficultie (as the Spaniſh Preface imports) obtained the Booke of the *Indians*, with Mexican interpretations of the Pictures (but ten daies before the departure of the Ships) committed the ſame to one ſkilfull in the Mexican language to be interpreted; who in a very plaine ſtile and verbatim performed the ſame, vſing alſo ſome Morisco words, as *Altaqui* and *Mezquitas* (for *Prieſt* and *Temples*) imports. This Hiſtorie thus written, ſent to Charles the fifth Emperour, was together with the Shippe that carried it taken by Frenchmen of war, from whom Andrew Theuet the French Kings Geographer, obtained the ſame: after whoſe death,

Ttt

Maſter

Sir. Hen. Spelman.

Master Hakluyt (then Chaplaine to the English Embassadour in France) bought the same for 20. French crownes, and procured Master Michael Locke in Sir Walter Raleighs name to translate it. It seemes that none were willing to be at the cost of cutting the Pictures, and so it remained amongst his papers till his death, whereby (according to his last will in that kinde) I became possessour thereof, and have obtained with much earnestnesse the cutting thereof for the Presse. The rather was I eagerly vehement herein, as being a thing desired by that most industrious Antiquary, iudicious Scholler, Religious Gentleman, our Ecclesiastike Secular, the Churches champion, Sir Henry Spelman, Knight; whom for honors sake I name, that his name may honour our ruder lines; a name so fitting to the Man, as one which can, in regard of his wise spell and science in diuine & humane learning, and is ready, with maine courage and alacritie to shew himselfe the Churches Man, and to exhibit himselfe in deede whatsoener any man can spell, out of Spel-man. The commending from such a friend (let the Muses impetrate pardon for so bold a name) was a commanding unto me, which here I againe commend to Him and thee.

It is diuided into three parts; the first being the *Annales* and Mexican Chronicle: the second, their Exchequer or the Accounts of their seuerall Tributes paid them from the Nations and peoples tributary, whereby may be scene the Naturall riches of those parts peculiarly sorted: the third the Mexican Oeconomie and Policie in warre and peace, religious and secular, their priuate and publicke rites from the graue of the wombe, to the wombe of the graue. Obscure places I haue explained (besides what before in Acolta thou hast read) comparing the translation with the originall, adding many of mine owne: and perhaps there is not any one History of this kinde in the world comparable to this, so fully expressing so much without Letters, hardly gotten, and easily lost, that thou maist here finde it.

CHAP. VII.

The History of the Mexican Nation, described in pictures by the Mexican Author explained in the Mexican language; which exposition translated into Spanish, and thence into English, together with the said Picture-historie, are here presented.

§. I.

The Mexican Chronicle.

Ere beginneth the Historie and foundation of the Citie of *Mexico*, founded and inhabited by the *Mexicans*, who at that time were called *Metici*; whose originall beginning of being Lords, and their acts and liues are declared briefly in this Historie, according as it is signified and set out successiue by the pictures and paintings following.

In the yeare 1324. after the comming of our Lord and Sauour Iesus Christ, the Mexican people first arriued at the place of the Citie of *Mexico*, and because they liked not the greatnesse and the scituation of that place, after that they had trauielled in their Iournies, and wandered many yeares from Country to Countrey, & in some of them had made their abode, for some yeares, being come from far Countries in following their Iournies, and not being contented with the other places where they had made their abode, they came and settled themselves in the place of *Mexico*. The which place at that time was all drowned with water, and was couered with great bogs and bankes of moorish shegs and bulrushes, which they call *Tuli*, and it had *Carizales*, and great plats of dry ground couered with shrubbes, bushes, and briars like woods. And through all the space of that place there went a spring & streame of fair cleerer water which was free from all segges and bushes, which water streame went through it crossewise, in manner of Saint *Andrewes* crosse, as it is shewed in the picture: and about the middle of that place of that water-streame, the *Metici* found a great rocke of stone, and growing thereon a great Tree or bush called *Tunal*, wherein a great Eagle *Candal* had her haunt and abode for her foode, so as all about that place was scattered full of bones and feathers of diuers Birds and Fowles of diuers colours. And they hauing gone throughout all that place and Countrey thereabout, and finding it very fruitfull and full of wilde beasts, wilde Fowles, Birds, and Fishes, and things of the water, wherewith to sustaine themselves and to profit themselves in their businesse in dealing with the Townes thereabouts, and finding the water-courses of that place so commodious, and that their Neighbours could not trouble nor hurt them, and for other things and causes to their good liking they determined to passe no further on their iourneyes in traueilling, but to settle them-

themselves and dwell still. And according to their determination, they did settle themselves there effectually. And made themselves a strong Citie of defence with bankes and walles about the waters, and on the plats of ground among the Segges and Bushes of *Tulis* and *Carrizales*. And for a beginning of that their seate and habitation, it was determined by them, to giue name and title to that place, calling it *Tenultitlan*. By reason and cause of the *Tunal* growing out of the *Rocke* (for *Tenuchtitlan* interpreted in our *Cassilian Spanish Tongue* is *Tunal* growing upon a *Rocke*.)

The armie of the *Mexican* people had with them for chiefe *Gouernours* ten persons named, *Ocelopan*, *Quapan*, *Acacitli*, *Ahuexolt*, *Tenuch*, *Tecineuh*, *Xemimtl*, *Xocoyol*, *Xuhcaqui*, *Atototl*, as it is shewed in the Pictures. And hauing so settled themselves, they did chuse *Tenuch* for their chiefe *Gouernour* and *Lord* to gouerne them, as a person especially chosen thereto and fit for it, hauing in him all parts and abilities to exercise *Lordship*. And they appointed the other chiefe *Gouernours*, that they should be *Agents* and *Captaynes*, *Gouernours* vnder him.

And after some yeeres were passed of their dwelling in that place, and the people multiplied, the Citie likewise was named *Mexico*, so named and deriued of the *Mexicans*, calling it the place of settling of the *Mexican* people.

And when the people were somewhat multiplied like bold and warlike people, they tooke beginning of couragious mindes in preuayling ouer their Neighbours, and so shewed themselves in force of armes, whereby they subdued and made tributarie to them two Townes next adioyning to *Mexico*, named *Colhuacan*, and *Tenaycan*; as likewise is set forth in the pictures: the which doings passed in the time of the gouernment of the chiefe *Lord Tenuch*, which was the space of fiftie one yeeres, at the end whereof he died.

Tenaycan sub-
dued.

Concerning the Pictures of blew in the margents of this Historie, it is to be vnderstood that euery seuerall space or partition doth signifie one yeare, and they bee the numbring of yeeres: it is to be vnderstood that euery seuerall space or partition signifie the one seuerall yeare, and so they accounted & numbred euery yeare seuerally, proceeding by the number of rundles or pricks therein contained, beginning at one, and proceeding to thirteene rundles. And from thence they began againe at the beginning in their accompt from one point or rundle, and so accordingly they did proceede in numbering againe, till they came to thirteene. And although that in the partitions or spaces seuerally there be diuers seuerall figures, yet the principall accompt of numbering is that accompt of the pictures or rundles therein contained. And although the names of the yeeres that they giue to euery partition from the number of the first point till the thirteenth be to some purpose, yet for to aduertise the Reader thereof; here is made by it selfe a declaration of the names, with their interpretations.

In the order and rule of the partitions which are numbred for yeeres, that partition where there is a branch with a foote like a flower, it doth signifie a bitter and vnfortunate yeare which the *Mexicans* had, and did feare, saying that their predecessours time out of minde did giue them warning that such yeeres which befell euery two and fiftieth yeare were dangerous, and vnfortunate, and bitter yeeres, because that in such yeeres there were floods generally, and likewise darkenesse of the eclips of the Sunne, and vniuersall earthquakes. And likewise in such yeeres they made great sacrifice and ceremonies to their gods, and gaue themselves to repentance, and did abstaine from all vices against the very day and houre of such a yeare. In the which day generally they put out all their lights and fires till that day were past; and being passed they kindled new lights being had out of a Mountaine by a Priest.

50

This is a weeke of yeeres after the Mexican computation (all coloured blew, the Mexican names written ouer in red) the first of which they call *Setuchtli*, that is, one *Conie*: the second *Omeacalt*, or two *Canes*: the third *Yeytecpatl*, three *Flints*: the fourth *Macuiltuchtli*, which signifieth foure houses: the fifth *Criquacenacatl*, that is five *Conies*: the sixth, sixe *Canes*: the seventh, seven *Flints*: the eighth, eight Houses: the ninth, nine *Conies*: the tenth, ten *Canes*: the eleventh, eleven *Flints*: the twelfth, twelue Houses: the thirteenth, thirteene *Conies*.

T i t t

This

This Picture presents the number of 51. yeares : that is, the time of Tenuchs reigne : in this wheele or square (which, as all the like representing yeares, are in the originall picture coloured blew) the pictures of men signifie the ten Lords or Gouvernours before mentioned ; their names are inscribed in the originall pictures, which here we raise by the letters annexed directly to a following glosse. A. Acasitli. B. Quapan. C. Ocelopan. D. Aguexotl. E. Tecinenb. F. Tenuch. G. Xominith. H. Xocoyol. I. Xinh-caqui.

caqui. K Atotl. L Tenochtitlan, representing the armes which they used in the conquest of that place, which they so intituled as M the Tunal (painted greene) growing out of a Rock. N the Eagle. O their setting or habitation. P the people of Colhuacan Q Tenayncan: both which Nations R Tenuch conquered by force of armes, as appeareth S their subiection or bringing under. T is the blue square and Saint Andrewes croffe. The former relation doth more fully lay open these things.

In this figure is represented the raigne of their second Lord or King Acamapich. A is the time of his reigne 21. yeeres. B Acamapichli the successor. C His target and arrows instruments of warre, by force whereof he subdued these foure townes or peoples figured D Quau-nabnac. G Mizquic. H Cuiclahuac. I Xochimilco. E is the same Acamapichli as a conqueror. F by foure faces and ensignes shewing the men of those foure Townes (to each of which is added like ensigne) subdued. This picture therefore doth in figures signifie, that which we in letters shew;

In the yeere 1377. in the said Gouvernement and Lordship succeeded Acamapichli. And during his Lordship he subdued and conquered by force of armes the foure Townes containd and named in the pictures here before, which are these: Quau-nabnac, Mizquic, Cuiclahuac, and Xochimilco, the which were tributaries to him, acknowledging their subiection. In the yeeres that the said Acamapich liued in the said Lordship: his inclination and vse was to haue many wiues, the which were daughters of all the principall men of Mexico, by whom he had many sons which were the beginning and increase of many Caciques, and Captaines, and warlike people, by meanes of whom the Citie of Mexico was enlarged and augmented in great might, as is signified hereafter in the discourses by the pictures,

figures, with their declarations. The two pictures with their titles & names of *Acamapich* be one same thing to diuers effects, for the first sheweth his beginning and succession of the said Lordship, and the second sheweth the yeere after his succession in the said Lordship, when hee began to conquer and subdue the said foure Townes. And in the said Lordship he had his course one and twentie yeeres, at the end whereof the said *Acamapich* dyed and departed this present life, the which said departure was in the yeere 1398.

A 21. yeeres. B Towne and People of Toltitlan. C Quauztitlan. D Chalco. H Tulancingo. I Xaltocan. K Otumpa. L Acolma. M Tezcucoc. E The Cutter bath set letters to diuers figures whereof

whereof I can giue no interpretation: and such is this, except perhaps it signifieth that in his seventh yeere he began his conquests. For I doe here interpret diuers in which the Spanish is silent, if the coniecture seeme easier. F is King Huicilhuicil. G the instruments of warre.

IN the yeere 1396. in the said Lordship succeeded Huicilhuicil sonne of Acamapich, and during the time of his reigne in his Lordship, he conquered by force of armes eight Townes, which are contayned in the pictures here before, with the names of the same Townes intituled, the which were made tributarie to the Mexican Lordship acknowledging seruitude. The said Huicilhuicil was valiant in warres, and inclined to haue many wiues by whom he had many sons, wherewith the power of the Mexicans was augmented. The time of the Lordship and life of the said Huicilhuicil therein was 21. yeeres, at the end whereof he dyed and departed this present life, according as by the pictures of blue are numbered.

A tenne yeeres. B Chimalpupuca. C Target and Darts, to intimate his forcible conquest of D Tequixquiac and E Chalco. F sheweth his death. G the Towne of Chalco in rebellion. H the foure Canoas and I the five men abovesaid of Mexico, which the Rebels slue. You see this King and euery other both King and Towne distinguished by speciall Armes or Scutchions, with other particulars, which here and in all the rest I leaue to each Readers owne industrie and search.

IN the yeere 1470. after the death of Huicilhuicil succeeded Chimalpupuca in the said Lordship of Mexico, sonne of the said Huicilhuicil, and during his time hee subdued by force of armes the Townes of Tequixquiac, and Chalco, which Chalco is a great Towne and acknowledging seruitude

uitude: they paid tribute to the Lordship of *Mexico*, according as the pictures doe shew. And hauing the said Townes thus in subiection, at the end of certaine yeeres the said Towne of *Chalco*, being mightie, rebelled against the *Mexicans*, and in the rebellion there grew danger to the *Mexicans*, insomuch that they slue five of them, and brake them foure Canoas, according as here is signified by the pictures. The time of the life and Lordship of the said *Chimalpupuca* was ten yeeres, at the end whereof hee dyed, according as is numbred by the blue pictures in the margent. And likewise the said *Chimalpupuca*, in the time of his life had many wiues and sons; for it was accounted a matter of reputation.

The explanation of the first Table A 13. yeeres. Yzcoatçi. F by force of Armes (signified by this Target and Darts) subdued the Townes and Territories of B Azcapualco. C Coyvacan. D Tzcalhucyacan. G Guaguacan. H Tlacopan. I Atlacuhayan. K Mixcoac. L Quauximalpan. M Quauhuitlan. N Tupan. O Acolhuacan.

I N the yeere 1427. in the said Dominion of *Mexico*, after the death of *Chimalpupuca*, succeeded Yzcoatçi, Sonne of *Acamapich*, which had beene Lord of *Mexico*, and during his time hee conquered by force of Armes foure & twentie Townes which are here pictured, which Townes he made subiect to the Lordship of *Mexico*, at one inuasion which he made; for he was as valiant and warlike in Armes as the said *Acamapich*, and was a man of good iudgement, and wise in many matters, and by his good industrie he subdued the said Townes which gaue him tribute, and did acknowledge seruitude. The said Yzcoatçi had many Concubines, by whom he had seuen Sonnes and Daughters and he reigned in the said Lordship thirteene yeeres at the end whereof the said Yzcoatçi dyed and departed this present life.

In the other Table (in the original being another Page) follow A Mixquic B Cuiclahuac. C Xochimilco. D Chalco. E Quauhlatōa the Lord of Tlatilco; the Towne also added. F Huicilapan. G Quauhnahuac. H Cuiclan. I Caqualpan. K Iztepec. L Xuhbrepec. M Toalan. N Tepequacnilco.

IN the yeere 1440. after the death of Tzcoatzi succeeded Gueguemotēcuma in the Lordship of Mexico, the Sonne of Cuicilahuac which had bene Lord of Mexico: and during his time, he conquered by force of Armes three and thirtie Townes according as they are pictured in that compasse where the Picture of Gueguemotēcuma standeth. And having subdued them to the said Lordship of Mexico, they payed him tribute, acknowledging their subiection.

This Gueguemotēcuma was a very seuer and graue Lord, and giuen to vertue, and was a man of a good nature and vnderstanding, and an enemy to all euill vices: and beeing of a good inclination, set downe Orders and Lawes in his Common-wealth, and to all his Seruants how they ought to liue, and also ordayned grieuous penalties for the breach of them: which penalties were executed without any remission vpon those that brake the Lawes. He was not cruell, but rather gentle, and desirous of the welfare of his Subiects, not vicious in women; hee had two Sonnes, hee was very temperate in drinking, for in all his life time hee was neuer seene to bee drunke as the naturall Indians which are extremely inclined to drunkennesse, but rather he commanded him to be corrected and punished that committed such a fact. And by his seueritie and Iustice and good example of life, hee was feared and reuerenced of all his Subiects, all his life time, which was the space of nine and twentie yeeres. At the end whereof he dyed, and passed out of this present life.

A nine and twenty yeeres. C Huehuetemoteczuma. D by force of Armes subdued. B Lord Atonal and his Towne Coayxtlahuacan. E Mamalhuaztepec. F Tenanco. G Tetachtepec. H Chicouquianhuco. I Ximitepec. K Tzolapan. L Chalco. M Quauhnaahuac. N Atlatlantlaco. O Huaxtepec.

Tlatilulco sub-
dued, before
as Acofta faich
the Mexicans
were subiect
to them.

IN the yeere 1479. after the death of *Gueguemotexuma*, succeeded in the Lordship of *Mexico* *Axayacaci* sonne of *Tecoconoetliquieto*, which was the sonne of *Tzacoalt* Lord of *Mexico*. And during the time that the said *Axayacaci* was Lord, he conquered and won by force of armes seuen and thirtie Townes, as hereafter are pictured and named. Amongst which Townes hee subdued vnder his Lordship by force of armes the Towne of *Tlatilulco*, a thing of great importance. *Moquibnix* was Lord of *Tlatilulco* at that time, who being a mightie person of great strength and of a proud nature, began to giue occasion of dissention and warres to the Lords of *Mexico*, hauing heretofore held them for friends: by occasion whereof hee had great incounters and battailes, wherein the said *Moquibnix* Lord of *Tlatilulco* dyed in throwing himselfe downe from a *Cu* (or a high *Mezcita*, or Temple) for he seeing himselfe so hard beset in the battaile, being almost ouercome, entred into a *Mizciti* to saue himselfe, because hee would not be taken prisoner. And an *Alfaqui* (or Priest) which was in the *Mezquito*, or Temple, reprouing him for it and imputing cowardise vnto him, he threw himselfe downe as aforesaid. At which time the *Mexicans* had the victorie. And thenceforth the Towne of *Tlatilulco* was subiect to the Lord of *Mexico*, paying tribute and acknowledging subiection. *Axayacaci* was very valiant and warlike in armes, and was viciously giuen to women, hauing had many wiues and sonnes: he was also proud and warlike, whereby all his subiects feared him extremely: hee did maintaine and hold for good all the Lawes and Ordinances that his predecesor *Gueguemotexuma* had made, according as hath beene mentioned in his Historie; and hee continued the space of twelue yeeres in the said Lordship of *Mexico*, at the end whereof he dyed and departed out of this present life.

A twelue yeeres. B *Axayacaci*. C by armed force subdued these Townes following (not as before expressed in picture) *Tlatilulco*, *Atlapulco*, *Xalatlanhio*, *Tlacotepec*, *Motepet*, *Capulnac*, *Ocoyacac*, *Quanhpanoayan*, *Xochiacan*, *Teotenanco*, *Caliymayan*, *Cinacantepec*, *Tulucan*, *Xiquipileo*, *Tenancinco*, *Tepeyacac*, *Tlaximaloyan*, *Oztoma*, *Xacotitlan*, *Ocuilan*, *Oztotitpac*, *Matlatlan*, *Cuezcomatlyacac*, *Tecalco*, *Cuetlaxtlan*, *Puxcanchtlan*, *Alcuilixapan*, *Tlaolan*, *Mixtlan*, *Cuecaloztoc*, *Tetzapotitlan*, *Miquizetlan*, *Tamuoc*, *Taupatel*, *Tuchpan*, *Tenextitpac*, *Quanhbilan*.

Ticocicatzi.

Title *Tlacatecatl*
that is, Great
Captaine.

IN the yeere 1482. after the end and death of *Axayacaci*, succeeded in the Lordship of *Mexico*, *Ticocicatzi*, sonne of the said *Axayacaci*, and during the time of his raigne he conquered and got by force of armes fourteene Townes. The said *Ticocicatzi* was very valiant and warlike in armes, and before that he succeeded in the Lordship of *Mexico*, he had done dangerous feates of valiantnesse in his owne person in the warres, whereby hee obtayned the title of *Tlacatecatl*, which

which they esteemed for a Title of great honour and estate: and it was a degree whereby that the Lordship of *Mexico* being vacant, he which had the same degree and title succeeded in the place of the same Dominion of *Mexico*, which title in like manner his Predecessors, Brothers, and Father, and Grand-father had, whereby they came to bee Lords of *Mexico*. Also the said *Ticocicatzi* by the estate and authoritie of the said Lordship of *Mexico*, had many Wiues and Sonnes which hee had by them, and he was a graue and seuerer man in commanding and was feared and reuerenced of his Subjects, hee was likewise enclined to good and vertuous things, and was good for his Commonwealth. He commanded the Lawes and Statutes to bee kept and approued for good, that his Predecessors had amplified and kept since the time of *Gueguemotexuma*. And he was zealous in punishing and chastising the euill vices and offences that his Subjects committed. And so the *Mexican* Commonwealth was well ordered and gouerned the time of his life, which was the space of fve yeeres, at the end whereof he dyed and departed this present life.

A Five yeeres. B Ticocicatzi C by armes subdued these Townes, Tonahmoquezan, Toxico, Ecatepec, Zilan, Tecaxic, Tuluca, Tancuislan, Tlapan, Atzacabacan, Mazatlan, Xochijetla, Tamapachco, Ecatehuapochco, Miquetlan.

IN the yeere 1485. after the death of *Tixizocatz*, succeeded *Abuizoxin*, brother to his Predecessor *Tixizocatz*, in the Signorie of *Mexico*. And during the time of his Lordship, he conquered by force of armes fve and fortie Townes, according as hereafter are pictured and named. The said *Abuizoxin* was like to his Predecessor and Brother *Tixizocatz* in valiantnesse and feates of warre, whereby he got the title of *Tlacatecatl*, which signifieth a great Captaine, and from the same title he came to be Lord of *Mexico*. The said *Abuizoxin* was by nature of a good inclination, and giuen to all vertue, and likewise in the course of his life hee had his Commonwealth ruled and gouerned well, and he fulfilled and kept the Lawes and Statutes that his Predecessors had maintayned since the time of *Gueguemotexuma*. And as the state of the Lordship of *Mexico* was brought to great Majestie, and had the greatest part of this *New Spaine* subiect, acknowledging their seruice, and by the great and rich tributes which they gaue the said *Mexican* Lordship, came to much renoume and mightinesse. And he like a mightie and great minded Prince, gaue great things and preferments to his seruants, and he was temperate of condition and mercifull, whereby his seruants loued him exceedingly, and yeelded him great reuerence. And likewise hee had many wiues, and children by them, because it was a thing adioyned to the Lordship, and a point of great estate. He was of a merrie condition, whereby his seruants did feast him continually in his life time with great and diuers kindes of feasts, and musick, and songs, and instruments, as well in the night as in the day: for in his place the Musicians and Singers neuer ceased with many Instruments of musicke. The course of his life in that Signorie was sixtene yeeres, at the end whereof he dyed and passed out of this present life.

A sixteene yeeres. B A-

Moteçuma.

His weale and
greatnesse.

Maieftie.

Conquests.

Wisdome and
learning.

Lawes.

Many women,
some wiues,
some Concu-
bines.

IN the yeere 1502. after the end and death of *Ahuizocim*, succeeded in the Lordship of *Mexico*, *Moteçuma*. *Mexico* was now growne into great Majestie, Renowme, and Authoritie: and he by his grauitie and seueritie enlarged exceedingly the State and Dominion of *Mexico*, yea a great deale more then his Predecessors. *Moteçuma* was the sonne of *Axayacati*, which had bene Lord of *Mexico*, and before hee came to the said Lordship hee had the deserts of a worthy Captaine and a valiant man in warres, whereby hee had the title of *Tlacatecatl*, 40
and so hee succeeded in the Lordship of *Mexico*, as is before rehearsed, and being in the said Lordship he did greatly increase the *Mexican* Empire, bearing the rule ouer all the Townes in this *New Spaine*, insomuch that they gaue and payed him great tributes of much riches and value: He was feared very much of all his seruants, and likewise of his Captaines and Principals, insomuch that not one when they had any businesse with him, for the great reuerence they had him in, durst for feare looke him in the face, but that they held downe their eyes and their head low and enclined to the ground, and many other extraordinarie respects and ceremonies they did vnto him for the Maieftie he represented vnto them, not mentioned here for auoyding of tediousnesse. After *Moteçuma* had succeeded in the said Lordship, hee conquered foure and fortie 50
Townes hereafter named; and hee subdued them vnder his Lordship and Empire, and in their acknowledging of seruitude all the continuance of his life, they payed him many and great tributes, as hereafter by their pictures and declarations is made manifest.

Moteçuma was by nature wise, and an Astrologer, and a Philosopher, subtile and skilled generally in all artes, as well of warres as all other matters temporall. And for his grauitie and estate he had of his Lordship the beginning of an Empire, according as his seruants did reuerence him with great honor and power, that in comparison of him, not one of his predecessors came to halfe so much estate and Maieftie. 60
The Statutes and Lawes of his Predecessors, since the time of *Gueguemoteçuma* vntill his time, he commanded to bee kept and wholly fulfilled with great zeale. And because hee was a man so wise, by his good nature he ordayned and made other Statutes and Lawes which he thought defective for the execution of the former, not abrogating any, all which were for the welfare and good gouernment of his Commonwealth and Subjects. Hee was inclined to keepe many houses and women, which were daughters of the Lords his Subjects and Confederates; and by them he had many children; and to haue so many wiues was for to set forth his Maieftie the more, for they hold it for a point of great estate. Among which the daughters of the Lords of great au-
thoritie

thoritie he held for lawfull wiues, according to their rights and ceremonies, and them hee kept within his Palaces and dwelling houses; and the children that came of them were had in reputation as more lawfull children then the others which hee had by the other women. It were a large historie to tell the order he had in keeping of them, and conuersation with them. And because this present historie is but brieue, it is left vnreheard.

See before in Acosta, and after in Gomara more large relations of Motezuma, in a wilde kinde of state and maiestie, equaling in many things, in some exceeding most Princes of the elder world. First notice of the Spaniards.

The quantitie, value, and number of the tributes and kindes of things that his subjects did pay for tribute vnto him, shall be seene and vnderstood hereafter, as by the pictures and declarations is signified. And he made a straight order that the tributes which they payed him, should be fulfilled according as they were leuiued by him; for the fulfilling whereof he had in all his subject-
10 townes his *Calpixques* and Factors, which were as *Gouernors*, that ruled, commanded, and gouerned them; and hee was so much feared that none durst disobey nor transgresse his will and commandement, but that they were kept and wholly fulfilled, because he punished and corrected the rebels without remission.

And in the sixteenth yeere of the reigne of *Motezuma*, the *Mexicans* had knowledge of certaine *Spaniards*, which were discoverers of this *New Spaine*, that at the end of twelue moneths there should come a fleet of *Spaniards* to ouercome and conquer this Country; and the *Mexicans* kept account thereof, and they found it to bee true, for at the end of the said twelue moneths was the arriuall of the said fleet at a Hauen of this *New Spaine*, in the which fleet came *Don Ferdinando Cortes*, Marques del Valle, which was the seuenteenth yeere of the reign
20 of *Motezuma*; and in the eighteenth yeere he made an end of the continuance of his Lordship and Raigne: in the which yeere he dyed and departed this present life. At the time when *Motezuma* came to his gouernment, he was five and thirtie yeeres old little more or lesse, so that at his decease he was three and fiftie yeeres of age. And straightway in the yeere after his death, this Citie of *Mexico*, and other Townes adjoyning, were ouercome and pacified by the said Marques del Valle, and his Confederates. And so this *New Spaine* was conquered and pacified.

Motezumas death.

¶ II.

The second part of this Booke containyng the particular Tributes which every Towne subdued paid vnto the Lords of Mexico.

Here follow pictured and intituled the kinds of things, that they of Tlatilulco (which at this day is called by the Spaniards, Saint James) did pay in tribute to the Lords of Mexico, and the said tribute summed here, is that which followeth.

They were charged for tribute, alwayes to repaire the Church called Huiznahuac. Item, fortie great Baskets (of the bignesse of halfe a Bushell) of Cacao ground, with the Meale of Maiz (which they called Chianpinoli) and every Basket had sixteene hundred Almonds of Cacao. Item, other fortie Baskets of Chianpinoli. Item, eight hundred burthens of great Mantels. Item, eightie pieces of Armour, of slight Feathers, and as many Targets of the same Feathers, of the deuices & colours as they are pictured. All the which tribute, except the said armes and targets they gaue every 24. dayes, and the said armes and targets they gaue for tribute but once in the whole yeere. The said tribute had his beginning since the time of Quauhtlaton and Moquibnix, which were Lords of Tlatilulco. The Lords of Mexico, which first enioyned to those of Tlatilulco, to pay tribute, and to acknowledge their subiection, were Tzcoatzi and Axiacaçi.

A the Temple of Huiznahuac. B 20. baskets of Cacao meale (the Eare and Meale figured) C 20. more of the same. C 20. D 20. E 20. baskets of Chianpinoli. F 40. peeces of Armes of this deuice. G 40. of this deuice (like the former, but that is white with blacke streakes, this yellow) H I are each 400. burthens (the eare signed 400.) of Mantles. K These foure like vnto flowres doe signifie foure dayes, every flowre 20. dayes, as they of Tlatilulco did tribute the things pictured and intituled by taxation of the Lords of Mexico. L 40. Targets of this deuice (to expresse the difference of colours

colours in each particular were too tedious.) N Tlatilulco. The names of Quauhtlaton and Moquihui Lords of Tlatilulco are added; because in their times it began; as also of Tenuxtulan, Izcacoatl and Apayacan to intimate that these two Lords of Mexico or Tenuxtulan subdued them. The Pictures of them (as of many Townes before) were omitted: being but such descriptions of men and Townes as you haue seene already.

The Townes pictured in the two Pieces following, and summed heere be twentie three Townes as appeareth by their Titles, and they had a chiefe Gouvernour appointed by the Lords of Mexico, called *Petlacacatl*, although neuertheless, every Towne had his *Calpixque*, which is at it were a Steward or Bayliffe, whose charge was to gather the Rents & tributes that the said Townes did tribute to the Dominion of Mexico, and all the said Stewards came to the said *Petlacacatl* as their Gouvernour, and the things and kinds that the said townes did tribute, are these which follow, 2400. burthens of great Mantels of twisted Yarne. Eight hundred burthens of little Mantles, rich attyre, of the colours as they are pictured. Foure hundred burthens of *Maxilac*, which serued for little clothes. Foure hundred burthens of *Huipiles* and *Nagmas*, all the which they gaue for tribute every sixe moneths.

Item, They gaue five pieces of Armour, of rich Feathers, and as many Targets of the colours and deuices as they are pictured.

Item, They did tribute seuentie pieces of Armour of Feathers of small account, and as many Targets of the colours and deuices as they are pictured.

Item, They tributed one *Trox* of *Frisoles*, and another *Trox* of *Chian*, and another *Trox* of *Mayz*, and another of *Guanle*, which is the seed of *Bles*. All the which things of the said Armour and Targets, and *Trox*es of *Frisoles*, and the other seeds the said Townes did pay for tribute once every yeere.

Q. III.

The third part of this Booke containeth the private behaviour in Mariages, education of Children, and Trades; with the Martiall, Ecclesiastike, and Civill policie of the MEXICAN people.

A Relation of the manner and custome that the naturall *Mexicans* had when either a Boy or Girle was borne vnto them. The vse and ceremonies in giuing names to their children, and afterwards to dedicate and offer them either to the Church, or else to the 10 warres, according as by the pictures is signified, and briefly declared.

The Woman being deliuered, they laid the childe in a Cradle, according as is pictured, & foure dayes after the birth of the childe the Midwife tooke it in her armes naked, & brought it forth to the yard of the childe wiues house; and in the yard were prepared Bulrushes or Sedges, which they call *Tule*, and they set vpon them a little pan of water, wherein the said Midwife washed the said childe: after it is washed, three Boyes, which are set by the said Bulrushes, eating toasted *Maiz*, mingled with foddren *Frisoles*, which they called *Txicne* foode, the which foode made

A kinde of Baptisme with the naming of their children.

A The woman that is deliuered. **B** The four Roses signifie foure dayes wherein the Midwife brought forth the childe that was lately borne to wash. **C** The cradle with the childe. **D** The Midwife. **E** The signes, instruments, and the bond (Shield and Darts) **F G H** the three Boyes which name the childe. **I** The Bulrushes with the pan of water. **K** The Broome. **L** The Spindell and the Distaffe. **M** The Basket. **N** The high Priest. **O** The childe in his cradle which his Parents offer in the Temple. **P** The Master or Teacher of boyes and yong men. **Q** The childe's Father. **R** The childe's Mother.

CHAP. 7. §. 3. *Washing and naming of children; their bringing vp and education.*

ready, was set in a little pan before the said Boyes, that they might eate it. And after the said baithing or washing, the said Midwife aduertised the said Boyes, that they should with a loud voice giue a new name vnto the childe that she had so washed, and the name that they gaue it was that which the Midwife would impose,

When the childe was brought forth to wash; if it be a man childe they bring him forth with his signe in his hand, and the signe is the Instrument wherewith his Father did exercise himselfe, as well in the Military art, as other arts, as of a Goldsmith, a Grauer, or any other office whatsoever: And after they had done all the aforesaid, the Midwife brings the childe to his Mother. And if it be a woman-childe, the signe wherewith they bring her to wash, is a Distaffe, a Spindel, a Basket, and a handfull of Broome; which are the things wherewith she should exercise herselfe, being of age thereto.

And the bond of the Manchilde with a Shield and Darts for a signe which he brings with him when they bring him for to wash; they offer it to that part and place where are likely to happen warres with his enemies, where they burie it vnder ground. And so likewise of the Woman-childe, her bond they buried vnder the *Metate*, which is a stone to grinde Cakes vpon.

And after the aforesaid, at the end of twenty dayes, the childe's Parents went with the childe to the Temple or *Mexquita*, which they called *Calmecac*, and in the presence of the Priests they presented the childe with his offering of Mantels, and *Mastelles* and some meate: And after the childe being brought vp by his Parents, and being of age, they committed the childe to the high Priest of the said Temple, because there he might be taught that hereafter he might be a Priest.

And if the childe's Parents were determined that he (being of age) should serue in warlike affaires, then straight way they offered him to the Master thereof, making him a promise of him (the Master of Boyes and yong men they called *Teachcauch* or *Telpachtlatotl*) which offering was made with his present of meate and other things for the celebrating thereof. And the childe being of age, they committed him to the said Master.

30 The declaration of the pictures contained in the deuision following, wherein is declared at what age, and in what manner the naturall Parents shal giue counsell to their children, how they ought to liue, as successiuelly is pictured in foure partitions; and so the foure partitions of this side are declared in order which are these that follow.

1 The first partition, wherein is declared how that the Parents corrected their children, in giuing them good counsell when they were three yeares of age; and the portion of meate that they gaue them euery meale was halfe a cake of bread.

2 The second partition wherein is pictured in what things the Parents did instruct their children when they were of the age of foure yeares, and how they began to exercise them to serue in small things. And the portion of meate which they gaue them at a meale, was a whole Cake.

60 A The Boy his Father. B Three yeares of age. C The Boy. D Halfe a Cake. E The Girl her Mother. F Halfe a Cake. G A Girl of three yeares of age. H The Father of the Boy. I A Boy of foure yeares of age. K A Cake. L The Mother of the Girl. M A Cake. N A Girl of foure yeares of age. O A Spindell with a Locke of cotten woll lying on a Mat.

3 The third partition, wherein is shewed that the Parents did exercise their children in bodily labour at five yeares of age, in loding their Sonnes with Wood and other things in small burdens, of small weight, and to carry packes of small weight to the *Tyangues*, or Market place. And they exercised their Daughters of that age, in shewing them how they should handle the Spindell and Distaffe for to spin. And their allowance of meate was a whole Cake of Bread.

4 The fourth partition, wherein is pictured how the Parents instructed their children of six yeares old, and exercised and occupied them in bodily seruice, that they might profit their Parents in some thing, as in the *Tyangues*, which are Market-places that they might gather from the ground, the cornes of *Maiz* and *Frisoles* that were spilt there by him, and other small things that the buyers and others had left and spilt there. And this was the Boies worke. But the Girles were put to spinne and to doe other profitable seruices, because in time to come, by meanes of the said seruices and occupations, they should not spend their time idelly, and should auoide euill vices that are wont to grow through idlenesse. And the allowance of meate that they gaue to their children was a Cake and a halfe of Bread.

O The Father of the Boyes. P Two Boyes of five yeares of age. Q A Cake. R A Cake
S The Mother of the Girle holding the Spindle and Rocke. T A Cake. V A Girle of five yeares
old. W The Father of the two Boyes. Two Boyes of six yeares old. X A Cake and a halfe. Y The
mother of the Girle. Z A Cake and a halfe. A Girle of six yeares old spinning Cotton wooll.

A Declaration of the figure following, wherein is shewed, at what age and in what things the naturall people of Mexico did instruct their children, and in what manner they corrected them, that they should auoide all idlenesse, and alwayes should be exercised in some profitable things, as successuely is pictured in foure partitions.

1 The first partition, wherein is pictured how the Parents vse their children of seven yeares old that is the men children they applyed them in giuing them their fishing Ners. And the Mothers did exercise their Daughters in spinning and in giuing them good counsell that they should alwayes apply and occupie their time in doing some thing for to auoide idlenesse. And the allowance of meate that they gaue to their children at euery meale was a Cake and a halfe of Bread.

A The Father of the Boyes. B These seven spots of blew signifie seven yeares. C F A Cake and a
halfe. D A Boy of seven yeares old, whose Father sheweth him how he should fish with the net he hath in
his hand. E The mother of the children. G A Girle of seven yeares old, whose mother is reaching
her to spinne.

CHAP. 7. §. 3. Education at 8. 9. and 10. yeeres of age in Mexico.

2 The second partition: Wherein is pictured, how the Parents did chasten their children of the age of eight yeeres, in laying before them with terrors and feares the thornes of *Maguez*, that in being negligent and disobedient to their Parents they should bee chastened with the said thornes, and so for very feare they wept, as by the pictures of this partition is signified. And their allowance for a meale, which they gaue them by measure, was a Cake and a halfe.

3 The third partition: Wherein is pictured, how the parents punished their children of nine yeeres of age, because they were disobedient and rebellious to their fathers, they did chastise them with the said thornes of *Maguez*, binding them naked hand and foot, they thrust the said thornes into their body and shoulders. And they pricked onely the wrists and hands of the 10 Girles with the said thornes, as in the said partition is pictured. And their allowance euery meale was a Cake and a halfe of bread.

4 The fourth partition: Wherein is pictured, how the parents chastised their children of ten yeeres of age, that is, being rebellious they did chastise them in beating them with a cudgell, and threatning them otherwise as in the fourth partition is pictured. And the allowance which they had giuen them at a meale, was a Cake and a halfe.

H The father of the children containd in this row. I These eight spots signifie eight yeeres. K N a cake and a halfe. L a Boy of eight yeeres old, whose father is threatning him that he be not unhappy, because he will chastise him in thrusting thornes of *Maguez* into his body. M The mother of the children containd in this row. O Thornes of *Maguez*. P a Girle of eight yeeres old, whom her mother threatneth her with thornes of *Maguez*, that shee bee not unhappy. Q The father of the children containd in this side. R W a Cake and a halfe. S These nine spots signifie nine yeeres. T a Boy of nine yeeres old, because he is incorreectible, his father thrusteth thornes of *Maguez* into his body. V The mother of the children containd in this row. X a Girle of nine yeeres old, that for her negligence and idlenesse, her mother did chastise her in pricking her hands with thornes of *Maguez*. Y These ten spots signifie ten yeeres. Z The father of the children containd in this row. & a Boy of ten yeeres old, whom his father is chastising with a cudgell staffe. C a Girle of ten yeeres, whom her mother is chastising in beating her with a cudgell staffe.

60 1 A Declaration of the first partition of the picture following. The Boy or Girle of eleuen yeeres old, which would not bee reformed with wordes nor stripes, their parents did chastise, giuing them into the Nose the smoke of *Axi*, which was a grievous and cruell torment, to the intent they should be reformed and not be vicious persons and vagabonds, but should employ and spend their time in profitable things. And to the children of that age they gaue bread, which are cakes, by measure, only a cake & a halfe at a meale, because they should not be gluttons.

2 In the second partition; The Boy or Girle of the age of twelue yeeres, which would not receiue quietly counsell nor correction at their Fathers hands; the Father tooke that Boy and tyed him hand and foot naked, and stretched him on the ground in a dirtie wet place, where he lay so a whole day, because he should be chastised and feared thereby. And the Girle of that age, her Mother made her serue, so that in the night before it were day shee should sweep all the house and the street, and that alwayes shee might be occupied in bodily seruice. And so likewise their Parents gaue them meat by measure a Cake and a halfe every meale.

3 In the third partition, the Boy or Girle of thirteene yeeres old, their Fathers employed in bringing wood from the Mountaine, and with a Canoa-boat to bring boughs and other herbs for the seruice of the house. And the Girles should grinde and make Cakes and other meates for their Parents. And they gaue their children meat by measure, two Cakes every meale.

4 In the fourth partition; The Boy or Girle of fourteene yeeres old, their Parents did imploy in fishing in Lakes and Riuers with his Canoa. And the Girle was set to weaue yarne of whatsoeuer sort for apparell. And they gaue them to eate two Cakes by measure.

A These eleuen spots of blue signifie eleuen yeeres. B The father of the children. C a Boy of eleuen yeeres old, whose father is chastising him, smoking him at the Nose with Axi dried. D a Cake and a halfe. E a fume or smoke of Axi or Pepper, which the Cutter hath not so well exprest. F The mother of the children. G a Girle of eleuen yeeres old, whose mother is chastising her smoking her at the Nose with Axi. H a Cake and a halfe. I a perfume of Axi. K The father of the children. L twelue yeeres. M a Cake and a halfe. N a Boy of twelue yeeres old, tyed hand and foot and laid a whole day on the wet and moist ground. O The mother of the children. P This picture signifieth the night. Q a Cake and a halfe. R a Girle of twelue yeeres old that is sweeping in the night time. S The father of the children. T Thirteene yeeres. V a Boy of thirteene yeeres old laden with Sedges. CHAP. 7. §. 3. Mexican education of youth. Marriage rites and solemnities.

1 **T**hat which is pictured in the first partition, doth signifie that the Father having two sonnes young men, of yeeres able to serue, brought them to the two houses that are pictured, either to the Masters house that did teach and instruct yong men, or else to the Temple, according as the youths were inclined, and so committed them either to the high Priests, or else to the Master of Boyes to the end they might be taught; the youths being fifteene yeeres of age.

2 In the second partition is pictured, the manner and law they had and kept in their Marriages that they made lawfully. The celebration thereof was, that an *Amantesa* (which is a Broker) carried the Bride on her backe at the beginning of the night, and there went with them foure women with Torches of Pine-tree refined burning, wherewith they lighted her. And being come to the Bridegroomes house, the Parents of the Bridegroome came out to the Court of the house to receiue her, and they carried her into a Hall or some place where the Bridegroome tarried for her. And the betrothed folkes were set on a Mat with their seates neere a pan of fire, and they tyed the one to the other with a corner of their apparell, and made a perfume of *Copale* to their gods, and two old men and two old women were present as witnesses. Then the married folke dined, and afterwards the old folkes. And when dinner was done, the old men and women separated the married folke by themselves, giuing them good counsell how they should behaue themselves and liue, and how they should maintayne the charge and calling they had taken vpon them, that they might liue with quietnesse.

60 **A** The father of the two youths. **B** a youth of fifteene yeeres old committed to an high Alsaqui or Priest. **C** Tlanacazqui, which is an high Priest. **D** a Temple or Mezquita, which they called Calmecac. **E** a youth of fifteene yeeres, whose father putteth him to a Master to be taught. **F** Tacheaub, a Master. **G** a house where youths are taught and brought up in. **H** Fifteene yeeres. **I** An old man. **K** The barth. Copale. **L** The woman. **M** The man. **N** An old woman. **O** The Mat. **P** The meat. **Q** The meat. **R** An old man. **S** A Cauler or pot of pulque. **T** The Cup. **V** An old woman. **W** The Bride. **X** These goe lighting the Bride, whom they goe to leane at the Bridegroomes house in the beginning of the night. **Y** Amantesa which carrieth the Bride on her backe. **Z** These goe lighting of the Bride at the beginning of the night. **1** a torch of Pinetree. **2** a torch. **3** torches of Pinetree. **4** torches of Pinetree. **1** When

1 **V**hen they entred to bee Priests, the elder Priests occupied them straightway in bodily seruices for their Temples, that afterwards they might bee skillfull when they were chiefe Priests, that after the same order as they had serued, they might bring vp the other Nouices that should be after them. These Priests are all painted in ash-colour: Other men in an oliue or tawny.

2 In the second partition is declared wherein the young men were occupied and did serue, that thenceforth when they were of yeeres, they might bee skillfull to take charge and command other youths like themselves, that they should not goe idle nor become vagabonds, but that they should alwayes apply themselves to things of vertue.

3 In the third partition is declared likewise the correction and chastising, that the chiefe Priests did to the Nouice-Priests, which were forgetfull and negligent in their seruices, and for other faults as they committed, chastising them according, as is shewed by the pictures.

4 In the fourth partition, is declared how the Captaines and warlike men exercised the young men which were of age thereto in warlike affaires, according as their fathers did recommend them.

in his office. I The nouice Priest. K The chiefe Priest. L The nouice Priest. M Another elder Priest. They

punishing this nouice Priest, pricking him with thornes of Maguez throughout his body, because he was arebell and

obedient and negligent in that he was commanded to doe. N This house signifieth that if the nouice Priest went to

riour. P The youth. Q The father of the youth that offereth his sonne to the valiant Warriour, to exercise him in

warlike affaires, and to carrie him to the warres. R The youth who is publike seruant to the valiant man that goeth to

the warre with him, carrying his baggage on his backe with his owne Armour. S Tequima, a valiant man that go-

eth armed to the warres.

CHAP. 7. §. 3. Exercises of Priests. Punishments used in Mexico.

1 **H**ere is declared how the chiefe Priests did exercise and occupie themselves in the night time, whereof some occupied themselves in going to the Mountaynes, to offer sacrifice to their Gods, others in Musicke, and others were obseruers of time by the Starres of the Element, and others in other things of their Temples.

2 In the second partition is declared the punishment they did vse to the young men, according as the Pictures doe represent. The which was executed according to the Lawes and Statutes of the Lords of Mexico.

4 The punishment that the Beadles *Telpuchtlatos* did vse to the vicious young men, which went about like Vagabonds according to their Lawes, and the rest pictured and declared in the same partition.

A chiefe Priest which goeth in the night with his fire burning, to a Mountaine to doe penance. And hee carrieth in his hand a purse of Capaly, which is Perfume to offer Sacrifice to the Deuill. And at his backe Poyson in a vessell for the same Sacrifice, and he carrieth his boughesto beset the place of Sacrifice. And haib after him a nouice Priest, which carrieth other things for the Sacrifice. B A nouice Priest. C A chiefe Priest, which is playing on the Teponaztly, which is an Instrument of Musicke, and he exerciseth himselfe thereon in the night. D This Picture with eyes doth signifie the night. E This Picture with eyes doth signifie the night. F A chiefe Priest which is looking on the starres of the Element by night, to see what houre it is in the night, which is his charge and office. G A young man that goeth to warre, laden with stufte and instruments of Armour. H Telpuchtlato. I The youth. K The woman. L Telpuchtlato. The two Telpuchtlato, do signifie Beadles to rule youths, that when any youth did fall in loue with any woman, they chastised the young man, throwing burning fire brands at him, and parted their loue. M A chiefe Priest whose office is to sweepe the Temples, or command them to be swept. N A chiefe Priest. O The nouice Priest. P The woman. Q A chiefe Priest. The declaration of the pictures of these two chiefe Priests is, that if the nouice Priest was negligent or had access to any woman, or fell in loue, the chiefe Priests did chastise him, thrusting thornes of Pine tree made like prickes in all his body. R Telpuchtlato, a Beadle. S The young man. T Teacheaub, the Beadle. By these Pictures is declared that if a young man went about like a Vagabond, the two Beadles did correct him in powling and finding his head with fire. V A young man that is occupied in carrying stones with his Canoe to repaire the Temple. X The Temple.

This Picture expresseth the Priests employments. A A novice Priest occupied in carrying of stones in his Canoe, for the reparation of the Temple. B The Temple called Ayauhcally. C A novice Priest that goeth to the warre with a chiefe Priest carrying his package. D A chiefe Priest that goeth to warre, for to enforce and boulden the Warriours, and to doe other Ceremonies in the Warres.

Their Armes, which signes of Armes were made of more authoritie from degree to degree, according as the worthinesse of the man of warre was knowne, and the number of the Captiues that they tooke. As is shewed sufficiently in the Pictures with their signes and Armes, and fashions of attire, and the degrees whereby they came to be valiant men in Warres. The first degree.

E Tecutylas, Constable and Iustice of the Lords of Mexico. F An Officer that followeth the Tecutly, as his Sergeant. G A Temple called Sibnateocally. H The high way or street with a bridge of wood. I A young man, who if hee tooke any Prisoner in the Warres, they gaue him for reward a Mantle of the fashon, of this quadrati with his followers, in a token of his valiantnesse. K The aboue said Teetli, in these Pictures signifie, that he is occupied in repaying the streets and bridges that goe to the Temple. L A Captiue. M This valiant man all in red, because hee tooke two enemies, they rewarded him with the fashon of Armour he hath on, and more (N) the square Mantle of Orange tawmie with a red twist, in token of his valiantnesse. O A Captiue. P This valiant Champion with a reward of the deuice he hath on, and this (Q) Mantle of rich worke, for a token that he tooke three enemies in the Warres. R A Prisoner. S This valiant Champion with the deuice he hath on, and the square Mantle. T Of two colours (blacke and Orange tawmie) with a list, in token that hee had taken foure enemies in the Wars. V A Captiue. W This valiant man with the deuice of Armour that he hath and his second name Etonati, for his valiantnesse, and because he tooke five or sixe enemies in the Wars, the which valiant man is hee that is aboue commended, who had his beginning of one enemy he tooke in the Wars, and so from degree to degree, he hath come to this degree. X A Captiue. Y This valiant man called Quagchil, with the deuice of Armour that he hath on, shewing that hee had taken five at the Wars of Guexo, besides that in other Wars he tooke many of his enemies. Z A Captiue. And this valiant man named Tlacatecatl, with the fashon of the apparell he hath on, and his tassell and deuice of rich feathers, do shew that he had done all the valiant acts afore pictured and declared, and is knowne to haue more title of valiantnesse of person then afore pictured.

CHAP. 7. §. 3. Mexican Priests military ensignes and degrees of honour.

The chiefe Priests did exercise warlike affaires, & according as they proved in valiant acts, and as the number of the Captiues were that they tooke, so the Lords of *Mexico* gaue them titles of honour, and Blasons of Armes with deuices of their valiantnesse, as is shewed by the Pictures, and by the Armor they haue on. In the third partition are the titles of honour, which they obtrayned by the exercise of war, whereby they came to a higher degree, the Lord of *Mexico* making them Captains and Generals of the Souldiers. And those of the one side serued for Messengers and Executioners of that which the Lords of *Mexico* determined and commanded, as wel in things touching the Common-wealth of *Mexico*, as also in other townes of their dominions.

A A Priest that captiued one enemy in the warres. B The same Priest aforesaid, because he tooke two enemies in the warres, he is rewarded with the deuice of Armour he hath on. C The aforesaid Priest, because through his valiantnesse he tooke three enemies, he is rewarded with the deuice of Armour he hath on. P P P Captiues. D The same Priest aforesaid, because he tooke foure enemies in the warre, for a token of his valiantnesse, he is rewarded with the deuice of Armour he hath on, blacke and white. E The same Priest because he tooke five of his enemies in warres, for a token of his valiantnesse, he is rewarded with the deuice of Armour he hath on, all red. F The same Priest for that he tooke sixe enemies in the warres, for a token of his force and valour, the Lord of *Mexico* rewarded him with the deuice of Armour he hath on. G is p^{er} son yellow feathers greene, target red, greene, yellow. H Quauh^{er}sch^{er} and Officer which put Mandats in execution. I Tlilap^{er}cal^{er}, another kind. J Atlap^{er}becal^{er}, a third kind. K Ez^{er}guagacatl, a fourth sort. These foure in this rowe did serue for Messengers and Executioners of that which the Lords of *Mexico* determined and did command. L Tlacoch^{er}cal^{er}. M Tezcacoacatl. N Tycoc^{er}ahuacatl. O Tequiltecatl. These foure on this rowe are valiant men in warre, and Captaines of the Armes of the Mexicans and persons which executed the charge of Generals ouer the Mexicans Armes.

The *Casique* (that is, a Lord of a Towne) because hee rebelled against the Lordship of *Mexico* by the Executioners afore containned, had a rope cast about his necke wherewith for his rebellion, he was condemned by the Lords of *Mexico* to die, and his wife and children to be taken and brought prisoners to the Court of *Mexico*. And for the accomplishing of the condemnation the officers are executing the penalties wherein he was condemned, as is signified by the pictures.

2 He together with his seruants and townie are condemned to be destroyed. And so the Executioners, by the commandement of the Lords of *Mexico*, are giuing him to vnderstand of the said condemnation, in token whereof they marke him with the signes that they set on his head, and the Target that they present him with, because he should not be ignorant of his destruction. And the pictures of men with mortall wounds, doe signifie that they were Merchants and Occu-
piers of *Mexico*, which came with things to the Countrey and Towne of the said *Casique*; and the seruants of the *Casique* assaulted them on the high-way, killing them and taking away the merchandise they carried, which was the occasion of the destruction of the Towne.

3 In the third partition: The foure Officers or Ambassadors of the Lords of *Mexico*, doe signifie that they haue warned the said *Casique* containned in the second partition before this, as is abouesaid, at the returning of the Executioners towards *Mexico*, there came out to the high-way certaine seruants of the said *Casique* to misse-vse them, shooting arrowes at them in token of war.

A Huiznahuatlan, officer and executioner as a Sergeant. B Executioner. C *Casique*. D Executioner. E The wife of the *Casique* imprisoned, with a yoke of Iron about her necke. F The sonne of the *Casique* taken prisoner with a yoke of Iron. G The seruant of the *Casique*. H The merchant. I a bundell of merchandise. K The merchant. L The seruant of the *Casique*. M Executioner. N Executioner. O *Casique*. P An Executioner or Ambassador of the Lord of *Mexico*. Q An Executioner or Ambassador of the Lord of *Mexico*. R a seruant of the *Casique*. S An Executioner or Ambassador of the Lord of *Mexico*. T An Executioner or Ambassador of the Lord of *Mexico*. V a seruant of the *Casique*. W a seruant of the *Casique* which shooteth at the Ambassadors of the Lords of *Mexico*, for mere occasion of warre.

The

CHAP. 7. §. 3. Mexican Spies, Warring, Captaines and Armes pictured.

1 The *Tequichna* signifieth Spies, sent to the Towne of the *Casique* by the Lord of *Mexico*, that in the night time they might goe and walke it secretly vnkowne to their enemies, to aduertise and giue warning vnto the Souldiers, where they should enter with the battaile. And so the *Tequichna* goe round about the Towne, Houses, Market place, and Church, at the time that they of the Towne are asleepe and at rest, for to finde a place where they may giue the onset with the lesse trouble and resistance.

2 A declaration of the pictures in the second partition. The *Mexican* that is pictured and at his shoulders a Target and Darts, doth signifie the *Mexicans* being moued to destroy a certaine Towne by warres, because they had rebelled against the Lordship of *Mexico*. And the other three that are pictured and set ouer against the *Mexicans* are seruants of the *Casique*, which doe signifie that the whole Towne of the *Casique* being afraid of the warres and destruction that the *Mexicans* would bring vpon them, they come to *Mexico* to entreat a peace, submitting themselves for seruants of *Mexico*, and protesting to acknowledge the Lordship, by meanes whereof they receiue them in friendship and for their seruants, laying aside that which was determined by their counsell.

The foure valiant men pictured and intituled, with their Speares in their hands, and made readie for the warres, and the deuices of Armour that they haue on, doe signifie that they are Captaines of the *Mexicans* armies.

Mexican Messengers, House-wives, Iustices, pleading pictured. LIB.V.

that is set and at his backe a woman spinning, signifieth that it is his wife new married, and because he had taken the state of matrimonie vpon him, hauing been a Messenger with the rest that are pictured before him, which are five, named *Telpuchty*, which are Messengers likewise. The married man giueth them a reason why hee leaueth the charge of a Messenger by reason of his marriage, and that hee will rest and leave off his seruice past. And to please them more, and that they should grant his request, hee maketh them a banquet in giuing them well to eate and drinke, and moreover the present that hee giueth them is a handfull of perfumes, a copper Hatchet and two Mantels, as by the pictures of these things are intituled. And by this solemnitie the married man is free from the said Office.

2 In the second partition: Hee that is set downe and intituled, doth signifie the Lord of *Mexico*, that when any Messenger *Telpuchty* pictured in the partition before this had giuen a good account of his office, and hauing taken vpon them the state of marriage, the Lords of *Mexico* from that they were but Messengers, did promote them to a better title and degree, in so much that he made them *Tequibna*, which is signified by the pictures and titles of *Tequibna*, with their Spears and Fannes, giuing them authoritie to bee his Ambassadors and Officers in the warres, which they held for an office of great honour.

3 The *Alcaldes* doe signifie Iustices, appointed by the Lords of *Mexico*, that they should heare matters aswell Ciuill as Criminall. And the pictures of men and women which are before them, are Pleaders and Suitors which doe aske iustice. And the foure pictures that are intituled *Teetli*, that are behinde the *Alcaldes*, are principall young men that ioyne with the *Alcaldes* in their audience, to learne and instruct themselves in matters of iudgement, and afterwards to succede in the Offices of the *Alcaldes*. From these *Alcaldes* there was an appellation before the counsell Chamber of *Moteguma*, as hereafter is pictured.

CHAP. 7. § 3. Mexican Palace, Councell chambers and Royall magnificence.

THE fashion of the Councell Chambers of the Lord or King of *Mexico*, and of his Royall Houses and Courts, and the steps where they entred in, and the Throne and Seate of *Moteczuma*, and in the spaces of euery thing is declared and intituled what they signifie, and so in this declaration it is not repeated. But that in one Councell Chamber, when that by way of offence they were agriued, and hauing a iust cause not being sentenced and determined by the *Alcaldes*, then by degree of appellation they appealed from the *Alcaldes* before the Councell. And if it were a matter of importance they appealed from the Councell Chamber before *Moteczuma* the King himselte, where the matter was concluded.

In the Chamber, that is intituled, The Councell Chamber of warre, were prouided Captaines and Armies for the warres, as was appointed by *Moteczuma*.

A The Throne and Maieitie of *Moteczuma* where he saie on Court-dayes, and on indgement. B *Moteczuma*. C a house where the Lords of *Tenayuca*, *Chienauhtla*, and *Colhuacan*, were lodged that were friends and confederates of *Moteczuma*. D a house where the chiefe Lords of *Tezcucoytaca* were lodged that were *Moteczuma* his friends. E F G The Court of the royall houses of *Moteczuma*. H K These lines that goe upward are the steps to the Courts of the royall houses of *Moteczuma*. I The counsell chamber of warre. L These foure are as Auditors of the counsell of *Moteczuma*, wise men. M Pleaders and Sutors that in the degree and appellation from the *Alcaldes*, doe present themselves and appeare before the Auditors of the counsell of *Moteczuma*.

THE father and the sonne that sit against each other face to face, signifie that the father giueth his sonne good counsell, that he be not vicious, laying before him for example, that those which come to vertue come afterwards in credit with the Lords and *Casiques*; in that they giue them

them honest offices, and doe vse them to be their Messengers, and they doe admit Musicians and Singers vnto their feasts and weddings for the credit they beate.

2 The pictured in the house, where they meane to talke and prouide for publike affaires, and the Steward that sitteth therein, doth signifie that there are before him weeping, because it hath happened vnto them to be occupied in bodily labour, that the *Cons* and *Guacales* doe represent. And the Steward is giuing them good counsell, and exhorting them to flee idlenesse, is the cause that they come to be Theeues and players at the Ball, and players at *Patol*, after the manner of Dice, from which Games doe spring theft for to satisfie and fulfill such vices.

3 The Carpenter, Lapidarie, Painter, Gold-smith, and garnisher of feathers, signifie that those Artificers teach their sonnes their occupation from their childhood, that when they are men they might follow their Trade, and spend their time in things of vertue, giuing them counsell that of idlenesse commeth euill vices, and so euill tongues, tale-bearing, drunkennesse, and theuerie, and many other euill vices.

A a Messenger. B C D The father counselleth his sonne to apply himselfe to all vertue. E One hauing a ghost, entertayneth a Musician. F G I a house where they meet for publike affaires. H The Petlacalcail. K M Coa and Guacal. L N Touches. O a vagabond. P a player at the ball. Q a Thiefe. R a player at *Patol* or Dice after their manner. S a Carpenter. T The Carpenters sonne. V a Lapidarie. W The Lapidaries sonne. X a Painter Y The Painters sonne. Z a Goldsmith. & The Goldsmiths sonne. Aa An ill tongued man and tale-bearer. Bb An artificer that garnisheth with feathers. Cc The artificers sonne. Dd a drunkard. Ee a drunkard and thiefe, the last worke like a halter seemes to signifie the euill ends which such come to. The particular punishments follow in the next picture.

A These two Pictures signifie that the young men that were drunke with Wine, dyed for that according to the Law. B A young man that was drunke. C A young woman if shee were drunke with Wine was killed heere according to the Lawes of Mexico. D A Thiefe, they stoned him to death according to the Lawes of the Lords of Mexico. E These two Pictures layed and couered with clothes, doe shew that if any man had carnall dealing with a married woman, they stoned them both to death, according to the Lawes of the Lords of Mexico. F An old man of threescore and tenne yeeres, hath licence to drinke Wine and to bee drunke aswell publikely as secretly because he is so old, and hath Sonnes and Nephewes, at which yeeres Wine and drunkenesse was not forbidden them. G An old woman, wife to the old man aboue pictured, had privilege to bee drunke as well as her Husband, because shee had children, and childrens children, and to all those of the like age, drunkenesse was not forbidden them.

CHAP. VIII.

Conquest of Mexico and New Spaine by HERNANDO CORTES.

a Gomara his
third part of
the Conquest
of the West In-
dies, translated
into English by
T. Nicolson.

Ernando Cortes was borne at Medellin in Andulozia, a Prouince of Spaine, Anno 1485. When he was nineteene yeeres old, he sayled to the Iland of Saint Domingo, where Ouando the Gouvernour kindly entertayned him. He went to the conquest of Cuba in the yeere 1511. as Clerke to the Treasurer, vnder the conduct of Iames Velasques, who gaue vnto him the Indians of Manicorao, where hee was the first that brought vp Kine, Sheepe and Mares, and had heards and

flockes of them: and with his Indians he gathered great quantitie of Gold, so that in short time he was able to put in two thousand Castlins for his stocke, with Andres de Duero, a Merchant. At this time Christopher Morante had sent (Anno 1517.) Francis Hernandes de Cordona, who first discovered Xucatan, whence he brought nothing (except the relation of the Country) but stripes: whereupon Iames Velasques in the yeere 1518. sent his Kinsman Iohn de Grijalua, with two hundred Spaniards in foure ships: he traded in the Riuer of Tanasco, and for trifles returned much Gold, and curious workes of feathers, Idols of Gold, a whole harness or furniture for an armed man of Gold thin beaten, Eagles, Lions, and other pourtratures found in Gold, &c. But while Grijalua deferred his returne, Velasques agreed with Cortes to bee his partner in the Discouery, which he gladly accepted, and procured licence from the Gouvernours in Domingo, and prepared for the Voyage.

Vol. 3.

Velasques afterward vsed all meanes to breake off, in so much that Cortes was forced to engage all his owne stocke, and credit, with his friends in the Expedition, and with five hundred and fiftie Spaniards in eleuen ships, set saile the tenth of February 1519. and arriued at the Iland of Acensamil. The Inhabitants at first fled, but by the kind entertainment of some that were taken, they returned, and receiued him and his with all kind offices.

They told him of cerryne bearded men in Yucatan, whither Cortes sent; and one of them, Geronimo de Aguilar came vnto him, who told him, that by shipwracke at Iamaica, their Caruell being lost, twentie of them wandred in the Boat without sayle, water or bread, thirteene or fourteene dayes, in which space the violence of the current had cast them on shoare in a Prouince called Maia, where, as they trauelled, seuen dyed with famine; and their Captayne Valdinia and other foure were sacrificed to be Idols by the Cacike, or Lord of the Countrey, and eaten in a solemne Banquet, and he with sixe other were put into a Coope or Cage, to bee fatned for another Sacrifice. But breaking Prison, they escaped to another Cacike, enemy to the former, where all the rest dyed, but himsele, and Gonsalo Guerres a Mariner. Hee had transformed himsele into the Indian cut, boring his nose full of holes, his eares jagged, his face and hands painted; married a Wife, and became a Captaine of name amongst the Indians, and would not returne with this Aguilar.

Cortes with this new Interpreter passed vp the Riuer Tanasco, called of the former Discoverer, Grijalua; where the Towne that stood thereon, refusing to victuall him, was taken and sacked. The Indians herewith intraged, assembled an Armie of fortie thousand, but Cortes by his Horse and Ordnance preuayled; the Indians thinking the Horse and Rider had beene but one creature, whose gaping and swiftnesse was terrible vnto them, whereupon they submitted themselves. When they heard the Horses ney, they had thought the Horses could speake, and demanded what they said: the Spaniards answered, These Horses are sore offended with you, for fighting with them, and would haue you corrected: the simple Indians presented Roses and Hens to the beasts, desiring them to eate, and to pardon them.

Cortes purposed to discover further Westward, because hee heard that there were Mines of Gold, hauing first receiued their Vassallage to the King his Master, to whom (he said) the Monarchie of the Vniuersall did appertayne. These were the first Vassals the Emperour had in New Spaine. They named the towne, where these things were done, Victorie, before called Potonchan, contayning neere five and twentie thousand houses, which are great, made of Lime, and Stone, and Bricke, and some of mud-wals and rafters, couered with straw; their dwelling is in the vpper part of the house, for the moystnesse of the soyle. They did eate mans flesh sacrificed.

The Spaniards sayled Westward, and came to Saint Iohn de Vltua, where Tendills the Gouvernour of the Countrey, came to him with foure thousand Indians. Hee did his reuerence to the Captayne, burning Frankincense (after their custome) and little strawes, touched in the blood of his owne bodie: and then presented vnto him victuals and Jewels of Gold, and other curious workes of feathers; which Cortes requited with a Collar of Glasse, and other things of small value. A woman-slaue, giuen him at Potonchan, vnderstood their language, and shee with Aguilas, were his Interpreters. Cortes professed himsele the seruant of a great Emperour, which had

sent him thither, whose power he so highly extolled, that *Teudilli* marvelled, thinking there had beene no such Prince in the World, as his Master and Soueraigne, the King of *Mexico*, whose Vassall he was, named, *Mutezuma*. To him he sent the representations of these bearded men, and their Hories, Apparell, Weapons, Ordnance, and other Rarities, painted in Cotton-clothes, their ships and numbers. These painted Cottons he sent by Posts, which deliuered them from one to another with such celeritie, that in a day and night the message came to *Mexico*, which was two hundred and ten miles distant. *Cortes* had demanded, whether *Mutezuma* had Gold? *Teudilli* affirmed, and *Cortes* replied, That he and his fellowes had a disease of the heart, whereunto Gold was the best remedie.

Spanish incurable sicknesse.

10 *Mutezuma* sent him many Cotton-clothes of diuers colours, many tuftes of Feathers, two Wheelles, the one of Siluer, with the signe of the Moone, and the other of Gold, made like the Sunne; which they hold for Gods, and giue vnto them the colours of the Metals most like them. Each Wheele was two yards and a halfe broad. These with other parts of the Present were esteemed worth twentie thousand Duckets. *Mutezuma* also professed ioy, to heare of so great a Prince, & so strange people, & promised prouision of all necessaries, but was very vnwilling that *Cortes* should come to see him, as he pretended. Yet *Cortes* persisted in that his desire of seeing *Mutezuma*, that he might further acquaint himselfe with the knowledge of those parts.

20 The silly *Indians* hauing neuer seene such strange sights, came daily to the Campe to see them and when they heard the Ordnance discharged, they fell downe flat, thinking the Heauens had falne: the ships they thought were the God of the Ayre, called *Quetzalcoatl*, which came with the Temples on his backe, for they daily looked for him. Amongst the rest, or rather aloofe off from the rest, were certayne *Indians* of differing habite, higher then the other, and had the gristles of their Noses slit, hanging ouer their mouthes, and Rings of Iet and Amber hanging thereat: their neather lips also bored, and in the holes, Rings of Gold and Turkeesse-stones, which weighed so much, that their lips hung ouer their chinnes, leauing their teeth bare. This vgliness they accounted gallantry, and such vncouth deformitie to be the only brauery. And thou Gallant, that readeest and deridest this madnesse of *Fashion*, if thine eyes were not dazeled with lightnesse (light I cannot call it) of selfe-reflected Vanitie, mightest see as Monster-like fashions at home, and a more fashionly Monster of thy selfe; thy clothes and oathes, thy gestures and vestures, make thy naked Deformitie worse then their thus deformed nakednesse: both indeed seeme to haue received some hellish Character (if there may bee bodily representation) of that olde Serpent in these new fashions, struing who shall shape himselfe, neerest to that misse-shapen vgliness, wherein the *Indian* jagges himselfe out of humane lineaments, the other swaggers himselfe further out of all Ciuill and Christian ornaments. But these Fashion-mongers haue made mee almost out of my fashion, and so forget my selfe, in remembring their forgetfulness.

Note for fashion-mongers.

30 These *Indians* of this New-cut, *Cortes* caused to come to him, and learned that they were of *Zempoallan*, a Citie distant thence a dayes journey, whom their Lord had sent to see what Gods were come in those *Tencallis*, that is Temples (so, it seemeth, they called the ships;) which held no conuersation with the other *Indians*, as being not subject to *Mutezuma*, but onely as they were holden in by force. He gaue them certaine toyes, and was glad to heare that the *Indians* of *Zempoallan*, and other their Neighbours were not well affected to *Mutezuma*, but readie, as farre as they durst, to entertayne all occasions of warre with him. Hee sayled from thence to *Panuco*, and passed the Riuer farther, till he came to a little Towne, where was a Temple, with a little Towre, and a Chappell on the top ascended by twenty steps, in which they found some Idols, many bloody Papers, and much mans blood, of those which had beene sacrificed, the blocke also whereon they cut open those Sacrifices, and the Razors made of flint, wherewith they opened their breasts, which strucke the *Spaniards* with some horror and feare. They passed a little further, and there hauing taken possession, in the Emperours name, of the whole Countrey, they founded the Towne *De la vera Cruz*, *Cortes* resigning his authoritie, and Officers being elected; and lastly, all with generall consent appointing *Cortes* their Captaine.

Zempoallan.

40 *Cortes* went forward to *Zempoallan*, where hee was solemnely receiued and lodged in a great house of lime and stone, whited with playster, that shined in the Sunne, as if it had beene Siluer; so did the Siluer-conceits of the *Spaniards* imagine, the desire of that Metall hauing made such an impression in their imagination, that they told *Cortes* before hee came at it, they had seene a house with wals of Siluer. Here, and at *Chianiztlan*, *Cortes* incited them to rebell against *Mutezuma*, and to become seruants to the *Spaniards*, which they did: and he vnder-hand so wrought, that *Mutezuma* tooke him for his friend.

Panuco.

Vera

50 All his intent was to fish in troubled waters, and to set them both by the eares, that hee might watch oportunitie to benefit himselfe. His owne people rebelled, some of whom he chastised with the halter and the whip for example to the rest: and after caused all his ships to be sunke closely, that they should not minde any returne. He left 150. men for the guard of the new Towne, vnder *Pedro de Henrico*, and with 400. *Spaniards*, fiftene Horfes, and sixe Peeeces of Artillery, and 1300 *Indians*, they went from *Zempoallan*, and came to *Zacatlan*, the Lord whereof was *Olintler* the subject of *Mutezuma*; who to testifie his ioy, and to honour *Cortes*, commanded fifty men to be sacrificed, whose blood they saw, new and fresh.

re a
hill.

They carried the Spaniards on their shoulders, sitting on Beeres, such as whereon they vse to carry dead men. He bragged as much of the power of *Mutezuma*, as their Spaniards of their Emperour. He said he had thirty Vassals, each of which was able to bring into the field an hundred thousand men of Warre, and sacrificed 20000. men yearly to the gods; in this he somewhat exceeded; the other was true, although some yeares, the Sacrifices also were thought to amount to 50000. This Towne was great, and had thirteene Temples, in each of which were many Idols of stone, of diuers fashions, before whom they sacrificed Men, Doves, Quails, & other things with great perfumes and veneration. Here *Mutezuma* had 5000. Souldiers in Garrison. *Cortes* passed from thence to *Mexico* by the Frontiers of *Tlaxcallan*, which were enemies to *Mutezuma*, whom he might easily haue ouercome, but reserued, partly for the exercise of his Subiects to the Warre, partly for the Sacrifices to his gods.

These ioyned an hundred and fifty thousand men against *Cortes*, taking him for *Mutezuma's* friend: and yet every day sent him Guinney-cockes and Bread, partly to espie his strength, and partly in a brauery, lest their glory should be obscured in the conquest of men already starued. But when in many skirmishes and fights they could not preuaile against that handfull of Spaniards, they thought they were preserued from harme by enchantments: and sent him three presents with this message: That if he were that rigorous god which eateth mans flesh, he should eate those five slaues which they brought him, and they would bring him more: if he were the meeke and gentle god, behold Frankinsence, and Feathers: if he were a mortall man, take here Fowle, Bread, and Cherries. At last they made peace with him, and submitted their City to him. Their City *Tlaxcallan* was great, planted by a Riuer side, which issued into the South-Sea. It had foure Streetes, each of which had their Captaine in the time of Warre. The gouernment was an Aristocracy, hating Monarchy, no lesse then tyranny. It had eight and twenty Villages, and in them an hundred and fifty thousand Housholds, very poore, but good warriors. They had one Market-place so spacious, that thirty thousand persons in a day came thither to buy and sell by exchange: for money they had none.

Mutezuma had sent before to *Cortes*, and promised tribute to the Emperour, whatsoever should be imposed; onely he would not haue him come to *Mexico*. And now he sent againe, that he should not trust that new friendship with the beggerly Nation of *Tlaxcallan*; and they againe counselled him not to aduenture himselfe to *Mutezuma*. *Cortes* held his determination for *Mexico*, and being accompanied with many of the *Tlaxcaltexas*, he went to *Chololla*, a little from whence *Mutezuma* had prepared an Army to intrap him in the way; but he finding the trechery, it redounded vpon the *Cholollois*, the same day they had thought to haue executed the same vpon him. For this end they had sacrificed ten children, five males, and as many females, three yeares old, to *Quezalcoatl*, their god, which was their custome when they began their Wars. He out-going them in their owne art of subtilty, intrapped their Captains in Counsell, and sent his Army to spoile the City, where were slaine thousands. There were twenty Gentlemen, and many Priests which ascended vp to the high towre of their Temple, which had an hundred and twenty steps, where they were burned, together with their gods and Sanctuary.

This Citie had twenty thousand Housholds within the Walls, and as many in the Suburbs. It shewed outward very faire and full of Towres, for there were as many Temples as dayes in the year, and every one had his Towre. The Spaniards counted foure hundred Towers. It was the Citie of most deuotion in all *India*, whither they travelled from many places farre distant in Pilgrimage. Their Cathedrall Temple was the best and highest in all *New-Spaine*, with an hundred and twenty steps vp to it. Their chiefe god was *Quezalcoatl*, god of the Ayre, who was (they say) founder of their Citie being a Virgin, of holy life and great penance. He instituted fasting, and drawing of blood out of their eares and tongues, and left precepts of Sacrifices. He neuer ware but one garment of Cotten, white, narrow, and long, and vpon that a Mantle, beset with certaine red crosses. They haue certaine greene stones which were his, and are kept for great relikes: one of them is like an Apes head. Eight leagues from *Chololla* is the hill *Popocatepec*, or smoake-hill, which the Earth seemeth to haue erected as a Fort to encounter and assault the Ayre: now with smoky mists endeououring to choake his purer breath, another while with violent flames, and naturall fire-workes threatening to ioyne league with his elder and superiour brother to disinherit him: sometimes with showers of ashes and embers, as it were, putting out the eyes, and sometimes with terrible and dreadfull thunders, rending the eares of that Airy Element; alwayes (such is the euent of warre) hurting and waisting it selfe, to indamage the enemy. The *Indians* thought it a place of Purgatory, whereby tyrannicall and wicked Officers were punished after their death, and after that purgation passed into glory. The Spaniards aduentured to see it, but two onely held on their iourney, and had there beene consumed, had they not by a Rocke bin shadowed from the violent eruption of the fire which then hapned. It chanced that the Earth, weary it seemeth of the warre, as hauing spent her store and munition, agreed on a truce which continued ten yeares: but in the year 1540. it brake forth into more violent hostility then before, quaking and renting it selfe with vnbridled passion: and whereas the Ayre had alwaies a snowie Garrison about her high tops and frontiers, to coole and quench

CHAP. 8. Corteses entertainment. Mutezumas Religion, Oration, death.

quench her fiery showers, yet these did but kindle a greater flame, the ashes whereof came to *Huexotzinco, Quexacopon, Tepiacac, Chololla* and *Tlaxcallan*, and other places, ten, or as some say, fiftene leagues distant, and burned their hearbs in their Gardens, their fields of Corne, Trees and cloathes that they laid a drying. The *Vulcan, Crater*, or mouth whence the fire issued, is about halfe a league in compasse. The *Indians* kissed their garments (an honour done vnto their gods) which had adventured themselves to this dreadfull spectacle.

Cortes drawing neere to *Mexico*, *Mutezuma* feared, saying, These are the people which our gods said should come and inherit this Land. He went to his Oratory, and there shut vp himselfe alone, abiding eight daies in praier and fasting, with sacrifice of many men, to asslake the fury of his offended deities. The *Devill* bids him not to feare, and that he should continue those bloody Rites, assuring him that he should haue the god *Vitziliputzli* and *Tescalipuca* to preserve him, saying, That *Quezalcoatl* permitted the destruction at *Chololla*, for want of that bloody sacrifice. *Cortes* passed a Hill six miles in height, where, by the difficulty of the passage, and of the cold (being alway couered with Snow) the *Mexicans* might easily haue prevented his passing further. Hence he espied the Lake, whereon *Mexico* and many other great Townes did stand, *Ixtacpallapana* Towne of 10000. houholds, *Coyacan* of six thousand, *Vizilopuchili* of five thousand. These Towns are adorned with many Temples and Towres, that beautifie the Lake. From *Ixtacpallapana* to *Mexico* is two Leagues, all on a fair causey, with many draw-bridges, thorow which the water passeth.

Mutezuma received *Cortes* with all solemnity on the eight of *November 15 19*, into this great Citie, excusing himselfe of former vnkindnesse the best he could. Of his house, and Maiestie, and the diuine conceit the people had of him, we shall speake after more fully, as also of the Temples, Priests, Sacrifices and other remarkable things of *Mexico*.

Mutezuma provided all things necessary for the *Spaniards* and *Indians* that attended them: euen beds of flowers were made, in place of litter for their Horses. But *Cortes* disquieted with those thoughts which commonly attend Ambition (discontent in the present, hopes and feares of the future) vsed the matter so, that he tooke *Mutezuma* prisoner, and detained him in the place appointed for the *Spaniards* lodging, with a *Spanish* Guard about him, permitting him otherwise to deale in all priuate or publike affaires as before. Hereupon *Cacama*, Lord of *Texcoco*, Nephew to *Mutezuma*, rebelled, but by treachery of his owne people, was presented prisoner to *Mutezuma*.

He, after this summonsd a Parliament, where hee made an Oration vnto his Subjects, saying, That He and his Predecessours were not Naturals of the Countrey, but his Fore-fathers came from a farre Countrey; and their King returned againe, and said, he would send such as should rule them. And he hath now sent these *Spaniards*, saith he. Hereupon he counselled them to yeelde themselves Vassals to the Emperour, which they did at his command, though with many teares on his part and theirs, at this breuall of their liberty. *Mutezuma* presently gaue to *Cortes*, in the name of tribute, a great quantity of Gold and other Jewels, which amounted to sixteene hundred thousand Castlins of Gold, besides Silver.

Cortes had hitherto a continuall victory in *Mexico* without any fight: but news was brought him of *Pamphilo de Naruaes*, who was sent with eighty Horse, and some hundred of *Spaniards* by *Velasques*, to interrupt the proceedings of *Cortes*: who leauing two hundred men in *Mexico*, with two hundred and fifty other came suddenly in the night, and tooke *Naruaes* prisoner, and returned to *Mexico* with *Naruaes* his Company, now his followers also, where he found his men exceedingly distressed by the *Cirizens* for a murder committed in the great Temple at a solemne Feast, wherein a religious dance they were slaine, for the rich garments and Jewels they ware, by the *Spaniards*. *Cortes* came in good time for the reliefe of his men: and *Mutezuma* caused the *Mexicans* to bridle their rage, which presently was renewed; and when *Mutezuma* was againe by his Guardians, the *Spaniards*, caused to speake to the people, a blow of a stone on his Temples wounded him, whereof threedayes after he died.

Cortes had some thousands of the *Tlaxotecs* to helpe him, but was driuen to flye from *Mexico* with all his *Spaniards* and *Indians*, which he did closely in the night, but yet an alarme was raised, and the Bridges being broken, much slaughter of his people was made by the *Mexicans*, and all his treasure in manner lost. They pursued after him also, and had two hundred thousand in the field: when it was *Cortes* his good hap to slay the Sandarbearer, whereupon the *Indians* forsooke the field. This battell was fought at *Orumpan*.

At *Tlaxcallan*, he and his were kindly entertained; they had prepared before 50000. men to goe to *Mexico* for his helpe, and now they promised him all offices of loyalty and seruice. With their helpe he subdued *Tepeacac*; and built certaine Brigandines, or Frigats, which were cartied many leagues on the backes of those *Indians*, and there fastned and finished, without which he could neuer haue won *Mexico*.

In *Tezcucio* certaine *Spaniards* had beene taken, sacrificed and eaten, which *Cortes* now reuenged on them. Eight thousand men had carried the loose peeces and timber of this Nauie, guarded with twenty thousand *Tlaxcallans*, and a thousand *Tamemez*, or Porters (which carried viatuals) attending. They calked them with Towe, and for want of Tallow and Oyle, they vsed

Mutezumas religion.

The like speech he had made at first to *Cortes*, who easily wrought on that aduantage, applying this Tradition to the *Spaniards*, *Cortes* *Narrat.*

Mutezuma

Mans

Mans Grease, of such as had beene slaine in the Warres. For so the *Indians* vsed, to take out the Grease of their Sacrifices. Cortes had here nine hundred *Spaniards*, of which fourescore and six were Horle-men, three cast peeces of Iron, fiftene small peeces of Brasse, and a thousand weight of Powder, and 100000. *Indian* Souldiers on his side. He made a sluice or trench about twelue foot broad, and two fathome deepe, half a league long, in which 40000. men wrought fifty dayes. He lanchd his Vessels, and soone ouercame all the Canoas of the Lake, of which were reckoned in all fise thousand. The *Spaniards* brake the Conduits of sweet water, wherewith the City was wont to be serued.

Quahutimoc, now the new King of Mexico, receiuing incouragement from the Deuillish Oracle, caused to breake downe the Bridges, and to exercise whatsoeuer wit or strength could doe in defence of his Citie, sometimes conquering, sometimes (as is doubtfull chance of warre) conquered. Cortes had in Texcoco ordained a new King, a Christian Indian, of the royall blood, who much assisted him in this siege. The *Spaniards* being Lords of the Lake, and of the Causeyes, by helpe of their Galliot and Ordinance, they fired a great part of the Citie. One day the *Mexicans* had gotten some aduantage, and thereupon celebrated a Feast of Victory. The Priests went vp into the Towers of Tlatelulco, their chief Temple, and made there perfumes of sweet Gums, in token of victory, and sacrificed forty *Spaniards* (which they had taken captiues, opening their brefts, and plucking out their hearts) sprinkling their blood in the Ayre; their fellowes looking on, and not able to reuenge it. They slew likewise many *Indians*, & foure *Spaniards* of Aluado's company, whom they ate in the open sight of the Army. The *Mexicans* danced, drank themselves drunke, made bonafires, stricke vp their Drums, and made all solemne expressings of ioy. Dread, Disdaine, and all the Furies that Passion or Compassion could coniure vp, had now filled the *Spaniards* hearts and their *Indian* partakers: and Cortes, that hitherto had hoped to reserve some part of the Citie, now did the vtmost that Rage and Reuenge could effect, helped no lesse with in with Famine and Pestilence, then with Sword and Fire without. At last Mexico is razed, the Earth and Water sharing betwixt them what the Fire had left; and all which had sometime challenged a lofty inheritance in the Ayre. Their King also was taken; all that mightie State subuerted. And as the *Mexicans* before had prophesied, That the *Tlaxantleca's* should againe build the Citie, if conquered, for them; if conquerors, for the *Spaniards*: It was re-built with a hundred thousand houses, fairer and stronger then before. The Siege lasted three Moneths, and had therein two hundred thousand *Indians*, nine hundred *Spaniards*, fourescore Horses, seuentene Peeces of Ordinance, thirteene Galliot, and six thousand Canoas. Fiftie *Spaniards* were slaine, and six Horses: of the *Mexicans*, a hundred thousand, besides those which died of Hunger and Pestilence.

This was effected Anno 1521. on the thirteenth day of August, which for that cause is kept festiuall every yeare. For the Description of the Country wherein Mexico is situate. Cortes in his second Narration to the Emperour saith, It is surrounded with hills: (He telleth of some hills also in his iourney, wherein diuers of his people died with cold) in the midst is a plaine of 70. leagues compasse, and therein two Lakes which extend the circuit of 50. leagues; the one salt, which ebberth and floweth (an argument for *Pavimus* his opinion, that saltnesse is a chiefe cause of that vicissitude of ebbing and flowing, in the Ocean) the other fresh: When the water of the Salt Lake increaseth, it runneth like a violent streame into the fresh Lake, which when it decreaseth, is repaired againe by the like issue of this into the former.

Nunno di Gusman hath written his expedition into Mechoacan and other Countries of New Spaine 1530. subduing and taking possession for the Emperour: He found some of them Sodomiters, others Sacrificers of mens flesh, and some eloly practising this butchery after they had professed themselves Christians: none of them which durst looke a Horse in the face, but were afraid that that Beast would eate them. The several peoples by him reckoned, would here be tedious to name: which we may say of the like mad by Godoy and Aluado. Of the Customes of the Auntient *Mexicans*, one of Cortes his Gentlemen hath written a Treatise extant in Ramusius, wherein are described their Citie, Temples, Rites of Sacrifice, and the like; as after followeth out of him and others.

CHAP. IX.

Larger Relations of things most remarkable observed by the Spaniards at their first coming : Cholollas holis; Popocatepecs ashes. Mutezummas multiforme magnificence and maiestic. Mexican Citie and Temple, with other antiquities gathered out of the Third part of the Historie of Francis Lopez * de Gomara.

* This part Lopez was long since translated and published by Tho. Nichols. I haue here in diuers places amended it by the Italian translation of Agostino di Craualiz : for the Spanish originall I haue not.

Chololla is a Citie as *Tlaxcallan*, and hath but one person who is *Gouernour* and generall Captaine, chosen by the consent of all the Citizens. It is a Citie of twenty thousand households within the wals, and in the suburbs as much more. It sheweth outwards very beautifull, and full of Towers, for there are as many Temples as dayes in the yeare, and euery Temple hath his Tower. Our men counted foure hundred Towers. The men and women are of good disposition, well fauoured, and very wittie. The women are Goldsmiths and also Caruers, the men are warriors, and light fellowes, and good Maisters for any purpose : they goe better apparelled then any other *Indians* yet seene. They weare for their vpper garment, cloakes like vnto *Morisces*, but after another sort. All the Countrey round about them is fruitfull and errable ground, well watered, and so full of people, that there is no waste ground, in respect whereof, there are some poore which begge from doore to doore. The *Spaniards* had not seene any beggers in that Countrey before they came thither.

Chololla is a Citie of most deuotion and religion in all *India*, it is called the Sanctuary, or holy place among the *Indians*, and thither they trauelled from many places farre distant in Pilgrimage, and for this cause there were so many Temples. Their Cathedrall Temple was the best and highest of all the *New Spaine*, with a hundred and twenty steps vp vnto it. The greatest Idoll of all their gods was called *Quezalcoatl*, God of the Aire, who was (say they) the founder of their Citie, being a Virgin of holy life, and great penance. He instituted fasting, and drawing of blood out of their eares and tongues, and left a precept, that they should sacrifice but onely Quails, Doves, and other fowle. He neuer ware but one garment of Cotten, which was white, narrow, and long, and vpon that a mantle beset with certaine red crosses. They haue certaine greene Stones which were his, and those they keepe for relickes. One of them is like an Apes head. Here they abode twenty dayes, and in this meane while there came so many to buy and sell, that it was a wonder to see. And one of the things that was to be seene in those faires, was the earthen vessell, which was exceeding curious and fine.

The hill called Popocatepec.

There is a hill eight leagues from *Chololla*, called *Popocatepec*, which is to say, a hill of smoake, for many times it casteth out smoake and fire. *Cortes* sent thither ten *Spaniards*, with many *Indians*, to carry their victuall, and to guide them in the way. The ascending vp was very troublesome, and full of craggie rocks, They approached so nigh the top, that they heard such a terrible noise which proceeded from thence, that they durst not goe vnto it, for the ground did tremble and shake, and great quantity of ashes which disturbed the way : but yet two of them who seemed to be most hardie, and desirous to see strange things, went vp to the top, because they would not returne with a sleeuelesse answer, and that they might not be accounted cowards, leauing their fellowes behinde them, proceeding forwards. The *Indians* said, what meane these men ? for as yet neuer mortall man tooke such a journey in hand.

These two valiant fellowes passed through the Desert of Ashes, and at length came vnder a great smoake very thicke, and standing there a while, the darkenesse vanished partly away, and then appeared the vulcan and concauity, which was about halfe a league in compasse, out of the which the ayre came abounding, with a great noise, very shrill, and whistling, in such sort that the whole hill did tremble. It was to be compared vnto an Ouen where Glasse is made. The smoake and heate was so great, that they could not abide it, and of force were constrained to returne by the way that they had ascended : but they were not gone farre, when the vulcan began to lash out flames of fire, ashes, and imbers, yea and at the last, stones of burning fire : and if they had not chanced to finde a Rocke, where vnder they shadowed themselves, vndoubtedly they had there beene burned. When with good tokens they were returned where they left their fellowes, the other *Indians* kissed their garments as an honour due vnto gods. They presented vnto them such things as they had, and wondred much at their fact.

The simple *Indians* thought, that that place was an infernall place, where all such as gouerned not well, or vsed tyrannie in their offices, were punished when they died, and also beleueed, that after their purgation, they passed into glory. This Vulcan is like vnto the Vulcan of *Sicilia*,

Purgatory.

it is high and round, and neuer wanteth snow about it, and is seene afarre off in the night, it la-
sheth out flames of fire. There is neere about this Hill many Cities, and *Huexoxinco* is one of the
highest. In tenne yeeres space this strange hill of working did expell no vapour or smoke: but
in the yeere 1540, it began againe to burne, and with the horrible noyse thereof, the Neighbours
that dwelt foure leagues from thence were terrified, for the especiall strange smoakes that then
were seene, the like to their Predecessors had not bene seene. The ashes that proceeded from
thence came to *Huexozinto*, *Quelaxcopan*, *Tepiacas*, *Quauhqueholla*, *Chololla*, and *Tlaxcallan*,
which standeth ten leagues from thence, yea some say, it extended fifteene leagues distant, and
burned their hearbes in their Gardens, their Fieldes of Corne, Trees, and cloathes that lay
a drying.

He left the way that the *Mexicans* had perswaded him to come, for it was both euill and
dangerous, as the *Spaniard* which went to the Vulcan had seene, he went another plainer way,
and neerer. He ascended vp a Hill couered with snow, which was sixe miles of height, where
if the 30000. Souldiers had waited for them, they might easily haue taken them, by reason of the
great cold: and from the top of that Hill, they discovered the Land of *Mexico*, and the great
Lake, with his Villages round about, which is an exceeding goodly sight. But when *Cortes*
saw that beautifull thing, his joy was without comparison.

There came twelue Lords from *Mexico*, among whom was *Cacama*, Nephew to *Mutezuma*,
who was Lord of *Tezcucan*, a young man of fise and twentie yeeres of age, whom the *Indians* did
much honour: he was carried vpon their shoulders, and when they set him downe, one went be-
fore with a Broome to sweepe the dust out of his way. In this order hee came to *Iztacpallapan*.
Euery two houres came messengers betwixt *Cortes* and *Mutezuma*: then came *Cuexlanac* Lord
of that Towne, with the Lord *Culhuacan* his Kinsman to receiue him, who presented vnto him
slaves, garments, and feathers, and to the value of foure thousand Duckets in Gold. *Cuexlanac*
receiued all the *Spaniards* into his owne house, which hath very faire Lodgings all of stone, and
Carpenters worke, exceeding well wrought, with high and low roomes, with all kind of ser-
uice: The chambers were hangd with cloth of Cotton very rich, after their manner. There
were faire Gardens replenished with many sweet flowres, and sweet trees garnished with Net-
worke, made of Canes, and couered with Roses and other fine hearbes, with sundry ponds of
sweet water. There was another Garden very beautifull of all sorts of fruits and hearbes, with
a great pond walled with lime and stone, and was foure hundred paces square, made with faire
steps to descend vnto the bottome in many places, and was full of diuers kinds of fishes, and ma-
ny kind of water Birds, which sometimes couered the pond, as Gulls, and Mewes, and such like.
Iztacpallapan is a Towne of 10000. households, and is planted in a Lake of Salt-water, the one
halfe of the Towne built on the water, and the other on the Land.

The solemne
pompe where
with *Cortes* was
receiued into
Mexico.

From *Iztacpallapan* to *Mexico* is two leagues all vpon a faire Calsey, vpon the which eight
Horsemen may passe on ranke, and so directly straight as though it had bene made by line. And
who soeuer hath good eye-sight might discerne the gates of *Mexico* from thence. *Coyoacan* is a
Towne of sixe thousand dwellers, *Vizilopuchtl* is of fise thousand. These Townes are planted
in the Lake, and are adorned with many Temples, which haue many faire Towres, that doe
beautifie exceedingly the Lake. There is great contraction of Salt, which is made there, and
from thence is carried abroad to Faires and Markets, which thing was a great rent to *Mutezuma*.
Vpon this Calsey are many drawne Bridges built vpon faire arches, that the water passeth
thorow.

Cortes passed this Calsey with 400. *Spaniards*, and 6000. *Indians* his friends: their passage was
with much adoe, by reason of the great multitude of *Indians* which came to see him, and com-
ming neere the Citie, there adjoynd another Calsey with a broader passage, where standeth a
strong Bulwarke of stone, of the heighth of two fathome with two Towres on each side, and two
gates very strong. Here at this Fort came three thousand Courtiers and Citizens to receiue him,
and euery of them touched the ground with his right hand and kissed it, and passed forwards in
the order as they came. These salutations endured an houre and more. From the Bulwarke the
Calsey lyeth directly, and before the entrance into the street there is another draw Bridge made
of timber ten paces broad, vnder the which the water passeth too and fro. At this Bridge came
Mutezuma to receiue *Cortes* vnder a Canopie of greene feathers and gold. At this Bridge came
hanging thereat, which Canopie foure Noble-men did carrie. And the two Princes *Cuexlanac*
and *Cacama* his Nephewes, did leade him by each arme: all three were rich apparelled and all
of one fashion, except *Mutezuma*, which had a paire of shooes of gold beled with precious
Stones, and the soles were tyed to the vpper part with latches, as is painted of the Antikes.
His Gentlemen went by two and two, laying downe and taking vp Mantles and Couerlets vpon
the ground, because his feet should not touch the same: then followed him as in Procession, 200.
Noblemen bare-footed, with garments of a richer Liurey then the first three thousand. *Mute-*
zuma came in the middest of the street, and the others came behind him as nigh the wall as they
might, their faces towards the ground, for it was a great offence to looke him in the face. *Cortes*
alighted from his Horse, and according to our vse went to embrace him, but the Princes who led
